in English: pampas brome

in Argentina: trigo, loica loi, cebadilla

B. briziformis Fischer & C.A. Meyer (*Bromus briziformis* Willk. ex Willk. & Lange, nom. illeg., non *Bromus briziformis* Fisch. & C.A. Mey.)

Europe. Annual, herbaceous, leaves downy, leaf sheaths softly hairy, ligules with a rough edge or hairs along the edge, no auricles, open and often-nodding flower head, pyramidal and branched loose panicles, wedge-shaped

spikelets, glumes obtuse, lemma obtuse and usually without awns, ornamental grass, grows in open and disturbed grasslands, roadsides, waste places, dry disturbed soil, see *Index Seminum [St. Petersburg]* 3: 30. 1837, *Linnaea* 25(1): 26. 1852, *Prodromus Florae Hispanicae* 1: 101. 1861 and *Flora Kavkaza* 1: 125. 1928.

in English: rattlesnake brome, rattlesnake chess, quake-grass

B. bromoideus (Lej.) Crép. (*Bromus arduennensis* Dumort.; *Bromus arduennensis* var. *villosus* (Crép.) Cugnac & A. Camus; *Bromus arduennensis* var. *villosus* (Crepin ex Husnot) Cugnac & A. Camus; *Bromus bromoides* (Lej.) Druce; *Calotheca bromoidea* Lej.; *Michelaria bromoidea* (Lej.) Dumort.)

Europe. Useful for erosion control, see *Observations sur les Graminées de la Flore Belgique* 77. 1823 [1824], *Enumeratio Plantarum Omnium Hucusque Cognitarum* 1: 416. 1833 and *List of British Plants*, edition 2 133. 1928, *Bulletin de la Société Botanique de France* 83: 66-67, t. 4. no. 21. 1936.

B. canadensis Michx. (*Bromopsis canadensis* (Michx.) Holub; *Bromus ciliatus* L.; *Bromus hookeri* var. *canadensis* (Michx.) E. Fourn.; *Zerna canadensis* (Michx.) Tzvelev)

North America, U.S., Mexico. Perennial, nonrhizomatous, leaves lax, panicle with pendulous branches, dark spikelets, first glume 1-nerved, second glume trinerved, lemma pubescent, see *Species Plantarum* 1: 76-77. 1753, *Flora Boreali-Americana* 1: 65. 1803, *Mexicanas Plantas* 2: 127-128. 1886 and *Acta Phytotaxonomica et Geobotanica* 2: 30. 1933, *Novosti Sist. Vyss. Rast.* 7: 54. 1970 [1971], *Folia Geobotanica et Phytotaxonomica* 8(2): 167. 1973, *Taxon* 25: 613. 1976.

in English: fringed brome

B. cappadocicus Boiss. & Balansa (*Bromopsis cappadocica* (Boiss. & Balansa) Holub; *Bromopsis tomentella* subsp. *cappadocica* (Boiss. & Balansa) Tzvelev; *Zerna cappadocica* (Boiss. & Balansa) Nevski; *Zerna tomentella* subsp. *cappadocica* (Boiss. & Bal.) Tzvelev)

Iran, Turkey, Europe. Small, short, leaves mostly basal and short, useful for erosion control, occurs in mountain meadows, rocky and dry sites, see *Diagnoses plantarum orientium novarum, ser. I*, 13: 65. 1854, *Bulletin de la Société Botanique de France* 4: 306. 1857 and *Annalen des K. K. Naturhistorischen Hofmuseums* 20: 433. 1905, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 61(Beibl. 140): 172. 1928, *Novosti Sist. Vyss. Oka, Quebec 1940, *Rhodora* 43: 76. 1941, *Flora Republicii Socialiste Romania* 12: 307. 1972, *Folia Geobotanica et Phytotaxonomica* 8(2): 167. 1973, *Folia Geobotanica et Phytotaxonomica* 12(4): 425. 1977, *Journal of August 1st Agricultural College* 14(1): 43-45. 1991, S.K. Dong, R.J. Long, Z.Z. Hu and M.Y. Kang, "Productivity and persistence of perennial grass mixtures under competition from annual weeds in the alpine region of the Qinghai-Tibetan Plateau." *Weed Research* 45(2): 114-120. Apr 2005.

in English: Hungarian brome, brome grass, smooth brome, smooth brome grass, awnless brome, Austrian brome, Russian brome

in Brazil: capim-cevadilha

in Colombia: bromo

in French: brome inerme

B. inermis Leyss. subsp. *inermis* (*Bromopsis inermis* (Leyss.) Holub)

Eurasia. Perennial, weed species naturalized elsewhere in temperate regions, fodder, forage, useful for erosion control, in disturbed habitats, ravines, see *Flora Halensis* 16. 1761.

in English: smooth brome, smooth brome grass, Russian brome grass, Austrian brome grass, Hungarian brome, Hungarian brome grass, awnless brome

B. inermis Leyss. subsp. *inermis* var. *divaricatus* Rohlena Europe, North America. See *Flora Halensis* 16. 1761.

in English: smooth brome

B. inermis Leyss. subsp. *inermis* var. *inermis* (*Bromopsis inermis* (Leyss.) Holub)

Europe, North America. See *Flora Halensis* 16. 1761.

in English: smooth brome

B. inermis Leyss. subsp. *pumpellianus* (Scribner) Wagnon (*Bromopsis inermis* subsp. *pumpelliana* (Scribn.) W.A. Weber; *Bromus pumpellianus* Scribner; *Bromus sibiricus* Drobow)

Northern America, Eurasia. Perennial, long-lived, alpine, nodes more or less pubescent, lemmas slightly to extremely pubescent, useful for erosion control, forage, found on gravelly soil, open woods, wet meadows, woodland openings, mountain light brown soil, see *Bulletin of the Torrey Botanical Club* 15(1): 9-10, f. s.n.; pl. D, f. 1-9. 1888 and *Rhodora* 52(651): 211. 1950.

in English: Pumpelly's brome grass, Pumpelly's brome, Arctic brome, brome grass

B. inermis Leyss. subsp. *pumpellianus* (Scribner) Wagnon var. *arcticus* (Shear ex Scribner & Merr.) Wagnon (*Bromopsis pumpelliana* (Scribn.) Holub subsp. *arctica* (Shear ex Scribn. & Merr.) Á. & D. Löve; *Bromus inermis* Leyss. var. *aristatus* Schur ex Scribn. & Merr.; *Bromus pumpellianus* Scribn. var. *arcticus* (Shear ex Scribn. & Merr.) Porsild)

North America. Perennial.

in English: Pumpelly's brome

B. inermis Leyss. subsp. *pumpellianus* (Scribner) Wagnon var. *pumpellianus* (Scribner) C.L. Hitchc. (*Bromopsis dicksonii* (Mitchell & Wilton) Á. & D. Löve; *Bromopsis inermis* (Leyss.) Holub subsp. *pumpelliana* (Scribn.) W.A. Weber; *Bromopsis pumpelliana* (Scribn.) Holub; *Bromus ciliatus* L. var. *coloradensis* Vasey ex Beal; *Bromus inermis* var. *pumpellianus* C.L. Hitchc.; *Bromus inermis* Leyss. var. *purascens* (Hook.) Wagnon; *Bromus inermis* Leyss. var. *tweedyi* (Scribn. ex Beal) C.L. Hitchc.; *Bromus pumpellianus* Scribn.; *Bromus pumpellianus* Scribn. subsp. *dicksonii* Mitchell & Wilton; *Bromus pumpellianus* Scribn. var. *tweedyi* Scribn. ex Beal; *Bromus pumpellianus* Scribn. var. *villosissimus* Hultén)

North America. Perennial, long-lived, erect, rhizomatous, stout, leaves flat, leaf sheaths with soft long hairs, short auricles on the lower leaves, hairy or glabrous nodes, flower head narrow to open, glumes glabrous, lemmas hairy along the margins and silky-hairy across the back, forage, on sandy or gravelly stream banks, open woods, see *Bulletin of the Torrey Botanical Club* 15(1): 9-10, f. s.n.; pl. D, f. 1-9. 1888 and *Rhodora* 52(651): 211. 1950, *Vascular Plants of the Pacific Northwest* 1: 507. 1969.

in English: Pumpelly brome, Pumpelly's brome

B. intermedius Guss. (*Bromus intermedius* Zumagl., nom. illeg., non *Bromus intermedius* Guss.; *Bromus lanceolatus* subsp. *intermedius* (Guss.) Lloret; *Serrafalcus intermedius* (Guss.) Parl.)

Algeria, Iran, Europe. Useful for erosion control, see *Species Plantarum* 1: 77. 1753, *Catalecta Botanica quibus plantae novae et minus cognitae ...* 1: 18. Lipsiae 1797, *Florae Siculae Prodromus* 1: 114. 1827, *Rariorum Plantarum in Sicilia Sponte Provenientium* 2: 17. 1840, *Flora Pedemontana* 1: 166. 1849, *Flora Dalmatica* 3: 341. 1852, *Mittheilungen der Thüringischen Botanischen Vereins* 13-14. 55. 1899 and *Bulletin, Division of Agrostology United States Department of Agriculture* 23: 19. 1900, *Collectanea Botanica a Barcinonensi Botanico Instituto Edita* 22: 151. 1993.

B. interruptus (Hackel) Druce (*Bromus mollis* var. *interruptus* Hack.)

Europe, U.K. Cultivated, species of arable and waste ground, weed in sanfoin and ryegrass, scarce or possibly extinct in wild, useful for erosion control, see *Journal of Botany, British and Foreign* 33: 344. 1895.

in English: interrupted brome

B. irtutensis Kom. (*Bromopsis irtutensis* (Kom.) Á. Löve & D. Löve; *Bromopsis korotkiji* (Drobow) Holub; *Bromopsis pumpelliana* subsp. *korotkiji* (Drobow) Tzvelev; *Bromus irtutensis* Kom.)

Russia, Irkutsk. Woodland openings, see *Folia Geobotanica et Phytotaxonomica* 8(2): 168. 1973, *Botaniska Notiser* 128(4): 501. 1975[1976].

B. japonicus Thunberg (*Bromus abolinii* Drobow; *Bromus arvensis* L.; *Bromus arvensis* var. *japonicus* (Thunb.) Fiori; *Bromus arvensis* var. *patulus* (Mert. & W.D.J. Pènzes; *Bromus japonicus* subsp. *phrygius* (Boiss.) Pènzes; *Bromus japonicus* subsp. *subsquarrosus* Pènzes; *Bromus japonicus* subsp. *typicus* (Hack.) Pènzes; *Bromus japonicus* var. *pendulus* (Schur) Schur ex Asch. & Graebn.; *Bromus japonicus* var. *phrygius* (Boiss.) Asch. & Graebn.; *Bromus japonicus* var. *porrectus* Hackel; *Bromus japonicus* var. *sooi* (Pènzes) Soó; *Bromus japonicus* var. *subsquarrosus* Savul.; *Bromus japonicus* var. *typicus* Hack.; *Bromus japonicus* var. *vestitus* (Schr.) Halácsy; *Bromus japonicus* var. *vestitus* (Schr.) Degen, nom. illeg., non *Bromus japonicus* var. *vestitus* (Schr.) Halácsy; *Bromus japonicus* var. *vestitus* (Schr.) Henrard, nom. illeg., non *Bromus japonicus* var. *vestitus* (Schr.) Halácsy; *Bromus kerlobagensis* Degen; *Bromus kochii* C.C. Gmel.; *Bromus patulus* Mert. & W.D.J. Koch; *Bromus patulus* subsp. *subsquarrosus* Borbás; *Bromus pendulus* Schur; *Bromus phrygius* Boiss.; *Bromus squarrosus* var. *patulus* (Mert. & W.D.J. Koch) Regel; *Bromus unilateralis* Schur; *Bromus vestitus* Schr.; *Forasaccus patulus* (Mert. & W.D.J. Koch) Bubani; *Serrafalcus patulus* (Mert. & W.D.J. Koch) Parl.) (Caucasus, Azerbaijan, Kura river)

Eurasia. Annual or biennial, herbaceous, low, caespitose, slender, erect or spreading, roots fibrous, sheaths hairy to densely villous, ligule membranous and truncate, leaves very hairy, auricles lacking, spreading and branched flower head, pyramidal nodding panicles, purplish spikelets lanceolate to oblong, glumes hairless to slightly rough, lower glume acute and 3-ribbed, upper glume obtuse and 5-ribbed, lemmas almost leathery in texture, broad lemmas lanceolate and obtuse, awn often twisted and flexuous, weed species naturalized elsewhere, may be troublesome weed in grain fields, a noxious weed on rangelands and prairies, ornamental, intolerant of alkaline soils, not recommended for restoration, reproduces only from seeds, decreases in nutritive content and digestibility as it matures, grows on soils of various textures, usually occurs along roadsides, prairies,

sand dunes, on disturbed sites and in undisturbed communities, waste grounds and fields, hybridizes with rattlesnake brome (*Bromus briziformis* Fischer & C.A. Meyer) and soft chess (*Bromus hordeaceus* L.), integrades with corn brome (*Bromus squarrosus* L.) and hairy brome (*Bromus commutatus* Schrad.), often confused with *Bromus commutatus* Schrad., see *Species Plantarum* 1: 77. 1753, *Systema Vegetabilium. Editio decima quarta* 119. 1784, *Flora Japonica*, ... 52, pl. 11. 1784, Carl [Karl] Christian Gmelin (1762-1837), *Flora Badensis Alsatica et confinium regionum cis et transrhena plantae a lacu bodamico* ... 4: 76, t. 6. Karlsruhe 1826, *Flora italiana, ossia descrizione delle piante* ... 1: 394. 1848, *Diagnoses plantarum orientalium novarum, ser. 1*, 2(13): 63. 1853, *Diagnoses plantarum orientalium novarum, ser. 2*, 3(4): 140. 1859, *Enum. Pl. Transsylv.* 802. 1866, *Acta Horti Petrop.* 7: 602. 1881 and *Synopsis der mitteleuropäischen Flora* 2: 620. 1901, *Flora Pyrenaea* ... 4: 387. 1901, *Conspectus Florae Graecae* 3: 397. 1904, *Nuova Flora Analitica d'Italia* 1: 149. 1923, *Repertorium Specierum Novarum Regni Vegetabilis* 21(581-587): 40. 1925, *Blumea* 4(3): 502. 1941, *Bull. Nat. Sci. Mus.* 31. 136. 1952, *Acta Botanica Academiae Scientiarum Hungaricae* 17(1-2): 115. 1971[1972], *Notes Royal Bot. Gard. Edinburgh* 42: 499. 1985.

in English: Japanese brome, wild oats, Japanese chess, spreading brome

in South Africa: hooigras, Japanese bromus

B. japonicus Thunb. subsp. *anatolicus* (Boiss. & Heldr.) Pènzes (*Bromus anatolicus* Boiss. & Heldr.; *Bromus carinatus* Hook. & Arn.)

Eurasia, Syria, Turkey. See *Systema Vegetabilium. Editio decima quarta* 119. 1784, *The Botany of Captain Beechey's Voyage* 403. 1840, *Diagnoses plantarum orientalium novarum, ser. 1*, 2(13): 63. 1853.

B. japonicus Thunb. subsp. *japonicus*

Europe, Egypt, Iran, Siberia, Turkey. See *Systema Vegetabilium. Editio decima quarta* 119. 1784.

B. japonicus Thunb. var. *vestitus* (Schr.) Halácsy (*Bromus japonicus* var. *vestitus* (Schr.) Degen, nom. illeg., non *Bromus japonicus* var. *vestitus* (Schr.) Halácsy; *Bromus japonicus* var. *vestitus* (Schr.) Henrard; *Bromus vestitus* Schr.)

South Africa. Villous to hairy, panicle very lax and nodding, glumes unequal and pubescent, lemma densely pubescent, see *Conspectus Florae Graecae* 3: 397. 1904 and *Flora vellebitica*. 1: 567. Budapest 1936-1938, *Blumea* 4(3): 502. 1941.

B. kalmii A. Gray (*Bromopsis kalmii* (Gray) Holub; *Bromus ciliatus* var. *purgans* (L.) A. Gray; *Bromus hookeri* E. Fourn.; *Bromus hookeri* var. *hookeri*; *Bromus imperialis* Steud.; *Bromus purgans* L.; *Bromus steudelii* Frank ex Steudel; *Forasaccus purgans* (L.) Lunell; *Zerna purgans* (L.)

Henrard) (for the Swedish (b. Ångermanland, Sweden) botanist Pehr (Peter) Kalm, 1716-1779 (d. Turku, Finland), traveler, pupil of Linnaeus, 1748-1751 North America, 1749 Canada, professor of economy and natural history at Abo (Turku), his writings include *Beschreibung der Reise die er nach dem nördlichen Amerika ... unternommen hat. Eine Übersetzung*. [translated from the Swedish by Johann Philipp Murray & Johann Andrews Murray] Göttingen 1754-1764 and *De Erica vulgari et Pteride aquilina*. Aboae [1754]. See Carl Skottsberg, "Pehr Kalm." *Kungliga Svenska vetenskapsakademiens levnadsteckningar*. 139: 221-503. 1951; Ragnar Granit, in *D.S.B.* 7: 210-211. 1981; J.H. South America, Uruguay. See *Bulletin de la Société Botanique de France* 124(56): 340. 1977.

B. latiglumis (Shear) A.S. Hitchc. (*Bromopsis latiglumis* (Scribn. ex Shear) Holub; *Bromus altissimus* Pursh, nom. illeg., non *Bromus altissimus* Weber ex Wiggers; *Bromus altissimus* f. *incanus* (Shear) Wiegand; *Bromus ciliatus* L.; *Bromus ciliatus* subvar. *latiglumis* (Scribn. ex Shear) Farw.; *Bromus ciliatus* var. *incanus* (Shear) Farw.; *Bromus ciliatus* var. *latiglumis* Scribn. ex Shear; *Bromus incanus* (Shear) Hitchc.; *Bromus latiglumis* (Scribn. ex Shear) Hitchc.; *Bromus latiglumis* f. *incanus* (Shear) Fernald; *Bromus purgans* auct. non L., misapplied; *Bromus purgans* var. *incanus* Shear; *Bromus purgans* var. *latiglumis* Scribn. ex Shear; *Forasaccus latiglumis* (Scribn. ex Shear) Lunell; *Zerna latiglumis* (Scribn. ex Shear) Henrard)

Northern America, U.S., Canada. Perennial, herbaceous, found in rich alluvial woods and riverbanks, thickets, see *Species Plantarum* 1: 76-77. 1753, *Flora Americae Septentrionalis; or, ...* 2: 728. 1814 and *Bulletin, Division of Agronomy United States Department of Agriculture* 23: 40-41. 1900, *Rhodora* 8(95): 211-212. 1906, *American Midland Naturalist* 4: 225. 1915, *Rhodora* 24(281): 91. 1922, *American Midland Naturalist* 10: 204. 1927, *Rhodora* 35: 316. 1933, *Blumea* 4(3): 498. 1941, *Folia Geobotanica et Phytotaxonomica* 9(3): 272. 1974.

in English: early-leaf brome, vibrant shade grass, brome grass

B. latiglumis (Shear) A.S. Hitchc. f. *incanus* (Shear) Wiegand

Northern America, U.S., Canada.

B. latiglumis (Shear) A.S. Hitchc. f. *latiglumis*

Northern America, U.S., Canada.

B. lepidus Holmb. (*Bromus brittanicus* I.A. Williams; *Bromus gracilis* Krösche, nom. illeg., non *Bromus gracilis* Weigel; *Bromus hordeaceus* subsp. *lepidus* (Holmb.) A. Pedersen; *Serrafalcus mollis* nra. *microstachyus* Rouy)

Europe. Annual, useful for erosion control, common in waste places, see *Flore de France* 14: 236. 1913, *Botaniska Notiser* 1924: 326. 1924, *Repertorium Specierum Novarum Regni Vegetabilis* 19: 329-330. 1924, *Journal of Botany, British and Foreign* 67: 65, f. A, D, G, p. 67. 1929, *Proceedings of the Royal Irish Academy* 52: 82. 1949, *Botanisk Tidsskrift* 68(3-4): 205. 1974, *Bot. Jahrb. Syst.* 122(2): 198. 2000.

in English: slender soft brome

B. leptoclados Nees (*Bromus cognatus* Steud.; *Bromus petitianus* A. Rich.)

Tropical Africa, Yemen, Arabia. Perennial, tufted to loosely tufted, erect or ascending, leaf sheaths hispid or glabrous, open panicle loose and nodding, spikelets narrowly oblong, glumes narrow and awned, lower glume 1-nerved, lemmas narrowly elliptic with a short straight awn, fodder, palatable pasture, grazed by all stock, common along rivers and streams, margins of ditches, in open areas, moist or shady sites, forest clearings, cliffs, open valleys, mountains, montane scrub, escarpment mountains, in forest shade, highlands, in humus, ungrazed shaded places, on riverbank, sandy loam, see *Florae Africae Australioris Illustrationes Monographicae* 453. 1841, *Synopsis Plantarum Glumacearum* 1: 321. 1854.

in English: mountain brome

B. lithobius L. (*Bromus andinus* Phil.; *Bromus andinus* var. *scabrivalva* Speg.; *Bromus chilensis* Trin.; *Bromus fonkii* F. Philippi; *Bromus scaber* F. Philippi; *Bromus unioloides* Kunth f. *humilis* (E. Desv.) Kloos; *Bromus unioloides* Kunth subvar. *pubescens* (Kunth) Kloos; *Bromus unioloides* Kunth var. *humilis* E. Desv.; *Bromus unioloides* Kunth var. *pubescens* Kunth) (from the Greek *lithos* “a stone” and *bios* “life,” referring to the rocky habitat)

South America, Argentina, Chile. Perennial, tufted, spreading, ascending, more or less erect, geniculate at base, prostrate or upright, leaf sheath rounded and softly hairy, ligule truncate and shortly denticulate, leaf blade villous, nodding panicle with slender branches, linear spikelets, acute and hairy glumes unequal to subequal, lemma keeled and densely hairy, awn present, cleistogamous and chasmogamous, common in waste ground, dry soil, roadsides, see *Nova Genera et Species Plantarum* 1: 151. 1815 [1816], *Linnaea* 10(3): 303-304. 1836, *Flora Chilena* 6: 438. 1854, *Linnaea* 29(1): 102. 1858, *Anales de la Universidad de Chile* 94: 341-342. 1896, *Revista de la Facultad de Agronomía; Universidad Nacional de La Plata* 3: 629. 1897 and *Anales del Museo Nacional de Buenos Aires* 21: 173. 1911, *Nederlandsch Kruidkundig Archief. Verslangen en Mededelingen der Nederlandsche Botanische Vereeniging* 1917: 164, 175. 1918, *Gayana, Botánica* 43: 47-110. 1986.

in English: Chilean brome

B. luzonensis J. Presl (*Bromus breviaristatus* Buckley; *Bromus carinatus* var. *linearis* Shear; *Bromus subvelutinus* Shear; *Trisetum luzonensis* (J. Presl) Steud.; *Triticum luzonense* (J. Presl) Kunth)

Northern America. See *Species Plantarum* 1: 85. 1753, *Syn. Pl.* 1: 97. 1805, *Reliquiae Haenkeanae* 1(4-5): 262. 1830, *Enumeratio Plantarum Omnium Hucusque Cognitarum* 1: 446. 1833, *The Botany of Captain Beechey's Voyage* 403. 1840, *Nomenclator Botanicus. Editio secunda* 1: 228. 1840, *Proceedings of the Academy of Natural Sciences of Philadelphia* 14: 98. 1862 and *Bulletin, Division of Agrostology*

United States Department of Agriculture 23: 52, 61, f. 32, 39. 1900, *Taxon* 39: 660. 1990.

B. macrocladus Boiss.

Turkey. Indeterminate species, see *Diagnoses plantarum orientarium novarum* 2(13): 64. 1854.

B. madritensis L. (*Anisantha flabellata* (Hack. ex Boiss.) Holub; *Anisantha madritensis* (L.) Nevski; *Bromus flabellatus* Hack. ex Boiss.; *Bromus madritensis* Cav. ex Kunth; *Bromus matritensis* L.; *Bromus variegatus* subsp. *villosulus* (Steud.) P.M. Sm.; *Bromus villosus* Forssk., nom. illeg., non *Bromus villosus* Scop.; *Festuca madritensis* (L.) Desf.; *Festuca matritensis* (L.) Desf.; *Genea madritensis* (L.) Dumort.; *Zerna madritensis* (L.) Gray; *Zerna madritensis* (L.) Panz. ex B.D. Jacks)

Mediterranean, southern Europe. Annual or short-lived perennial, tufted or loosely tufted, noded, slender, erect or geniculate, glabrous, unbranched, auricles absent, leaves mostly basal, ligule lacinate denticulate and hyaline, leaf sheaths keeled, upper sheaths glabrous, raceme or panicle upright and conic, panicle branches erect or slightly spreading, spikelets oblong, glabrous peduncle, glumes subequal to unequal, lower glume carinose and narrow-lanceolate, upper glume lanceolate, callus pointed, lemmas toothed and keeled, lemma margins without cilia, slender and slightly curved awns, ovary apex hairy, fruit oblong and hairy, invasive weed naturalized elsewhere, of little value to livestock and big game, drought-resistant, long awns harmful to livestock, the long awned ripe seeds may be troublesome in the wool of sheep, characteristic of disturbed places, ballast, grows on sandy soils, waste ground, red rocky soil, coastal sand, shallow soils, weedy places, dry rocky soil, there is a taxonomic disagreement about *Bromus madritensis* L. in the strict sense, see *Amoen. Acad. seu dissertationes variae* ... 4: 265. 1759, *Flora Aegyptiaco-Arabica* 23. 1775, *Flora Atlantica* 1: 91. 1798, *A Natural Arrangement of British Plants* 2: 117. 1821, *Enumeratio Plantarum Omnium Hucusque Cognitarum* 1: 419. 1833, *Bulletin de la Société Botanique de Belgique* 7: 67. 1868, *Flora Orientalis* 5: 648. 1884, *Index Kewensis* 2: 1249. 1895 and *Folia Geobotanica et Phytotaxonomica* 8(2): 176. 1973, *Notes Royal Bot. Gard. Edinburgh* 43: 500. 1985, *Edinb. J. Bot.* 50: 11. 1993.

in English: compact brome, foxtail chess, red brome, wall brome, Madrid brome, lesser brome, Spanish brome

B. madritensis L. subsp. *madritensis*

Mediterranean. Annual, occurs in wetlands and in nonwetlands, in disturbed habitats.

in English: foxtail chess

B. madritensis L. subsp. *rubens* (L.) Husnot (*Bromus madritensis* subsp. *rubens* (L.) Duvin; *Bromus rubens* L.)

Mediterranean, southern Europe. Annual, reddish, noxious and invasive weed species, occurs in wetlands and in nonwetlands, in disturbed habitats, see Lesley A. DeFalco,

David R. Bryla, Vickie Smith-Longozo and Robert S. Nowak, "Are Mojave Desert annual species equal? Resource acquisition and allocation for the invasive grass *Bromus madritensis* subsp. *rubens* (Poaceae) and two native species." *Am. J. Bot.* 90: 1045-1053. 2003.

in English: red brome

B. madritensis L. var. *delilei* Boiss. (*Bromus madritensis* var. *delilei* Boiss. ex Batt. & Trab.)

Europe, Asia. See *Flora Orientalis* 5: 649. 1884, *Flore d'Alger* 2: 226. 1895 and *Bulletin de la Société d'Histoire Naturelle de l'Afrique du Nord* 30: 311. 1939, *Willdenowia* 6(2): 291-296. 1971.

B. mango E. Desv. (*Bromus burkartii* Muñoz; *Ceratochloa mango* (E. Desv.) Holub)

South America, Chile, Argentina, Chubut, Neuquen, Rio Negro. Rare species, old cereal, cultivated by the Indians pre-conquest, see *Flora Chilena* 6: 436, t. 82. 1854 and *Agricultura Técnica (Santiago)* 8: 83, f. 16-18. 1948, *Folia Geobotanica et Phytotaxonomica* 8(2): 170. 1970, *Flora Patagónica* 3: 77-93. 1978.

B. marginatus Nees ex Steud. (*Bromus breviaristatus* Buckley; *Bromus carinatus* Hook. & Arn.; *Bromus carinatus* var. *carinatus*; *Bromus carinatus* Hook. & Arn. var. *linearis* Shear; *Bromus carinatus* var. *marginatus* (Nees ex Steud.) Hitchc.; *Bromus flodmanii* Rydb.; *Bromus hookeri* var. *marginatus* (Nees ex Steud.) E. Boivin; *Bromus parviflorus* Nutt. ex A. Gray; *Bromus pauciflorus* Nutt. ex Shear, nom. illeg., non *Bromus pauciflorus* Thunb.; *Bromus proximus* Shear; *Bromus sitchensis* var. *marginatus* (Nees ex Steud.) B. Boivin; *Ceratochloa marginata* (Nees ex Steud.) B.D. Jackson; *Ceratochloa marginata* Steud. ex B.D. Jacks.; *Ceratochloa marginata* (Nees ex Steud.) W.A. Weber; *Forasaccus marginatus* (Nees ex Steud.) Lunell (named for Julius Hjalmar Flodman, plant collector)

Pacific Northwest of the U.S., Northern America, Canada, Alberta, British Columbia. Perennial bunchgrass, short-lived, tufted, erect, tall, more or less coarse, noncreeping, leafy, deep and well-branched root system, leaf sheaths sparsely to densely hairy, ligule gnawed or sparsely hairy along the edge, leaf blades flat, no auricles, flower head mostly narrow and with erect branches, pedicles longer than the spikelets, keeled lemmas leathery and nerved, forage, recommended for short term pastures or hay crops, useful for erosion control, grows in grasslands, waste places, dry soil, damp rocky soil, open slopes, shrublands and openings in the forests, resembles *Bromus carinatus* Hook. & Arn., see *The Botany of Captain Beechey's Voyage* 403. 1840,

Synopsis Plantarum Glumacearum 1: 322. 1854, *Proceedings of the Academy of Natural Sciences of Philadelphia* 14: 98, 336. 1862, *Mexicanas Plantas* 2: 127. 1886, *Index Kewensis* 1: 487. 1893 and *Bulletin, Division of Agrostology United States Department of Agriculture* 23: 53, 55. 1900, *Bulletin of the Torrey Botanical Club* 28: 245. 1901, *Proceedings of the Biological Society of Washington* 18: 148. 1905, *Bulletin of the Torrey Botanical Club* 36: 538. 1909, *American Midland Naturalist* 4: 225. 1915, *Flora of the Rocky Mountains* 89. 1917, *Le Naturaliste Canadien* 94(4): 521. 1967, *Brittonia* 33(3): 325. 1981, *Phytologia* 55(3): 209. 1984.

in English: large mountain brome, mountain brome, California brome, western brome grass

in French: brome marginé

B. maritimus (Piper) A.S. Hitchc. (*Bromus carinatus* Hook. & Arn. var. *maritimus* (Piper) C.L. Hitchc.; *Bromus marginatus* subsp. *maritimus* Piper; *Bromus marginatus* var. *maritimus* Piper; *Ceratochloa maritima* (Piper) Holub)

Northern America, U.S. Perennial, see *The Botany of Captain Beechey's Voyage* 403. 1840 and *Proceedings of the Biological Society of Washington* 18: 148. 1905, *A Flora of California* 1: 177. 1912, *Vascular Plants of the Pacific Northwest* 1: 504. 1969, *Folia Geobotanica et Phytotaxonomica* 8(2): 170. 1973.

in English: seaside brome, maritime brome

B. maroccanus Pau & Font Quer (*Bromopsis maroccana* (Pau & Font Quer) Holub; *Bromus maroccanus* Pau & Font Quer ex Sennen & Mauricio; *Zerna maroccana* (Pau & Font Quer) Holub)

Morocco. Rare species, see *Catalogo de la flora del Rif oriental ...* 134. 1934, *Folia Geobotanica et Phytotaxonomica* 5: 440. 1970, *Folia Geobotanica et Phytotaxonomica* 8(2): 168. 1973.

B. maximus Desf. (*Bromus diandrus* Roth; *Bromus diandrus* subsp. *maximus* (Desf.) Soó; *Bromus diandrus* var. *rigidus* (Roth) F. Sales; *Bromus madritensis* var. *maximus* (Desf.) B. meyeri Swallen (*Bromopsis anomala* (Rupr. ex E. Fourn.) Holub; *Bromus anomalus* Rupr. ex E. Fourn.)

America, Mexico. Perennial, rhizomatous, see *Annales de la Société Linnéenne de Lyon, sér. 2*, 17: 187. 1869, *Mexicanas Plantas* 2: 126. 1886 and *Contributions from the United States National Herbarium* 29(9): 395. 1950, *Folia Geobotanica et Phytotaxonomica* 8(2): 167. 1973.

B. modestus Renvoize (*Bromus frigidus* Ball, nom. illeg., non *Bromus frigidus* Boiss. & Hausskn.)

South America, Peru. Nodding inflorescences, see *Journal of the Linnean Society, Botany* 22: 63. 1885 and *Kew Bulletin* 49(3): 545. 1994.

B. moesiacus Vell. (*Bromopsis moesiaca* (Vell.) Holub; *Bromus erectus* Huds. subsp. *erectus* var. *moesiacus* (Vell.) Stoj. & Stef.; *Zerna moesiaca* (Vell.) Holub)

Bulgaria. Rare species, see *Flora Bulgarica* 616. 1891 and *Folia Geobotanica et Phytotaxonomica* 5: 440. 1970, *Folia Geobotanica et Phytotaxonomica* 8(2): 168. 1973.

in English: misian brome

B. mollis L. (*Bromus hordeaceus* L.; *Bromus mollis* Thunb., nom. illeg., non *Bromus mollis* L.)

Europe. Leaf blades pubescent, sheaths pubescent, dense panicles, spikelets strongly compressed, grains toxic could be fatal to poultry, see *Species Plantarum* 1: 76-77. 1753, *Species Plantarum, Editio Secunda* 1: 112, 114. 1762, *Observationes Botanicae* 8, t. 1, f. 9. 1772, *Prodromus Plantarum Capensium, ...* 22. 1794, *Prodromus stirpium in horto ad Chapel Allerton vigentium*. 23. Londini [London] (Nov-Dec) 1796, *Syn. Pl.* 1: 95. 1805, *Novitiae Florae Suecicae* 16. 1814-1823, *Systema Vegetabilium, editio decima sexta* 4: 36. 1827, *Handbok i Skandinaviens Flora* 33. 1832, *Rariorum Plantarum in Sicilia Sponte Provenientium* 2: 11. 1840, *Synopsis Plantarum Glumacearum* 1: 324. 1854, *Flore de France* 3: 590. 1856, *Actes de la Société Linnéenne de Bordeaux* 25: 613. 1864, *Flora von Nieder-Österreich* 109. 1890 and *Flora Pyrenaea ...* 4: 386. 1901, *Rhodora* 24(281): 90. 1922, *Nuova Flora Analitica d'Italia* 1: 149. 1923, *Suomen Kasvio* 219. Helsinki 1933, *J. Bombay Nat. Hist. Soc.* 551. 1936, *Catalogue des Plantes du Maroc* 4: 943. 1941, *Uppsala Universitets Årsskrift* 7: 84. 1945, *Flore de l'Afrique du Nord*: 3: 254. 1955, *Watsonia* 6: 327-344. 1968, *Flora Republicii Socialiste Romania* 12: 325. 1972, *Notes from the Royal Botanic Garden, Edinburgh* 42: 496, 499. 1985, *Taxon* 49(2): 247-248. 2000.

B. mollis L. var. **glabratus** Hartm.

Europe. See *Handbok i Skandinaviens Flora*, edition 5 289. 1849.

B. mucroglumis Wagnon (*Bromopsis mucroglumis* (Wagnon) Holub; *Bromus thysanoglottis* T.R. Soderstr. & J.H. Beaman)

North America, U.S. Slopes, clay soil, see *Leaflets of Western Botany* 6(3): 67-68. 1950, *Publications of the Museum. Michigan State University. Biological Series* 3(5): 509. 1968, *Folia Geobotanica et Phytotaxonomica* 8(2): 168. 1973.

in English: sharp-glume brome

B. natalensis Stapf (*Bromus natalensis* var. *lasiophilus* Stapf; *Bromus speciosus* sensu Compton, non Nees)

South Africa. Perennial, rhizomatous, open panicle, on rocky places, hillsides, see *Flora Capensis* 7: 732-733. 1900.

B. nepalensis Melderis

Western Nepal. Perennial, erect, caespitose, glabrous, leaf blade acuminate, inflorescence nodding, panicle spreading, spikelets persistent and slightly keeled, lower glume lanceolate and acute, upper glume broadly lanceolate, lemma awned, erect awn, see *Enum. Fl. Pl. Nepal* 1: 125. 1978.

B. nottowayanus Fern. (*Bromopsis nottowayana* (Fernald) Holub) (U.S., Virginia, Valley of Nottoway River, Sussex County)

North America, U.S. Perennial, without rhizomes, forming clumps, an open panicle often drooping at maturity, numerous spikelets, upper glume 5-nerved, grows along rivers and streams, bottomland woods, on rich loamy soils, this grass very similar to *Bromus latiglumis* (Shear) A.S. Hitchc. and *Bromus pubescens* Muhl. ex Willd., see *Rhodora* 43(514): 530-532, pl. 670, f. 1-7. 1941, *Folia Geobotanica et Phytotaxonomica* 8(2): 168. 1973, P.M. Mackenzie & D. Ladd, "Status of *Bromus nottowayanus* (Poaceae) in Missouri." in *Missouriensis*. 16(2): 57-68. 1995.

in English: Nottoway valley brome, satin brome

B. obtusiflorus Hack. (*Bromus araucanus* Phil.; *Bromus araucanus* var. *obtusiflorus* (Hack.) J.A. Cámara; *Bromus araucanus* var. *obtusiflorus* (Hack.) J. Hern.)

Southern America, Argentina. See *Anales de la Universidad de Chile* 94: 343. 1896 and *Anales del Museo Nacional de Buenos Aires* 21: 171. 1911, *Flora Patagónica* 3: 86. 1978.

B. orcuttianus Vasey (*Bromopsis orcuttiana* (Vasey) Holub; *Bromus brachyphyllus* Merr.; *Bromus orcuttianus* (Shear) A. Hitchc.; *Bromus orcuttianus* var. *hallii* A.S. Hitchc.)

North America, U.S. Annual, open dry pine forests, see *Botanical Gazette* 10: 223. 1885 and *Bulletin, Division of Agrostology United States Department of Agriculture* 23: 43. 1900, *Rhodora* 4(43): 146-147. 1902, *A Flora of California* 1: 175. 1912, *Folia Geobotanica et Phytotaxonomica* 8(2): 168. 1973.

in English: Orcutt's brome, Chinook brome

B. orcuttianus Vasey var. *hallii* Hitchc.

North America, U.S.

B. orcuttianus Vasey var. *orcuttianus*

North America, U.S.

B. ornans Kom. (*Bromopsis ornans* (Kom.) Holub; *Bromopsis pumpelliana* subsp. *ornans* (Kom.) Tzvelev; *Bromus arcticus* subsp. *ornans* (Kom.) Karav. ex Gubanov & V.N. Tikhom.; *Bromus arcticus* var. *ornans* (Kom.) Hultén; *Zerna ornans* (Kom.) Nevski; *Zerna pumpelliana* subsp. *ornans* (Kom.) Tzvelev)

Asia, Australia. See *Contributions from the United States National Herbarium* 13: 83. 1910, *Kongliga Svenska Vetenskapsakademiens Handlingar* 5: 147, t. 6, f. d. 1927, *Novosti Sist. Vyss. Rast.* 7: 58. 1970[1971], *Folia Geobotanica et Phytotaxonomica* 8(2): 168. 1973.

B. oxyodon Schrenk (*Bromus krausei* Regel; *Bromus lanceolatus* subsp. *oxyodon* (Schrenk) Tzvelev; *Bromus oxyodon* Schrenk)

Asia, Iran, Russia. Annual, loose and open panicles, awned, useful for erosion control, see *Enumeratio Plantarum Novarum* 2: 1. 1841.

B. pacificus Shear (*Bromopsis pacifica* (Shear) Holub; *Bromus magnificus* Elmer)

North America, U.S. Perennial, common in moist thickets near the seashore, boggy spots, see *Bulletin, Division of Agrostology United States Department of Agriculture* 23: 38, f. 21. 1900, *Botanical Gazette* 36: 53. 1903, *Folia Geobotanica et Phytotaxonomica* 8(2): 168. 1973.

in English: Pacific brome

B. pannonicus Kumm. & Sendtn. (*Bromopsis pannonica* (Kummer & Sendtn.) Holub; *Bromus erectus* var. *pannonicus* (Kummer & Sendtn.) Asch. & Kan.; *Bromus erectus* var. *pannonicus* (Kummer & Sendtn.) Fiori, nom. illeg., non *Bromus erectus* var. *pannonicus* (Kummer & Sendtn.) Asch. & Kan.; *Bromus erectus* var. *vernalis* Pancic; *Bromus pannonicus* Hack., nom. illeg., non *Bromus pannonicus* Kummer & Sendtn.; *Bromus reptans* Borbás; *Bromus vernalis* (Panic ex Hack.; *Zerna pannonica* (Kummer & Sendtn.) Holub)

Central Europe. Useful for erosion control, see *Flora* 32: 757. 1849 and *Nuova Flora Analitica d'Italia* 1: 146. 1923, *Folia Geobotanica et Phytotaxonomica* 5: 440. 1970, *Acta Botanica Academiae Scientiarum Hungaricae* 17(1-2): 115. 1971[1972], *Folia Geobotanica et Phytotaxonomica* 8(2): 168. 1973, *Botanical Journal of the Linnean Society* 76: 360. 1978.

B. pannonicus Kumm. & Sendtn. subsp. *monocladus* (Domin) P.M. Sm. (*Bromus monocladus* Domin)

Europe, Hungary. See *Botanical Journal of the Linnean Society* 76: 360. 1978.

B. pannonicus Kumm. & Sendtn. subsp. *pannonicus*

Central Europe.

B. parodii Covas & Itria (after the Argentine botanist Lorenzo Raimundo Parodi, 1895-1966, agrostologist, professor of botany in Argentina, 1934-1962 editor and director of the *Revista Argentina de Agronomía*, his writings include "Nota sobre las especies de *Briza* de la flora argentina." *Revista Fac. Agron. Veterin.* 3: 113-138. 1920, "Albert Spear Hitchcock." *Revista Argent. Southeast Asia, Turkey, Eastern Europe. Perennial bunchgrass, tufted, vigorous, mildly rhizomatous, extensive fibrous root system, leaves and stems generally pubescent, basal leaf growth, leaves long and arching, fodder, forage, permanent pasture, useful for erosion control, growing in dry hillsides, meadow steppes, black soil, open meadows at mountain top, see *Verhandlungen des Naturforschenden Vereins in Brünn* 10: 8. 1871 [1872], *Enumeratio Plantarum Transsylvanicae* 584. 1886 and *Acta Botanica Academiae Scientiarum Hungaricae* 17(1-2): 115. 1971[1972], *Folia Geobotanica et Phytotaxonomica* 8(2): 169. 1973.

in English: meadow brome, meadow bromegrass, bromegrass.

B. rubens L. (*Anisantha rigens* (L.) Nevski; *Anisantha rubens* (L.) Nevski; *Bromus dilatatus* Lam.; *Bromus madritensis* subsp. *rubens* (L.) Husnot; *Bromus madritensis* subsp. *rubens* (L.) Duvin; *Bromus matritensis* subsp. *rubens*

(L.) Husnot; *Bromus purpurascens* Delile; *Bromus scoparius* var. *rubens* (L.) St.-Amans; *Festuca rubens* (L.) Pers.; *Zerna rubens* (L.) Grossh.)

Southern Europe, Mediterranean. Annual bunchgrass, tufted, erect, geniculate, pubescent, dense and shallow root system, leaves nonauriculate, culms hairy below the inflorescence, leaf sheath villous and not keeled, ligule lacinate and hyaline, blade flat or involute, leaves hairy to pilose to shortly pubescent, green reddish panicle or raceme compact or contracted, dense panicles of erect branches, cleistogamous spikelets, seed heads large and nodding, glumes acute and subequal to unequal, lower glume narrowly oblong, strongly nerved lemmas keeled and curved outwards, awn slightly divaricate or twisted, palea hyaline to membranous, ovary apex hairy, fruit compressed and not grooved, weed species naturalized elsewhere, potential wildland pest, forage, low palatability, suitable for revegetation, ungrazed after the seed heads mature, generally on poor sandy soils in dry areas, desert, on arid and shallow-soil sites, open hillsides, waste ground, woodland or chaparral areas, disturbed places, see *Centuria I. Plantarum* ... 1: 5. 1755, *Amoen. Acad. seu dissertationes variae* ... 4: 265. 1759, *Mantissa Plantarum* 1: 33. 1767, *Flora Aegyptiaco-Arabica* 23. 1775, *Encyclopédie Méthodique, Botanique* 1: 468. 1785, *Flora Atlantica* 1: 91. 1798, *Syn. B. sinensis Keng f. (*Bromus sinensis* Keng)

China. Subalpine shrub, gravelly loam, see *Claves Generum et Specierum Graminearum Primarum Sinicarum Appendice Nomenclatione Systematica* 175. 1957, *Acta Botanica Yunnanica* 4(4): 349. 1982.

B. sitchensis Trin. (Sitcha/Sitka Isl.)

Canada, North America, U.S. Perennial, stout, robust, erect, without rhizomes, flat leaves sparsely hairy, leaf sheaths hairless or covered by long scattered hairs, ligule denticulate with a ragged to hairy margin, no auricles, large flower head very open and branched, spreading panicle branches, strongly flattened spikelets, cleistogamous and chasmogamous, glumes subequal acute to acuminate, keeled lemmas awned and nerved, occurs on rocky soil, stream banks and exposed rocky bluffs, waste ground, gardens, closely resembles Aleutian brome *Bromus aleutensis* Trin. ex Griseb., see *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques, Physiques et Naturelles* 2(2): 173. 1832, *Flora Rossica* 4(13): 361. 1852, *Synopsis Plantarum Glumacearum* 1: 322. 1854 and *Flora of Alaska and Neighboring Territories. A Manual of the Vascular Plants* 254. 1942, *Le Naturaliste Canadien* 94(4): 521. 1967.

in English: Sitka brome, Alaska brome

B. speciosus Nees (*Bromus natalensis* Stapf)

South Africa. Perennial, tufted, panicle open with glabrous pedicels, purplish linear spikelets, found on moist mountain slopes, along streams, see *Florae Africae Australioris Illustrationes Monographicae* 454. 1841 and *Flora Capensis* 7: 732-733. 1900.

in English: purple brome

B. squarrosus L. (*Bromus japonicus* subsp. *noeanus* (Boiss.) Pènzes; *Bromus japonicus* var. *paniculatus* (Kuntze) Roshev.; *Bromus noeanus* Boiss.; *Bromus pubescens* Pieri, nom. illeg., non *Bromus pubescens* Muhl. ex Willd.; *Bromus squarrosus* subsp. *typicus* Pènzes; *Bromus squarrosus* var. *villosus* Koch, nom. illeg.; *Bromus wolgensis* Fisch. ex J. Jacq.; *Forasaccus squarrosus* (L.) Bubani; *Serrafalcus squarrosus* (L.) Bab.)

Mediterranean, Europe. Annual or biennial, herbaceous, stems solitary or tufted, stems erect or ascending, leaves hairy, panicles with open drooping branches, sparse spikelets ovate to elliptic, awn recurved and twisted, weed species, growing in rocky dry areas, waste places, alluvial soils, coarse brown sandy loams, railroad ballast, grassland, open habitats, disturbed places, see *Species Plantarum* 1: 76. 1753, *Species Plantarum, Editio Secunda* 1: 114. 1762, *Eclogae Graminum Rariorum* 20, t. 15. 1813, The *Flora corcirese* anonymously published in *Ionios Anthologia* ... 3: 680. 1834, *Manual of British Botany* 375. 1843, *Acta Horti Petrop.* 7: 602. 1881, *Flora Orientalis* 5: 651. 1884 and *Flora Pyrenaea* ... 4: 385. 1901, *Flora Republicii Socialiste Romania* 12: 327. 1972, *Notes from the Royal Botanic Garden, Edinburgh* 42: 500. 1985, *Anales de Biologia, Facultad de Biologia, Universidad de Murcia* 13: 27. 1987.

in English: rough brome, corn brome, chess

B. stamineus E. Desv. (*Bromus cebadilla* Steud.; *Bromus uniolooides* f. *elatus* (E. Desv.) Kloos; *Bromus uniolooides* var. *elata* E. Desv.; *Bromus valdivianus* F. Philippi; *Ceratochloa staminea* (E. Desv.) Stace; *Ceratochloa valdiviana* (Phil.) Holub)

South America, Argentina, Chile, Juan Fernandez Islands. Annual or perennial, robust, coarse, tufted, spreading, ascending to more or less erect, leaf sheath hairy to villous, ligule denticulate, heavy panicles erect and spreading, glumes unequal acute, awned, weed species, forage, useful for erosion control, waste ground, disturbed places, along roadsides, often coastal, see *Nova Genera et Species Plantarum* 1: 151. 1815 [1816], *Flora Chilena* 6: 438, 440. 1854, *Synopsis Plantarum Glumacearum* 1: 321. 1854, *Linnaea* 29(1): 102. 1858 and *Nederlandsch Kruidkundig Archief. in English: Harlan brome, roadside brome, spikey brome, grazing brome

B. stenostachyus Boiss. (*Bromopsis stenostachya* (Boiss.) Holub; *Zerna stenostachya* (Boiss.) Nevski)

Asia, Iran. Useful for erosion control, see *Folia Geobotanica et Phytotaxonomica* 8(2): 169. 1973.

B. sterilis L. (*Anisantha sterilis* (L.) Nevski; *Bromus distichus* Moench; *Bromus grandiflorus* Weigel; *Bromus grandiflorus* K. Koch, nom. illeg., non *Bromus grandiflorus* Weigel; *Bromus jubatus* Ten., nom. illeg., non *Bromus jubatus* Vill.; *Genea sterilis* (L.) Dumort.; *Schedonorus sterilis* (L.) Fries; *Zerna sterilis* Panz. ex B.D. Jacks.; *Zerna sterilis* (L.) Panz.)

North Africa, Morocco, Europe, southwestern Asia. Annual or biennial, herbaceous, reddish, loosely tufted or solitary, more or less erect or geniculate and ascending, leaf sheath densely pubescent, ligule lacerate, open panicle with drooping spreading branches, glumes unequal and membranous, scabrous lemmas rounded and awned, weed species naturalized elsewhere, found in disturbed places, rocky sites, dry rocky soil, dry sandy soil, damp rocky soil, bottomland, waste ground, along roadsides, mowed areas, see *Species Plantarum* 1: 77. 1753, *Observationes Botanicae* 9-10, t. 1, f. 6. 1772, *Flora Napolitana* 3: 89. 1824-1829, *Botaniska Notiser* 131. 1843, *Linnaea* 21(4): 419. 1848, *Bulletin de la Société Botanique de Belgique* 7: 67. 1868, *Index Kewensis* 2: 1249. 1895 and *Acta Botanica Academiae Scientiarum Hungaricae* 17(1-2): 115. 1971[1972], *Notes from the Royal Botanic Garden, Edinburgh* 42: 500. 1985, *Blumea* 35: 497. 1991, *Taxon* 41: 584. 1992.

in English: poverty brome, sterile brome, barren brome

in French: brome stérile

in Japan: arechi-no-cha-hiki

B. striatus Hitchc. (*Bromus catharticus* var. *striatus* (Hitchc.) Pinto)

South America, Peru. See *Symbolae Botanicae*, ... 2: 22. 1791 and *Contributions from the United States National Herbarium* 24(8) 316. 1927.

B. subvelutinus Shear (*Bromus breviaristatus* Buckley; *Bromus luzonensis* J. Presl; *Bromus marginatus* var. *breviaristatus* (Buckley) Beetle; *Trisetum luzonensis* (J. Presl) Steud.; *Triticum luzonense* (J. Presl) Kunth)

Northern America, U.S. Perennial, see *Reliquiae Haenkeanae* 1(4-5): 262. 1830, *Enumeratio Plantarum Omnium Hucusque Cognitarum* 1: 446. 1833, *Nomenclator Botanicus. Editio secunda* 1: 228. 1840, *Proceedings of the Academy of Natural Sciences of Philadelphia* 14: 98. 1862 and *Bulletin, Division of Agrostology United States Department of Agriculture* 23: 52, f. 32. 1900, *Phytologia* 55(3): 209. 1984, *Taxon* 39: 660. 1990.

in English: short brome, hoary brome

B. suksdorfii Vasey (*Bromopsis suksdorfii* (Vasey) Holub) (after the American (b. Holstein, Germany) botanist Wilhelm Nikolaus Suksdorf, 1850-1932 (killed by a train),

plant collector (Iowa, California, Montana, Oregon and Washington), worked with Asa Gray, his writings include *Flora washingtonensis*. [White Salmon, Washington 1892] and "Untersuchungen in der Gattung *Amsinckia*." *Werdenda*. 1: 47-113. 1931; see J.H. Barnhart, *Biographical notes upon botanists*. 3: 346. 1965; R. Zander, F. Encke, G. Buchheim and S. Seybold, *Handwörterbuch der Pflanzennamen*. 14. Aufl. 1993; T.W. Bossert, comp., *Biographical dictionary of botanists represented in the Hunt Institute portrait collection*. 388. 1972; S. Lenley et al., *Catalog of the manuscript and archival collections and index to the correspondence of John Torrey*. Library of the New York Botanical Garden. 360, 398. 1973; E.M. Tucker, *Catalogue of the library of the Arnold Arboretum of Harvard University*. Cambridge, Mass. 1917-1933; Joseph Ewan, *Rocky Mountain Naturalists*. 1950)

North America, U.S. Perennial, subalpine forest, loose soil, see *Botanical Gazette* 10: 223. 1885 and *U.S.D.A. Div. Agrostol. Bull.* 23: 46. 1900, *Folia Geobotanica et Phytotaxonomica* 5: 440. 1970, *Folia Geobotanica et Phytotaxonomica* 8(2): 169. 1973.

in English: Suksdorf's brome

B. syriacus Boiss. & Blanche

Jordan, Israel, Syria. Useful for erosion control, see *Diagn. pl. orient.* ser. 2, 4: 139. 1859, *Flora Orientalis* 5: 644. 1884 and *Folia Geobotanica et Phytotaxonomica* 8(2): 169. 1973.

B. tectorum L. (*Anisantha pontica* Koch; *Anisantha tectorum* (L.) Nevski; *Bromus abortiflorus* St.-Amans; *Bromus nutans* St.-Lag.; *Bromus setaceus* Buckley; *Bromus tectorum* f. *nudus* (Klett & Richt.) H. St. John; *Bromus tectorum* L. var. *glabratus* Spenner; *Bromus tectorum* var. *hirsutus* Regel; *Bromus tectorum* var. *nudus* Klett & Richter; *Bromus tectorum* var. *tectorum*; *Genea tectorum* (L.) Dumort.; *Schedonorus tectorum* (L.) Fries; *Zerna tectorum* (L.) Panz.; *Zerna tectorum* Panz. ex B.D. Jacks.)

Mediterranean. Annual or occasionally biennial, extremely variable in height, herbaceous, erect, slender, stems single or tufted or loosely tufted, culms glabrous below the inflorescence, ligule with a lacerate margin, sheaths softly hairy to shortly pubescent, leaves hairy and purplish, no auricles, flower head more or less lax or contracted, dense and nodding panicle with flexuous branches, brush-like spikelets often purplish and moderately awned or with long and prominent awns, glumes very unequal, lemmas hairy to long-hairy over the back and often with a few longer hairs on the margins, native pasture species, grows quickly and reproduces only from seeds, invasive and noxious weed species, widespread aggressive invader, readily invades perennial forage crops, may be troublesome weed in grain fields, grows in waste ground and disturbed areas, sandy soil on roadsides, disturbed habitats, fields, dry fallow fields, along highways and railroads, overgrazed rangelands, see *Species Plantarum* 1: 77. 1753, *Flora Friburgensis* 1:

152. 1825, *Flora der phanerogamischen Gewächse der Umgegend von Leipzig* 109. Leipzig 1830, *Botaniska Notiser* 131. 1843, *Linnaea* 21(4): 394. 1848, *Flore de France ... in English: drooping brome, June grass, downy chess, early chess, cheat grass, cheatgrass brome, downy brome, bronco grass, slender chess, downy brome grass, military grass, Mormon oats

in French: brome des toits

in Spanish: bromo veloso, espiguilla colgante

in Turkey: ibubuk ekini

B. tectorum L. var. ***glabratus*** Spenner. (*Anisantha tectorum* (L.) Nevski; *Bromus tectorum* L.; *Bromus tectorum* f. *nudus* (Klett & Richt.) H. St. John; *Bromus tectorum* var. *nudus* Klett & Richt.)

Europe. See *Species Plantarum* 1: 77. 1753, *Flora Friburgensis* 1: 152. 1825, *Flora der phanerogamischen Gewächse der Umgegend von Leipzig* 109. Leipzig 1830 and *Notes from the Royal Botanic Garden, Edinburgh* 42: 500. 1985.

B. texensis (Shear) A.S. Hitchc. (*Bromopsis texensis* (Shear) Holub; *Bromus purgans* var. *texensis* Shear)

North America, U.S. Annual, weed species, disturbed places, see *Species Plantarum* 1: 76. 1753 and *Bulletin, Division of Agrostology United States Department of*

Agriculture 23: 41. 1900, *Contributions from the United States National Herbarium* 17(3): 381. 1913, *Folia Geobotanica et Phytotaxonomica* 8(2): 169. 1973.

in English: Texas brome

B. thysanoglottis Soderstr. & J.H. Beaman (*Bromus mucroglumis* Wagnon)

Mexico, U.S. Slopes, clay soil, see *Leaflets of Western Botany* 6(3): 67-68. 1950, *Publications of the Museum. Michigan State University. Biological Series* 3(5): 509. 1968, *Folia Geobotanica et Phytotaxonomica* 8(2): 168. 1973.

in English: sharp-glume brome

B. tomentellus Boiss. (*Bromus tomentellus* (Boiss.) Holub, also spelled *tomentella*)

Asia, Iran, Turkey, Syria. Perennial bunchgrass, tall, glaucous, slender, robust, leaves mostly basal, leaves pubescent and narrow, useful for erosion control, grows in gravelly red clay, limestone, stony soil, heavy clay soil, on rocky slope above a stream, see *Diagn. pl. orient. ser. 1*, 7: 126. 1846.

B. tomentosus Trin. (*Bromopsis triniana* (Schult.) Holub; *Bromus persicus* Boiss. ex Steud.; *Bromus trinianus* Schult., nom. illeg.; *Zerna tomentosa* (Trin.) Nevski; *Zerna triniana* (Schult.) Tzvelev)

Asia, Iran, Iraq, Turkey. Perennial, short, rhizomatous, glaucous to light green, with densely pubescent to velvety leaves, useful for erosion control, see *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Avec l'Histoire de l'Académie* 6: 487, t. 9. 1818 and *Novosti Sist. Vyss. Rast.* 7: 58. 1970[1971], *Folia Geobotanica et Phytotaxonomica* 8(2): 169. 1973.

B. trinii E. Desv. (*Bromus barbatooides* Beal; *Bromus barbatooides* var. *sulcatus* Beal; *Bromus berteroanus* Colla; *Bromus rudis* Sodiro; *Bromus trinii* var. *excelsus* Shear; *Danthonia pseudo-spicata* Müll. Hal.; *Trisetobromus hirtus* (Trin.) Nevski; *Trisetum barbatum* Steud., nom. illeg., non *Trisetum barbatum* Nees; *Trisetum barbatum* var. *major* Vasey; *Trisetum trinii* (Trin.) Louis-Marie; *Trisetum trinii* var. *majus* (Vasey) Louis-Marie; *Trisetum trinii* var. *pallidiflorus* (E. Desv.) Louis-Marie)

Chile. Annual, found in dry areas, hillsides, see *Memorie della Reale Accademia delle Scienze di Torino* 39: 25, t. 58. 1836, *Herbarium Pedemontanum* 6: 68. Torino 1836, *Linnaea* 10(3): 300. 1836, *Florae Africae Australioris Illustrationes Monographicae* 345. 1841, *Flora Chilena* 6: 441-442. 1854, *Synopsis Plantarum Glumacearum* 1: 229. 1854, *Botanische Zeitung. Berlin* 14(20): 348. 1856, *U.S. Department of Agriculture. Division of Botany. Bulletin* 13(2): 60. 1893, *Grasses of North America for Farmers and Students* 2: 614-615. 1896 and *Bulletin, Division of Agrostology United States Department of Agriculture* 23: 25. 1900, *Rhodora* 30: 243. 1928 [1929].

in English: Chilean chess

B. tunicatus Phil. (*Bromus culmineus* Phil.; *Bromus unioloides* var. *hirsuta* Speg.)

South America, Chile. See *Linnaea* 33(3-4): 298. 1864, *Anales de la Universidad de Chile* 94: 343. 1896, *Revista de la Facultad de Agronomía y Veterinaria* 30-31: 586. 1897.

B. valdivianus Phil. (*Bromus cebadilla* Steud.; *Ceratochloa valdiviana* (Phil.) Holub)

South America. Perennial, tufted, slender, geniculate to erect, leaf sheath villous, ligule denticulate, drooping panicles, glumes very unequal, weed, gardens, along roadsides, grassland, see *Synopsis Plantarum Glumacearum* 1: 321. 1854, *Flora Chilena* 6: 440. 1854, *Linnaea* 29(1): 102. 1858 and *Folia Geobotanica et Phytotaxonomica* 8(2): 171. 1973.

in English: stripey brome

B. variegatus M. Bieb. (*Bromopsis variegata* (M. Bieb.) Holub; *Zerna variegata* (M. Bieb.) Nevski)

Asia, Turkey, Iran, Armenia. Herbaceous, erect, roots fibrous, useful for erosion control, grows in open meadow, steep slopes, see *Folia Geobotanica et Phytotaxonomica* 8(2): 169. 1973.

B. variegatus M. Bieb. subsp. ***variegatus***

Asia, Russia, Armenia, Turkey.

B. variegatus M. Bieb. subsp. ***villosulus*** (Steud.) P.M. Sm. (*Bromopsis variegata* subsp. *villosula* (Steud.) Tzvelev; *Bromus adjaricus* Sommier & Levier; *Bromus pubescens* C. Koch, nom. illeg., non *Bromus pubescens* Muhl. ex Willd.; *Bromus villosulus* Steud.; *Zerna adjaricus* (Somm. & Levier) Nevski; *Zerna variegata* subsp. *villosula* (Steud.) Tzvelev)

Asia, Iraq, Iran, Armenia. See *Linnaea* 21(4): 420. 1848, *Synopsis Plantarum Glumacearum* 1: 327. 1854, *Acta Horti Petrop.* 13(1): 51. 1893 and *Novosti Sist. Vyss. Rast.* 7: 55. 1970[1971], *Notes from the Royal Botanic Garden, Edinburgh* 42(3): 496. 1985.

B. villosissimus A.S. Hitchc.

Peru. Rare species, alpine, bunchgrass, open, tufted, spikelets green purplish to reddish, growing in loose soils, slopes, see *Proceedings of the Biological Society of Washington* 36: 195. 1923.

B. vulgaris (Hook.) Shear (*Bromopsis vulgaris* (Hook.) Holub; *Bromus ciliatus* var. *glaberrimus* Suksd.; *Bromus ciliatus* var. *ligulatus* Vasey ex Macoun; *Bromus ciliatus* var. *pauciflorus* Beal; *Bromus ciliatus* var. *pauciflorus* Vasey ex Macoun; *Bromus debilis* Nutt. ex Shear; *Bromus eximius* (Shear) Piper; *Bromus eximius* subsp. *robustus* (Shear) Piper; *Bromus eximius* subsp. *umbraticus* Piper; *Bromus eximius* var. *umbraticus* Piper; *Bromus purgans* var. *vulgaris* Hook.; *Bromus vulgaris* var. *eximius* Shear; *Bromus vulgaris* var. *robustus* Shear; *Zerna vulgaris* (Hook.) Henrard)

Northern America, U.S. Annual or perennial bunchgrass, slender, loosely tufted, hollow culms, perennating buds at the bases of culms, leaf sheaths are hairy to smooth, flat and lax leaf blades, ligules blunt and gnawed looking, no auricles, slender and narrow drooping flower head with slender branches, few-flowered and rounded spikelets, lemma awned, livestock forage, common in rocky soils, moist to dry conditions, in shaded or open woods, on open or forested sites, moist thickets, chaparral, rocky ravines, near the seashore, on moist or dry stream banks, on dry rocky slopes, see *Species Plantarum* 1: 76-77. 1753, *Flora Boreali-Americana* 2: 252. 1840, *Catalogue of Canadian Plants* 2(4): 238. 1888, *Grasses of North America for Farmers and Students* 2: 619. 1896 and *Bulletin, Division of Agrostology United States Department of Agriculture* 23: 43-44, f. 24. 1900, *Deutsche Botanische Monatschrift* 19: 93. 1901, *Contributions from the United States National Herbarium* 11: 143-144. 1906, *Blumea* 4(3): 498. 1941, *Folia Geobotanica et Phytotaxonomica* 8(2): 169. 1973.

in English: Columbia brome, Colombian brome, common brome

B. willdenowii Kunth (*Bromus catharticus* Vahl; *Bromus catharticus* var. *catharticus*; *Bromus unioloides* Kunth; *Bromus unioloides* (Willd.) Raspail, nom. illeg., non *Bromus unioloides* Kunth; *Ceratochloa unioloides* (Willd.) P. Beauv.; *Ceratochloa willdenowii* (Kunth) W.A. Weber; *Festuca unioloides* Willd.)

South America. Annual or short-lived perennial, tufted, coarse, stout, ascending to erect, lower sheaths silky, ligule denticulate, leaves glabrous or slightly hairy, pyramidal heavy panicles erect or drooping, spikelets compressed, sharply keeled glumes more or less unequal to subequal, awned, cleistogamous and chasmogamous, used as a good forage grass, found along roadsides, fields, gardens, waste ground, see *Symbolae Botanicae, ...* 2: 22. 1791, *Hortus Regius Botanicus Berolinensis* 1: 3, t. 3. 1803, *Essai d'une Nouvelle Agrostographie* 75, t. 15, f. 7. 1812, *Nova Genera et Species Plantarum* 1: 151. 1815 [1816], *Annales des Sciences Naturelles, Botanique* 5: 439. 1825, *Florula belgica, operis majoris prodromus, auctore ...* 155. Tournay 1827, *Révision des Graminées* 1: 134. 1829, *Reliquiae Haenkeanae* 1(4-5): 285. 1830, *Synopsis Plantarum Glumacearum* 1: 326. 1854, *Index Kewensis* 1: 487. 1895, *Contribucion al estudio de la flora de la Sierra ...* 76-77. 1896, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 25: 719. 1898 and *Bulletin of the Torrey Botanical Club* 28(4): 244. 1901, *Anales del Museo Nacional de Buenos Aires* 11: 144. 1904, *Bollettino della Società Botanica Italiana* 1907: 6. 1907, *Nederlandsch Kruidkundig Archief. in English: prairie grass, brome grass

in Mexico: bromo cebadilla, bromo cebadillo, cebadilla

Bromus Scop. = *Triticum* L.

Pooideae, Triticeae, Triticinae, see *Species Plantarum* 1: 85-87. 1753, *Introductio ad Historiam Naturalem* 74. 1777 and *Contributions from the United States National Herbarium* 48: 676-684. 2003.

Brousemichea Balansa = *Zoysia* Willd.

Chloridoideae, Cynodonteae, Zoysiinae, type *Brousemichea seslerioides* Bal., see *Der Gesellschaft Naturforschender Freunde zu Berlin, neue Schriften* 3: 440-441. 1801, *Icones et Descriptiones Graminum Austriacorum* 3: 5. 1805, *Journal de Botanique (Morot)* 4(8): 161-172. 1890 [B. Balansa, *Catalogue des Graminées de l'Indo-Chine française ...*, Paris 1890] and *Kew Bulletin* 28(1): 41. 1973, *Contributions from the United States National Herbarium* 41: 240. 2001.

Bruchmannia Nutt. = *Beckmannia* Host

Probably a misspelling for *Beckmannia*.

Pooideae, Poeae, Alopecurinae, see *The Genera of North American Plants* 1: 48. 1818 and *Webbia* 49(2): 265-329. 1995, *Contributions from the United States National Herbarium* 48: 140-141. 2003.

Brylkinia F. Schmidt

One species, Japan, China. Pooideae, Poodae, Meliceae, or Brylkinieae, perennial, herbaceous, slender, rhizomatous, auricles absent, ligule membranous, sheath margins connate, leaf blades narrow linear, plants bisexual, inflorescence a raceme, spikelets pedicellate and laterally compressed, one fertile floret with 2 sterile lemmas below and a short rachilla extension above, two narrow glumes herbaceous and acuminate, sterile lemma acuminate, fertile lemma terminally awned, palea present, 2 free lodicules, 3 stamens, ovary glabrous, 2 stigmas, shade, woodland, type *Brylkinia caudata* (Munro) Schmidt, see *Species Plantarum* 1: 60-61. 1753, *Kongl. Vetenskaps Akademiens Handlingar* 40: 217, pl. 8. 1779, *Nova Acta r. Soc. Sci. Upsal.* 3: 208. 1780, *Memoirs of the American Academy of Arts and Science, new series* 6: 420. 1859, *Mémoires de l'Académie*

Impériale des Sciences de Saint Pétersbourg (Sér. 7) 12: 199, pl. 8, f. 22-27. 1868 and Acta Phytotaxonomica et Geobotanica 10: 107-108. 1941, Canad. J. Bot. 38: 962. 1960, Taxon 29: 645-666. 1980.

Species

B. caudata (Munro) Schmidt (*Alopecurus caudatus* Thunb.; *Brylkinia caudata* (Thunb.) F. Schmidt; *Brylkinia schmidtii* (Munro) Ohwi; *Ehrharta caudata* Munro)

Asia.

Bucetum Parn. = *Festuca* L., *Schedonorus* P.

Beauv.

From the Latin *bucetum* (*bucita, orum*) “a pasture for cow, cow-pasture” (M. Annaeus Lucanus).

Pooideae, Poaeae, Loliinae, see *Species Plantarum* 1: 73-77. 1753, *Flora Anglica* 37. 1762, *Essai d'une Nouvelle Agrostographie* 77, 99, 162, 177, pl. 12, f. 2. 1812, *The Grasses of Scotland* 104-105, 107-108, t. 46, 47. 1842, *Nomencl. Bot.* 2: 1071. 1874 and *Contr. U.S. Natl. Herb.* 24(6): 193. 1925, *Zlaki SSSR* 2: 393. 1976, *Watsonia* 16: 300. 1987, *Novosti Sist. Vyss. Rast.* 23: 14. 1988, *Contributions from the United States National Herbarium* 48: 312-368, 605-607. 2003.

Buchloe Engelm. = *Bouteloua* Lag., *Buchloë* Engelm., *Bulbilis* Raf. ex Kuntze, *Calanthera* Hook., *Lasiostega* Benth.

From the Greek *bous* “an ox” and *chloe, chloa* “grass, young grass.”

One species, North America. Chloridoideae, Cynodonteae, Boutelouinae, perennial, low, tufted, solid, stoloniferous, herbaceous, sward-forming, auricles absent, leaf blades narrow, ligule a fringe of hairs, plants monoecious or dioecious, female inflorescence of two racemes, female spikelet one-flowered and dorsally compressed, two glumes very unequal, upper glume forming an involucre enclosing the floret, lower glume reduced or suppressed, male inflorescence long-exserted and spicate, palea present, lodicules absent or present, ovary glabrous, stigmas 2, racemes embraced by inflated upper leaf sheaths, weed species, fodder, native pasture species, dry plains, prairies, type *Buchloe dactyloides* (Nutt.) Engelm., see *Varietades de Ciencias, Literatura y Artes* 2(4,21): 134, 141. 1805, *Hooker's Journal of Botany and Kew Garden Miscellany* 8: 18. 1856, *Plantas Hartwegianas imprimis Mexicanas* 347. 1857, *Transactions of the Academy of Science of St. Louis* 1: 432. 1859, *Revisio Generum Plantarum* 2: 763. 1891 and *Phytologia* 37(4): 317-407. 1977, *Flora Mesoamericana* 6:

293-295. 1994, *Las Gramíneas de México* 2: 1-344. 1987, *Contributions from the United States National Herbarium* 41: 20-33. 2001.

Species

B. dactyloides (Nutt.) Engelm. (*Antheophora axilliflora* Steud.; *Bouteloua dactyloides* (Nutt.) Columbus; *Bouteloua mutica* Griseb. ex E. Fourn.; *Bulbilis dactyloides* (Nutt.) Raf. ex Kuntze; *Calanthera dactyloides* (Nutt.) Kunth ex Hook.; *Casiostega dactyloides* (Nutt.) E. Fourn.; *Casiostega hookeri* Rupr. ex E. Fourn.; *Lasiostega humilis* Rupr. ex Munro; *Melica mexicana* Link ex E. Fourn.; *Sesleria dactyloides* Nutt.)

Northern America, U.S., Mexico. Tufted, sward-forming, unbranched above, leaf sheath glabrous, ligule ciliate, leaf blade flat, curly leaves, florets unisexual, female spikelets crowded together and burrlike, male spikelets on a raceme, short basal bracts, cultivated, ornamental, good forage, useful for erosion control, open habitats, see *The Genera of North American Plants* 1: 65. 1818, *Synopsis Plantarum Glumacearum* 1: 111. 1854, *Hooker's Journal of Botany and Kew Garden Miscellany* 8: 18. 1856, *Plantas Hartwegianas imprimis Mexicanas* 347. 1857, *Bulletin de la Société Botanique de Belgique* 15: 470-471. 1876, *Revisio Generum Plantarum* 2: 763. 1891 and *Aliso* 18: 63. 1999.

in English: buffalo grass

in Spanish: hierba búfalo, zacate búfalo

in Mexico: zacate búfalo, zacate chino

Buchlomimus J.R. Reeder & C.G. Reeder & Rzedowski = *Bouteloua* Lag.

Similar to *Buchloe*.

One species, Mexico. Chloridoideae, Cynodonteae, Boutelouinae, perennial, prostrate, herbaceous, ligule a line of hairs, auricles absent, leaf blades narrow, stoloniferous, plants dioecious, inflorescence spicate, racemes straight or curved exserted from leaf sheaths, spikelets solitary, female spikelets dorsally compressed, 1 fertile floret, hermaphrodite florets lacking, two unequal glumes narrow and membranous, lemma tapering to a shortly 3-awned tip, male inflorescence erect, male spikelets 1-flowered, palea present, 2 free lodicules, no stamens, 3 staminodes, ovary glabrous, 2 stigmas, open areas, slopes, dry places, rocky hills, closely related to *Cyclostachya* and *Pringleochloa*, type *Buchlomimus nervatus* (Swallen) J. & C. Reeder & Rzedowski, see *Linnaea* 2: 589. 1827 and *Brittonia* 17(1): 26-33. 1965, *Flora Mesoamericana* 6: 293-295. 1994, *Las Gramíneas de México* 2: 1-344. 1987, *Contributions from the United States National Herbarium* 41: 20-33. 2001.

Species

B. nervatus (Swallen) J. & C. Reeder & Rzedowski (*Bouteloua nervata* J.R. Swallen)

Mexico. See *North American Flora* 17(8): 626. 1939.

Buergersiochloa Pilger

One species, Papua New Guinea, Indonesia. Bambusoideae, Oryzodae, Olyreae, Buergersiochloae, perennial, dimorphic, erect, unarmed, loosely tufted, auricles present, ligule a fringed membrane, plants monoecious, sexes mixed, inflorescence a narrow contracted panicle, hermaphrodite florets lacking, female spikelets above and male below, all the fertile spikelets unisexual, female spikelet lanceolate, male spikelets without glumes, two coriaceous glumes, lemma awned, palea present, 3 lodicules, staminal filaments joined, no stamens, 3 staminodes, ovary glabrous, 2 stigmas, forest, type *Buergersiochloa bambusoides* Pilg., see *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 52: 167-168, f. 1. 1914, *Blumea, Suppl.* 3(56): 56-62. 1946 [S.T. Blake, Two new grasses from New Guinea.], *Blumea* 22(3): 415-418. 1975 [F. Fijten, A taxonomic revision of *Buergersiochloa* Pilg. (Gramineae)].

Species

B. bambusoides Pilg. (*Buergersiochloa macrophylla* S.T. Blake)

New Guinea.

***Bulbilis* Raf. ex Kuntze = *Bouteloua* Lag., *Buchloe* Engelm., *Bulbilis* Kuntze**

From the Greek *bolbos* "bulb," Latin *bulbus* "a bulb."

Chloridoideae, Cynodonteae, Boutelouinae, see *Revisio Generum Plantarum* 2: 763. 1891 and *Phytologia* 37(4):

317-407. 1977, *Flora Mesoamericana* 6: 293-295. 1994, *Las Gramíneas de México* 2: 1-344. 1987, *Contributions from the United States National Herbarium* 41: 20-33. 2001.

***Bulbulus* Swallen = *Rehia* Fijten**

Latin *bulbulus* "a small bulb."

Bambusoideae, Olyreae, Olyrinae, type *Bulbulus nervatus* Swallen, see *Phytologia* 11(3): 154. 1964, *Blumea* 22(3): 416. 1975, *Brittonia* 34: 25-29. 1982, *Flora of the Guianas. Series A, Phanerogams* 545-547. 1990, *Contributions from the United States National Herbarium* 39: 109. 2000.

***Burmabambus* Keng f. = *Sinarundinaria* Nakai**

From Burma (Myanmar).

Bambusoideae, Bambuseae, Arundinariinae, type *Burmabambus elegans* (Kurz) Keng f., see *Journal of the Asiatic Society of Bengal. Part 2. Natural History* 42: 249. 1873 and *Journal of Japanese Botany* 11(1): 1. 1935, *Journal of Bamboo Research* 1(2): 40, 173. 1982, *Contributions from the United States National Herbarium* 39: 112-113. 2000.

***Butania* Keng f. = *Arundinaria* Michx.**

From Bhutan.

Bambusoideae, Bambuseae, Arundinariinae, type *Butania pantlingii* (Gamble) Keng f., see *Flora Boreali-Americana* 1: 73-74. 1803 and *Journal of Japanese Botany* 11(1): 1. 1935, *Journal of Bamboo Research* 1(2): 42. 1982, *Contributions from the United States National Herbarium* 39: 18-24, 112-113. 2000.

C

Cabrera Lag. = *Axonopus* P. Beauv.

Panicoideae, Paniceae, Paspalinae, type *Cabrera chrysoblepharis* Lag., see *Species Plantarum* 1: 55. 1753, *Systema Naturae*, *Editio Decima* 846, 855, 1359. 1759, *Essai d'une Nouvelle Agrostographie* 12, 154. 1812, *Genera et species plantarum* 5. 1816, *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques, Physiques et Naturelles. Seconde Partie: Sciences Naturelles* 3,1(2-3): 193, 195. 1834, *Synopsis Plantarum Glumacearum* 1: 37. 1855 [1853], *Flora Brasiliensis* 2(2): 113. 1877 and *Contr. U.S. Natl. Herb.* 12: 142. 1908, *Proceedings of the Biological Society of Washington* 24: 132, 134. 1911, *Advancing Frontiers of Plant Sciences* 5: 1-186. 1963, *Revista de la Academia Colombiana de Ciencias Exactas, Físicas y Naturales* 26(98): 13-23. 2002, *Contributions from the United States National Herbarium* 46: 116-134. 2003.

Cabralea A. Juss., Meliaceae, named for the Portuguese explorer Pedro Alvares (Alvarez) Cabral (Cabrera), ca. 1467/68-ca. 1526, navigator, in 1500 sailed from Lisbon for the East Indies, landed at Mozambique, claimed Brazil for Portugal.

Calamagrostis Adanson = *Achaeta* Fourn., *Amagris* Raf., *Ancistrochloa* Honda, *Anisachne* Keng, *Aniselytron* Merr., *Athernotus* Dulac, *Aulacolepis* Ettingsh. (Pinaceae), *Aulacolepis* Hack., *Chamaecalamus* Meyen, *Cinnagrostis* Griseb., *Deyeuxia* Clarion ex P. Beauv., *Lechlera* Steud., *Neoaulacolepis* Rauschert, *Pteropodium* Steud., *Sclerodeyeuxia* (Stapf) Pilg., *Stilpnophleum* Nevski, *Stylagrostis* Mez

A reedy grass, from the Greek *kalamos* "reed" and *agrostis*, *agrostidos* "grass, weed, couch grass."

About 230-270 species, temperate regions. Pooideae, Poodae, Aveneae, or Pooideae, Poodae, Agrostidinae, perennial, bunchgrass, leafy, unbranched, herbaceous, erect or ascending, rhizomatous or stoloniferous or caespitose or decumbent, tufted, flimsy to robust and glabrous, sometimes reedlike, auricles absent, ligule an unfringed membrane, long and linear leaf blades, plants bisexual with

narrowly paniculate inflorescence, dense or lax panicle open or contracted, bisexual spikelets compressed, plumose rachilla extended beyond the single floret, spikelets 1-flowered and narrow-lanceolate, spikelets breaking up above the persistent glumes, hermaphrodite florets, awned or unawned, awns straight or sharply bent or geniculate, 2 glumes more or less equal or subequal, lemma membranous to coriaceous, palea present, 2 free and glabrous membranous lodicules, stamens 3, ovary glabrous without the apical appendage, 2 plumose stigmas, cleistogamous or chasmogamous, native pasture species, can be invasive, some species valuable sand binder, marshland fen, wet woodland, coastal sand, in shade or in open habitats, páramos, punas, hybridization, a difficult genus often included in *Deyeuxia*, species polymorphic, type *Calamagrostis lanceolata* Roth, see *Familles des plantes*. 31, 530. Paris 1763, *Tentamen Florae Germanicae* 1: 34. 1788, *Ess. Agrostogr.* 43-44, 160. 1812, *Principes Fondamentaux de Somiologie* 27. 1814, *Observations sur les Graminées de la Flore Belgique* 126. 1824, *Conspectus Regni Vegetabilis* 50. 1828, *Reise um die Erde* 1: 456. 1834, *Nomenclator Botanicus. C. brevifolia (J. Presl) Steud. var. **brevifolia**

Southern America.

C. brevifolia (J. Presl) Steud. var. **expansa** (Rúgolo & X. Villavicencio) Soreng (*Deyeuxia brevifolia* var. *expansa* Rúgolo & X. Villavicencio)

Southern America, Bolivia. See *Boletín de la Sociedad Argentina de Botánica* 31(1-2): 125. 1995, *Contributions from the United States National Herbarium* 48: 194. 2003.

C. breweri Thurb. (*Calamagrostis lemmonii* Kearney; *Deyeuxia breweri* (Thurb.) Vasey)

North America, U.S., California. See *Geological Survey of California, Botany* 2: 280-281. 1880, *The Grasses of the United States* 28. 1883, *Bulletin, Division of Agrostology United States Department of Agriculture* 11: 16-17. 1898.

C. cabreræ Parodi (*Deyeuxia cabreræ* (Parodi) Parodi) (named for the Argentine botanist Angel Lulio Cabrera, 1908-1999)

Southern America, Argentina. See *Revista Argentina de Agronomía* 15(1): 59, f. 3. 1948, *Revista Argentina de Agronomía* 20(1): 14. 1953.

C. cabreræ Parodi var. **aristulata** (Rúgolo & X. Villavicencio) Soreng (*Deyeuxia cabreræ* var. *aristulata* Rúgolo & X. Villavicencio)

Southern America. See *Boletín de la Sociedad Argentina de Botánica* 31(1-2): 126, f. 1. 1995, *Contributions from the United States National Herbarium* 48: 195. 2003.

C. cabreræ Parodi var. **cabreræ**

Southern America.

C. cabreræ Parodi var. **maxima** (Rúgolo) Soreng (*Deyeuxia cabreræ* var. *maxima* Rúgolo)

Southern America. See *Parodiana* 4(1): 106, f. 3a-e. 1986, *Contributions from the United States National Herbarium* 48: 195. 2003.

C. cabreræ Parodi var. **trichopoda** (Parodi ex Rúgolo) Soreng (*Deyeuxia cabreræ* var. *trichopoda* Parodi ex Rúgolo)

Southern America. See *Parodiana* 4(1): 107, f. 3f-k. 1986, *Contributions from the United States National Herbarium* 48: 195. 2003.

C. cainii Hitchc. (for the American botanist Stanley Adair Cain, 1902-1995, botanical collector (1920-1937 Southern Appalachian Mts., Smokey Mts., Indiana, Tennessee), author of "Dale J. Hagenah (1908-1971): an outstanding Michigan botanist." *Michigan Bot.* 11: 60-66. 1972, *Foundations of Plant Geography*. New York 1971. See J.H. Barnhart, *Biographical notes upon botanists*. 1: 297. 1965; J. Ewan, editor, *A Short History of Botany in the United States*. 119, 121, 122, 128, 130. 1969; Stanley A. Cain and G.M. de Oliveira Castro, *Manual of Vegetation Analysis* New York 1959.

America. See *Journal of the Washington Academy of Sciences* 24(11): 480. 1934.

C. calderillensis Pilg. (*Deyeuxia calderillensis* (Pilg.) Rúgolo)

America, Bolivia. See *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 42: 72.

1908, *Boletín de la Sociedad Argentina de Botánica* 30(1-2): 112. 1994.

C. canadensis (Michx.) P. Beauv. Eurasia, Siberia, Europe. Ornamental, see *Flora Germanica* 1: 217. 1806, *Essai d'une Nouvelle Agrostographie* 44, 152, 160. 1812, *Flore Française. Troisième Édition* 5: 255. 1815, *Beiträge zur Pflanzenkunde des Russischen Reiches* 4: 36. 1845.

in English: feather reed grass

C. x lactea Suskd. ex Beal (*Calamagrostis canadensis* x *Calamagrostis nutkaensis*) (*Calamagrostis canadensis* var. *lactea* (Suskd. ex Beal) C.L. Hitchc.; *Calamagrostis lactea* Suskd. ex Beal; *Calamagrostis langsdorffii* var. *lactea* (Suskd. ex Beal) Kearney; *Deyeuxia lactea* (Suskd. ex Beal) Suskd. ex Beal; *Deyeuxia lactea* (Suskd. ex Beal) Suskd.)

America, U.S. See *Essai d'une Nouvelle Agrostographie* 15, 152, 157. 1812, *Gram. Unifl. Sesquifl.* 225, t. 4, f. 10. 1824, *Grasses of North America for Farmers and Students* 2: 346. 1896 [also *Grasses of North America* second edition 2: 346. 1896], *Bulletin, Division of Agrostology United States Department of Agriculture* 11: 28. 1898 and *Deutsche Botanische Monatschrift* 19(6): 92. 1901, *Vascular Plants of the Pacific Northwest* 1: 524. 1969.

Calamina P. Beauv. = *Apluda* L.

Panicoideae, Andropogoneae, Ischaeminae, see *Species Plantarum* 1: 82. 1753, *Essai d'une Nouvelle Agrostographie* 128, 157. 1812 and *Regnum Veg.* 127: 20. 1993, *Contributions from the United States National Herbarium* 46: 68-69, 144. 2003.

x Calammophila Brand

Ammophila x *Calamagrostis*.

See *Synopsis der Deutschen und Schweizer Flora* edition 3, 3: 2715. 1907, *Genera Graminum* 374. 1986.

Calamochloa E. Fourn. = *Calamochloe* Rehb., *Eufournia* Reeder, *Sohnsia* Airy Shaw

Greek *kalamos* "reed" and *chloe*, *chloa* "grass, young grass."

Chloridoideae, Cynodonteae, type *Calamochloa filifolia* E. Fourn., see *Conspectus Regnum Vegetabilis ... Pars I.* 1828, *Bulletin de la Société Botanique de France* 24: 177-178. 1877 and *The Families of Flowering Plants* 2: 199-229. 1934, *Journal of the Washington Academy of Sciences* 46: 109-112. 1956, *American Journal of Botany* 51: 453-463. 1964, *Kew Bulletin* 18(2): 272. 1965, *Brittonia* 19: 244. 1967, *Bulletin of the Torrey Botanical Club* 94: 1-17. 1967, *Contributions from the United States National Herbarium* 41: 35, 117, 195. 2001.

Calamochloe Reichb. = *Arundinella* Raddi, *Goldbachia* DC. (Brassicaceae, alt. Cruciferae), *Goldbachia* Trin.

Greek *kalamos* “reed” and *chloe*, *chloa* “grass, young grass.”

Panicoideae, Arundinelleae, see *Neue Entdeckungen im ganzen Umfang der Pflanzenkunde* 2: 42, 81. 1820, *Mémoires du Muséum d'Histoire Naturelle* 7: 242. 1821, *Regni Vegetabilis Systema Naturale* 2: 577. 1821, *Agrostografia Brasiliensis* 36-37, t. 1, f. 3. 1823, *Conspectus Regni Vegetabilis* 52. 1828 and *Flora Mesoamericana* 6: 377-378. 1994, *Annals of the Missouri Botanical Garden* 81(4): 768-774. 1994, J.F. Veldkamp, “Name changes in *Agrostis*, *Arundinella*, *Deyeuxia*, *Helictotrichon*, *Tripogon* (Gramineae).” *Blumea* 41: 407-411. 1996, *Contributions from the United States National Herbarium* 46: 111-113. 2003.

x **Calamophila O. Schwarz**

Ammophila x *Calamagrostis*.

See *Mitteilung der Thüringischen Botanischen Gesellschaft* 1: 88. 1949, *Genera Graminum* 374. 1986.

Calamovilfa (A. Gray) Hack. = *Calamovilfa* (A. Gray) Hack. ex Scribn. & Southw.

From the Greek *kalamos* “reed” plus the genus *Vilfa* Adans.

About 4-5 species, North America, southwestern U.S. Chloridoideae, Eragrostideae, or Chloridoideae, Zoysieae, Sporobolinae, perennial, erect or slightly ascending, thick, solitary, herbaceous, coarse, caespitose, solid internodes, shortly rhizomatous, auricles absent, ligule a line of hairs, leaf blades filiform to linear and pointed, plants bisexual, panicle open or contracted, spikelets pedicellate and lanceolate, solitary spikelets laterally compressed and keeled, 1 floret per spikelet, 2 unequal glumes membranous and awnless, lemma 1-nerved and awnless, callus bearded, palea hairy, 2 free lodicules truncate, stamens 3, ovary glabrous, stigmas 2, used for reclamation and revegetation, found in sandy areas, marshy sites, open habitats, inland dunes, sandy prairies, edge of swamps, type *Calamovilfa brevipilis* (Torr.) Hack. ex Scribn. & Southw., see *A Manual of the Botany of the Northern United States* 582. 1848, *True Grasses* 113. 1890 and *U.S.D.A. Bull.* 772: 126. 1920, *Brittonia* 12: 71-77. 1960, J.W. Thieret, “Synopsis of the genus *Calamovilfa* (Gramineae).” *Castanea* [The Journal of the Southern Appalachian Botanical Society] 31(2): 145-152. 1966, *Bulletin of the Torrey Botanical Club* 94: 199-200. 1967, *Contributions from the United States National Herbarium* 41: 35-36. 2001, *Restoration Ecology* 9(1): 60-70.

Mar 2001, Jean-Michel Gagné and Gilles Houle, “Factors responsible for *Honckenya peploides* (Caryophyllaceae) and *Leymus mollis* (Poaceae) spatial segregation on subarctic coastal dunes.” *Am. J. Bot.* 89: 479-485. 2002, Feihai Yu, Ming Dong and Bertil Krüsi, “Clonal integration helps *Psammochloa villosa* survive sand burial in an inland dune.” *New Phytologist* 162(3): 697-704. June 2004.

Species

C. arcuata K.E. Rogers

North America. Perennial, herbaceous, erect, glabrous, tufted, may root at the nodes, forming dense colonies, leaf blades broad and tapering to a very fine tip, sheath margins free, ligule a short fringe of hairs, shortly rhizomatous, persistent bases of the foliage leaves, horizontal underground stems, open panicles, inflorescence branches erect and spreading, spikelets ventrally compressed, 2 glumes firm and unequal, glumes usually arcuate and acute, 4 to 8 fertile florets, lemmas arcuate and pubescent, paleas pubescent, 2 feathery stigmas, grows along streams and rivers, open rocky seasonally flowing streams, rocky stream bed, could be confused with switchgrass (*Panicum virgatum*) or purpletop (*Tridens flavus*), see *Rhodora* 72(789): 72-79, f. 1-2. 1970.

in English: Cumberland sand reed

C. brevipilis (Torr.) Scribn. (*Ammophila brevipilis* (Torr.) Benth. ex Vasey; *Arundo brevipilis* Torr.; *Calamagrostis brevipilis* (Torr.) L.C. Beck; *Calamovilfa brevipilis* var. *brevipilis*; *Calamovilfa brevipilis* var. *calvipes* Fernald; *Calamovilfa brevipilis* var. *heterolepis* Fernald; *Calamovilfa brevipilis* var. *typica* Fernald)

North America. Perennial, shortly rhizomatous, persistent bases of the foliage leaves, open panicles with ascending to spreading branches, straight and acute glumes, lemmas acuminate and pubescent, paleas pubescent, grows in moist to dry pine barrens, savannah, sandy swamps, bogs, swamp edges, see *Icones et Descriptiones Graminum Austriacorum* 4: 24. 1809, *A Flora of the Northern and Middle Sections of the United States* 1: 95. 1823, *Botany of the Northern and Middle States* 401. 1833, *The Grasses of the United States* 29. 1883 and *Rhodora* 41: 501-502, pl. 573, f. 1-2, 4. 1939.

in English: pine barren sand reed

C. curtissii (Vasey) Scribn. (*Ammophila curtissii* Vasey; *Calamagrostis curtissii* (Vasey) Vasey) (for the American botanist Allen Hiram Curtiss, 1845-1907, traveler, botanical collector, associated with USDA, 1881-1886 Texas and Arkansas, 1884-1899 Florida, Virginia and Georgia, 1902-1905 in West Indies, author of *Catalogue of the phænogamous and vascular cryptogamous plants of Canada and the Northeastern portion of the United States*, including Virginia and Kentucky on the South, and Missouri, Iowa and Minnesota on the West. Liberty, Va., 1873. See J.H. Barn-

hart, *Biographical notes upon botanists*. 1: 406. 1965; Ignatz Urban (1848-1931), editor, *Symbolae Antillanae*. 3: 35. Berlin 1902; Ignatz Urban, *Geschichte des Königlichen Botanischen Museums zu Berlin-Dahlem (1815-1913). Nebst Aufzählung seiner Sammlungen*. 1916; G. Murray, *History of the collections contained in the Natural History Departments of the British Museum*. 1: 142. London 1904; *Bulletin de la Société Botanique de France* 20: 208-209. 1874)

North America. Rare, perennial, shortly rhizomatous, panicles contracted with erect branches, glumes straight, lemmas straight and pubescent, grows in moist flatwoods, in interdune swales, see *Bulletin of the Torrey Botanical Club* 11: 7. 1884, *Botanical Gazette* 15: 269. 1890, *Bulletin, Division of Agrostology United States Department of Agriculture* 17: 199. 1899.

in English: Florida sand reed

C. gigantea (Nutt.) Scribn. & Merr. (*Calamagrostis gigantea* Nutt.; *Toxemia gigantea* Nutt. ex Scribn. & Merr.)

Utah, Nebraska, Arizona, Texas. Perennial, tall, mostly solitary, ligule a ring of hairs, rhizomes elongate and scaly, panicle long exerted and open, panicle branches ascending to strongly divergent, spikelets flattened and 1-flowered, glumes unequal and straight, lemmas straight and pubescent, excellent sand binding, grows on sand dunes, sandy banks, prairies, riverbanks, flood plains, see *Transactions of the American Philosophical Society, new series*, 5: 143. 1837 and *Circular, Division of Agrostology, United States Department of Agriculture* 35: 2. 1901.

in English: giant sand reed, big sand reed

C. longifolia (Hook.) Scribn. (*Ammophila longifolia* (Hook.) Benth. ex Vasey; *Athernotus longifolius* (Hook.) Lunell; *Calamagrostis longifolia* Hook.; *Calamovilfa longifolia* (Hook.) Hack. ex Scribn. & Southw.; *Vilfa rigida* Buckley)

North America. Perennial, stout, smooth, mostly solitary, stiff leaf blades, ligule a dense ring of hairs, leaf sheaths crowded and overlapping, scaly rhizomes elongate and sharp-pointed, narrow loosely spreading panicle with branches ascending to strongly divergent, 1-flowered, crowded spikelets flattened and overlapping, glumes rigid and acuminate, lemmas and paleas glabrous, forage, food for horses, excellent sand binding, grows in sand or sandy soils, steppe, in clay soils, prairies, sand hills, see *Flora Boreali-Americana* 2: 241. 1840, *Proceedings of the Academy of Natural Sciences of Philadelphia* 14: 89. 1862 and *American Midland Naturalist* 4: 218. 1915, *Manual of the Grasses of the United States* 844. 1950.

in English: prairie sand reed, sand reed grass

C. longifolia (Hook.) Scribn. var. ***longifolia***

North America. Perennial, stout, glabrous, solitary, erect, ligule a fringe of hairs, leaf blades flat and involute, leaf sheaths round and pilose, auricles absent, coarse rhizomes scaly and branched, long panicle with ascending branches, spikelets 1-flowered, lemma glabrous, more or less resistant to trampling, tolerant of moderately saline soils, low forage value, food for ungulates, provides cover for small mammals and birds, palatability decreases with plant maturity, high silica content, an early colonizer in sand dunes, used for reclamation and revegetation, grows on sandy range sites, sand flats, slopes, dry valleys, deep sandy soils, stabilized blowouts, dry prairies, disturbed sand, dune depressions, stabilized dunes, sand hills, see *Oecologia* 49: 137-142. 1981.

in English: prairie sand reed, sand grass, sand reed grass

C. longifolia (Hook.) Scribn. var. ***magna*** Scribn. & Merr. Eastern U.S., Great Lakes region. Perennial, leaf sheaths densely pubescent, panicle branches widely divergent, grows on sandy shorelines, on dunes and lakeshores, see *Circular, Division of Agrostology, United States Department of Agriculture* 35: 3. 1901.

Calanthera Hook. = *Bouteloua* Lag.,
Buchloe Engelm.

From the Greek *kalos* "beautiful" and *anthera* "anther."

Chloridoideae, Cynodonteae, Boutelouinae, see *Varietades de Ciencias, Literatura y Artes* 2(4,21): 134, 141. 1805, *Hooker's Journal of Botany and Kew Garden Miscellany* 8: 18. 1856, *Plantas Hartwegianas Imprimis Mexicanas* 347. 1857, *Transactions of the Academy of Science of St. Louis* 1: 432. 1859, *Revisio Generum Plantarum* 2: 763. 1891 and *Phytologia* 37(4): 317-407. 1977, *Flora Mesoamericana* 6: 293-295. 1994, *Las Gramíneas de México* 2: 1-344. 1987, *Contributions from the United States National Herbarium* 41: 20-33. 2001.

Calderonella Soderstr. & H.F. Decker

Named for Cléofe E. Calderón (1940-1989), Panama botanist, botanical collector, bamboo taxonomist at the Smithsonian Institution. See C.E. Calderón & Thomas R. Soderstrom, "Las gramíneas tropicales afines a *Olyra* L." Atas do Simpósio sobre a Biota Amazônica. Conselho de Pesquisas, Rio de Janeiro. 4 (Botânica): 67-76. 1967; C.E. Calderón & Thomas R. Soderstrom, "Morphological and anatomical considerations of the grass subfamily Bambusoideae based on the new genus *Maclurolyra*." *Smithsonian Contributions to Botany* no.11. Washington 1973; *Phytologia* 46: 290-291. 1980; C.E. Calderón & Thomas R. Soderstrom, *The Genera of Bambusoideae (Poaceae) of the American Continent: Keys and Comments*. Washington, Smithsonian Institution Press 1980; *Acta Amazonica* 11:

307. 1981; *Kew Bulletin* 39: 180, 182. 1984; *J. Bromel. Soc.* 34: 213. 1984; *Brittonia* 37: 23-25. 1985; *Amer. J. Bot.* 74: 35. 1986; *Bol. Mus. Para. Emilio Goeldi, ser. Bot.* 7: 305. 1991; *Novon* 7: 302. 1997.

One species, Panama. Centothecoideae, Centotheceae, or Panicoideae, Centotheceae, perennial, very small, delicate, herbaceous, unarmed, almost stemless, caespitose, leaf blades lanceolate, ligule an unfringed membrane, leaves false petiolate, stoloniferous, plants bisexual, inflorescence a single raceme, spikelets solitary and pedicellate, 3- to 5-flowered, lowest floret female, 2 glumes acute, female lemma strongly gibbous, male florets lanceolate, palea present, 2 lodicules, 3 stamens, ovary glabrous, 2 stigmas, shade species, forest, possible that *Calderonella* and *Zeugites* may be congeneric, type *Calderonella sylvatica* Soderstr. & H.F. Decker, see *Mat. Fl. Malay Pen.* 3: 122. 1907, *Ann. Missouri Bot. Gard.* 60(2): 427-441. 1973, *Flora Mesoamericana* 6: 249-250. 1994, G.H. Rua, "Centothecoid grasses and the evolution of panicoid spikelets." *Plant Systematics and Evolution* 240(1-4): 83-89. Sep 2003, *Contributions from the United States National Herbarium* 46: 144. 2003.

Species

C. sylvatica Soderstr. & H.F. Decker

Panama. See *Annals of the Missouri Botanical Garden* 60(2): 427-432, f. 2-3, 5. 1973

Callichloea Steud. = *Elionurus* Humb. & Bonpl. ex Willd., *Elionurus* Kunth

From the Greek *kalli* "beautiful" and *chloe*, *chloa* "grass, young grass."

Panicoideae, Andropogoneae, Rottboelliinae, see *Species Plantarum. Editio quarta* 4(2): 941-942. 1806, *Mémoires du Muséum d'Histoire Naturelle* 2: 69. 1815 [1816], *Nomenclator Botanicus. Editio secunda* 1: 257. 1840 and *Taxon* 47: 737. 1998, *Taxon* 49: 273. 2000, *Contributions from the United States National Herbarium* 46: 225-229. 2003.

Calochloa Kunze = *Elionurus* Humb. & Bonpl. ex Willd.

From the Greek *kalos* "beautiful" and *chloe*, *chloa* "grass, young grass." Panicoideae, Andropogoneae, Rottboelliinae, see *Contributions from the United States National Herbarium* 46: 225-229. 2003.

Calosteca Desv. = *Briza* L., *Calosteca* Desv.

From the Greek *kalos* "beautiful" and *theke* "a case."

One species, South America. Pooideae, Poodae, Poeae, or Pooideae, Poeae, Brizinae, perennial, tufted, herbaceous, auricles absent, narrow leaf blades linear, ligule an unfringed membrane, plants bisexual, cleistogamous or chasmogamous, inflorescence paniculate, spikelets pedicellate and laterally flattened, 2 glumes subequal, palea present, 2 free and membranous lodicules, ovary glabrous, 2 stigmas, often in *Briza* or in *Calosteca*, type *Calosteca brizoides* (Lam.) Desv., see *Species Plantarum* 1: 70-71. 1753, *Tableau Encyclopédique et Méthodique ... Botanique* 1: 193. 1791, *Nouveau Bulletin des Sciences, publié par la Société Philomatique de Paris* 2: 190. 1810 and *Willdenowia* Beiheft 8, 168 pp. 1975, *Darwiniana* 23(1): 279-309. 1981, *Taxon* 37: 434. 1988, *Flora Mesoamericana* 6: 229. 1994, *Contributions from the United States National Herbarium* 48: 146-151, 227-228. 2003.

Species

C. brizoides (Lam.) Desv. (*Briza brizoides* (Lam.) Kuntze; *Briza elegans* (P. Beauv.) Döll; *Briza patula* Phil.; *Briza tandilensis* Parodi; *Bromus brizoides* Lam.; *Calosteca brizoides* (Lam.) Desv.; *Calosteca elegans* P. Beauv.; *Chascolytrum elegans* E. Desv. ex P. Beauv.)

South America. See *Essai d'une Nouvelle Agrostographie* 86, 157, t. 17, f. 7. 1812, *Flora Brasiliensis* 2(3): 135. 1878, *Anales de la Universidad de Chile* 94: 163. 1896, *Revisio Generum Plantarum* 3(3): 341. 1898 and *Revista de la Facultad de Agronomía y Veterinaria* 3: 132, f. 4(1b). 5. 1920.

Calosteca Desv. = *Briza* L., *Calosteca* Desv.

Pooideae, Poodae, Poeae, or Pooideae, Poeae, Brizinae, often in *Briza* or in *Calosteca*, type *Calosteca brizoides* (Lam.) Desv., see *Nouveau Bulletin des Sciences, publié par la Société Philomatique de Paris* 2: 190. 1810, *Anleitung zur Kenntniss der Gewächse* 2(1): 167. 1817 and *Darwiniana* 23(1): 279-309. 1981, *Taxon* 37: 434. 1988, *Cladistics* 14: 287-296. 1998, *Contributions from the United States National Herbarium* 48: 146-151, 227-228. 2003.

Calosteca Desv. ex Spreng. = *Aeluropus* Trin.

Chloridoideae, Eragrostideae, see *Species Plantarum* 1: 66-71, 73-76. 1753, *Nouveau Bulletin des Sciences, publié par la Société Philomatique de Paris* 2: 190. 1810, *Anleitung zur Kenntniss der Gewächse* 2(1): 167. 1817, *Fundamenta Agrostographiae*. 143, t. 12. Khaton & S.I. Ali, *Chromosome Atlas of the Angiosperms of Pakistan*. Karachi 1993 [University of Karachi, Department of Botany], *Annals of the Missouri Botanical Garden* 81(4): 784-791. 1994.

Calotheca P. Beauv. = *Briza* L., *Calotheca* Desv.

From the Greek *kalos* “beautiful” and *theke* “a case.”

Pooideae, Poodae, Poeae, or Pooideae, Poeae, Brizinae, see *Essai d'une Nouvelle Agrostographie* 85. 1812 and *Contributions from the United States National Herbarium* 48: 146-151, 227-228. 2003.

Calotheria Steud. = *Enneapogon* Desv. ex P. Beauv.

From the Greek *kalos* “beautiful” and *ather* “barb, spine, chaff, prickle, awn.”

Pappophoreae, or Chloridoideae, Eragrostideae, Cotteinae, see *Genera Plantarum* 2: 787. 1791, *Symbolae Botanicae*, ... 3: 10, t. 51. 1794, *Essai d'une Nouvelle Agrostographie* 81, 161. 1812, *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques, Physiques et Naturelles* 1(1): 91. 1830, *Émoires de la Société d'Agriculture, Sciences et Arts d'Angers* 1: 202. 1831, *Synopsis Plantarum Glumacearum* 1: 199. 1854, *Die Natürlichen Pflanzenfamilien* 2(2): 64. 1887 and *U.S. Dept. Agric. Bull.* 772: 83. 1920, *Proc. Linn. Soc.* 153: 52-91. 1941, *Kew Bulletin* 22: 393-401. 1968, E.K.Z. Kakudidi, M. Lazarides and J.A. Carnahan, “A revision of *Enneapogon* (Poaceae, Pappophoreae) in Australia.” *Aust. Syst. Bot.* 1(4): 325-353. 1989, *Contributions from the United States National Herbarium* 41: 78. 2001.

Calycodon Nutt. = *Muhlenbergia* Schreb.

From the Greek *kalyx*, *kalykos* “calyx” and *odous*, *odontos* “a tooth.”

Chloridoideae, Cynodonteae, Muhlenbergiinae, type *Calycodon montanum* Nutt., see *Genera Plantarum* 44. 1789, *Systema Naturae ... editio decima tertia, aucta, reformata* 2: 171. 1791, *Proceedings of the Academy of Natural Sciences of Philadelphia* 4: 23. 1848, *J. Acad. Nat. Sci. Philadelphia* ser. 2, 1: 186. 1848 and *United States Department of Agriculture: Bulletin* 772: 145, 147. 1920, *Phytologia* 79(1): 25-27. 1995, Y. Herrera-Arrieta, “A revision of the *Muhlenbergia montana* (Nutt.) Hitchc. complex (Poaceae: Chloridoideae).” *Brittonia* 50(1): 23-50. 1998, P.M. Peterson, “Systematics of the Muhlenbergiinae (Chloridoideae: Eragrostideae).” *Grasses: Systematics and Evolution*

195-212. 2000, *Contributions from the United States National Herbarium* 41: 143-173. 2001.

Calyptochloa C.E. Hubb.

From the Greek *kalypto* “to hide, cover” and *chloe*, *chloa* “grass, young grass”; see Charles Edward Hubbard (1900-1980), *Hooker's Icones Plantarum*. Ser. 5. 3: t. 3210. 1933.

One species, Australia. Panicoideae, Panicodae, Paniceae, perennial, herbaceous, creeping, decumbent, mat-forming, hollow, auricles absent, ligule a fringe of hairs, plants bisexual, cleistogamous or chasmogamous, cleistogenes in upper axils, hidden cleistogenes in the leaf sheaths, inflorescence loosely racemose, 5-8 spikelets singly on a slender rachis, spikelets adaxial, 2 glumes very unequal, lower glume vestigial, upper glume stiffly pilose, upper lemma shortly awned, palea present, 2 free and fleshy lodicules, 3 stamens, ovary glabrous, 2 stigmas, suitable for mine site revegetation, grows in woodland shade, forest, woodland understorey, related to *Cleistochloa* and *Alloteropsis*, type *Calyptochloa gracillima* C.E. Hubbard, see *Hook. Ic. Pl.* 33: t. 3210, 1-3. 1933, C.S. Campbell, J.A. Quinn, G.P. Cheplick and T.J. Bell, “Cleistogamy in Grasses.” *Annual Review of Ecology and Systematics* 14: 411-441. 1983.

Species

C. gracillima C.E. Hubbard

Australia, Queensland.

Campeiostrachys Drobow = *Elymus* L.

Pooideae, Triticoideae, Triticeae, or Pooideae, Triticeae, Hordeinae, type *Campeiostrachys schrenkiana* (Fisch. & C.A. Mey.) Drobow, see *Species Plantarum* 1: 83-84. 1753, *Bulletin de la Classe Physico-Mathématique de l'Académie Impériale des Sciences de Saint Pétersbourg* 3: 305. 1845 and *Flora Uzbekistanica* 1: 300, 540. 1941, *Canad. J. Bot.* 42: 554. 1964, *Taxon* 41: 562-563. 1992, *Taxon* 44: 611-612. 1995, *Contributions from the United States National Herbarium* 48: 279-307. 2003.

Campelia Kunth = *Campelia* Rich.

(Commelinaceae), *Deschampsia* P. Beauv.

Pooideae, Poodae, Aveneae, or Pooideae, Poeae, Airinae, see *Species Plantarum* 2: 1028. 1753, *Démonstrations Botaniques* 46. 1808, *Essai d'une Nouvelle Agrostographie* 91, 149, 160. 1812, *Nova Genera et Species Plantarum (quarto ed.)* 1: 264. 1815 [1816], *A Manual of the Botany of the Northern United States* 605. 1848 and *Flora Mesoamericana* 6: 235. 1994, *Plant Systematics and Evolution* 205: 99-110. 1997, *Botanical Journal of the Linnean Society* 134: 495-512. 2000 [The *Deschampsia cespitosa* complex

in central and northern Europe: a morphological analysis.], *Contributions from the United States National Herbarium* 48: 245-256. 2003.

Campella Link = *Deschampsia* P. Beauv.

Pooideae, Poodae, Aveneae, or Pooideae, Poeae, Airinae, see *Species Plantarum* 1: 64-65. 1753, *Species Plantarum* 2: 1028. 1753, *Démonstrations Botaniques* 46. 1808, *Essai d'une Nouvelle Agrostographie* 91. 1812, *Nova Genera et Species Plantarum (quarto ed.)* 1: 264. 1815 [1816], *Hortus Regius Botanicus Berolinensis* 1: 122. 1827, *A Manual of the Botany of the Northern United States* 605. 1848, *Flora Rossica* 4(13): 420. 1852 and *Botaniska Notiser* 1953(3): 356. 1953, *Flora Mesoamericana* 6: 235. 1994, *Plant Systematics and Evolution* 205: 99-110. 1997, *Botanical Journal of the Linnean Society* 134: 495-512. 2000 [The *Deschampsia cespitosa* complex in central and northern Europe: a morphological analysis.], *Contributions from the United States National Herbarium* 48: 245-256. 2003.

Campuloa Desv. = *Ctenium* Panz.

Perhaps from the Greek *kampylos* "curved" and *chloa* "grass, young grass."

Chloridoideae, Cynodonteae, see *Mémoires de la Société d'Agriculture, Sciences et Arts d'Angers* 1: 167. 1813, *Ideen zu einer künftigen Revision der Gattungen der Gräser*. 38, 61. 1813, *Denkschriften der Bayer[ischen]. Botanischen Gesellschaft in Regensburg* 4: 311, t. 13, f. 1-2. 1813 [1814] and *North American Flora* 17(8): 579-638. 1939, *Flora Mesoamericana* 6: 290-291. 1994, *Contributions from the United States National Herbarium* 41: 57-58. 2001.

Campulosus Desv. = *Ctenium* Panz.

Perhaps from the Greek *kampylos* "curved."

Chloridoideae, Cynodonteae, type *Campulosus gracilior* Desv., see *Nouveau Bulletin des Sciences, publié par la Société Philomatique de Paris* 2: 189. 1810, *Ideen zu einer künftigen Revision der Gattungen der Gräser*. 38, 61. 1813, *Denkschriften der Bayer[ischen]. Botanischen Gesellschaft in Regensburg* 4: 311, t. 13, f. 1-2. 1813 [1814] and *North American Flora* 17(8): 579-638. 1939, *Flora Mesoamericana* 6: 290-291. 1994, *Contributions from the United States National Herbarium* 41: 57-58. 2001.

Camusia Lorch = *Acrachne* Wight & Arn. ex Chiov.

For the French botanist Aimée Antoinette Camus, 1879-1965, among his works are *Monographie des saules*

d'Europe. Paris 1904-1905 and *Les Chataigniers*. Paris 1929, with the French pharmacist and botanist Edmond Gustave Camus (1852-1915) (her father) wrote *Classification des saules d'Europe et monographie des Saules de France*. Paris 1904-1905, with E.G. Camus and Paul Bergon (1863-1912) wrote *Monographie des orchidées de l'Europe, de l'Afrique septentrionale, de l'Asie mineure et des provinces russes transcaspiennes*. Paris [1908]; see J.H. Barnhart, *Biographical notes upon botanists*. 1: 305. 1965; T.W. Bossert, *Biographical dictionary of botanists represented in the Hunt Institute portrait collection*. 64. 1972; Ida Kaplan Langman, *A Selected Guide to the Literature on the Flowering Plants of Mexico*. 1964; Clyde F. Reed, *Bibliography to Floras of Southeast Asia*. 1969; F.N. Hepper and Fiona Neate, *Plant Collectors in West Africa*. 16. 1971; Elmer Drew Merrill, in *Bernice P. Bishop Mus. Bull.* 144: 58. 1937; Frans A. Stafleu and Erik A. Mennega, *Taxonomic literature. Supplement III*. 337-350. 1995.

Chloridoideae, Cynodonteae, or Chloridoideae, Eragrostideae, Eleusininae, type *Camusia perrieri* (A. Camus) Lorch, see *Annuario del Reale Istituto Botanico di Roma* 8(3): 361-362. 1908, *Bulletin de la Société Botanique de France* 75: 913. 1928, *Bulletin of the Research Council of Israel, Section D, Botany* 9: 155. 1961.

Camusiella Bosser = *Setaria* P. Beauv.

For the French botanist Aimée Antoinette Camus, 1879-1965.

About 2 species, Madagascar. Panicoideae, Panicoideae, Paniceae, or Panicoideae, Paniceae, Setariinae, annual, caespitose, unarmed, solid, auricles absent, leaf blades pseudopetiolate, ligule fringed, plants bisexual, inflorescence a false spike, spikelets with involucre of bristles, 2 glumes unequal, palea present, fleshy lodicules, 3 stamens, ovary glabrous, 2-3 stigmas, sometimes referred to *Setaria*, see *Essai d'une Nouvelle Agrostographie* 51, 178. 1812 and *Bulletin de la Société Botanique de France* 108: 158-163. 1961, *Adansonia: recueil périodique d'observations botanique, n.s.* 6: 105-112. 1966, *Contributions from the United States National Herbarium* 46: 569-593. 2003.

Species

C. fiherenensis Bosser

Madagascar.

C. vatkeana (K. Schum.) Bosser (*Camusiella vatkeana* subvar. *violaceus* Bosser; *Camusiella vatkeana* var. *meridionalis* Bosser; *Camusiella vatkeana* var. *vatkeana*; *Setaria vatkeana* K. Schum.) (for the German botanist Georg Carl Wilhelm Vatke, 1849-1889; see J.H. Barnhart, *Biographical notes upon botanists*. 3: 427. 1965; T.W. Bossert, *Biographical dictionary of botanists represented in the Hunt Institute portrait collection*. 415. 1972; W. Vatke, "Plantas in itinere

africao ab J.M. Hildebrandt collectas determinare pergit." *Linnaea* 43(7): 507-541. 1882)

Madagascar. See *Abhandlungen herausgegeben vom Naturwissenschaftlichen Vereine zu Bremen* 9: 402. 1887.

Canastra Morrone, Zuloaga, Davidse & Filgueiras

Monotypic, Brazil, Minas Gerais. Panicoideae, Paniceae, Paspalinae, perennial, erect, caespitose, robust, tussocky, simple or branched, leaf sheaths overlapping, lower sheaths usually lacinate, ligules membranous ciliate, leaves rigid and involute, inflorescences terminal or axillary, spikelets dorsiventrally compressed, spikelets 2-flowered, lower and upper glume awned, upper glume as long as the spikelet, lower glume reduced and 1-nerved, lower flower present and staminate, upper flower bisexual, lodicules 2, stamens 3, stigmas plumose, found among rocks, sandy soils, type *Canastra lanceolata* (Filgueiras) Morrone, Zuloaga, Davidse & Filgueiras, related to *Arthropogon*, *Altoparadisium*, *Homolepis* and *Achlaena*, see *Proc. Linn. Soc. New South Wales*, ser. 2, 39: 385-394. 1914, *Bothalia* 12: 65-109. 1976, *Bothalia* 12: 641-672. 1979, *Bradea* 3(36): 303-322. 1982, *Ann. Missouri Bot. Gard.* 79: 770-818. 1992, *Novon* 11(4): 429-436. 2001, *Ann. Missouri Bot. Gard.* 88: 351-372. 2001, *Contributions from the United States National Herbarium* 46: 144. 2003.

Species

C. lanceolata (Filgueiras) Morrone, Zuloaga, Davidse & Filgueiras (*Arthropogon lanceolatus* Filgueiras)

Brazil, Parque Nacional da Serra da Canastra.

Candollea Steud. = *Agrostis* L., *Candollea* Baumg. (Ericaceae), *Candollea* Labill. (Stylidiaceae), *Candollea* Labill. (Dilleniaceae), *Candollea* Mirb. (Polypodiaceae), *Candollea* Raddi (Bryophyta)

Named after the Swiss botanist Augustin Pyramus de Candolle, 1778-1841, among his most valuable writings are *Plantarum historia succulentarum*. Paris 1798-1837, *Catalogus plantarum horti botanici monspeliensis*. Montpellier, Paris, Strasbourg 1813 and *Plantes rares du Jardin de Genève*. Genève, Paris 1825 [-1827]; see J.H. Barnhart, *Biographical notes upon botanists*. 1: 306. 1965; Jacques Julien Houtton de Labillardière (1755-1834), *Novae Hollandiae plantarum specimen*. 2: 33, t. 176. 1806; T.W. Bossert, *Biographical dictionary of botanists represented in the Hunt Institute portrait collection*. 64. 1972; Ida Kaplan Langman, *A Selected Guide to the Literature on the Flowering Plants of Mexico*. University of Pennsylvania Press, Philadelphia 1964; P.E. Pilet, in *D.S.B.* 3: 43-45.

1981; Stafleu and Cowan, *Taxonomic literature*. 1: 438-452. Utrecht 1976; Gordon Douglas Rowley, *A History of Succulent Plants*. 1997.

Pooideae, Poaceae, Agrostidinae, see *Species Plantarum* 1: 61-63. 1753, *Histoire Naturelle des Végétaux, Classés par Familles* 3: 471 and 5: 89. 1803, *Annales du muséum national d'histoire naturelle* 6: 453. 1805, *Novae Hollandiae Plantarum Specimen* 2: 33. 1806, Giuseppe Raddi (1770-1829), *Jungermannografia etrusca ...* Modena 1818 [Mem. Soc. Mod. xviii.], *Nomenclator Botanicus. Editio secunda* 1: 273. 1840 and *J. Wash. Acad. Sci.* 36: 168. 1946, *Fl. Fenn.* 5: 29. 1971, *Taxon* 41: 556. 1992, *Taxon* 44: 611-612. 1995, *Contributions from the United States National Herbarium* 48: 42-89. 2003.

Capillipedium Stapf = Filipedium Raizada & Jain

Latin *capillus*, *i* "the hair" and *pes*, *pedis* "foot," referring to the spikelets, pedicels and base are ciliate, or alluding to the spikelets borne on capillary panicle branches.

Some 14 species, warm Old World, eastern Africa, tropical Asia, New Caledonia, Australia. Panicoideae, Andropogonodae, Andropogoneae, Andropogoninae, annual or perennial, erect and slender, sometimes decumbent or caespitose, rambling, usually scented or sometimes aromatic, tufted, stout, herbaceous, nodes bearded or hairy, auricles absent, ligule membranous and more or less fringed, leaves flat, plants bisexual, elongate inflorescence, a panicle open with capillary branchlets, racemes short on slender and glandular branches, panicle branches bearing short racemes of 1-8 sessile spikelets, terminal spikelets in triplets, sessile spikelets with 1 fertile floret and 1 sterile lemma, pedicellate spikelets flattened, short racemes often reduced to triads, glumes 2 more or less equal, upper glume boat-shaped or naviculate, lower glume 2-keeled, palea absent, free and fleshy lodicules present, stamens 3, ovary glabrous, stigmas 2, ornamental, weed species, essential oil with antibacterial efficacy, related to and hybrids with *Bothriochloa* Kuntze, found in open grassy places, type *Capillipedium parviflorum* (R. Br.) Stapf, see *Flora of Tropical Africa* 9: 11, 169. 1917, *University of Queensland, Department of Biology, Papers* 2(3): 1-62 (41-46). 1944, *Journal of the Bombay Natural History Society* 49: 682-683. 1951, *Phytomorphology* 7: 93-102. 1957, *Boissiera. Mémoires du Conservatoire de Botanique et de l'Institut de Botanique Systématique de l'Université de Genève* 9: 154. 1960, *Grasses of Burma ...* 110-113. 1960, *Flora of New South Wales Gramineae* 19(1): 37-39. 1961, *American Journal of Botany* 53(1): 94-98. 1966 [Morphology of the Compilospecies *Bothriochloa intermedia*.], *Bot. Tidsskr.* 67: 324-326. 1973, *Journal of Cytology and Genetics* 15: 51-57. 1980, *Pharmazie* 39(1): 64. 1984, *Journal of Cytology and Genetics* 25: 140-143.

1990, *Annals of the Missouri Botanical Garden* 81(4): 775-783. 1994.

C. planipedicellatum Bor (*Dichanthium planipedicellatum* (Bor) S.K. Jain & Deshp.; *Filipedium planipedicellatum* (Bor) Raizada & Jain)

Asia, India. Awnless, see *Kew Bulletin* 1949: 222. 1949, *Journal of the Bombay Natural History Society* 49: 683. 1951, *Bulletin of the Botanical Survey of India* 20(1-4): 135. 1978[1979].

C. pteropechys (Clarke) Stapf (*Andropogon pteropechys* Clarke; *Dichanthium pteropechys* (C.B. Clarke) S.K. Jain & Deshp.)

Naga Hills, India. Nodes bearded, leaf sheaths stgriate, leaf blades acuminate, ligule ciliate, panicle branched, see *J. Linn. Soc. (Botany)* 25: 88, t. 38. 1899 and *Hooker's Icones Plantarum* 31(4): t. 3085. 1922, *Bulletin of the Botanical Survey of India* 20(1-4): 135. 1978[1979].

C. spicigerum S.T. Blake (*Andropogon micranthus* var. *muelleri* Hack.; *Andropogon parviflorus* var. *spicigerus* (Benth.) Domin; *Andropogon spicigerus* (S.T. Blake) Reeder; *Chrysopogon parviflorus* var. *spicigerus* Benth.; *Dichanthium parviflorum* var. *spicigerum* (S.T. Blake) de Wet) (Latin *spica*, *ae* “a point, spike, tuft” and *gero, gessi, gestum* “to bear, carry, to wear”)

Australia, Queensland, New South Wales, Northern Territory. Perennial, tufted, stout, smooth and green leaves, hairy and purple to yellowish panicle, purple spikelets long awned, pedicellate spikelets sterile or male, low forage value, ornamental when in flower, scented panicles, sometimes weedy, woodland, similar to *Capillipedium parviflorum* (R. Br.) Stapf, see *University of Queensland, Department of Biology, Papers* 2(3): 43. 1944, *Journal of the Arnold Arboretum* 29(4): 366. 1948, *Flora of New South Wales* 19(1): 37-39 (38-39). 1961.

in English: scented-top grass

C. sulcatum Bor

Asia, India. See *Botanisk Tidsskrift* 67(4): 324. 1973.

C. venustum (Thwaites) Bor (*Bothriochloa venusta* (Thwaites) A. Camus; *Hemisorghum venustum* (Thwaites) Clayton; *Vetiveria venusta* (Thwaites) Willis)

Southeast Asia, India. See *Enumeratio Plantarum Zeylaniae* 136. 1864 and *Annales de la Société Linnéenne de Lyon, sér. 2*, 76: 165. 1931, *Grasses of Burma ...* 113. 1960, *Kew Bulletin* 27(3): 448. 1972.

Capriola Adans. = *Cynodon* Rich.

Chloridoideae, Cynodonteae, Chloridinae, type *Capriola dactylon* (L.) Kuntze, see *Flora Mesoamericana* 6: 291-292. 1994, *Contributions from the United States National Herbarium* 41: 59-63. 2001.

Caryochloa Spreng. = *Piptochaetium* Presl

From the Greek *karyon* “a nut, any kind of nut” and *chloe, chloa* “grass.”

Pooideae, Stipeae, Stipinae, type *Caryochloa montevidensis* Spreng., see *Systema Vegetabilium, editio decima sexta* 4(2): 22, 30. 1827, *Reliquiae Haenkeanae* 1(4-5): 222, t. 37, f. 2. 1830 and *Darwiniana* 36(1-4): 107-157. 1998, *Contributions from the United States National Herbarium* 48: 495-504. 2003.

Caryochloa Trin. = *Luziola* Juss.

From the Greek *karyon* “a nut, any kind of nut” and *chloe, chloa* “grass.”

Ehrhartoideae, Oryzeae, Luziolinae, type *Caryochloa brasiliensis* Trin., see *Genera Plantarum* 33. 1789, *Systema Naturae ... editio decima tertia, aucta, reformata* 2: 637. 1791, *De Graminibus Paniceis* 54, 248. 1826, *Die Natürlichen Pflanzenfamilien* 2(2): 40. 1887 and *Contributions from the United States National Herbarium* 39: 69-71. 2000.

Caryophyllea Opiz = *Aira* L.

From the Greek *karyon* “nut” and *phylon* “leaf.”

Pooideae, Poeae, Airinae, see *Species Plantarum* 1: 63-66. 1753 and *Boissiera*. 13: 179-180. 1967, *Taxon* 41: 556. 1992, *Opera Botanica* 121: 159-172. 1993, *Flora Mesoamericana* 6: 235. 1994, *Taxon* 44: 611-612. 1995, *Bothalia* 26(1): 53-61. 1996, *Thaiszia* 9(1): 31-40. 1999, *Contributions from the United States National Herbarium* 48: 89-96. 2003.

Casiostega Galeotti = *Opizia* C. Presl

Chloridoideae, Cynodonteae, Boutelouinae, see *The Genera of North American Plants* 1: 65. 1818, *Reliquiae Haenkeanae* 1(4-5): 293, t. 41, f. 1-11. 1830, *Bulletin de l'Académie Royale des Sciences et Belles-lettres de Bruxelles* 9: 232. 1842, *Bulletin de la Société Botanique de Belgique* 15: 470-471. 1876.

Castellia Tineo

Dedicated to the Italian botanist Pietro Castelli, author of *Exactissima descriptio rariorum quarundam plantarum, quae continentur Romae in horto Farnesiano*: Tobia Aldino Cesenate auctore... Romae, typis Jacobi Mascardi, 1625, and Petri Castelli ... *Hortus Messanensis*. Messanae, typis viduae Ioannis Francisci Bianco, 1640; see Luigi Belloni, in *D.S.B.* 9: 62-66. 1981; Mariella Azzarello Di Misa, a cura di, *Il Fondo Antico della Biblioteca dell'Orto Botanico di Palermo*. 65-66. Palermo 1988; Giuseppe M. Mira, *Bibliografia Siciliana*. 1: 195. Palermo 1881.

One species, Mediterranean, western Asia, Canary Islands. Pooideae, Poodae, Poeae, annual, herbaceous, tufted, erect or geniculately ascending, auricles absent or present, ligule an unfringed membrane, leaf blades linear, plants bisexual, inflorescence racemose or paniculate, racemes single or scattered, spikelets compressed laterally and more or less sessile, several-flowered, 2 glumes unequal more or less keeled, thin lemmas awnless and densely tuberculate, palea present, 2 free and membranous lodicules, stamens 3, ovary glabrous, 2 stigmas, open habitats, dry places, dry open places, confused with *Lolium*, type *Castellia tuberculata* Tineo, see Vincenzo (Vincentius) Tineo, 1791-1856,

Plantarum rariorum Siciliae minus cognitarum ... 2: 17-18. Panormi 1846.

Species

C. tuberculosa (Moris) Bor (*Castellia tuberculata* Tineo; *Catapodium tuberculatum* Moris; *Desmazeria tuberculosa* (Moris) Batt. & Trab.; *Desmazeria tuberculosa* (Moris) Bonnet; *Festuca tuberculata* (Tineo) Benth.; *Festuca tuberculosa* (Moris) Coss. & Dur.; *Micropyrum tuberculatum* (Moris) Pilg.; *Nardurus tuberculatus* (Moris) Hayek)

Asia, Europe, Greece, Italy. Annual, loosely tufted, stiff racemose inflorescence sparsely branched, a single raceme, spikelets distichous and many-flowered, glumes glabrous, scabrid-tuberculate lemmas thinly membranous, useful for erosion control, grows in bushland, rocky areas, crevices, see *Exploration Scientifique de l'Algérie* 2: 189, t. 41. 1855, *Journal of the Linnean Society, Botany* 19: 128. 1881, *Flore d'Alger* 100. 1884 and *Feddes Repertorium, Beiheft* 30(3): 295. 1932, *Indian Forester* 74: 90. 1948, *Engler's Botanische Jahrbucher* 74: 576. 1949.

in French: catapodium tuberculé

in Morocco: mahadoun, ziouan

Catabrosa P. Beauv.

Greek *katabibrosko*, *katabibroskein* "eat up, devour," *kato*, *kata* "below, downward, down from" and *broskein*, *brosko*, *bibrosko* "to eat, to devour," *katabrosis* "eating up, devouring," used as fodder for cattle and goats or referring to the glumes.

About 2-3 species, north temperate, Chile. Pooideae, Poodae, Meliceae, or Pooideae, Poae, Puccinelliinae, perennial, often prostrate, with creeping stolons or decumbent, soft and fleshy, herbaceous, hollow, loosely tufted or sprawling, branching and rooting at the nodes in water, leaf sheaths glabrous, leaf blades linear and narrow, ligule an unfringed membrane, plants bisexual, inflorescence loosely paniculate, panicle open, spikelets 1- to 3-flowered, 2 glumes unequal toothed or erose, lower glume obtuse to truncate, lemmas membranous and keeled, floret callus glabrous, palea present, 2 free lodicules, 3 stamens, ovary glabrous, 2 stigmas, growing in aquatic habitats, in marshes, in mud, from sea level, shallow water, streams and seepage areas, streamsides, drainage ditches, open habitats, springs, related to *Colpodium* Trin., containing HCN-glucoside, type *Catabrosa aquatica* (L.) P. Beauv., see *Essai d'une nouvelle Agrostographie, ou nouveaux genres des Graminées*. 97. Paris 1812, *Fundamenta Agrostographiae* 119, t. 7. 1820, *Flora Orientalis* 5: 578. 1884 and *Darwiniana* 23(1): 179-188. 1981 [*Catabrosa* P. Beauv. y *Phippsia* R. Brown (Gramineae) en America del Sur.], R.R. Mill, "Eremopoa, Nephelochloa, Catabrosella, Colpodium, Hypopoa, Catabrosa, Paracolpodium." in P.H. Davis (editor),

Flora of Turkey and the East Aegean Islands 9: 486-501. 1985, *American Journal of Botany* 81(1): 119-126. 1994, *Contributions from the United States National Herbarium* 48: 228-230. 2003.

Species

C. aquatica (L.) P. Beauv. (*Aira aquatica* L.; *Catabrosa aquatica* subsp. *pseudairoides* (Herrm.) Tzvelev; *Catabrosa aquatica* var. *uniflora* S.F. Gray; *Catapodium aquaticum* Trin. ex Willk. & Lange; *Colpodium aquaticum* (L.) Trinius; *Diarrhena aquatica* (L.) in English: waterhair, water hairgrass, brookgrass, whorlgrass, water whorlgrass, water whorl grass

C. aquatica (L.) P. Beauv. subsp. **aquatica** (*Catabrosa aquatica* var. *aquatica*; *Catabrosa aquatica* var. *laurentiana* Fernald; *Catabrosa aquatica* var. *uniflora* S.F. Gray)

North temperate. See *A Natural Arrangement of British Plants* 2: 133. 1821 and *Rhodora* 35(412): 137-140, pl. 242, f. 3-4. 1933.

C. sikkimensis Stapf ex Hook.f.

North temperate, India, Sikkim. Alpine grass, spreading, rooting at nodes, dwarf, leafy, leaf sheaths glabrous, ligules blunt, lax panicle, see *The Flora of British India* 7(22): 311. 1897 [1896].

C. werdermannii (Pilg.) Nicora & Rúgolo (*Catabrosa latifolia* Phil.; *Panicularia latifolia* (Phil.) Kuntze; *Phippsia werdermannii* Pilg.; *Phippsia werdermannii* f. *major* Pilg.; *Phippsia werdermannii* f. *minor* Pilg.; *Phippsia werdermannii* f. *werdermannii*)

South America. See *Herbarium Pedemontanum* 6: 235. 1836, *Anales Mus. Nac. Santiago de Chile* 1891: 85. 1891, *Revisio Generum Plantarum* 2: 783. 1891 and *Notizblatt des Botanischen Gartens und Museums zu Berlin-Dahlem* 10(97): 759-760. 1929, *Darwiniana* 23(1): 182. 1981.

Catabrosella (Tzvelev) Tzvelev = Colpodium Trin.

The diminutive of *Catabrosa*.

About 9 species, Himalaya, China. Pooideae, Poodae, Poeae, perennial, herbaceous, caespitose, auricles absent, narrow linear leaf blades, ligule an unfringed membrane, plants bisexual, open inflorescence paniculate, lax panicle, spikelets pedicellate and laterally flattened, 2 glumes unequal to very unequal, lemmas awnless, palea present, 2 membranous lodicules, 3 stamens, ovary glabrous, 2 stigmas, often in *Colpodium*, type *Catabrosella humilis* (Bieb.) Griseb., see *Fundamenta Agrostographiae* 119, t. 7. 1820 and *Novosti Sist. Vyss. Rast.* 1: 12. 1964, *Bot. Zhurn. (Moscow & Leningrad)* 50: 1320. 1965, N.L. Bor (1893-1972), *Flora Iranica: Gramineae*. Graz 1970, *Zlaki SSSR* 481. 1976, R.R. Mill, "Eremopoa, Nephelochloa, Catabrosella, Colpodium, Hyalopoa, Catabrosa, Paracolpodium." in P.H. Davis (editor), *Flora of Turkey and the East Aegean Islands* 9: 486-501. 1985, *Nordic Journal of Botany* 14(6): 601-607. 1994.

Species

C. araratica (Lipsky) Tzvelev (*Catabrosa araratica* Lipsky; *Colpodium araraticum* (Lipsky) Woronow ex Grossh.; *Colpodium araraticum* (Lipsky) Woronow; *Colpodium fibrosum* var. *araraticum* (Lipsky) Woronow ex B. Fedtsch.; *Koeleria dominii* Nábelek)

Eurasia, Turkey. See *Flora Kavkaz* 1: 112. 1928.

C. calvertii (Boiss.) Czerep. (*Catabrosella humilis* subsp. *calvertii* (Boiss.) Tzvelev; *Catabrosella parviflora* subsp. *calvertii* (Boiss.) E.B. Alexeev ex R.R. Catalepis Stapf & Stent

From the Greek *kato*, *kata* “below, downward, down from” and *lepis*, *lepidos* “flake, scale.”

One species, South Africa. Chloridoideae, Chlorideae, or Chloridoideae, Cynodonteae, Zoysiinae, perennial, caespitose, creeping, herbaceous, unbranched, unarmed, leaves mostly basal, auricles absent, ligule a fringe of short hairs, plants bisexual, inflorescence spicate or paniculate, head of numerous racemes, spikelets solitary and shortly pedicellate, floret 1 bisexual, 2 glumes very unequal, lower glume reduced to a small subulate scale, upper glume narrow and acuminate, lemma keeled and acute, palea present, 2 lodicules free and fleshy, stamens 3, ovary glabrous, 2 stigmas plumose, growing in mountain grassland, sandy veld near vleis, disturbed places, black clay near vleis, open habitats, shallow sandy soil, along roadsides, stony hillsides, type *Catalepis gracilis* Stapf & Stent, see *Kew Bulletin* 1929: 11-12. 1929 [*Bulletin of Miscellaneous Information Kew* 1929(1): 11-12. 1929].

Species

C. gracilis Stapf & Stent

South Africa, Transvaal. Perennial, tufted, creeping, rhizomatous, leaf blade rolled and curly with age, contracted spike-like panicle, lower glume reduced to a small scale, lodicules cuneate, highly palatable and overgrazed, weed, pioneer grass, useful for erosion control.

in English: gause grass

in South Africa: gause gras

Catapodium Link = *Cutandia* Willk.
Scleropoa Griseb., *Synaphe* Dulac

From the Greek *kata* “below, all along” and *podion* “little foot,” referring to the short branches clothed with spikelets, or from the Greek *katapoda*, *katapodas* “straightway,” allusion obscure; see the German botanist and physician Johann Heinrich Friedrich Link (1767-1851), in *Hortus regius botanicus berolinensis*. 1: 44, 145, 380. Berolini (Oct-Nov) 1827 and 2: 193. 1833.

About 2 species, Europe, Mediterranean, North Africa to Iran. Pooideae, Poodae, Poeae, or Pooideae, Poeae, Ammochloinae, annual, often coastal, tufted or solitary, erect or spreading, sometimes geniculate, smooth, slender, herbaceous, unbranched, hollow internodes, auricles absent, leaf blade flat, linear leaves, ligule an unfringed membrane, plants bisexual, stiff and 1-sided panicle, spikelets many-flowered, florets 3-10 bisexual or uppermost floret reduced and sterile, awnless glumes unequal and pointed, lemmas obtuse and glabrous, palea nerved and keeled with keels wingless, 2 ovate lodicules free and glabrous, stamens 3, ovary glabrous, stigmas plumose, small fruit ellipsoid, weed, found in maritime sand, disturbed areas, dry places, open habitats, sometimes referred to *Desmazeria* Dumort., type *Catapodium loliaceum* (Huds.) Link, see *Species Plantarum* 1: 67-70. 1753, *Flora Anglica* 10. 1754, *Prodromus Florae Novae Hollandiae* 179. 1810, *Observations sur les Graminées de la Flore Belgique* 110, 113. 1823 [1824], *Hortus Regius Botanicus Berolinensis* 1: 44, 145, 280. 1827, *Florula belgica, opera majoris prodromus, auctore ...* 157. 1827, *Spicilegium florum rumelicarum et bithynicarum ...* 2: 431. 1846, *Flore de Département des Hautes-Pyrénées* 90. 1867, Edmond Bonnet (1848-1922) et J.F. L.; *Poa rigida* L.; *Sclerochloa rigida* (L.) Link; *Scleropoa rigida* (L.) Griseb.; *Synaphe rigida* (L.) Dulac)

Europe, Mediterranean. Annual, much branched at the base, often coastal, small to tiny, glabrous, rigid, slender, tufted, erect or spreading and geniculate at the base, ligule acute and membranous, leaf sheath glabrous ribbed, glabrous inrolled leaves, stiff inflorescence with oblong awnless spikelets, erect and 1-sided panicle linear to narrowly ovate with rigid and ascending branches, florets widely spaced, glumes pointed and subequal, lemmas obtuse, paleas with scabrid keels, low forage value, weed of disturbed areas, wasteland, dry open places, dry rocky outcrops, walls, sea dune areas, depleted pasture, gardens, on sandy disturbed areas, dry habitats and substrates, along roadsides, railway ballast, in sand or sandy soil, on sandy and gravelly beaches, in damp situations, limestone, see *Flora Anglica* 10. 1754, *Flora Caroliniana, secundum* ... 80. 1788, *Enumeratio Plantarum Horti Regii Berolinensis Altera* 1: 90. 1821, *English Flora* 1: 119. 1824, *Annales des Sciences Naturelles,*

Botanique 5: 445. 1825, *Spicilegium florum rumelicarum et bithynicarum* ... 2: 431. 1844, *Flore de Département des Hautes-Pyrénées* 90. 1867, *Flora of the Southern United States* 609. 1897 and *Flora of the British Isles* 1434. 1952, Charles Abbot (1761-1817), *Flora Bedfordiensis*, comprehending such plants as grow wild in the county of Bedford, arranged according to the system of Linnæus, with occasional remarks. 437. 1953, *Bot. J. Linn. Soc.* 91: 439. 1985, *Flora of South Africa* 4: 1888. 1986, *Grasses of New South Wales* 136. 1991, *The Grasses of Tasmania* 52. 1991, *Taxon* 49(2): 256. 2000.

in English: fern grass, hard grass, rigid fescue, hard poa, hard meadow-grass

in French: catapode rigide, paturin rigide

in Morocco: mahadoun srhir

in Italian: logliarello rudérale

in South Africa: steifgras

C. rigidum (L.) C.E. Hubb. ex Dony subsp. **rigidum** (*Catapodium rigidum* var. *rigidum*)

Europe, Mediterranean.

Catatherophora Steud. = *Pennisetum* Rich.

Greek *kato*, *kata* “below, downward” plus *ather* “barb, spine, chaff, prickle, awn” and *phoros* “bearing.”

Panicoideae, Paniceae, Cenchrinae, or Panicoideae, Panicoideae, Paniceae, see *Species Plantarum* 1: 60. 1753, *Syn. Pl.* 1: 72. 1805, *Flora* 12: 465. 1829 and *Contr. U.S. Natl. Herb.* 22: 210. 1921, *Flora Mesoamericana* 6: 371-374. 1994, *Contributions from the United States National Herbarium* 46: 527-536. 2003.

Cathariostachys S. Dransf.

Possibly from the Greek *kathairo* “to purge,” *kathartes* “purifier,” *katharos* “pure,” *kathartikon* “purgatives,” referring to the cyanogenic parts of the bamboos.

Two species, Madagascar. Bambusoideae, type *Cathariostachys capitata* (Kunth) S. Dransf., lowlands, mountain forests, see S. Dransfield, “*Valiha* and *Cathariostachys*, 2 new bamboo genera (Gramineae-Bambusoideae) from Madagascar.” *Kew Bulletin* 53(2): 375-397. 1998.

Species

C. capitata (Kunth) S. Dransf. (*Beesha capitata* (Kunth) Munro; *Cephalostachyum peclardii* A. Camus; *Nastus capitatus* Kunth; *Ochlandra capitata* (Kunth) E.G. Camus)

Madagascar. See *Révision des Graminées* 1: 325, t. 75. 1830, *Transactions of the Linnean Society of London* 26(1): 145. 1868 and *Les Bambusées* 183. 1913, *Bulletin de la*

Société Botanique de France 72: 87-88. 1925, *Kew Bulletin* 53(2): 378, 391. 1998.

C. madagascariensis (A. Camus) S. Dransf. (*Cephalostachyum madagascariense* A. Camus; *Cephalostachyum peclardii* A. Camus) (named for a mister Péclard, grass collector in Madagascar, see *Bulletin de la Société Botanique de France* 72: 88. 1925)

Madagascar. Bamboo, stoloniferous, solitary stems, the favourite food of the bamboo lemurs, *Haplemur* spp. consume the cynogenic parts — young leaf bases, young pseudopetioles and young shoots, see *Bulletin de la Société Botanique de France* 72: 87-88. 1925, *Kew Bulletin* 53(2): 391, 394. 1998.

in English: giant bamboo

in French: bambou géant

in Madagascar: volosy, volohosy, volotsangana

Cathestecum J. Presl = *Bouteloua* Lag.

Possibly from the Greek *kathestekotos*, “fixedly, steadily,” *katasketos*, *katasketon*, “held back, kept back, held fast.”

About 5-6 species, Mexico, U.S., Guatemala. Chloridoideae, Cynodonteae, Boutelouinae, annual or perennial, herbaceous, unarmed, glabrous, erect or ascending or decumbent, stoloniferous, caespitose, leaves mostly basal, auricles absent, sheaths terete with open margins, ligule a dense fringe of hairs, plants bisexual, inflorescence a false spike, racemes cuneate, each raceme with dimorphous spikelets in triplets, male and female fertile spikelets mixed in the inflorescence, central spikelet fertile and 3-flowered, lateral spikelets sessile and 2-flowered, 2 lower spikelets usually male or neuter, spikelets subtended by solitary bristles deciduous with the spikelets, 2 glumes very unequal, thin lemmas, awns 3, palea present, 2 free and fleshy lodicules, stamens 0-3, ovary glabrous, 2 plumose stigmas, open habitats, dry areas, hillsides, open scrub, open gravelly ground, under trees and shrubs, type *Cathestecum prostratum* J. Presl, see *Varietades de Ciencias, Literatura y Artes* 2(4,21): 134, 141. 1805, *Reliquiae Haenkeanae* 1(4-5): 294-295, t. 42. 1830, *Bull. Torrey Bot. Club* 11: 37, t. 45. 1884 and *Contr. U.S. Nat. Herb.* 14(3): 358-363. 1912, *Journal of the Washington Academy of Sciences* 27(12): 495-501. 1937, *Fieldiana, Botany* 24(2): 38-331. 1955, *Phytologia* 37(4): 317-407. 1977, *Bulletin of the Torrey Botanical Club* 105: 134-138. 1978, Irving William Knobloch, compiled by, “A preliminary verified list of plant collectors in Mexico.” *Phytologia Memoirs*. VI. Plainfield, N.J. 1983, *Taxon* 33: 126-134. 1984, *Las Gramíneas de México* 2: 1-344. 1987, *Flora Mesoamericana* 6: 296. 1994, *Sida* 17: 111-114. 1996, *Aliso* 17(2): 99-130. 1998, *Aliso* 18: 61-65. 1999, *Contributions from the United States National Herbarium* 41: 20-33. 2001.

Species

C. brevifolium Swallen (*Bouteloua diversispicula* Columbus; *Cathestecum brevifolium* var. *brevifolium*)

Mexico. Good forage, medicinal, mat-forming, found on gravelly soil, along roadsides, see *Journal of the Washington Academy of Sciences* 27(12): 500. 1937, *Aliso* 18(1): 63. 1999.

in Mexico: grama china, pasto

C. brevifolium Swallen var. *sonorense* Pacheco L. (*Cathestecum brevifolium* Swallen; *Cathestecum erectum* Vasey & Hack.)

Mexico. Inflorescence reddish to greenish, see *Bulletin of the Torrey Botanical Club* 11: 37, pl. 45. 1884.

C. multifidum Griffiths (*Bouteloua multifidum* (Griffiths) Columbus; *Griffithsochloa multifida* (Griffiths) G.J. Pierce)

Mexico. See *Contributions from the United States National Herbarium* 14(3): 360, f. 24. 1912, *Bulletin of the Torrey Botanical Club* 105(2): 134. 1978.

Mexico. Forage, see *Reliquiae Haenkeanae* 1(4-5): 295, t. 42. 1830 and *Journal of the Washington Academy of Sciences* 27(12): 497. 1937.

in Mexico: grama china, zacate

C. tamaulipense Pierce ex Beetle

Mexico. See A.A. Beetle, *Las Gramíneas de México* 2: 177. 1987.

C. varium Swallen (*Cathestecum brevifolium* Swallen; *Bouteloua varia* (Swallen) Columbus)

Mexico. Fodder, see *Journal of the Washington Academy of Sciences* 27(12): 498. 1937, *Phytologia* 37(4): 317-407. 1977.

in Mexico: pasto

Celtica F.M. Vázquez and Barkworth

One species, western Mediterranean. Pooideae, Stipeae, Stipinae, perennial, ligules membranous scabrous, lax panicle open, spikelets lanceolate, glumes 3-nerved or veined, lemma coriaceous, awn bigeniculate, paleas membranous bifid, 3 lodicules, 3 anthers, type *Stipa gigantea* Link (*Celtica gigantea* (Link) F.M. Vázquez and Barkworth), see *Species Plantarum* 1: 78-81. 1753, *Révision des Graminées* 1: 58-59. 1829 and *Preslia* 48(2): 186. 1976, *Acta Bot. Malacitana* 21: 163-165. 1996, *Contributions from the United States National Herbarium* 48: 432. 2003, Francisco M. Vázquez and Mary E. Barkworth, “Resurrection and emendation of *Macrochloa* (Gramineae: Stipeae).” *Botanical Journal of the Linnean Society* 144(4): 483-495. Apr 2004.

Cenchropsis Nash = Cenchrus L.

Resembling the genus *Cenchrus* L.

Panicoideae, Paniceae, Cenchrinae, type *Cenchropsis myosuroides* (Kunth) Nash, see *Species Plantarum* 2: 1049-1050. 1753 and *Flora of the Southeastern United States* ... 109, 1327. 1903, *Contributions from the United States National Herbarium* 46: 144-150. 2003.

Cenchrus L. = Cenchropsis Nash, Echinaria Fabr., Nastus Lunell, Raram Adans.

From the Greek *kenchros* "millet"; Latin *cenchros*, used by Plinius for an Arabian diamond or an unknown kind of precious stone big as a grain of millet; see Carl Linnaeus, *Species Plantarum*. 1049. 1753 and *Genera Plantarum*. edition 5. 470. 1754.

About 22-30 species, cosmopolitan, warm and dry regions, tropical and warm temperate. Panicoideae, Paniceae, Paniceae, or Panicoideae, Paniceae, Cenchrinae, annual or perennial, tufted, erect or procumbent, weak geniculate culms, herbaceous, slender, branched, stoloniferous or rhizomatous, auricles absent, ligule a short ciliate membranous rim, loose leaf sheaths keeled and compressed, narrow leaf blades linear or linear-lanceolate, sometimes leaves pungent, plants bisexual with only a single spike-like axis, inflorescence a false simple cylindrical spike, inflorescence bristles fused and often united at base, spikelets solitary or clustered, sessile involucre of sterile spikelets hardened and spiny, deciduous involucre composed of 1 or more whorls of bristles, spikelets unawned and falling with the glumes, florets 1 or 2, lower floret sterile or male, upper floret hermaphrodite deciduous with the spiny involucre, 2 glumes very unequal and shorter than the spikelet, lower glume minute or sometimes suppressed, palea present, lodicules absent, stamens 3, ovary glabrous, stigmas 2, spines and bristles on the seeds, weed, cultivated fodder, halophytic, troublesome prickly spiny burrs contaminate wool and their spines damage skin, in damp or wet soils some species are prone to root rots, native pasture species, drought resistant and tolerant of hard grazing, soil stabilizer, shade species, ornamental, grows on open grasslands, on disturbed land, woodland on poorer soils, coastal dunes, pampas, bush, rainforest, sandy and weedy places, some species overlapping and confused with *Pennisetum* Rich., see *Species Plantarum* 2: 1049-1050. 1753, *Enumeratio Methodica Plantarum* 206. 1759, *Familles des Plantes* 2: 35, 597. 1763, *Flora Atlantica* 2: 385. 1799 and *Flora of the Southeastern United States* ... 109, 1327. 1903, *American Midland Naturalist* 4: 214. 1915, *Contributions from the United States National Herbarium* 22: 45-77. 1929, *Journal of the Washington Academy of Sciences* 45(5): 135-143. 1955, *Iowa State College Journal of Science* 37(3): 259-351. 1963 [Taxonomy and distribution of the genus *Cenchrus*], *Kurtziana* 4: 95-129. 1967, *Taxon* 33: 126-134. 1984, *Acta Amazonica* 14(1-2): 95-127. 1984, J. Fournet and John L. Hammerton, *Weeds of the Lesser Antilles*. INRA, Paris 1991, *Flora Mesoamericana* 6: 374-375. 1994, *Flora of Ethiopia and Eritrea* 7: 275-279. 1995, *Sida* 19(3): 523-530. 2001 [Nomenclatural changes in *Pennisetum* (Poaceae: Paniceae)], *Contributions from the United States National Herbarium* 46: 144-150. 2003.

Species

C. sp.

in Mexico: rosapillo

C. agrimonioides Trin. (*Cenchrus agrimonioides* var. *laysanensis* F. Br.; *Cenchrus calyculatus* var. *uniflorus* Hillebr.; *Cenchrus fusiformis* Nees; *Cenchrus fusiformis* Nees & Meyen; *Cenchrus pedunculatus* Degener & Whitney)

U.S., Hawaii. Perennial, endangered species, occurs in the mountains, grows in well-drained soil, see *De Graminibus Paniceis* 72. 1826, *Gramineae* 38. 1841, *Nova Acta Phys.-Med. Acad. Caes. Leop.-Carol. Nat. Cur.* 19(Suppl. 1): 170. 1843, *Flora of the Hawaiian Islands* 505. 1888 and *Bernice P. Bishop Museum Bulletin* 81: 20. 1931.

in English: agrimony sandbur

in Hawaii: kamanomano, kumanomano

C. agrimonioides Trin. var. *agrimonioides*

U.S., Hawaii. Perennial, endangered species

in English: agrimony sandbur

C. agrimonioides Trin. var. *laysanensis* F. Br. (*Cenchrus pedunculatus* O. Deg. & Whitney) (Laysan Island in the Northwestern Hawaiian Islands)

U.S., Hawaii. Perennial, endangered or extinct species, see *De Graminibus Paniceis* 72. 1826 and *Bernice P. Bishop Museum Bulletin* 81: 20. 1931.

in English: Laysan agrimony sandbur

in Hawaii: kamanomano, kumanomano

C. australis R. Br. (*Cenchrus calyculatus* Cav.)

Australia, Queensland. See *Icones et Descriptiones Plantarum, quae aut sponte ...* 5: 40, t. 463. 1799, *Prodromus Florae Novae Hollandiae* 1: 196. 1810, *Systema Vegetabilium, editio decima sexta* 1: 303. 1825.

in English: hillside burgrass

C. biflorus Roxb. (*Cenchrus annularis* Andersson ex Peters; *Cenchrus barbatus* Schumacher; *Cenchrus catharticus* Delile; *Cenchrus catharticus* Schltdl., nom. illeg., non *Cenchrus catharticus* Delile; *Cenchrus leptacanthus* A. Tropical Africa, Sahel, Sudan, Yemen, subtropical Africa. Annual, herbaceous, tufted, erect or geniculately ascending, sheaths keeled or compressed, ligule a densely ciliate rim, blades flat and rigid, lamina linear-lanceolate, inflorescence spike-like formed of clusters of spikelets, spikelets surrounded by a rigid involucre in 2 whorls, inner bristles flattened, outer bristles short and spiny, ovoid disc at the base of the burr, thorny grains may wound livestock and wildlife, exact native range obscure, paleotropical invasive weed, adapted to hot and dry tropical areas, it does not have any flood tolerance, used for hay and silage, native pasture species, grazed by most animals in its juvenile state, a source of fodder, food for the herds grazing throughout the Sahel, in northwestern Sahel a food resource for the nomadic Tuareg and settled populations, seeds eaten (Nigeria), seeds used for making bread, in India seeds eaten mixed with *bajra* (millet) for bread making, seeds also eaten raw, in Sudan seeds are pounded and eaten raw or made into porridge, a thin bread (*kisra*) is also made from the

seeds, a grass with hypotensive activity, impressions of *Cenchrus biflorus* seeds in potsherds found in the archeological site of Tichitt Chebka III (Mauritania, West Africa), grows on sand dunes and on sandy soils, clayey soils and light sandy soils, coastal sand dune scrub woodland, deciduous bushland, sand dune savannah and desert fringes, on disturbed lands, orange sand, in sandy plains, in bush, in arid and semiarid regions, hot and dry tropical areas, in low-rainfall woodland savannah on sand, abandoned cultivation, bare sandy ground, see *Flora Aegyptiaco-Arabica* 25. 1775, *Hortus Bengalensis, or a catalogue ...* 81. 1814, *Flora Indica; or Descriptions ...* 1: 238. 1820, *Beskrivelse af Guineiske planter* 43-44. 1827, *Kongel. Tropical Africa, Middle East, India, Pakistan, Syria. Perennial bunchgrass, rarely spreading, profusely branched, shrub-like, wiry to woody, often forming tussocks or mat, tufted, very variable in habit, ascending, base decumbent and geniculate, tough rootstock, ligule ciliate, sheaths glabrous to sparingly pilose and compressed, leaves more or less glabrous and linear, inflorescence dense spike-like pale green or purplish, involucre elongate, spikelets seated in bristly involucre, solitary or clustered spikelets surrounded by numerous bristles not spiny, prickly burs, inner bristles united only at the base to form a disc, outer bristles filiform, lower glume usually nerveless and acute, upper glume mucronate, lemmas subequal and minutely awned, lower lemma male or sterile rarely bisexual, upper lemma bisexual, ornamental, weed species introduced into many tropical and subtropical areas and widely naturalized, invasive and adaptable, palatable when young, cultivated fodder with a moderately high oxalate content, native pasture species, forage, nutritive value of new growth very good, can be fed green or turned into silage, tolerant of heavy grazing once established, soil stabilizer, very drought resistant, sensitive to waterlogging, in India (Rajasthan) seeds eaten mixed with *bajra* (millet) for bread making, seeds also eaten raw, occurs mostly on sandy soils and alluvial flats, on shallow soils of marginal fertility, on light sandy soils, in heavy limestone, creeklines, river edges, roadside table drains, silty and alluvial soils, shifting sand dunes, sandstone rocky sites, along roadsides and water courses, dry river beds,

rocky hillsides, on sandy loam and clay loam soils, in open woodlands and calcareous areas, hot dry areas, in dry sandy regions and denuded arid lands, often treated as *Pennisetum ciliare* (L.) Link, many ecotypes and strains are known, see *Mantissa Plantarum* 302. 1771, *Flora Atlantica* 2: 388. 1799, *Syn. Pl.* 1: 72. 1805, *Enumeratio Plantarum ...* 2: 395. 1805, *Enumeratio Plantarum Horti Botanici Berolinensis*, ...1031. 1809, *Essai d'une Nouvelle Agrostographie* 51. 1812, *Systema Vegetabilium, editio decima sexta* 1: 302. 1825, *Hortus Regius Botanicus Berolinensis* 1: 213. 1827, *Ind. Northern America, U.S., Florida, Arizona, Texas, Mexico. Annual or sometimes a short-lived perennial, tufted, with a shallow root system, erect or bend at the lower nodes, branched, base decumbent and frequently reddish, prostrate stems rooting at the lower nodes, leaf sheaths either hairy or glabrous, ligule ciliate, blade flat or folded, inflorescence open or compact, flowering spikes often partially enclosed by the upper leaf sheath, seed head a spike of spiny burs, spiny inflorescence not very dense, involucre pubescent, spines flat and more or less spreading and rigid, lower lemma sterile, upper lemma bisexual, each yellowish bur usually contains 2 seeds, seeds often a nuisance in hay and wool as well as skin, noxious weed species specialized for life on sand dunes, invasive and unpalatable, often an indicator of poor fertility, found mostly in disturbed areas, dry sites, dry sand, washes, in saline meadows, beaches, dunes, sand hills, in cultivated fields, sandy soils, road verges and paddocks, lawns and pastures, see *Species Plantarum* 2: 1050. 1753, *Flora Caroliniana, secundum* ... 79. 1788, *Icones et Descriptiones Plantarum, quae aut sponte* ... 5: 38, t. 461. 1799, *A Flora of the Northern and Middle Sections of the United States* 1: 69. 1824, *Boston J. Hook.f.; *Pennisetum pennisetiforme* (Hochst. & Steud.) Wipff)

Mediterranean region, east and northeast tropical Africa, India, Arabia, Yemen, Pakistan. Annual or short-lived perennial, tufted, variable, usually branched, soft stems, erect or ascending, leaf sheaths keeled and compressed, ligule a ciliate rim, blade flat to convolute, panicle spike-like and cylindrical, involucre elongate, bristles numerous, inner bristles glabrous and connate from the base, outer bristles filiform, spikelets lanceolate and acute, cluster of spikelets surrounded by hairy bristles, lower glume present or suppressed, lower lemma male or sterile, upper lemma bisexual, planted, pasture, fodder grass, well-grazed, adapted to arid conditions and slightly alkaline soils, excellent drought tolerance, withstands heavy grazing, survives seasonal floodings, useful for stabilisation of the sand dunes, grows as a monospecific sward, common on deep sandy soils, dry waste places, dry semidesert habitats, on sand hills and poor soils, salt marshes, along the banks of water courses, gravel plains, hot and dry regions, loams and alluvial silts, stream beds, along roadsides, well-drained sand dunes, see *Mantissa Plantarum* 302. 1771, *Flora* 20(1): 57. 1837, *Nomenclator Botanicus. East and northeast tropical Africa, northwest India, Arabia, Yemen. Perennial bunchgrass or annual, grows rapidly and vigorously, variable, leafy, more or less erect, tussocky, stoloniferous, forming clumps, more or less spiny, low spreading, bulbous at base, stout rootstock, short rhizomes, leaf sheath scabrous upward, ligule short and ciliate, leaf blades flat or folded, dense inflorescence spike-like erect and cylindrical, spikelets surrounded by a rigid involucre cup-shaped, body of the involucre glabrous, outer bristles minute or absent, inner bristles flattened and grooved on the back, lower lemma sterile rarely male, upper lemma bisexual, seeds purple and bristly, cultivated fodder, once established withstands heavy stocking, forage, pasture species or potential pasture grass, high feed value during the

pre-flowering stage, tender leaves quite palatable, poor forage value, in India seeds eaten mixed with *bajra* (millet) for bread making, seeds also eaten raw, adapted to arid and semiarid climates with a long dry season, useful against moving sand, very tolerant of drought, naturalized elsewhere, can be a serious riverine weed, found in alluvial flats and water courses, wet to upland soil, open dry bush and grassland, arid deciduous grassland, desert areas, subdesert grassland, hot arid zones, along roadsides, on sandy soils, margins of irrigated fields, sandy and silty soils, free-draining soils, sand plains and sand dunes, alkaline soils, sandstone rocky sites, stony hills, savannah, ravine areas, degraded lands, see *Enumeratio Plantarum ... 2*: 395. 1805, Henry Salt (1780-1827), *A Voyage to Abyssinia* and travels into the interior of that country ... in the years 1809 and 1810, etc. 62. C. spinifex Cav. (*Cenchrus echinatus* L.; *Cenchrus incertus* M.A. Curtis; *Cenchrus parviceps* Shinnery; *Cenchrus pauciflorus* Benth.)

U.S., Florida, South America. Tufted annual or short-lived perennial, culms geniculate, prostrate, decumbent, leaf sheaths compressed, leaves entire and alternate, flower spikes consist of burs with sharp spines, burs imbricate, bristles ciliate basally, outer bristles when present mostly flattened, first floret sometimes staminate, first palea sometimes reduced or absent, noxious weed, invasive, burs can inflict pain, growing on sandy areas and sandy soils in both open areas and thin woods, on sandy plains, beach sand, in sandy woods, fields and waste places, in sandy soils along rivers and streams, cultivated fields, along roadsides, see *Species Plantarum* 2: 1050. 1753, *Methodus Plantas Horti Botanici ...* 206. 1794, *Icones et Descriptiones Plantarum, quae aut sponte ...* 5: 38, t. 461. 1799, *Boston Journal of Natural History* 1: 135. Eastern U.S., West Indies, Brazil. Perennial or annual, sharp and quite painful to touch, branched, sprawling, erect or ascending, branching and rooting at the lower nodes, leaf sheaths compressed, long narrow gray-green glabrous leaves, flowers scattered and infrequent, flower clusters spiny, spikelets hard and prickly, burs densely pubescent, tiny and backward-pointing spines densely villous basally, outer bristles usually present, spines flattened and more or

less spreading, fertile lemma and palea occasionally scaberrulous, weed species, unpleasant to walk on barefooted, naturalized elsewhere, useful stabilizer of dunes, young burs used as fodder, seeds scorched to make herbal coffee or bread, grows in moist sandy dunes, on coastal sands, beaches, on sandy shores, open dunes, active dunes, sandy fields and woods, cultivated fields, primary dunes zone, land side of barrier dunes, back dunes or secondary dunes, across secondary dunes, tropical salt marshes, open grasslands to dense shrub, groves of low broadleaf evergreen trees, see *Species Plantarum* 2: 1050. 1753, *Flora Caroliniana, secundum* ... 79. 1788, *A Flora of the Northern and Middle Sections of the United States* 1: 69. 1824, *Boston Journal of Natural History* 1: 135. Centosteca Desv. = *Centotheca* Desv.

Presumably an orthographic variant of *Centotheca* Desv., see *Nouveau Bulletin des Sciences, publié par la Société Philomatique de Paris* 2: 189. 1810, *Journ. de Bot.* 1: 70. 1813.

Centotheca Desv. = *Centosteca* Desv.,
Centotheca P. Beauv., *Ramosia* Merr.

From the Greek *kenteo* “to prick, torture, torment, sting, spur, pierce” and *theke* “a case, sheath,” alluding to the prickly glumes, to the spines on the lemma, to prickly hairs within the spikelet on the upper lemmas.

Some 1/4-5 species, Old World tropics, tropical West Africa, tropical Asia, Pacific, India, China, Sri Lanka. Bambusoideae, Oryzodae, Centothecoideae, Centothecaceae, perennial or annual, unarmed, tufted, ascending to erect, knotty base, rhizomatous or caespitose, woody and persistent, flowering culms leafy, culm nodes glabrous, culm internodes solid, auricles present or absent, sheaths strongly nerved, ligule a short rim or an unfringed membrane, leaf blades elliptic or linear to lanceolate, plants bisexual and unarmed, inflorescence an ascending panicle, the terminal floret rudimentary, upper floret often with reflexed bristles, spikelets with pedicels hispid, 2 glumes herbaceous and oblong-lanceolate, lemmas apiculate and awnless, palea present, lodicules 2 or absent, stamens 2-3, ovary glabrous, 2 stigmas, spikelets breaking up at maturity, forest shade, type *Centotheca lappacea* (L.) Desv., see *Nouveau Bulletin des Sciences, publié par la Société Philomatique de Paris* 2: 189. 1810, *Journ. de Bot.* 1: 70. 1813, *Flora Indica; or Descriptions of Indian Plants, by the Late William Roxburgh, ...* edited by William Carey, D.D. to which are added descriptions of plants more recently discovered by Nathaniel Wallich... 2 vols. Forst.; *Torresia biflora* Roem. & Schult.; *Torresia latifolia* (Osbeck) P. Beauv. ex Roem. & Schult.)

Southeast Asia, India, China, Africa. Perennial or annual, tufted, rather coarse, robust, rhizomatous, culms erect or ascending and solitary, sometimes rooting at the lower nodes, woody roots, leaf sheath with hairy margins and strongly nerved, leaf blade lanceolate to nearly elliptic, ligule membranous, leaves reticulate below, panicle exerted from the uppermost sheath, inflorescence a branching terminal panicle, open panicle with the lower branches

drooping, spikelets ovate-elliptic, bristles on the upper flowering glume, 2 glumes, lower glume hairy, spines or stiff hairs on the lemma, palea narrow and slightly hairy, dispersal by reflexed spines, moderately palatable, good fodder, grazed by cattle, usually animals avoid eating the seed heads, medicinal value, weed species growing in shady damp areas, forest shade, rather shady habitats, hills, disturbed areas, swamps, open places in rain forests and thickets, along trails, forest paths, lowlands, edge of woodlands, in secondary vegetation, old taro plantations, waste places, in forest clearings, among tall shrubs, see *Dagbok ofwer en Ostindisk Resa* 247. 1757, *Species Plantarum, Editio Secunda* 1488. 1763, *Florulae Insularum Australium Prodrumus* 8. 1786, *Nouveau Bulletin des Sciences, publié par la Société Philomatique de Paris* 2: 189. 1810, *Systema Vegetabilium* 2: 515, 728. 1817, *Fundamenta Agrostographiae* 141. 1820, *Nov. Centochloa Swallen

Greek *kentron* "a spur, prickle" and *chloe, chloa* "grass, young grass, vegetables, greens."

One species, Brazil. Panicoideae, Panicoideae, Paniceae, or Panicoideae, Paniceae, Paspalinae, annual, caespitose, herbaceous, auricles absent, ligule a fringed membrane, plants bisexual, inflorescence of subdigitate racemes, spikelets solitary, 1 glume per spikelet, lower glume absent, upper glume extending below the callus, upper lemma tip pubescent to puberulous, palea present, 2 free and fleshy lodicules, 3 stamens, ovary glabrous, 2 stigmas, open habitats, savannah, type *Centochloa singularis* Swallen, see J.R. Swallen, "*Centochloa*, a new genus of grasses from Brazil." *Journal of the Washington Academy of Sciences* 25: 190-193. 1935, *Contributions from the United States National Herbarium* 46: 151. 2003.

Species

C. singularis Swallen

Brazil. See *Journal of the Washington Academy of Sciences* 25(4): 192, f. A. 1935.

Centrophorum Trin. = Chrysopogon Trin.

From the Greek *kentron* "a spur, prickle" and *phoros* "bearing," *kentrophoros* "with a sting."

Panicoideae, Andropogoneae, Sorghinae, type *Centrophorum chinense* Trin., see *Fundamenta Agrostographiae* 106, 187-188, t. 5. 1820, *Die Natürlichen Pflanzenfamilien* 2(2): 28. 1887 and *Flora Mesoamericana* 6: 383. 1994, *Austrobaileya* 5(3): 503-533. 1999, *Contributions from the United States National Herbarium* 46: 159-161. 2003.

Centropodia Reichenbach = Asthenatherum Nevski, Centropodia (R. Br.) Rchb.

From the Greek *kentron* "a spur, prickle" and *pous, podos* "foot," referring to the stem.

About 4 species, North Africa, southern Africa, Middle East, northern India. Arundinoideae, Arundineae, annual or perennial, herbaceous, unbranched, unarmed, glaucous, tufted or decumbent, woody rootstock, auricles absent, ligule a fringe of hairs, leaf blades stiff and pungent, plants bisexual, inflorescence a contracted panicle, panicles enclosed by spathe-like upper leaf sheaths, 2 glumes equal or subequal, rachilla internode between the glumes, awns 1 or 3 straight or geniculate, floret callus pungent, glumes 2 more or less equal strongly 7-11 nerved, lemmas coriaceous with a terminal long tuft, awn straight or geniculate, 2 lodicules free and fleshy, 3 stamens, ovary glabrous, 2 stigmas, open habitats, deserts, an earlier name for

Asthenatherum Nevski, see *Narrative of Travels and Discoveries in Northern and Central Africa* 244. 1826, *Conspectus Regni Vegetabilis* 212a. 1828 and *Senck. Biol.* 43(4): 239-266. 1962, *Kew Bulletin* 37(4): 657-659. 1982, T.A. Cope, "Centropodia: an earlier name for *Asthenatherum* (Gramineae)." *Kew Bulletin* 37(4): 657-659. 1983, *Bothalia* 15(1/2): 153-159. 1984, *Bothalia* 18: 119-122. 1988, *Annals of the Missouri Botanical Garden* 75: 866-873. 1988, *Flora of Ethiopia and Eritrea* 7: 73. 1995.

Species

C. glauca (Nees) T.A. Cope (*Asthenatherum forskahlei* auctt.; *Asthenatherum glaucum* (Nees) Nevski; *Danthonia forskalii* subsp. *glauca* (Nees) Maire & Weiller; *Danthonia glauca* Nees)

South Africa. Annual or short-lived perennial, tufted, erect, variable with habitat, brittle, fragile, weak, branched from the base, shortly rhizomatous, rhizomes covered with papery bracts, leaf blades scabrid with a fine sharp tip, basal sheaths densely hairy and loose, ligule a ring of short hairs, dense contracted panicle, lower 2 spikelets bisexual, glumes with bent awns, very palatable, very high grazing value, useful for erosion control, found in sandveld, on sand dunes, in gravel flats between dunes, in deep sandy soils, open habitats, on red sand, on gravelly soils, see *Florae Africae Australioris Illustrationes Monographicae* 327. 1841 and

Flore de l'Afrique du Nord: 2: 363. 1953, *Kew Bulletin* 37(4): 658. 1982.

in English: gha grass

in South Africa: ghagras, dünenhafer

C. glauca (Nees) T.A. Cope var. *glauca*

South Africa, Southern Kalahari. Perennial, tufted, glabrous, sandy dunes.

C. glauca (Nees) T.A. Cope var. *lasiophylla* (Pilger) Conert South Africa. Perennial, tufted, rhizomes covered with hairy papery bracts, leaf sheaths densely hairy.

C. mossamedensis (Rendle) Cope (*Asthenatherum mossamedense* (Rendle) Conert; *Danthonia mossamedensis* Rendle) (Angola, Mossamedes)

South Africa. Perennial, tufted, rhizomatous, woody bulbous rhizomes, basal sheaths present or absent, in coarse sandy places, riverbeds, desert, drainage lines, see *Catalogue of the African Plants Collected by Dr. F. Welwitsch in 1853-61* 2(1): 211. 1899 and *Senckenbergiana Biologica* 43: 254. 1962, *Kew Bulletin* 37(4): 658. 1982.

Cephalochloa Cosson & Durieu = *Ammochloa* Boiss.

From the Greek *kephale* "head" and *chloe*, *chloa* "grass, young grass."

Pooideae, Poodae, Aveneae, see *Diagnoses plantarum orientarium novarum* ser. 1. 2(13): 51-52. 1854, *Annales des Sciences Naturelles, Botanique*, sér. 4 1: 229. 1854 and *Acta Universitatis Lundensis* 36(4): 12. 1900, *Repertorium Specierum Novarum Regni Vegetabilis, Beihefte* 63: 1. 45. 1931, *Kew Bulletin, Additional Series* 13: 109. 1986 [*Genera Graminum*].

Cephalostachyum Munro = *Schizostachyum* Griff., *Schizostachyum* Nees

From the Greek *kephale* "head" and *stachys* "a spike."

About 1/12-16 species, tropics and subtropics, Bhutan, Indomalaya, Burma (Myanmar), Madagascar, from northeastern Himalayas to Thailand. Bambusoideae, Bambusoideae, Bambuseae, Melocanninae, sympodial, perennial, unarmed, thin-walled, dense clumps, rhizomes pachymorph, manifold branching, woody, flexible, persistent, climbing, straggling, pendulous or scandent or not scandent, flowering culms leafy, culm internodes hollow, culm nodes glabrous or hairy, internodes long, culm sheath coriaceous shedding late, auricles lacking or not, sheath blade erect or extending outward, plants bisexual, flowering iterant, spikelets with basal buds, pseudospikelet aggregating into cephalanthium, 2-several glumes, palea present, 3 free lodicules, 6 stamens, hollow ovary appendage, 2-3 stigmas,

useful for weaving into mats, found in deciduous forest, mixed forests, high rainfall forests, thickets, near streams, humid and shady conditions, broad-leaved forests, moist sites, mountain to forests at low altitudes, riverbanks, evergreen forest, type *Cephalostachyum capitatum* Munro, see *Flora Brasiliensis seu Enumeratio Plantarum* 2: 535. 1829, *Deutsch. Fl.* 6: 6. 1846, *Notulae ad Plantas Asiaticas* 3: 64. 1851, *Transactions of the Linnean Society of London* 26(1): 138-139, 143, t. 3. 1868, *Forest Flora of British Burma* 2: 566. 1877, *Annals of the Royal Botanic Garden, Calcutta*. 7(26): 107, t. 94. 1896 and A. Camus, "Le genre *Cephalostachyum* a Madagascar." *Bulletin de la Société Botanique de France* 72: 84-88. 1925, *Taxon* 6(7): 201. 1957, R.A. Young & J.R. Haun, "Bamboo in the United States: Description, culture, and utilization." *Agriculture Handbook* 193: i-iii, 1-74. 1961, F.A. McClure, "Genera of bamboos native to the New World (Gramineae: Bambusoideae)." *Smithsonian Contributions to Botany* 9: 1-148. 1973, *Florae Indicae Enumeratio: Monocotyledonae, Bambusoideae* Botanical Survey of India, Flora of India, Series 4, 281-282. Majumdar, nom. illeg., non *Schizostachyum latifolium* Gamble; *Schizostachyum latifolium* (Gamble) Majumdar; *Schizostachyum sharmae* S. Kumar & P. Sing)

Bhutan, India, Burma. Internodes rough, culm nodes hairy, culm sheaths ridges, inflorescence compound and unilateral, used for weaving, see *Transactions of the Linnean Society of London* 26(1): 140. 1868, *Annals of the Royal Botanic Garden, Calcutta*. 7(26): 107, t. 94. 1896 and *Fl. Ind. Enumerat.-Monocot*. 281. 1989, *J. Indian Bot. Soc.* 70(1-4): 423. 1991, *Edin. J. Bot.* 51(1): 29. 1994.

in Bhutan: jhi, ghopi bans, pishima, palom

C. madagascariense A. Camus (*Cathariostachys madagascariensis* (A. Camus) S. Dransf.)

Madagascar. See *Bulletin de la Société Botanique de France* 72: 88. 1925, *Special Bulletin of Taiwan Forestry Research Institute* no. 4: 33. 1967, S. Dransfield, "Valiha and *Cathariostachys*, 2 new bamboo genera (Gramineae-Bambusoideae) from Madagascar." *Kew Bulletin* 53(2): 375-397. 1998.

C. mannii (Gamble) Stapleton & D.Z. Li (*Arundinaria mannii* Gamble; *Neomicrocalamus mannii* (Gamble) R.B. Majumdar; *Racemobambos mannii* (Gamble) Campbell)

India. See *Annals of the Royal Botanic Garden, Calcutta*. 7(26): t. 26. 1896, *Fl. Brit. Ind.* 7: 38. 1896 and *Notes Sino-Himal. Bamboo Spec.* 23. 1988, *Fl. Ind. Enumerat.-Monocot*. 279. 1989, *Kew Bulletin* 52(3): 700. 1997.

C. mindorensis Gamble (*Cephalostachyum mindorensis* Gamble)

Philippines. Scrambling, thin-walled, many slender pseudospikelets clustered at each node, used for fencing and handicrafts, household articles, some taxonomic problem for this plant, see *Plant Resources of South-East Asia* 7: 148-149. 1995.

in Philippines: bagto

C. pallidum Munro (*Schizostachyum pallidum* (Munro) R.B. Majumdar)

India, Burma, Bhutan, China. Upper part of the culm scandent, culm wall thin, branching extending upward with no main branch, sheath narrow long, no sheath auricles, sheath ligule very low, sheath blade narrow-lanceolate to long-lanceolate, leaves ovate-lanceolate its underside scabrous to tomentose, used in weaving and making flutes, see *Transactions of the Linnean Society of London* 26(1): 139. 1868 and *Florae Indicae Enumeratio: Monocotyledonae, Bambusoideae* Botanical Survey of India, Flora of India, Series 4, 282. Calcutta 1989 [also *Fl. Ind. Enumerat.-Monocot*. 282. 1989].

C. peclardii A. Camus (*Cathariostachys capitata* (Kunth) S. Dransf.; *Nastus capitatus* Kunth)

Madagascar. See *Révision des Graminées* 1: 325, t. 75. 1830 and *Bulletin de la Société Botanique de France* 72: 87-88. 1925, *Special Bulletin of Taiwan Forestry Research Institute* no. 4: 19, 33. 1967, *Kew Bulletin* 53(2): 391. 1998.

C. pergracile Munro (*Oxytenanthera aliena* McClure; *Schizostachyum pergracile* (Munro) R.B. Majumdar)

Myanmar (Burma). Tufted, sympodial, deciduous, growing in large stands, young culms densely covered with small adnate pubescence, very thin walled, erect with nodding to pendulous tips, branches from the upper nodes, culm sheath thick and leathery, sheath blade erect or extending outward, sheath auricles long ovate, leaf blades linear-lanceolate and rough, inflorescence drooping, pseudospikelets, spikelets with 1-2 sterile florets at base, often flowers sporadically, can be propagated by seed and rhizome cuttings, widely cultivated, ornamental, stems used for fishing rods and in building, fences, wind-breaks, crate weaving, basketry, handicrafts, binding materials, raw material for paper pulp, young shoots bitter and edible, in Burma internode of a 1-year-old culm used for cooking glutinous rice, found in mixed deciduous forests, hills, see *Transactions of the Linnean Society of London* 26(1): 141. 1868 and *Lingnan University Science Bulletin* 9: 39. 1940, *Economic Botany* 11: 235-243. 1957, *The Indian Forester* 102: 579-595. 1976, *Fl. Ind. Enumerat.-Monocot*. 282. 1989.

in English: tinwa bamboo

in Burma: tinwa

in India: latang, madang

in Thailand: khaao laam, khao lam, khui pang, khui paang, mai-pang, paang, pang, phai-khaolam, phai-khaolarm, wa blo, waa blo, wa phlong, waa phlong

C. perrieri A. Camus

Madagascar. Climbing, scandent, see *Bulletin de la Société Botanique de France* 72: 85. 1925, *Special Bulletin of Taiwan Forestry Research Institute* no. 4: 18, 33. 1967.

C. scandens Bor (*Cephalostachyum scandens* Jia Rong Xue & C.M. Hui, nom. illeg., non *Cephalostachyum scandens* Bor; *Cephalostachyum scandens* Hsueh & C.M. Hui, nom.

illeg., non *Cephalostachyum scandens* Bor; *Schizostachyum scandens* (Bor) H.B. Naithani & Bennet)

Burma, China. Scandent, straggling, see *Kew Bulletin* 12(3): 419. 1958, *Indian Forester* 117(1): 68. 1991, *Research of Bamboos from Nujiang (Salween), Yunnan, China* 22. 1996, *Kew Bulletin* 52(3): 699-702. 1997, *Acta Phytotaxonomica Sinica* 35(6): 562-565. 1997.

C. viguieri A. Camus

Madagascar. Solid, climbing, lining, erect or suberect, eaten by *Hapalemur aureus*, see *Bulletin de la Société Botanique de France* 72: 85-86. 1925, *Special Bulletin of Taiwan Forestry Research Institute* no. 4: 19, 33. 1967.

in Madagascar: tsiergolovolo

C. virgatum (Munro) Kurz (*Melocanna virgata* Munro; *Schizostachyum virgatum* (Munro) H.B. Naithani & Bennet)

Myanmar. Culm top slightly drooping, thin-walled, manifold branching at lower portion of culm, branches spreading horizontally, young culm pruinose, sheath auricles like narrow stripe, sheath blade narrow-lanceolate erect or turned outside down, leaves lanceolate, inflorescence borne on leafless branch, several to many groups of slender pseudospikelets at each node, culms used for matting, handles, household utensils, in ware weaving used as rafters or strips, found growing in evergreen forests, some taxonomic problem for this plant, see *Transactions of the Linnean Society of London* 26(1): 133. 1868, *Forest Flora of British Burma* 2: 564. 1877 and *Indian Forester* 117(1): 68. 1991.

in Myanmar: waba

in Thailand: pai hia, phai hia, phai hiae

Ceratochaete Lunell = *Zizania* L.

From the Greek *keras*, *keratos* “a horn” and *chaite* “bristle, mane, loose flowing hair, long hair.”

Ehrhartoideae, Oryzaeae, Zizaniinae, type *Ceratochaete aquatica* (L.) Lunell, see *Species Plantarum* 2: 991. 1753 and *American Midland Naturalist* 4: 214. 1915, *Phytologia* 72: 6. 1992, *Sida* 17(3): 533-549. 1997, *Newslett. Int. Organ. Pl. Biosyst. (Oslo)* 30: 10-15. 1999, *Contributions from the United States National Herbarium* 39: 116-118. 2000.

Ceratochloa DC. & P. Beauv. = *Bromus* L., *Ceratochloa* P. Beauv.

Greek *keras*, *keratos* “a horn” and *chloe*, *chloa* “grass,” referring to the seeds.

Pooideae, Bromaeae, type *Ceratochloa cathartica* (Vahl) Herter, see *Species Plantarum* 1: 76-78. 1753, A.M.F.J. Palisot de Beauvois, *Essai d'une nouvelle Agrostographie*.

75, 158. 1812, *Flora Rossica* 4(13): 360. 1852 and *U.S.D.A. Div. Agrostol. Bull.* 23: 1-66. 1900, *Revista Sudamericana de Botánica* 6(5-6): 144. 1940, *Blumea* 4(3): 498. 1941, *Brittonia* 7: 421. 1952, *Bot. Jahrb. Syst.* 102: 447. 1981, *Taxon* 41: 559. 1992, *Taxon* 44: 611-612. 1995, *Contributions from the United States National Herbarium* 48: 154-191. 2003.

Cerea Schlttdl. = *Cerea* Thou.

(Elaeocarpaceae), *Ceresia* Pers., *Paspalum* L.

Panicoideae, Paniceae, Paspalinae, see *Systema Naturae, Editio Decima* 846, 855, 1359. 1759, Louis-Marie Aubert Aubert du Petit-Thouars (1758-1831), *Histoire des Végétaux Recueillis dans les Isles Australes d'Afrique* (edition 2) t. 28. Paris 1805, *Bot. Zeitung (Berlin)* 12: 820. 1854 and *Contr. U.S. Natl. Herb.* 12: 116. 1908, *Contributions from the United States National Herbarium* 46: 443-527. 2003.

Ceresia Pers. = *Paspalum* L.

Ceres, the daughter of Saturn and Ops.

Panicoideae, Paniceae, Paspalinae, type *Ceresia elegans* Pers., see *Systema Naturae, Editio Decima* 846, 855, 1359. 1759, *Flora Caroliniana, secundum ...* 75. 1788, *Tableau Encyclopédique et Méthodique ... Peterson, "Systematics of the Muhlenbergiinae (Chloridoideae: Eragrostideae).," *Grasses: Systematics and Evolution* 195-212. 2000, *Contributions from the United States National Herbarium* 41: 143-173. 2001.

Species

C. atacamensis (Parodi) P.M. Peterson & Annable (*Muhlenbergia atacamensis* Parodi; *Muhlenbergia atacamensis* var. *atacamensis*; *Muhlenbergia atacamensis* var. *brachyanthera* Parodi)

South America. Annual, see *Revista Argentina de Agronomía* 15: 248, 250. 1948, *Madroño* 39(1): 19. 1992.

C. decumbens (Swallen) Reeder & C. Reeder (*Muhlenbergia decumbens* Swallen)

Mexico. Annual, see *Boletín de la Sociedad Botánica de México* 23: 30-32, f. 4. 1958 [1959], *Phytologia* 65(2): 156. 1988.

C. ligulata E. Fourn. (*Muhlenbergia ligulata* (E. Fourn.) Scribn. & Merr.)

Mexico. Good forage, see *Mexicanas Plantas* 2: 112, t. 1. 1886 and *Bulletin, Division of Agrostology United States Department of Agriculture* 24: 19. 1901.

in Mexico: pelillo

C. subbiflora (Hitchc.) Reeder & C. Reeder (*Muhlenbergia subbiflora* Hitchc.)

Mexico. Annual, moist soil, see *North American Flora* 17(6): 437. 1935, *Phytologia* 65(2): 156. 1988.

Chaetaria P. Beauv. = *Aristida* L.

Greek *chaite* "bristle, loose flowing hair."

Arundinoideae, Aristideae, or Aristidoideae, Aristideae, type *Chaetaria stricta* (Michx.) P. Beauv., see *Species Plantarum* 1: 82. 1753, *Essai d'une nouvelle Agrostographie, ou nouveaux genres des Graminées*. 30, 152, 158. 1812, *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques, Physiques et Naturelles* 1(1): 83. 1830 and *Contr. U.S. Natl. Herb.* 22(7): 529. 1924, *Meded. Rijks.-Herb.* 54: 9. 1926, *Kurtziana* 1: 123-206. 1961, *Flora Mesoamericana* 6: 253-257. 1994, *Flora del Valle de Tehuacán-Cuicatlán* 3: 1-35. 1994, *Flora of Ethiopia and Eritrea* 7: 76-85. 1995, *Grassland of China* 1995(1): 16-20. 1995, *Annals of the Missouri Botanical Garden* 82: 593-595. 1995, *Candollea* 53(2): 466-470. 1998, *Bot. Rev.* 64: 1-85. 1998, *Boletim do Instituto de Botânica (São Paulo)* 12: 113-179. 1999, *Acta Botánica Mexicana* 63: 1-45. 2003, *Contributions from the United States National Herbarium* 46: 69-104, 151-152. 2003.

Chaetium Nees = *Berchtoldia* J. Presl

From the Greek *chaite* "bristle, loose flowing hair, foliage."

About 3 species, tropical South America, Brazil, Mexico, West Indies. Panicoideae, Panicodae, Paniceae, or Panicoideae, Paniceae, Melinidinae, perennial, herbaceous, unbranched, caespitose, erect, solid internodes, auricles absent, plants bisexual, inflorescence racemose or paniculate, loose single raceme along a central axis, spikelets lanceolate solitary or paired, 2 glumes subequal and awned, lower glume sometimes reduced to an awn, lower lemma acuminate or awned, upper lemma shortly awned, palea present, 2 free and fleshy lodicules, 3 stamens, ovary glabrous, 2 stigmas, open areas, along roadsides, grasslands,

trails, moist forest, type *Chaetium festucoides* Nees, see *Species Plantarum* 1: 55. 1753, *Flora Brasiliensis seu Enumeratio Plantarum* 2(1): 269-271. 1829, *Reliquiae Haenkeanae* 1(4-5): 323-324, t. 43. 1830, *Flora Brasiliensis* 2(2): 149. 1877 and *Brittonia* 23(3): 293-324. 1971, *Flora Mesoamericana* 6: 330-331. 1994, *Annals of the Missouri Botanical Garden* 85(3): 404-424. 1998 [Revisión sistemática y análisis cladístico del género *Chaetium* (Poaceae: Panicoideae: Paniceae).], *Contributions from the United States National Herbarium* 46: 152-153. 2003.

Species

C. bromoides (J. Presl) Benth. ex Hemsl. (*Berchtoldia bromoides* J. Presl; *Panicum berchtoldiae* Döll)

Mexico. Perennial, erect, forming colonies, forage, found along roadsides, see *Reliquiae Haenkeanae* 1: 324, t. 43. 1830, *Flora Brasiliensis* 2(2): 150. 1877, *Biologia Centrali-Americana*; ... *Botany* ... 3: 503. 1885.

C. cubanum (C. Wright) Hitchc. (*Bouteloua litigiosa* Lag.; *Perotis cubana* C. Wright)

West Indies, Cuba. Awnless, see *Hortus Kewensis* 1: 85. 1789, *Varietates de Ciencias, Literatura y Artes* 2(4,21): 134. 1805, *Genera et species plantarum* 5. 1816, *Anales de la Academia de Ciencias Medicas* ... 8: 288. 1871 and *Contributions from the United States National Herbarium* 12(6): 232. 1909.

C. festucoides Nees (*Oplismenus festucoides* (Nees) Kunth; *Panicum chaetium* Steud.; *Panicum festucoides* Poir.)

South America, Brazil. See *Flore d'Oware* 2: 14. 1807 [1810], *Encyclopédie Méthodique. Botanique* ... *Supplément* 4: 283. 1816, *Flora Brasiliensis seu Enumeratio Plantarum* 2(1): 270-271. 1829, *Enumeratio Plantarum Omnium Hucusque Cognitarum* 1: 146. 1830, *Nomenclator Botanicus. Editio secunda* 2: 254. 1841.

Chaetobromus Nees = Danthonia DC.

From the Greek *chaite* "bristle" plus *Bromus* L., *bromos* "oats," referring to the shape of the spikelets.

About 1-3 species, South Africa. Arundinoideae, Danthoniae, perennial, tufted, herbaceous, erect, unarmed, branched, sometimes long-rhizomatous or stoloniferous, sometimes decumbent, rooting also occurs at the lower nodes, black nodes, network of roots and runners, auricles absent, ligule a fringe of hairs, plants bisexual, inflorescence paniculate open or contracted, spikelets solitary 2- to 4-flowered, linear pungent bearded callus, 2 glumes papery equal or subequal, lemmas membranous with long awns and bristles, female-fertile lemmas with a bent awn, palea present, lodicules glabrous, 3 stamens, ovary glabrous, 2 stigmas, coastal species, on sandy soil, dry stony soils, a difficult genus, serious taxonomic problems, type *Chaetobromus involucratus* (Schrad.) Nees, see *Flore Française*.

Troisième Édition 3: 32. 1805, *Essai d'une Nouvelle Agrostographie* 92, t. 18, f. 8. 1812, *Systema Vegetabilium* 2: 690. 1817, *A Natural System of Botany* 449. 1836, *Florae Africae Australioris Illustrationes Monographicae* 1: 344-345. 1841 and *Bothalia* 18: 111-114, 119-122. 1988, *South African Journal of Botany* 61: 60-65. 1995, *Genome* 33: 646-658. 1990, *Nordic Journal of Botany* 18: 57-77. 1998 [A re-evaluation of species limits in *Chaetobromus* (Danthonieae: Poaceae)], P.C. Beukes and R.M. Cowling, "Evaluation of restoration techniques for the Succulent Karoo, South Africa." *Restoration Ecology* 11(3): 308-316. Sep 2003.

Species

C. dregeanus Nees (*Chaetobromus involucratus* subsp. *dregeanus* (Nees) Verboom; *Danthonia dregeana* (Nees) Steud.)

South Africa. See *Florae Africae Australioris Illustrationes Monographicae* 1: 343-345. 1841, *Synopsis Plantarum Glumacearum* 1: 244. 1854 and *Nordic Journal of Botany* 18(1): 74. 1998.

C. involucratus (Schrad.) Nees (*Avena involucrata* Schrad.; *Danthonia involucrata* (Schrad.) Schrad.; *Pentameris involucrata* (Schrad.) Nees)

South Africa. Perennial, stoloniferous or tufted, rhizomatous, erect, basal leaves and sheaths hairy, basal florets with central awn usually not geniculate, rocky places, see *Göttingische gelehrte Anzeigen (unter der Aufsicht der Königl. Gesellschaft der Wissenschaften)* 3: 2075. 1821, *Mantissa* 2: 383. 1824, *Linnaea* 7(3): 310. 1832, *Florae Africae Australioris Illustrationes Monographicae* 344-345. 1841 [Agrostographia Capensis ... denuo impressa. Halae 1853], *Conspectus Florae Africae* 5: 851. 1894 and *Nordic Journal of Botany* 18(1): 70, 72. 1998.

C. schraderi Stapf

South Africa. Perennial, erect, rooting at the lower nodes, subterranean runners, leaves with sharp points, inflorescence paniculate, spikelets on the side branches, valuable grazing crop, used to protect sandy soil against wind erosion, among shrubs, rocky areas, sandy soil, see *Flora Capensis* 7: 538. 1899 and *Bothalia* 18: 119-122. 1988, *Genome* 33: 646-658. 1990.

in South Africa: wortelgras

Chaetochloa Scribner = Setaria P. Beauv.

Greek *chaite* "bristle, mane, crest, foliage" and *chloe*, *chloa* "grass."

Panicoideae, Paniceae, Setariinae, type *Chaetochloa viridis* (L.) Scribn., see *Essai d'une Nouvelle Agrostographie* 51, 178. 1812, *Index Seminum [Berlin]* 18. 1855, Frank Lamson Scribner (1851-1938), in *Bulletin, Division of Agrostology*

United States Department of Agriculture 4: 38-39. 1897 and *Contr. U.S. Natl. Herb.* 22(3): 156, 158. 1920, *Flora Mesoamericana* 6: 359-363. 1994, J.F. Veldkamp, "Miscellaneous notes on southeast Asian Gramineae: 9. *Setaria* and *Paspalidium*." *Blumea* 39: 373-384. 1994, R.D. Webster, "Nomenclatural changes in *Setaria* and *Paspalidium* (Poaceae: Paniceae)." *Sida* 16: 439-446. 1995, *Darwiniana* 37(1-2): 37-151. 1999, *Sida* 18(4): 1037-1047. 1999, *Contributions from the United States National Herbarium* 46: 569-593. 2003.

Chaetopoa C.E. Hubb. = *Anthephora* Schreb.

Greek *chaite* "bristle, mane, crest, foliage" and *poa* "grass, pasture grass."

About 2 species, Tanzania. Panicoideae, Panicoideae, Paniceae, annual, herbaceous, slender, loosely tufted, erect, geniculately-ascending, auricles absent, ligule membranous, leaf sheaths hairy, narrow leaf blades, plants bisexual, cylindrical spiciform inflorescence bearing deciduous clusters of shortly pedicelled sterile spikelets embracing 1 sessile bisexual spikelet, 2 glumes subequal, bisexual spikelet lower glume suppressed or subulate, upper glume more or less lanceolate, upper lemma acuminate awned, sterile spikelets glumes long and awnlike, palea present, 2 glabrous lodicules, 3 stamens, ovary hairy, 2 stigmas, rocky places, open habitats, see *Beschreibung der Gräser* 2: 105, t. 44. Leipzig 1769-1810 and *Hooker's Icones Plantarum* 37: t. 3646. 1967, *Kew Bulletin* 32(4): 579-581. 1977, *Flora of Tropical East Africa* 451-898. 1982.

Species

C. pilosa W.D. Clayton

Tanzania. See *Kew Bulletin* 32(3): 579. 1978.

C. taylori C.E. Hubbard

Tanzania.

Chaetopogon Janchen = *Chaeturus* Link

From the Greek *chaite* "bristle, mane, crest, foliage" and *pogon* "a beard."

About 1-2 species, Mediterranean. Pooideae, Poodae, Aveneae, annual, herbaceous, auricles absent, narrow linear leaf blades, ligule an unfringed membrane, plants bisexual, contracted inflorescence paniculate, spikelets without rachilla extension and shortly pedicellate, 2 membranous glumes unequal and longer than floret, lower glume awned, lemma rounded and acute, palea nerveless, 2 lodicules membranous, 3 stamens, ovary glabrous, 2 stigmas, sandy places, see *Flora Berolinensis Prodrum* 200. 1787, *Journal für die Botanik* 1799(2): 313. 1800 and Erwin Janchen (1882-

1970), *Die europäischen Gattungen der Farn- und Blütenpflanzen ...* (edition 2) 33. Leipzig und Wien 1913, M. Gandoger (1850-1926), *Flora cretica*. Paris 1916, *Lagascalia* 15: 119-124. 1988, *Boletim da Sociedade Broteriana, ser. 2* 63: 153-205. 1990.

Species

C. creticus (Coustur. & Gand.) Hayek (*Chaeturus creticus* Coustur. & Gand.)

Creta. See *Repertorium Specierum Novarum Regni Vegetabilis, Beihefte* 30(3): 335. 1932.

C. fasciculatus Link (Hayek) (*Chaeturus fasciculatus* Link; *Polypogon fasciculatus* (Link) Pers.)

Mediterranean, Spain. See *Flora Atlantica* 1: 66. 1798 [1800], *Syn. Pl.* 1: 80. 1805 and *Repertorium Specierum Novarum Regni Vegetabilis, Beihefte* 30(3): 335. 1932.

Chaetostichium C.E. Hubb. = *Oropetium* Trin.

Greek *chaite* "bristle, mane, crest, foliage" and *stichos* "rank."

One species, Africa. Chloridoideae, Eragrostideae, type *Chaetostichium minimum* (Hochst.) C.E. Hubbard, perennial, herbaceous, densely tufted, narrow and rigid leaf blades, ligules fringed, plants bisexual, slender and recurved inflorescence spicate, spikes usually flexuous or coiled, spikelets solitary, 1 or 2 glumes per spikelet, lower glume obscure or absent, upper glume acuminate to awned, palea and lodicules present, 3 stamens, ovary glabrous, 2 stigmas, depressions and bushland, shallow soil, among rocks, dry sandy soil, grassy plains, type *Chaetostichium minimum* (Hochst.) C.E. Hubb., see *Fundamenta Agrostographiae* 98, t. 3. 1820, *Flora* 38: 332. 1855 and *Bulletin de la Société Botanique de France: Mémoires* 8(d): 222. 1912, *Hooker's Icones Plantarum* 34: t. 3341. 1937, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 74: 14. 1947, *Webbia* 8: 107-108. 1951, *Kew Bulletin* 1957: 60. 1957, *Bulletin du Jardin Botanique National de Belgique* 38: 1285. 1968, *Kew Bulletin* 30: 467-470. 1975, *Kew Bulletin* 50: 601-604. 1995.

Species

C. minimum (Hochst.) C.E. Hubbard (*Chaetostichium majusculum* C.E. Hubb.; *Chaetostichium minimum* var. *macrochaetum* Chiov.; *Chaetostichium minimum* var. *microchaetum* Chiov.; *Lepturus minimus* Hochst.; *Oropetium majusculum* (C.E. Hubb.) Cufod.; *Oropetium minimum* (Hochst.) Pilg.)

Northeast Africa. Perennial, densely tufted, small, spikes curved.

Chaetotropis Kunth = *Polypogon* Desf.

From the Greek *chaite* “bristle, crest, foliage” and *tropis*, *tropidos* “keel, the keel of a vessel.”

Pooideae, Poaceae, Agrostidinae, see *Flora Atlantica* 1: 66-67. 1798 [1800], *Révision des Graminées* 1: 72. 1829 and *Flora Mesoamericana* 6: 241-242. 1994, *Las Gramíneas de México* 5: 1-466. 1999, *Contributions from the United States National Herbarium* 48: 583-588. 2003.

Chaeturus Link = *Chaetopogon* Janchen, *Chaeturus* Host ex Saint-Lager (Lamiaceae, Labiatae), *Chaeturus* Rchb. (Lamiaceae), *Chaiturus* Willd. (Lamiaceae)

Greek *chaite* “bristle, crest, foliage” and *oura* “a tail.”

Pooideae, Poodae, Aveneae, see *Flora Berolinensis Prodrum* 200. 1787, *Journal für die Botanik* 1799(2): 313. 1800, *Conspectus Regni Vegetabilis* 116. 1828, *Étude des Fleurs*, éd. 8 2: 681. 1889 and *Die europäischen Gattungen der Farn- und Blütenpflanzen* (edition 2) 33. 1913.

Chalcoelytrum Lunell = *Chrysopogon* Trin.

Greek *chalkeios* “of copper, of bronze” and *elytron* “a sheath, a cover.”

Panicoideae, Andropogoneae, Sorghinae, see *Species Plantarum* 2: 1045. 1753, *Fundamenta Agrostographiae* 187-188. 1820, *Die Natürlichen Pflanzenfamilien* 2(2): 28. 1887 and *American Midland Naturalist* 4: 212. 1915, *Austrobaileya* 5(3): 503-533. 1999, *Contributions from the United States National Herbarium* 46: 159-161. 2003.

Chalynochlamys Franch. = *Arundinella* Raddi

Panicoideae, Arundinelleae, see *Journal of Cytology and Genetics* 20: 205-206. 1985, *Bot. Zhurn. (Moscow & Leningrad)* 75: 1783-1786. 1990, *Journal of Cytology and Genetics* 25: 140-143. 1990, *Flora Mesoamericana* 6: 377-378. 1994, *Annals of the Missouri Botanical Garden* 81(4): 768-774. 1994, J.F. Veldkamp, “Name changes in *Agrostis*, *Arundinella*, *Deyeuxia*, *Helictotrichon*, *Tripogon* (Gramineae).” *Blumea* 41: 407-411. 1996, *Contributions from the United States National Herbarium* 46: 111-113. 2003.

Chamaecalamus Meyen = *Calamagrostis* Adans.

Greek *chamai* “on the ground, low, dwarf” and *kalamos* “a reed, cane.”

Pooideae, Poaceae, Agrostidinae, see *Familles des Plantes* 2: 31, 530. 1763, *Tentamen Florae Germanicae* 1: 34. 1788, *Reise um die Erde* 1: 456. 1834, *Gramineae* 24. 1841, *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques, Physiques et Naturelles. Seconde Partie: Sciences Naturelles* 6,4(3-4): 365. 1841, *Nova Acta Phys.-Med. Acad. Caes. Leop.-Carol. Nat. Cur.* 19(Suppl. 1): 156. 1843 and *Contributions from the United States National Herbarium* 48: 191-227. 2003.

Chamaedactylis T.F.L. Nees = *Aeluropus* Trin.

Greek *chamai* “on the ground, low, dwarf” with *daktylos* “a finger.”

Chloridoideae, see *Fundamenta Agrostographiae* 143, t. 12. 1820, *Genera Plantarum Florae Germanicae* iconibus et descriptionibus illustrata ... Bonnae [1833-] 1835-1860 and *Grasses of Burma, Ceylon, India and Pakistan* 379-381. 1960, *Novosti Sist. Vyss. Rast.* 1966: 25. 1966, *Fitologija* 39: 72-77. 1991, S. Khattoon and S.I. Ali, *Chromosome Atlas of the Angiosperms of Pakistan*. Karachi 1993 [University of Karachi, Department of Botany], *Annals of the Missouri Botanical Garden* 81(4): 784-791. 1994.

Chamaeraphis R. Br. = *Setosa* Ewart

Greek *chamai* “on the ground, dwarf” and *rhaphis*, *rhaphidos* “a needle.”

One species, Australia. Panicoideae, Panicoideae, Paniceae, perennial, herbaceous, tufted, solid internodes, auricles absent, narrow leaf blades, ligule an unfringed membrane, plants bisexual, inflorescence densely spicate, imbricate reduced racemes in 2 opposite rows, each raceme composed of a single spikelet with pungent callus and subtended by a stout bristle, 2 glumes unequal, open sandy places, open areas, coastal grassland, type *Chamaeraphis hordeacea* R. Br., see Robert Brown, *Prodromus florae Novae Hollandiae* 193-194. 1810, *Annales des Sciences Naturelles (Paris)* 5: 299. 1825 and *Lexicon Generum Phanerogamarum* 115. 1903, Alfred James Ewart (1872-1937) and Olive Blanche Davies (fl. 1917), *The flora of the Northern territory* 33, pl. 2. Melbourne 1917, *Icones Plantarum [Hooker's]* Edn. Ser. 5 2: t. 3140. 1930, *The Australian Paniceae (Poaceae)* 1-322 (28-29). 1987, *Vascular Plant Families and Genera* 395. 1992.

Species

C. hordeacea R. Br. (*Panicum hordeaceum* (R. Br.) Raspail; *Setosa erecta* Ewart & Cookson)

Australia.

Chamaerhaphis Sprengel

Orthographic variant *Chamaeraphis* R. Br., see *Genera plantarum* 1: 76. 1830.

Chamagrostis Borkh. = Mibora Adans.

Greek *chamai* “dwarf” plus *Agrostis*.

Pooideae, Poeae, Miliinae, or Aveneae, see *Familles des Plantes* 2: 495. 1763, Moriz Balthasar Borkhausen (1760-1806), *Tentamen dispositionis plantarum Germaniae seminiferarum* ... 43. Darmstadt 1792, August Wilhelm Eberhard Christoph Wibel (1775-1813), *Primitiae Florae Werthemensis* 126. Ienae [Jena] 1799, *English Botany* 16: 1127. 1803, *Essai d'une Nouvelle Agrostographie* 167, pl. 8, f. 4. 1812, *Observations sur les Plantes des Environs d'Angers* 45. 1818, *Fundamenta Agrostographiae* 135. 1820, *Dictionnaire des Sciences Naturelles*. second edition 31: 17. 1824 and *Boll. Soc. Bot. Ital.* 1925: 151. 1925, *Bulletin de la Société d'Histoire Naturelle de l'Afrique du Nord* 32: 220. 1941, *Preslia* 46(2): 168. 1974, *Taxon* 49(2): 243. 2000, *Contributions from the United States National Herbarium* 48: 450. 2003.

Chandrasekharania V.J. Nair, V.S. Ramach. & Sreek.

One species, India. Panicoideae, Panicodae, or Arundinelleae, annual, ligule membranous, plants bisexual, contracted panicle capitate, papery spikelets, both florets bisexual, 2 glumes unequal and shortly awned, lemmas membranous with a short straight awn, palea wingless and bilobed, 2 lodicules fleshy and glabrous, 3 stamens, ovary glabrous, 2 stigmas, type *Chandrasekharania keralensis* V. J. Nair, Ramachandran, Sreekumar, see V.J. Nair, V.S. Ramachandran and P.V. Sreekumar, “*Chandrasekharania*. A new genus of Poaceae from Kerala, India.” *Proc. Indian Acad. Sci. (Plant Sci.)* 91: 79-82. 1982, Uniyal, B.P. & D.C. & Pal., “Additional locality for *Chandrasekharania keralensis*.” *J. Econ. Tax. Bot.* 4(3): 950. 1983.

Species

C. keralensis Nair, Ramachandran & Sreekumar

Southern India. Lemma bidentate and short awned.

Chascolytrum Desv. = *Briza* L., *Chondrachyrum* Nees

From the Greek *chasko* “to gape” and *elytron* “a sheath, a cover.”

About 6 species, South America. Pooideae, Poeae, Brizinae, perennial or annual, caespitose or clump forming, glabrous,

leaves nonauriculate, basal sheaths persistent, ligule hyaline and smooth, sheath loose and smooth, rough and green leaves, cleistogamous spikelets, purplish or green compact inflorescence linear to ovate, small curled spikelets in small airy heads on stems, glumes green or purplish, lower glume narrowly obovate, upper glume elliptic, lemmas imbricate and mucronate or shortly awned, upper lemmas with a mid-nerve shortly aristate, palea winged with glabrous wings, ovary glabrous and without a conspicuous apical appendage, fruit ventrally compressed, type *Chascolytrum subaristatum* (Lam.) Desv., often in *Briza* L., see *Species Plantarum* 1: 66-67, 70-71. 1753, *Nouveau Bulletin des Sciences, publié par la Société Philomatique de Paris* 2: 190. 1810, *Nova Genera et Species Plantarum* 1: 164. 1815 [1816], *A Natural System of Botany* 449. 1836, *Synopsis Plantarum Glumacearum* 1: 288. 1854, *Genera Plantarum* 3(2): 1194-1195. 1883 and *Revista de la Facultad de Agronomía y Veterinaria* 3: 120. 1920, *Feddes Repertorium* 84(7-8): 541. 1973, O. Matthei, “Der *Briza*-Komplex in Südamerika: *Briza*, *Calotheca*, *Chascolytrum*, *Poidium* (Gramineae)” *Willdenowia. Beihefte* 8: 1-168. 1975, *Hickenia* 1: 73-78. 1977, *Darwiniana* 23(1): 279-309. 1981 [Los géneros sudamericanos afines a *Briza* L. (Gramineae).], *Boletim do Instituto de Biociências, Universidade Federal do Rio Grande do Sul* 41: 1-191. 1987, *Flora Mesoamericana* 6: 229. 1994, *Flora Mediterranea* 5: 340-345. 1995, *Bothalia* 27: 75-82. 1997, *Cladistics* 14: 287-296. 1998 [N.D. Species

C. erectum (Lam.) Desv. (*Briza erecta* Lam.; *Briza macrostachya* (J. Presl) Steud.; *Briza montevidensis* Trin. ex Steud.; *Calotheca brizoidea* P. Beauv.; *Calotheca brizoides* (Lam.) Desv.; *Calotheca dilatata* Link; *Calotheca macrostachya* J. Presl; *Calotheca montevidensis* Spreng. ex Steud.; *Festuca brizoides* Spreng.; *Festuca erecta* (Lam.) Spreng. ex Kunth, nom. illeg., non *Festuca erecta* (Huds.) Wallr.)

South America. Perennial, good forage, see *Tableau Encyclopédique et Méthodique ... Botanique* 1: 187. 1791, *Essai d'une Nouvelle Agrostographie* 86, 155, t. 17, f. 6. 1812, *Hortus Regius Botanicus Berolinensis* 1: 157. 1827, *Reliquiae Haenkeanae* 1(4-5): 268, 351. 1830, *Enumeratio Plantarum Omnium Hucusque Cognitarum* 1: 373. 1833, *Nomenclator Botanicus. Editio secunda* 1: 225, 261. 1840, *Flora Brasiliensis* 2(3): 132. 1878 and *Contr. U.S. Natl. Herb.* 24(8): 334. 1927.

C. lamarckianum (Nees) Matthei (*Briza fusca* (Parodi) Parodi; *Briza lamarckiana* Nees; *Briza lindmanii* Ekman; *Briza subaristata* var. *fusca* Parodi)

Southern America, southern Brazil to Argentina, Uruguay. Panicle spreading with long and flexuous branches, occurs in sandy fields near small streams, often considered to be a synonym of *Chascolytrum lamarckianum* (Nees) Matthei, see *Flora Brasiliensis seu Enumeratio Plantarum* 2: 481. 1829 and *Arkiv för Botanik utgivet av K. Svenska Vetenskapsakademien* 13(10): 54, t. 4, f. 2. 1913, *Revista de la Facultad de Agronomía y Veterinaria* 3: 127, f. 2(1). 1920, *Revista de la Facultad de Agronomía y Veterinaria* 4: 93. 1922, *Willdenowia*, Beih. 8: 74. 1975.

C. paleapiliferum (Parodi) Matthei (*Briza paleapilifera* Parodi)

America, Argentina. See *Revista de la Facultad de Agronomía y Veterinaria* 3: 124, f. 2(5). 1920, *Willdenowia*, Beih. 8: 88. 1975.

C. parodianum (Roseng., B.R. Arrill. & Izag.) Matthei (*Briza parodiana* Roseng., B.R. Arrill. & Izag.)

America, Uruguay. See *Boletín de la Facultad de Agronomía de Universidad de la República, Montevideo* 105: 26. 1968, *Willdenowia*, Beih. 8: 68. 1975.

C. scabrum (Nees ex Steud.) Matthei (*Briza scabra* (Nees ex Steud.) Ekman; *Chondrachyrum scabrum* Nees ex Steud.; *Panicum scabrum* Trin. ex Steud.)

America. See *Nomenclator Botanicus. Editio secunda* 1: 254. 1841, *Synopsis Plantarum Glumacearum* 1: 276, 288. 1854 and *Arkiv för Botanik utgivet av K. Svenska Vetenskapsakademien* 13(10): 53. 1913, *Willdenowia*, Beih. 8: 77, 88. 1975.

C. subaristatum (Lam.) Desv. (*Briza microstachya* (J. Presl) Steud.; *Briza poiformis* (Spreng.) Kuntze; *Briza reniformis* (J. Presl) Steud.; *Briza rotundata* (Kunth) Steud.; *Briza stricta* (Hook. & Arn.) Steud.; *Briza subaristata* Lam.; *Briza subaristata* var. *interrupta* (Hack. ex Stuck.) Roseng. B.R. Arrill. & Izag.; *Briza triloba* Nees; *Briza triloba* f. *pumila* Hack. ex Kneuck.; *Briza triloba* f. *violascens* Hack.; *Briza triloba* var. *alpha* Nees; *Briza triloba* var. *beta* Nees; *Briza triloba* var. *grandiflora* Döll; *Briza triloba* var. *interrupta* Hack.; *Briza triloba* var. *typica* Parodi; *Briza violascens* Steud.; *Bromus rotundatus* Kunth; *Calotheca microstachya* J. Mexico, Chile, southern Brazil to Argentina, Uruguay, Paraguay. Perennial or annual, caespitose or clump forming, good forage, useful for erosion control, usually in moist cultivated areas, along roadsides, see *Tableau Encyclopédique et Méthodique ... Botanique* 1: 187. 1791, *Nouveau Bulletin des Sciences, publié par la Société Philomatique de Paris* 2: 190. 1810, *Nova Genera et Species Plantarum*

1: 152-153. 1815 [1816], *Systema Vegetabilium* 2: 632. 1817, *Systema Vegetabilium, editio decima sexta* 1: 348, 353. 1825, *Flora Brasiliensis seu Enumeratio Plantarum* 2: 482. 1829, *Révision des Graminées* 1: 121. 1829, *Reliquiae Haenkeanae* 1(4-5): 268. 1830, *The Botany of Captain Beechey's Voyage* 50. 1832, *Enumeratio Plantarum Omnium Hucusque Cognitarum* 1: 374. 1833, *Nomenclator Botanicus. Editio secunda* 1: 225. 1840, *Synopsis Plantarum Glumacearum* 1: 283-284. 1854, *Flora Chilena* 6: 383. 1854, *Flora Brasiliensis* 2(3): 134. 1878, *Revisio Generum Plantarum* 3(3): 342. 1898 and *Allgemeine Botanische Zeitschrift für Systematik, Floristik, Pflanzengeographie* 8: 97. 1902, *Anales del Museo Nacional de Buenos Aires* 21: 146. 1911, *Revista de la Facultad de Agronomía y Veterinaria* 3: 127, 128, f. 2(1). 1920, *Bol. Fac. Agron. Univ. Montevideo* 105: 22. 1968, *Willdenowia* Beih. 8: 79. 1975.

in Mexico: lanternita, linternita

Chasea Nieuwl. = *Panicum* L.

Dedicated to the American botanist Mary Agnes Chase (née Merrill), 1869-1963, agrostologist, plant collector, traveler, among her writings are *First Book of Grasses*. New York 1922 and "Poaceae (pars)." *North Amer. Fl.* 17(8): 568-579. 1939, with the American botanist Albert Spear Hitchcock (né Jennings) (1865-1935) wrote *Grasses of the West Indies*. Washington [D.C.] 1917, *Tropical North American Species of Panicum*. Washington [D.C.] 1915 and *The North American Species of Panicum*. Washington [D.C.] 1910, in 1950 revised the *Manual of the Grasses of the United States* (by A.S. Hitchcock), with Cornelia D. Niles edited *Index to Grass Species*. Boston 1962. See J.H. Barnhart, *Biographical notes upon botanists*. 1: 335. 1965; T.W. Bossert, *Biographical dictionary of botanists represented in the Hunt Institute portrait collection*. 71. 1972; J. Ewan, editor, *A Short History of Botany in the United States*. New York and London 1969; Ida Kaplan Langman, *A Selected Guide to the Literature on the Flowering Plants of Mexico*. 1964; Frans A. Stafleu and Erik A. Mennega, *Taxonomic literature. Suppl. IV*. 57-60. 1997.

Panicoideae, Paniceae, Panicinae, see *Species Plantarum* 1: 55, 58. 1753 and *Contr. U.S. Natl. Herb.* 15: 13-15. 1910, *American Midland Naturalist* 2: 64. 1911, *Boletim do Museu Paraense Emílio Goeldi, Série Botânica* 17(2): 297-314. 2001, *Contributions from the United States National Herbarium* 46: 306-441. 2003.

Chasechloa A. Camus = *Echinolaena* Desv.

For the American botanist Mary Agnes Chase (née Merrill), 1869-1963.

About 3 species Madagascar. Panicoideae, Panicodae, Paniceae, or Panicoideae, Paniceae, Paspalinae, annual or perennial, herbaceous, auricles absent, plants bisexual, inflorescence spicate, spikelets solitary, 2 glumes subequal and winged, lower glume acute to shortly awned, lemmas keeled, palea present, 2 lodicules glabrous and fleshy, 3 stamens, ovary glabrous, 2 stigmas, savannah, often in *Echinolaena*, type *Chasechloa madagascariensis* (Baker) A. Camus, see *Species Plantarum* 1: 55. 1753, *Journal de Botanique, Appliquée à l'Agriculture, à la Pharmacie, à la Médecine et aux Arts* 1: 75. 1813, *Flora Brasiliensis seu Enumeratio Plantarum* 2: 127. 1829 and *Bulletin de la Société Botanique de France* 95: 330-331. 1949, *Flora Mesoamericana* 6: 302. 1994, *Contributions from the United States National Herbarium* 46: 224-225. 2003.

Species

C. egregia (Mez) A. Camus (*Echinolaena boiviniana* A. Camus; *Panicum egregium* Mez)

Madagascar. See *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 56(Beibl. 125): 5. 1921, *Bulletin de la Société Botanique de France* 75: 912. 1928, *Bulletin de la Société Botanique de France* 95: 331. 1948[1949].

C. humbertiana A. Camus

Madagascar. See *Mémoires de l'Institut Scientifique de Madagascar, Série B, Biologie Végétal* 5: 203-204. 1955.

C. madagascariensis (Baker) A. Camus (*Echinolaena madagascariensis* Baker)

Madagascar. See *Journal of the Linnean Society, Botany* 21: 452. 1885.

Chasmanthium Link = *Gouldochloa* Valdés-Reyna, Morden & S.L. Hatch

Greek *chasma*, *chasmatos* "open, any wide opening" and *anthos* "flower."

About 6 species, eastern U.S., Mexico. Centothecoideae, Centotheceae, or Panicoideae, Centotheceae, perennial, erect or ascending, herbaceous, hollow, rhizomatous, leaf blades linear to narrowly lanceolate, auricles absent, ligule variable, plants bisexual, inflorescence a panicle or a raceme, spikelets cuneate and pedicellate, 2- to 20-flowered, rachilla extension bearing a rudimentary floret, reduced florets both above and below fertile florets, 2 glumes equal or unequal, lemmas acute and papery, palea gibbous, 2 glabrous lodicules, stamen 1-3, ovary glabrous, 2 stigmas, exposed-cleistogamous or chasmogamous, semiarid shrubland, woodland, moist areas, traditionally referred to *Uniola*, type *Chasmanthium gracile* (Michaux) Link, see *Species Plantarum* 1: 71. 1753, *Hortus Regius Botanicus Berolinensis* 1: 159. 1827 and *Southw. Nat.* 11(2): 145-189. 1966, *Southw. Nat.* 11(4): 415-455. 1966 [Revision of grasses traditionally referred to *Uniola*, II. *Chasmanthium*],

Systematic Botany 11(1): 112-118, f. 1-5. 1986, *Contributions from the United States National Herbarium* 46: 158-159. 2003.

Species

C. curvifolium (Valdés-Reyna, Morden & S.L. Hatch) Wipff & S.D. Jones (*Gouldochloa curvifolia* Valdés-Reyna, Morden & S.L. Hatch)

America, Mexico. See *Systematic Botany* 11(1): 112-118, f. 1-5. 1986, *Phytologia* 69(6): 469. 1990 [1991].

C. latifolium (Michx.) Yates (*Uniola latifolia* Michx.)

U.S. Perennial, clump forming, arching or drooping, ligules a ciliate membrane, panicles open or contracted, spikelets ovate and laterally compressed, nodding clusters of oatlike seed heads, subequal florets, seeds a food source for wildlife, decorative foliage, ornamental and attractive, forage, sometimes used in gardens and landscapes, once established tolerant of drought and salt, found in wet woods, bottomlands, pondside, see *Flora Boreali-Americana* 1: 70-71. 1803 and *The Southwestern Naturalist* 11(4): 416. 1966.

in English: Indian woodoats, broadleaf uniola, wild oats, northern sea oats, spangle grass, sea oats, river oats

in Mexico: canastilla de hoja ancha

C. laxum (L.) Yates (*Chasmanthium gracile* (Michx.) Link; *Holcus laxus* L.; *Uniola gracilis* Michx.; *Uniola laxa* (L.) Britton, Sterns & Poggenb.; *Uniola sessiliflora* Poir.; *Uniola uniflora* Benke; *Uniola virgata* Bartram ex Pursh)

North America, U.S. Perennial, see *Species Plantarum* 2: 1047-1048. 1753, *Flora Boreali-Americana* 1: 71. 1803, *Encyclopédie Méthodique, Botanique* 8: 185. 1808, *Flora Americae Septentrionalis; or, ...* 1: 82. 1814, *Preliminary Catalogue of Anthophyta and Pteridophyta Reported as Growing Spontaneously within One Hundred Miles of New York* 69. 1888 and *Rhodora* 31(368): 148-149. 1929, *The Southwestern Naturalist* 11(4): 433, 440, f. 6. 1966, *Ann. Missouri Bot. Gard.* 77: 601. 1990.

in English: slender woodoats, spike uniola, slender spikegrass, small river oats

C. nitidum (Baldwin) Yates (*Uniola intermedia* Bosc ex P. Beauv.; *Uniola nitida* Baldw.)

U.S. Perennial, see *Essai d'une Nouvelle Agrostographie* 75, 181. 1812, *A Sketch of the Botany of South-Carolina and Georgia* 1(2): 167. 1816 and *Southw. Naturalist* 11(4): 448, 453-454. 1966.

in English: shiny woodoats, shiny spikegrass, spanglegrass.

C. ornithorhynchum (Steud.) Yates (*Chasmanthium ornithorhynchum* Nees; *Chasmanthium ornithorhynchum* Nees ex Steud.; *Chasmanthium ornithorhynchum* (Nees) H.O. Yates; *Uniola ornithorhyncha* (Nees) Steud.; *Uniola ornithorhyncha* Steud.; *Uniola ornithorhyncha* (Nees) Steud.)

U.S. Perennial, see *Annals of Natural History* 1: 284. 1838, *Synopsis Plantarum Glumacearum* 1: 280, 473. 1854 and *The Southwestern Naturalist* 11(4): 443, f. 8. 1966.

in English: birdbill woodoats

C. sessiliflorum (Poir.) Yates (*Chasmanthium laxum* subsp. *sessiliflorum* (Poir.) L.G. Clark; *Chasmanthium laxum* var. *sessiliflorum* (Poir.) J. Wipff & S.D. Jones; *Poa sessiliflora* (Poir.) Kunth; *Uniola longifolia* Scribn.; *Uniola sessiliflora* Poir.)

U.S. Perennial, see *Encyclopédie Méthodique, Botanique* 8: 185. 1808, *Révision des Graminées* 1: 111. 1829, *Bulletin of the Torrey Botanical Club* 21(5): 229-230. 1894 and *The Southwestern Naturalist* 11(4): 426, 433. 1966, *Annals of the Missouri Botanical Garden* 77(3): 601. 1990, *Phytologia* 77(6): 456. 1994[1995].

in English: longleaf woodoats, longleaf uniola, slender woodoats

Chasmopodium Stapf

From the Greek *chasme* “gaping, yawning” and *podion* “a small foot.”

About 2 species, west tropical Africa, Zaire. Panicoideae, Andropogonodae, Andropogoneae, Rottboelliinae, perennial or annual, herbaceous, canelike, pithy stems, robust, coarse, branched, auricles absent, ligule a fringe of hairs, broad leaf blades, plants bisexual, inflorescence axillary, single racemes subcylindrical, spikelets paired sessile and pedicellate, lower floret male, 2 glumes more or less equal, lower glume oblong-ovate and 2-keeled, palea present, 2 free and fleshy lodicules, 3 stamens, ovary glabrous, 2 stigmas, good fodder, used for fencing, sometimes toxic, savannah, rainforest, type *Chasmopodium caudatum* (Hack.) Stapf, see *Flora of Tropical Africa* 9: 76. 1917, *Flore Agrostologique du Congo Belge* 1: 66. 1929, *Kew Bulletin* 28(1): 51. 1973, *Bull. Jard. Bot. Nat. Belg.* 48: 373-381. 1978.

Species

C. afzelii (Hack.) Stapf (the name commemorates the Swedish doctor and botanist Adam Afzelius, 1750-1837, botanical collector, pupil of Linnaeus, correspondent of Banks, Smith, and Thunberg, in 1812 professor of *materia medica* at Uppsala, traveler, he lived in Sierra Leone in 1792-93 and 1794-96 and collected plants there, in 1792 Agric. Adviser, Freetown, Sierra Leone Company, in 1797 medical degree; among other works Afzelius was the author of *Genera plantarum Guineensium revisa et aucta*. Uppsala [1804]. See J.H. Barnhart, *Biographical notes upon botanists*. 1: 18. 1965; Joseph Vallot, “Études sur la flore du Sénégal.” in *Bull. Soc. Bot. de France*. 29: 172. Paris 1882; G. Murray, *History of the collections contained in the Natural History Departments of the British Museum*. London

1904; Warren R. Dawson, *The Banks Letters*. London 1958; Jonas C. Dryander, *Catalogus bibliothecae historico-naturalis Josephi Banks*. London 1796-1800; Antoine Lasègue, *Musée botanique de M. Benjamin Delessert*. 1845; H.N. Clokie, *Account of the Herbaria of the Department of Botany in the University of Oxford*. 121. Oxford 1964; J. Lanjouw and F.A. Stafleu, *Index Herbariorum*. London 1939; Robert Clarke, *Sierra Leone*. London 1843; Nicholas Owen, *Journal of a Slave-Dealer*. Edited, with an introduction by Eveline Martin. London 1930)

Tropical Africa. See *Flora of Tropical Africa* 9: 77. 1917.

in English: cane grass, wild rice of the bush, wild rice of the bird

in Guinea: kali

in Nigeria: kamsuvan doki, marorehe, sansari, shinkaafar daajii, shinkaafar tsuntsuu

in Senegal: esisitè

in Sierra Leone: aboboruni, awop, bomie, ethanke, fa, famese, fanebaba, gala, gbande, kala, kale, kali, kalla, ken gras, kesiowuli, ngala, ngalei, ngara, waga

in Upper Volta: ngeloori

West Africa, Sierra Leone. Annual, coarse, robust, canelike

C. caudatum (Hack.) Stapf (*Rottboellia caudata* Hack.)

Central Africa, Sudan. See *Supplementum Plantarum* 13, 114. 1781 [1782], *Monographiae Phanerogamarum* 9: 298. 1889 and *Flora of Tropical Africa* 9: 76. 1917.

in English: cane grass

in Nigeria: kamsuvan doki, marorehe, sansari

Chauvinia Steudel = *Spartina* Schreb.

After the French botanist François Joseph Chauvin, 1797-1859, algologist, see J.H. Barnhart, *Biographical notes upon botanists*. 1: 337. 1965.

Chloridoideae, Zoysieae, Sporobolinae, type *Chauvinia chilensis* Steud., see *Genera Plantarum* 43. 1789, *Catalecta Botanica* 3: 10. 1806, *Voyage Autour du Monde* 2(2): 14. 1829, *Synopsis Plantarum Glumacearum* 1: 362. 1854 [1855] and *Iowa State College Journal of Science* 30(4): 471-574. 1956 [Taxonomy and distribution of the genus *Spartina*], *Flora Mesoamericana* 6: 292. 1994, *Memoirs of the New York Botanical Garden* 78: 509-540. 1996, M.J. Balick, M.H. Nee & D.E. Atha, *Memoirs of the New York Botanical Garden* 85: i-ix, 1-246. 2000, *Contributions from the United States National Herbarium* 41: 195-200. 2001.

Chennapyrum Á. Löve = *Aegilops* L.

Presumably from the Greek *chenna* "a quail" and *pyros* "grain, wheat."

Pooideae, Triticeae, Triticinae, see J.C. Buxbaum (1693-1730), *Plantarum minus cognitarum centuriae, complectens plantas circa Byzantium et in Oriente observatas* Centuria I. Petropoli 1728-1740, *Species Plantarum* 1: 85. 1753, *Species Plantarum* 2: 1050-1051. 1753, *Familles des Plantes* 2: 36, 513. 1763, *Enumeratio Methodica Plantarum* 371. 1763, *Systema Vegetabilium* 2: 769. 1817, *Notes sur Quelques Plantes Critiques, Rares, ou Nouvelles, ...* 2: 69. 1849, *Illustrationes Plantarum Orientalium* 4: 12, 21, 23. 1851, *Flora Dalmatica* 3: 345. 1852, *Synopsis Plantarum Glumacearum* 1: 354. 1854, *Flore de France* 3: 601. 1856, *Plantae Europaeae* 1: 128. 1890 and *Repertorium Specierum Novarum Regni Vegetabilis* Beih. 55: 84, 90, 117. 1929, *Blumea, Supplement* 3: 15, 17. 1946, *Grasses of Burma, Ceylon, India and Pakistan (excluding Bambuseae)* 653-655. 1960, *Feddes Repert.* 91: 225-228, 233-234, 236. 1980, *Biologisches Zentralblatt* 101(2): 206-208. 1982, *Feddes Repert.* 95: 493, 495. 1984, *Taxon* 41: 552-583. 1992, *Agric. Univ. Wageningen Pap.* 94-7: 1-512. 1994, *Taxon* 44: 611-612. 1995, *Flora de Veracruz* 114: 1-16. 2000, *Contributions from the United States National Herbarium* 48: 20-23. 2003.

Chevalierella A. Camus Dedicated to the French botanist Auguste Jean Baptiste Chevalier, 1873-1956 (b. Orne, d. Paris), explorer, plant collector (in French West Africa, Belgian Congo, Cape Verde Islands., Dahomey, French Guinea, Ivory Coast), father of applied tropical botany, 1905 established Botanical Garden at Dalaba (Guinea), traveler, president of Acad. Science of France, his works include *Michel Adanson, voyageur, naturaliste et philosophe*. Paris 1934, *Travaux bryologiques dédiés à la mémoire de Pierre-Tranquille Husnot*. Paris 1942, *Nos connaissances actuelles sur la géographie botanique et la flore économique du Sénégal et du Soudan*. [Exposition Universelle Internationale de 1900. About 1-2 species, Zaire. Centothecoideae, Centotheceae, perennial, small herbaceous habit, unarmed, leaf blades elliptic and pseudopetiolate, tufted, leafy, plants bisexual, inflorescence spiciform of numerous loose racemes, 1-flowered, spikelets solitary and pedicellate, rachilla extension bearing a small sterile floret, 2 glumes unequal, lemmas awned, palea present, 2 glabrous lodicules, 2 stamens, ovary glabrous, 2 stigmas, forest, shady places, type *Chevalierella congoensis* A. Camus, see *Revue internationale de botanique appliquée et d'agriculture tropicale* 13: 421-422. 1933, *Bull. Jard. Bot. Bruxelles* 29: 400. 1954, *Bull. Sci. Inst. des Recherches Agronomiques tropicales* 8. 1962.

Species

C. congoensis A. Camus

Zaire.

C. dewildemanii (Vand.) Van der Veken ex Compère (*Ichnanthus dewildemanii* Vanderyst) (for the Belgian botanist Émile Auguste Joseph De Wildeman, 1866-1947, a specialist

of the Congolese flora; see J.H. Barnhart, *Biographical notes upon botanists*. 1: 450. 1965; Ida Kaplan Langman, *A Selected Guide to the Literature on the Flowering Plants of Mexico*. University of Pennsylvania Press, Philadelphia 1964; Frans A. Stafleu and Richard S. Cowan, *Taxonomic literature*. 1: 639-643. Utrecht 1976; É.A.J. De Wildeman, "Études de systématique et de géographie botaniques sur la flore du Bas- et du Moyen-Congo." in *Annales du Musée du Congo (Belge)*. Botanique. Sér. 5 Congo-Kasai. 152, t. 40 (1). 1910; É.A.J. De Wildeman, *Reliquiae Dewevreanae* ou Énumération des Plantes récoltées par Alfr. Dewèvre en 1895-96 dans l'État Indépendant du Congo. Fasc. 1-2. Bruxelles 1901)

Zaire. See *Essai d'une Nouvelle Agrostographie* 56. 1812 and *Bulletin agricole du Congo Belge* 10: 249. 1919, *Bulletin du Jardin Botanique de l'État* 33: 393. 1963.

Chikusichloa Koidzumi

From Japanese *chiku* "bamboo" and Greek *chloe*, *chloa* "grass, young grass."

Three species, Japan, Sumatra, China. Bambusoideae, Oryzodae, Oryzaceae, perennial, aquatic or terrestrial, tufted, erect, herbaceous, ligule membranous, leaf blades linear, plants bisexual, open inflorescence paniculate, panicles terminal and lax, spikelets 1-flowered, long slender stipe derived from floret callus, glumes usually absent or vestigial, lemma membranous strongly 5- to 7-veined, awned or awnless, palea present, 2 lodicules, 1 stamen, ovary glabrous, 2 stigmas, shade species, found in moist places in forest, resembles *Leersia* Sw., type *Chikusichloa aquatica* Koidz., see *Botanical Magazine* (Tokyo) 39: 23-24. 1925, *J. Fac. Sci. Univ. Tokyo* 3: 303. 1930, Yi-Li Keng (1897-1975), "The genus *Chikusichloa* of Yapan and China." *J. Wash. Acad. Sci.* 21: 526-530. 1931.

Species

C. aquatica Koidz.

China, Japan. Type species, leaf sheaths smooth and keeled, panicle lax and purplish, spikelets awned, glumes absent, lemma lanceolate to narrowly ovate, awn scabrous, grains yellowish brown, growing in wet valleys, along streamsides, see *Botanical Magazine* 39: 23. 1925.

C. brachyathera Ohwi

Japan, Ryûkyû Islands. Awned, see *Acta Phytotaxonomica et Geobotanica* 11: 255. 1942.

in English: Iriomote grass

in Japan: Iriomote-gaya

C. mutica Keng

China. Leaf sheaths smooth, panicle lax, spikelets awnless, callus stipe slightly curved, glumes vestigial, lemma lanceolate, stipe with 2 tiny lemma vestiges, grains dark brown,

found in damp streamsides in forest, see *Journal of the Washington Academy of Sciences* 21(21): 527-530, f. 2. 1931.

Chilochloa P. Beauv. = Phleum L.

From the Greek *cheilos* "a lip" and *chloe*, *chloa* "grass."

Pooideae, Poaceae, Alopecurinae, type *Chilochloa boehmeri* (Wibel) P. Beauv., see *Species Plantarum* 1: 59-60. 1753, *Primitiae Florae Werthemensis* 125. 1799, *Essai d'une Nouvelle Agrostographie* 37, 158. 1812, *Observations sur les Graminées de la Flore Belgique* 131. 1823 [1824], Wilhelm Ludwig Petermann (1806-1855), *Deutschlands flora* 619. Leipzig 1849 and *Contr. U.S. Natl. Herb.* 24: 167. 1925, *Contributions from the United States National Herbarium* 48: 234, 491-494. 2003.

Chimonobambusa Makino = Oreocalamus

Keng, *Qiongzhuea* (T.H. Wen & D.

Ohrnberger) J.R. Xue [Pinyin spelling Hsueh]

& T.P. Yi, *Qiongzhuea* J.R. Xue & T.P. Yi,

Qiongzhuea Hsueh & Yi, *Qiongzhuea* Hsueh

& Yi

Winter bamboo, bamboo shooting out in cold winter, from the Greek *cheimon* "winter" plus *Bambusa*.

About (2-6-)10/20-38 species, south and eastern Asia, Indochina, India, southwest China, Japan. Bambusoideae, Bambusoideae, Bambuseae, Arundinariinae or Shibataeinae, monopodial or amphipodial, perennial, woody, tall or shrub-like, sometimes arborescent, erect, diffuse habit, single-stemmed or clump forming, conspicuously thorny, branched above, 3 or more branches at each node, rhizomatous or stoloniferous, rhizomes leptomorph, running rhizomes, flowering culms leafy, multiple twigs, culm sheaths somewhat leathery or chartaceous and deciduous or persistent, sheath blades very small, no sheath auricles, leaves glabrous, culm internodes hollow, internodes smooth or scabrous, the 2-ridged culm nodes usually thorny and very swollen, lower nodes often with rootlets thorns, tubercular aerial roots present, plants bisexual, inflorescence diffuse and compound, a terminal or axillary racemose leafy panicle, racemes fascicled, spikelets terminal on the branchlets and many-flowered, usually 2 glumes frequently 1 or none, lemmas membranous, palea present, 3 stamens, ovary glabrous without the apical appendage, short style, 2 plumose stigmas, forest, type *Chimonobambusa marmorea* (Mitford) Makino, see *Annals of the Royal Botanic Garden, Calcutta*. 7: 130, t. 119. 1896 and *Botanical Magazine* (Tokyo) 28(329): 153-154. 1914, *Plantae Wilsonianae* 2(1): 64. 1914, *Journal of Japanese Botany* 11(1): 1. 1935, *Sunyatsenia* 4(3-4): 146-151, t. 37. Canton 1940, *Technical*

Bulletin of the National Forestry Research Bureau 8: 15. 1948, *Taxon* 6(7): 201-202. 1957, *Acta Botanica Yunnanica* 1(2): 75-76. 1979, *Acta Botanica Yunnanica* 2(1): 91-92, 96-99, pl. 3, 4. 1980, *Acta Phytotaxonomica Sinica* 21(1): 96-99, pl. 2. 1983, *Acta Botanica Yunnanica* 5(1): 42-44, 45-46, pl. 3, 4. 1983, *Kew Bulletin, Additional Series* 13: 48. 1986 [*Genera Graminum*], *Journal of Bamboo Research* 5(2): 22. 1986, *Journal Nanjing University. Species

C. angustifolia C.D. Chu & C.S. Chao (*Chimonobambusa linearifolia* W.D. Li & Q.X. Wu)

China, Guangxi, Sichuan. Glabrous, culm and branch fragile, culm sheath papery shorter than internode, tiny tubercles caducous, shoots bitter, found near ditches, wet spots, hills, in hardwood forests, see *Journal of Nanjing Agricultural College* 1981(3): 36, t. 5. 1981, *Journal of Bamboo Research* 4(1): 47-48, f. 3. 1985.

C. armata (Gamble) Hsueh & Yi (*Arundinaria armata* Gamble; *Chimonobambusa metuoensis* Hsueh & Yi; *Chimonocalamus armatus* (Gamble) R.B. Majumdar; *Oreocalamus armatus* (Gamble) T.H. Wen)

China. Culm cylindrical, internodes of branches ridged and grooved, nodes thorny, sheath annulus convex, sheath shorter than internode and shedding late, sheath blade tiny and erect, no sheath auricles, sheath ligule truncate, leaves lanceolate, edible shoots, see *Annals of the Royal Botanic Garden. Calcutta.* 7: 130, t. 119. 1896 and *Journal of Bamboo Research* 2(1): 38. 1983, *Journal of Bamboo Research* 5(2): 22. 1986, *Journal of Bamboo Research* 6(2): 11-13, f. 2. 1987, *Fl. Ind. Enumerat.-Monocot.* 275. 1989.

in Thailand: tut

C. brevinoda Hsueh & W.P. Zhang

China, southeast Yunnan. Internodes cylindrical or square, leaves 3-5 per twig, culm annulus convex, lower nodes often with rootlets thorns, culm sheath persistent and longer than internode, sheath auricles absent, sheath ligule indistinct, leaf blades lanceolate, broad-leaved forest, see *Journal of Bamboo Research* 7(1): 14-16, f. 1. 1988.

C. callosa (Munro) Nakai (*Arundinaria callosa* Munro; *Chimonobambusa callosa* (Munro) Makino; *Chimonocalamus callosus* (Munro) Hsueh & Yi; *Sinobambusa callosa* (Munro) T.H. Wen)

Asia, Bhutan, India. Shrubby, erect, single, smooth, striate when young, nodes pubescent and thorny, internodes smooth, nodes swollen subtended by a ring, culm sheaths pubescent, leaf sheaths glabrous, auricles small, leaves oblong-lanceolate, branched panicle, nodes of the panicle subtended by sheathing bracts, 2 glumes nerved, lemmas mucronate and ciliate, paleas acute, 3 lodicules fimbriate, ovary glabrous, 2 stigmas shortly plumose, culms used for thatching and tying, young shoots edible, growing in open clumps, in forests, deep shade, see *Transactions of the Linnean Society of London* 26(1): 30. 1868 and *Journal of the Arnold Arboretum* 6(3): 151. 1925, *Acta Botanica Yunnanica* 1(2): 84. 1979, *Journal of Bamboo Research* 1(1): 35. 1982, *Kew Bulletin* 44: 366. 1989, *Edinb. J. Bot.* 51: 327. 1994.

in India: kaure maling, khare bans, spar, sypar, u-spar, uskong, uspar

Vernacular names: khare bans, rawa, u

C. communis (Keng f.) Wen & Ohrnb. (*Chimonobambusa communis* (J.R. Xue & T.P. Yi) K.M. Lan; *Chimonobambusa communis* (J.R. Xue & T.P. Yi) Wen & D. Ohrnberger; *Oreocalamus communis* (J.R. Xue & T.P. Yi) Keng f.; *Qionghuea communis* J.R. Xue & T.P. Yi)

China. See *Acta Botanica Yunnanica* 2(1): 96-98, pl. 3. 1980, *Journal Nanjing University. Natural Sciences Edition* 22(3): 416. 1986, *Flora Guizhouensis* 5: 308. 1988.

C. convoluta Q.H. Dai & X.L. Tao

China, Guangxi. Internodes with yellowish brown longitudinal tomentum, sheath shorter than internode and deciduous, see *Acta Phytotaxonomica Sinica* 20(2): 212-213, pl. 2. 1982.

C. damingshanensis Hsueh & W.P. Zhang

China, Guangxi, Nanning. Sheath densely tomentose, a ring of dark brown tomentose below nodes, basal nodes with root-thorns, inflorescence paniculate or racemose, lemmas papery awned, slopes, see *Bamboo Res.* 7(3): 5, t. 1. 1988.

C. densifolia (Munro) Nakai (*Arundinaria densifolia* Munro; *Sinarundinaria densifolia* (Munro) C.S. Chao & Renvoize; *Yushania densifolia* (Munro) R.B. Majumdar)

Sri Lanka; Kerala, India. Rare, small, shrubby, gregarious, thick or thin walls, nodes prominent with 2 or 3 branches, culm sheath hirsute, leaves sessile and rounded at the base, scaly thick rhizome, inflorescence on leafy branches, 2 glumes attenuate, lemmas and glumes with an awned tip, paleas 2-keeled, 3 lodicules, ovary glabrous, 2 stigmas plumose, leaves used as a fodder for cattle, see *Transactions of the Linnean Society of London* 26(1): 32. 1868 and

Journal of the Arnold Arboretum 6: 151. 1925, *Kew Bulletin* 44(2): 354. 1989.

C. fansipanensis Nguyen & Vucan

Vietnam. See *Bot. Zhurn. (Moscow & Leningrad)* 76(7): 994. 1991

C. grandifolia Hsueh & W.P. Zhang

China. Culm wall thick, 3 branches at each node, internode cylindrical, sheath papyraceous and shedding late, sheath blade triangular, sheath annulus with a ring of dense brown hair, lower internodes often with rootlets thorns or spiny air roots, leaves oblong-lanceolate, edible shoots, ornamental, see *Journal of Bamboo Research* 7(1): 17-19, f. 2. 1988.

C. hejiangensis C.D. Chu & C.S. Chao

China, Hejiang, Sichuan. Sheath deciduous, internode tubercular, see *Journal of Nanjing Agricultural College* 1981(3): 36, t. 6. 1981.

C. hirtinoda C.S. Chao & K.M. Lan

China. Culm square, young culm densely hairy, sheath blade tiny, 3 branches at each node, nodes with tubercles, spiny aerial roots, sheath papyraceous longer than internode, leaves membranous oblong-lanceolate or lanceolate, see *Bamboo Research in Asia* 1982(1): 2, f. 2. 1982.

C. lactistriata W.D. Li & Q.X. Wu

China. Short and sparse tubercular setae, 3 branches at each node, sheath papyraceous usually longer than internode, sheath blade narrow triangular or absent, sheath auricles undeveloped, sheath ligule tiny or absent, leaves lanceolate finely pubescent beneath, see *Journal of Bamboo Research* 4(1): 46-47, f. 2. 1985.

C. leishanensis Yi

China. See *Acta Botanica Yunnanica* 13(2): 144-145, pl. 1. 1991.

C. linearifolia W.D. Li & Q.X. Wu

China. See *Journal of Bamboo Research* 4(1): 47-48, f. 3. 1985.

China.

C. maculata Wen (*Chimonobambusa maculata* (T.H. Wen) Wen; *Qiongzhueta maculata* T.H. Wen)

China. See *Journal of Bamboo Research* 5(2): 22, f. 5. 1986, *Journal of Bamboo Research* 7(1): 31. 1988.

C. marmorea (Mitford) Makino (*Arundinaria marmorea* (Mitford) Makino; *Arundinaria matsumurae* Hack., also spelled *matsumarae*; *Arundinaria nana* Makino; *Bambusa marmorea* Mitf.; *Chimonobambusa marmorea* Makino; *Chimonobambusa marmorea* (Mitford) Nakai; *Chimonobambusa purpurea* J.R. Xue & T.P. Yi; *Phyllostachys marmorea* (Mitford) Asch. & Graebn.)

Asia temperate, Japan. Origin unknown. Small, slender, round culm, smooth, purple-lined, 3 branches at each node, nodes prominent, internodes glabrous, nodes of lower part with spiny air roots, sheath persistent or shedding late, culm sheaths softly membranous and marbled brown and white, running rhizomes, leaf blades narrowly lanceolate or band-like lanceolate, leaves glabrous, spikelets linear with 4-7 florets, terminal floret usually male, 0-3 glumes frequently 1 or none, lemmas ovate-lanceolate, palea 2-mucronate at the tip, 3 ovate lodicules, 3 stamens exerted, ovary narrowly ovoid, 2 feathery stigmas, may be invasive, edible shoots tasty, ornamental, cultivated, used for furniture, handles, see *The Bamboo Garden* 46: 547. 1894, *Botanical Magazine* (Tokyo) 11: 160. 1897 and *Synopsis der mitteleuropäischen Flora* 2(1): 778. 1902, *Botanical Magazine* (Tokyo) 28(329): 154. 1914, *Bulletin de l'Herbier Boissier* 7(9): 716. 1929, *Report Fuji Bamboo Garden* 17: 8. 1972, *Journ. Yunnan For. Coll.* 1982(1): 36, f. 2. 1982.

in English: winter bamboo, marble bamboo

in Japan: kan-chiku

C. marmorea (Mitford) Makino var. *marmorea* (*Arundinaria marmorea* (Mitford) Makino; *Bambusa marmorea* Mitford; *Chimonobambusa setiformis* T.H. Wen; *Phyllostachys marmorea* (Mitford) Ascherson & Graebner)

Asia temperate. A ring of root-thorns on basal nodes, see *The Bamboo Garden* 46: 547. 1894 and *J. Bamboo Res.* 3(2): 29. 1984.

C. marmorea (Mitford) Makino var. *purpurea* (Hsueh & T.P. Yi) D.Z. Li (*Chimonobambusa neopurpurea* T.P. Yi; *Chimonobambusa purpurea* Hsueh & T.P. Yi)

Asia temperate. Robust, a ring of root-thorns on nonbranching nodes, see *J. Yunnan Forest. Coll.* 1982 (1): 36. 1982, *J. Bamboo Res.* 8(3): 23. 1989.

C. metuoensis Hsueh & Yi

China, Tibet. See *Journal of Bamboo Research* 2(1): 34, t. 4. 1983.

C. microfloscula McClure

China, Yunnan. Internode cylindrical, 3 branches at each node, some basal nodes with spiny aerial roots, sheath caducous and shorter than internode, sheath ligule with a ciliate tip, leaves oblong-lanceolate, edible shoots, cultivated, planted as hedge and fence, growing in hardwood forests, see *Lingnan University Science Bulletin* 9: 17. 1940.

C. montigena Ohrnb. (*Chimonobambusa montigena* (Yi) Ohrnberger; *Qiongzhueta montigena* Yi)

China, Yunnan. See *Journal of Bamboo Research* 9(3): 28-30, f. 2. 1990.

C. neopurpurea Yi (*Chimonobambusa purpurea* Hsueh & Yi)

China, Sichuan. Aerial roots under branch, sheath thinly papyraceous and longer than internode, edible shoots, culm used for papermaking, shelter, fence, screen, see *J. Bamboo Res.* 8(3): 22, pl. 2. 1989, *Acta Botanica Yunnanica* 14(2): 137-138. 1992.

C. ningnanica Hsueh & L.Z. Gao (*Chimonobambusa tuberculata* J.R. Xue & L.Z. Gao)

China, Tibet. See *Journal of Bamboo Research* 2(1): 38. 1983, *Journal of Bamboo Research* 6(2): 11-15, f. 2, 3. 1987.

C. opienensis (Keng f.) Wen & Ohrnb. (*Chimonobambusa opienensis* (J.R. Xue & T.P. Yi) T.H. Wen & D. Ohrnberger; *Oreocalamus opienensis* (J.R. Xue & T.P. Yi) Keng f.)

in English: square bamboo, square-stem bamboo, square-stemmed bamboo

in Japan: shiho-chiku, shi-hou-chiku, shihou-chiku zoku, shikaku-dake, kimmei-hou-chiku (with green oblong stripes on the bud canal), tatejima-hou-chiku, suow-shikaku dake

C. quadrangularis (Franceschi) Makino f. ***purpureiculma*** Wen

China. See *Journal of Bamboo Research* 8(1): 24. 1989.

C. rigidula (Keng f.) Wen & Ohrnb. (*Chimonobambusa rigidula* (J.R. Xue & T.P. Yi) T. H. Wen & D. Ohrnberger; *Oreocalamus rigidulus* (J.R. Xue & T.P. Yi) Keng f.; *Qiongzhueta rigidula* J.R. Xue & T.P. Yi)

China. See *Acta Phytotaxonomica Sinica* 21(1): 96-99, pl. 2. 1983, *Journal Nanjing University. Natural Sciences Edition* 22(3): 416. 1986.

C. rivularis Yi

China. See *Journal of Bamboo Research* 8(3): 18-21, f. 1. 1989.

C. setiformis Wen

China. Greenish purplish, sheath persistent and papyraceous, no sheath auricles and cilia, sheath ligule arcuate,

leaves narrowly lanceolate glabrous, see *Journal of Bamboo Research* 3(2): 29, t. 5. 1984.

C. szechuanensis (Rendle) Keng f. (*Arundinaria szechuanensis* Rendle; *Oreocalamus szechuanensis* (Rendle) Keng f.)

China, Sichuan. Glabrous, middle and lower portion of culm square, several nodes with spiny aerial roots, culm sheath caducous and shorter than internode, forming thickets, shoot edible, culm used for papermaking, a plant for giant panda, see *Plantae Wilsonianae* 2(1): 64. 1914, *Sunyatsenia* 4(3-4): 147-148. 1940, *Technical Bulletin of the National Forestry Research Bureau* 8: 15. 1948.

C. szechuanensis (Rendle) Keng f. var. *flexuosa* Hsueh & C. Li (*Chimonobambusa szechuanensis* f. *flexuosa* (J. R. Xue & C. Li) T.H. Wen & D. Ohrnberger)

China, Sichuan. Culm zigzag and abnormally swollen, used for making smoking pipes, see *Journ. Yunn. For. Coll.* 1982(1): 40, f. 3. 1982.

C. tuberculata Hsueh & L.Z. Gao (*Chimonobambusa armata* f. *tuberculata* (J.R. Xue & L.Z. Gao) T.H. Wen; *Chimonobambusa ningnanica* J.R. Xue & L.Z. Gao)

China, Yunnan. Culm cylindrical, young culm densely pubescent, 3 or more branches at each node, at nodes 4-12 spiny tubercular aerial roots, caducous sheath long triangular and longer than internode, leaves lanceolate, see *Journal of Bamboo Research* 2(1): 38. 1983, *Journal of Bamboo Research* 6(2): 11-15, f. 2, 3. 1987.

C. tumidissinoda Hsueh & Yi ex Ohrnb. (*Chimonobambusa tumidinoda* (J.R. Xue & T.P. Yi) T.H. Wen; *Qiongzhueta tumidinoda* Hsueh & Yi)

China. See *Acta Botanica Yunnanica* 2(1): 93, pl. 1-2. 1980, *Journal of Bamboo Research* 10(1): 17. 1991, *Taxon* 53(2): 527. 2004.

C. unifolia Wen (*Chimonobambusa unifolia* (Yi) T.H. Wen; *Qiongzhueta unifolia* Yi)

China. See *Journal of Bamboo Research* 9(1): 27-29, f. 1. 1990.

C. utilis (Keng) Keng f. (*Oreocalamus utilis* Keng)

China, Sichuan, Guizhou. Internode cylindrical or square, culm smooth and glabrous, sheath papery, sheath ligule green, 3 branches on each nodes, edible shoot, timber bamboo, see *Sunyatsenia* 4(3-4): 148-151, t. 37. 1940, *Technical Bulletin of the National Forestry Research Bureau* 8: 15. 1948.

C. verruculosa Wen & Ohrnb. (*Chimonobambusa verruculosa* (T.P. Yi) T. H. Wen & D. Ohrnberger; *Qiongzhueta verruculosa* T.P. Yi)

China. See *Bulletin of Botanical Research* (Harbin) 8(4): 65-67, pl. 2. 1988.

C. yunnanensis Hsueh & W.P. Zhang

China, Yunnan. Internode square, sometimes cylindrical, culm annulus flat, sheath blade triangular, nodes below middle culm with spiny aerial roots, no sheath auricles, in evergreen hardwood forests, see *Journal of Bamboo Research* 7(1): 19-21, f. 3. 1988.

Chimonocalamus Hsueh & Yi = *Chimonocalamus* J.R. Xue & T.P. Yi, *Sinarundinaria* Nakai

From the Greek *cheimon*, *cheimonos* "winter" and *kalamos* "a reed, cane."

About 16 species, China, India, Bhutan, Myanmar. Bambuseae, Thamnocalaminae, erect, shrubby or arborescent, sympodial, rhizomes short-necked, thorny, clump-forming, 3 or more branches, joint of branches swollen, culm sheaths caducous longer than internodes, sheath ligule developed, inflorescence semelactant shortly paniculate on leafy flowering branches, 2 glumes, lemmas slightly awned, paleas 2-keeled, 3 lodicules, 3 stamens, ovary glabrous, 2 stigmas plumose, mountains, subtropical regions, used for house construction and weaving, edible shoots, cavity of culms often containing a fragrant oil, see *Journal of Japanese Botany* 11(1): 1. 1935, *Acta Botanica Yunnanica* 1(2): 74-92. 1979, *Kew Bulletin* 44(2): 349-367. 1989, *Journal of South China Agricultural University* 10(2): 45. 1989, *Edinburgh Journal of Botany* 51(2): 284, 290. 1994, *Journal of Bamboo Research* 13(4): 1-3, f. 1. 1994, *Contributions from the United States National Herbarium* 39: 112-113. 2000.

Species

C. bicorniculatus S.F. Li & Z.P. Wang (*Semiarundinaria bicorniculata* (S.F. Li & Z.P. Wang) Govaerts)

China. See *Acta Phytotax. Sin.* 33(6): 614-615, f. 1. 1995, *World Checklist of Seed Plants* 3(1): 21. 1999.

C. burmaensis (C.S. Chao & Renvoize) D.Z. Li (*Chimonocalamus burmaensis* (C.S. Chao & Renvoize) Ohrnb.; *Sinarundinaria burmaensis* C.S. Chao; *Sinarundinaria burmaensis* C.S. Chao & Renvoize)

Burma. See *Kew Bulletin* 43(3): 409, f. 1. 1988, *Acta Botanica Yunnanica* 16(1): 40. 1994.

C. callosus (Munro) Hsueh & Yi (*Arundinaria callosa* Munro; *Arundinaria far* Brandis ex Camus; *Chimonobambusa callosa* (Munro) Nakai; *Sinobambusa callosa* (Munro) Wen)

Bhutan, India. See *Transactions of the Linnean Society of London* 26(1): 30. 1868 and *Indian Trees* 721. 1906, *J. Arnold Arboretum* 6: 151. 1925, *Acta Bot. Yunnan.* 1(2): 84. 1979, *J. Bamb. Res.* 1(1): 35. 1982, *Edinb. J. Bot.* 51(3): 327. 1994.

Local names: khare bans, khare maling, u, rawa

C. delicatus Hsueh & Yi

China. Sheath coriaceous but fragile and easy to break, culm annulus convex, sheath blade lanceolate or linear-lanceolate, no sheath auricles, sheath ligule denticulate, edible shoots, see *Acta Bot. Yunnan.* 1(2): 77-78, f. 1. 1979.

in China: xiangzhu

C. dumosus Hsueh & Yi

China, Yunnan. Young culm gray pruinose, sheath annulus smooth, culm auricles convex, manifold branching, sheath papery, sheath blade erect, sheath auricles absent, sheath ligule rusty hairy, 3-7 leaves on each twig, edible shoots, bushy, see *Acta Bot. Yunnan.* 1(2): 81-82, f. 7. 1979.

in China: xiao xiangzhu

C. dumosus Hsueh & Yi var. *pygmaeus* Hsueh & Yi

China. Aerial roots densely clustered, sheath blades caducous, green branches, see *Acta Bot. Yunnan.* 1(2): 82. 1979.

C. fimbriatus Hsueh & Yi

China, Yunnan, Kengma. Young culm sparsely tomentose, aerial spiny roots densely clustered, sheath coriaceous, culm sheath ligule fimbriate, edible shoot, see *Acta Bot. Yunnan.* 1(2): 78-79, f. 3. 1979.

in China: liusu xiangzhu

C. gallatyi (Gamble) Hsueh & Yi (*Arundinaria gallatyi* Gamble; *Chimonobambusa gallatyi* (Gamble) Rhind; *Sinarundinaria gallatyi* (Gamble) C.S. Chao & Renvoize)

Burma. See *Ann. Roy. Bot. Gard. Calcutta* 7: 23, pl. 21. 1896 and *Bull. Misc. Inf., Kew* 47. 1928, *The Grasses of Burma* 2: 10. Calcutta 1945, *J. Bamb. Res.* 2(1): 38. 1983, *Kew Bulletin* 44(2): 354. 1989.

C. griffithianus (Munro) Hsueh & Yi (*Arundinaria griffithiana* Munro; *Chimonobambusa griffithiana* (Munro) Nakai; *Sinarundinaria griffithiana* (Munro) C.S. Chao & Renvoize)

Burma, India, China. See *Trans. Linn. Soc.* 26(1): 20. 1868 and *J. Arnold Arboretum* 6: 151. 1925, *Acta Botanica Yunnanica* 1(2): 83-84. 1979, *Kew Bulletin* 44(2): 353. 1989.

in China: geshi xiangzhu

C. longiligulatus Hsueh & Yi

China, Yunnan, Luchun. Culm annulus and sheath annulus convex, aerial spiny roots closely arranged, sheath coriaceous and caducous, sheath blade erect, 2-6 leaves on each twig, edible shoots, see *Acta Phytotax. Sin.* 23(3): 236, f. 1. 1985.

C. longispiculatus R.B. Majumdar (*Chimonocalamus longispiculatus* (C.S. Chao & Renvoize) D.Z. Li; *Sinarundinaria longispiculata* C.S. Chao & Renvoize)

India. See *Kew Bulletin* 43(3): 411. 1988, *Florae Indicae Enumeratio: Monocotyledonae, Bambusoideae* Botanical Survey of India, Flora of India, Series 4, 276. Calcutta 1989, *Acta Botanica Yunnanica* 16(1): 41. 1994.

C. longiusculus Hsueh & Yi

China, Yunnan. Thick-walled, internodes solid, thick and spiny air roots, 4-5 branches at each node, sheath coriaceous shedding late, sheath blade linear and erect, sheath auricles small or absent, leaves linear, shoots edible, hard and tough wood used in rural construction, bushy, see *Acta Bot. Yunnan.* 1(2): 80-81, f. 6. 1979.

in China: changje xiangzhu

C. lushaiensis Ohrnb. (*Chimonocalamus longispiculatus* (C.S. Chao & Renvoize) D.Z. Li; *Chimonocalamus longispiculatus* (C.S. Chao & Renvoize) Ohrnb.; *Sinarundinaria longispiculata* C.S. Chao & Renvoize)

India. See *Acta Bot. Yunnan.* 16(1): 41. 1994, *Kew Bulletin* 43(3): 411, f. 2. 1988.

C. makuanensis Hsueh & Yi

China, Yunnan, Maguan. Young culms densely silky pubescent, air roots at each node of branches, 3-4 branches at each node, yellow-striped culm sheath caducous, sheath blade erect, edible shoot, see *Acta Bot. Yunnan.* 1(2): 80, f. 5. 1979.

in China: maguan xiangzhu

C. montanus Hsueh & Yi

China, Yunnan, Tengchong. Smooth, glabrous, spiny air roots expanding above branches, sheath blade slender lanceolate with wavy base, 2-4 leaves on each twig, see *Acta Bot. Yunnan.* 1(2): 79, f. 4. 1979.

in China: shan xiangzhu

C. pallens Hsueh & Yi

China, Yunnan, Yuanyang. Young culm with grayish to grayish green powder, aerial roots present, sheath coriaceous, sheath blade ribbon-like lanceolate, sheath ligule denticulate, see *Acta Bot. Yunnan.* 1(2): 79, f. 2. 1979.

in China: huizhu

C. tortuosus Hsueh & Yi

China, Tibet. Aromatic bamboo, 2-9 branches on each node, young culm silky pubescent, sheath persistent, sheath blade broadly lanceolate, culm sheath blade twisted when dry, sheath auricles convex and purplish, sheath ligule purplish and triangular, 3-7 leaves on each twig, found growing in broad-leaved forests, see *Acta Botanica Yunnanica* 1(2): 82, f. 8. 1979.

in China: xizang xiangzhu

Chionachne R. Br. = Sclerachne R. Br.

Greek *chion* "snow" and *achne* "chaff, glume," alluding to the fruits or to the nature of the spikelet.

About 7 species, Southeast Asia, Polynesia, Indomalayan region, Indochina, eastern Australia. Panicoideae, Andropogonodae, Maydeae, or Andropogoneae, Chionachninae, perennial, rarely annual, woody and persistent or herbaceous,

reedlike, rhizomatous or caespitose, bulbous base, culms cylindrical, branched, culm nodes hairy or glabrous, culm internodes solid or hollow, ligule tomentose, leaf blades flat, plants monoecious, inflorescence axillary, spiciform spathe racemes bearing paired spikelets with female segments below and male segments above, all the fertile spikelets unisexual, basal female spikelet and several males, pedicelled spikelet suppressed or vestigial, male spikelets 2-flowered and solitary or 2-nate, 2 glumes dissimilar and membranous, caryopsis enveloped in the hard lower glume, palea present, lodicules absent, ovary glabrous, 2 stigmas, some species prone to grazing and trampling, on moist grassy slopes, forest margins, riverbanks, type *Chionachne barbata* (Roxb.) R. Br., see *Transactions of the American Philosophical Society, new series*, 5: 142. 1835, John Joseph Bennett (1801-1876) and Robert Brown, *Plantae Javanicae rarioris*. 15, 18, 20. London 1838, *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques, Physiques et Naturelles. Seconde Partie: Sciences Naturelles* 6,4(3-4): 273. 1841, *Fragmenta Phytographiae Australiae* 8: 116. 1873, *Flora Australiensis* 7: 515. 1878, *Contributions from the United States National Herbarium* 2(3): 518. 1894 and *Meded. Rijks-Herb.* 67: 1-17. 1931, R.P. Celarier, "Cytotaxonomy of the Andropogoneae 2. Subtribes Ischaeminae, Rottboellinae, and the Maydeae." *Cytologia* 22: 160-183. 1957, *Kew Bulletin* 35: 813. 1981, *Blumea* 47(3): 545-580. 2002 [Revision of Chionachninae (Gramineae: Andropogoneae), by T.A. Jannink & J.F. Veldkamp].

Species

C. biaurita Hack.

Australia, Philippines. See *Philippine Journal of Science* 1(Suppl.): 263. 1906, *Blumea* 47(3): 556-557, f. 1. 2002.

C. cyathopoda (F. Muell.) Benth. (*Chionachne cyathopoda* (F. Muell.) F. Muell. ex Benth.; *Polytoca cyathopoda* (F. Muell.) Bailey; *Sclerachne cyathopoda* F. Muell.)

Western Australia. Perennial, tufted, reedlike, rhizomatous, produces coarse fodder, palatable when young, eaten by horses, a weed of irrigation canals, along the banks of river, clay, sand, see *Fragmenta Phytographiae Australiae* 8: 116. 1873, *Fl. Austral.* 7: 516. 1878 and *The Queensland Flora* 6: 1849. 1902, *Mededeelingen Van's Rijks-Herbarium* 67: 11. 1931, *Blumea* 47(3): 557-559, f. 2. 2002.

in English: cane grass, river grass

C. gigantea (J. König) Veldkamp (*Chionachne barbata* (Roxb.) Aitch.; *Chionachne barbata* (Roxb.) Benth., nom. illeg., non *Chionachne barbata* (Roxb.) Aitch.; *Chionachne barbata* (Roxb.) Chionochloa Zotov

From the Greek *chion* "snow" and *chloe*, *chloa* "grass, young grass," referring to the habitat; see Victor Dmitrievich Zotov (1908-1977), *New Zealand Journal of Botany* 1: 87. 1963.

About 21-24 species, New Zealand, southeast Australia. Arundinoideae, Danthoneieae, Danthoniinae, or Danthonioideae, Danthoneieae, perennial, caespitose, solitary, forming large and dense tussocks, erect, coarse, herbaceous, harsh foliage, glabrous nodes, hollow internodes, auricles absent, old leaf sheaths persistent, leaf blades flat or folded and persistent or falling or disarticulating, ligule a fringe of hairs, leaves often pungent, plants nearly always bisexual, all species chasmogamous, inflorescence loose or contracted, erect and open or compact panicle of few to many spikelets of few to several bisexual florets, spikelets flattened, 2 unequal glumes acute or rarely awned, lemmas 2-lobed with the lobes often short-awned, lemma lobes conspicuous, long awns present with flattened and more or less twisted column, palea pubescent or glabrous, hairy callus, 2 ciliate lodicules free and toothed to lobed, stamens 3, ovary glabrous, 2 stigmas, anthers and stigmas simultaneously exerted at anthesis, reproduction by seeds, tussock grasses, alpine and subalpine grasslands, sea level, valuable summer grazing, useful for slope protection, ornamental when in flower, graceful flower heads, sometimes referred to as *Danthonia* sensu lato and *Rytidosperma* Steudel, intergrading with *Cortaderia* Stapf and *Danthonia* DC., type *Chionochloa rigida* (Raoul) Zotov, see *Transactions and Proceedings of the New Zealand Institute* 45: 274. 1913, *Journal of the Linnean Society, Botany* 51: 1-9. 1937, *New Zealand Journal Agric. Res.* 3: 728-733. 1960, *New Zealand Journal of Botany* 1: 78-136. 1963, *Heredity* 18: 538-540. 1963, *New Zealand Journal of Botany* 3: 180-193, 300-319. 1965, *New Zealand Journal of Botany* 4: 392-397. 1966, *New Zealand Journal of Botany* 5: 3-16. 1967, *Vegetatio* 18: 289-306. 1969, *New Zealand Journal of Botany* 8: 132-152. 1970, *New Zealand Journal Agric. Res.* 13: 534-554. 1970, *New Zealand Journal of Botany* 10: 205-224, 515-544. 1972, *New Zealand Journal of Botany* 14: 315-326. 1976, *Phytochem.* 15: 1933-1935. 1976, *New Zealand Journal of Botany* 15: 399-442, 761-765. 1977, *New Zealand Journal of Botany* 16: 255-260, 435-460, 479-498. 1978, *New Zealand Journal of Botany* 17: 43-54. 1979, *New Zealand Journal of Botany* 19: 161-170. 1981, Williams, G.R. & Given, D.R. *The Red Data Book of New Zealand: Rare and Endangered Species of Endemic Terrestrial Vertebrates and Vascular Plants*. Species

C. acicularis Zotov

New Zealand. Erect, slender, leaf sheath persistent, leaf blade disarticulating at ligule, pointed and deciduous leaves, see *New Zealand Journal of Botany* 1: 101. 1963.

C. antarctica (Hook.f.) Zotov (*Bromus antarcticus* Hook.f.; *Danthonia antarctica* (Hook.f.) Hook.f., nom. illeg., non *Danthonia antarctica* (G. Forst.) Spreng.; *Danthonia flavescens* var. *hookeri* Zotov)

New Zealand. Slender, leaf blade disarticulating at ligule, leaves pungent and deciduous, glumes acute or shortly awned, see *Flora Antarctica* 1: 97, t. 54. 1845[1844], *Flora Novae-Zelandiae* 1: 302. 1853 and *Transactions and Proceedings of the New Zealand Institute* 73(3): 234. 1943, *New Zealand Journal of Botany* 1: 99. 1963.

C. australis (Buchanan) Zotov (*Danthonia australis* (Buchanan) Buchanan; *Danthonia raoulii* subsp. *australis* Buchanan)

New Zealand. Low growing, mat-forming, alpine, deep green, leaf sheath glabrous and hairy, leaf blade persistent, leaves tightly rolled and pungent tipped, lemma scabrid, occurs in steep alpine slopes, see *Synopsis Plantarum Glumacearum* 1: 246. 1854, *Transactions and Proceedings of*

the New Zealand Institute 4: 224. 1872, *Manual of the Indigenous Grasses of New Zealand* 77, t. 31. 1880 and *New Zealand Journal of Botany* 1: 103. 1963.

in English: alpine carpet grass, carpet grass

C. beddiei Zotov

New Zealand. Caespitose, leaf blade persistent, glumes shortly awned and prickly, on coastal cliffs, see *New Zealand Journal of Botany* 1: 90. 1963.

C. bromoides (Hook.f.) Zotov (*Danthonia bromoides* Hook.f.)

New Zealand. Caespitose, gynodioecious, sheath hairy, leaf blade persistent, prickly glumes acute or shortly awned, on coastal cliffs, see *Flora Novae-Zelandiae* 1: 303. 1853 and *New Zealand Journal of Botany* 1: 90. 1963.

C. cheesemanii (Hack. ex Cheeseman) Zotov (*Danthonia flavescens* var. *cheesemanii* (Hack. ex Cheeseman) Zotov; *Danthonia raoulii* var. *cheesemanii* Hack. ex Cheeseman) (for the New Zealand (born at Hull, Yorks) botanist Thomas Frederic (Frederick) Cheeseman, 1846-1923, explorer, botanical collector, from 1854 to New Zealand, 1873 Fellow of the Linnean Society, he is best known for his *Manual of the New Zealand Flora*. Wellington 1906, with William Botting Hemsley (1843-1924) wrote *Illustrations of the New Zealand Flora*. [The plates drawn by Miss Matilda Smith, 1854-1926] Wellington 1914. See J.H. Barnhart, *Biographical notes upon botanists*. 1: 338. 1965; J. Lanjouw and F.A. Stafleu, *Index Herbariorum*. Part II, *Collectors A.-D*. Regnum Vegetabile vol. 2. 1954; O.E. Schulz, *Notizblatt des Botanischen Gartens und Museums zu Berlin-Dahlem*. 10: 551. 1929)

New Zealand. Tussocky, leaf blade persistent, sheath densely hairy, scabrid leaves, distant florets, glumes hyaline, lemma scabrid, in forest, grasslands, see *Synopsis Plantarum Glumacearum* 1: 246. 1854, *Handbook of the New Zealand Flora* 332. 1864 and *Manual of the New Zealand Flora* 887. 1906, *Transactions and Proceedings of the New Zealand Institute* 73(3): 234. 1943, *New Zealand Journal of Botany* 1: 95. 1963.

C. conspicua (G. Forst.) Zotov (*Agrostis conspicua* (G. Forst.) Roem. & Schult.; *Agrostis conspicua* (G. Forst.) Willd. ex A. Rich., nom. illeg., non *Agrostis conspicua* (G. Forst.) Roem. & Schult.; *Arundo conspicua* G. Forst.; *Calamagrostis conspicua* (G. Forst.) Gmelin; *Chionochloa conspicua* (G. Forst.) Zotov subsp. *cunninghamii* (Hook.f.) Zotov; *Cortaderia conspicua* (G. Forst.) Stapf; *Deyeuxia conspicua* (G. Forst.) Zotov)

New Zealand. Tall, densely tufted, robust, basal leaves dark green to olive, leaf sheath persistent and fibrous, leaf blade margin hairy below, leaves rigid and flat to concave, drooping leaves tardily deciduous, loose seed heads, erect to pendent and hairy open inflorescence, drooping panicles, spikelets 3- to 7-flowered, glumes apex acute or shortly

awned, lemma pilose at the base, awn straight, ornamental, rare species, pioneer, used by Maoris for thatching, high wind tolerance, alpine and subalpine habitats, see *Florulae Insularum Australium Prodromus* 9. 1786, *Systema Naturae ... editio decima tertia, aucta, reformata* 2: 172. 1791, *Essai d'une Nouvelle Agrostographie* 20, 142, 146, 152. 1812, *Systema Vegetabilium* 2: 364. 1817, *Voyage de découvertes de l'Astrolabe ... Part [1]: Essai d'une flore de la Nouvelle-Zélande* 127. Paris 1832 and *Hand-list Herbaceous Plants Cultivated Royal Bot. Gard. Kew, edition 2*, 137, 333. 1902, *Transactions and Proceedings of the New Zealand Institute* 73(3): 234. 1943, *New Zealand Journal of Botany* 1: 92. 1963.

in English: Hunangamoho grass, broad-leaved bush tussock, plume tussock grass, plumed tussock grass, bush tussock, brown tussock, snow grass, snow tussock

in New Zealand: toetoe, toitoi

C. conspicua (G. Forst.) Zotov subsp. ***conspicua***

New Zealand. Leaf sheath and leaf blade hairy.

C. conspicua (G. Forst.) Zotov subsp. ***cunninghamii*** (Hook.f.) Zotov (*Danthonia antarctica* var. *laxiflora* Hook.f.; *Danthonia antarctica* var. *parviflora* Hook.f.; *Danthonia cunninghamii* Hook.f.; *Danthonia pentaflora* Colenso)

New Zealand. Leaf sheath and leaf blade glabrous, see *Flora Novae-Zelandiae* 1: 302. 1853, *Handbook of the New Zealand Flora* 332. 1864, *Transactions and Proceedings of the New Zealand Institute* 16: 343. 1884 and *New Zealand Journal of Botany* 1: 92, 94. 1963.

C. crassiuscula (Kirk) Zotov (*Chionochloa pungens* (Cheeseman) Zotov; *Danthonia crassiuscula* Kirk; *Danthonia pungens* Cheeseman)

New Zealand. Small tawny green tussock, sheath stout and stiff, leaf blade hairy, leaves pungent with thick tips, leaves curl spirally when dry or dead, inflorescence hairy, occurs in the higher rainfall mountains, leached or boggy soils, deep wet hollows, see *Transactions and Proceedings of the New Zealand Institute* 17: 224. 1885 and *Manual of the New Zealand Flora* 887. 1906, *New Zealand Journal of Botany* 1: 103. 1963.

in English: curly-leaved snow tussock, curly snow tussock

C. crassiuscula (Kirk) Zotov subsp. ***crassiuscula*** (*Chionochloa pungens* (Cheeseman) Zotov; *Danthonia pungens* Cheeseman)

New Zealand. Stout, robust, tussocky, pungent leaf blades curved and coriaceous, in meadows, boggy meadows, see *Manual of the New Zealand Flora* 887. 1906, *New Zealand Journal of Botany* 1: 103. 1963.

C. crassiuscula (Kirk) Zotov subsp. ***directa*** Connor

New Zealand. Prostrate, slender, wet grassland, boggy grassland, inundated and poorly drained areas, see

New Zealand Journal of Botany 1: 103. 1963, *New Zealand Journal of Botany* 29(3): 236, f. 5. 1991.

C. crassiuscula (Kirk) Zotov subsp. ***torta*** Connor

New Zealand. Stout, robust, tussocky, alpine, leaf sheaths glabrous or hairy, leaf blades curled or twisting, see *New Zealand Journal of Botany* 1: 103. 1963, *New Zealand Journal of Botany* 29(3): 237, f. 6. 1991.

C. defracta Connor

New Zealand. Tussocky, hairy to scabrid, variable, leaf blades hairy, leaves narrow or long, inflorescence hairy, glumes acute or shortly awned, open slopes, see *New Zealand Journal of Botany* 25(1): 164. 1987.

C. flavescens Zotov (*Danthonia flavescens* Hook.f.)

New Zealand. Densely tufted, alpine plant, tough, stout shoots, leaf sheaths glabrous or hairy, leaf blades tapering, glossy leaves drooping and deciduous, dead sheaths break crosswise, glumes acute or shortly awned, growing on rocky coarse textured slopes, on shady slopes, sometimes described under *Chionochloa rigida* (Raoul) Zotov, see *Handbook of the New Zealand Flora* 332. 1864 and *Transactions and Proceedings of the Royal Society of New Zealand* 68: 295. 1938, *New Zealand Journal of Botany* 1: 97. 1963, *New Zealand J. Bot.* 29: 253. 1991.

in English: broad leaved snow tussock grass, broad leaved snow tussock

C. flavescens Zotov subsp. ***brevis*** Connor

New Zealand. Inflorescence glabrous, grassland, see *New Zealand Journal of Botany* 1: 97. 1963, *New Zealand Journal of Botany* 29(3): 240, f. 9. 1991.

C. flavescens Zotov subsp. ***flavescens***

New Zealand. Inflorescence glabrous, grassland, see *New Zealand Journal of Botany* 1: 97. 1963.

C. flavescens Zotov subsp. ***hirta*** Connor

New Zealand. Leaf sheath glabrous, inflorescence very hairy, glumes awned, see *New Zealand Journal of Botany* 1: 97. 1963, *New Zealand Journal of Botany* 29(3): 241, f. 10. 1991.

C. flavescens Zotov subsp. ***lupeola*** Connor

New Zealand. Leaf sheath glabrous, inflorescence very hairy, see *New Zealand Journal of Botany* 1: 97. 1963, *New Zealand Journal of Botany* 29(3): 242, f. 11. 1991.

C. flavicans Zotov (*Danthonia antarctica* var. *elata* Hook.f.)

New Zealand. Stout, sprawling, persistent foliage, sheath glabrous, leaf blade margin scabrid, inflorescence dense and compact, distant florets, light-green seed heads, glumes bifid, lemma scabrid, weeping flowers, slow growing, ornamental, occurs in dry areas, see *Flora Novae-Zelandiae* 1: 302. 1853 and *New Zealand Journal of Botany* 1: 91. 1963. in New Zealand: dwarf weeping toi toi, snow tussock

C. flavicans Zotov f. *flavicans*

New Zealand.

C. flavicans Zotov f. *temata* Connor

New Zealand. See *New Zealand Journal of Botany* 29(3): 245, f. 13. 1991.

C. frigida (Vickery) Conert (*Danthonia frigida* Vickery)

New Zealand, Australia, New South Wales, Kosciuszko district. Perennial, robust, densely caespitose, forming dense stout tussocks, culms smooth and shining, grayish leaves flat or folded, panicles nodding and many-flowered, spikelets 4- to 8-flowered, glumes subequal, central awn geniculate and coarse, anthers yellow-orange, rare species, alpine and subalpine meadows, rocky slopes.

in English: robust wallaby grass, ribbon grass

C. howensis S.W.L. Jacob

Australia, Lord Howe Island. Rare, see *Telopea* 3(2): 281. 1988.

C. juncea Zotov (*Danthonia raoulii* var. *teretifolia* Patrie; *Danthonia rigida* var. *teretifolia* (Petrie) Zotov)

New Zealand. Tussocky, swollen bases, leaf sheath entire, leaf blades junceous, old leaf sheaths fibrous and persistent, leaves persistent, glumes glabrous, lemma hairy and glabrous, swampy places, see *Annales des Sciences Naturelles; Botanique, sér. 3* 2: 116. 1844, *Synopsis Plantarum Glumacearum* 1: 246. 1854 and *Transactions and Proceedings of the New Zealand Institute* 54: 571. 1923, *Transactions and Proceedings of the New Zealand Institute* 73(3): 234. 1943, *New Zealand Journal of Botany* 1: 101. 1963.

C. lanea Zotov

New Zealand. Slender, tussocky, hairy persistent sheaths, leaf blade tip blunt and leaf blade margin glabrous, deciduous leaves, glumes glabrous, lemma more or less hairy to glabrous, wet ground, boggy sites, grassland, see *New Zealand Journal of Botany* 25(1): 165. 1987.

C. macra Zotov

New Zealand. Tussock, persistent sheath, leaves narrow flat or loosely rolled, basal sheaths dull purplish brown, inflorescence open and glabrous, glumes subequal, long awn column, alpine areas, harsh climates, see *New Zealand Journal of Botany* 8: 91. 1970.

in English: slim snow-tussock, slim-leaved snow tussock

C. oreophila (Petrie) Zotov (*Chionochloa oreophila* var. *elata* (Petrie) Zotov; *Danthonia flavescens* var. *elata* (Petrie) Zotov; *Danthonia oreophila* Patrie; *Danthonia oreophila* var. *elata* Patrie; *Danthonia pallida* Patrie, nom. illeg., non *Danthonia pallida* R. Br.)

New Zealand. Small, short and mat-forming, tussock, slender flowering culms, persistent sheaths, inflorescence on flexuous branches, small solitary spikelets, glumes more or less equal, common in snowbanks, grasslands.

in English: snow patch grass, see *Handbook of the New Zealand Flora* 332. 1864, *Transactions and Proceedings of the New Zealand Institute* 27: 406. 1895 and *Transactions and Proceedings of the New Zealand Institute* 45: 274. 1913, *Transactions and Proceedings of the New Zealand Institute* 73(3): 234. 1943, *New Zealand Journal of Botany* 1: 104. 1963.

C. ovata (Buchanan) Zotov (*Danthonia ovata* Buchanan; *Danthonia planifolia* Petrie)

New Zealand. Tussock, old sheaths fibrous, leaf blade tip pungent and leaf blade margin glabrous, leaf sheaths persistent, inflorescence shortly branched, lemma hairy and glabrous, wet places, grassland, see *Manual of the Indigenous Grasses of New Zealand* t. 29 (2). 1880 [1879, in *Flora of New Zealand* 5: 447. 2000] and *Transactions and Proceedings of the New Zealand Institute* 33: 328. 1901, *New Zealand Journal of Botany* 1: 104. 1963.

C. pallens Zotov

New Zealand. Green or tawny green tussock, leaf sheaths keeled and glabrous, soft leaves, basal sheaths pale brown to purple, inflorescence glabrous, glumes acute and glabrous, found in the penialpine zone, on rocky well-drained soils, see *New Zealand Journal of Botany* 1: 99. 1963, W.G Lee, M Fenner, A Loughnan and K.M Lloyd, "Long-term effects of defoliation: incomplete recovery of a New Zealand alpine tussock grass, *Chionochloa pallens*, after 20 years." *Journal of Applied Ecology* 37(2): 348-355. Apr 2000.

in English: mid-ribbed snow tussock

C. pallens Zotov subsp. *cadens* Connor

New Zealand. Stout, old sheaths hairy and persistent, leaf blade twisting and disarticulating at ligule, see *New Zealand Journal of Botany* 29(3): 251, f. 17. 1991.

C. pallens Zotov subsp. *pallens*

New Zealand. Stout, persistent leaf blades, in grassland.

C. pallens Zotov subsp. *pilosa* Connor

New Zealand. Leaf blade persistent and pilose, in grassland, see *New Zealand Journal of Botany* 29(3): 252, f. 18. 1991.

C. pallida (R. Br.) S.W.L. Jacobs (*Danthonia pallida* R. Br.; *Notodanthonia pallida* (R. Br.) Veldkamp)

New South Wales, Victoria. Perennial, densely caespitose, robust, culms stout and erect, forming erect tussocks, leaves rather rigid and greenish, panicles exerted and spreading, spikelets loosely arranged, glumes subequal and rather narrow, lemma membranous, central awn geniculate and twisted, anthers red-orange, ornamental, grows on poor and acid soils, on upland soils of low fertility.

in English: silvertop wallaby grass, red anther wallaby grass, white-topped wallaby-grass

C. rigida (Raoul) Zotov (*Danthonia flavescens* Hook.f.; *Danthonia raoulii* Steud.; *Danthonia raoulii* var. *flavescens*)

(Hook.f.) Hack. ex Cheeseman; *Danthonia rigida* Raoul; *Danthonia rigida* Steud., nom. illeg., non *Danthonia rigida* Raoul)

New Zealand. Erect and spreading, stout, shoots slender, leaf blade deciduous, leaf sheaths pale green to light brown to orange, dead sheaths break crosswise, tough and glossy leaves, inflorescence open, panicle branched and loose, glumes acute or shortly awned, lemma hairy, harsh climate, on poorly drained areas, see *Annales des Sciences Naturelles; Botanique, sér. 3* 2: 116. 1844, *Synopsis Plantarum Glumacearum* 1: 243, 246. 1854, *Handbook of the New Zealand Flora* 332. 1864 and *Manual of the New Zealand Flora* 886. 1906, *New Zealand Journal of Botany* 1: 96. 1963, *New Zealand J. Bot.* 29: 253. 1991.

in English: snow tussock, narrow-leaved snow tussock

C. rigida (Raoul) Zotov subsp. *amara* Connor

New Zealand. Scabrid or hairy inflorescence, in boggy places, see *New Zealand Journal of Botany* 29(3): 254, f. 19. 1991.

C. rigida (Raoul) Zotov subsp. *rigida*

New Zealand. Glabrous inflorescence.

C. rubra Zotov (*Danthonia antarctica* var. *minor* Hook.f.; *Danthonia raoulii* Steudel)

New Zealand. Very tough, slender, upright, dense tussock forming, leaves needle-like red to purple, inflorescence open, glumes acute rarely awned, ornamental, pioneer, high waterlogging tolerance, tolerant of dry or wet conditions, high wind tolerance, seepages and swamps, tussock grassland, bogs, stream banks, see *Flora Novae-Zelandiae* 1: 302. 1853 and *New Zealand Journal of Botany* 1: 96. 1963.

in English: red tussock grass, copper tussock, red tussock

C. rubra Zotov subsp. *cuprea* Connor

New Zealand. Leaf sheath entire, see *New Zealand Journal of Botany* 29(3): 256, f. 23. 1991.

C. rubra Zotov subsp. *occulta* Connor

New Zealand. See *New Zealand Journal of Botany* 29(3): 257, f. 24. 1991.

C. rubra Zotov subsp. *rubra*

New Zealand. See *New Zealand Journal of Botany* 1: 96. 1963.

C. rubra Zotov var. *inermis* Connor

New Zealand. See *New Zealand Journal of Botany* 29(3): 255, f. 22. 1991.

C. rubra Zotov var. *rubra*

New Zealand. See *New Zealand Journal of Botany* 1: 96. 1963.

C. spiralis Zotov

New Zealand, South Island. Vulnerable species, perennial, slender, tussock-forming, leaf sheath glabrous and coiling

up, leaves narrow and sharply pointed, narrow inflorescence, branched panicles, spikelets 4- to 6-flowered, glumes acute or shortly awned, lemma hairy and long-awned, in limestone areas, see *New Zealand Journal of Botany* 1: 100. 1963.

C. teretifolia (Petrie) Zotov (*Danthonia teretifolia* Petrie)

New Zealand. Tussock, small, leaf blade juncous and disarticulating at ligule, persistent sheaths, hairy leaves twisting and deciduous, inflorescence open, few solitary spikelets, in grasslands, see *Transactions and Proceedings of the New Zealand Institute* 46: 36. 1914 and *New Zealand Journal of Botany* 1: 100. 1963.

C. vireta Connor

New Zealand. Slender, tussock, hairy sheaths entire, leaf blade twisting and disarticulating at ligule, inflorescence glabrous, see *New Zealand Journal of Botany* 29(3): 261, f. 25. 1991.

Chloachne Stapf = *Poecilostachys* Hack.

From the Greek *chloe*, *chloa* "grass, young grass" and *achne* "chaff, glume."

Two species, tropical Africa. Panicoideae, Panicoideae, Paniceae, perennial, decumbent, branched, tufted, herbaceous, rhizomatous, rambling, stoloniferous, scrambling, running, trailing, auricles absent, leaf blades lanceolate, ligule a fringed membrane, plants bisexual, inflorescence spicate or paniculate, racemes unilateral, spikelets in pairs or in triplets, 2 glumes unequal or subequal, palea present, 2 free lodicules, 3 stamens, ovary glabrous, 2 stigmas, forest shade, sometimes in *Poecilostachys*, see *Flore d'Oware* 2: 14. 1807 [1810], *Sitzungsberichte der kaiserlichen Akademie der Wissenschaften. Wien. Mathematisch-naturwissenschaftlichen Classe. Abteilung 1* 89: 131. 1884, *Journal of the Linnean Society, Botany* 21: 317-353, 407-455. 1884-1885, *Boletim da Sociedade Broteriana* 6: 141. 1888 and *Journal of the Linnean Society, Botany* 40: 231. 1911, *Bulletin du Jardin Botanique de l'État* 9(3): 173. 1932, *Mémoires de l'Institut Scientifique de Madagascar, Série B, Biologie Végétale* 6: 1-272. 1955, W.D. Clayton and S.A. Renvoize, *Flora of Tropical East Africa Gramineae* 451-898. 1982.

Species

C. oplismenoides (Hack.) Robyns (*Chloachne secunda* Stapf; *Oplismenus anomalus* Peter; *Panicum oplismenoides* Hack.; *Poecilostachys flaccidula* Stapf ex Rendle; *Poecilostachys oplismenoides* (Hack.) Clayton)

Africa. See *Boletim da Sociedade Broteriana* 6: 141. 1888 and *Journal of the Linnean Society, Botany* 40: 231. 1911, *Hooker's Icones Plantarum* 31: t. 3072. 1916, *Repertorium Specierum Novarum Regni Vegetabilis, Beihefte* 1: 220.

1930 [1931], *Bulletin du Jardin Botanique de l'État* 9(3): 173. 1932, *Kew Bulletin* 42: 403. 1987.

C. secunda Stapf (*Chloachne oplismenoides* (Hack.) Robyns; *Panicum oplismenoides* Hack.; *Poecilostachys oplismenoides* (Hack.) Clayton)

Africa. See *Boletim da Sociedade Broteriana* 6: 141. 1888 and *Hooker's Icones Plantarum* 31: t. 3072. 1916, *Bulletin du Jardin Botanique de l'État* 9(3): 173. 1932, *Kew Bulletin* 42: 403. 1987.

Chloammia Raf. = *Vulpia* Gmelin

Perhaps from the Greek *chloe*, *chloa* “grass, young grass” and *ammos* “sand.” Pooideae, Poeae, Loliinae, type *Festuca tenella* Willd., see *Species Plantarum* 1: 73-76. 1753, *Species Plantarum. Editio quarta* 1(1): 419. 1797, *Flora Badensis Alsatica* 1: 8. 1805, C.S. Rafinesque, *Neogenyton* 4. 1825, *Genera Plantarum* 101. 1836, *Prodromus Florae Hispanicae* 1: 91. 1861, *Die Natürlichen Pflanzenfamilien* 2(2): 75. 1887 and E.D. Merrill, *Index rafinesquianus* 75. 1949, *Botaniska Notiser* 130: 173-187. 1977 [Morphological and anatomical variation of *Vulpia* (Gramineae)], *Nordic Journal of Botany* 1(1): 17-26. 1981, *Contributions from the United States National Herbarium* 48: 234, 690-694. 2003.

Chloammia Raf. ex Schlecht.

Perhaps from the Greek *chloe*, *chloa* “grass” and *ammos* “sand,” see E.D. Merrill, *Index rafinesquianus*. 75. 1949.

Chloothamnus Büse = *Nastus* Juss.

From the Greek *chloe*, *chloa* “grass” and *thamnos* “bush, shrub.”

Bambusoideae, Bambusodae, Bambuseae, Bambusinae, Hickeliinae, type *Chloothamnus chilianthus* Büse, see *Genera Plantarum* 34. 1789, *Systema Naturae ... editio decima tertia, aucta, reformata* 2: 580. 1791, *Plantae Javanicae Rariores* 42. 1848, *Plantae Junghuhnianae* 386. 1854 and *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 52: 174. 1914, *Blumea* 2: 70-71. 1936, *Mémoires de l'Institut Scientifique de Madagascar, Série B, Biologie Végétale* 6: 1-272. 1955, R.E. Holttum, “The bamboo-genera *Nastus* and *Chloothamnus*.” *Kew Bulletin* 10: 591-594. 1956 [1955], *Taxon* 6(7): 202, 205. 1957, R.E. Holttum, “The bamboos of New Guinea.” *Kew Bulletin* 21(2): 263-292. 1967, W.C. Lin, “The species and distribution of bamboos in the Republic of Malagasy (Madagascar), East Africa.” *Special Bulletin of Taiwan Forestry Research Institute* no. 4. 1967.

Chloridion Stapf = *Stereochlaena* Hack.

Referring to *Chloris*.

See *Hooker's Icones Plantarum* 28: t. 2640. 1900, *Proceedings of the Rhodesia Scientific Association* 7(2): 65-66. 1908, *Die natürlichen Pflanzenfamilien, Zweite Auflage* 14e: 45. 1940, W.D. Clayton, “The genus *Stereochlaena* (Gramineae).” *Kew Bulletin* 33(2): 295-297. 1978, *Flora of Tropical East Africa Gramineae* 451-898. 1982, *Kew Bulletin, Additional Series* 13: 298, 377. 1986.

Chloridopsis Hack. = *Trichloris* E. Fourn. ex Benth.

Referring to *Chloris*.

Chloridoideae, Cynodonteae, Chloridinae, see *Nova Genera et Species Plantarum seu Prodromus* 1, 25. 1788, *Varietates de Ciencias, Literatura y Artes* 2(4): 143. 1805, *Journal of the Linnean Society, Botany* 19: 102. 1881, *Mexicanas Plantas* 2: 142. 1886, *Die Natürlichen Pflanzenfamilien* 2(2): 59. 1887, *Revisio Generum Plantarum* 2: 771. 1891 and *Division of Botany, Circular (United States Department of Agriculture)* 32: 7. 1901, *U.S. Dept. Agric. Bull.* 772: 190. 1920, Adolf Pascher (1881-1945), *Die Süßwasser-Flora Deutschlands, Österreichs und der Schweiz* 4: 88, 103. 1927, *Brigham Young University Science Bulletin: Biological Series* 19(2): 1-133. 1974, *Flora Mesoamericana* 6: 287-289. 1994, *Flora of Ecuador* 68: 105-106. 2001 [by Laegaard, S. & P.M. Peterson], *Contributions from the United States National Herbarium* 41: 39-52, 222-223. 2001.

Chloris O. Swartz = *Actinochloris* Steud., *Agrostomia* Cerv., *Apogon* Steud., *Chloridopsis* Hack., *Chloroides* Fisch. ex Regel, *Chloropsis* Kuntze, *Chlorostis* Raf., *Geopogon* Steud., *Heterolepis* Boiss., *Heterolepis* Cass. (Asteraceae), *Heterolepis* Ehrenb. ex Boiss., *Leptochloris* Kuntze, *Phacellaria* Steud., *Phacellaria* Willd. ex Steud., *Pterochloris* (A. Camus) A. Camus, *Schultesia* Spreng., *Trichloris* Benth., *Trichloris* E. Fourn. ex Benth.

After the Greek goddess of flowers, Chloris, daughter of Amphion; Flora was the equivalent Roman goddess; Latin *chloris*, *chloridis* “verdant,” Greek *chloros* “green”; see Olof Peter Swartz, *Nova genera et species plantarum seu Prodromus*. 25. 1788.

About 35-55 species, tropical and warm temperate regions. Chloridoideae, Cynodonteae, perennial or annual, habitat

variable, 2- or 3-awned, herbaceous, slender, erect and decumbent or prostrate, forming spreading tussocks, caespitose, rhizomatous or stoloniferous, long-rhizomatous or long-stoloniferous, auricles absent, leaf sheaths keeled and chartaceous, ligule a fringed membrane, leaves linear and scabrous, plants bisexual, inflorescence spicate and digitate or subdigitate or very rarely single, spikelets laterally flattened and arranged on a short axis, rachilla nonarticulated, hidden cleistogenes absent or present, 1 perfect basal floret, 1 to several sterile florets above, 2 glumes unequal and keeled, upper glume acute or 2-toothed, fertile lemma awned and keeled, palea present, 2 free and fleshy lodicules in bisexual florets, stamens 3, ovary glabrous, 2 stigmas, small fruit not compressed or trigonous in cross section, weed species aggressive, cultivated useful fodder, valuable for forage, tussock grasses, native pasture species, decorative flower heads, reports of high contents of cyanogenic glycosides, ruderal species on disturbed ground, growing in poor soil, dry open habitats, grassland, pampas, rainforest, related to *Eustachys* Desv. and *Cynodon* Rich., often confused with *Enteropogon* Nees, hybridization with *Cynodon* Rich., type *Chloris cruciata* (L.) Sw., see *Prod. Veg. Ind. Occ.* 25. 1788 [also *Nova Genera et Species Plantarum seu Prodromus* 25. 1788], *Principes Fondamentaux de Somiologie* 26, 29. 1814 [1813], *Plantarum Minus Cognitarum Pugillus* 2: 17. 1815, *Bull. Sci. Soc. Philom. Paris* 1820: 26. 1820, *Conspectus Regni Vegetabilis* 4. 1828, *Nomenclator Botanicus. Editio secunda* 1: 352-353. 1840, *Nomenclator Botanicus. Editio secunda* 2: 343. 1841, *Index Seminum [St. Petersburg]* 28. 1863, *Naturaleza [Sociedad mexicana de historia natural]* 1: 345. 1870, *Flora Brasiliensis* 2(3): 63. 1878, *Flora Orientalis* 5: 554. 1884 and *Bulletin de la Société Botanique de France* 91: 63. 1944, *Bulletin de la Société Botanique de France* 97: 227. 1950, *Flora of Ethiopia and Eritrea* 7: 166-171. 1995, *Bulletin du Muséum d'Histoire Naturelle sér. 2*, 29: 349. 1957, *Folia Primatologica* 15: 1-35. 1971, D.E. Anderson, "Taxonomy of the genus *Chloris* (Gramineae)." *Brigham Young University Science Bulletin: Biological Series* 19(2): 1-133. 1974, *Taxon* 25: 176-178. 1976, *Feddes Repert.* 94: 625-630. 1983, *Taxon* 32(3): 472. 1983, *Feddes Repert.* 96: 269-277. 1985, *Flora Mesoamericana* 6: 287-289. 1994, *Contributions from the United States National Herbarium* 41: 39-52, 222-223. 2001, *Flora of Australia* vol. 44B, Poaceae 3: 269-282. 2005, *Journal of Biogeography* 32(2): 311-327. May 2005.

Species

C. sp.

in Mexico: escobetilla

C. acicularis Lindl. (*Chloris acicularis* var. *queenslandiae* Domin; *Enteropogon acicularis* (Lindl.) Lazarides)

Australia. Erect or spreading, glaucous, tussock forming, erect flowering stems, radiating spikes, food for finches, see *Journal of an Expedition into the Interior of Tropical Australia* 33. 1848 and *Bibliotheca Botanica* 85: 368. 1915, *Australian Journal of Botany, Supplementary Series* 5: 31. 1972.

in English: curly windmill grass

C. affinis Caro & E.A. Sánchez

Argentina. See *Kurtziana* 6: 224, f. 2. 1971.

C. amethystea Hochst.

Ethiopia. Perennial, loosely tufted, stoloniferous, leaf blades acute, spikelets 2-flowered and inconspicuously awned, confused with *Chloris gayana* Kunth, see *Flora* 38: 205. 1855.

C. andropogonoides Fourn. (*Chloris andropogonoides* E. Fourn. ex Hemsl.; *Chloris tenuispica* Nash)

North America, U.S., Mexico. Good forage, see *Biologia Centrali-Americana; ... Botany ...* 3: 558. 1885, *Mexicanas Plantas* 2: 143. 1886, *Bulletin of the Torrey Botanical Club* 25: 436. 1898.

in Mexico: verdillo esbelto

in English: slim-spike windmill grass, fingergrass, slim-spike windmillgrass

C. arenaria Hitchc. & Ekman (*Chloris eleusinoides* var. *vestita* Greenm. ex Combs)

Cuba. Endangered species, found on white sand, grassy riverbanks, pinelands, see *Transactions of the Academy of Science of St. Louis* 7: 477, t. 39. 1897 and *Manual of the Grasses of the West Indies* 131. 1936.

C. barbata Swartz (*Andropogon barbatus* sensu L. 1771 (also *barbata* and *barbatum*); *Andropogon polydactylon* L.; *Chloris barbata* (L.) Nash, nom. illeg., non *Chloris barbata* Sw.; *Chloris barbata* (L.) Swartz; *Chloris barbata* var. *divaricata* Kuntze; *Chloris barbata* var. *formosana* Honda; *Chloris dandyana* C.D. Adams; *Chloris inflata* Link; *Chloris longifolia* Steud.; *Chloris paraguayensis* Steud.; *Chloris paraguayensis* Steud.; *Chloris polydactyla* (L.) Sw.; *Chloris rufescens* Steud., nom. illeg., non *Chloris rufescens* Lag.; *Miscanthus polydactylos* (L.) Voss; *Saccharum polydactylum* (L.) Thunb.)

Tropics, origin uncertain. Annual or short-lived perennial, stout, glabrous, 3-awned, loosely tufted, simple or only branched at base, stems loosely clumped and ascending, erect or sometimes decumbent, often stoloniferous, base prostrate, sometimes rooting at the lowermost nodes, leaf

sheaths compressed and keeled, leaves linear and flat, ligule a ring of hairs or shortly pilose, inflorescence spicate and digitately arranged at the end of a flowering culm, spikelets secund and 3-awned, spikelets purple-red on short stalks in 2 rows alternately on each side of the spike, lowest fertile floret with long-bearded callus, glumes unequal, lower glume lanceolate, upper glume ovate, lemma oval with a purple awn, fertile lemmas bordered with long spreading hairs, palea oblong with folded margins, 2 lodicules, 3 stamens, a common weed species widespread in tropics and subtropics, high food value, fodder and forage, best grazed in mixture with other grasses, unpalatable when old, good fodder up to the time of flowering, young plants grazed by stock, suitable as hay when mixed with legumes, it stands drought well, can thrive on alkaline soils, often growing on road verges, wasteland, levee banks, along roadsides, abandoned fields, pastures, grassy slopes in dry areas, disturbed sites and creek lines, sandy beaches, on lowlands and coastal areas, in dry regions at lower elevations, in disturbed dry and mesic areas, see *Voy. Jamaica* 111, t. 65, f. 2. 1707, *Systema Naturae, Editio Decima* 2: 1305. 1759, *Species Plantarum, Editio Secunda* 2: 1483. 1763, *Mantissa Plantarum* 302. 1771, *Flora Japonica*, ... 42. 1784, *Nova Genera et Species Plantarum seu Prodromus* 26. 1788, *Flora Indiae Occidentalis* 1: 200, 203. 1797, *Essai d'une Nouvelle Agrostographie* 84, 158, 176. 1812, *Enumeratio Plantarum Horti Regii Berolinensis Altera* 1: 105. 1821, *Synopsis Plantarum Glumacearum* 1: 204-206. 1854, *Enum. Pl. Zeyl.* 5: 371. 1864, *Flora Brasiliensis* 2(3A): 1-160, t. 1-43. 1878, *Flora Australiensis: A Description ...* 7: 613. 1878, *Revisio Generum Plantarum* 2: 771. 1891, *Vilmorin's Illustrierte Blumengartnerei* 1: 1191. 1895, *Bulletin of the Torrey Botanical Club* 25: 443. 1898 and *Handb. Fl. Ceylon* 5: 275. 1900, *Botanical Magazine (Tokyo)* 40: 437. 1926, *Claves Generum et Specierum Graminearum Primarium Sinicarum Appendice Nomenclatione Systematica* 197. 1957, *Grasses of Burma ...* 465. 1960, *Journal of the Royal Society of Western Australia* 44(3): 77-83. 1961, *Phytologia* 21: 408. 1971, *Australian Journal of Botany, Supplementary Series* 5: 1-51. 1972, *Taxon* 25(1): 176-178. 1976, *Flora Illustrada Catarinense* 1(Gram.): 1-435. 1981, *Fl. Guianas, Ser. A, Phanerogams* 8: 136. 1990, *Rhodora* 94(878): 135-140. 1992, *Memoirs of the New York Botanical Garden* 78: 509-540. 1996.

in English: swollen fingergrass, swollen chloris, swollen windmillgrass, purpletop chloris, purple top, peacock-plume grass, airport grass

in Spanish: paraguaita morada

in French: herbe cils

in Argentina: pasto borla

in Brazil: capim branco, capim guiamum, pé de galinha

in the Caribbean: ti pyé poul, zèb a bab, petit pied de poule, herbe à barbe

in Colombia: pasto blanco, siy, siyi

in Hawaii: mau'u lei

in Japan: murasaki-hige-shiba, shima-hige-shiba

in the Philippines Islands: banoko, korokorosan, koro-korosan, banuko

in India: adavigodhumulu, aptia, bardiya, botya jhara, chanderyot, chhinkri, gandi, gandi gavung, ganni, gavung, gondvel, goshva, hennu ganjalu garike hullu, jargi, jharna, kodai pullu, konda jeri, konda pulla, konda pullu, manchada kaalu hullu, myel kondai pullu, navilu baalada hullu, paluah, palwat, phulkia, phundi, punji, sevarugu pullu, uppa gaddi, uppugaddi, zende balada hullu

in Sri Lanka: kondai pul, mayuru tana

in Thailand: yaa rang nok, ya rang nok

in Ghana: kafar faraki, káfàr fàràki

C. berazainiae Catasus

America. See *Acta Botanica Cubana* 25: 5. 1985.

C. berroi Arechav. (*Chloris accumbens* Hack. ex Arechav.) (dedicated to M.B. Berro)

South America, Uruguay, Argentina. Perennial, clumped, cylindrical inflorescence spicate and digitate, spikelets densely arranged, growing in dry arid places, see *Anales del Museo Nacional de Montevideo* 1: 388, t. 44. 1896 and 5: 391. 1896.

in English: giant fingergrass, Uruguay grass

in Spanish: pata de gallo

C. boliviensis Renvoize

Bolivia. Perennial, tufted, leaf blades acuminate, solitary racemes, spikelets 3-flowered, glumes lanceolate and acuminate, lemma acute, dry or wet savannahs, see *Gramíneas de Bolivia* 347, f. 74. 1998.

C. bournei Rangachariar & Tadulingam

India. See *Journal of the Indian Botanical Society* 2: 189. 1921, *Current Science* 57(11): 617-618. 1988.

C. breviaristata (Hack. ex Kütz.) Herter (*Chloris polydactyla* var. *breviaristata* Hack. ex Kütz.)

South America. See *Boletín de Academia de Ciencias, Bellas Letras y Nobles Artes. Córdoba, Spain* 16: 257. 1899 and *Revista Sudamericana de Botánica* 6: 146. 1940.

C. breviseta Benth. (*Chloris virgata* var. *breviseta* (Benth.) Pilger ex Peter)

Africa, Benin. See *Niger Flora* 566. 1849 and *Repertorium Specierum Novarum Regni Vegetabilis, Beihefte* 40: 262. 1931.

C. canterae Arechav. (also *canterai*) (*Chloris barbata* Sw.; *Chloris parodiana* Rosengurt & Izaguirre; *Chloris polydactyla* f. *pauciradiata* Kurtz; *Chloris polydactyla* f. *stolonifera* Parodi) (named for Mr. C.B. Cantera)

South America, Argentina, Uruguay, Paraguay. Perennial, tufted, erect, leafy, growing along roadsides, grasslands, see *Nova Genera et Species Plantarum seu Prodromus* 26. 1788, *Anales del Museo Nacional de Montevideo* 1: 385. 1896 and *Boletín de Academia de Ciencias, Bellas Letras y Nobles Artes. Córdoba, Spain* 16: 257. 1900, *Revista Argentina de Agronomía* 20: 24. 1953, *Boletín de la Sociedad Argentina de Botánica* 12: 124, 128, f. 4. 1968.

in English: Paraguayan windmill grass, windmill grass

in Spanish: pata de gallo

C. canterae Arechav. var. **canterae** (*Chloris parodiana* Rosengurt & Izaguirre)

South America. See *Anales del Museo Nacional de Montevideo* 1: 385. 1896 and *Boletín de la Sociedad Argentina de Botánica* 12: 128, f. 4. 1968.

in English: windmill grass

C. canterae Arechav. var. **grandiflora** (Roseng. & Izag.) D.E. Anderson (*Chloris grandiflora* Roseng. & Izag.)

America. See *Anales del Museo Nacional de Montevideo* 1: 385. 1896 and *Boletín de la Sociedad Argentina de Botánica* 12: 124, f. 3. 1968, *Brigham Young University Science Bulletin: Biological Series* 19(2): 32. 1974.

C. castilloniana Lillo & Parodi (named for L. Castillon)

Bolivia, Argentina. Annual, bunchgrass, erect, caespitose, glabrous, flat leaves, forage, very palatable, useful for erosion control, see *Physis. Revista de la Sociedad Argentina de Ciencias Naturales* 4: 176, f. 1-2. 1918.

C. castilloniana Lillo & Parodi var. **castilloniana**

South America.

C. castilloniana Lillo & Parodi var. **pubescens** Caro & E.A. Sánchez

South America. See *Kurtziana* 6: 230. 1971.

C. cheesemani Hack. ex Cheesem.

Cook Island. Endangered species, see *Fragmenta Phytographiae Australiae* 7: 118. 1870 and *Transactions of the Linnean Society of London, Botany*, ser. 2, 6: 305. 1903, *Kew Bulletin* 21: 108. 1967.

C. ciliata Sw. (*Andropogon pubescens* Aiton; *Andropogon pubescens* Vis., nom. illeg., non *Andropogon pubescens* Aiton; *Andropogon pubescens* Willd. ex Kunth, nom. illeg., non *Andropogon pubescens* Aiton; *Chloris brachyathera* (Hack. ex Parodi) Herter; *Chloris ciliata* var. *texana* Vasey; *Chloris nashii* A. Heller; *Chloris propinqua* Steud.; *Chloris texana* (Vasey) Nash; *Cynodon ciliatus* (Sw.) Raspail)

North and South America, West Indies. Perennial, caespitose, erect, branched, leaf blades glabrous or scabrous, good forage, growing in disturbed areas, open habitats, see *Nova Genera et Species Plantarum seu Prodromus* 25. 1788. *Hortus Kewensis; or, a catalogue ...* 3: 423. 1789, *Annales des Sciences Naturelles (Paris)* 5: 303. 1825, *Flora*

12(Erganz. 1): 3. 1829, *Enumeratio Plantarum Omnium Hucusque Cognitarum* 1: 498. 1833, *Synopsis Plantarum Glumacearum* 1: 204. 1854, *U.S. Department of Agriculture. Division of Botany. Bulletin* 12(1): t. 30. 1890, *Bulletin of the Torrey Botanical Club* 25: 441. 1898 and *Boletín de Academia de Ciencias, Bellas Letras y Nobles Artes. C. cubensis A.S. Hitchc. & Ekman (*Chloris cubensis* Hitchc. & Ekman ex A.S. Hitchc.; *Chloris sagraeana* subsp. *cubensis* (Hitchc. & Ekman) Cat. Guerra)

Cuba. See *Manual of the Grasses of the West Indies* 131. 1936, *Acta Botanica Cubana* 25: 6. 1985, *Fontqueria* 44: 145. 1996.

in English: Cuban windmill grass

C. cucullata Bisch.

North America, Mexico, U.S., Texas, New Mexico. Perennial, caespitose, tall, erect, simple, sometimes with short stolons, flat bluish green stems and sheaths, leaves scabrous and acuminate, purplish terminal spikes, ornamental, fair forage value for both livestock and wildlife, growing in waste ground, arid soils, deserts and xeric shrublands, in flat sandy soils, on upland sandy soils, see *Annales des Sciences Naturelles; Botanique, sér. 3* 19: 357. 1853.

in English: hooded windmill grass, hooded windmillgrass, windmill grass, hooded fingergrass

in Mexico: papalote, verdillo, verdillo papalote

C. dandyana C.D. Adams (*Andropogon barbatus* L.; *Andropogon polydactylon* L.; *Chloris arundinacea* Nees ex Steud.; *Chloris barbata* Sw.; *Chloris barbata* (L.) Swartz; *Chloris barbata* (L.) Nash, nom. illeg., non *Chloris barbata* Sw.; *Chloris castilloniana* Lillo & Parodi; *Chloris consanguinea* Kunth; *Chloris elata* Desv.; *Chloris polydactyla* Sw.; *Chloris polydactyla* (L.) Sw.; *Chloris polydactyla* f. *stolonifera* Parodi)

U.S., Florida, Cuba, Argentina. Annual or perennial, erect bunchgrass, stemmy, leaf blade acuminate, inflorescence brown, lower lemma ciliate on the margins and keel, good forage, drought-tolerant, rhizomes against uterine disorders, common in disturbed places, dry sites, see *Systema Naturae, Editio Decima* 2: 1305. 1759, *Species Plantarum, Editio Secunda* 2: 1483. 1763, *Mantissa Plantarum* 302. 1771, *Nova Genera et Species Plantarum seu Prodrum* 26. 1788, *Flora Indiae Occidentalis* 1: 200. 1797, *Révision des Graminées* 1: 89. 1829, *Mémoires de la Société d'Agriculture, Sciences et Arts d'Angers* 1: 177. 1831, *Synopsis Plantarum Glumacearum* 1: 207. 1854, *Bulletin of the Torrey Botanical Club* 25: 443. 1898 and *Revista Argentina de Agronomía* 20: 24. 1953, *Phytologia* 21: 408. 1971, *Taxon* 25(1): 176-178. 1976, *Fl. Guianas*, Ser. A, 8: 136. 1990.

in Brazil: capim branco, capim guiamum, pé de galinha

C. dichanthioides Everist (*Austrochloris dichanthioides* (Everist) Lazarides)

Australia. See *Queensland Agricultural Journal* 49(5): 432, t. 155. 1938, *Australian Journal of Botany, Supplementary Series* 5: 35. 1972.

C. diluta Renvoize

South Africa, Transvaal. Perennial, wiry, erect, ascending, branching above the base, rhizomatous and rarely stoloniferous, leaf blades acuminate, inflorescence digitate to subdigitate, slender spikes, 2 florets, spikelets spaced, glumes lanceolate and membranous, awned, lemma elliptic, common on riverbanks, scrub forest, very similar to *Chloris pycnothrix* Trin., see *Kew Bulletin* 31(4): 844. 1977.

C. divaricata R. Br. (*Chloris cynodontoides* Balansa; *Chloris divaricata* var. *cynodontoides* (Balansa) Lazarides)

Queensland, New South Wales. Perennial, erect or decumbent, slender, creeping, mostly glabrous, simple or freely branching at lower joints, tufted to shortly stoloniferous, creeping runners, upright flower stalks, spikes digitate and spreading at maturity from a common center, spikelets imbricate and crowded, 2 florets, glumes very narrow-lanceolate, fertile lemma toothed at the apex and scabrous, upper lemma glabrous and deeply 2-lobed, noxious weed, alluvial areas, floodplains and areas subject to periodic flooding, dry regions, see *Prodrum Florae Novae*

Hollandiae 186. 1810, *Bulletin de la Société Botanique de France* 19: 318. 1872, *Flora Australiensis: A Description ...* 7: 612. 1878 and *Repertorium Specierum Novarum Regni Vegetabilis* 9: 553. 1911, *Transactions and Proceedings of the Royal Society of South Australia* 37: 124, t. 5. 1913, *Australian Journal of Botany, Supplementary Series* 5: 18. 1972, *Brigham Young University Science Bulletin: Biological Series* 19(2): 85. 1974.

in English: spreading windmill grass, star windmill grass, star grass, slender chloris

C. divaricata R. Br. var. *cynodontoides* (Balansa) Lazarides
Australia. Rigid inflorescence branches.

C. divaricata R. Br. var. *divaricata*

Australia. Flexible inflorescence branches.

C. ekmanii Hitchc.

West Indies, Cuba. Pastures, see *Manual of the Grasses of the West Indies* 129. 1936.

C. elata Desv. (*Andropogon barbatus* L.; *Andropogon polydactylon* L.; *Chloris arundinacea* Nees ex Steud.; *Chloris barbata* (L.) Nash, non Sw.; *Chloris dandyana* C.D. Adams; *Chloris polydactyla* (L.) Sw.)

Bolivia, Brazil. Annual, dark green, caespitose, erect, herbaceous, inflorescence flexuous, along roadsides, see *Systema Naturae, Editio Decima* 2: 1305. 1759, *Species Plantarum, Editio Secunda* 2: 1483. 1763, *Mantissa Plantarum* 302. 1771, *Nova Genera et Species Plantarum seu Prodrum* 26. 1788, *Flora Indiae Occidentalis* 1: 200. 1797, *Révision des Graminées* 1: 89. 1829, *Mémoires de la Société d'Agriculture, Sciences et Arts d'Angers* 1: 177. 1831, *Synopsis Plantarum Glumacearum* 1: 207. 1854, *Bulletin of the Torrey Botanical Club* 25: 443. 1898 and *Revista Argentina de Agronomía* 20: 24. 1953, *Phytologia* 21: 408. 1971, *Taxon* 25(1): 176-178. 1976, *Fl. Guianas*, Ser. A, 8: 136. 1990.

in English: tall windmill grass, manyspiked chloris, manyspike fingergrass

C. exilis Renvoize

Brazil. Annual, slender, erect, decumbent, leaf blades linear, inflorescence subdigitate, spikelets oblong, glumes ovate, in cerrado or caatinga, on sandy soils, see *Kew Bulletin* 37(2): 323, f. 2. 1982.

C. ferruginea Renvoize (*Tetrapogon ferrugineus* (Renvoize) S.M. Phillips)

Africa, Kenya. Rare species, see *Kew Bulletin* 28(2): 195, f. 1. 1973, *Kew Bulletin* 42(2): 478. 1987.

C. filiformis Poir. (*Bouteloua simplex* Lag.; *Chloris filiformis* (Vahl) Poir.; *Chloris tenuis* Poir.)

Mauritius. Vulnerable species, second floret occasionally fertile, see also *Cynosurus filiformis* Vahl, see *Symbolae Botanicae, ...* 2: 20. 1790, *Varietades de Ciencias, Literatura y Artes* 2(4): 141. 1805, *Encyclopédie Méthodique.*

C. flabellata (Hack.) Launert (*Chloris pubescens* Peyr., nom. illeg., non *Chloris pubescens* Lag.; *Tetrapogon flabellatus* Hack.)

South Africa. Perennial, stoloniferous, woody and stout stolons, sward-forming, spikes stout and curved, upper glume with silky edge, useful for erosion control, common on saline marshes, flats, coastal regions, sandy places, muddy sites, see *Akademie der Wissenschaften in Wien, Sitzungsberichte, Mathematisch-naturwissenschaftliche Klasse, Abteilung I* 38: 385. 1860, *Bulletin de l'Herbier Boissier* 4: 810. 1896 and *Mitteilungen der Botanischen Staatssammlung München* 8: 147-163. 1970.

C. gabriellae Domin (*Chloris virgata* Sw.)

Australia. See *Flora Indiae Occidentalis* 1: 203. 1797 and *Bibliotheca Botanica* 85: 368, f. 83. 1915.

C. gayana Kunth (*Chloris abyssinica* Hochst. ex A. Rich.; *Chloris gayana* f. *genuina* Maire & Weiller; *Chloris gayana* f. *oligostachys* (Barratte & Murb.) Maire & Weiller; *Chloris gayana* subsp. *oligostachys* Barratte & Murb.; *Chloris glabrata* Andersson; *Chloris multiradiata* var. *ragazzii* Pirota; *Chloris repens* Hochst.; *Eustachys gayana* Mundy)

Tropical and southern Africa. Short-lived perennial or annual, very variable, leafy, glabrous, erect or ascending, culms often decumbent at the base then erect, simple or usually branched, tall and robust, tough and wiry, vigorous root system, sometimes forming tufts, usually strongly stoloniferous, rooting stolons, ligule membranous with hairy margins, leaf sheaths compressed and keeled, blades flat or folded, leaves linear and tapering, spikes or racemes subdigitate and spreading to somewhat erect, spikelets crowded or densely imbricate, spikelets rather coarse, 2 awns, florets 3 or 4, lowest floret fertile, upper florets awnless, glumes membranous and unequal, lemma tips truncate, fertile lemma lanceolate and ciliate on the margins and keel, 2 lodicules, 3 stamens, weed species widely naturalized and grown in tropical countries, escaped from cultivation, suitable for silage and hay, thatching, pasture grass in subtropical areas, cultivated fodder, relished by livestock, high grazing value, a valuable forage species, young growth very palatable, fairly drought resistant, usually will not survive prolonged drought or flooding, it does not grow well in shade, withstands trampling and recovers quickly, salt-tolerant, ground cover for erosion control, useful as a sand binder and soil stabilizer, grows on road margins and pastures, irrigated terraces, open bushland, disturbed sites, along roadsides in dry areas, vleis, riverbanks, lake margins, waste places, seasonally waterlogged plains, fields, open woodland and grassland, sown pastures, clay and clay-loam soils, red clay soil, infertile sands, in coastal and subcoastal areas, red loams, alluvial loam, alluvial soils, allied to

Chloris inflata, see *Révision des Graminées* 1(6): 89. 1829, *Révision des Graminées* 2: 293, t. 58. 1830, *Tentamen Florae Abyssinicae ... 2*: 406. 1850, *Flora* 38: 204. 1855, *Naturwissenschaftliche Reise nach Mossambique ... 2*: 557. 1864, *Annuario del Reale Istituto Botanico di Roma* 6: 157. 1896 and *Acta Universitatis Lundensis*, Sect. 2, 36: 8, t. 13. 1900, *Rhodesian Agricultural Journal* 14: 142. 1922, *Flore de l'Afrique du Nord*: 2: 204. 1953, *Grasses of Ceylon* 89. 1956, *Ceylon J. Sci. Biol. Sci.* 2(2): 126. 1959, *Grasses of Burma ...* 466, f. 51. 1960.

in English: Hunyani grass, Rhodes grass, Rhodesgrass, Rhodesian blue grass, Rhodes chloris

in French: chloris, herbe de Rhodes

in Portuguese: capim-de-Rhodes

in Southern Africa: bruinvingergras, Rhodes chloris, Rhodes-gras, Rhodesgras, rooiklossiesgras; nyankomo (Zulu)

in the Philippines Islands: banuko, koro-korosan, Rhodes grass

in Thailand: ya rot

in Vietnam: tucgiêân

C. halophila Parodi (*Gymnopogon beyrichianus* (Kunth) Parodi)

Argentina. Racemes at maturity divergent to reflexed, fertile lemma awned, see *Essai d'une Nouvelle Agrostographie* 41, 164. 1812, *Révision des Graminées* 1: 89, 289. 1829 and *Revista del Centro de Estudiantes de Agronomía y Veterinaria. Buenos Aires* 18: 148, f. 55. 1925, *Revista Argentina de Agronomía* 12(1): 45. 1945.

C. halophila Parodi var. ***halophila***

America.

C. halophila Parodi var. ***humilis*** Christa Müller

Argentina to Ecuador, Peru, high Andes. Perennial, stoloniferous or rhizomatous, rooting and branching from nodes, mat-forming, flowering culms erect, leaf sheaths keeled, leaf blades linear, inflorescence of digitate or subverticillate racemes, glumes unequal and lanceolate, fertile lemma lanceolate with a straight awn, sterile lemma with a subapical awn, palea membranous, 2 lodicules, 3 stamens, open grassland, in disturbed ground, along roads, see *Feddes Repert.* 94(9-10): 627. 1983.

C. inflata Link (*Andropogon barbatus* sensu L. 1771 (also *barbata* and *barbatum*); *Chloris barbata* Sw.; *Chloris paraguayensis* Steud.)

Pantropical. Annual, stout, glabrous, tussocks, often pro-cumbent and rooting from basal nodes, auricles hairy, ligule a ciliate membrane, leaf blades linear long-attenuate, inflorescence of 8-16 digitate racemes erect, spikelets with 2-4 rudimentary florets, 3-4 weak and flexuous awns, glumes lanceolate, lemma of fertile floret ovate, sterile lemmas inflated, 2 lodicules, 3 stamens, dry grassland, roadsides, coastal lowland, see *Systema Naturae, Editio Decima* 2: 1305. 1759, *Mantissa Plantarum* 302. 1771, *Enumeratio Plantarum Horti Regii Berolinensis Altera* 1: 105. 1821, *Synopsis Plantarum Glumacearum* 1: 204-206. 1854.

C. jubaensis Cope

Somalia. Perennial, erect or ascending, tufted or stoloniferous, leaves obtuse and oblong, a head of digitate or subdigitate racemes, spikelets 2-3 awned, fertile lemma glabrous, see *Kew Bulletin* 50(1): 113, f. 2A-B. 1995.

C. lamproparia Stapf

Africa. Annual, tufted, erect or spreading, ascending, sometimes rooting at the nodes, leaf blades flat and acuminate, spikes paired or closely digitate, spikelets 3- to 4-flowered and 2-awned, inflated uppermost leaf sheaths embracing the spikes, glumes acuminate, lower glume papery, upper glume membranous, fertile lemma bearded at the margins, edible grains, good grazing for stock, possibly a source of minerals, found on dry soil, savannah, open places, rocky areas, dry bare soils, shallow sandy soil, see *Mémoires de la Société Botanique de France*, sér. 4, 8: 220. 1912.

in English: donkey's grass

in Arabic: aba malih

in Mali: dugu kunsingui

in Nigeria: gegera

in Upper Volta: bunagau

C. lobata Lazarides

Australia. Annual, erect or prostrate, stolons absent, inflorescence branches erect or spreading, spikelets pedicellate 2- to 3-flowered, deeply lobed second lemma, similar to *Chloris pumilio*, see *Australian Journal of Botany, Supplementary Series* 5: 20. 1972.

C. mensensis (Schweinf.) Cufod. (*Chloris somalensis* Rendle; *Gymnopogon mensensis* Schweinf.)

Eastern Africa, Ethiopia, Somalia. Perennial, tufted, long straggling stems, leaf blades linear and tapering to an acute apex, basal leaf sheaths flattened, open inflorescence, digitate or subdigitate racemes, spikelets long-awned, 2 florets, rudimentary second floret, glumes linear-lanceolate, fertile lemma lanceolate and glabrous, rocky areas, hillsides, dry open scrubland, grassland, see *Journal of Botany, British*

and Foreign 37: 66. 1899 and *Bulletin du Jardin Botanique National de Belgique* 38. 1968.

C. montana Roxb. (*Chloris decora* Thw., non Nees; *Chloris montana* var. *glauca* Hook.f.)

India, Sri Lanka. Perennial or sometimes annual, glabrous, strongly compressed, branched or simple, compact, ascending and rooting at the lower nodes, leaf sheaths folded and keeled, leaf blades pointed and acuminate, leaves folded and imbricate, spicate inflorescence erect and appressed, 5-awned spikelets, 5 florets, lowest floret bisexual, glumes mucronate, found in overgrazed areas, coastal, savannah, grassland, woodland, sandy dunes, wasteland, see *Fl. Ind.* 1: 331. 1820, *Enum. Pl. Zeyl.* 5: 371. 1864 and *Handb. Fl. Ceylon* 5: 276. 1900, *Grasses of Ceylon* 89. 1956, *Ceylon J. Sci. Biol. Sci.* 2(2): 126. 1959, *Grasses of Burma ...* 466. 1960.

in India: gonde javara hullu

C. mossambicensis K. Schum. (*Tetrapogon mossambicensis* (K. Schum.) Chippind. ex B.S. Fisher)

Tropical Africa, Kenya, South Africa, Tanzania, Mozambique. Perennial, erect or ascending, tufted, robust, stoloniferous and rhizomatous, shortly rhizomatous or stoloniferous, culms compressed, basal sheaths strongly compressed or keeled, leaves oblong and obtuse, coarse inflorescence, digitate spikes or racemes straw to purplish colored, spikelets 2-awned, fertile lemma ciliate on the margins, fairly palatable, little grazing value, useful for erosion control, extremely drought-tolerant, growing on sandy soil, on clay and waterlogged soil, heavy clay soils, loose sandy soils, consolidated dunes, shady places, seasonal pans, grassland and open bush, in wet areas, riverbanks, see *Notizblatt des Botanischen Gartens und Museums zu Berlin-Dahlem* 1: 104. 1895 and *Grasses and Pastures of South Africa* 198. 1955.

in English: perennial spiderweb grass

in South Africa: meerjarige spinnerakgras

C. orthonoton Döll (*Chloris guaranitica* Parodi)

Brazil, Argentina. See *Flora Brasiliensis* 2(3): 64. 1878 and *Revista Argentina de Agronomía* 28: 106, f. 2. 1961 [1962].

C. paniculata Scribn.

Costa Rica. Bunchgrass, see *Proceedings of the American Academy of Arts and Sciences* 38: 262. 1902.

C. parvispicula Caro & E.A. Sánchez

Argentina. See *Kurtziana* 6: 227, f. 3. 1971.

C. pectinata Benth. (*Chloris divaricata* R. Br. var. *minor* J. Black; *Chloris divaricata* R. Br. var. *muelleri* Domin; *Chloris pectinata* var. *fallax* Domin; *Chloris pectinata* var. *typica* Domin)

Queensland, Northern Territory, South Australia, Western Australia, New South Wales. Annual, glabrous, erect or ascending, geniculate at the base, usually simple, leaves

flat, purplish spike-like racemes erect to slightly reflexed, spikelets packed and diverging, 2 florets, upper floret empty, glumes narrow-lanceolate membranous or hyaline, lemmas cartilaginous, fertile lemma 2-lobed and usually smooth, moderately palatable, grows in temporarily wet places, clayey soils, floodplains, waterholes and depressions, see *Flora Australiensis: A Description ...* 7: 612. 1878 and *Repertorium Specierum Novarum Regni Vegetabilis* 9: 553. 1911, *Transactions and Proceedings of the Royal Society of South Australia* 37: 124, t. 5. 1913, *Bibliotheca Botanica* 85: 366. 1915.

in English: comb windmill grass, comb chloris

C. pilosa Schumach. (*Chloris breviseta* Benth.; *Chloris nigra* Hack.)

Tropical Africa. Annual, tufted, erect, ascending or geniculately ascending, slender to robust, often rooting at the lower nodes, spreading by lateral runners, sheaths rolled, hairy auricles, leaf blades finely pointed, inflorescence more or less erect with few loosely digitate spikes, spikelets 3-flowered, 2 upper florets reduced to lemma, lowest floret bisexual, first lemma obovate and gibbous, 2nd lemma cuneate and inflated, glumes 2, awn length variable, grain translucent, good forage, pasture, good quality hay, along roadsides margins, disturbed places, related to *Chloris virgata*, see *Beskrivelse af Guineiske planter* 55-56. 1827 [also in *Kongel. Danske Vidensk. Selsk. Naturvidensk. Math. Aft. 3: 75-76. 1828*], *Niger Flora* 566. 1849 and *Boletim da Sociedade Broteriana* 21: 179. 1906, *Repertorium Specierum Novarum Regni Vegetabilis, Beihefte* 40: 262. 1931, *Bulletin du Jardin Botanique National de Belgique* 57(3-4): 455. 1987.

Dedicated to the German botanist Philipp Salzman, 1781-1851, physician, entomologist, plant collector and traveler (Brazil and North Africa), wrote *Enumeratio plantarum rariorum, in Gallia australi sponte nascentium*. Mospelii 1818. See John Hendley Barnhart (1871-1949), *Biographical notes upon botanists*. Boston 1965; H.N. Clouke, *Account of the Herbaria of the Department of Botany in the University of Oxford*. 237. Oxford 1964; A. Lasègue, *Musée botanique de Benjamin Delessert*. Paris 1845; E.M. Tucker, *Catalogue of the library of the Arnold Arboretum of Harvard University*. Cambridge, Mass. 1917-1933) (*Gymnopogon haumanii* Parodi for the Belgian botanist Lucien Hauman, 1880-1965, studied under Leo (-Abram) Errera (1858-1905), from 1904 to 1926 Faculty of Agronomy in Buenos Aires (Argentina), 1928-1950 professor of botany at Bruxelles, author of *La végétation des hautes Cordillères de Mendoza*. Buenos Aires 1919, Buenos Aires 1917-1923 *Catalogue des phanérogames de l'Argentine* jointly written with G. Vanderveken and Luis H. Irigoyen; see J.H. Barnhart, *Biographical notes upon botanists*. 2: 139. 1965; R. Zander, F. Encke, G. Buchheim and S. Seybold, *Handwörterbuch der Pflanzennamen*. 14. Aufl. Stuttgart 1993; Ida Kaplan Langman, *A Selected Guide to the Literature on the Flowering Plants of Mexico*. Philadelphia 1964)

Tropical Africa, South America, Venezuela to Argentina. Annual or perennial, loosely tufted, erect or bent at the nodes and ascending, sometimes stoloniferous and spreading with short stolons, often rooting at the lower nodes, flattened leafy shoots, fibrous roots, ligule membranous with hairy margin, leaf sheath strongly compressed, leaf

blades flat and blunt to bluntly acute, inflorescence a star-shaped whorl of 2-8 narrow spikes or digitate racemes, 2-flowered, purplish awn, glumes linear-lanceolate and acuminate-mucronate, lemmas glabrous, lowest lemma acuminate, 1 to 2 awns, a common weed species of annual and perennial crops, palatable, fodder, forage, good hay, very low grazing value, colonizer, useful for erosion control, found in wasteland on light and heavy soils, fields borders, high rainfall areas, weedy places, lawns, shallow stony soils, red and stony soils, gardens and roadsides, woodland margins, in disturbed places, edge of sidewalk, riverbanks, cultivated lands, limestone hillsides, grasslands, fallows, margins of irrigation ditches, irrigated grassland, see *Systema Naturae, Editio Decima* 873. 1759, *Nova Genera et Species Plantarum seu Prodrumus* 26. 1788, *De Graminibus unifloris et sesquifloris* 234. Petropoli 1824, *Révision des Graminées* 1: 89, 289. 1829, *Mémoires de la Société d'Agriculture, Sciences et Arts d'Angers* 1: 177. 1831, *Nomenclator Botanicus* (edition 2.) 1: 353. 1840, *Tentamen Florae Abyssinicae ...* 2: 407. 1850, *Synopsis Plantarum Glumacearum* 1: 206. 1854, *Flora Brasiliensis* 2(3): 64. 1878, *Conspectus Florae Africae* 5: 861. 1894 and *Anales del Museo Nacional de Buenos Aires* 13: 489. 1906, *Physis. Tropical Africa, Arabia, eastern and southern Africa, Angola, India. Perennial bunchgrass, erect or procumbent,

tufted to densely tufted, coarse, tussocky, flat shoot bases, tough spreading stolons, rhizomatous, young growth very succulent, basal sheaths strongly keeled, lowest leaf sheaths usually white or straw-colored, leaves linear tapering to an acute apex, dense feathery inflorescence, spikes or racemes numerous and arranged on a long central axis, feathery panicles straw-colored or purple, spikelets long-awned, 3 or 4 awns, fertile lemma elliptic and ciliate to sparsely ciliate, grains and leaves eaten by baboons, ornamental, excellent for dry flower arrangements, a good fodder, readily grazed, drought-tolerant, useful for erosion control, often a pioneer grass, grows in arid and semiarid areas, amongst bushes, stony slopes, in shallow clay loam, loose sandy soils, abandoned cultivation, old termite nesting grounds, red gravelly soil, savannah, open grassland, open scrub, desert woodland, shrubland, loams and alluvial silts, on sandy or alluvial soils, see *Flora Indica; or Descriptions* ... 1: 332. 1820, *Mantissa* 2: 339. 1824, *Flora* 38: 204. 1855 and *Annuario del Reale Istituto Botanico di Roma* 8(1): 54. 1903, *Journal of Economic and Taxonomic Botany* 22(2): 491-494. 1998.

in English: horsetail grass, plumed chloris

in India: bamna, hika gadi, mathaniya, salakodam gadi

in Somalia: anekuduk, anadug

C. rufescens Lag. (*Agrostomia aristata* Cerv.; *Chloris aristata* (Cerv.) Swallen; *Chloris peregrina* P. Durand; *Chloris rufescens* Llanos, nom. illeg., non *Chloris rufescens* Lag.; *Chloris rufescens* Steud., nom. illeg., non *Chloris rufescens* Lag.)

Mexico. See *Varietades de Ciencias, Literatura y Artes* 2(4): 143. 1805, Philippe Durand [l'abbé] (*fl.* 1795-1815), *De Quibusdam Chloridis Speciebus* 11, 22. C. sagraeana A. Rich. (*Chloris eleusinoides* Griseb.; *Chloris morales-coelloi* León ex Britton) (named for Ramon de la Sagra, 1798-1871)

North America, the Caribbean, Cuba. Growing in waste places, sandy areas, see *Historia Fisica Politica y Natural de la Isla de Cuba, Botánica* 11: 315. 1850, *Flora of the British West Indian Islands* 539. 1864 and *Bulletin of the Torrey Botanical Club* 53: 458. 1926, *Acta Botanica Cubana* 25: 1-6. 1985, *Fontqueria* 46: [i-ii], 1-259. 1997.

in English: roadside windmill grass

C. sagraeana A. Rich. subsp. **cubensis** (Hitc. & Ekman) Catus (*Chloris cubensis* Hitc. & Ekman)

America. See *Manual of the Grasses of the West Indies* 131. 1936, *Acta Botanica Cubana* 25: 6. 1985, *Fontqueria* 44: 145. 1996.

C. sagraeana A. Rich. subsp. *sagraeana*

America.

C. scariosa F. Muell. (*Chloris scariosa* P. Beauv.; *Oxychloris scariosa* (F. Muell.) Lazarides)

Australia. Annual or short-lived perennial, stiff, glabrous, erect, densely tufted, simple or branched, spikes erect, whitish spikelets, glumes hyaline, lemmas with broad scarious wings, this grass appears not to be grazed to any extent, often occurs in areas of high salinity, on red-earth soils under mulga, on low rocky hills, creek banks and on heavy soils under gidgee, water courses, see *Essai d'une Nouvelle Agrostographie* 79, 158. 1812, *Fragmenta Phytographiae Australiae* 6: 85. 1867 and *Nuytsia* 5(2): 283. 1984[1985]. in English: winged windmill grass, winged chloris, wing chloris

C. sesquiflora Burkart

Argentina. See *Boletín de la Sociedad Argentina de Botánica* 12: 287, f. 2. 1968.

C. spathacea Hochst. ex Steud. (*Chloris spathacea* Baill., nom. illeg., non *Chloris spathacea* Hochst. ex Steud.; *Cryptochloris spathacea* (Hochst. ex Steud.) Benth.; *Tetrapogon cenchriformis* (A. Rich.) Clayton; *Tetrapogon macranthus* var. *spathaceus* (Hochst. ex Steud.) Chiov.; *Tetrapogon spathaceus* (Hochst. ex Steud.) Hack. ex T. Schweinf.; *Tetrapogon triangulatus* var. *agowensis* Chiov.; *Tetrapogon triangulatus* var. *sericatus* Chiov.)

India. Erect, decumbent, smooth, leaves smooth and soft, spikes solitary or in pairs, 3- to 5-flowered, good fodder grass, see *Hortus Bengalensis, or a catalogue ...* 82. 1814, *Flora Indica: or Descriptions ...* 1: 330. 1820, *Systema Vegetabilium, editio decima sexta* 1: 274. 1825, *Tentamen Florae Abyssinicae ...* 2: 409. 1850, *Bulletin de l'Herbier Boissier* 2: App. 2: 97. 1894, *Annuario del Reale Istituto Botanico di Roma* 6: 171, t. 15. 1896, *Fl. Br. Ind.* 7: 291. 1896 and *Annuario del Reale Istituto Botanico di Roma* 8(3): 352. 1908, *Grass. Saudi Arabia* 302. 1989.

in India: kagya, morbhaga ghas

C. texensis Nash (*Chloris nealleyi* Nash) (named for Greenleaf Cilley Nealley, 1846-1896)

U.S., Texas. Rare vulnerable endangered species, growing in sandy to sandy loam soils, coastal prairie grasslands, see *Bulletin of the Torrey Botanical Club* 23: 151. 1896, *Bulletin of the Torrey Botanical Club* 25: 435. 1898.

in English: Texas windmill grass, Texas windmillgrass

C. transiens Pilg. (*Schoenefeldia transiens* (Pilg.) Chiov.)

Africa. See *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 51(3-4): 418. 1914, *Resultati Scientifici della Missione Stefanini-Paoli nella Somalia Italiana* 1: 186. 1916.

C. triangulata Hochst. ex A. Rich. (*Lepidopironia triangulata* (Hochst. ex A. Rich.) Hochst. ex Schumach.; *Tetra-*

pogon tenellus (J. König ex Roxb.) Chiov.; *Tetrapogon triangularis* (Hochst. ex A. Rich.) Hochst.; *Tetrapogon tri-angulatus* (Hochst. ex A. Rich.) Schweinf.)

Africa. See *Flora Indica; or Descriptions ...* 1: 330. 1820, *Tentamen Florae Abyssinicae ...* 2: 409. 1850, *Bulletin de l'Herbier Boissier* 2: App. 2: 97. 1894 and *Annuario del Reale Istituto Botanico di Roma* 8(3): 352. 1908.

C. truncata R. Br. (*Chloris elongata* Poir.; *Chloris megastachya* Schrad. ex Schult.; *Chloris truncata* f. *abbreviata* Thell.)

Queensland, New South Wales, South Australia, Western Australia. Annual or perennial, small, usually simple or unbranched, leafy, coarse, oblique or erect, slender, glabrous, forming compact tufts, sometimes stoloniferous with short and branched stolons, leaves flat or folded with apex obtuse, dull green basal leaves, inflorescence spicate and branched, racemes widely spreading at maturity, spikes digitate and spreading horizontally when in flower, spikes arranged like the vanes of a windmill, spikelets rather distant, florets often black to bright purple when mature, upper floret empty, glumes unequal with or without a short point, lemmas cartilaginous, fertile lemma narrow-elliptic with apex truncate, long and roughened awns, moderate fodder value, readily grazable when young, unpalatable with age, decorative when in flower, cultivated as an ornamental plant, ingestion of this plant is said to produce photosensitisation in animals, a colonizer of some eroded soils and scalded areas, suitable for rehabilitation, useful for landscaping, provides excellent habitat for the Common Froglet, grows on heavy clay soils, wasteland, in pastures, stony or sandy ground, disturbed places, in open fields and river settings, on plains, gray clays, on red or black earths, see *Prodromus Florae Novae Hollandiae* 186. 1810, *Encyclopédie Méthodique. Botanique ... Supplément* 2: 236. 1811, *Mantissa* 2: 340. 1824 and *Vierteljahrsschrift der Naturforschenden Gesellschaft in Zürich* 64: 706. 1919.

in English: stargrass, umbrella grass, umberalla grass, windmill grass, creeping windmill grass, Australian fingergrass

C. ventricosa R. Br. (*Chloris sclerantha* Lindl.; *Chloris ventricosa* var. *tenuis* Benth.)

Queensland, Victoria, New South Wales, South Australia. Perennial, dull green, stoloniferous, forming spreading tufts, stems variable but usually branched, prostrate or spreading to erect, leaves close to the ground, inflorescence spicate and spreading like a windmill, spikes flexible and digitate, spikelets closely packed along the branches and shortly awned, 2 or 3 florets, glumes scarious, upper lemma blunt, awns glabrous, callus pubescent, pioneer grass, suitable for revegetation and pasture, cultivated as an ornamental, very hardy, attractive and decorative, grows in woodland on good soil, see *Prodromus Florae Novae Hollandiae* 186. 1810, *Journal of an Expedition into the Interior of Tropical*

Australia 31. London 1848, *Flora Australiensis: A Description ...* 7: 613. 1878.

in English: Australian weeping grass, windmill grass, Australian windmill grass, tall windmill grass, tall chloris

C. verticillata Nutt.

North America, U.S., New Mexico, Texas. Perennial bunchgrass, low, in small tufts, blue-green, erect, strongly flattened stems usually branched at the base and rooting at the lower nodes, small fringed ligule, auricles absent, leaf blades narrow and folded, leaf sheaths compressed and very flat, inflorescence windmill-like and terminal, spikelets alternate and awned, poor economic value, grows in heavy sand and gravelly soils, old fields, waste places, on railroad tracks, on disturbed rocky sites, dry prairies and plains, disturbed ground, on roadsides, lawns, on the sandy riverbanks, in developed land and successional field, see *Transactions of the American Philosophical Society, new series*, 5: 150. 1835, *Pacif. Railr. Rep.* 2: 176. 1855, *Botanische Zeitung. Berlin* 19(46): 341. 1861, *Contributions from the United States National Herbarium* 2(3): 528. 1894, *Bulletin of the Torrey Botanical Club* 25: 439. 1898.

in English: tumble windmill grass, tumble windmillgrass, windmill grass

(*Chloris albertii* Regel possibly named for the Swiss-born Russian physician [Johann] Albert von Regel, 1845-1908, botanist, traveler, oldest son of Edward August von Regel (1815-1892), in 1875 appointed District Physician at Kuldja in Ili, explorer of Turkestan and Eastern Asia (1876-1888); see J.H. Barnhart, *Biographical notes upon botanists*. 3: 138. 1965; Emil

Bretschneider, *History of European Botanical Discoveries in China*. Leipzig 1981; E.M. Tucker, *Catalogue of the library of the Arnold Arboretum of Harvard University*. Cambridge, Mass. 1917-1933; I.C. Hedge and J.M. Lamond, *Index of Collectors in the Edinburgh Herbarium*. Edinburgh 1970)

Tropics. Annual or short-lived perennial, variable, weak, ascending to erect or geniculate, spreading, clumped, tufted or rarely slightly stoloniferous, open-tufted, often decumbent, often or occasionally rooting from the lower nodes, much-branched and soft-stemmed, shallow root system, ligule an inconspicuous short membrane, sheaths inflated and keeled, leaf blades very acute to acuminate and hispid, inflorescence digitate and erect, ripe spikelets black, soft spikelets pubescent to feathery, spikelets densely crowded and 2-flowered, lower floret fertile, upper floret imperfect and reduced to a lemma, 2 awns, glumes lanceolate, lemmas cartilaginous, fertile lemma entire or notched or keels slightly gibbous, second lemma truncate, tuft of hairs on the lemma tips, 2 lodicules, 3 stamens, a cover plant rapidly growing, seeds easily transported by wind and water, low palatability, native pasture species, good fodder for horses and cattle, valuable as forage, palatable grazing when young, weed species, usually will not survive prolonged flooding, a decoction of the plant or of the roots used for colds and rheumatism, leaves applied on wound to prevent bacterial infection, pioneer grass used for reseeding denuded rangeland, found in areas where water lies after rain, dry tidal mudflats, tropical lowland, tropical coasts, hind dunes, desert steppe, in gardens, grasslands, along coast, desert washes and swales, on bare compacted and disturbed soil, sandy places, very dry areas, in pure sand, in saline areas, edges of the desert, disturbed sites along roads, cultivated and disturbed areas, disturbed agricultural area, along field margins, grass steppe, waste places, open habitats, black cracking clays, heavy soils, shallow gravelly soil, in ditch along highway, along roadsides and creeks, banks of water courses, see *Observationes Botanicae* 5: 21. 1789, *Flora Indiae Occidentalis* 1: 203. 1797, *Flora Boreali-Americana* 1: 59. 1803, *Varietates de Ciencias, Literatura y Artes* 2(4): 143. 1805, *De Quibusdam Chloridis Speciebus* 10. 1808, *Essai d'une Nouvelle Agrostographie* 84, 98, 158, 160, 176. 1812, *Catalogus plantarum horti botanici monspeliensis* 94. 1813, *Nova Genera et Species Plantarum* 1: 166-167, t. 49. 1815 [1816], *Fundamenta Agrostographiae* 161, 203, t. 18. 1820, *De Graminibus unifloris et sesquifloris* 231. C. x subdolichostachya Müll. Hal. [*cucullata* x *verticillata*] (*Chloris brevispica* Nash; *Chloris latisquamea* Nash; *Chloris verticillata* var. *aristulata* Torr. & A. Gray; *Chloris verticillata* var. *intermedia* Vasey)

North America, U.S., Texas. Perennial, good forage, growing on sandy sites, on disturbed sandy sites in drier soil conditions, see *Transactions of the American Philosophical Society, new series*, 5: 150. 1835, *Pacif. Railr. Rep.* 2: 176. 1855, *Botanische Zeitung, Berlin* 19(46): 341. 1861, *Contributions from the United States National Herbarium* 2(3): 528. 1894, *Bulletin of the Torrey Botanical Club* 25: 438-439. 1898 and *Phytologia* 37(4): 317-407. 1977, *Las*

Gramíneas de México 2: 1-344. 1987, *Phytologia* 74(4): 336-338. 1993.

in English: short-spike windmill grass, shortspike windmillgrass, shortspiked windmillgrass, Nash windmill grass
in Mexico: verdillo norteño

Chlorocalymma W.D. Clayton

From the Greek *chloros* “green, pale green” and *kalymma* “a covering, hood.”

One species, Tanzania. Panicoideae, Panicodae, Paniceae, annual, herbaceous, auricles absent, ligule an unfringed membrane, plants bisexual, inflorescence spicate, rachis tough, spikelets subtended by a spiny elongated involucre, 2 glumes unequal to very unequal, lower lemma laterally winged, palea present, 3 stamens, ovary glabrous, 2 stigmas, open habitats, dry areas, bushland, type *Chlorocalymma cryptacanthum* Clayton, see *Kew Bulletin* 24: 461. 1970.

Species

C. cryptacanthum Clayton

Africa.

Chloroides Regel = *Chloris* Sw., *Chloroides* Fisch. ex Regel, *Eustachys* Desv.

Greek *chloroeides* “of a greenish appearance,” resembling *Chloris*.

Chloridoideae, Cynodonteae, Chloridinae, see *Nova Genera et Species Plantarum seu Prodrumus* 1, 25. 1788, *Nouveau Bulletin des Sciences, publié par la Société Philomatique de Paris* 2: 188-189. 1810, *Index Seminum [St. Petersburg]* 28. 1863 and *Flora Mesoamericana* 6: 288-289. 1994, A.M. Molina, “Revisión taxonómica del género *Eustachys* Desv. (Poaceae: Chloridoideae, Cynodonteae) de Sudamérica.” *Candollea* 51(1): 225-272. 1996, *Gramíneas de Bolivia* 353-355. 1998, *Contributions from the United States National Herbarium* 41: 39-52, 117-118, 222-223. 2001.

Chloropsis Kuntze = *Chloropsis* Hack. ex Kuntze, *Trichloris* E. Fourn. ex Benth.

From the Greek *chloros* “green, pale green, yellow-green” and *opsis* “aspect, appearance, resemblance,” resembling *Chloris*.

Chloridoideae, Cynodonteae, Chloridinae, see *Nova Genera et Species Plantarum seu Prodrumus* 1, 25. 1788, *Variedades de Ciencias, Literatura y Artes* 2(4): 143. 1805, *Journal of the Linnean Society, Botany* 19: 102. 1881, *Mex-*

icanas Plantas 2: 142. 1886, *Die Natürlichen Pflanzenfamilien* 2(2): 59. 1887, *Revisio Generum Plantarum* 2: 771. 1891 and *Division of Botany, Circular (United States Department of Agriculture)* 32: 7. 1901, *U.S. Dept. Agric. Bull.* 772: 190. 1920, Adolf Pascher (1881-1945), *Die Süßwasser-Flora Deutschlands, Österreichs und der Schweiz* 4: 88, 103. 1927, *Brigham Young University Science Bulletin: Biological Series* 19(2): 1-133. 1974, *Flora Mesoamericana* 6: 287-289. 1994, *Flora of Ecuador* 68: 105-106. 2001, *Contributions from the United States National Herbarium* 41: 39-52, 222-223. 2001.

Chlorostis Raf. = *Chloris* Sw.

Referring to *Chloris* Sw.

Chloridoideae, Cynodonteae, Chloridinae, see C.S. Rafinesque (1783-1840), *Princ. Fond. Somiol.* 26, 29. 1813 [1814], *Flora Telluriana*. 1: 84. 1836 [1837] and *Contributions from the United States National Herbarium* 41: 39-52, 222-223. 2001.

Chondrachyrum Nees = *Briza* L., *Chascolytrum* Desv.

Greek *chondros* “cartilage, gristle” and *achyron* “chaff, husk.”

Pooideae, Poeae, Brizinae, type *Chondrachyrum scabrum* Nees ex Steud., see *Species Plantarum* 1: 66-67, 70-71. 1753, *Nouveau Bulletin des Sciences, publié par la Société Philomatique de Paris* 2: 190. 1810, *Nova Genera et Species Plantarum* 1: 164. 1815 [1816], *A Natural System of Botany* 449. 1836, *Synopsis Plantarum Glumacearum* 1: 276, 288. 1854, *Genera Plantarum* 3(2): 1194-1195. 1883 and *Arkiv för Botanik utgivet av K. Svenska Vetenskapsakademien* 13(10): 53. 1913, *Revista de la Facultad de Agronomía y Veterinaria* 3: 120. 1920, *Feddes Repertorium* 84(7-8): 541. 1973, *Willdenowia*, Beih. 8: 77. 1975, *Boletim do Instituto de Biociências, Universidade Federal do Rio Grande do Sul* 41: 1-191. 1987, *Flora Mesoamericana* 6: 229. 1994, *Flora Mediterranea* 5: 340-345. 1995, *Bothalia* 27: 75-82. 1997, *Cladistics* 14: 287-296. 1998 [N.D. Bayón, Cladistic analysis of the *Briza* Complex (Poaceae, Poeae).], *Opera Botanica* 137: 1-42. 1999, *Lagascalia* 21(1): 235-240. 1999, *Contributions from the United States National Herbarium* 48: 146-151, 233-234. 2003.

Chondrochlaena Kuntze = *Prionachne* Nees ex Lindl., *Prionanthium* Desv.

From the Greek *chondros* “cartilage, lump, groats of wheat” and *chlaena*, *chlaenion* “cloak.”

Chondrolaena Nees = *Prionachne* Nees ex Lindl., *Prionanthium* Desv.

Greek *chondros* “cartilage, lump, groats of wheat” and *chlaena*, *chlaenion*, *laina* “cloak, blanket,” Latin *laena*, *ae* “a cloak, mantle.”

Arundinoideae, Danthoniae, see *Mémoires de la Société d'Agriculture, Sciences et Arts d'Angers* 1: 168-169, t. 7, f. 3. 1831, *An Introduction to the Natural System of Botany* 447. 1836, *Florae Africae Australioris Illustrationes Monographicae* 1: 133. 1841 and G. Davidse, “A revision of the genus *Prionanthium* (Poaceae: Arundineae).” *Bothalia* 18: 143-153. 1988, *South African Journal of Botany* 60: 285-292. 1994.

Chondrosium Desv. = *Actinochloa* Willd. ex Roem. & Schult., *Antichloa* Steud., *Bouteloua* Lag., *Erucaria* Cerv.

Greek *chondros* “cartilage, wheat, grain of wheat.”

About 14 species or 0, Canada to Argentina, U.S., Mexico. Chloridoideae, Cynodonteae, Boutelouinae, annual or perennial, caespitose, leaf blades linear, spikelets laterally compressed with 1-2 sterile florets, glumes lanceolate, lemma keeled and 3-awned, lower lemma fertile, upper lemmas sterile, open habitats, plains, often included in *Bouteloua* as a subgenus, type *Chondrosium procumbens* (P. Durand) Desv., see *Varietades de Ciencias, Literatura y Artes* 2(4,21): 134. 1805, *Nouveau Bulletin des Sciences, publié par la Société Philomatique de Paris* 2: 188. 1810, *Systema Vegetabilium* 2: 22, 417. 1817, *Nomenclator Botanicus. Editio secunda* 1: 108. 1840, *A Manual of the Botany of the Northern United States*. second edition 553. 1856, *Naturaleza [Sociedad mexicana de historia natural]* 1: 347. 1870, *Genera Plantarum* 3(2): 1168. 1883 and *Annals of the Missouri Botanical Garden* 66(3): 348-416. 1979 [1980], *Kew Bulletin* 37(3): 417-420. 1982, *Flora Mesoamericana* 6: 292-293, 296. 1994, *Sida* 17: 111-114. 1996, *Aliso* 17(2): 99-130. 1998, *Aliso* 18: 61-65. 1999, *Contributions from the United States National Herbarium* 41: 20-33. 2001.

Chretomeris Nutt. ex J.G. Sm. = *Elymus* L., *Sitanion* Raf.

Pooideae, Triticeae, Hordeinae, see *Species Plantarum* 1: 83-84. 1753, C.S. Rafinesque, *Journal de Physique, de Chimie, d'Histoire Naturelle et des Arts* 89: 103. 1819, *Annals of Natural History* 1: 284. 1838, *Genera Plantarum* 3(2): 1207. 1883, *Bulletin, Division of Agrostology United States Department of Agriculture* 18: 10, 12-13, 15, 17, 19-20, t. 3. 1899 and E.D. Merrill, *Index rafinesquianus* 76. 1949, *Canad. J. Bot.* 42: 554. 1964, M.E. Barkworth &

D.R. Dewey, “Genomically based genera in the perennial Triticeae of North America: identification and membership.” *Amer. J. Bot.* 72: 767-776. 1985, *Taxon* 41: 562-563. 1992, *Taxon* 44: 611-612. 1995, *Contributions from the United States National Herbarium* 48: 279-307. 2003.

Chrysochloa Swallen = *Bracteola* Swallen

From the Greek *chrysos* “gold” and *chloe*, *chloa* “grass.”

About 4-5 species, tropical Africa. Chloridoideae, Cynodonteae, annual or perennial, unarmed, tufted, herbaceous, caespitose, stoloniferous, leafy, leaves mainly basal, auricles absent, ligule a fringed membrane, plants bisexual, inflorescence spicate digitate or subdigitate, racemes single or digitate, spikelets imbricate compressed, 2 florets, upper floret male or sterile, 2 glumes more or less equal, upper glume deciduous and keeled, fertile lemma mucronate or shortly awned, palea present, 2 free and fleshy lodicules, 3 stamens, ovary glabrous, 2 stigmas, open habitats, seasonally flooded places, lowlands, damp sites, seasonally waterlogged soils, see *Catalogue of the African Plants Collected by Dr. F. Welwitsch in 1853-61* 2(1): 222. 1899 and *American Journal of Botany* 20: 118, f. 1. 1933, *Bulletin of Miscellaneous Information Kew* 1934: 117. 1934, *Proceedings of the Biological Society of Washington* 54: 44. 1941.

Species

C. hindsii C.E. Hubbard (*Chrysochloa annua* C.E. Hubbard; *Chrysochloa caespitosa* Clayton)

Tropical Africa. Annual, stoloniferous, caespitose, variable, see *Kew Bulletin* 4: 349. 1949, *Kew Bulletin* 12: 59. 1957, *Kew Bulletin* 14: 239. 1960.

in Upper Volta: petrepin ragha

C. hubbardiana Germain & Risopoulos

Tropical Africa. See *Bulletin du Jardin Botanique de l'État* 22: 71. 1952.

C. lucida (Swallen) Swallen (*Bracteola lucida* Swallen)

Tropical Africa, Angola. See *American Journal of Botany* 20: 118, f. 1. 1933, *Proceedings of the Biological Society of Washington* 54: 44. 1941.

C. orientalis (C.E. Hubbard) Swallen (*Bracteola orientalis* C.E. Hubb.)

Tanzania. See *Bulletin of Miscellaneous Information Kew* 1934: 117. 1934, *Proceedings of the Biological Society of Washington* 54: 44. 1941.

C. subaequigluma (Rendle) Swallen (*Chloris subaequigluma* Rendle)

Tropical Africa. See *Catalogue of the African Plants Collected by Dr. F. Welwitsch in 1853-61* 2(1): 222. 1899 and *Bulletin of Miscellaneous Information Kew* 1934: 117.

1934, *Proceedings of the Biological Society of Washington* 54: 44. 1941.

Chrysopogon Trin. = *Centrophorum* Trin., *Chalcoelytrum* Lunell, *Lenormandia* Steud., *Mandelorna* Steud., *Pollinia* Spreng., *Pollinia* Trin., *Rhaphis* Lour., *Trianthium* Desv.

From the Greek *chrysos* “gold” and *pogon* “a beard,” referring to the color of the awns or to the golden brown callus hairs of some species; see Carl Bernhard von Trinius (1778-1844), *Fundamenta Agrostographiae*. 187. Viennae (Jan) 1820.

About 25-45 species, tropical and subtropical, warm regions, mainly in Asia and Australia. Panicoideae, Andropogonodae, Andropogoneae, Andropogoninae, or Panicoideae, Andropogoneae, Sorghinae, annual or perennial, herbaceous, usually unbranched, sometimes decumbent or slightly bent, mostly tufted, solid culm internodes, leaves often harsh and glaucous in a basal tussock, leaf blades narrow, auricles absent, ligule a fringed membrane or a ciliate rim, rhizomatous or stoloniferous, deep-rooting, plants bisexual, inflorescence loosely paniculate and filiform usually with terminal triads of spikelets or spikelets in pairs, spikelets at the ends of the branches of the panicle, 1 sessile bisexual spikelet and 2 pedicellate male or sterile spikelets, 1 sessile awned spikelet and 2 pedicelled unawned spikelets developed or rudimentary, fertile spikelets compressed laterally, male spikelets often purplish and compressed dorsally, tuft of long hairs on the branches below the spikelets, lower glume cartilaginous and rounded on the back, upper glume often awned, lower floret reduced, upper lemma hyaline often 2-toothed and awned, palea present or absent, 2 glabrous lodicules free and fleshy, stamens 3, anthers yellow, ovary glabrous, fruit yellow and compressed, cultivated fodder, weed species resistant to drought and heavy grazing, native pasture species, lawns, playing fields, common in disturbed ground, heavy soils, open habitats, poor soils or subdesert, rainforest, floodplains, desert, humid tropics, intergrades with *Vetiveria*, type *Chrysopogon gryllus* (L.) Trin., see *Species Plantarum* 1: 61-63, 82. 1753, *Species Plantarum* 2: 1045, 1047. 1753, *Flora Cochinchinensis* 538, 552. 1790, *Pl. Pugill.* 2: 10. 1815, *Fundamenta Agrostographiae* 187-188. 1820, *Bull. Sci. Soc. Philom. Paris* 1822: 43. 1822, *Flora* 33: 229. 1850, *Synopsis Plantarum Glumacearum* 1: 359. 1854 [1855], *Die Natürlichen Pflanzenfamilien* 2(2): 28. 1887 and *American Midland Naturalist* 4: 212. 1915, *Bulletin de l'Institut Française d'Afrique Noire* 22: 106. 1960, *Boissiera. Mémoires du Conservatoire de Botanique et de l'Institut de Botanique Systématique de l'Université de Genève* 9: 291. 1960, *Folia Primatologica* 15: 1-35. 1971, *Journal of Cytology and Genetics* 20: 205-206. 1985, *Journal of Cytology*

and *Genetics* 25: 140-143, 322-323. 1990, *Flora Mesoamericana* 6: 383. 1994, *Annals of the Missouri Botanical Garden* 81(4): 775-783. 1994, J.F. Veldkamp, “A revision of *Chrysopogon* Trin. including *Vetiveria* Bory (Poaceae) in Thailand and Malesia with notes on some other species from Africa and Australia.” *Austrobaileya* 5(3): 503-533. 1999, *Contributions from the United States National Herbarium* 46: 151, 156, 159-161, 283, 285, 541-542, 544-545. 2003, Federico Selvi and Massimo Bigazzi, “Revision of genus *Anchusa* (Boraginaceae-Boraginaceae) in Greece.” *Botanical Journal of the Linnean Society* 142(4): 431-454, Aug 2003.

Species

C. aciculatus (Retz.) Trin. (*Andropogon acicularis* Willd.; *Andropogon acicularis* Retz. ex Roem. & Schult.; *Andropogon aciculatus* Retzius; *Andropogon aciculatus* Willd.; *Andropogon gryllus* L.; *Andropogon javanicus* Steud.; *Andropogon subulatus* J. Desv.; *Rhaphis gryllus* (L.) Trin.; *Rhaphis javanica* Nees ex Steud.; *Rhaphis javanica* Nees; *Rhaphis trivialis* Lour.; *Rhaphis zizanioides* var. *aciculatus* (Retz.) Roberty

Tropics, Southeast Asia, China, India, Japan, Indonesia, Philippines, Nepal. Perennial, terrestrial, variable, vigorous, solid, glabrous, often branching, stoloniferous, extensively creeping, prostrate and mat-forming, spreading, ascending or erect from a decumbent base, nodal rooting, forming a short turf, woody creeping rhizome, leaves mostly basal, auricles present, sheaths striate, ligule a shallow rim or shortly membranous, erect flowering culm unpalatable when in fruit, inflorescence a rigid and erect panicle, small panicles reddish purple with several slender branches, triad of spikelets, pedicellate spikelets purple, erect naked peduncle, 1 sessile awned spikelet and 2 pedicelled awnless spikelets, lower bisexual spikelet, upper male spikelets, 2 glumes, palea hyaline and oblong-acute, stamens 3, sharp-pointed seeds cause extensive ulceration, ripe fruits with sharp basal callus, diaspores adhere to clothing and hair very readily, aggressive and noxious weed species, a serious persistent pest, a weed of tea in India, straw used for making hats and mats, culms woven into cigarette-cases and used to make brushes, can stand heavy grazing, fairly drought-tolerant, useful fodder grass, cultivated, forage to worthless as forage flowering culms and spikelets have low palatability, leaves highly palatable, naturalized, ornamental, lawns and playing

fields, soil binder, erosion control, useful for stabilizing embankments, withstands trampling and poor soils, responds to burning, a vigorous coloniser of denuded ground, prefers moist soils, open areas, rocky slopes, waste areas, common on abandoned cultivations on poor sandy soils, pastures, overgrazed soil, humid tropics, sandy loams, neutral soils, heavy soil, rangelands, intergrades with *Vetiveria* Bory, taxonomy of the genus remains confused, see *Centuria II. Plantarum* ... 2: 33. 1756, *Amoen. Acad.* 4: 332. 1759, *Obs. Bot.* 5: 22. 1789, *Flora Cochinchinensis* 2: 553. 1790, *Synopsis Plantarum Germaniae* 1: 437. 1792, *Species Plantarum. C. argutus (Steud.) Trin. ex Jackson (*Andropogon argutus* Nees ex Steud.; *Chrysopogon argutus* (Nees ex Steud.) Trin. ex B.D. Jacks.; *Vetiveria arguta* (Nees ex Steud.) C.E. Hubb.)

Mauritius, Rodrigues. Pungent and hairy callus, 1-6 spikelet groups per branch, see *Synopsis Plantarum Glumacearum* 1: 391. 1854, *Index Kewensis* 1: 124, 530. 1893 and *Bulletin of Miscellaneous Information Kew* 1939: 654. 1940.

C. aucheri (Boiss.) Stapf (*Andropogon aucheri* Boiss.; *Chrysopogon ciliolatus* var. *aucheri* (Boiss.) Boiss.; *Chrysopogon fulvus* var. *migiurtinus* (Chiov.) Chiov.; *Chrysopogon montanus* var. *migiurtinus* Chiov.; *Chrysopogon serrulatus* var. *aucheri* (Boiss.) Boiss. ex Parsa)

Eastern Arabia, Iran, Pakistan, India. Perennial, slender, densely tufted, basal sheaths often silky-villous, leaves pubescent and glaucous, panicle ovate, a triplet spikelet, sessile spikelet elliptic to oblong, pedicelled spikelets usually 1-awned, upper glume and upper lemma shortly awned, spikelet dispersal occurs primarily by wind, awn of pedicelled spikelet glabrous, found in desert and semidesert, rocky hills, coastal, grassland, very rare in East Africa, mainly in Somalia, see *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques, Physiques et Naturelles* 2(3): 318. 1832, *Diagnoses plantarum orientalium novarum* 5: 77. 1844, *Flora Orientalis* 5: 458. 1884 and *Bulletin of Miscellaneous Information Kew* 6: 211. 1907, *Flora Somala* 328. 1929, *Flora of Iran [Parsa]* 5: 538. 1950.

in Niger: akarasha, kébulu, kéwulu, taghatemt, toeghatimt

C. borneensis Henr.

East Borneo. Perennial, very similar to *Chrysopogon tenuiculmis* Henr., see *Blumea* 4(3): 534. 1941.

C. celebicus Veldk.

Celebes. Perennial, obtuse and hairy callus, 4-7 spikelet groups, on sandy soil, similar to *Chrysopogon lawsonii* (Hook.f.) Veldk. and *Chrysopogon nemoralis* (Balansa) Holtt., see *Austrobaileya* 5(3): 511-512. 1999.

C. elongatus (R. Br.) Benth. (*Andropogon elongatus* (R. Br.) Spreng.; *Holcus elongatus* R. Br.; *Rhaphis elongatus* (R. Br.) Chase; *Sorghum elongatus* (R. Br.) P. Beauv.; *Vetiveria elongata* (R. Br.) Stapf ex C.E. Hubb.)

Australia. Pungent and hairy callus, see *Prodromus Florae Novae Hollandiae* 1: 200. 1810, *Essai d'une Nouvelle Agrostographie* 131, 164, 178. 1812, *Bull. Sci. Soc. Philom. Paris* 1822: 43. 1822, *Systema Vegetabilium, editio decima sexta* 1: 287. 1825, *Flora Australiensis: A Description ...* 7: 538-539. 1878 and *Contributions from the United States National Herbarium* 24: 205. 1925, *Bulletin of Miscellaneous Information Kew* 1934: 444. 1934, *Austrobaileya* 5(3): 513. 1999.

in English: long golden beard grass.

C. fallax S.T. Blake (*Andropogon gryllus* sensu J. Black, non L.; *Chrysopogon gryllus* sensu Benth., non (L.) Trin.)

South Australia, Western Australia, Queensland, Northern Territory, New South Wales. Perennial, tufted, stems erect, sheath not keeled, leaves smooth and hairy in a dense basal tussock, inflorescence a loose panicle with whorled simple branches, tall flower heads, narrow spikelets on long and slender stalks, pedicellate spikelets sterile or male, a more or less valuable pasture species and grass, eaten when young, an indicator of good range condition, very hardy and drought resistant, a decreaser species, can be removed by overgrazing, found on heavy soils, floodplains, in open sandy places, see *Flora South Australia (edition 2)* 1: 60. 1943, *University of Queensland Papers: Department of Biology* 2(3): 9. 1944.

in English: golden beard grass

Chumsriella Bor = Germainia Balansa & Poitrasson

Named for Chai Anan [Chaianan] Chumsri, b. 1930, agrostologist, botanist in Thailand.

One species, Thailand. Panicoideae, Andropogonodae, Andropogoneae, Andropogoninae, annual, herbaceous, ligule a fringe of hairs, plants monoecious, inflorescence loosely racemose, bractiform involucre, all the fertile spikelets unisexual, male and female fertile spikelets mixed in the inflorescence, sessile spikelets chartaceous, 2 glumes more or less equal or subequal, palea present, lodicules absent, no stamens, ovary glabrous, 2 stigmas, desert and arid places, often included in *Germainia*, type *Chumsriella thailandica* Bor, see *Bulletin de la Société d'Histoire Naturelle de Toulouse* 7: 344, f. 1-9. 1873, *Flora Australiensis: A Description ...* 7: 518. 1878, *Journal de Botanique (Morot)* 4: 83. 1890 and *Lexikon Generum Phanerogamarum* 247. 1903 [1904], *Bulletin du Muséum d'Histoire Naturelle* 25: 285. 1919, O. Stapf and Charles Edward Hubbard, *Hooker's Icones Plantarum*. Species

C. thailandica Bor (*Germainia thailandica* (Bor) Chai-Anan)

Thailand. Lower glume chartaceous, see *Dansk Botanisk Arkiv* 23: 467. 1968, *Thai Forest Bulletin. Botany* 6: 37. 1972.

Chusquea Kunth = *Coliquea* Bibra, *Coliquea* Steud. ex Bibra, *Dendragrostis* Jackson, *Dendragrostis* Nees ex B.D. Jackson, *Dendragrostis* Nees, *Mustelia* Cav. ex Steud., *Mustelia* Steud., *Rettbergia* Raddi, *Swallenochloa* McClure

From a South American (Colombia) native name, *chusque*.

About 100-135-137 species, Central and South America. Bambusoideae, Bambuseae, Chusqueinae, solid, slender, mostly sympodial, sometimes monopodial, woody and branching, shrubby or climber, mostly scandent or strongly arching, at each node 1 large branch and several small leafy branches, dimorphic bud-branches, inflorescence an open or condensed capitate panicle, 1 fertile floret, 4 glumes, the 2 lower glumes small or rudimentary, stamens 3, stigmas 2, found in rain forest, understory, páramos and subpáramos, forest, dense woods, pastures, wet montane forest, mountain slopes, edge of woods, cloud forest, montane woodlands, moist shady banks, a difficult genus, type *Chusquea scandens* Kunth, see *Species Plantarum* 1: 81-82. 1753, *Genera Plantarum* 34. 1789, *Flora Boreali-Americana* 1: 73. 1803, *Journal de Physique, de Chimie, d'Histoire Naturelle et des Arts* 95: 151. 1822, *Synopsis Plantarum* 1: 254. 1822, *Agrostografía Brasiliensis* 17, 18, t. 1, f. 1. 1823, *Linnaea* 9(4): 467, 487. 1835[1834], *Nomenclator Botanicus. Editio secunda* 2: 168. 1841, *Denkschriften der Kaiserlichen Akademie der Wissenschaften. Mathematisch-naturwissenschaftliche Klasse* 5(2): 115. 1853, *J. Linn. Soc. Species

C. sp.

in Central America: crimichaca, rosetilla, vara de botoncillo

in Colombia: carrizo, chusque

in Ecuador: carrizo

in Peru: caña-brava

in Venezuela: puru-puru

C. abietifolia Griseb. (*Arundinaria microclada* Pilg.)

The Caribbean. See *Fl. Brit. West Indies* 529. 1864 and *Symb. Antill.* 5: 289. 1907.

C. acuminata Döll (*Chusquea tenuis* Glaz. ex E.G. Camus)

Brazil. See *Flora Brasiliensis* 2(3): 204. 1880 and *Les Bambusées* 1: 90. 1913.

C. affinis Munro ex Camus (*Chusquea ramosissima* Lindm.)

Brazil. See *Kongliga Svenska Vetenskapsakademiens Handlingar* 34(6): 24, t. 14. 1900, *Les Bambusées* 1: 80, t. 60, f. B. 1913, *Revista Argent. Agron.* 8: 338. 1941.

C. albilanata L.G. Clark & Londoño

Ecuador, Colombia. See *Nordic Journal of Botany* 11(3): 323. 1991.

C. amistadensis L.G. Clark, Davidse & R.P. Ellis

Costa Rica, Panama. Páramos, see *National Geographic Research* 5(4): 462, f. 1, 2Aa, 3-4, 5, 6C, 7C, 8C. 1989.

C. andina Phil. (*Chusquea culeou* E. Desv.)

Chile. See *Flora Chilena* 6: 450, t. 83, f. 2. 1854, *Linnaea* 29(1): 103. 1858 and *Rev. Argent. Agron.* 8(4): 343. 1941, *Economic Botany* 55(2): 243-254. 2001.

C. anelythra Nees (*Dendragrostis anelythra* Nees ex Munro)

Brazil. See *Linnaea* 9(4): 491. 1835, *Trans. Linn. Soc. London* 26(1): 63. 1868, *Flora Brasiliensis* 2(3B): 161-242, t. 44-58. 1880.

C. anelytroides Rupr. ex Döll

Brazil. See *Flora Brasiliensis* 2(3): 206. 1880.

C. angustifolia (Soderstr. & C.E. Calderón) L.G. Clark (*Swallenochloa angustifolia* Soderstr. & C.E. Calderón)

Venezuela, Colombia. Páramos, see *Brittonia* 30(3): 303. 1978, *Annals of the Missouri Botanical Garden* 74(2): 428. 1987.

C. antioquiensis L.G. Clark & Londoño

Colombia. See *Novon* 8(4): 423, f. 6. 1998.

C. aperta L.G. Clark

Mexico. See *Annals of the Missouri Botanical Garden* 74(2): 426-427, f. 1E-H. 1987.

C. arachniforme L.G. Clark & Londoño (*Chusquea arachniformis* L.G. Clark & Londoño)

Colombia. See *Novon* 8(4): 425-428. 1998.

C. argentina Parodi (*Chusquea culeou* E. Desv.)

Chile, Argentina. See *Flora Chilena* 6: 450, t. 83, f. 2. 1854 and *Revista Argent. Agron.* 8(4): 339, t. 24, f. 4. 1941, *Flora Patag.* 3: 1-583. 1978, *Gayana, Bot.* 42: 1-157. 1985.

C. aspera L.G. Clark

Peru. See *Iowa State Journal of Research* 61(1): 113, f. 4f-i. 1986.

C. attenuata (Döll) L.G. Clark (*Arundinaria attenuata* Döll)

Brazil. See *Flora Brasiliensis* 2(3): 170. 1880 and *Novon* 3(3): 237. 1993.

C. baculifera Silveira

Brazil. See *Arq. Mus. Nac. Rio de Janeiro* 22: 99, t. 1. 1919.

C. bahiana L.G. Clark (*Chusquea bambusoides* (Raddi) Hack.)

Brazil. See *Ergebnisse der Botanischen Expedition nach Südbrasilien* 1: 20. 1906, *Brittonia* 48(2): 250-253, f. 1. 1996.

C. bambusoides (Raddi) Hack. (*Chusquea bahiana* L.G. Clark; *Chusquea gaudichaudii* Kunth; *Nastus brunneus* Desv.; *Rettbergia bambusoides* Raddi) (named for the French naturalist Charles Gaudichaud-Beaupré, 1789-1854, plant collector, circumnavigator, accompanied Freycinet in his voyage round the world, wrote "Rapport sur la flore des îles Malouines." *Ann. Sci. Nat.* 5: 89-110. Paris 1825; see J.H. Barnhart, *Biographical notes upon botanists.* 2: 33. 1965; John Dunmore, *Who's Who in Pacific Navigation.* University of Hawaii Press, Honolulu 1991; Paul Henri Lecomte, *Flore générale de l'Indo-Chine.* Paris 1907-1950; Emil Bretschneider (1833-1901), *History of European Botanical Discoveries in China.* 809-811. Cinna L. = *Abola* Adans., *Blyttia* Arn. (Asclepiadaceae), *Blyttia* Fries, *Cinnastrum* E. Fourn.

Greek *kinna* for “way barley, wall barley,” applied by Dioscorides to a species of *Hordeum*; Latin *Cinna*, *ae* was the family name of the gentes Cornelia and Helvia.

About 3-6 species, Northern America, U.S., Canada, Mexico to Peru. Pooideae, Poodae, Aveneae, or Pooideae, Poaeae, Aveninae, perennial, herbaceous, solitary or tufted, more or less tuberous, internodes hollow, rhizomatous, auricles absent, leaf sheaths glabrous, ligule an unfringed membrane, plants bisexual, inflorescence paniculate, panicle open, spikelets pedicellate and falling with the glumes, 2 glumes subequal membranous, upper glume 1- to 3-nerved and acute, lemmas membranous and keeled, palea present, 2 free and membranous lodicules, 1-2 stamens, ovary glabrous, 2 stigmas, shade species useful for erosion control, moist areas, damp woods, open and semiopen areas, alluvial soils, recent clearings, along roadsides, type *Cinna arundinacea* L., see Carl Linnaeus, *Species Plantarum* 1: 5, 61, 67, 81. 1753, *Genera Plantarum*. edition 5. 6. 1754, *Familles des Plantes* 2: 31, 511. 1763, *Genera Plantarum* 44. 1789, *Magazine of Zoology and Botany* 2: 420. 1838, *Novit. Blackwell and J.W. Thieret, "Revision of the genus *Cinna* (Poaceae)." *Sida* 14: 581-596. 1991, *Flora Mesoamericana* 6: 242-243. 1994, *Sida* 19(1): 195-200. 2000, *Contributions from the United States National Herbarium* 48: 234-236. 2003.

Cladoraphis Franchet

From Greek *klados* "branch, twig, young shoot" and *rhapshis, raphidos* "a needle."

About 2 species, southern Africa, Namibia. Chloridoideae, Eragrostidae, Eragrostidinae, perennial, armed, woody,

stout, branched, long-rhizomatous or rhizomatous and stoloniferous, auricles absent, ligule a fringe of hairs, leaf blades flat or rolled, hard and needle-like leaves, plants bisexual, open panicle, spikelets solitary, lemmas rounded and entire, palea present, 2 free and fleshy lodicules, 3 stamens, ovary glabrous, 2 stigmas, suitable for stabilizing dunes, open habitats, maritime-arenicolous, on beach dunes, in sandy beds, on desert dunes, windblown dunes, in sandy beds of dry water courses, sometimes referred to *Eragrostis* N.M. Wolf, type *Cladoraphis duparquetii* Franch., see *Species Plantarum* 1: 67-70, 73-76. 1753, *Genera Plantarum* 23. 1776, *Bulletin Mensuel de la Société Linnéenne de Paris* 1: 673. 1887 and *Contributions from the United States National Herbarium* 41: 55-56. 2001.

Species

C. cyperoides (Thunb.) S.M. Phillips (*Brizopyrum cyperoides* (Thunb.) Nees; *Eragrostis cyperoides* (Thunb.) P. Beauv.; *Poa cyperoides* Thunb.)

South Africa. Perennial, tufted, bushy, spiny, primary branches not always spiny, spikelets clustered, sometimes occasionally grazed, useful for erosion control, usually on coastal dunes, deep sand, see *Prodromus Plantarum Capensium*, ... 22. 1794, *Essai d'une Nouvelle Agrostographie* 71, 162, 174. 1812, *Florae Africae Australioris Illustrationes Monographicae* 374. 1841 and *Kew Bulletin* 37(1): 159. 1982.

in English: sedge-stemmed lovegrass, bristly lovegrass

in South Africa: steekriet

C. spinosa (L.f.) S.M. Phillips (*Eragrostis spinosa* (L.f.) Trin.; *Festuca spinosa* L.f.)

South Africa. Perennial, tufted, spiny, bushy, primary branches spiny, spreading spine-tipped racemes, useful for erosion control, common on loose sand, on dunes, weel drained deep sand, overgrazed veld, see *Supplementum Plantarum* 111. 1781 [1782], *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques, Physiques et Naturelles* 1(4): 416. 1830 and *Kew Bulletin* 37(1): 159. 1982.

in English: ostrich grass, spiny lovegrass

in South Africa: volstruisgras, volstruisdoring

Claudia Opiz = *Beckeria* Bernh., *Melica* L.

Pooideae, Meliceae, type *Claudia ciliata* (L.) Opiz, see *Species Plantarum* 1: 66-67. 1753, *Systematisches Verzeichnis* 20, 40. 1800, *Lotos* 3: 67. 1853, *Flora der Provinz Brandenburg* 1: 838. 1864, *Index Kewensis* 1: 282. 1893 and *Bull. U.S.D.A.* 772: 69. 1920, *Taxon* 41: 566. 1992, *Taxon* 44: 611-612. 1995, *Contributions from the United States National Herbarium* 48: 140, 236, 432-450. 2003.

Clausospicula Lazarides

Latin *claudo* “to close, to shut up,” *clausus* “closed” and *spicula* “spikelet,” *spiculum* “a little sharp point, sting, spicule.”

One species, Australia. Panicoideae, Andropogonodae, Andropogoneae, Andropogoninae, annual, herbaceous, ligule an unfringed membrane, plants bisexual, inflorescence paniculate, reduced racemes, sterile spikelets awnless, 2 glumes subequal, palea present, 2 free and fleshy lodicules, 3 stamens, ovary glabrous, 2-3 stigmas, type *Clausospicula extensa* Lazarides, see *Methodus Plantas Horti Botanici ...* 207. 1794 and *Cytologia* 55: 141-151. 1990, M. Lazarides, J. Lenz & L. Watson, “*Clausospicula*, a new Australian genus of grasses (Poaceae, Andropogoneae).” *Australian Systematic Botany* 4(2): 391-405. 1991, *Australian Systematic Botany* 4: 591-635. 1991 [Taxonomy, cytology and ecology of indigenous Australian sorghums (*Sorghum* Moench: Andropogoneae: Poaceae)], Russell E. Spangler, “Taxonomy of *Sarga*, *Sorghum* and *Vacoparis* (Poaceae: Andropogoneae).” *Australian Systematic Botany* vol. 16 no. 3: 279-299. 2003, *Annals of Botany* 95: 219-227. 2005.

Species

C. extensa Lazarides

Northern Territory. See *Australian Systematic Botany* 4(2): 399, f. 1-10. 1991.

Clavinodum T.H. Wen = *Arundinaria* Michx.

Latin *clava* “a club, a knotty branch” and *nodus* “node.”

Bambusoideae, Bambuseae, Arundinariinae, type *Clavinodum oedogonatum* (Z.P. Wang & G.H. Ye) T.H. Wen, see *Flora Boreali-Americana* 1: 73-74. 1803 and *Journal Nanjing University. Natural Sciences Edition* 1981(1): 96, f. 3. 1981, *Journal Nanjing University. Natural Sciences Edition* 1982(3): 734, f. 2. 1982, *Journal of Bamboo Research* 3(2): 24-26, t. 1. 1984, *Contributions from the United States National Herbarium* 39: 18-24. 2000.

Cleachne Roland ex Rottb. = *Cleachne* Adns., *Paspalum* L.

Greek *kleis* “lock, key” and *achne* “chaff, glume.”

Panicoideae, Paniceae, Paspalinae, see *Systema Naturae, Editio Decima* 846, 855, 1359. 1759, *Acta Literaria Universitatis Hafniensis* 1: 285. 1778 and *Contr. U.S. Natl. Herb.* 12: 116. 1908, *Journal of Cytology and Genetics* 18: 26-33, 60-61. 1983, *Blumea* 30: 279-318. 1985, *Journal of Cytology and Genetics* 22: 161-162. 1987, *Ernstia* 1(4):

135. 1992, *Ernstia* 2(1-2): 22. 1992, *Novon* 4(1): 20. 1994, *Flora Mesoamericana* 6: 335-352. 1994, *Annals of the Missouri Botanical Garden* 81(4): 768-774. 1994, *Ernstia* 8(4): 100. 1999, *Contributions from the United States National Herbarium* 46: 443-527. 2003.

Cleistachne Benth.

From the Greek *kleistos*, *klistos* “closed” and *achne* “chaff, glume,” alluding to the nature of the spikelets.

One species, tropical Africa. Panicoideae, Andropogonoidae, Andropogoneae, Andropogoninae, annual, unarmed, herbaceous, coarse, unbranched, leaf blades narrow and linear, auricles absent, ligule an unfringed membrane, large terminal inflorescence paniculate, contracted panicle oblong or linear-oblong, primary branches bearing racemes, single sessile spikelet, 2 glumes subequal, lower glume coriaceous, upper lemma bidentate and awned, awn often twisted, palea minute, 2 free and fleshy lodicules ciliate, 3 stamens, ovary glabrous, 2 stigmas, open habitats, moist grassland, riverbanks, wastelands, along forest margins, old cultivations, closely related to *Sorghum*, type *Cleistachne sorghoides* Benth., see *Hooker's Icones Plantarum* 14: t. 1379. 1882, *The Flora of British India* 7(21): 162. 1897 [1896] and *Österreichische Botanische Zeitschrift* 51(5): 153. 1901, *Flora of Tropical Africa* 9: 89-91, 155. 1917.

Species

C. sorghoides Benth.

Tropical Africa, India. Annual, robust, coarse, erect, stilt roots, leaf blades hispid, leaf sheaths hispid, dark inflorescence, panicle narrowly oblong, spikelets pedicellate covered with white hairs, useful for erosion control.

in English: false sorghum

Cleistochloa C.E. Hubb. = *Dimorphochloa*
S.T. Blake

Greek *kleistos*, *klistos* “closed” and *chloe*, *chloa* “grass,” some spikelets are cleistogamous and the others chasmogamous; see Charles Edward Hubbard, in *Hooker's Icones Plantarum*. Ser. 5. 3: t. 3209. (Dec) 1933.

About 2-3 species, Australia and New Guinea, Queensland and New South Wales. Panicoideae, Panicodae, Paniceae, perennial, caespitose, wiry, branched, hollow internodes, glabrous nodes, ligule hairy, plants bisexual, terminal and axillary inflorescences few spikeleted, single loose raceme, spikelets dimorphic, hidden cleistogenes, axillary inflorescence of a single cleistogamous spikelet, terminal inflorescence spike-like and of chasmogamous spikelets, 2 florets, the lower floret sterile and reduced to the lemma, the upper floret bisexual, 1 or 2 glumes, lower glume minute or absent,

upper glume and lower lemma acute to truncate, upper lemma coriaceous, palea 2-nerved, 2 free and fleshy lodicules, open habitats, dry sandstones ridges, cleistogamous and chasmogamous, type *Cleistochloa subjuncea* C.E. Hubb., see *Species Plantarum* 1: 55. 1753, *Plantae Javanicae Rariores* 15, 18, 20. 1838 and *Flora of Tropical Africa* 9: 739. 1920, *Hooker's Icones Plantarum* 33: t. 3209. 1933, *Blumea* 3(3): 161. 1938, *University of Queensland Papers: Department of Biology* 1(19): 1. 1941, Jannink & Veldkamp, “Revision of Chionachninae (Gramineae: Andropogoneae).” *Blumea* 47(3): 545-580. 2002.

Species

C. rigida (S.T. Blake) R.D. Webster (*Cleistochloa rigida* (S.T. Blake) Clayton, nom. illeg., non *Cleistochloa rigida* (S.T. Blake) R.D. Webster; *Dimorphochloa rigida* S.T. Blake)

Australia, Queensland and New South Wales. Perennial, shrubby, fertile floret mucronate, dry scrub, sandstone, see *University of Queensland Papers: Department of Botany* 1(19): 2. 1941, *Kew Bulletin* 42(2): 401-403. 1987.

C. sclerachne (F.M. Bailey) C.E. Hubb. (*Chionachne sclerachne* F.M. Bailey; *Polytoxa sclerachne* (F.M. Bailey) F.M. Bailey)

Australia. See *Queensland Dept. Agric. Bull.* 7(Bot. Bull. 2): 21. 1891 and *The Queensland Flora* 6: 1849. 1902.

C. subjuncea C.E. Hubb. (*Cleistochloa hubbardiana* Henrard; *Entolasia subjuncea* (C.E. Hubb.) C.E. Hubb.; *Panicum subjunceum* Ekman; *Panicum subjunceum* Domin, nom. illeg., non *Panicum subjunceum* Ekman)

Australia, Queensland and New South Wales. Wiry, bases with cataphylls, terminal inflorescence erect, chasmogamous spikelets almost glabrous, cleistogamous spikelets obtuse, sandstone, scrubby areas, see *Arkiv för Botanik utgivet av K. Svenska Vetenskapsakademien* 10(17): 16, t. 5, f. 2, t. 6, f. 8. 1911, *Bibliotheca Botanica* 85: 314, f. 70. 1915, *Journal of Ecology* 21: 223. 1933.

Cleistogenes Keng = *Diplachne* P. Beauv.,
Jarrilla I.M. Johnst., *Kengia* Packer

From the Greek *kleistos*, *klistos* “closed” and *gennao* “to generate.”

Chloridoideae, Cynodonteae, see *Essai d'une Nouvelle Agrostographie* 80-81, 160, pl. 16, f. 9. 1812, *A Manual of the Botany of the Northern United States* 588. 1848, *Flora Europae* 25: 354. 1891 and *Torreyia* 21: 47. 1921, *Contributions from the Gray Herbarium of Harvard University* 70: 78. 1924, *Botanical Magazine* (Tokyo) 39: 258. 1925, *J. Wash. Acad. Sci.* 23: 136. 1933, *Sinensia* 5: 147. 1934, *Journal of Japanese Botany* 18(9): 540. 1942, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und*

Pflanzengeographie 78(2): 208-245. 1959 [Beiträge zur Monographie der Gattungen *Cleistogenes* und *Neyraudia*], *Botaniska Notiser* 113(3): 291. 1960, *Taxon* 43: 123. 1994, Chen Liang, D.L. Michalk & G.D. Millar, "The ecology and growth patterns of *Cleistogenes* species in degraded grasslands of eastern Inner Mongolia, China" *Journal of Applied Ecology* 39(4): 584-594. Aug 2002.

Cleomena Roem. & Schult. = *Muhlenbergia* Schreb.

Derivation obscure, possibly from the Greek *kleio*, *kleiein* "to shut, close," or from *kleio*, *kleiein* "to glorify, celebrate," *kleomai* "to become famous."

Chloridoideae, Cynodonteae, Muhlenbergiinae, see *Systema Vegetabilium* 2: 18, 383. 1817 and P.M. Peterson, "Systematics of the Muhlenbergiinae (Chloridoideae: Eragrostideae)." *Grasses: Systematics and Evolution* 195-212. 2000, *Contributions from the United States National Herbarium* 41: 143-173. 2001.

Cliffordiochloa B.K. Simon = *Steinchisma* Raf.

For Harold Trevor Clifford, Australian botanist, taxonomist, ecologist, author of *Etymological Dictionary of Grasses*. Amsterdam 1996; see *Tropical Plant Communities: Their Resilience, Functioning and Management in Northern Australia* / H.T. Clifford and R.L. Specht, editors St. Lucia, Australia: Dept. of Botany, University of Queensland 1986; Rolf Martin T. Dahlgren (1932-1987), *The Families of the Monocotyledons: Structure, Evolution, and Taxonomy* / R.M.T. Dahlgren, H.T. Clifford, P.F. Yeo in cooperation with R.B. Faden ... [et al.]. Berlin: Springer-Verlag 1985.

Panicoideae, Panicoideae, Paniceae, Paspalinae, perennial, herbaceous, caespitose, ligule membranous, plants bisexual, inflorescence a panicle more or less contracted, spikelets flattened, 2 glumes unequal to very unequal, lower glume short, lower lemma 3-nerved, palea thickened, 2 fleshy and glabrous lodicules, 2 stamens, ovary glabrous, 2 stigmas, in damp grassland, sometimes referred to *Panicum*, type *Cliffordiochloa parvispicula* B.K. Simon, see *Species Plantarum* 1: 55, 58. 1753, Constantine S. Rafinesque, *Seringe Bull. Bot.* 1: 220. 1830 [also *Bulletin Botanique [Genève]* 1: 220. 1830] and *Flora of the Southeastern United States* ... 105. 1903, *Contr. U.S. Natl. Herb.* 15: 13-15. 1910, E.D. Merrill, *Index Rafinesquianus* 76. 1949, *Grass Systematics and Evolution* 300. 1987, *Syst. Bot.* 13: 598. 1988, *Austrobaileya* 3(4): 674, 676, f. 3. 1992, *Flora Mesoamericana* 6: 302-318. 1994, *Austrobaileya* 4(3): 369-379. 1995, *Annals of the Missouri Botanical Garden* 85: 631-656. 1998, *Contributions from the United States National*

Herbarium 46: 607-608. 2003, *Austrobaileya* 6(3): 561-562. 2003.

Species

C. parvispicula B.K. Simon (*Panicum laxum* Sw.; *Steinchisma laxa* (Sw.) Zuloaga)

South America, Australia. Perennial, erect, clumped, stoloniferous, rhizomatous, sprawling, tidal mudflats, wet savannah, along roadsides and streams, marshy areas, see *Nova Genera et Species Plantarum seu Prodromus* 23. 1788 and *Austrobaileya* 3(4): 676, f. 3. 1992, *American Journal of Botany* 90(5): 817. 2003.

Clinelymus (Griseb.) Nevski = *Elymus* L.

From the Greek *kline* "a bed" and *elymos* "millet."

Pooideae, Triticeae, Hordeinae, see *Species Plantarum* 1: 83-84. 1753, *Flora Rossica* 4(13): 330. 1852 and *Canad. J. Bot.* 42: 554. 1964, *Taxon* 41: 562-563. 1992, *Taxon* 44: 611-612. 1995, *Contributions from the United States National Herbarium* 48: 279-307. 2003.

Clomena P. Beauv. = *Muhlenbergia* Schreb.

Chloridoideae, Cynodonteae, Muhlenbergiinae, type *Clomena peruviana* P. Beauv., see *Genera Plantarum* 44. 1789, *Systema Naturae ... editio decima tertia, aucta, reformata* 2: 171. 1791, *Essai d'une Nouvelle Agrostographie* 28, t. 7, f. 10, t. 3, f. 20. 1812, *Systema Vegetabilium, editio decima sexta* 1: 262. 1825, *Nomenclator Botanicus. Editio secunda* 1: 41. 1840, *Gramineae* 12-13. 1841, *Nova Acta Phys.-Med. Acad. Caes. Leop.-Carol. Nat. Cur.* 19(Suppl. 1): 144-145. 1843, *Die Natürlichen Pflanzenfamilien* 2(2): 97. 1887, *Revisio Generum Plantarum* 3(3): 357. 1898 and *Contributions to Western Botany* 14: 7. 1912, *Ill. Fl. N. U.S.* (edition 2) 1: 184. 1913, *Die natürlichen Pflanzenfamilien, Zweite Auflage* 14d: 69-70. 1956, *Flora Mesoamericana* 6: 276-286. 1994, *American Journal of Botany* 81: 622-629. 1994, *Madroño* 42(4): 427-449. 1995, *Sida* 17: 349-365. 1996, *Brittonia* 50(1): 23-50. 1998, P.M. Peterson, "Systematics of the Muhlenbergiinae (Chloridoideae: Eragrostideae)." *Grasses: Systematics and Evolution* 195-212. 2000, *Contributions from the United States National Herbarium* 41: 143-173. 2001, *Flora of Ecuador* 68: 85. 2001.

Cockaynea Zotov = *Hystrix* Moench

Dedicated to the English-born New Zealand botanist Leonard Cockayne, 1855-1934, scientist, ecologist and traveler, 1876 to Australia, ca. 1880 moved to New Zealand, botanical collector, naturalist, teacher, explorer, 1910 F.L.S., 1912 F.R.S., Cockayne moved to Wellington in 1914, he became President of the New Zealand Institute for

2 years in 1918, Honorary Botanist to the New Zealand Forest Service from 1923 and Honorary Botanist to the Wellington City Council, 1927 responsible for the establishment of the Otari Open Air Plant Museum at Wilton, Wellington, wrote *The Vegetation of New Zealand*, 1921, *New Zealand Plants and Their Story*. 4th edition edited by E.J. Godley. Wellington, Govt. Print., 1967, "Some New Zealand indigenous-induced weeds and indigenous-induced modified and mixed plant-communities." *J. Linn. Soc. (Bot.)* 49: 13-45. 1932. See J.H. Barnhart, *Biographical notes upon botanists*. 1: 362. 1965; R. Zander, F. Encke, G. Buchheim and S. Seybold, *Handwörterbuch der Pflanzennamen*. 14. Aufl. 700. Stuttgart 1993; R. Glenn, *The Botanical Explorers of New Zealand*. 173. Wellington 1950; A.D. Thomson, *The Life and Correspondence of Leonard Cockayne*. Christchurch, New Zealand: [s.n.], 1983 (Christchurch: Caxton Press) [Paper presented at the History of Science in New Zealand Conference, Wellington, 12 to 14 Feb, 1983]; Sir Arthur William Hill (1875-1941), "Leonard Cockayne 1855-1934." *Obit. Not. Roy. Soc. Lond.* pp. 443-457. 1935; *Transactions and Proceedings of the Royal Society of New Zealand* 65: 457-467. 1935-1936; Ray Desmond, *Dictionary of British & Irish Botanists and Horticulturists*. 156. London 1994; I. Urban, *Geschichte des Königlichen Botanischen Museums zu Berlin-Dahlem (1815-1913). Nebst Aufzählung seiner Sammlungen*. 1916; Dennis John Carr and S.G.M. Carr, editors, *People and Plants in Australia*. 167, 168, 176. London 1981; Frans A. Stafleu and Erik A. Mennega, *Taxonomic literature. Supplement IV: Ce-Cz*. 233-240. 1997; L.B. Moore, "The Cockayne memorial lecture, 1965: Leonard Cockayne, botanist." *Transactions of the Royal Society of New Zealand, General* 2, No 1: 1-18. Mar 1967.

Two species, New Zealand. Pooideae, Triticoideae, Triticeae, perennial, herbaceous, hollow, stoloniferous, ligule an unfringed membrane, plants bisexual, cleistogamous or chasmogamous, inflorescence spicate, spikelets solitary, glumes reduced to suppressed, palea present, 2 free and membranous lodicules, 3 stamens, ovary hairy, 2 stigmas, sometimes referred to *Elymus*, type *Cockaynea laevis* (Petrie) Zotov, see *Species Plantarum* 1: 83-84, 560. 1753, *Botanisches Magazin (Römer & Usteri)* 7: 5. 1790, *Methodus Plantas Horti Botanici et agri marburgensis, a staminum situ describendi ...* 294-295. Marburgi Cattorum [Marburg] 1794, *Beschreibung der Gräser Leipzig* 1769-1810, *A Manual of the Botany of the Northern United States* 604. 1848, *Flora of New Zealand* 1: 312, t. 70. 1853, *Geological Survey of California, Botany* 2: 327. 1880 and *American Midland Naturalist* 4: 228. 1915, *Transactions of the Royal Society of New Zealand, Biological Sciences* 73: 233-234. 1943, *Canad. J. Bot.* 42: 554. 1964, *N.Z. J. Bot.* 20: 169-186. 1982, *Feddes Repert.* 95: 425-521. 1984 [Conceptus of the Triticeae], *Taxon* 41: 562-563. 1992, *New Zealand J. Bot.* 32: 146. 1994, *Taxon* 44: 611-612. 1995,

C. Baden, S. Frederiksen and O. Seberg, "A taxonomic revision of the genus *Hystrix* Moench (Triticeae, Poaceae)." *Nord. J. Bot.* 17: 449-467. 1997, *Nordic Journal of Botany* 18(1): 89-94. 1998, Zhou Yong-Hong, Zheng You-Liang, Yang Jun-Liang and Yen Chi, "Relationships among species of *Hystrix* Moench and *Elymus* L. assessed by RAPDs." *Genetic Resources and Crop Evolution* 47(2): 191-196. Apr 2000, *Contributions from the United States National Herbarium* 48: 279-307. 2003.

Species

C. gracilis (Hook.f.) Zotov (*Gymnostichum gracile* Hook.f.)

New Zealand.

C. laevis (Petrie) Zotov (*Asprella laevis* Petrie)

New Zealand. Auricles absent, see *Transactions and Proceedings of the New Zealand Institute* 27: 406. 1895.

Codonachne Steudel = Tetrapogon Desf.

From the Greek *kodon* "a bell" and *achne* "chaff, glume."

Chloridoideae, Cynodonteae, see *Flora Atlantica* 2: 388-389, t. 255. 1799 [1800], *Nomenclator Botanicus. Editio secunda* 1: 393. 1840.

Coelachna Post & Kuntze

Orth. var. of *Coelachne* R. Br., see Tomas Erik von Post and C.E.O. Kuntze, *Lexicon generum Phanerogamarum*. 134. 1903.

Coelachne R. Br.

Greek *koilos* "hollow" and *achne* "chaff, glume, scale," the glumes are hollow, or referring to the saccate lemma.

About 10 species, Old World tropics and subtropics, India. Panicoideae, Panicodae, Isachneae, annual or perennial, slender, filiform, caespitose, ascending or decumbent, herbaceous, weak, low growing, densely matted, culm nodes bearded, auricles absent, leaf blades flat or folded, leaf sheaths rounded, ligule absent or a minute fringe of hairs, leaves lanceolate or linear to ovate-lanceolate, creeping rhizomes, plants bisexual, inflorescence an open or contracted panicle, small narrow panicle with short spreading branches, small to very minute spikelets gaping and deciduous, 2 florets membranous and exerted, lower floret perfect and large, upper floret female, 2 persistent broad glumes more or less unequal and shorter than the spikelet, lemmas awnless and rounded on back, palea present, 2 free and fleshy lodicules, 2-3 stamens, ovary glabrous, 2 stigmas, marshes and marshy places, waterfalls, streamsides, along streams, waterlogged soils, ponds, springs, wet

places, type *Coelachne pulchella* R. Br., see *Species Plantarum* 1: 55. 1753, *Prodromus florae Novae Hollandiae* 187, 196. 1810, *Gen. Pl.* 3: 1156. 1883, *Flora of British India* 7: 270. 1897 and *Lexicon generum Phanerogamarum* 134. 1903, *Hook. Ic. Pl.* t. 3440. 1943, *Grasses of Burma* ... 576. 1960.

Species

C. africana Pilg.

Zambia. Perennial, low, mat-forming, slender, straggling, rooting at the nodes, leaf blades narrowly lanceolate, panicle lanceolate, spikelets oblong, florets obtuse, lower glume broadly oblong, upper glume broadly ovate, lower lemma ovate, upper lemma narrowly ovate, see *Wissenschaftliche Ergebnisse der Schwedischen Rhodesia-Kongo-Expedition, 1911-1912, unter Leitung von Eric Graf von Rosen* 1: 208. 1916.

C. minuta Bor (*Coelachne ghatika* Naik)

India, Western Ghats, Maharashtra. Rare, annual, erect, tufted, very slender, wiry, leaf blades lanceolate and acute, panicle effuse with spreading capillary branches, spikelets globose and minute, glumes glabrous or sparsely bristly, lower lemma folded, upper lemma lanceolate and 2-keeled, stamens usually 2, grows in open areas, rocky places, moist grassland, see *J. Bombay Nat. Hist. Soc.* 58: 317-318. 1961, *Reinwardtia* 9: 393. 1980.

C. perpusilla (Arn. ex Steudel) Thw. (*Coelachne perpusilla* var. *muscosa* Hook.f.; *Coelachne pulchella* R. Br. var. *perpusilla* (Steud.) Hook.f.; *Panicum perpusillum* Steud.; *Panicum perpusillum* Arn. ex Steud.)

Southeast Asia. Perennial, ascending, densely tufted, leaf blades pointed and mostly filiform, panicle few-flowered and very lax, panicle branches spreading, spikelets spaced, florets densely bearded at base, lower lemma coriaceous, 3 stamens, in marshy soils, along lakes, seeps, see *Prodromus Florae Novae Hollandiae* 1: 187. 1810, *Syn. Pl. Glumac.* 1: 96. 1854, *Enum. Pl. Zeyl.* 373. 1864, *The Flora of British India* 7(22): 271. 1897 [1896] and *Handb. Fl. Ceylon* 5: 270. 1900, *Grasses of Ceylon* 111. 1956, *Grasses of Burma* ... 576. 1960.

C. perpusilla (Arn. ex Steudel) Thw. var. *nilagirica* Ved Prakash & Jain

India, Tamil Nadu. Slender, leaf blades linear-lanceolate, see *Bull. Bot. Survey India* 24: 187. 1983.

C. perpusilla (Arn. ex Steudel) Thw. var. *perpusilla*

India, Tamil Nadu, Sri Lanka. Leaf blades involute and filiform, in marshy places, see *The Flora of British India* 7(22): 271. 1897 [1896] and *Handb. Fl. Ceylon* 5: 270. 1900.

C. simpliciuscula (Wight & Arn. ex Steudel) Munro ex Bentham (*Coelachne pulchella* R. Br. var. *simpliciuscula* (Steud.) Hook.f.; *Coelachne simpliciuscula* (Wight & Arn.)

Munro; *Coelachne simpliciuscula* (Steudel) Bentham; *Isachne hispidula* Steud.; *Isachne hispidula* Nees ex Steud.; *Isachne simpliciuscula* (Steud.) Thw.; *Panicum simpliciusculum* Steud.; *Panicum simpliciusculum* Wight & Arn. ex Steud.)

Southeast Asia, China; Madagascar, Sri Lanka. Perennial or annual, variable, tufted, erect or decumbent, prostrate or ascending, dense mat-forming, leaf blades lanceolate or linear, panicles spiciform or open with spreading branches, spikelets appressed, florets glabrous at base, glumes glabrous, 3 stamens, weed in paddy fields, in moist soils, in damp and marshy places, closely related to *Coelachne pulchella* R. Br., see *Syn. Pl. Glumac.* 1: 96. 1854, *Enum. Pl. Zeyl.* 373. 1864, *Journal of the Linnean Society, Botany* 19(115-116): 93. 1881, *Fl. Br. Ind.* 7: 271. 1896 and *Grasses of Ceylon* 110. 1956, *Grasses of Burma* ... 576. 1960, *Canad. J. Bot.* 52: 1075-1090. 1974, *Taxon* 24: 512. 1974, *Taxon* 25: 158. 1976.

in Thailand: yaa phai, yaa wong waen

Coelachyropsis Bor

Resembling *Coelachyrum* Hochst. & Nees.

One species, Sri Lanka, southern India. Chloridoideae, annual, herbaceous, unbranched, erect or geniculate, decumbent, stoloniferous, auricles absent, glandular, ligule a fringed membrane, plants bisexual, inflorescence digitate, 2 glumes broadly elliptic more or less equal, lemma acute to mucronate, palea present, 2 free and fleshy lodicules, 3 stamens, ovary glabrous, 2 stigmas, type *Coelachyropsis lagopoides* Bor, see *Species Plantarum* 1: 71. 1753, *Systema Naturae, edition 12* 2: 95. 1767, *Linnaea* 16(2): 221. 1842 and *Annalen des Naturhistorischen Museums in Wien* 75: 23, 25. 1971[1972], *Taxon* 49(2): 250. 2000.

Species

C. lagopoides Bor (*Dactylis lagopoides* L.)

South India, Sri Lanka.

Coelachyrum Hochst. & Nees =
Coelachyropsis Bor, *Coeleochloa* Steud.,
Cypholepis Chiov.

From the Greek *koilos* "hollow" and *achyron* "chaff, husk."

About 6-8 species, Africa, Mauritania, Arabia, Somalia, Tanzania, Pakistan, southern India, Sri Lanka. Chloridoideae, Eragrostideae, annual or perennial, variable, herbaceous, erect or geniculate, sometimes or usually stoloniferous, auricles absent, ligule a ciliate fringed membrane, leaves flat almost subcordate at base, plants bisexual, contracted spike-like racemes open or dense, spikelets laterally compressed elliptic to ovate, 2 glumes unequal and

keeled, lemmas saccate and more or less papery to coriaceous, palea entire and sometimes villous on the keels, 2 lodicules free and fleshy, stamens 3, ovary glabrous, 2 stigmas, free pericarp, species of open habitats or light shade, open shrubland, limestone, dry grassland, sand and red sandy soil, desert to semidesert, a link between *Eragrostis* and *Eleusine*, type *Coelachyrum brevifolium* Hochst. & Nees, see *Nomenclator Botanicus. Editio secunda* 1: 394. 1840, *Linnaea* 16(2): 221. 1842 and *Annuario del Reale Istituto Botanico di Roma* 8(3): 357-358. 1908, *Kirkia* 3: 117, 131-134. 1963, *Annalen des Naturhistorischen Museums in Wien* 75: 23. 1971[1972].

Species

C. brevifolium Hochst. & Nees (*Coelachyrum brevifolium* (Koenig ex Willd) Hochst. & Nees; *Eleusine brevifolia* (Hochst. & Nees) Steud.)

Sudan, Somalia, Arabia. Annual, loosely tufted, sprawling, stolons lacking or stoloniferous, subdigitate racemes clustered, 6-10 florets closely imbricate, spikelets sessile and broadly ovate, glumes ovate to elliptic and mucronate, lemmas hairy and membranous, grain rugose, good grazing, coastal dunes, sand, desert, type species, see *Linnaea* 16(2): 221. 1842, *Synopsis Plantarum Glumacearum* 1: 211. 1854. in Nigeria: magari kura

C. lagopoides (Burm.f.) Senaratna (*Aeluropus laevis* Trin.; *Aeluropus lagopoides* (L.) Trin. ex Thw.; *Coelachyropsis lagopoides* (Burm.f.) Bor; *Coelachyrum brevifolium* (Koenig ex Willd.) L.; *Distichlis sudanensis* Beetle; *Eleusine brevifolia* (Hochst. & Nees) Steud.; *Eleusine brevifolia* (Koenig ex Willd.) R. Br. ex Hook.f., nom. illeg., non *Eleusine brevifolia* (Hochst. & Nees) Steud.; *Eleusine brevifolia* (Willd.) R. Br. ex Hook.f.; *Eleusine lagopoides* (Burm.f.) Merr.; *Eragrostis brevifolia* (Willd.) Benth.; *Eragrostis brevifolia* Benth.; *Koeleria brevifolia* (Willd.) Spreng.; *Koeleria brevifolia* Spreng.; *Poa brevifolia* (Willd) Kunth; *Poa brevifolia* (J. König ex Willd.) Kunth, nom. illeg., non *Poa brevifolia* DC.)

Southern India, Asia, Sri Lanka. Annual, slender, smooth, branched, erect or geniculate, spreading or prostrate, inflorescence compact, glumes mucronate, pericarp wavy or rugulose, see *Mant.* 33. 1767, *Flora Indica ... nec non Prodrumus Florae Capensis* 29. 1768, *Mant.* 557. 1771, *Genera Plantarum* 23. 1776, *De Fructibus et Seminibus Plantarum...* 1: 7. 1788, *Species Plantarum. Editio quarta* 1: 410. 1797, *Syn. Pl.* 1: 97. 1805, *Plantarum Minus Cognitarum Pugillus* 2: 21. 1815, *Journal de Physique, de Chimie, d'Histoire Naturelle et des Arts* 89: 104. 1819, *Fundamenta Agrostographiae* 143, t. 12. 1820, *Révision des Graminées* 1: 111. 1829, *Linnaea* 16(2): 221. 1842, *Enum.*

Pl. Zeyl. 374. 1864, *Hooker's Icones Plantarum* pl. 1268 p. 51. 1881, *Die Natürlichen Pflanzenfamilien* 2(2): 61. 1887, *The Flora of British India* 7(22): 294. 1897 [1896] and *Handb. Fl. Ceylon* 5: 278-279. 1900, *Philippine Journal of Science* 19: 339. 1921, *Revista Argentina de Agronomía* 22(2): 89, f. 1. 1955, *Grasses of Ceylon* 79. 1956, *Grasses of Burma ...* 488. 1960, *Annalen des Naturhistorischen Museums in Wien* 75: 25. 1971[1972].

C. longiglume Napper (*Desmostachya bipinnata* (L.) Stapf)

Kenya. Annual, slender, geniculately ascending, soft leaf blades linear, ovate open panicle with racemose branches, 5- to 10-flowered, spikelets broadly elliptic, glumes unequal and 3-nerved, lemmas elliptic and densely hispid, rugulose grains, saline plains, dry grassland, flats, see *Flora Palaestina* 12. 1756 and *Flora Capensis* 7: 632. 1900, *Kirkia* 3: 113. 1963.

C. piercei (Benth.) Bor (*Coelachyrum stoloniferum* C.E. Hubb.; *Eragrostis piercei* Benth.; *Leptochloa appletonii* Stapf) (for E. Pierce)

Ethiopia, Asia, Pakistan, Arabia. Perennial, tufted, stoloniferous with woody stolons, knotty base, open panicle with racemose branches, spikelets on pedicels, glumes unequal, upper glume mucronate, lemma glabrous or shortly ciliate, grassland, sand, bushland, coastal dunes, limestone, desert scrub, semideserts, see *Icones Plantarum* 4: 1370. 1881 and *Bulletin of Miscellaneous Information Kew* 6: 223. 1907, *Kew Bulletin* 1941: 198. 1941, *Kew Bulletin* 7(2): 226. 1952.

in Somalia: duyu, dooyo

C. poiflorum Chiov. (*Coelachyrum induratum* Pilger; *Eleusine poiflora* (Chiov.) Chiov.)

Sudan, Somalia, Arabia. Perennial, densely tufted, erect, spreading, with woody stolons, inflorescence racemose, 4- to 18-flowered, spikes clustered toward the top of the culm, spikelets sessile and ovate, glumes 1-nerved, upper glume mucronate or shortly awned, lemmas shaggy and mucronate, grain strongly compressed, growing on rocky or sandy plain, gypsum, grassland, limestone, open shrubland, see *Annuario del Reale Istituto Botanico di Roma* 7: 75, t. 3, f. 4. 1896 and *Annali di Botanica* 10(3): 409. 1912.

C. yemenicum (Schweinf.) S.M. Phillips (*Cypholepis yemenica* (Schweinf.) Chiov.; *Eleusine yemensis* (Schweinf.) Chiov.; *Eragrostis yemenica* Schweinf.; *Leptochloa appletonii* Stapf)

Tropical East Africa, South Africa, Ethiopia, Somalia, Yemen, Arabia. Annual or perennial, slender, densely tufted, erect or geniculate, ascending, without stolons, sheaths keeled, leaf blades narrowly linear, narrow inflorescence racemose, erect racemes spaced, 7- to 12-flowered, spikelets elliptic to narrowly lanceolate-elliptic, florets closely imbricate, glumes lanceolate-oblong, lemmas coriaceous and obtuse, smooth grain, growing on red sandy soil, grassland, open areas, in *Acacia* scrub, open shrubland, rocky places,

sandstone, limestone, open stony ground, see *Bulletin de l'Herbier Boissier* 2(App. 2): 41. 1894 and *Bulletin of Miscellaneous Information Kew* 6: 223. 1907, *Annuario del Reale Istituto Botanico di Roma* 8(3): 357-358. 1908, *Annali di Botanica* 10: 410. 1912, *Kew Bulletin* 37(1): 159. 1982, *Grass. Saudi Arabia* 274. 1989.

Coelarthron Hook.f. = *Microstegium* Nees

From the Greek *koilos* "hollow" and *arthron* "a joint."

Panicoideae, Andropogoneae, Saccharinae, type *Coelarthron brandisii* Hook.f., see *Species Plantarum* 2: 1045. 1753, *A Natural System of Botany* 2nd edn. 447. 1836, *The Flora of British India* 7(21): 163-164. 1897 [1896] and *Die Natürlichen Pflanzenfamilien* 2(2): Nachtr. 2: 4. 1900, *The Grasses of Burma* 2, 62. 1945, *Contributions from the United States National Herbarium* 46: 292. 2003.

Coelochloa Steud. = *Coelachyrum* Hochst. & Nees

From the Greek *koilos* "hollow" and *chloe, chloa* "grass, young grass."

Chloridoideae, Eragrostideae, see *Nomenclator Botanicus. Editio secunda* 1: 394. 1840, *Linnaea* 16(2): 221. 1842 and *Annuario del Reale Istituto Botanico di Roma* 8(3): 357-358. 1908, *Kirkia* 3: 117, 131-134. 1963, *Annalen des Naturhistorischen Museums in Wien* 75: 23. 1971[1972].

Coelorachis Brongn. = *Apogonia* (Nutt.) E. Fourn., *Coelorhachis* Brongn., *Cycloteria* Stapf, *Mnesithea* Kunth

Greek *koilos* "hollow" and *rhachis* "rachis, axis, midrib of a leaf," the rachis is concave, swollen and hollow; see Louis-Isidor Duperrey, *Voyage autour du Monde exécuté par ordre du Roi sur la corvette La Coquille pendant les années 1822-1825*. 64, t. 14. 1831.

About 20-21 species, tropics. Panicoideae, Andropogonodae, Andropogoneae, Rottboelliinae, perennial or annual, rather variable, herbaceous, branched, robust, clump forming, culm internodes solid, auricles absent, ligule fringed, broad leaf blades linear and flat, plants bisexual, inflorescence axillary, single cylindrical or flattened raceme, peduncled racemes, partial inflorescences, racemes linear bearing pairs of sessile and pedicellate spikelets, sessile spikelet unawned, lower floret barren, 2 glumes more or less equal, lower glume smooth and 2-keeled, upper glume awnless, palea present, 2 free and fleshy lodicules, 3 stamens, ovary glabrous, 2 stigmas reddish to red, pedicelled spikelet sometimes vestigial, spikelets sometimes borne in triplets, damp

soils, grassland, open habitats, open woodland, savannah, closely related to *Rhytachne*, sometimes included in *Mnesithea* Kunth, type *Coelorachis muricata* (Retz.) Brongn., see *Mantissa Plantarum* 2: 164. 1767, *Supplementum Plantarum* 13, 114. 1781 [1782], *Supplementum Carpologicae* 1(1): 3, pl. 181, f. 3. 1805, *The Genera of North American Plants* 1: 83-84. 1818, *Révision des Graminées* 1: 153. 1829, *Voyage autour du Monde* 64, t. 14. 1831, *Mexicanas Plantas* 2: 63. 1886, *Die Natürlichen Pflanzenfamilien* 2(2): 25. 1887 and *Ann. Soc. Linn. Lyon*, sér. 2, 68: 198. 1921 [1922], *Kew Bulletin* 24: 309-314. 1970, *Blumea* 31: 291, 293. 1986, *Flora of the Guianas. Series A, Phanerogams* 8: 143-146. 1990, *Journal of Cytology and Genetics* 25: 140-143. 1990, *Annals of the Missouri Botanical Garden* 81(4): 775-783. 1994, *Journal of Cytology and Genetics* 29(2): 125-131. 1994, *Flora Mesoamericana* 6: 396-397. 1994, *Contributions from the United States National Herbarium* 46: 295-296. 2003.

Species

C. afraurita (Stapf) Stapf (*Mnesithea afraurita* (Stapf) de Koning & Sosef; *Rottboellia afraurita* Stapf)

Tropical Africa. Perennial, tufted, erect, good fodder when young, used for fencing and matting, marshy places, marshy grasslands, swamps, fresh water, see *Bulletin de la Société Botanique de France* 55: Mém. 8, 98. 1908, *Flora of Tropical Africa* 9: 80. 1917, *Blumea* 31(2): 290. 1986.

in Sierra Leone: fovo, tomo

C. aurita (Steud.) A. Camus (*Coelorachis aurita* (Steud.) Henrard, nom. illeg., non *Coelorachis aurita* (Steud.) A. Camus; *Coelorhachis aurita* (Steud.) A. Camus; *Manisuris aurita* (Steud.) Kuntze ex Hitchc. & Chase; *Manisuris aurita* (Steud.) Hitchc. & Chase, nom. illeg., non *Manisuris aurita* (Steud.) Kuntze; *Manisuris aurita* (Steud.) Kuhlman, nom. illeg., non *Manisuris aurita* (Steud.) Kuntze; *Manisuris aurita* (Steud.) Kuntze; *Manisuris fasciculata* (Lam.) Hitchc.; *Mnesithea aurita* (Steud.) de Koning & Sosef; *Rottboellia aurita* Steudel)

Costa Rica to Argentina. Swamps and damp places, see *Synopsis Plantarum Glumacearum* 1: 361. 1854, *Monographiae Phanerogamarum* 6: 311. 1889, *Revisio Generum Plantarum* 3(3): 356. 1898 and *Contributions from the United States National Herbarium* 18(7): 276. 1917, *Annales de la société linnéenne de Lyon*, sér. 2 68: 197. 1921, *Comissão de Linhas Telegraficas Estratégicas de Matto-Grosso ao Amazonas, Botanica* 67(Bot. 11): 90. 1922, *Blumea* 4(3): 515. 1941, *Blumea* 31(2): 290. 1986.

C. capensis Stapf (*Mnesithea capensis* (Stapf) de Koning & Sosef)

South Africa. Perennial, tufted, pedicellate spikelets sometimes reduced, see *Bulletin of Miscellaneous Information Kew* 1916: 234. 1916, *Blumea* 31(2): 290. 1986.

C. clarkei (Hack.) Blatt. & McCann (*Manisuris clarkei* (Hack.) Bor ex Santapau; *Mnesithea clarkei* (Hack.) de Koning & Sosef; *Rottboellia clarkei* Hack.)

Tropics, India. Annual, see *Österreichische Botanische Zeitschrift* 41: 8. 1891 and *Journal of the Bombay Natural History Society* 82: 33. 1927, *Records of the Botanical Survey of India* 16(1): 357. 1953, *Blumea* 31(2): 290. 1986.

C. cylindrica (Michx.) Nash (*Manisuris campestris* (Nutt.) A.S. Hitchc.; *Manisuris cylindrica* (Michx.) Kuntze; *Mnesithea cylindrica* (Michx.) de Koning & Sosef; *Rottboellia cylindrica* (Michx.) Torr., nom. illeg., non *Rottboellia cylindrica* Willd.; *Tripsacum cylindricum* Michx.)

Northern America, U.S. Perennial, useful for erosion control, see *Flora Boreali-Americana* 1: 60. 1803, *Revisio Generum Plantarum* 2: 779. 1891 and *North American Flora* 17(1): 85. 1909, *Blumea* 31(2): 290. 1986.

in English: Carolina joint-tail grass, cylinder joint-tail grass

C. glandulosa (Trin.) Stapf ex Ridl. (*Manisuris glandulosa* (Trin.) Kuntze; *Mnesithea glandulosa* (Trin.) de Koning & Sosef; *Ophiuros muriculatus* Steud.; *Rottboellia glandulosa* Trin.)

Asia, Southeast Asia. See *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques, Physiques et Naturelles* 2(4): 250. 1832, *Synopsis Plantarum Glumacearum* 1: 360. 1854, *Revisio Generum Plantarum* 2: 780. 1891 and *The Flora of the Malay Peninsula* 5: 204. 1925, *Blumea* 4(3): 517. 1941, *Blumea* 31(2): 290. 1986.

in the Philippines Islands: murabon

in Thailand: yaa khaao paa

C. khasiana (Hackel) Stapf ex Bor (*Coelorachis khasiana* (Hack.) Henrard, nom. illeg., non *Coelorachis khasiana* (Hack.) Stapf ex Bor; *Mnesithea khasiana* (Hack.) de Koning & Sosef; *Rottboellia striata* Nees ex Steudel subsp. *khasiana* Hackel)

India, Darjeeling, Sikkim. Leafy, leaves lanceolate and acuminate, leaves margins not ciliate, lower glume of sessile spikelet contracted into winged apiculus, pedicellate spikelet well-developed, see *Monographiae Phanerogamarum* 6: 302. 1889 and *Indian Forest Records: Botany* 1(3): 101. 1939, *Blumea* 4(3): 519. 1941, *Blumea* 31(2): 291. 1986.

C. rottboellioides (R. Br.) A. Camus (*Andropogon rottboellioides* (R. Br.) Steud.; *Coelorachis rottboellioides* (R. Br.) Henrard, nom. illeg., non *Coelorachis rottboellioides* (R. Br.) A. Camus; *Coelorachis rottboellioides* (R. Br.) Ohwi, nom. illeg., non *Coelorachis rottboellioides* (R. Br.) A. Camus; *Coelorachis rottboellioides* (R. Br.) Stapf ex C.E. Hubb., nom. illeg., non *Coelorachis rottboellioides* (R. Br.) A. Camus; *Ischaemum rottboellioides* R. Br.; *Manisuris rottboellioides* (R. Br.) Kuntze; *Rottboellia rottboellioides* (R. Br.) Druce; *Rottboellia rottboellioides* (R. Br.) Reeder, nom. illeg., non *Rottboellia rottboellioides* (R. Br.) Druce)

Southeast Asia. Useful for erosion control, see *Prodromus Florae Novae Hollandiae* 1: 205. 1810 and *Annales de la Société Linnéenne de Lyon, sér. 2*, 68: 197. 1921 [1922], *Blumea* 4(3): 519. 1941, *Bulletin of Miscellaneous Information Kew* 1941: 25. 1941, *Bulletin of the Tokyo Science Museum* 18: 2. 1947, *Acta Botanica Neerlandica* 2(2): 255. 1953, *Blumea* 31(2): 291. 1986.

in English: cane grass

C. striata (Nees ex Steudel) A. Camus (*Manisuris striata* (Nees ex Steud.) Kuntze; *Mnesithea striata* (Nees ex Steud.) de Koning & Sosef; *Rottboellia striata* Nees ex Steudel)

Southeast Asia, India. Leaves margins ciliate, pedicellate spikelet reduced, see *Synopsis Plantarum Glumacearum* 1: 361. 1854, *Revisio Generum Plantarum* 1(2): 780. 1891 and *Annales de la Société Linnéenne de Lyon, sér. 2*, 68: 197. 1922, *Blumea* 4(3): 519. 1941, *Grasses of Burma, Ceylon, India and Pakistan (excluding Bambuseae)* 121. 1960, *Blumea* 31(2): 292. 1986.

in Thailand: yaa khon

Coelorhachis Endl.

Orthographic variant of *Coelorachis* Brongn.

Coix L. = *Lachryma-jobi* Ortega, *Lachrymaria* Heist. ex Fabr., *Lacryma* Medikus, *Lacrymaria* Heist. ex Fabr., *Lithagrostis* Gaertn., *Sphaerium* Kuntze

From the ancient Greek name used by Theophrastus for a kind of Egyptian palm, *Hyphaene thebaica* (L.) Martius, Latin *coix*, *coicis* for a kind of Ethiopian palm (Plinius).

Some 5/6 species, Europe, tropical Asia. Panicoideae, Andropogonodae, Maydeae, or Panicoideae, Andropogoneae, Coicinae, annual or perennial, herbaceous, leafy, coarse, thick, stout, often rhizomatous, erect, branched, culm internodes solid, auricles absent, ligule membranous, leaves flat and lanceolate, plants monoecious with all the fertile spikelets unisexual, inflorescences axillary and compound, racemes separated by a prophyll, inflorescences in hard globular utricles, male and female spikelets on the same inflorescence and usually the male above, female inflorescence sessile, fertile female spikelet with 2 florets, all the fertile spikelets unisexual, without hermaphrodite florets, male raceme pedunculated, male spikelets with 2 florets both fertile, hard utricles are modified leaf base enclosing the female inflorescence, lower glume papery and laterally winged, palea present, lodicules absent, ovary glabrous, stamens absent or 3 staminodes, stigmas 2, false fruits variable, ornamental, weed, cultivated fodder crop, grain crop species, aquatic forms, swamps, shade species, wet habitats, forest margins, swamps, type *Coix lacryma-jobi*

L., see *Species Plantarum* 2: 972. 1753, *Genera Plantarum*. edition 5. 419. 1754, *Enumeratio Methodica Plantarum* 208. 1759, *Syst. Nat.* edition 10, 1261. Species

C. aquatica Roxb. (*Coix gigantea* var. *aquatica* (Roxb.) Watt; *Coix lacryma-jobi* f. *aquatica* (Roxb.) Backer)

China, India, Thailand, Southeast Asia. Floating, creeping, succulent culms, sometimes decumbent and rooting from nodes, floating roots, leaves densely hairy, male spikelets mainly in triads, animal food, fodder, weed species, ponds, lakes, wet habitats, streams and marshes, see *Der Naturforscher* 23: 211. 1788, *Flora Indica*; or, *Descriptions of Indian Plants* 3: 571-572. 1832 and *Journal of Cytology and Genetics* 1: 14-20. 1966, *Current Science* 55: 1200-1201. 1986, *Genetica* 74: 61-68. 1987, *Cytologia* 54: 169-172. 1989, *Proceedings of the Indian Science Congress Association* 77(3, vi): 135. 1990, *Nucleus* 37(1,2): 10-15. 1994, *The Grasses and Bamboos of India* 1: 175. 1997.

in Thailand: chaai fuei, chaai phuei, chai fueai, dueai hin, duei hin, lam iak, o nam

C. gigantea Koenig ex Roxb. (*Chionachne gigantea* (J. König) Veldkamp; *Coix gigantea* J. König; *Coix lacryma-jobi* var. *gigantea* (J. König ex Roxb.) Stapf ex Hook.f.; *Coix lingulata* Hack.)

Papua New Guinea, Sri Lanka, Southeast Asia, India, Malaysia, Indonesia. Perennial, densely caespitose water grass, stiff, erect, leaf blades linear not cordate at base, surface of leaves glabrous to scabrid, staminate inflorescence drooping, spikelets mainly in threes, lower glume winged, used for bead-curtains and baskets, sometimes collected for food, grains separated from the shell can be fed to poultry, cereal, a salt source, often used for ornamental purposes, weed species of rice fields, growing in marshy areas, moist or dry locations, wet situations, see *Der Naturforscher* 23: 211. 1788, *Hortus Bengalensis, or a catalogue* ... 66. 1814, *Fl. Ind.* edition 2. 3: 570. 1832, *Plantae Javanicae Rariores* 15, 18. 1838, *Österreichische Botanische Zeitschrift* 41: 5. 1891, *The Flora of British India* 7(21): 100. 1897 [1896] and *Grasses of Ceylon* 203. 1956, *Grasses of Burma* ... 264. 1960, *Genetica* 74: 61-68. 1987, *The Grasses and Bamboos of India* 1: 175. 1997, *Blumea* 47(3): 559-560, f. 3. 2002.

in English: wild adlay

in India: danga gurgur, kesai

in Sri Lanka: hin kirindi

C. lacryma-jobi L. (also spelled ***lachryma-jobi***) (*Coix agrestis* Lour.; *Coix arundinacea* Lam.; *Coix exaltata* Jacq.; *Coix lacryma* L.; *Coix ovata* Stokes; *Coix pendula* Salisb.; *Lithagrostis lacryma-jobi* (L.) Gaertn.; *Sphaerium lacryma* (L.) Kuntze)

Asia. Annual or perennial, monoecious, tall, large, smooth, sometimes woody, ornamental and variable species, robust and erect, prostrate and rooting at the nodes below, branched or much-branched, leaf sheath short or long, ligule short and membranous, leaves narrow-lanceolate and acute, inflorescences arching, male and female inflorescences on 1 peduncle, male spikelets mainly in pairs, female inflorescence surrounded by utricles ovoid-globose, lower glume narrowly winged, tear-shaped seeds, hard seedcoat or large stony involucre, weed, naturalized, used as a fiber plant by Aborigines of Australia, fodder or poor fodder for cattle, the green material is very palatable, the seed is enclosed in a hard shell that has to be broken by pounding or rough grinding, utricles used as beads, grass widely cultivated and naturalized in tropics, in India seeds eaten by the Bhil people, seeds either mixed with *Panicum colonum* L. or *Zea mays* L. and made into bread or prepared like rice, beverage base, a coffee is made from the roasted seed, seeds used to make tea in Japan, roots used in the treatment of menstrual disorders, fruits are antipyretic, antiseptic and antispasmodic, usually growing along forest edge, hot and damp areas, moist conditions, lowlands, near streams, along water courses, swampy places, ditches, on drier disturbed ground, hill forest, see *Species Plantarum* 2: 972. 1753, *Systema Naturae, Editio Decima* 1261. 1759, *De Fructibus et Seminibus Plantarum*... 1: 7. 1788, *Flora Cochinchinensis* 2: 551. 1790, *Encyclopédie Méthodique, Botanique* 3: 422. 1791, *Prodromus stirpium in horto ad Chapel Allerton vigentium*. 28. Londini [London] (Nov-Dec) 1796, *A Botanical Materia Medica* 4: 343. 1812, *Eclogae Graminum Rariores* 60, t. 40. 1820, *Bull. Soc. Acclimat.* 3(8): 442. 1881, *Journal de Botanique (Morot)* 4(4): 77. 1890, *Revisio Generum Plantarum* 2: 793. 1891, *The Flora of British India* 7: 100. 1896 and *Flore Générale de l'Indo-Chine* 7(5): 220. 1922, *Grasses of Ceylon* 203. 1956, *Grasses of Burma* ... 264. 1960, *Fl. Trop. E. Afr. Gramineae* (3): 857. 1982, *J. Guangdong Bot. Soc.* 2: 72-73. 1984, *Journal of Wuhan Botanical Research* 3(4): 345-349. 1985, *Cytologia* 51: 527-547. 1986, *Grasses of Japan and its Neighboring Regions* 498. 1987, *Current Science* 58: 757-758. 1989, *Proceedings of the Indian Science Congress Association* 76(3, vi): 177-178. 1989, *Cytologia* 55: 57-60. 1990, *Journal of Cytology and Genetics* 25: 140-143. 1990, *Cytologia* 58: 355-360. 1993, *Nucleus* 37(1,2): 10-15. 1994, *Caryologia* 50: 175-184. 1997, *Grassland of China* 2000(5): 1-5. 2000.

Acclimat.* 3(8): 442. 1881, *Journal de Botanique (Morot)* 4(4): 77. 1890, *Revisio Generum Plantarum* 2: 793. 1891, *The Flora of British India* 7: 100. 1896 and *Flore Générale de l'Indo-Chine* 7(5): 220. 1922, *Fl. Trop. E. Afr. Gramineae* (3): 857. 1982, *Grasses of Japan and its Neighboring Regions* 498. 1987.

in Thailand: ma doi, dueai

C. lacryma-jobi L. var. **ma-yuen** (Rom. Caill.) Stapf ex Hook.f. (*Coix chinensis* Tod.; *Coix chinensis* var. *chinensis*; *Coix lacryma-jobi* subsp. *ma-yuen* (Rom. Caill.) T. Koyama; *Coix lacryma-jobi* var. *ma-yuen* (Rom. Caill.) Stapf; *Coix ma-yuen* Rom. Caill.)

Southeast Asia, China, India. False fruits ovoid to pyriform, involucre soft and striate, cultivated for its edible seeds and medicinal virtues, cereal, animal food, fodder, handicrafts, used in macrobiotic diets and cuisine, the seeds are a traditional Chinese medicine possessing antitumor activity, see *Ind. Sem. Hort. Bot. Pan. Ann.* 5. 1861, *Bulletin de la Société Nationale d'Acclimatation de France*, sér. 2, 8: 442. 1881, *The Flora of British India* 7(21): 100. 1897 [1896] and *Grasses of Japan and its Neighboring Regions* 498. 1987, M. Numata, A. Yamamoto, A. Moribayashi, H. Yamada, "Antitumor components isolated from the Chinese herbal medicine *Coix lacryma-jobi*." in *Planta Med.* 60(4): 356-359. Aug 1994.

in China: yi yi

in Japan: hato-mugi

in Brazil: rosario

C. lacryma-jobi L. var. ***maxima*** Makino (*Coix agrestis* var. *maxima* (Makino) Nakai)

Asia temperate, Taiwan. See *Botanical Magazine* 20: 10. 1906.

C. lacryma-jobi L. var. ***monilifer*** G. Watt

Tropical Asia, Eastern India, Malaysia, Myanmar. Hard false fruit globose and flattened, ornamental, see *Dictionary of the Economic Products of India* 493. 1887 and *Agricultural Ledger* 214. 1904.

C. lacryma-jobi L. var. ***novoguineensis*** Pilg.

New Guinea. See *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 52: 171. 1914.

C. lacryma-jobi L. var. ***stenocarpa*** (Balansa) Stapf ex Hook.f. (*Coix lacryma-jobi* var. *stenocarpa* (Oliv.) Stapf; *Coix lacryma* var. *stenocarpa* Oliv.; *Coix lacryma-jobi* var. *stenocarpa* Stapf; *Coix stenocarpa* Balansa; *Coix stenocarpa* (Oliv.) Balansa; *Coix tubulosa* Hack.)

Southeast Asia, China, India. Hard false fruit cylindrical and not striate, ornamental, used for beads, see *Hooker's Icones Plantarum* 18(3): t. 1764. 1888, *Journal de Botanique (Morot)* 4(4): 77-78. 1890, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 13(2): 260. 1890, *The Flora of British India* 7: 100. 1896.

in Thailand: boe, ma dueai khi non, ma duei kee non, phong mue thee, phong mue thi

C. puellarum Balansa (*Coix lacryma-jobi* var. *puellarum* (Balansa) A. Camus)

Southeast Asia, China, India. Perennial, ornamental purposes, see *Journal de Botanique (Morot)* 4(4): 77. 1890 and *Flore Générale de l'Indo-Chine* 7(5): 220. 1922.

in India: sachipa

in Thailand: boe mue thee, boe mue thi, ma dueai hin, ma duei hin

Colantheia McClure & E.W. Smith

From the Greek *kouleos*, *koleos*, *koleon*, *kouleon* "a sheath" and *anthele* "a type of inflorescence, a little flower," *anthe-lion* is a diminutive of *anthos* "flower, blossom," referring to the small synflorescences.

About 7 species, eastern Brazil. Bambusoideae, Bambuseae, Arthrostylydiinae, or Bambusoideae, Bambusodae, Bambuseae, perennial, very slender, sympodial, erect, weak, decumbent, scandent, woody, shrub, scrambler, hollow, climbing, leaf blades pseudopetiolate, clump forming, branch complement several, nodes with 2 ridges, 1 branch dominant, narrow sheaths, short rhizomes pachymorph, plants bisexual, inflorescence simple and exserted, a weak panicle or raceme, 1-2 spikelets slender, 1-3 glumes unequal, palea present, 3 free and membranous lodicules, 3 stamens, ovary hairy, 2 stigmas, forest, type *Colantheia cingulata* (McClure & L.B. Sm.) McClure, see *Flora Boreali-Americana* 1: 73. 1803 and *Smithsonian Contributions to Botany* 9: 1-148. 1973 [Genera of bamboos native to the New World (Gramineae: Bambusoideae)], *American Bamboos* 172-174. 1999, *Contributions from the United States National Herbarium* 39: 53. 2000, *Botanical Journal of the Linnean Society* 138(1): 45-55. Jan 2002 [Cauline anatomy of native woody bamboos in Argentina and neighbouring areas: epidermis].

Species

C. burchellii (Munro) McClure (*Arthrostyidium burchellii* Munro; *Arundinaria burchellii* (Munro) Hack.) (for the British naturalist William John Burchell, 1781-1863, in South Africa 1811-1815, Brazil 1825-1829, botanical collector, explorer, painter, writer, gardener, entomologist, 1808 Fellow of the Linnean Society (1803, in Staffeu and Menega, *Suppl. III*), author of *Travels in the Interior of Southern Africa*. London 1822-1824; see Helen M. McKay, editor, *The South African Drawings of William J. Burchell*. Johannesburg 1952; John Lindley, *The Genera and Species of Orchidaceous Plants*. London 1830-1840; J.H. Barnhart, *Biographical notes upon botanists*. 1: 282. 1965; John Hutchinson (1884-1972), *A Botanist in Southern Africa*. 625-641. London 1946; M. Gunn and L.E. Brazil. See *Repert. Spec. Nov. Regni Veg.* 7(149-151): 323. 1909.

Coleanthus J. Seidel = *Schmidtia* Tratt., *Schmidtia* Raf., *Smidetia* Raf., *Wilibalda* Sternb. ex Roth, *Wilibalda* Roth

From the Greek *koleos* “a sheath” and *anthos* “flower.”

One species, northern Asia, central Europe, North America. Pooideae, Poodae, Poeae, or Pooideae, Poeae, Agrostidinae, annual, dwarf, small, decumbent, herbaceous, auricles absent, upper leaf sheaths inflated embracing the inflorescence, narrow leaf blades linear, ligule an unfringed membrane, plants bisexual, contracted inflorescence paniculate, spikelets in globular clusters, 1-flowered, glumes lacking, lemma keeled with a short subulate awn, palea present, lodicules absent, 2 stamens, ovary glabrous, 2 stigmas, pond margins, type *Coleanthus subtilis* (Tratt.) Seidel, see *Flora des Österreichischen Kaiserthumes* 1: 12. 1816, *Systema Vegetabilium* 2: 11, 276. 1817, *Enumeratio Plantarum Phaenogamarum in Germania* 1(1): 92. 1827, Constantine Samuel Rafinesque, *Autikon botanikon. Icones plantarum select. nov. vel rariorum, etc.* 187. Philadelphia 1840, *Beiträge zur Flora der Cap Verdischen Inseln* 154. Heidelberg 1852 and *Contributions from the United States National Herbarium* 48: 237, 608, 614, 694. 2003.

Species

C. subtilis (Tratt.) Seidel (*Schmidtia subtilis* Tratt.; *Schmidtia utricularia* J. Presl & C. Presl; *Smidetia humilis* Raf.; *Wilibalda subtilis* (Tratt.) Roth; *Zizania subtilis* (Tratt.) Raspail)

Canada, U.S. Clusters of umbel-like spikelets, see *Species Plantarum* 2: 991. 1753, *Flora Cechica* 12. 1819, *Annales des Sciences Naturelles, Botanique* 5: 452, 458. 1825.

Coleataenia Griseb. = *Panicum* L.

From the Greek *koleos* “a sheath” and *tainia* “fillet, a ribbon.”

Panicoideae, Paniceae, Panicinae, type *Coleataenia gynerioides* Griseb., see *Species Plantarum* 1: 55, 58. 1753, *Flora Brasiliensis seu Enumeratio Plantarum* 2(1): 162-163. 1829, *Symbolae ad Floram Argentinam* 308. Göttingen 1879 [also in *Abhandlungen der Königlichen Gesellschaft der Wissenschaften zu Göttingen Phys. Cl.* 24(1): 1-345. 1879] and *Contr. U.S. Natl. Herb.* 15: 13-15. 1910, *Notizblatt des Botanischen Gartens und Museums zu Berlin-Dahlem* 11(104): 243. 1931, *Gramíneas Uruguayas* 341-342, f. 143. 1970, *Contributions from the United States National Herbarium* 46: 163, 306-441. 2003.

Coliquea Steud. ex Bibrá = *Chusquea* Kunth

Bambusoideae, Bambuseae, Chusqueinae, type *Coliquea quila* (Molina) Steud. ex Bibrá, see *Saggio sulla Storia Naturale del Chili ...* 154-155. 1782, *Journal de Physique, de Chimie, d'Histoire Naturelle et des Arts* 95: 151. 1822, *Synopsis Plantarum* 1: 254. 1822, *Denkschriften der Kaiserlichen Akademie der Wissenschaften. Mathematisch-naturwissenschaftliche Klasse* 5(2): 115. 1853 and *Flora Mesoamericana* 6: 202-210. 1994, *The Bamboos* 33-44. 1997 [Diversity, biogeography and evolution of *Chusquea*], Emmet J. Judziewicz et al., *American Bamboos*. 199-223. Smithsonian Institution Press, Washington and London 1999, *Contributions from the United States National Herbarium* 39: 36-52, 53. 2000.

Colladoa Cav. = *Ischaemum* L.

Probably after the Swiss physician Louis Théodore Frédéric Colladon, 1792-1862, botanist; see J.H. Barnhart, *Biographical notes upon botanists*. 1: 366. Boston 1965; T.W. Bossert, *Biographical dictionary of botanists represented in the Hunt Institute portrait collection*. 80. 1972; Ida Kaplan Langman, *A Selected Guide to the Literature on the Flowering Plants of Mexico*. 210. University of Pennsylvania Press, Philadelphia 1964.

Panicoideae, Andropogonodae, Andropogoneae, Andropogoninae, or Panicoideae, Andropogoneae, Ischaeminae, type *Colladoa distachia* Cav. [also *distachya*], see *Species Plantarum* 2: 1049. 1753, *Icones Stirpium Rariorum* 1, t. 1. 1791, *Icones et Descriptiones Plantarum, quae aut sponte ...* 5: 37, t. 460. 1799, *Systema Vegetabilium, editio decima sexta* 1: 298. 1825 and *Philippine Journal of Science* 1(Suppl.): 330. 1906, *North Amer. Fl.* 17: 94. 1909, *Flora Mesoamericana* 6: 386-387. 1994, *Contributions from the United States National Herbarium* 46: 275-276. 2003.

Colobachne P. Beauv. = Alopecurus L.

Greek *kolobos* “stunted, mutilated” and *achne* “chaff, glume.”

Pooideae, Poeae, Alopecurinae, type *Colobachne vaginata* (Willd.) P. Beauv., see *Species Plantarum* 1: 60-61. 1753, *Flora Pedemontana* 2: 232. 1785, *Der Gesellschaft Naturforschender Freunde zu Berlin, neue Schriften* 3: 44. 1801, *Essai d'une Nouvelle Agrostographie* 22, 158. 1812, *Fundamenta Agrostographiae* 59. 1820, *Enumeratio Plantarum Horti Regii Berolinensis Altera* 1: 74. 1821, *Linnaea* 21(3): 382. 1848, *Botaniska Notiser* 1851: 69. 1851, *Flora Rossica* 4(14): 640. 1853 and *Regnum Veg.* 127: 17. 1993, *Flora Mesoamericana* 6: 242. 1994, *Annals of the Missouri Botanical Garden* 81(4): 784-791. 1994, *Bot. Zhurn. (Moscow & Leningrad)* 81(5): 98-101. 1996, *Flora Mediterranea* 7: 204-213. 1997, *Watsonia* 21: 365-368. 1997, *Flora Mediterranea* 8: 307-313. 1998, *Turkish Journal of Botany* 23(4): 245-262. 1999, *Opera Botanica* 137: 1-42. 1999, *Contributions from the United States National Herbarium* 48: 97-106, 237. 2003.

Colobanthium (Reichb.) G. Taylor = Sphenopholis Scribn.

From the Greek *kolobanthes* “bearing stunted flowers,” *kolobos* “stunted, mutilated” and *anthos*.

Pooideae, Poodae, Aveneae, or Pooideae, Poeae, Aveninae, see *Der Deutsche Botaniker Herbarienbuch* 1(2): 149. 1841 and *Rhodora* 8(92): 142. 1906, *Index Kewensis* 13: 33. 1966, *Flora of Alaska and Neighboring Territories; A Manual of the Vascular Plants* i-xxi, 1-1008. 1968, *Anderson's Flora of Alaska and Adjacent Parts of Canada* i-xvi, 1-724. 1974, *Flora of the Yukon Territory* i-xvii, 1-669. 1996, *Contributions from the United States National Herbarium* 48: 614-617. 2003.

Colobanthus (Trin.) Spach = Colobanthus Bartl. (Caryophyllaceae), Sphenopholis Scribn.

Greek *kolobos* “stunted, mutilated” and *anthos* “flower.”

Pooideae, Poodae, Aveneae, or Pooideae, Poeae, Aveninae, see *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg, Sixième Série. Sciences Mathématiques, Physiques et Naturelles* 1(1): 66. 1830, *Ordines Naturales Plantarum* 305. 1830, *Reliquiae Haenkeanae* 2(1): 13, t. 49, f. 2. 1831, *Histoire Naturelle des Végétaux* 13: 163. 1841 and *Rhodora* 8(92): 142, 144. 1906, *Contributions from the United States National Herbarium* 48: 237, 614-617. 2003.

Colpodium Trinius = Catabrosella (Tzvelev) Tzvelev, Hyalopoa (Tzvelev) Tzvelev, Keniochloa Melderis, Paracolpodium (Tzvelev) Tzvelev

From the Greek *kolpodes*, *kolpoeides* “like a breast, winding, loose, like a bay, turgid, embosomed.”

Some 3 (*sensu stricto*)/20 species, montane, high altitude North temperate, Turkey, Nepal, eastern Siberia, Caucasus, Africa, Kenya, Lesotho. Pooideae, Poodae, Poeae, perennial, tufted, herbaceous, unbranched, shortly rhizomatous or stoloniferous, decumbent or erect, auricles absent, ligule an unfringed membrane, leaf blades flat or folded, plants bisexual, open inflorescence paniculate, panicle open or sometimes contracted, spikelets 1- to 4-flowered, 2 obtuse to acute glumes unequal to subequal, lower glume 1-nerved, upper glume 1- to 3-nerved, lemmas toothed and membranous, palea keels smooth and non scabrid, 2 free and membranous lodicules, 3 stamens, ovary glabrous, 2 stigmas, high mountains, a segregate from *Poa*, type *Colpodium stevenii* Trin. (*Colpodium versicolor* (Steven) Schmalh.), see *Species Plantarum* 1: 61-63. 1753, *Familles des Plantes* 2: 495. 1763, *Essai d'une nouvelle Agrostographie, ou nouveaux genres des Graminées.* 97, 119. 1812, *Fundamenta Agrostographiae* 119, t. 7. 1820, *Neue Entdeckungen im ganzen Umfang der Pflanzenkunde* 2: 37, 58. 1821, *Beiträge zur Pflanzenkunde des Russischen Reiches* 2: 64. 1845 [1846], *Flora Rossica* 4(13): 385. 1852, *Flora Orientalis* 5: 578. 1884 and *Svensk Botanisk Tidskrift* 50(4): 538, 540. 1956, *Grasses of Burma ...* 529-530. 1960, *Novosti Sist. Vyss. Rast.* 1: 5-19. 1964, *Arkticheskaia Flora SSSR* [Flora of the Russian Arctic] 2: 172. Akademija nauk SSSR Leningrad 1964, *Bot. Zhurn. (Moscow & Leningrad)* 50(9): 1320. 1965, *Novosti Sist. SSSR* 70(12): 1698-1699. 1985, *Nordic Journal of Botany* 14(6): 601-607. 1994 [The genus *Colpodium* (Gramineae) in Africa.], *Contributions from the United States National Herbarium* 48: 237-238. 2003, Elizabeth A. Kellogg and Jeffrey L. Bennetzen, “The evolution of nuclear genome structure in seed plants.” *Am. J. Bot.* 91: 1709-1725. 2004.

Species

C. chionogeiton (Pilg.) Tzvelev (*Agrostis chionogeiton* Pilg.; *Agrostis oreades* Peter; *Colpodium oreades* (Peter) E.B. Alexeev; *Keniochloa chionogeiton* (Pilg.) Melderis; *Keniochloa chionogeiton* var. *oreades* (Peter) Melderis)

Africa, Kenya. Narrow and contracted panicle, see *Notizblatt des Botanischen Gartens und Museums zu Berlin-Dahlem* 9(87): 510. 1926, *Repertorium Specierum Novarum Regni Vegetabilis, Beihefte* 40(Anhang 1): 87, f. 2. 1930, *Svensk Botanisk Tidskrift* 50(4): 540. 1956, *Novosti Sist. Vyss. Rast.* 17: 8. 1980.

C. colchicum (Albov) Woronow ex Grossh. (*Catabrosa colchica* Albov; *Paracolpodium colchicum* (Albov) Tzvelev)

Eurasia, Russia. See *Flora Kavkaza* 1: 111. 1928, *Novosti Sist. Vyss. Rast.* 1966: 33. 1966.

C. drakensbergense Hedberg & I.Hedberg

Lesotho, South Africa. See *Nordic Journal of Botany* 14(6): 606, f. 3. 1994.

C. fibrosum Trautv. (*Catabrosella fibrosa* (Trautv.) Tzvelev)

Turkey. See *Novosti Sist. Vyss. Rast.* 1966: 33. 1966.

C. hedbergii (Melderis) Tzvelev (*Catabrosa aquatica* auct.; *Keniochloa hedbergii* Melderis)

Africa, Russia, Europe. Perennial, rare, tufted to loosely tufted, prostrate or ascending, stoloniferous, basal leaf sheaths papery, leaves keeled and folded, ligule acute, panicle with spreading stiff branches, spikelets 1-flowered, glumes subequal or equal, on moist ground, wet places, temporary pools, along small streams, sedge meadows, see *Svensk Botanisk Tidskrift* 50(4): 542, f. 1,1-2, 2. 1956.

C. humile (M. Bieb.) Griseb. (*Aira humilis* M. Bieb.; *Catabrosa humilis* (M. Bieb.) Trin.; *Catabrosella humilis* (M. Bieb.) Tzvelev; *Colpodium humile* Lange, nom. illeg., non *Colpodium humile* (M. Bieb.) Griseb.; *Glyceria humilis* (M. Bieb.) Heynh.)

China, Russia, Turkey. See *Flora Taurico-Caucasica* 1: 57. 1808, *Fundamenta Agrostographiae* 136. 1820, Gustav Heynhold (1800-ca. 1860), *Nomenclator Botanicus Hortensis* 1: 361. Dresden, Leipzig 1840-1846, *Flora Rossica* 4(13): 384. 1852 and *Bot. Zhurn. (Moscow & Leningrad)* 50: 1320. 1965.

C. lanatiflorum (Roshevitz) Tzvelev (*Hyalopoa lanatiflora* (Roshev.) Tzvelev; *Poa lanatiflora* Roshev.)

Russia. See *Flora Arctica URSS* 2: 172. 1964, *Novosti Sist. Vyss. Rast.* 1966: 32. 1966.

C. oreades (Peter) E.B. Alexeev (*Agrostis oreades* Peter; *Colpodium chionogeiton* (Pilg.) Tzvelev; *Keniochloa chionogeiton* var. *oreades* (Peter) Melderis)

Russia. See *Repertorium Specierum Novarum Regni Vegetabilis, Beihefte* 40(Anhang 1): 87, f. 2. 1930, *Svensk Bot-*

anisk Tidskrift 50(4): 540. 1956, *Novosti Sist. Vyss. Rast.* 17: 8. 1980.

C. tibeticum Bor (*Paracolpodium tibeticum* (Bor) E.B. Alexeev)

India, Tibet, Himalaya. Plant robust, see *Kew Bulletin* 8(2): 270. 1953, *Novosti Sist. Vyss. Rast.* 18: 95. 1981.

C. vahlianum (Liebm.) Nevski (*Atropis vahliana* (Liebm.) K. Richt.; *Glyceria vahliana* (Liebm.) Th. Fr.; *Phippsia vahliana* (Liebm.) Á. Löve and D. Löve; *Poa vahliana* Liebm.; *Puccinellia vahliana* (Liebm.) Scribn. and Merr.; *Puccinellia vahliana* (Liebm.) Tolm., nom. illeg., non *Puccinellia vahliana* (Liebm.) Scribn. & Merr.)

Canada, Russia. Caespitose, curly roots, see *Chloris Melvilliana* 27. 1823, *Fl. Danica* 2401. 1845, *Flora italiana, ossia descrizione delle piante ...* 1: 366. 1848, *Öfversigt af Förhandlingar: Kongl. Svenska Vetenskaps-Akademiens* 26: 139-140. 1869, *Plantae Europaeae* 1: 92. 1890 and *Contributions from the United States National Herbarium* 13: 78. 1910, *Fl. SSSR* 2: 436, 470. 1934 [*Flora URSS* 2: 436. 1934], *Botaniska Notiser* 128(4): 501. 1975 [1976], *Contributions from the United States National Herbarium* 48: 591-601. 2003.

C. variegatum (Boiss.) Griseb. (*Catabrosa variegata* Boiss.; *Catabrosella variegatum* (Boiss.) Tzvelev, also spelled *variegata*)

Russia, Turkey. In damp soil, alpine slopes, see *Diagnoses plantarum orientalium novarum, ser. 1*, 1(5): 1. 1844, *Flora Rossica* 4(13): 384. 1852 and *Novosti Sist. Vyss. Rast.* 1966: 32. 1966.

C. versicolor (Steven) Schmalh. (*Agrostis versicolor* Steven; *Catabrosa versicolor* (Steven) Boiss.; *Colpodium schelkownikowii* Grossh.; *Colpodium versicolor* (Steven) Woronow ex Grossh.; *Colpodium stevenii* Trin.)

Russia. See *Fundamenta Agrostographiae* 119, t. 7. 1820, *Flora Orientalis* 5: 579. 1884 and *Flora Kavkaza* 1: 111, 127. 1928.

C. wallichii (Hook.f. ex Stapf) Bor (*Catabrosa wallichii* Hook.f. ex Stapf; *Paracolpodium wallichii* (Hook.f. ex Stapf) E.B. Alexeev)

India, Bhutan, Sikkim. Inflorescence a raceme, glumes dark purple, see *The Flora of British India* 7(22): 312. 1897 [1896] and *Kew Bulletin* 1953: 270. 1953, *Novosti Sist. Vyss. Rast.* 18: 94. 1981.

Commelinidium Stapf = Acroceras Stapf

Resembling *Commelina*.

Three species, tropical Africa. Panicoideae, Paniceae, Setariinae, or Panicoideae, Paniceae, Panicinae, perennial, herbaceous, slender, nonwoody, branched, coarse, solid, rhizomatous or stoloniferous, usually with long prostrate

base, trailing, creeping or decumbent-based culms, leaning, often rooting at the lower nodes, auricles absent, narrow membranous ligule, leaves lanceolate to linear-lanceolate to ovate-lanceolate, plants bisexual, inflorescence paniculate or spicate, solitary or paired spikelets, florets 2, lower floret sterile or male, upper floret bisexual or perfect, 2 very unequal glumes, lower glume 3- to 5-nerved, upper glume 5-nerved, palea present, 2 fleshy and free lodicules, stamens 3, ovary glabrous, stigmas 2, shade and open habitats, near running fresh water, understory, damp places, shallow water, marshy ground, forests, stream and lake margins, often referred to *Acroceras*, type *Commelinidium gabunense* (Hack.) Stapf, see *North American Flora* 3(2): 200, 210. 1915, *Flora of Tropical Africa* 9: 621-622, 627. 1920, *Bulletin du Muséum National d'Histoire Naturelle (Paris)* 26(7): 664. 1921 [1920], *Notizblatt des Botanischen Gartens und Museums zu Berlin-Dahlem* 11(104): 240. 1931, *Heredity: An International Journal of Genetics* 3: 369-374. 1949, *Bull. Soc. Bot. France* 97: 84-85. 1950, *Cytologia* 19: 97-103. 1954, *Grasses of Burma ...* 275-276. 1960, *Prodromus einer Flora von Südwestafrika* 160: 1-228. 1970, *Brittonia* 23(3): 293-324. 1971, *Canadian Journal of Botany* 52(5): 1075-1090. 1974, *Las Gramíneas de México* 1: 1-260. 1983, *Darwiniana* 28(1-4): 191-217. 1987[1988], *Darwiniana* 30(1-4): 87-94. 1990, *Flora of the Guianas. Series A, Phanerogams* 8: 42-45. 1990, *Flora Mesoamericana* 6: 329. 1994, *Flora of Ethiopia and Eritrea* 7: 209-210. 1995, *Contributions from the United States National Herbarium* 46: 13-14. 2003.

Species

C. gabunense (Hack.) Stapf (*Acroceras gabunense* (Hack.) Clayton; *Commelinidium mayumbense* (Franchet) Stapf; *Commelinidium nervosum* Stapf; *Echinochloa nervosa* (Stapf) Roberty; *Panicum gabunense* Hack.; *Panicum hensii* K. Schum.; *Panicum mayumbense* Franch.)

West tropical Africa, Gabon, Tanzania. Perennial, scrambling, prostrate at the base, rooting at the lower nodes, leaf blades ovate, fodder, found in forest shade, see *Essai d'une Nouvelle Agrostographie* 52, 53, t. 11, f. 1. 1812, *Verhandlungen des Botanischen Vereins für die Provinz Brandenburg und die angrenzenden Länder* 31: 70. 1889, *Bulletin de la Société d'Histoire Naturelle d'Autun* 8: 343. 1895, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 24(3): 332. 1897 and *Flora of Tropical Africa* 9: 627-629. 1920, *Petite Flore de l'Ouest-Africain* 398. 1954, *Bull. Inst. Franç. Afrique Noire Sér. A*, 17: 64. 1955, *Kew Bulletin* 34(3): 557. 1979 [1980].

in Sierra Leone: ngale

Comopyrum (Jaub.) Á. Löve = *Aegilops* L., *Comopyrum* (Jaub. & Spach) Á. Löve, *Comopyrum* Á. Löve

From the Greek *kome* "hair of the head, tuft of hairs" and *pyros* "grain, wheat."

Pooideae, Triticeae, Triticinae, see *Species Plantarum* 2: 1050-1051. 1753, *Flora Graeca* 1: 75, t. 94. 1806, *Flora Orientalis* 5: 675. 1884 and *Repertorium Specierum Novarum Regni Vegetabilis* Beih. 55: 84, 90, 117. 1929, *Blumea, Supplement* 3: 15, 17. 1946, *Grasses of Burma, Ceylon, India and Pakistan (excluding Bambuseae)* 653-655. 1960, *Feddes Repert.* 91: 225-228, 233-234, 236. 1980, *Biologisches Zentralblatt* 101(2): 206-208. 1982, *Feddes Repert.* 95(7-8): 493, 495. 1984, *Taxon* 41: 552-583. 1992, *Agric. Univ. Wageningen Pap.* 94-7: 1-512. 1994, *Taxon* 44: 611-612. 1995, *Flora de Veracruz* 114: 1-16. 2000, *Contributions from the United States National Herbarium* 48: 20-23, 238. 2003.

Corethrum Vahl

From the Greek *korethron* "broom."

Name of uncertain application, type *Corethrum bromoides* Vahl, see *Skrifter af Naturhistorie-Selskabet* 6: 85. 1810 and *Genera Graminum* 376. 1999.

Coridochloa Nees = *Alloteropsis* Presl

Greek *koris*, *koridos* "a species of *Hypericum*, a bug" and *chloe*, *chloa* "grass, young grass"; see Robert Wight and G. Arnott Walker Arnott, *The Edinburgh New Philosophical Society*. 15: 381. 1833.

Panicoideae, Panicodae, Paniceae, Setariinae, or Panicoideae, Paniceae, Paspalinae, type *Coridochloa cimicina* (L.) Nees ex B.D. Jacks., see *Contributions from the United States National Herbarium* 12(6): 210. 1909, F.M. Bailey, in *Queensland Agricultural Journal*. 27: 69, t. XIX. 1911, *Annali di Botanica* 13: 47. 1914, *Willdenowia* 4: 209, 21. 1966, *Flora of Tropical East Africa* 451-898. 1982, *Annals of the Missouri Botanical Garden* 75: 866-873. 1988, *Botanical Journal of the Linnean Society* 97: 255-259. 1988, *ASBS Symposium 1990: Indo-Pacific Biogeography*, 14. 1990, *Contributions from the United States National Herbarium* 46: 16, 163. 2003.

Cornucopiae L.

Cornucopiae, the emblem of fruitfulness and abundance.

Two species, eastern Mediterranean, Iraq. Pooideae, Poodae, Aveneae, annual, branched, herbaceous, auricles absent, narrow leaf blades linear acuminate, upper sheaths

inflated subtending 1-several panicles, inflorescence capitate, panicle with dentate cupuliform involucre, 2 glumes subequal, lower glume 3-nerved, upper glume 2- to 3-nerved, palea and lodicules lacking, 3 stamens, ovary glabrous, 2 stigmas, type *Cornucopiae cucullatum* L. (*Alopecurus cornucopiae* (L.) Trin.), see *Species Plantarum* 1: 54, 60-61. 1753, *Flora Caroliniana, secundum ...* 73-74. 1788, *Mém. Acad. Imp. Sci. Saint Pétersbourg, Sér. 6, Sci. Math., Seconde Pt. Sci. Nat.* 6,4(1-2): 46. 1840, *Journal of the Linnean Society, Botany* 24: 440. 1888 and *Repertorium Specierum Novarum Regni Vegetabilis* 17(19-30): 293. 1921, *Regnum Veg.* 127: 38. 1993.

Species

C. alopecuroides L.

Mediterranean. See *Systema Naturae, edition 12* 2: 85. 1767, *Mant. Pl.* 29. 1767 and *Taxon* 49(2): 249. 2000.

C. cucullatum L. (*Alopecurus cornucopiae* (L.) Trin.)

Mediterranean. See *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg, Sixième Série. Sciences Mathématiques, Physiques et Naturelles. Seconde Partie: Sciences Naturelles* 6,4(1-2): 46. 1840, *Flora* 68(7): 126. 1885 and *Kew Bulletin* 20: 446. 1966.

Cortaderia Stapf = Moorea Lemaire

From *cortadera*, the Argentine name; from the Spanish *cortar* "to cut, to harvest, pick," from the Latin *curto, avi, atum, are (curtus)* "to shorten"; the plant has sharp-edged leaves or leaf blades. "Que rodea una laguna/con su pajonal dorado/de filosa cortadera/coronada de penachos." (Hilario Ascasubi, *Santos Vega*).

About 15-27 species, mostly South America, New Zealand. Arundinoideae, Danthonieae, Cortaderiinae, or Danthonioideae, Danthonieae, perennial, large, erect, densely tussocky, caespitose, robust and coarse, hollow, unbranched, ligule present, leaves mostly basal or crowded at the base of flowering shoot, auricles absent, leaf blades linear and harsh, ligule a dense rim of hairs, plants bisexual, dioecious or gynodioecious, inflorescence a small or large silvery silky plumose branched panicle, spikelets unisexual or occasionally hermaphrodite, 2-5 developed florets and a rudiment, florets hermaphrodite or female on separate plants (gynodioecious), with hermaphrodite florets or without hermaphrodite florets, glumes transparent and persistent 1- to 3-nerved, several hairy white and papery lemmas, lemmas awned or slender-pointed, the median lemma awn not strongly flattened, laterals lemmas present or absent, callus in female long silky-hairy and pointed, palea keeled, 2 fleshy and ciliate lodicules, stamens 3, ovary glabrous, plumose stigmas, noxious weed species, in weedy places, pampas, cultivated, ornamental, lawn specimens, wetter areas, open habitats, a rather heterogeneous genus, inter-

grading with *Chionochloa* Zotov, type *Cortaderia argentea* (Nees) Stapf (*Cortaderia selloana* (Schultes & Schultes f.) Asch. & Graebner), see *L'illustration horticole* 2: Misc. 14-15. 1855, *The Gardeners' Chronicle*. Ser. 3, 22: 378, 396. 1897 and *Synopsis der mitteleuropäischen Flora* 2(1): 325. 1900, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 37: 374. 1906, *Contributions from the United States National Herbarium* 24(8): 291-556. 1927, *Field Museum of Natural History, Botanical Series* 13(1/1): 96-261. 1936, *Contributions from the Gray Herbarium of Harvard University* 184: 1-223. 1958, *Bol. in English: pampas grass

in Colombia: carmín, pasto de trenza

C. archboldii (Hitchc.) Connor & Edgar (*Chionochloa archboldii* (Hitchc.) Conert; *Danthonia archboldii* Hitchc.) New Guinea, New Zealand. See *Brittonia* 2(2): 114. 1936, *Taxon* 23(4): 596. 1974, *Senckenbergiana Biologica* 56: 156. 1975.

C. atacamensis (Phil.) Pilg. (*Gynerium atacamense* Phil.) Chile, Argentina, Bolivia. See *Linnaea* 33(3-4): 289. 1864 and *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 37: 374. 1906, *Syst. Anat. Arundineae* 90. 1961.

in English: pampas grass, Selloa pampas grass

C. bifida Pilger (*Cortaderia aristata* Pilg.; *Cortaderia bifida* var. *bifida*; *Cortaderia bifida* var. *grandiflora* Henrard; *Cortaderia trianae* Stapf ex Conert)

South America, Peru, Bolivia, Colombia. Perennial, caespitose, erect, large, tussocky, leaf blades flat or involute, old leaf sheaths curling at the base, ligule a rim of hairs, loose terminal panicle oblong with scabrous branches or shortly hispid, 2-4 flowered with a small rudiment, glumes subequal, lower lemma pilose, páramos, roadsides, scrub forests, subpáramos, see *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 37: 374-375. 1906, *Mededeelingen van's Rijks-Herbarium* 40: 67. 1921, *Die Systematik und Anatomie der Arundineae* 100-101. 1961.

C. boliviensis M. Lyle (*Cortaderia bifida* var. *grandiflora* Henrard)

Chile, Argentina, Bolivia. Leaves basal, leaf blades flat or involute, loose terminal panicle oblong, glumes subequal, lower lemma pilose, see *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 37: 374. 1906, *Mededeelingen van's Rijks-Herbarium* 40: 67. 1921, *Novon* 6(1): 72, f. 1-2. 1996.

C. columbiana (Pilg.) Pilg. (*Cortaderia parviflora* Swallen; *Gynerium columbianum* Pilg.)

Colombia. See *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 27: 31. 1900, *Contributions from the United States National Herbarium* 29(6): 253. 1949.

C. fulvida (Buchanan) Zotov (*Arundo conspicua* var. *fulvida* (Buchanan) Kirk; *Arundo fulvida* Buchanan)

New Zealand. Robust, coarse, stout, erect, tussock-forming, caespitose, green, glabrous, contra-ligule absent, leaves narrow and curved to flexible, seed heads compact, tawny and pale panicles with pendent branches, spikelets 1- to 3-flowered, glumes more or less equal, pioneer grass, ornamental, attracts birds, fast growing, riparian, useful for erosion control and slope stabilisation, provides wind shelter, high wind and salt wind tolerance, occurs in swamps, in open stream-sides, margins of forests, stream banks, damp sites, open areas, wetland margins, clearings, roadsides, see *Transactions and Proceedings of the New Zealand Institute* 6: 242. 1874, *T.N.Z.I.* 10: app. xliii. 1879 and *New Zealand Journal of Botany* 1: 84. 1963.

in New Zealand: toetoe, kakaho

C. hapalotricha (Pilg.) Conert (*Cortaderia scabriflora* Swallen; *Danthonia hapalotricha* Pilg.) (from the Greek *hapalos* "soft, tender, delicate, weak" and *thrix, trichos* "hair")

Peru, Bolivia, Colombia, Venezuela, Ecuador, Costa Rica. Perennial, erect, caespitose, leaf blades convolute or flat, foliage crowded at the base, leaves pungent and rigid, contracted terminal panicle oblong or ovate, panicle branches long-hairy, glumes equal or subequal, lower lemma pilose, central awn straight, palea loosely pilose, páramos, open habitats, often in swamps, lakeshores, see *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 25: 715. 1898 and *Contributions from the United States National Herbarium* 29(6): 252. 1949, *Die Systematik und Anatomie der Arundineae* 102-103. 1961, *Taxon* 23(4): 595-605. 1974, *Fieldiana: Botany, New Series* 4: 1-608. 1980, *Taxon* 32(4): 633-634. 1983, Volkmar Vareschi (1906-1991), *Flora de Los Páramos de Venezuela*. 1991, *Ruizia* 13: 1-480. 1993, *AAU Reports* 34: 1-443. 1994, *Flora Mesoamericana* 6: 251-252. 1994.

C. jubata (Lemoine) Stapf (*Arundo quila* Molina; *Coliquea quila* (Molina) Steud. ex Bibrá; *Cortaderia atacamensis* (Phil.) Pilger; *Cortaderia jubata* (Lemoine ex Carrière) Stapf; *Cortaderia quila* (Nees & Mey.) Stapf; *Cortaderia quila* (Molina) Stapf; *Gynerium jubatum* Lemoine ex Carrière; *Gynerium pygmaeum* Meyen; *Gynerium quila* (Molina) Nees & Meyen; *Gynerium quila* var. *pygmaeum* Nees; *Moorea quila* (Molina) Stapf)

Southern America, Peru, Ecuador, Argentina, Bolivia, Andes. Perennial, deep dark green, large and robust tussock grass, densely tufted, erect, sheaths of mature plants with long hairs, ligule a dense rim of hairs, leaves mostly basal arching and scabrous, margins rough and cutting, loose and feathery panicle, branches nodding or drooping, plants dioecious (staminate and pistillate flowers on different plants), male spikelets covered with long hairs, glumes unequal, lemma scabrid, lodicules lobed or simple, noxious weed species naturalized elsewhere, produces abundant seeds annually and establishes rapidly on bare soil, ornamental, useful for erosion control, grown to control erosion of mine dumps, growing in disturbed areas, dry slopes, moist sites, landslides, waste places, roadsides, railway lines, coastal and lowland shrub, open rocky sites, in grazed areas, sand dunes, coastal dunes, grasslands, clearings, forest margins, scrub, see *Reise um die Erde* 1: 484. 1834, *Gramineae* 21-22, 153-154. 1841, *Nova Acta Phys.-Med. Acad. Caes. Leop.-Carol. Nat. Cur.* 19(Suppl. 1): 153-154. 1843, *Revue Horticole* 50: 449. 1878, *Gardener's Chronicle, ser. 3* 22(571): 396. 1897, *Botanical Magazine* 124: t. 7607. 1898 and *Contributions from the Gray Herbarium of Harvard University* 184: 1-223. 1958, *Taxon* 23: 598-599. 1974, *Revista de Ciencias (San Marcos)* 74: 48-57. 1986, *Fieldiana: Botany, New Series* 24: 1-126. 1990, *Publicaciones del Museo de Historia Natural: Universidad Nacional Mayor de San Marcos: Serie B: Botánica* 34: 1-37. 1990, *New Zealand Journal of Botany* 29: 117-129. 1991, Timmins, Susan M. and Ian W. in South Africa: pampasgras, silwergras

in Mexico: plum de las pampas

C. sericantha (Steud.) Hitchc. (*Danthonia jubata* Sodiro; *Danthonia sericantha* Steud.)

Colombia, Ecuador, Peru. Perennial, tussocky, low, erect, caespitose, woody, robust, foliage spreading and stiff, leaf sheaths densely hairy, ligule a dense rim of white hairs, leaf base waxy, leaf blades tapering to a sharp point at the apex, short dense panicle contracted, panicle branches densely long hairy, 2-3 florets and a rudiment, dry areas, along roads, slopes, swampy areas, wet soils, near lakes and on lakeshores, along streams, wet páramos, boggy plains, see *Synopsis Plantarum Glumacearum* 1: 246. 1854 and *Contributions from the United States National Herbarium* 24(8): 348. 1927, *Revista del Colegio Nacional Vicente Rocafuerte* 12: 91. 1930, *Taxon* 23: 602. 1974, *Taxon* 32(4): 633-634. 1983.

C. speciosa (Nees & Meyen ex Nees) Stapf (*Cortaderia speciosa* (Nees & Meyen) Stapf; *Gynerium argenteum* var. *strictum* E. Desv.; *Gynerium speciosum* Nees & Meyen ex Nees; *Gynerium speciosum* Nees & Meyen; *Moorea speciosa* (Nees & Meyen ex Nees) Stapf; *Moorea speciosa* (Nees & Meyen) Stapf)

Chile, Argentina, Bolivia. Caespitose, leaves mainly basal, ligules ciliate, leaf blades linear, panicle oblong, lemmas densely pilose mucronate or shortly awned, see *Flora Brasiliensis seu Enumeratio Plantarum* 2: 462. 1829, *Gramineae* 21. 1841, *Nova Acta Phys.-Med. Acad. Caes. Leop.-Carol. Nat. Cur.* 19(Suppl. 1): 153. 1843, *Flora Chilena* 6: 328. 1854, *Gardener's Chronicle, ser. 3* 22(571): 396. 1897 and *Gardener's Chronicle, ser. 3* 34: 400. 1903, *Taxon* 23: 603. 1974, *Darwiniana* 33: 51. 1995.

in Spanish: cortadera

C. splendens Connor

New Zealand. Robust tussock, green, coarse, tall, hairy, rhizomatous with long stout rhizomes, leaf sheath densely hairy, contra-ligule present, leaf blade flexible, plumose inflorescence erect or nodding, seed heads compact and pale brown, glumes equal, occurs in coastal sand dunes and cliff faces, sand hills, rocks, see *New Zealand Journal of Botany* 9(3): 519. 1971, *Taxon* 23: 595-605. 1974, *New Zealand Journal of Botany* 29: 117-129. 1991.

in New Zealand: toetoe

C. toetoe Zotov

New Zealand. Robust tussock, green, coarse, tall, erect, hairy, waxy, ivory glabrous sheath, stiff leaf blades, sharp leaves, large plumose panicle, erect seed heads creamy white, glumes equal, pioneer grass, attracts birds, weaving material, anti-inflammatory uses, occurs in dry to boggy conditions, wetlands, damp and dry soils, coastal and inland, swamps, roadsides and clearings, poor soils, see *New Zealand Journal of Botany* 1: 85. 1963.

in New Zealand: toetoe, native toetoe, kakaho

C. trianae Stapf ex Conert (*Cortaderia bifida* Pilg.) (for the Colombian (b. Zipaquirá) botanist José Jerónimo (or Gerónimo) Triana, 1834-1890 (d. Paris), traveler, plant collector, botanical explorer, his writings include *Nuevos jeneros i especies de plantas para la flora Neo-Granadina*. Bogotá 1854 and *Prodromus florum Novogranatensis*. Paris 1862-1867; see Enrique Pérez Arbeláez, in *D.S.B.* 13: 463-464. 1981; J.H. Barnhart, *Biographical notes upon botanists*. 3: 400. 1965)

Colombia. Pistillate, see *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 37: 374-375. 1906, *Mededeelingen van's Rijks-Herbarium* 40: 67. 1921, *Die Systematik und Anatomie der Arundineae* 100-101. 1961.

C. turbaria H.E. Connor

New Zealand, Chatham Islands. Vulnerable endangered species, perennial, tall, stout, tussock-forming, leaf sheath densely hairy, leaf blade pointed, leaves narrow and scabrid, dense plumose inflorescence, branched panicles, spikelets with 2 hermaphrodite florets, all flowers hermaphrodite, glumes more or less equal, occurs in peaty swamps, stream margins, see *New Zealand Journal of Botany* 25(1): 167. 1987.

in New Zealand: Chatham Island toetoe, Chatham Island toitoi

C. vaginata Swallen

South America, Colombia, Brazil. See *Sellowia* 7: 9. 1956.

Corycarpus Spreng. = *Diarrhena* P. Beauv., *Korycarpus* Lag., *Korycarpus Zea* ex Lag.

Orth. var. *Korycarpus*, from the Greek *korys*, *korythos* "a helmet" and *karpos* "fruit."

Pooideae, Diarrheneae, see *Systema Vegetabilium, editio decima sexta* 1: 123. 1824 and *Flora of the Prairies and Plains of Central North America* 114. 1932, E.D. Merrill, *Index rafinesquianus*. The plant names published by C.S. Rafinesque, etc. 75. Jamaica Plain, Massachusetts, U.S. 1949, *Bulletin of the Torrey Botanical Club* 118: 128-136. 1991 [A revision of *Diarrhena* (Poaceae) in the U.S.], *Contributions from the United States National Herbarium* 48: 238, 269, 419. 2003.

Corynephorus P. Beauv. = *Anachortus*
Jirásek & Chrtek, *Weingaertneria* Bernh.

From the Greek *koryne* “a club” and *phoros* “bearing, carrying,” *phero*, *phoreo* “to bear,” alluding to the extraordinary awns.

About 5 species, Iran, Europe, Mediterranean. Pooideae, Poodae, Aveneae, or Pooideae, Poaceae, Airinae, annual or perennial, tufted, herbaceous, leaf blades narrow linear, auricles absent, ligule an unfringed membrane, plants bisexual, open or contracted panicle, spikelets 2-flowered, hairs at the base of the floret, 2 glumes subequal, lower glume 1-nerved, upper glume 1- to 3-nerved, lemmas membranous and rounded, basal awns with twisted column, awns with a ring of hairs, palea present, 2 free and membranous lodicules, 3 stamens, ovary glabrous, 2 stigmas, open habitats, in sandy places, on dunes, often coastal, type *Corynephorus canescens* (L.) P. Beauv., see *Species Plantarum* 61-63, 65, 79-81. 1753, Johann Jacob Bernhardt (1774-1850), *Systematisches Verzeichnis* 23, 51. Cottea Kunth

For the German patron of science Johann Georg Cotta von Cottendorf, 1796-1863.

One species, America, southern U.S., Argentina. Chloridoideae, Pappophoreae, or Chloridoideae, Eragrostideae, Cotteinae, perennial, loosely caespitose, herbaceous, erect or ascending or geniculate, unarmed, branched, internodes solid, tuberous, auricles absent, leaf sheaths villous to pilose, hidden cleistogenes in the basal leaf sheaths, glandular leaves not pungent, ligule fringed, plants bisexual, cleistogamous or chasmogamous, inflorescence paniculate, panicles open or narrow or contracted, spikelets pubescent and pedicellate, 4-8 florets and a rudiment, female-fertile lemmas irregularly lobed, 2 glumes subequal, lemmas awned, 7-13 awns antrorsely barbed, palea keels ciliate, 2 lodicules, 3 stamens, ovary glabrous, cleistogenes within the lower sheaths, rachilla disarticulating between florets, open habitats, steppes, plains, dry areas, hills, coastal lowland, type *Cottea pappophoroides* Kunth, see *Révision des Graminées* 1: 84. 1829 and *Ecología en Bolivia* 34: 45-70. 2000, *Contributions from the United States National Herbarium* 41: 56. 2001.

Species

C. pappophoroides Kunth

Mexico, Peru. Perennial, more or less pubescent, wiry, knotty base with cleistogenes, leaf sheaths furrowed, leaf blades linear, panicle ovate-lanceolate, spikelets ovate and awned, glumes lanceolate and awned, ornamental, forage.

in English: cotta grass, cottea

in Mexico: cotea, pelucilla

Craepalia Schrank = *Lolium* L.

Pooideae, Poeae, Loliinae, type *Craepalia temulenta* (L.) Schrank, see *Species Plantarum* 1: 83. 1753, *Observations sur les Graminées de la Flore Belgique* 97, 99. 1823 [1824], *Baiersche Flora* 1: 102, 382. 1789 and *Grasses of Ceylon* 45. 1956, *Techn. Bull. U.S.D.A. (or U.S. Dept. Agric. Tech. Bull., or Technical Bulletin, United States Department of Agriculture)* 1392: 1-65. 1968, *Dominguezia* 1: 1-23. 1978, *Bot. J. Linn. Soc.* 108: 408. 1992, *Novon* 3(3): 239-243. 1993, *Fragmenta Floristica et Geobotanica* 41(2): 521-536. 1996, *Contributions from the United States National Herbarium* 48: 239, 426-431. 2003.

Craspedorhachis Benth.

From the Greek *kraspedon* "a fringe, border" and *rhachis* "rachis, axis, midrib of a leaf."

About 2-5/6 species, southern tropical Africa, North and South America. Chloridoideae, Chlorideae, perennial, herbaceous, unarmed, often stoloniferous or shortly rhizomatous, auricles absent, ligule fringed, plants bisexual, inflorescence with several racemes more or less digitate, spikelets dorsally compressed, 2 glumes subequal and

membranous, lower glume keeled, upper glume deciduous and rounded, lemma obtuse, palea present, lemma and palea hairy or glabrous, 2 fleshy lodicules, ovary glabrous, open habitats, sandy savannah, on sand dunes, sandy soils, sandy loam, similar to *Willkommia* and *Microchloa*, type *Craspedorhachis africana* Benth., see *Fragmenta Botanica* 77. 1809, *Tentamen Florae Abyssinicae* ... 2: 409. 1850, *Hooker's Icones Plantarum* 14: 58, t. 1377. 1882, *Verhandlungen des Botanischen Vereins für die Provinz Brandenburg und die angrenzenden Länder* 30: 145. 1888 and *Bulletin de l'Herbier Boissier, sér. 2, 1*: 770. 1901, *Botanical Gazette* 35: 283, f. 1-2. 1903, *Physis. Revista de la Sociedad Argentina de Ciencias Naturales* 8: 78. 1925, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 74: 27. 1947, *Grasses and Pastures of South Africa* 205, f. 182. 1955, *Notulae Systematicae. Herbarium du Museum de Paris* 15(2): 134. 1956, *Adansonia, sér. 2, 8*: 515. 1968.

Species

C. africana Benth.

Tropical Africa. Perennial, tufted, erect, rhizomatous, lemma and palea hairy, considered rare in South Africa, see *Hooker's Icones Plantarum* 14: 58, t. 1377. 1882.

C. africana Benth. var. *madecassa* A. Camus

Madagascar. See *Notulae Systematicae. Herbarium du Museum de Paris* 15: 135. 1956.

C. digitata Kupicha & Cope

Zimbabwe. See *Kew Bulletin* 40(4): 89-90. 1985.

C. rhodesiana Rendle

Africa. Perennial, tufted, erect, lemma and palea glabrous, common on sand dunes, along dry river beds, see *Journal of the Linnean Society, Botany* 40: 233, t. 5, f. 5-13. 1911.

C. rhodesiana Rendle var. *gracilior* C.E. Hubb.

Africa. See *Bulletin of Miscellaneous Information Kew* 1949: 36. 1949.

Crassipes Swallen = *Sclerochloa* P. Beauv.

From the Latin *crassus, a, um* "thick" and *pes, pedis* "foot," thick-footed or thick-stemmed.

Pooideae, Poeae, Puccinelliinae, type *Crassipes annuus* Swallen, see *Species Plantarum* 1: 72. 1753, *Essai d'une Nouvelle Agrostographie* 97-98, 174, 177. 1812, *Aug Pyrami de Candolle Botanicon Gallicum* 1: 522. 1828 and *Contr. U.S. Natl. Herb.* 10: 2. 1906, *American Journal of Botany* 18(8): 684-685, f. 1-4. 1931, *Journal of Cytology and Genetics* 21: 155. 1986, D.M. Brandenburg, J.R. Estes & J.W. Thieret, "Hard Grass (*Sclerochloa dura*, Poaceae) in the United States." *Sida*. 14(3): 369-376. 1991, *Cytologia* 56: 437-452. 1991, *Flora Mediterranea* 8: 307-313. 1998,

Contributions from the United States National Herbarium 48: 239, 608-609. 2003.

Cremopyrum Schur = *Eremopyrum* (Ledeb.)
Jaub. & Spach

Greek *kremao* “to hang” and *pyros* “grain, wheat.”

Pooideae, Triticaceae, Hordeinae, see *Enumeratio Plantarum Transsilvaniae* 807-808. 1866 and *Contributions from the United States National Herbarium* 48: 311-312. 2003.

Criciuma Soderstr. & Londoño = *Bambusa*
Schreber, *Eremocaulon* Soderstr. & Londoño

A vernacular name, or perhaps from *krikion*, the diminutive of the Greek *krikos* “ring, armband.”

One species, Brazil. Bambusoideae, Bambuseae, Guaduiniae, woody, solid, vinelike, hard, erect, pendent, loosely clumped, shortly rhizomatous, foliage leaf with asymmetrical central midnerve, inflorescence terminal, elongate pseudospikelets, florets linear-lanceolate, 3 lodicules, 6 stamens, ovary glabrous, 2 plumose stigmas, type *Criciuma asymmetrica* Soderstr. & Londoño, see *American Journal of Botany* 74(1): 27-39. 1987 [2 new genera of Brazilian bamboos related to *Guadua* (Poaceae: Bambusoideae: Bambuseae.)], Emmet J. Judziewicz et al., *American Bamboos* 234-238. 1999, *Contributions from the United States National Herbarium* 39: 29-35, 54-55. 2000, *Systematic Botany* 27(4): 703-721. 2002.

Species

C. asymmetrica Soderstr. & Londoño (*Eremocaulon asymmetricum* (Soderstr. & Londoño) Londoño)

Brazil. Climbing, ascending, culm leaves with reflexed blades, pseudospikelets linear-lanceolate, sandy places, forests, see *American Journal of Botany* 74(1): 35, f. 1, 2, 5a, 5b. 1987, *Systematic Botany* 27(4): 711-714, f. 4-5. 2002.

Crinipes Hochst.

Latin *crinis* “hair” and *pes* “foot,” referring to the awn.

Two species, Sudan, Ethiopia, Uganda. Arundineae, or Arundinoideae, Danthonieae, perennial, herbaceous, caespitose, tussocky, auricles absent, leaves basal, ligule fringed or a ciliate rim, tough leaf blades narrowly linear to linear-lanceolate, plants bisexual, inflorescence paniculate, panicle oblong to ovate to elliptic-oblong, spikelets flattened and oblong, 2- to 3-flowered, 2 unequal glumes acuminate or shortly awned, floret callus bearded, lemmas membranous entire or toothed, long awn straight or flexuous, palea glabrous, 2 free lodicules glabrous, 3 stamens, ovary glabrous, 2 stigmas, moist places, moist rock, type

Crinipes abyssinicus (Hochst. ex A. Braun) Hochst., see *Flore Française. Troisième Édition* 3: 32. 1805, *Prodromus Florae Novae Hollandiae* 185. 1810, *Flora* 24: 20. 1841, *Flora* 38: 279-280. 1855 and *Kew Bulletin* 1934: 200. 1934, *Kew Bulletin* 1935: 306. 1935, *Kew Bulletin* 12: 51-52, 54-58. 1957, *Bothalia* 9: 134. 1966.

Species

C. abyssinicus (Hochst. ex A. Braun) Hochst. (*Danthonia abyssinica* Hochst. ex A. Braun; *Danthonia tenuiglumis* Steud.; *Triraphis abyssinica* (Hochst. ex A. Braun) Nees ex Engl.)

Abyssinia. Perennial, tough, pendulous, forming large dense tussocks, panicle narrowly oblong, glumes linear-lanceolate, see *Flora* 24(45): 712. 1841, *Synopsis Plantarum Glumacearum* 1: 244. 1854, *Abhandlungen der Königlichen Akademie der Wissenschaften in Berlin* 2(1): 132. 1891 [1892].

C. longifolius C.E. Hubb.

Abyssinia. Perennial, coarse, pendulous, forming large dense tussocks, glumes lanceolate, lemmas lanceolate-oblong, see *Kew Bulletin* 1935(5): 306-307. 1935.

Critesion Raf. = *Hordeum* L.

Greek *crithe*, Akkadian *qaritum*, *qiritu* “granary, store room,” Hebrew *qorah* “beam, roof,” see *Journal de Physique, de Chimie, d’Histoire Naturelle et des Arts* 89: 103. 1819.

About 35 species, temperate regions. Pooideae, Triticodae, Triticaceae, or Pooideae, Triticaceae, Hordeinae, annual or perennial, tufted, herbaceous, leaf sheath membranous, ligule membranous, auricles present or absent, plants bisexual, flowers in dense and narrow spike-like raceme, spikelets in triads at each node, lateral spikelets usually smaller or incomplete or male, central spikelet usually hermaphrodite, rachis fragile, glumes 2, lemma of central spikelet rigid and awned or unarmed, lemmas of lateral florets usually reduced, palea nerved, 2 lodicules, stamens 3, ovary with hairy corona, tolerant of saline soils, growing in dry soils, sandy places, rather moist habitats, salty sites, there is considerable taxonomic confusion concerning this genus, formerly included in *Hordeum* L. as subgen., type *Critesion geniculatum* Raf., see *Species Plantarum* 1: 84-85. 1753, *Journal de Physique, de Chimie, d’Histoire Naturelle et des Arts* 89: 103. 1819 and *Canad. J. Bot.* 37: 679. 1959, *Nord. J. Bot.* 9: 1-10. 1989, *Plant Systematics and Evolution* 189: 217-231. 1994, *Flora Mesoamericana* 6: 247. 1994, *Nordic Journal of Botany* 14(2): 117-136. 1994 [A taxonomic revision of *Hordeum* sect. *Critesion*.], *Annals of Botany* 73: 195-203. 1994, *Nord. J. Bot.* 15: 449-458. 1995, *Systematic Botany* 21(2): 3-15. 1996, *Canadian Journal of Botany* 78(12): 1590-1602. 2000, *Plant, Cell and Environment*

24(6): 585-596. June 2001, J.W. Morgan, "Seedling recruitment patterns over 4 years in an Australian perennial grassland community with different fire histories." *Journal of Ecology* 89(6): 908-919. Dec 2001, M.P. McDonald, N.W. Galwey and T.D. Colmer, "Similarity and diversity in adventitious root anatomy as related to root aeration among a range of wetland and dryland grass species." *Plant, Cell and Environment* 25(3): 441-451. Mar 2002, *Contributions from the United States National Herbarium* 48: 239-241, 389-402. 2003, *Ecological Management and Restoration* 4(1): 5-12. Apr 2003, *Plant, Cell and Environment* 26(1): 17-36. Jan 2003, *Am. J. Bot.* 91: 1789-1801. 2004, *Botanical Journal of the Linnean Society* 147(4): 501-508. Apr 2005, *Ecological Management and Restoration* 6(1): 61-67. Apr 2005.

Species

C. glaucum (Steud.) Á. Löve (*Critesion murinum* subsp. *glaucum* (Steud.) B.K. Simon, nom. illeg., non *Critesion murinum* subsp. *glaucum* (Steud.) W.A. Weber; *Hordeum glaucum* Steud.; *Hordeum murinum* subsp. *glaucum* (Steud.) Tzvelev)

Mediterranean, southwestern Asia. Annual, loosely tufted, erect or geniculate, auricles glabrous, leaf sheath more or less inflated, ligule membranous and truncate, erect racemes, central spikelet hermaphrodite with glabrous pedicels, lateral spikelets male or sterile with shortly pubescent pedicels, erect and spreading awns, pasture species, a widespread weed of disturbed sites, waste ground, grazed woodlands and shrublands, host to several cereal diseases, its sharp seeds can enter the eyes and skin of sheep, see *Species Plantarum* 1: 85. 1753, *Linnaea* 9(1): 133. 1834, *Synopsis Plantarum Glumacearum* 1: 352. 1854 and *Novosti Sist. Vyss. Rast.* 8: 67. 1971, *Botanical Journal of the Linnean Society* 72(2): 150. 1976, *Taxon* 29(2/3): 350. 1980, *Phytologia* 51(6): 374. 1982, *Feddes Repertorium* 95: 440. 1984, *Austrobaileya* 2(3): 241. 1986.

in English: barley grass

C. hystrix (Roth) Á. Löve (*Hordeum geniculatum* All.; *Hordeum hystrix* Roth)

Mediterranean, southwestern Asia. Annual, often decumbent, closely tufted, auricles absent, ligule truncate, leaf sheath pilose, raceme erect, lateral spikelets sterile, central hermaphrodite spikelet sessile, glumes more or less equal, in saline flats, see *Flora Pedemontana* 2: 259, 3: t. 91, f. 3. 1785, *Catalecta Botanica* 1: 23. 1797 and *Feddes Repertorium* 95(7-8): 440. 1984.

in English: Mediterranean barley grass, Mediterranean barley

C. jubatum (L.) Nevski (*Hordeum jubatum* L.)

North America. Perennial, erect or geniculate below, loosely tufted, auricles absent, ligule truncate, sheath of uppermost leaf inflated, plume-like nodding racemes dense-flowered,

central hermaphrodite spikelet sessile, lateral spikelets sterile, glumes subequal, lemma of lateral spikelets much reduced, along roadsides, see *Species Plantarum* 1: 85. 1753 and *Flora URSS* 2: 721. 1934, *Canadian Journal of Botany* 40: 1690. 1962, *Botaniska Notiser* 128(4): 503. 1975[1976].

in English: squirrel tail grass

C. marinum (Huds.) Á. Löve (*Hordeum marinum* Huds.)

Eurasia. Annual, loosely tufted, stiff, auricles absent, lodicules ciliate, see *Flora Anglica, Editio Altera* 1: 57. 1778, *Flora Palermitana* 1: 246. 1845 and *Taxon* 29(2/3): 350. 1980, *American Journal of Botany* 72(5): 772. 1985, M.P. McDonald, N.W. Galwey and T.D. Colmer, "Waterlogging tolerance in the tribe Triticeae: the adventitious roots of *Critesion marinum* have a relatively high porosity and a barrier to radial oxygen loss." *Plant, Cell and Environment* 24(6): 585-596. June 2001.

C. murinum (L.) Á. Löve (*Hordeum murinum* L.)

Europe. Annual, loosely tufted, clasping auricles, ligule ciliate, oblong racemes dense-flowered. Central bisexual spikelet sessile or pedicelled, lateral spikelets male or sterile, in wasteland, along roadsides, see *Species Plantarum* 1: 85. 1753, *Linnaea* 9(1): 133. 1834, *Synopsis Plantarum Glumacearum* 1: 352. 1854 and *Taxon* 29(2/3): 350. 1980, *Phytologia* 51(6): 374. 1982, *Austrobaileya* 2(3): 241. 1986.

C. murinum (L.) Á. Löve subsp. ***leporinum*** (Link) Á. Löve Europe, Mediterranean, Asia. See *Linnaea* 9(1): 133. 1834, *Comp. Fl. Ital.* 805. 1882 and *Taxon* 29(2/3): 350. 1980.

in English: barley grass

C. murinum (L.) Á. Löve subsp. ***murinum***

Europe. See *Species Plantarum* 1: 85. 1753 and *Taxon* 29(2/3): 350. 1980.

C. secalinum (Schreb.) Á. Löve (*Hordeum secalinum* Schreb.)

Europe, Africa. Perennial, erect or geniculate, loosely tufted, sheath of uppermost leaf appressed to culm, dense-flowered raceme, glumes subequal, see *Spicilegium Florae Lipsicae* 148. 1771 and *Taxon* 29(2/3): 350. 1980.

Critho E. Meyer = *Hordeum* L.

From the Greek *krithe* "barley-corn, barley."

Pooideae, Triticoideae, Triticeae, or Pooideae, Triticeae, Hordeinae, see *Species Plantarum* 1: 84-85. 1753, *Illustrations of the Botany ... of the Himalayan Mountains ...* 1(11): 418. 1839 [1840], *Index Sem. Hort. Regiomont.* 5. 1848 and *Canad. J. Bot.* 37: 679. 1959, *Plant Systematics and Evolution* 189: 217-231. 1994, *Flora Mesoamericana* 6: 247. 1994, *Nordic Journal of Botany* 14(2): 117-136. 1994 [A taxonomic revision of *Hordeum* sect. *Critesion*.], *Annals of Botany* 73: 195-203. 1994, *Systematic Botany* 21(2): 3-15.

1996, *Canadian Journal of Botany* 78(12): 1590-1602. 2000, *Contributions from the United States National Herbarium* 48: 241, 389-402. 2003.

Crithodium Link = *Triticum* L.

Greek *krithe* “barley-corn, barley,” *krithidion* “decoction of barley, a little barley.”

Pooideae, Triticeae, Triticinae, type *Crithodium aegilopoides* Link, see *Species Plantarum* 1: 85-87. 1753, *Species Plantarum, Editio Secunda* 127. 1762, *Linnaea* 9(1): 132, pl. 3, f. 1-5. 1834, *Oekonomisch-technische Flora Böhmens* 1: 425. 1836, *Annales des Sciences Physiques et Naturelles, d'Agriculture et de l'Industrie, Publiées par la Société Royale d'Agriculture, etc., de Lyon.* 5: 103-196, pl. 2-10. 1842 [*Descriptions et figures des céréales européennes*], *Landwirtschaftliche Flora* 335-336. 1866, *Botanisches Centralblatt* 73: 339. 1898 and *Flora URSS* 2: 677. 1934, A. Prati, *Vocabolario etimologico italiano*. Torino 1951, *Feddes Repert.* 95(7-8): 497. 1984, *Taxon* 35: 144-149. 1986, *Wageningen Agricultural University Papers* 94-7: 1-512. 1994, *Contributions from the United States National Herbarium* 48: 241, 676-684. 2003.

Crithopsis Jaub. & Spach

Resembling *Critho*, Greek *krithe* “barley-corn, barley” and *opsis* “aspect, appearance, resemblance.”

One species, Libya, Iran, Crete. Pooideae, Triticodae, Triticeae, annual, herbaceous, caespitose, auricles present, leaf blades acuminate, ligule an unfringed membrane, plants bisexual, inflorescence spiciform, raceme narrowly oblong, raceme rachis fragile, 2-flowered, upper floret rudimentary, spikelets paired and flattened laterally, 2 linear glumes subequal, lemma rounded on back and awned, palea present, 2 free and membranous lodicules, 3 stamens, ovary hairy, 2 stigmas, type *Crithopsis rhachitricha* Jaub., see *Species Plantarum* 1: 83-85. 1753, *Illustrationes Plantarum Orientalium* 4: 30, t. 321. 1851, *Die Natürlichen Pflanzenfamilien* 2(2): 88. 1887 and *Nordic Journal of Botany* 13: 481-493. 1993 [Taxonomic studies in some annual genera of the Triticeae (Poaceae)].

Species

C. delileana (Schult.) Roshev. (*Agropyron cretense* Coustur. & Gand.; *Crithopsis brachytricha* Walp.; *Crithopsis rhachitricha* Jaub.; *Elymus arenarius* subsp. *geniculatus* (Curtis) Husn.; *Elymus delileanus* Schult.; *Elymus geniculatus* Delile; *Elymus geniculatus* Curtis; *Elymus rhachitrichus* Hochst. ex Kotschy; *Eremopyrum cretense* (Coustur. & Gand.) Nevski; *Hordeum delileanum* Hack.; *Hordeum geniculatum* (Delile) Thell., nom. illeg., non *Hordeum geniculatum* All.)

North Africa. See *Description de l'Égypte, ... Histoire Naturelle, Tom. Second* 174, t. 13, f. 1. 1812, *Mantissa* 2: 424. 1824, *Annales des Sciences Naturelles; Botanique, sér.* 3 14: 360. 1851, *Graminées. Descriptions ... France, Belgique, Isles Britanniques, Suisse* 76. 1899 and *Flora Cretica* 107. 1916, *Nord. J. Bot.* 13: 484. 1993.

Crithopyrum Steud. = *Elymus* L.

From the Greek *krithe* “barley-corn, barley” and *pyros* “grain, wheat.”

Pooideae, Triticodae, Triticeae, or Pooideae, Triticeae, Hordeinae, in syn. sub *Triticum trachycaulum* Link, see *Species Plantarum* 1: 83-84. 1753, *Novi Commentarii Academiae Scientiarum Imperialis Petropolitanae* 14(1): 539. 1770, *Hortus Regius Botanicus Berlinensis* 2: 189. 1833, *Synopsis Plantarum Glumacearum* 1: 344. 1854 and *The Canadian Field-Naturalist* 45: 201. 1931, *Rhodora* 56(662): 28. 1954, *Canad. J. Bot.* 42: 554. 1964, *Feddes Repert.* 95: 425-521. 1984 [Conspectus of the Triticeae.], *Taxon* 41: 562-563. 1992, *Taxon* 44: 611-612. 1995, *Contributions from the United States National Herbarium* 48: 241, 279-307. 2003.

Crossotropis Stapf = *Trichoneura* Andersson

From the Greek *krossos* “a fringe” and *tropis* “keel, the keel of a vessel.”

Chloridoideae, Eragrostideae, Eleusininae, or Chloridoideae, Cynodonteae, type *Crossotropis grandiglumis* (Nees) Rendle, see *Prodromus Florae Novae Hollandiae* 182. 1810, *Essai d'une Nouvelle Agrostographie* 80. 1812, *Kongliga Svenska Vetenskapsakademiens Handlingar* 1853: 148. 1855, *Flora Capensis* 7: 317. 1898, *Catalogue of the African Plants Collected by Dr. F. Welwitsch in 1853-61* 2(1): 226. 1899 and *Ark. Bot.* 11, 9: 1-19. 1912, *Grasses and Pastures of South Africa* 128. 1955, *Boletín de la Sociedad de Biología de Concepción* 46: 37-39. 1973, *Los Generos de Gramineas de America Austral.* 1987, *Contributions from the United States National Herbarium* 41: 56, 224. 2001.

Crypsinna Fourn. = *Muhlenbergia* Schreb.

From the Greek *krypto*, *kryptein* “to hide,” *krypsis* “hiding, suppression.”

Chloridoideae, Cynodonteae, Muhlenbergiinae, type *Crypsinna macroura* (Kunth) E. Fourn., see *Genera Plantarum* 44. 1789, *Systema Naturae ... editio decima tertia, aucta, reformata* 2: 171. 1791, *Essai d'une Nouvelle Agrostographie* 29, 176, 179, t. 8, f. 2, 3. 1812, *Mémoires du Muséum d'Histoire Naturelle* 2: 72. 1815, *Mexicanas*

Plantas 2: 90. 1886 and P.M. Peterson, "Systematics of the Muhlenbergiinae (Chloridoideae: Eragrostideae)." *Grasses: Systematics and Evolution* 195-212. 2000, *Contributions from the United States National Herbarium* 41: 56, 143-173. 2001.

Crypsis Aiton = *Antitragus* Gaertn., *Ceytosis* Munro, *Heleochloa* Host ex Roem., *Pachea* Steud., *Pallasia* Scop., *Pallassia* Houtt. (Rutaceae), *Pechea* Lepeyrouse, *Raddia* Mazziari, *Torgesia* Bornm.

Greek *krypsis* "hiding, suppression," Greek *kryptein* "to hide," perhaps referring to the seeds extruded from the fruits or alluding to the partially hidden inflorescence.

About 7-8 species, Mediterranean, Middle East, China, central Africa. Chloridoideae, Cynodonteae, Sporobolinae, or Chloridoideae, Zoysieae, Sporobolinae, annual, low growing, prostrate or ascending, erect, decumbent, much branched near the base, auricles absent, ligule a line of hairs, leaf blades flat or involute, panicle spiciform cylindrical and more or less exserted, ovoid to capitate inflorescence sometimes partially enclosed by bract-like leaf sheaths, spikelets solitary strongly laterally compressed and keeled sometimes falling entire, floret 1 per spikelet, 2 glumes more or less equal and strongly keeled, glumes narrow acute or shortly awned, lemma membranous acute or shortly awned, palea rarely nerved, lodicules absent, stamens 2-3, ovary glabrous, stigmas 2, often mat-forming, found on wet saline soils, salty plains, seasonally flooded areas, mud, semiarid regions, related to *Sporobolus*, type *Crypsis aculeata* (L.) Aiton, see *Species Plantarum* 1: 42, 54-55, 59-63. 1753, *Natuurlijke Historie* 2(4): 382. 1775, *Introductio ad Historiam Naturalem* 72. 1777, William Townsend Aiton (1766-1849), *Hortus Kewensis; or, a catalogue ...* 1: 48. 1789, *De Fructibus et Seminibus Plantarum...* 2: 7. 1790, *Collectanea ad omnem rem botanicam spectantia partim e propriis, partim ex amicorum schedis manuscriptis concinnavit et edidit J.J. 220. 2001, *Am. J. Bot.* 91: 2022-2029. 2004, *Botanical Journal of the Linnean Society* 148(1): 57-72. May 2005 [Caryopsis morphology of the Chloridoideae (Gramineae) and its systematic implications].

Species

C. aculeata (L.) Aiton (*Agrostis aculeata* (L.) Scop.; *Schoenus aculeatus* L.)

Europe. See *Flora Carniolica, Editio Secunda* 1: 62. 1771.

C. alopecuroides (Phill. & Mitterp.) Schrad. (*Crypsis explicata* (Link) F. Herm.; *Crypsis phalaroides* M. Bieb.; *Heleochloa alopecuroides* (Pill. & Mitt.) Roem.; *Heleochloa alopecuroides* (Piller & Mitterp.) Host; *Phalaris explicata* Link; *Phalaris geniculata* Sibth. & Sm.; *Phleum alopecuroides* Piller & Mitterp.)

Europe. See A. Mathias Piller (1733-1788), *Iter per Poeseganam Sclavoniae [Slavoniae] provinciam ...* 147, t. 16. Budae [Budapest] 1783, *Journal für die Botanik* 1: 312. 1799, *Icones et Descriptiones Graminum Austriacorum* 1: 23, t. 29. 1801, *Flora Germanica* 1: 167. 1806, *Flora Graecae Prodrum* 1: 38. 1806, *Flora Taurico-Caucasica* 1: 45. 1808 and *Hercynia* 1: 121. 1937, *Feddes Repert.* 45: 230. 1938.

C. schoenoides (L.) Lam. (*Heleochloa schoenoides* (L.) Host; *Phleum schoenoides* L.)

Arabia, Yemen. Annual, tufted, compressed, much branched from the base, prostrate or ascending, spreading in a circle from the root, ligule a ring of hairs, leaves flat acuminate, upper sheaths swollen and open, inflorescence densely capitate, spikelets 1-flowered awnless, spikelets usually partially enclosed by the uppermost leaf sheaths, spikelets densely crowded into sessile ovoid or ellipsoid heads, glumes more or less equal shortly ciliate on the keels, found on wet saline soils, salty plains, coastal, see *Species Plantarum* 1: 60. 1753, *Tableau Encyclopédique et Méthodique ... Botanique* 1: 166, t. 42, f. 1. 1791, *Icones et Descriptiones Graminum Austriacorum* 1: 23, t. 30. 1801.

in English: swamp grass

in India: talaphetar

in Sudan: gogheib

C. vaginiflora (Forssk.) Opiz (*Crypsis compacta* Steud.; *Crypsis niliacea* Fig. & De Not.; *Crypsis schoenoides* (L.) Lam., in part; *Heleochloa compacta* (Steud.) T. Durand & Schinz; *Phalaris vaginiflora* Forssk.)

Tropical Africa, Europe. Annual, prostrate, ascending, branched, forming mats or low cushions, leaf blades linear and tough, leaf sheaths slightly inflated and enveloping, inflorescence axillary, glumes and lemma more or less equal, lower glume linear, lemma narrowly lanceolate, palea 2-nerved, grazed, found in damp sites, flooded areas, riverbanks, lake margins, often confused with *Crypsis schoenoides* (L.) Lam., see *Flora Aegyptiaco-Arabica* 18. 1775,

Naturalientausch 8: 83. 1823, *Mémoires de l'Académie Royale des Sciences de Turin* 14: 322. 1854, *Synopsis Plantarum Glumacearum* 1: 151. 1855 [1854], *Conspectus Florae Africae* 5: 814. 1894.

Cryptochloa Swallen

From the Greek *kryptos* "hidden" and *chloe, chloa* "grass, young grass," referring to the inflorescences.

About 5-8/15 species, Central and South America, Mexico to Brazil. Bambusoideae, Oryzodae, Olyreae or Bambusoideae, Olyreae, Olyrinae, perennial, herbaceous, unarmed, robust, clumped, caespitose, decumbent floriferous culms, leaf blades pseudopetiolate, very short and narrowly oblong 2-ranked leaves, shortly rhizomatous, plants monoecious, inconspicuous inflorescence few-flowered, a terminal and axillary panicle, female spikelets above and male spikelets below, female lemma dorsally compressed, 2 glumes 3- to 5-nerved herbaceous and acute, lemma usually glabrous, palea present, 3 free and fleshy lodicules, stamens 0, ovary glabrous, 2 stigmas, forest, upland primary forest, on slope along rivers and streams, forest floor, related to *Olyra* L., type *Cryptochloa variana* Swallen, see *Systema Naturae, Editio Decima* 1253, 1261, 1379. 1759, *Opuscoli Scientifici* 3: 410. 1819, *Flora Brasiliensis seu Enumeratio Plantarum* 2(1): 298. 1829 and *Annals of the Missouri Botanical Garden* 29(4): 317-318, 320-321. 1942, *Ceiba* 19(1): 1-118. 1975 [Enumeración de las plantas de Honduras.], *Brittonia* 34: 25-29, 199-209. 1982, *American Journal of Botany* 70(5): 129-130. 1983, *Novon* 2(2): 81-110. 1992, *Flora Mesoamericana* 6: 213-214. 1994, Emmet J. Judziewicz et al., *American Bamboos*. 267-269. Smithsonian Institution Press, Washington and London 1999, *Contributions from the United States National Herbarium* 39: 53-54. 2000, *Ceiba* 42(1): 1-71. 2001[2002].

Species

C. capillata (Trin.) Soderstr. (*Olyra capillata* Trin.; *Olyra capillata* var. *capillata*; *Olyra capillata* var. *segregata* Döll; *Olyra podachne* Mez; *Raddia capillata* (Trin.) Hitchc.)

Brazil. See *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques, Physiques et Naturelles. Seconde Partie: Sciences Naturelles* 3,1(2-3): 114. 1834, *Flora Brasiliensis* 2(2): 318. 1877 and *Bot. Jahrb. Syst.* 56(Beibl. 125): 6. 1921, *Contr. U.S. Natl. Herb.* 24(8): 491. 1927.

C. concinna (Hook.f.) Swallen (*Olyra concinna* Hook.f.; *Raddia concinna* (Hook.f.) Chase)

Nicaragua, Guatemala, Mexico, Honduras, Colombia. Fern-like, see *Bot. Mag.* 122: t. 7469. 1896 and *Proceedings of the Biological Society of Washington* 21: 185. 1908, *Ann. Missouri Bot. Gard.* 29(4): 320. 1942.

C. decumbens Soderstr. & Zuloaga

Panama. See *Brittonia* 37: 29, f. 5. 1985.

C. dressleri Soderstr. (named for the botanist and taxonomist Robert Louis Dressler, born 1927, an orchid specialist at the Smithsonian Tropical Research Institute, Panama, he collected plants throughout the American tropics, among his writings are "Terrestrial plants of Panama." *Bull. Biol. Soc.* Washington 2: 179-186. 1972, *Phylogeny and Classification of the Orchid Family*. Portland, Oregon 1993, *Field Guide to the Orchids of Costa Rica and Panama*. Ithaca, New York 1993 and "Checklist of the orchids of Panama." I-XXVI. in *Orchids of Panama*. Monographs in Systematic Botany from the Missouri Botanical Garden vol. 4: 1-26. See *Genera Orchidacearum*: vol.1, edited by: Alec M. Pridgeon, Phillip J. Cribb, Mark W. Chase, Finn Rasmussen. Oxford, Oxford University Press 1999)

Panama. See *Brittonia* 34(1): 25, f. 1. 1982.

C. soderstromii Davidse

Panama. Clumped, see *Novon* 2(2): 96, f. 7. 1992.

C. strictiflora (E. Fourn.) Swallen (*Cryptochloa granulifera* Swallen; *Olyra strictiflora* (E. Fourn.) Hemsl.; *Raddia strictiflora* (E. Fourn.) Chase; *Strepium strictiflorum* E. Fourn.)

Mexico, Ecuador, Costa Rica, Panama. See *Bulletin de la Société Botanique de Belgique* 15(3): 465. 1876, *Biologia Centrali-Americana; ... Botany ...* 3(19): 510. 1885 and *Proceedings of the Biological Society of Washington* 21: 185. 1908, *Annals of the Missouri Botanical Garden* 29(4): 321. 1942.

C. unispiculata Soderstr.

Peru, Ecuador, Bolivia, Brazil, Colombia. See *Brittonia* 34(2): 200-202, f. 1. 1982, *AAU Reports* 24: 1-241. 1990, *Systematic Botany* 18(1): 80-99. 1993, *Ruizia* 13: 1-480. 1993.

C. variana Swallen

Panama, Colombia, the Caribbean. See *Ann. Missouri Bot. Gard.* 29(4): 318. 1942.

Cryptochloris Benth. = Tetrapogon Desf.

From the Greek *kryptos* "hidden" plus *Chloris*.

Chloridoideae, Cynodonteae, type *Cryptochloris spathacea* (Hochst. ex Steud.) Benth., see *Nova Genera et Species Plantarum seu Prodromus* 1, 25. 1788, *Flora Atlantica* 2: 388-389, t. 255. 1799 [1800], *Synopsis Plantarum Glumacearum* 1: 204. 1854, *Journal of the Linnean Society, Botany* 19: 106. 1881, *Hooker's Icones Plantarum* 14: t. 1376. 1882, *Conspectus Florae Africae* 5: 864. 1895 and *Reports of the Princeton University Expeditions to Patagonia, 1896-1899, Volume viii, 1 [2]*, *Botany* 8(1,5,1): 211. 1904, *Annuario del Reale Istituto Botanico di Roma* 8(3): 352. 1908, *Flora of Ethiopia and Eritrea* 7: 159-163. 1995.

Cryptopyrum Heynh. = *Elymus* L.

From the Greek *kryptos* “hidden” and *pyros* “grain, wheat.”

Pooideae, Triticodae, Triticeae, or Pooideae, Triticeae, Hordeinae, see *Species Plantarum* 1: 83-84. 1753, *Novi Commentarii Academiae Scientiarum Imperialis Petropolitanae* 14(1): 539. 1770, *Hortus Regius Botanicus Berolinensis* 2: 190. 1833, Gustav Heynhold (1800- ca. 1860), *Nomenclator Botanicus Hortensis* oder alphabetische und synonymische ... 2: 174. 1846 and *American Journal of Botany* 21(3): 131. 1934, *Rhodora* 56(662): 28. 1954, *Canad. J. Bot.* 42: 554. 1964, *Botaniska Notiser* 128(4): 502. 1975 [1976], *Feddes Repert.* 95: 425-521. 1984 [Conspectus of the Triticeae.], *Taxon* 41: 562-563. 1992, *Taxon* 44: 611-612. 1995, *Newslett. Int. Organ. Pl. Biosyst. (Oslo)* 30: 10-15. 1999, *Contributions from the United States National Herbarium* 48: 241, 279-307. 2003.

Cryptostachys Steud. = *Sporobolus* R. Br.

From the Greek *kryptos* “hidden” and *stachys* “a spike.”

Chloridoideae, Eragrostidae, or Chloridoideae, Cynodonteae, Sporobolinae, type *Cryptostachys vaginata* Steud., see *Prodromus Florae Novae Hollandiae* 169-170. 1810, *Flora* 33: 229. 1850, *Fragmentos de Algunas Plantas Filipinas* 25. 1851, *Synopsis Plantarum Glumacearum* 1: 181. 1854, *Nom. Bot.* 2: 1274. 1874, *Botanical Gazette* 21: 15. 1896 and *Flora of the Guianas, Series A: Phanerogams* 606-615. 1990, *Blumea* 35(2): 393-458. 1991, *American Journal of Botany* 81: 622-629. 1994, *Flora Mesoamericana* 6: 273-276. 1994, *Sida* 16: 529-544. 1995, *Memoirs of the New York Botanical Garden* 78: 509-540. 1996, *Australian Systematic Botany* 12(3): 375-448. 1999, *Contributions from the United States National Herbarium* 41: 57, 200-219. 2001.

Crypturus Trin. = *Lolium* L.

From the Greek *krypto* “to hide” and *oura* “tail.”

Pooideae, Poeae, Loliinae, type *Crypturus loliaceus* Link, see *Species Plantarum* 1: 83. 1753, *Linnaea* 17(4): 386-387. 1844 and *Grasses of Ceylon* 45. 1956, *Techn. Bull. U.S.D.A. (or U.S. Dept. Agric. Tech. Bull., or Technical Bulletin, United States Department of Agriculture)* 1392: 1-65. 1968, *Dominguezia* 1: 1-23. 1978, *Novon* 3(3): 239-243. 1993, *Fragmenta Floristica et Geobotanica* 41(2): 521-536. 1996, *Contributions from the United States National Herbarium* 48: 241, 426-431. 2003.

Ctenium Panzer = *Aplocera* Raf., *Campuloa* Desv., *Campulosus* Desv., *Kampochloa* W.D. Clayton, *Monathera* Raf., *Monocera* Elliott, *Triatherus* Raf.

From *ktenion*, the diminutive of the Greek *kteis*, *ktenos* “a comb,” referring to the arrangement of the spikelets.

About 17-20 species, tropical and subtropical, America and Africa, Madagascar. Chloridoideae, Cynodonteae, perennial or annual, tufted or densely tufted, herbaceous, unarmed, aromatic or not aromatic, leaf sheath usually round, ligule a very short fringed membrane, hard leaves linear or involute, plants bisexual, inflorescence a single unilateral spike sickle-shaped when young and spirally twisted when mature, racemes single or digitate, spikelets strongly compressed laterally, 2 lowermost florets sterile, third floret fertile, fourth floret male or sterile, straight awns, male florets with 2 stamens, 2 glumes very unequal, large upper glume enclosing the florets, fertile lemma entire or bidentate, palea present, 2 lodicules free and fleshy, stamens 3, ovary glabrous, 2 stigmas, found on moist soils, open habitats, savannah, open grassland, open bushveld, poor dry sandy soils, type *Ctenium carolinianum* Panz., see *Species Plantarum* 1: 53-54. 1753, *Species Plantarum* 2: 1050. 1753, *Supplementum Plantarum* 13, 114. 1781 [1782], *Nova Genera et Species Plantarum seu Prodromus* 1, 25. 1788, *Syn. Pl.* 1: 85. 1805, *Nouveau Bulletin des Sciences, publié par la Société Philomatique de Paris* 2: 189. 1810, *Ideen zu einer künftigen Revision der Gattungen der Gräser*. 38, 61. München 1813, *Mémoires de la Société d'Agriculture, Sciences et Arts d'Angers* 1: 167. 1813, *Denkschriften der Bayer[ischen]. Botanischen Gesellschaft in Regensburg* 4: 311, t. 13, f. 1-2. 1813 [1814], *A Sketch of the Botany of South-Carolina and Georgia* 1(2): 176. 1816, *American Monthly Magazine and Critical Review* 3: 99. 1818, *American Monthly Magazine and Critical Review* 4: 190. 1819, *Medical Flora* 2: 193. 1830 and *North American Flora* 17(8): 579-638. 1939, *Kew Bulletin* 16: 471-475. 1963, *Kew Bulletin* 21: 103. 1967, *Acta Botanica Brasilica* 1: 53-62. 1988, *Flora Mesoamericana* 6: 290-291. 1994, *Journal of Biogeography* 26(6): 1307-1321. Report* 3: 416. 1914.

in English: toothache grass

C. brachystachyum (Nees) Kunth (*Campulosus brachystachyus* Nees)

Brazil, Paraguay. Solitary racemes, lemmas awnless or shortly awned, see *Flora Brasiliensis seu Enumeratio Plantarum* 2: 417-418. 1829, *Enumeratio Plantarum Omnium Hucusque Cognitarum* 1: 275. 1833.

C. brevispicatum J.G. Smith (*Campulosus brachystachyus* Trin.; *Ctenium trinii* Ekman)

Brazil. Lemmas awned and ciliate on the margins, see *Species Graminum* 1828-1836, *Botanical Gazette* 21: 363. 1896 and *Arkiv för Botanik utgivet av K. Svenska Vetenskapsakademien* 13(10): 45. 1913.

C. chapadense (Trin.) Döll (*Campuloa chapadensis* Trin. ex Döll; *Campulosus chapadensis* Trin.)

Brazil, Bahia. Perennial, wiry, erect, often fibrous at base, leaf blades linear and acuminate, straight or flexuous racemes 1-sided and terminal, spikelets in 2 rows, glabrous glumes conspicuously glandular on the nerves, see Carl B.

Trinius (1778-1844), *Species Graminum iconibus et descriptionibus ... Petropoli* [St. Petersburg] 1828-1836, *Flora Brasiliensis* 2(3): 73-74. 1878.

C. cirrosus (Nees) Kunth (*Campulosus cirrosus* Nees)

America. See *Flora Brasiliensis seu Enumeratio Plantarum* 2: 416-417. 1829, *Révision des Graminées* 2: 445, t. 136. 1831.

C. concinnum Nees (*Ctenium concinnum* var. *indutum* Pilg.; *Ctenium minus* (Pilg.) Clayton)

South Africa. Perennial, densely tufted, unbranched, wiry, leaves mostly basal, leaf sheath usually round, basal sheaths nonfibrous, ligule a short membrane, hard leaves, inflorescence a single unilateral spike sickle-shaped when young and spirally twisted when mature, spikelets compressed laterally, upper glume tubercled, straight awns, low grazing value, species of open habitats, open grassland, open bushveld, poor dry sandy soils, on moist soils, similar to *Ctenium somalense* (Chiov.) Chiov., see *Florae Africae Australioris Illustrationes Monographicae* 1: 237. 1841 and *Notizblatt des Botanischen Gartens und Museums zu Berlin-Dahlem* 9(82): 118. 1924, *Kew Bulletin* 16: 473. 1963.

in English: sickle grass

in South Africa: sekelgras

C. elegans Kunth (*Chloris elegans* (Kunth) Roberty, nom. illeg., non *Chloris elegans* Kunth; *Ctenium serpentinum* Steud.)

Tropical Africa. Strongly aromatic, densely tufted, annual, wiry, low to medium grazing value, used for thatching and for making baskets, found on dry sandy soils, see *Révision des Graminées* 1: 93. 1829, *Révision des Graminées* 2: 295, t. 59. 1830, *Synopsis Plantarum Glumacearum* 1: 202. 1854 and H.J.R. Vanderyst (1860-1934), *Étude de l'agrostologie agricole tropicale. Bas et Moyen-Congo Belge ... Bruxelles* 1921, *Revue de Botanique Appliquée et d'Agriculture Tropicale* 14(150): 128. 1934, *Petite Flore de l'Ouest-Africain* 387. 1954.

in Guinea: enokolomb

in Guinea-Bissau: undáte

in Mali: samu saana, wolo kaman

in Niger: alakad, alakaka, bat kaarey, bata kwaré, bataré, buhirdi, chinaka, ikardan'allagh, kinaka, niél, niniét, shinaka

in Nigeria: abori woroko, shinaka, sinaka, sinakaho, weewe, wicco dombru, wicco pallandi, wicco wanduho, wixxo wandulho, wutsiyar beeraa, wutsiyar biri, wutsiyar kadan-gare, wutsiyar kuusuu

in Senegal: dikandapali, lab a koy, rev, rov, uluku, yagon

C. floridanum (Hitchc.) Hitchc. (*Campulosus floridanus* Hitchc.)

America. See *American Journal of Botany* 2: 306. 1915, *Proceedings of the Biological Society of Washington* 41: 162. 1928.

C. newtonii Hack. (*Ctenium camposum* A. Chev.; *Ctenium newtonii* var. *majusculum* Pilg.; *Ctenium newtonii* var. *productum* Pilg.; *Ctenium schweinfurthii* Pilg.) (in honor of Francis[co] Xavier Oakley de Aguiar Newton, 1864-1909, British-born Portuguese plant collector in West Africa)

Tropical Africa. Perennial, tufted, wiry, aromatic, colonizer, aggressive, pioneer, low grazing value, used as a thatching grass, open bushland, stony areas, overgrazed fields, poor soils, see *Boletim da Sociedade Broteriana* 5: 229. 1887 and *Notizblatt des Botanischen Gartens und Museums zu Berlin-Dahlem* 9(82): 116. 1924, *Revue de Botanique Appliquée et d'Agriculture Tropicale* 14(150): 128. 1934, *Adansonia* 15(3): 388. 1975 [1976].

in Guinea: d'yubali bowal, dyubali bowal

in Mali: wolo kaman

in Nigeria: abori woroko, shinaka, sinaka, sinakaho, weewe, wicco dombru, wicco pallandi, wicco wanduho, wixxo wandulho, wutsiyar beeraa, wutsiyar biri, wutsiyar kadan-gare, wutsiyar kuusuu

in Sierra Leone: fiwa, foni gboli, kerinkeralal, puisale, wolen

in Upper Volta: laasi dawaadi, lamzudu

C. nubicum De Not.

Nubia. See *Index Seminum [Geneva]* 25. 1852, *Annuario del Reale Istituto Botanico di Roma* 7: 72. 1897 and *Nuovo Giornale Botanico Italiano* n.s. 26: 82. 1919, *Fl. Trop. E. Africa, Gramineae* (Part 2): 324. 1974.

C. planifolium (J. Presl) Kunth (*Campulosus planifolius* J. Presl; *Ctenium glandulosum* Scribn. & J.G. Sm.)

America. See *Reliquiae Haenkeanae* 1(4-5): 287. 1830, *Enumeratio Plantarum Omnium Hucusque Cognitarum* 1: 275. 1833, *Botanical Gazette* 21(6): 362. 1896.

C. plumosum (Hitchc.) Swallen (*Campulosus plumosus* Hitchc.)

America, Mexico. See *Contributions from the United States National Herbarium* 17(3): 330. 1913, *North American Flora* 17(8): 602. 1939.

C. polystachyum Balansa

Brazil and Paraguay. Lemmas awned and ciliate on the margins, see *Bulletin de la Société Botanique de France* 32: 244. 1885.

C. sesquiflorum Clayton

Guinea. See *Kew Bulletin* 14: 239-240. 1960.

C. somalense (Chiov.) Chiov. (*Ctenium nubicum* var. *somalense* Chiov.)

Ethiopia. Perennial, erect, tufted, slender, old leaf sheaths fibrous, open places, bushland, deciduous bushland, see

Index Seminum [Geneva] 25. 1852, *Annuario del Reale Istituto Botanico di Roma* 7: 72. 1897 and *Nuovo Giornale Botanico Italiano* n.s. 26: 82. 1919, *Fl. Trop. E. Africa, Gramineae* (Part 2): 324. 1974.

Ctenopsis De Notaris = Ctenopsis Naudin (Cucurbitaceae), *Vulpia* Gmelin

Greek *ktenos* "a comb" and *opsis* "resemblance," a comb-like inflorescence; imitating *Ctenium*.

About 4 species, Mediterranean, Western Asia. Pooideae, Poodae, Poeae, or Pooideae, Poeae, Loliinae, annual, caespitose, herbaceous, auricles absent, ligule an unfringed membrane, plants bisexual, inflorescence racemose or paniculate, spikelets pectinate compressed laterally, 2 unequal glumes, lower glume 0-nerved, upper glume 3-nerved, lemmas papery, palea present, 2 lodicules free and membranous, 3 stamens, ovary glabrous, stigmas 2, species of open habitats, often referred to *Vulpia*, type *Ctenopsis pectinella* (Delile) De Not., see *Species Plantarum* 1: 73-76. 1753, *Flora Badensis Alsatica* 1: 8. 1805, *Index Sem. Hort. Genuensis* 26. 1847, *Prodromus Florae Hispanicae* 1: 90. 1861, *Annales des Sciences Naturelles; Botanique, sér. 5*, 6: 12-13. 1866 and *Bulletin de la Société d'Histoire Naturelle de l'Afrique du Nord* 16: 100-102. 1925, *Verhandlungen des Botanischen Vereins für die Provinz Brandenburg und die angrenzenden Länder* 76: 29. 1936, *Anales del Instituto Botánico A. J. Cavanilles* 21: 365. 1963, *Botaniska Notiser* 130(2): 186. 1977, *Nordic Journal of Botany* 1(1): 20, 24. 1981, *Watsonia* 15: 38-39. 1984, *Taxon* 33: 351-354. 1984, *Watsonia* 16: 300. 1987, *International Organization of Plant Biosystematists Newsletter* 13: 16. 1989, *Boletim da Sociedade Broteriana, ser. 2* 64: 35-74. 1991, *Flora Mesoamericana* 6: 228. 1994, *Bothalia* 27: 75-82. 1997, *Flora Mediterranea* 8: 307-313. 1998, *Bothalia* 29(2): 335-341. 1999, *Systematic Botany* 27(2): 241-251. 2002, *Contributions from the United States National Herbarium* 48: 690-694. 2003.

Species

C. cynosuroides (Desf.) Paunero ex Romero Garcia (*Festuca cynosuroides* Desf.; *Narduretia cynosuroides* (Desf.) Villar)

Mediterranean. See *Flora Atlantica* 1: 88, t. 12. 1798 and *Bulletin de la Société d'Histoire Naturelle de l'Afrique du Nord* 16: 100-101. 1925, *Lagascalia* 18(2): 321. 1996.

C. gypsophila (Hack.) Paunero (*Festuca gypsophila* Hack.)

Mediterranean. See *Österreichische Botanische Zeitschrift* 27: 47. 1877 and *Anales del Instituto Botánico A. J. Cavanilles* 21: 368. 1963.

C. patens (Boiss.) Melderis (*Vulpia patens* Boiss.)

Europe. See *Arkiv för Botanik, Andra Serien* 2: 297. 1952.

C. pectinella (Delile) De Not. (*Festuca pectinella* Delile; *Vulpia pectinella* (Delile) Boiss.)

Europe. See *Flora Orientalis* 5: 631. 1884.

Curtopogon P. Beauv. = Aristida L.

From the Greek *kyrtos* “curved, swelling, bent, hunch-backed” and *pogon* “beard.”

Arundinoideae, Aristideae, or Aristidoideae, Aristideae, type *Curtopogon dichotomus* (Michx.) P. Beauv., see *Species Plantarum* 1: 82. 1753, *Flora Boreali-Americana* 1: 41. 1803, *Essai d'une Nouvelle Agrostographie* 32, 159, t. 8, f. 7. 1812, *Species Graminum Stipaceorum* 101. 1842 and *Contr. U.S. Natl. Herb.* 22(7): 529. 1924, *Meded. Rijks.-Herb.* 54: 9. 1926, *Kurtziana* 1: 123-206. 1961, *Flora Mesoamericana* 6: 253-257. 1994, *Flora del Valle de Tehuacán-Cuicatlán* 3: 1-35. 1994, *Flora of Ethiopia and Eritrea* 7: 76-85. 1995, *Grassland of China* 1995(1): 16-20. 1995, *Annals of the Missouri Botanical Garden* 82: 593-595. 1995, *Candollea* 53(2): 466-470. 1998, *Bot. Rev.* 64: 1-85. 1998, *Boletim do Instituto de Botânica (São Paulo)* 12: 113-179. 1999, *Acta Botánica Mexicana* 63: 1-45. 2003, *Contributions from the United States National Herbarium* 46: 69-104, 166. 2003.

Cutandia Willk. = Catapodium Link, Desmazeria Dumort., Scleropoa Griseb.

For the Spanish botanist Vicente Cutanda, 1804-1866, professor of botany (Madrid); see J.H. Barnhart, *Biographical notes upon botanists*. 1: 407. 1965; M. Colmeiro y Penido, *La Botánica y los Botánicos de la Península Hispano-Lusitana*. Madrid 1858.

About 6 species, Middle East, Mediterranean. Pooideae, Poeae, Ammochloinae, or Pooideae, Poodae, Poeae, annual, hollow, branched, nodes glabrous, auricles absent, narrow linear leaf blades, ligule an unfringed membrane, plants bisexual, open inflorescence paniculate with divergent branches, panicle sparse, spikelets several-flowered, 2 glumes very unequal or subequal, lower glume 1- to 3-nerved, upper glume 1-5 nerved, 3 nerved lemma, palea present, 2 free and ciliate lodicules, 3 stamens, ovary glabrous, 2 stigmas, native pasture species, open habitats, coastal, maritime, stony hillsides, sandy places, type *Cutandia scleropoides* Willk., see *Species Plantarum* 1: 73-76, 85-87. 1753, *Novi Commentarii Academiae Scientiarum Imperialis Petropolitanae* 14(1): 539. 1770, *Essai d'une Nouvelle Agrostographie* 100, 15, pl. 19, f. 35. 1812, *Commentationes Botanicae* 26-27. 1822, *Hortus Regius Botanicus Berolinensis* 1: 44, 145, 280. 1827, *Spicilegium florae rumelicae et bithynicae* ... 2: 431. 1846, *Botanische Zeitung. Cuviera Koeler = *Cuviera* DC. (Rubiaceae), *Hordelymus* (Jess.) Jess. ex Harz, *Hordelymus* (Jessen) Harz

After the French (born Württemberg, Montbéliard) naturalist Georges Léopold Chrétien Frédéric Dagobert baron Cuvier, 1769-1832 (Paris, France), zoologist, palaeontologist, comparative anatomist, studied under Karl Friedrich Kiemeyer (1765-1844) at the Caroline University, (former/once) friend of Étienne Geoffroy Saint-Hilaire (1772-1844) and Lamarck, from 1795 assistant professor of animal anatomy at the Muséum (Paris), in 1796 a member of the Institut de France, from 1800 professor at the Collège de France, in 1818 member of the Académie Française, his works include *Notice biographique sur Bruguières, etc.* [Rapport général des travaux de la Société Philomatique de Paris] [1799], *Voyages dans l'Amérique méridionale*, par F. de Azara ... enrichis de notes par G. Cuvier. Paris 1809 and *The Animal Kingdom*. London 1827-1835, with Achille Valenciennes wrote *Histoire naturelle des Poissons*. Paris 1828-1849, with A. Brongniart wrote *Description Géologique des environs de Paris*. Paris 1822, he was the brother of the French zoologist Frédéric Cuvier (1773-1838, d. Strasbourg, France). See Georges Louis Duvernoy (1777-1855), *Notice historique sur les Ouvrages et la Vie de M. le Baron Cuvier*. Paris 1833; *G. Cuvier's Briefe an C.H. Pfaff aus den Jahren 1788 bis 1792 ...* Herausgegeben von ... W.F.G. Behn. Kiel 1845; Franck Bourdier, in *D.S.B.* 3: 520-528. 1981; J.H. Barnhart, *Biographical notes upon botanists*. 1: 408. 1965; Felix de Azara (1742-1821), *Viaje por la America meridional*. La descripción geográfica ... del Paraguay ... los pueblos salvajes ... medios de los Jesuitas para someter ... Pub. por C.A. Walckenaer. Madrid 1941.

Pooideae, Triticodae, Triticeae, type *Cuviera europaea* (L.) Koeler, see *Species Plantarum* 1: 84-85. 1753, *Annales du muséum national d'histoire naturelle* 9: 222. 1807, *Description Graminum in Gallia et Germania* 1802, *Observations sur les Graminées de la Flore Belgique* 92. 1823 [1824], *Nomenclator Botanicus. Editio secunda* 2: 233. 1841, *Deutschlands Gräser und Getreidearten ...* 202. 1863, *Bulletin de la Société Botanique de Belgique* 7: 66. 1868, *Genera Plantarum* 3(2): 1206. 1883, *Landwirtschaftliche Samenkunde* 2: 1147. 1885 and *Archives de Biologie Végétale Pure et Appliquée* 1: 18, 38. 1901, *Bot. Zhurn. (Moscow & Leningrad)* 35: 191. 1950, *New Publications of the U.S. Geological Survey* 17(1-2): 120. 1971 [1972], *Flora Republicii Socialiste Romaniaa* 12: 583. 1973, *Giornale Botanico Italiano* 111(1-2): 58. 1977, *Acta Biologica Cracoviensia, Series Botanica* 27: 57-74. 1985, *Taxon* 49(2): 250. 2000.

Cyathopus Stapf

From the Greek *kyathos* “cup, ladle” and *pous* “foot,” referring to the stoloniferous culm or to the cupular pedicel tips.

One species, Sikkim, eastern Himalayas. Aveneae, perennial, erect and leafy, ascending, tufted, herbaceous, slender, scabrid or glabrous, terete, branched, leaf blades narrow and scabrid, leaf sheaths glabrous, ligule elongate, plants bisexual, inflorescence paniculate and lax, open panicle, spikelets borne on the slender branches of decompound panicle, floret 1, 2 glumes subequal and 3-nerved, lemma membranous and awnless, palea 2-keeled, 2 free lodicules, 3 stamens, ovary glabrous, 2 stigmas, shade species, in woods, valleys, type *Cyathopus sikkimensis* Stapf, see *Hooker's Icones Plantarum* t. 2395. 1895, *Fl. British India* 7: 240. 1897 and *Grasses of Burma ...* 565. 1960.

Species

C. sikkimensis Stapf

North Sikkim. Stout culms, erect, creeping, stoloniferous, leaf blades oblong and acute to finely acuminate, panicle effuse, spikelets glabrous at base, glumes beaked.

Cyathorhachis Nees ex Steud. = *Cyathorhachis* Steud., *Polytoca* R. Br.

From the Greek *kyathos* “cup, ladle” and *rhachis* “rachis, axis, midrib of a leaf.”

Andropogoneae, type *Cyathorhachis wallichiana* Nees ex Steud., see John Joseph Bennett (1801-1876) and Robert Brown, *Plantae Javanicae rarioris*. 15, 18, 20, f. 5. London (July) 1838, *Synopsis Plantarum Glumacearum* 1: 403. 1854 [1855] and *Meded. Rijks-Herb.* 67: 9. 1931, *Blumea* 47(3): 545-580. 2002 [Revision of Chionachninae (Gramineae: Andropogoneae)].

Cyclichnium Dulac = *Gaudinia* P. Beauv.

From *kylichnion*, the diminutive of the Greek *kylichne* “a small cup.”

Pooideae, Poodae, Aveneae, or Pooideae, Poeae, Aveninae, see *Essai d'une Nouvelle Agrostographie* 95, 153, 164, t. 19,5. 1812, *Hortus Regius Botanicus Berolinensis* 1: 151. 1827, *Conspectus Regni Vegetabilis* 54. 1828, *Flore du Département des Hautes-Pyrénées* 68. 1867 and *Acta Universitatis Lundensis* 36(1): 27. 1900, *Contr. U.S. Natl. Herb.* 24: 192. 1925, *Flora de la Provincia de Buenos Aires* 4(2): 39. 1970, *Contributions from the United States National Herbarium* 48: 241, 370. 2003.

Cyclostachya J.R. Reeder & C.G. Reeder = *Bouteloua* Lag.

From the Greek *kyklos* “circle, round” and *stachys* “a spike,” referring to the inflorescences, to the mature racemes.

One species, Mexico. Chloridoideae, Cynodonteae, Boutelouinae, perennial, herbaceous, stoloniferous, caespitose, solid, auricles absent, leaf blades narrow linear, ligule membranous, plants dioecious, inflorescence exerted from sheath, hermaphrodite florets lacking, single pectinate raceme, 1 fertile floret, female spikelets dorsally compressed, male inflorescence deciduous, 2 narrow glumes unequal and dissimilar, lower glume 1-nerved, upper glume 2- to 3-nerved, lemma 3-awned, palea present, 2 free and fleshy lodicules, no stamens, 3 staminodes, ovary glabrous, 2 stigmas, open habitats, dry areas, type *Cyclostachya stolonifera* (Scribn.) Reeder & C. Reeder, see *Varietades de Ciencias, Literatura y Artes* 2(4,21): 134, 141. 1805, *Gen. Sp. Nov.* 5. 1816 and *Bulletin of the Torrey Botanical Club* 90: 195-196. 1963, *Contributions from the United States National Herbarium* 41: 20-33, 58-59. 2001.

Species

C. stolonifera (Scribn.) Reeder & Reeder (*Atheropogon stolonifer* E. Fourn.; *Bouteloua reederorum* Columbus; *Bouteloua stolonifera* Scribn.)

Mexico. Good forage, see *Mexicanas Plantas* 2: 140. 1886, *Proceedings of the Academy of Natural Sciences of Philadelphia* 43(2): 302. 1891 and *Aliso* 18(1): 63. 1999.

in Mexico: zacate rueda

Cyclotera Stapf = *Coelorachis* Brongn.

From Greek *kyklos* “circle, round” and *teres, retis (tero)* “rounded off, smoothed, shapely,” *kykloteres* “made round by turning,” or possibly from the Greek *theros* “summer, summer-fruits,” *thero* “heat, warm,” Greek *teiro, teirein* “distress, weaken,” or Latin *tero, -is, trivi, tritum, terere* “to grind, to wear away, to waste.”

Panicoideae, Andropogonodae, Andropogoneae, Rottboelliinae, see *Voyage Autour du Monde* 2: 64, f. 14. 1829 [1831] and Otto Stapf (1857-1933), *Index Londinensis* to illustrations of flowering plants, ferns and fern allies ... /prepared under the auspices of the Royal Society of London at the Royal Botanic Gardens, Kew. Oxford: Clarendon Press 1929-1931, *Kew Bulletin* 24: 309-314. 1970, *Blumea* 31: 291, 293. 1986, *Flora of the Guianas. Series A, Phanerogams* 8: 143-146. 1990, *Journal of Cytology and Genetics* 25: 140-143. 1990, *Annals of the Missouri Botanical Garden* 81(4): 775-783. 1994, *Journal of Cytology and Genetics* 29(2): 125-131. 1994, *Flora Mesoamericana* 6: 396-397. 1994, *Contributions from the United States National Herbarium* 46: 161-162, 295-296. 2003.

Cylindropyrum (Jaub. & Spach) Á. Löve = *Aegilops* L.

From the Greek *kylindros* “a cylinder” and *pyros* “grain, wheat.”

Pooideae, Triticeae, Triticinae, see *Species Plantarum* 2: 1050-1051. 1753, *Icones et Descriptiones Graminum Australiacorum* 2: 6, t. 7. 1802, *Illustrationes Plantarum Orientalium* 4: 12. 1851 and *Repertorium Specierum Novarum Regni Vegetabilis* Beih. 55: 84, 90, 103, 117. 1929, *Blumea, Supplement* 3: 15, 17. 1946, *Grasses of Burma ...* 653-655. 1960, *Feddes Repert.* 91: 225-228, 233-234, 236. 1980, *Biologisches Zentralblatt* 101(2): 206-208. 1982, *Feddes Repert.* 95(7-8): 493, 495, 500. 1984, *Taxon* 41: 552-583. 1992, *Agric. Univ. Wageningen Pap.* 94-7: 1-512. 1994, *Taxon* 44: 611-612. 1995, *Flora de Veracruz* 114: 1-16. 2000, *Contributions from the United States National Herbarium* 48: 20-23, 241. 2003.

Cymatochloa Schldl. = *Paspalum* L.

From the Greek *kyma, kymatos* “anything swollen” and *chloe, chloa* “grass, young grass.”

Panicoideae, Paniceae, Paspalinae, type *Cymatochloa fluitans* (Elliott) Schldl., see *Systema Naturae, Editio Decima* 846, 855, 1359. 1759, *Acta Helvetica, Physico-Mathematico-Anatomico-Botanico-Medica* 7: 129, t. 7. 1762 [1772], *A Sketch of the Botany of South-Carolina and Georgia* 1(2): 109, pl. 6. f. 4. 1816, *Flora Brasiliensis seu Enumeratio Plantarum* 2: 77. 1829, *Species Graminum* 3: t. 271. 1829-1830, *Hooker's Journal of Botany and Kew Garden Miscellany* 2: 103. 1850, *Botanische Zeitung. Berlin* 12(47): 817, 821-822. 1854, *Botanische Zeitung. Berlin* 19(44): 326. 1861, *Flora Brasiliensis* 2(2): 98. 1877, *Genera Plantarum* 3(2): 1097-1098. 1883 and *Contr. U.S. Natl. Herb.* 12: 116. 1908, *Contributions from the United States National Herbarium* 24(8): 435. 1927, *Repertorium Specierum Novarum Regni Vegetabilis* 26(7-15): 229. 1929, *Contributions from the United States National Herbarium* 46: 166-167, 443-527. 2003.

Cymbachne Retz.

From the Greek *kymbe* “boat” and *achne* “chaff, glume,” an allusion to the shape of flowers and spikes, see *Observationes Botanicae* 6: 36. Jul-Nov 1791 and *Genera Graminum* 376. 1999, *Contributions from the United States National Herbarium* 46: 167. 2003.

Cymbanthelia Andersson = *Cymbopogon* Sprengel

From the Greek *kymbe* “boat” and *anthele* “a type of inflorescence, a little flower.”

Panicoideae, Andropogonodae, Andropogoneae, Andropogoninae, see *Plantarum Minus Cognitarum Pugillus* 2: 14-15. 1815, *Nova Acta Regiae Societatis Scientiarum Upsaliensis* ser. 3, 2: 254. 1856 and *Bot. Porto Rico* 1: 27.

1923, *Contributions from the United States National Herbarium* 46: 167-169. 2003.

Cymbopogon Sprengel = Cymbanthelia
Andersson, *Gymnanthelia* Schweinf.,
Gymnanthelia Andersson

From the Greek *kymbe* “a boat” and *pogon* “a beard,” referring to the many-awned spikelets and boat-shaped spathes or to the glumes; see Kurt Polycarp Joachim Sprengel, *Plantarum Minus Cognitarum Pugillus*. 2: 14. 1815.

About 40/55(-60) species, Old World tropics and subtropics. Panicoideae, Andropogonodae, Andropogoneae, Andropogoninae, perennial or rarely annual, robust, tussocky, tall, aromatic, herbaceous, densely tufted, unbranched, internodes solid, auricles absent, ligule membranous and fringed or not or scarious, leaves linear to lanceolate, plants bisexual, inflorescences spatheate and spatheolate, large panicles compound and multibranching, racemes short and long peduncled, at the tip of each branch 2 small racemes, racemes paired and enclosed in a reddish spatheole, spikelets paired and dissimilar, sessile spikelet dorsally compressed and pedicelled spikelet never concave on the back, sessile spikelets awned and with 1 fertile floret above a sterile floret, 2 glumes more or less equal, lower glume flat or concave and laterally 2-keeled, upper lemma 2-lobed or bifid pedicellate spikelets awnless and sterile, palea absent, 2 lodicules free and fleshy, 3 stamens, ovary glabrous, 2 stigmas, usually grazed when young, several species provide seed for small birds, ornamental for foliage and for the inflorescences, under certain conditions several species could develop toxic properties, aromatic oils used in medicine and as flavouring agents, highly flammable, diverse uses in food, in perfumery and pharmaceutical industry and as a natural precursor of semisynthetic vitamin A, essential oils from different species of the genus *Cymbopogon* are known for their antimicrobial activity, may be harmful if ingested in quantity, populations occurring in the wild harbor considerable genetic variation, a difficult genus, resembles *Andropogon* L., drought-resistant, occurs from mountains and grasslands to arid zones, dry soils, savannah, rainforest, open habitats, type *Cymbopogon schoenanthus* (L.) Spreng., see *Species Plantarum* 2: 1045. 1753, *Catalogus plantarum horti botanici monspeliensis* 78. 1813, *Plantarum Minus Cognitarum Pugillus* 2: 14-15. 1815, *Allgemeine Gartenzeitung* 3: 267. Berlin 1835, *Florae Africae Australioris Illustrationes Monographicae* 109. 1841, *Synopsis Plantarum Glumacearum* 1: 383. 1855 [1854], *Nova Acta Regiae Societatis Scientiarum Upsaliensis* ser. 3, 2: 254. 1856, *Beitr. Flora Aethiopiens* 229. 1867 and *Bulletin of Miscellaneous Information Kew* 1906: 322, 350-351, 357. 1906, *J. Bombay Nat. Hist. Soc.* 51: 890-916. 1953 and 52: 149-183. 1954, *Cytologia* 19: 97-103. 1954, *Folia Primatologica* 15: 1-35. 1971, S. Soenarko, “The

genus *Cymbopogon* Sprengel (Gramineae).” *Reinwardtia* 9(3): 225-375. 1977, *Journal of Cytology and Genetics* 15: 51-57. 1980, *Journal of Cytology and Genetics* 20: 205-206. 1985, *Journal of Cytology and Genetics* 21: 21-34. 1986, *Cytologia* 53: 517-524. 1988, *Annals of the Missouri Botanical Garden* 75: 866-873. 1988, *Journal of Cytology and Genetics* 25: 140-143. 1990, *Flora Mesoamericana* 6: 390-391. 1994, *Journal of Cytology and Genetics* 24: 241-246. 1994, *Cymbopogon: The Aromatic Grass*. Monograph/edited by Sushil Kumar, Samresh Dwivedi, A.K. Kukreja, J.R. Sharma and G.D. Bagchi. Lucknow, Central Institute of Medicinal & Aromatic Plants 2000, Liliana M. Giussani, J. Hugo Cota-Sánchez, Fernando O. Zuloaga and Elizabeth A. Kellogg, “A molecular phylogeny of the grass subfamily Panicoideae (Poaceae) shows multiple origins of C4 photosynthesis.” *Am. J. Bot.* 88: 1993-2012. 2001, *Contributions from the United States National Herbarium* 46: 167-169, 243. 2003, *Weed Biology and Management* 4(1): 19-23. Species

C. spp.

in English: lemon grasses

C. ambiguus A. Camus (*Andropogon ambiguus* Steudel, nom. illeg., non *Andropogon ambiguus* Michx.; *Cymbopogon ambiguus* (Steudel) A. Camus; *Cymbopogon exaltatus* sensu J. Black, non (R. Br.) Domin; *Cymbopogon exaltatus* var. *ambiguus* (A. Camus) Domin)

South Australia, Western Australia, Queensland, New South Wales, Northern Territory. Perennial, slender, tufted, lemon-scented, caespitose, forming erect and leafy tussocks, leaves bluish green or sometimes reddish, sheath glabrous, stems erect or arching, densely villous racemes paired and more or less erect, very narrow panicles, sheathing bract, spikelets blue-green and very hairy or densely silky-villous, awn slender, not usually grazed, rarely eaten by stock, moderately palatable to rabbits, handsome and very attractive, drought resistant, revegetation, used by the Australian aborigines for analgesic purposes, the fresh grass is crushed between the hands and the scent inhaled to relieve congestion, the whole plant dried used as a liniment for scabies,

sores, cramp and sore heads, growing on rocky hills, shallow rocky soils, exposed granite and on roadsides which have shallow loam or clayey soils, also along creek banks in stony uplands, often near water courses, see *Flora Boreali-Americana* 1: 58. 1803, *Synopsis Plantarum Glumacearum* 1: 385. 1854 and *Bibliotheca Botanica* 85: 273. 1915, *Revue de Botanique Appliquée & d'Agriculture Coloniale* 1: 290. 1921.

in English: scented grass, lemon scented grass, scented oilgrass, scent grass, lemon grass

C. bombycinus (R. Br.) Domin (*Andropogon bombycinus* R. Br.; *Andropogon exaltatus* var. *lanatus* (R. Br.) Hack.; *Andropogon lanatus* R. Br.; *Andropogon procerus* var. *schultzei* Hack.; *Cymbopogon bombycinus* (R. Br.) A. Camus, nom. illeg., non *Cymbopogon bombycinus* (R. Br.) Domin; *Sorghum bombycinum* (R. Br.) Kuntze) (referring to the silky hairs of the spikelets, Greek *bombyx*, *bombykos* "silk, silk-worm, silk garment," Latin *bombyx*, *bycis* "silk-worm, silk, any fine fiber")

Western Australia, Queensland, Northern Territory. Perennial, erect, tufted, tough, forming erect and rigid tussocks, stems slender and rigid, leaves narrow and rigid, woolly spikelets with long silky hairs, ornamental and attractive, an increaser species, sandy or stony soils, along stream banks, alluvial flats, see *Prodromus Florae Novae Hollandiae* 202. 1810, *Monographiae Phanerogamarum* 6: 595-596. 1889, *Revisio Generum Plantarum* 2: 791. 1891 and *Bibliotheca Botanica* 85: 274. 1915, *Revue de Botanique Appliquée & d'Agriculture Coloniale* 1: 290. 1921.

in English: citronella grass, silky oilgrass

C. caesioides (Nees) Stapf (*Andropogon caesioides* Nees ex Hook. & Arn.; *Andropogon connatus* Hochst. ex A. Rich.; *Andropogon excavatus* Hochst.; *Andropogon schoenanthus* L.; *Andropogon schoenanthus* subsp. *schoenanthus* var. *caesioides* (Nees) Hackel; *Andropogon schoenanthus* var. *caesioides* (Nees ex Hook. & Arn.) Hack.; *Andropogon schoenanthus* var. *caesioides* (Nees ex Hook. & Arn.) Rangachariar, nom. illeg., non *Andropogon schoenanthus* var. *caesioides* (Nees ex Hook. & Arn.) Hack.; *Andropogon schoenanthus* var. *gracillimus* Hook.f.; *Cymbopogon caesioides* (Nees ex Hook. & Arn.) Stapf; *Cymbopogon caesioides* (Hook. & Arn.) Stapf; *Cymbopogon connatus* (Hochst. ex A. Rich.) Chiov.; *Cymbopogon connatus* var. *muticus* Chiov.; *Cymbopogon excavatus* (Hochst.) Stapf; *Cymbopogon excavatus* (Hochst.) Stapf ex Burt Davy; *Cymbopogon schoenanthus* (L.) Spreng.; *Trachypogon schoenanthus* (L.) Nees) (Latin *caesioides* "bluish gray")

Eastern Africa, Somalia, southern India, Sri Lanka, South Africa, Namibia, Swaziland. Perennial, straggling, tufted or densely tufted or loosely tufted, tussocky, usually unbranched, wiry, erect, knotted woody rhizome, lower portions of the stem not covered with leaf sheaths, narrow leaf blade widest at the base, leaf sheath rounded and smooth,

ligule a short and rounded membrane, basal leaf sheaths glabrous, linear leaves blue-green and waxy, thick inflorescence, erect false panicle narrow to narrowly oblong, each pair of spike-like racemes partially enclosed by a spathe, spikelets paired, 1 spikelet sessile and with a twisted awn, pedicelled spikelet narrowly lanceolate, sessile raceme with lowest pedicel swollen, panicle remains yellow-green at maturity, a weed, low grazing value, poorly utilized, low palatable and hard, only eaten when very young, very unpalatable because of its bitter leaves and peppery scent, strong turpentine smell, sour by nature, eaten by goats in Tanzania, used for thatching roofs, found in most veld types, damp ground, open areas, fixed dunes, shrubby vegetation, alluvial plains, on red loamy sand, near the coast, steep rocky hillsides, stony soil, open grassy plain, upland hillsides, overgrazed veld, field borders, cliffs, closely related to *Cymbopogon martinii* (Roxb.) J.F. Watson and *Cymbopogon pospischilii* (K. Schum.) C.E. Hubbard, see *Species Plantarum* 2: 1046. 1753, *The Botany of Captain Beechey's Voyage* 244. 1838, *Tentamen Florae Abyssinicae* ... 2: 464. 1850, *Gaz. N.W. Prov. Ind.* 392. 1882, *Monographiae Phanerogamarum* 6: 610. 1889, *The Flora of British India* 7(21): 205. 1897 [1896] and *Bulletin of Miscellaneous Information Kew* 1906(8): 360-361. 1906, *Grasses of Burma* ... 125. 1960, *Journal of Cytology and Genetics* 19: 15-20. 1984, *Pakistan Journal of Botany* 17: 309-310. 1985, *Cell and Chromosome Research* 15(3): 16. 1992.

in English: broad-leaved turpentine grass, kachi grass, inchi grass, buchu grass, turpentine grass, common turpentine grass, eau-de-Cologne grass, ginger grass, lemon-scented grass, lemon grass

in Arabic: m'hâh

in India: adavi nimma gaddi, anji hullu, kaamaanchi hullu, kaasi gaddi, kaasi hullu, kharadaa kaasi hullu, mandappullu, muchival pullu, naati laamancha, kaamaakshi pullu

in Vietnam: co dit, co thui

in Namibia: Heng'ge (Vasekele)

in Somalia: sandul, sandool

in East Africa: ang'we

in Rodrigues Island: citronelle, citronelle marron

in Southern Africa: boegoegrass, buchugras, lemoengras, stinkgras, suurgras, suurpol, gewone terpenyngras, terpenyngras, breëblaarterpenyngras, breitblättriges pfeffergras, koperdraadgras; imbubu (Zulu); mkakama, umqungu (Tswana); patiane (Sotho)

in southern Rhodesia: mWaa

C. calciphilus Bor

Thailand. Indeterminate species, see *Dansk Botanisk Arkiv* 23: 157. 1965.

in Thailand: ya kho daeng

C. cambogiensis (Balansa) E.G. Camus & A. Camus (*Andropogon cambogiensis* Balansa; *Cymbopogon siamensis* Bor)

Southeast Asia, Thailand. See *Journal de Botanique, rédigé par une société de botanistes* 4: 114. 1890 [*Journal de Botanique (Morot)*] and *Flore Générale de l'Indo-Chine* 7: 351. 1922, *Dansk Botanisk Arkiv* 23: 158. 1965.

in Thailand: yaa frik fran, yaa phrik phraan, ya phrik phran

C. citratus (DC.) Stapf (*Andropogon ceriferus* Hack.; *Andropogon citratus* DC.; *Andropogon citratus* DC. ex Nees; *Andropogon citriodorum* hort. ex Desf.; *Andropogon nardus* subsp. *ceriferus* (Hack.) Hack.; *Andropogon roxburghii* Nees ex Steud.; *Andropogon schoenanthus* L.; *Cymbopogon citratus* (DC. ex Nees) Stapf; *Cymbopogon citratus* (Nees) Stapf; *Cymbopogon nardus* subvar. *citratus* (DC.) Roberty)

Southeast Asia, Sri Lanka, South India, Nepal. Perennial bunchgrass strongly lemon-scented, blue green, canelike stems slender to robust, densely clumped, bushy, tall, very leafy, short oblique rhizome, leaves sheathing, ligule a fringed membrane, sheaths slightly flattened and more or less waxy, leaves narrowed at the base or tapered to both ends, nodding inflorescence, rachis nodes and pedicels ciliate, lax false panicles, spathe bracts linear-lanceolate, sessile spikelet bearing 2 florets, paired and dissimilar spikelets, sessile spikelet linear-lanceolate and awnless or with a twisted awn, raceme with lowest pedicel not swollen, lower glume of sessile spikelet concave or flat, lower floret reduced to an empty lemma, upper floret hermaphrodite and awnless, pedicelled spikelet elliptic-oblong, palea mostly absent, 2 lodicules, 3 stamens, plumose stigmas, propagation is by root or plant division, plants rarely flower or set seed, essential oils, culinary herb, stem and leaves are used for cooking, the lemon-scented foliage used as a flavouring and a masking fragrance, used in herbal teas and in the preparation of a highly spiced sherbet, scent for soaps and creams, reported to have antimicrobial activity, considered a carminative and insect repellent, used against coughing, muscular aches and pains, insufficient milk in breast feeding mothers, headaches, oil acts as a central nervous system depressant, lemongrass oil is obtained by steam distillation of partially wilted leaves, commonly cultivated and wild, grows well in sandy soils with adequate drainage, semi-deserts, savannah, in clearings, sunny warm and humid conditions, see *Species Plantarum* 2: 1046. 1753, *Catalogus plantarum horti botanici monspeliensis* 78. Montpellier, Paris, Strasbourg 1813, *Tableau de l'École de Botanique* 15. 1815, *Allgemeine Gartenzeitung* 3: 267. 1835, *Synopsis Plantarum Glumacearum* 1: 395. 1854, *Flora Brasiliensis* 2(4): 281. 1883, *Monographiae Phanerogamarum* 6: 605. 1889, *Catalogue of the African Plants Collected by Dr. F. Welwitsch in 1853-61* 2(1): 155. 1899 and *Handb. Fl. Ceylon* 5: 243. 1900, *Bulletin of Miscellaneous Information Kew* 1906: 322, 357. 1906 [also *Kew Bulletin*], *Handb. Fl.*

Ceylon 6: 335. 1931, *Grasses of Ceylon* 193. 1956, *Grasses of Burma ...* 126. 1960, *Boissiera. Mémoires du Conservatoire de Botanique et de l'Institut de Botanique Systématique de l'Université de Genève* 9: 174. 1960, *Taxon* 49(2): 246. 2000.

in English: camel grass, lemon grass, true lemon grass, melissa grass, rosha grass, sweet rush, ginger grass, fever grass, West Indian lemon grass, West Indian lemon, citronella, citronella grass, mulch grass

in French: citronnelle, herbe citron, verveine des Indes, fausse citronnelle

in Angola: belgata, chá de gabão, chá de princípios, matitiiti

in Benin: tiwouroussou, ousofoussouhou

in Cameroon: bealibe ti, bejaba ti, beyebe ti, hundè, ti

in Gambia: kanyang yallo

in Guinea: idel tegag, walel waregag

in Guinea-Bissau: belgata

in Sierra Leone: anwoapotho, bichineyo, bichinyeyo, lemon gras, pei-poto, popana, pu-lumbe, pudumbi, pulumbi, ti

in Yoruba: koriko oba, koriko oyinbo, kooko oba, oko oba, tii, eti, isoko

in Pacific: moengalo

in Burma (Myanmar): sabalin

in Cambodia: sacrey, slek krey sabou

in China: iang mao, hsiang mao ts'ao

in India: abichhathraka, agia ghas, agin ghas, aginghas, agya-ghans-tail, akyaghas-ka-air, athigandha, badhira, badhiradhvanibodhana, bhoostrhina, bhoothika, bhor, bhustrina, bhuthina, bohr, chaa hullu, chae Kashmiri, chaathappu, chaayapuu, chayapul, chhathra, chippa-gaddinune, chippagaddi, choakappullu, devajagdhaka-tailam, gandha bela, gandha-bena, gandhabena, gandhatrana, gandhathrina, gandhatrina, gavathichahaa, gavaticaha, gochhalaka, guchhala, guhyabeeja, gundardha, haree chaha, hazar-masaleh-ka-aatar, hirua cha, hirvacha, jambukapriya, karenduka, karpooora pullu, karpoorpul, karpura-pullu-yenney, khawi, kutimbaka, lili cha, lilicha, lilli-chaya-tel, majjige hullu, malathrinaka, mikkotiu, mirchia gand, nimbe hullu, nimma-gaddi-nune, nimmagaddi, olancha, olecha, patichachaha, pengrima-tel, penguin, poonsvavighraha, poothigandha, purhali hullu, purvali-hullu-yanne, roghanchae-kashmiri, rohisha, rusa, rusa ka tel (grass oil of Nimar), sabalen-si, samalambi, sambaara hullu, sambharapulla-enna, shambharapull, shringarocha, sugandha, sugandhichaha, takratani, takratrani, thakkaathana, thakrathruna, tikari, vaasana gaddi, vaasana pullu, vasanap-

pulla-enna, vasanappillu, vasanappulla, vasanapulla, vasanapull, vasane-hullu-yanne, vashanap-pullu-yenney, vashanup pulla

in Indonesia: bubu, serai dapur, sereh

in Laos: 'si khai, 'sing khai

in Malaysia: serai, serai dapur, sereh

in the Philippines: balioko, baroni, belioko, paja de meca, salai, salay, tanglad

in South Laos: (people Nya Hön) bum sray

in Sri Lanka: sera, serai

in Thailand: cha khrai, ho wo ta po, howo tapo, hua sing khai, kha hom, khaa hom, khrai, loe kroei, soet kroei, ta khrai

in Vietnam: huong mao, la sa, s[ar] chanh, sa, say ya

in Spanish: pasto limón, zacate limón

in Portuguese: citronela

in Brazil (Amazonas): makiyuma hanaki, makiyuma xik, patchuli, waihi hanaki

in Brazil: capim-catinga, capim-cheiroso, capim-cidreira, capim-cidrilho, capim-ciri, capim-de-cheiro, capim limão, capim-marinho, capim santo, erva cidreira, grama-cidreira, patchuli, patchuli-falso, vervena, yerba Luisa

in the Caribbean: citronnelle, sitwonnèl

in Central America: limonera, te de limón, zacate limón, zacate de limón

in Colombia: limoncillo

in Costa Rica: to kri, togli

in Ecuador: hierba de limón, hierba luisa, limoncillo

in Guatemala: llmon ch'iim, lmunch chim, tè de limón, zacate limón

in Mexico: Imoo toom, ocozacatl, pasto limón, tè limón, zacate limón, zacatlatlaunqui

in Nicaragua: sagádi, sagádi abirua, ti

in Puerto Rico: caña limonaria

in South America: ajéj, arak, cedrón, hierba buena, hierba lousa, hierba luisa, limoncillo, limonera, paja cedrón, pipirí, yerba juiza, yerba luisa, yerba luiza

in Venezuela: malojo

in West Indies: fever grass, lemon grass, sitwonele, citronelle, herbe lemon, herbe citronelle

C. coloratus (Hook.f) Stapf (*Andropogon coloratus* Nees ex Wight; *Andropogon nardus* subsp. *glomeratus* Hack.; *Andropogon nardus* var. *coloratus* Hook.f)

Asia, Southeast Asia, India. Perennial, aggressive, nonpalatable grass, used for perfuming soaps, see *Monographiae Phanerogamarum* 6: 604. 1889, *The Flora of British India* 7(21): 206. 1897 [1896] and *Bulletin of Miscellaneous Information Kew* 1906: 321. 1906.

in English: boda grass

in India: boda gaddi, manakru pillu, manjen pullu, senga manu mala pillu, sengana pillu

C. commutatus (Steud.) Stapf (*Andropogon commutatus* Steud.; *Cymbopogon divaricatus* Stapf; *Cymbopogon flocosus* (Schweinf.) Stapf)

Tropical Africa, Asia, India. Perennial, variable, tufted to densely tufted, erect, sweetly scented, basal leaf sheaths glabrous or hairy, leaves flat or filiform, inflorescence linear, racemes ciliate, sessile and pedicelled spikelets lanceolate to narrowly lanceolate, lowermost pedicel of the sessile raceme swollen, lower glume of sessile spikelet with rounded keels, awn of upper lemma geniculate, low to medium palatability, grazed, used for roofing, found in degraded areas, deciduous bushland, open sandstone hillsides, grassy plains, limestone, hillsides, wadi, see *Synopsis Plantarum Glumacearum* 1: 387. 1854 and *Flora of Tropical Africa* 9: 276, 278. 1919, *Bulletin of Miscellaneous Information Kew* 1907: 211. 1907.

in Somalia: hadaf

in Arabic: sakhbar, idhkhir, khasab, hamra

C. densiflorus (Steud.) Stapf (*Andropogon densiflorus* Steud.; *Andropogon schoenanthus* L.; *Andropogon schoenanthus* subsp. *densiflorus* Hack.; *Andropogon schoenanthus* var. *densiflorus* (Steud.) Hack.; *Andropogon stypticus* Welw.; *Cymbopogon schoenanthus* (L.) Spreng.; *Cymbopogon schoenanthus* var. *densiflorus* (Hack.) Rendle; *Cymbopogon schoenanthus* var. *typicus* Rendle; *Cymbopogon stypticus* (Welw.) Fritsch)

Tropical Africa. Annual or perennial, tufted, aromatic, ornamental, inflorescences used in rituals, growing in open habitats, along roadsides, grassland, see *Species Plantarum* 2: 1046. 1753, *Plantarum Minus Cognitarum Pugillus* 2: 15. 1815, *Synopsis Plantarum Glumacearum* 1: 386. 1854, *Boletim da Sociedade Broteriana* 3: 139. 1885, *Monographiae Phanerogamarum* 6: 609. 1889, *Catalogue of the African Plants Collected by Dr. F. Welwitsch in 1853-61* 2(1): 154. 1899 and *Bulletin de l'Herbier Boissier, sér. 2, 1*(11): 1099. 1901, *Flora of Tropical Africa* 9: 289. 1919, *Taxon* 49(2): 246. 2000.

in Angola: evulu, kaxinde, kiangu, musoso, onkotankota, saku-saku, saku

C. dependens B.K. Simon

Australia, Northern Territory. Rare species, see *Austrobaileya* 3(1): 79-99. 1989 [Studies in Australian grasses: 4. Taxonomic and nomenclatural studies in Australian Andropogoneae].

C. dieterlenii Stapf ex Schweick. (*Andropogon dieterlenii* Stapf; *Cymbopogon dieterlenii* Stapf ex E. Phillips)

South Africa. Perennial, forming large clumps, tufted, ligule pointed, leaves basal, inflorescence paniculate with spatheate racemes, spikelets sessile and pedicellate, sessile spikelets

with winged lower glume, palatable only when young, in South Africa traditional healers use it to remove bad luck after the death, found in mountain slopes and veld, among boulders, open areas, see *Annals of the South African Museum* 16: 336. 1919, *Bulletin of Miscellaneous Information Kew* 1936(5): 325. 1936 [or *Kew Bulletin* 1936: 325. 1936].

in South Africa: lebate, leбата, lebatjana

C. *distans* (Nees) J.F. Watson (*Andropogon distans* Nees ex Steud.; *Andropogon nardus* var. *distans* (Nees ex Steud.) Hack.; *Cymbopogon distans* (Nees ex Steud.) J.F. Watson)

Asia, India, Jammu and Kashmir State. Perennial, simple, aromatic and sweet smelling, smooth, glabrous, fibrous roots, basal sheaths very short, ligule membranous scarious, old leaf sheaths fibrous, leaf blades rounded at the base with a long filiform tip, leaves mostly basal, panicle with paired racemes, lower floret empty, upper floret hermaphrodite, erosion control, subtropical or tropical savannah, dry habitats, see *Synopsis Plantarum Glumacearum* 1: 387. 1854, *Gaz. N.W. Prov. India* 392. 1882, *Monographiae Phanerogamarum* 6: 608. 1889 and *Proceedings of the Indian Academy of Sciences* 71: 97. 1970, *Reinwardtia* 9: 356. 1977.

in India: sunni ghas

C. *exaltatus* (R. Br.) Domin (*Andropogon exaltatus* R. Br.; *Cymbopogon procerus* (R. Br.) Domin)

Australia. See *Prodromus Florae Novae Hollandiae* 1: 202. 1810 and *Bibliotheca Botanica* 85: 273. 1915, *Revue de Botanique Appliquée & d'Agriculture Coloniale* 1: 290. 1921.

C. *flexuosus* (Nees ex Steudel) J.F. Watson (*Andropogon ampliflorus* Steud.; *Andropogon flexuosus* Nees ex Steud.; *Andropogon nardus* var. *flexuosus* (Nees ex Steud.) Hack.; *Cymbopogon flexuosus* (Steud.) J.F. Watson; *Cymbopogon flexuosus* (Nees ex Steud.) Stapf, nom. illeg., non *Cymbopogon flexuosus* (Nees ex Steud.) J.F. Watson; *Cymbopogon travancorensis* Bor)

Indomalesia, Asia tropical, India. Perennial, rather variable, vigorous, tufted, aromatic, terete, erect, solid, smooth and glabrous, nodes sometimes short-bearded, leaf blade linear-acuminate tapering at both ends, tomentose patches at the base of the leaf blade, sheath clasping the culm, ligule papery, short thick rhizome, leaves sheathing, inflorescence paniculate with crowded paired racemes, a spatheole subtending a pair of racemes, large and loose panicle with many drooping branches, spikelets paired, pedicelled spikelet male or sterile, lower floret reduced to an empty lemma, upper floret hermaphrodite, palea absent, 2 lodicules, 3 stamens, plumose stigmas, commonly cultivated and sometimes naturalized, waterlogging not tolerated, often cultivated as a garden plant, rainfed crop, propagation is by root or plant division, essential oils, flavouring, used in herbal teas, widely used as a fragrance in perfumes and cosmetics, considered a carminative and insect repellent, oil has

antifungal activity, useful for acne and excessive perspiration, muscular pain, grows well in sandy soils with adequate drainage, fertile sandy loams, fields, along roadsides, slopes, ridges, forest, see *Synopsis Plantarum Glumacearum* 1: 388. 1854, *Gaz. N.W. Prov. India* 10: 392. 1882, *Monographiae Phanerogamarum* 6: 603. 1889 and *Bulletin of Miscellaneous Information Kew* 1906(8): 319-321. 1906, *Journal of the Bombay Natural History Society* 51: 903. 1954, *Genetica* 72: 211-215. 1987, *Bangladesh Journal of Botany* 16: 109-110. 1987, *Journal of Cytology and Genetics* 34(2): 161-168. 1999.

in English: Malabar oil, Malabar grass, Malabar lemon-grass, Cochin grass, Cochin lemongrass, East Indian lemon grass, ginger grass, lemongrass

in French: herbe de Malabar, verveine des Indes

in Spanish: pasto de Malabar

in Brazil: capim-catinga, capim-cheiroso, capim-cidreira, capim-cidrilho, capim-ciri, capim-de-cheiro, capim limão, capim limão da Índia oriental, capim-marinho, capim santo, erva cidreira, grama-cidreira, patchuli, patchuli-falso, vervena

in India: anthibale hullu, kodi pullu, kodipullu, shunti hullu

in Vietnam: co sa, s[ar] d[i]j[u]

C. *flexuosus* (Nees ex Steudel) J.F. Watson var. ***microstachys*** (Hook.f.) Bor (*Andropogon nardus* var. *microstachys* Hook.f.)

India, Uttar Pradesh, Singapore. Rare species, see *The Flora of British India* 7: 207. 1896 and *Journal of the Bombay Natural History Society* 52: 162. 1954.

C. *gidarba* (Ham. ex Hook.f.) Haines (*Andropogon gidarba* Ham. ex Hook.f.; *Andropogon gidarba* Buch.-Ham. ex Steud.; *Andropogon gidarba* Buch.-Ham.; *Cymbopogon gidarba* (Buch.-Ham. ex Steud.) A. Camus; *Cymbopogon gidarba* (Buch.-Ham. ex Steud.) Haines)

India. A good fodder grass, see *Synopsis Plantarum Glumacearum* 1: 387. 1854, *The Flora of British India* 7(21): 208. 1897 [1896] and *Bulletin du Muséum d'Histoire Naturelle* 26: 562. 1920, *The Botany of Bihar and Orissa* 1: 48. 1924.

in India: benne hanchi hullu

C. *giganteus* (Hochst.) Chiov. (*Andropogon giganteus* Hochst., nom. illeg., non *Andropogon giganteus* Ten.; *Andropogon giganteus* (Chiov.) Eyles; *Cymbopogon conatus* var. *benearmatus* Chiov.; *Cymbopogon giganteus* Chiov.)

Tropical Africa. Perennial, herbaceous, pithy stems, robust, tufted to loosely tufted, rhizomatous, erect, thick, sometimes stilt-rooted, ligule scarious, aromatic to strongly smelling, pepper flavour, leaves more or less cordate, inflorescence cylindrical, false panicle linear, sessile spikelet elliptic, lower glume membranous and winged, upper

lemma awned, pedicelled spikelet lanceolate, essential oils in the inflorescences, vigorous, used for soil erosion, browsed when young, low nutritive value, unpalatable when old, thatching material, fencing, occurs in wooded grasslands, open habitats, deciduous savannah bushland, forest, silty soils, fallows, savannah, see *Flora Napolitana* 5: 285. 1835-1836[-1838], *Flora* 27: 242. 1844 and Emilio Chiovenda (1871-1941), *Intorno ad alcune graminacee da essenze ed a quelle della Colonia Eritrea*. Roma 1909, *Transactions of the Royal Society of South Africa* 5: 296. 1916, *Kew Bulletin* 19: 454. 1965.

in English: tsauri grass, scented reed, wolf's grass, scented grass

in French: citronnelle de brousse

in Arabic: nal, seko

in Benin: meunououse, yakimooribou

in Gambia: benefalu, kala kasala, wa, wa serrela

in Ghana: gbetenga, mopele mogo, ngkabe

in Guinea: ediediyita, endediyita, endiediyita, osamban

in Ivory Coast: awendè, boborasien, fime, fimu, nukian, nuyapien, surugubi, wozomo

in Mali: dagè, gagèli, kièkala, kogniorè, tièkala, tièkala bilé

in Niger: abanazar, abanozar, ahanbarom, ahanibaerum, gadjiali, gajaali, goso faryé, sabré, wadjialo

in Nigeria: gamba, kyara, mobefa, nal, nugbwanu bmagna, oka eye, riyak, seko, sukkahoreho, tsabre, tsagre, tsaure, wajaalo, wajande

in Senegal: ara, begnfala, bègnfala, bègnfalo, beignfala, beignefala, benfala, benfalo, bengfala, dagé, dagué, ebuk, èbuk, ebukay, èbukay, éputa, gadé, gadié, gagèli, gapélé, gosofaryé, holl, inak, kala, kékala, kiékala, konorè, mbal, mbol, mbonfala, mbönfala, nak, ñak, nipéré, sabré, tékala, tiékala, tiékala bilé, trékala, wa, wa kasala, wakasala

in Upper Volta: boborasien, fasaure, fbopbo rasienasuure, gajaalo, kasseburu, kuèrè, kurukuru, mofogo, natamora, nata moza, surugubi, tièkala

in Yoruba: oka eye

C. goeringii (Steud.) A. Camus (*Andropogon goeringii* Steud.; *Andropogon nardus* var. *goeringii* (Steud.) Hack.; *Cymbopogon tortilis* var. *goeringii* (Steud.) Hand.-Mazz.) (named for the German chemist Philip Friedrich Wilhelm Goering, 1809-1876, botanical collector in Japan)

Southeast Asia. See *Flora* 24: 22. 1846, *Monographiae Phanerogamarum* 6: 607. 1889 and *Revue de Botanique Appliquée & d'Agriculture Coloniale* 1: 286. 1921, *Revue de Botanique Appliquée & d'Agriculture Coloniale* 5: 206. 1925, *Symbolae Sinicae* 7(5): 1314-1315. 1936, *Reinwardtia* 9(3): 346. 1977.

C. jwarancusa (Jones) Schult. (also spelled *iwarancusa*) (*Andropogon himalayensis* Gand., nom. illeg., non *Andropogon himalayensis* Steud.; *Andropogon jwarancusa* Jones; *Cymbopogon iwarancusa* (Jones) Schult.; *Cymbopogon jwarancusa* Schultes) (the word *Cusa* is perhaps derived from the Sanskrit word *Kusha* for grass)

Africa, Asia, Uttar Pradesh, India, Pakistan. Perennial, densely tufted, very aromatic, leaf sheaths more or less inflated below, ligule membranous and ciliolate, leaf blades flat with a long filiform tip, long and narrow panicles conspicuously hairy to densely villous, racemes unequal, lowermost pedicel of the sessile spikelet not swollen, lower glume of the sessile spikelet with sharp keels, with 4 different dispersal units: a paired spikelet, a partial raceme, an entire raceme and a partial inflorescence, effective barrier against soil erosion, useful species for conserving soil and water in arid lands, medicinal grass used in Ayurvedic traditional medicine, used to purify blood and in coughs, boiled in wine as a diuretic, occurs on sand dune, arid and semiarid lands, arid stony plains, see Sir William Jones (1746-1794), "Botanical observations on select Indian plants." *Asiatic Researches* 4: 237-312. 1795, *Mantissa* 2: 458. 1824, *Bulletin de la Société Botanique de France* 46: 421. 1899.

in English: Iwarancusa grass, oilgrass

in India: amrinala, avadahaka, avadataka, bur, deerghamoola, ghatyari, ghatzari, ibharankusha, ibharankussa, ishthaka pathika, izkhir, izkir, jalashaya, jara khus, karankusa, karankusha, karankussa, karilaavancha hullu, khavi, khawi, khoi, laghu, lamajjaka, lamjak, lavaja, laya, nalada, panni, pivalavala, pilo valo, purale hullu, purvele hullu, san, sandula, sevyra, shighra, solara, sunala, sunila

C. ladakhensis B.K. Gupta

India. Threatened species, see *Proceedings of the Indian Academy of Sciences* 71: 10. 1970 and S.K. Jain & R.R. Rao, *An Assessment of Threatened Plants of India*. Proceedings of the seminar held at Dehra Dun, 14-17 Sept, 1981. Howrah, Botanical Survey of India 1983.

C. marginatus (Steud.) Stapf ex Burt Davy (*Andropogon marginatus* Steud.)

South Africa. Perennial, densely tufted, racemes hairy, lower glume of sessile spikelets winged, found in rocky places, see *Flora* 12(2): 472. 1829 and *Annals of the Transvaal Museum* 3: 121. 1912.

in English: dobo grass, khuskus, lemon grass, scented turpentine grass, Cape turpentine grass, tambootie grass

in Southern Africa: akkerwani, buffelsrooigras, koperdraadgras, kuskusgras, lemoegras, motwortel, motwortelterpentyngras, terpentyngras, muskusgras, platgras, rooigras, tamboekiegras, vrouehaargras; lebatha (Sotho); umqungu (Xhosa)

C. martinii (Roxb.) J.F. Watson (*Andropogon martinii* Roxb.; *Andropogon pachnodes* Trin.; *Andropogon schoenanthus* var. *martinii* (Roxb.) Benth.; *Andropogon schoenanthus* var. *martinii* Hook.f.; *Cymbopogon martinianus* (Roxb.) Schult.; *Cymbopogon martinii* var. *martinii*; *Cymbopogon martinii* var. *sofia* Bruno; *Cymbopogon pachnodes* (Trin.) W. Watson; *Gymnanthelia martinii* (Roxb.) Anderson) (dedicated to a General Martin, collector)

India, Asia tropical. Perennial, leafy, vigorous, terete, densely tufted, tussocky or forming clumps, simple or sparingly branched, smooth, glabrous, long slender stems, lower nodes often swollen, knotty base covered with dry sheaths, ligule membranous, leaf blade oblong-lanceolate with a cordate base, stout woody rhizome, inflorescence a cylindrical contracted panicle, boat-shaped bract, lower floret reduced to an empty lemma, upper floret hermaphrodite, lower glume channelled, palea absent, 3 stamens, plumose stigmas, pedicellate spikelet male with florets reduced to a scale, usually unpalatable to livestock, sometimes eaten by cattle, used to flavour tobacco and in perfumery and as a substitute for oil of rose and oil of geranium, sweet-scented aromatic essential oil has stimulating properties and is used as a remedy for rheumatism, very popular with soap and cosmetic manufacturers, stomachic and tonic, antiseptic and bactericide, antimicrobial, antifungal, used for infections, helps in skin and lymphatic problems, a valuable aid against dermatitis and skin infections, supportive to the nerves and cardiovascular system, restores intestinal flora, stimulates and aids digestion, palmarosa oil is obtained from freshly cut whole flowering plant, possessing an odour resembling geranium and rose, both the herb and the essential oil are

used widely in traditional Indian Ayurvedic medicine, cultivated and wild, useful for erosion control, does not tolerate acid soils or waterlogging, prefers warm and sunny conditions, fertile well-drained soils, see *Hortus Bengalensis, or A Catalogue ...* 7. 1814, *Flora Indica; or Descriptions ...* 1: 280-281. 1820, *Systema Vegetabilium* 459. 1824, *Gaz. N.W. Prov. Ind.* 392. 1882 and *Boll. Stud. Inform. Reale Giardino Coloniale* 10: 66. 1929, *Grasses of Burma ...* 125, 129. 1960, *Journal of Cytology and Genetics* 25: 322-323. 1990, *Annals of the Missouri Botanical Garden* 81(4): 775-783. 1994.

Willis; *Cymbopogon validus* (Stapf) Burt Davy; *Sorghum nardus* (L.) Kuntze) (Greek *nardos* "spikenard")

Tropical Asia, Sri Lanka, South India. Perennial, harsh, tufted, tall, robust and erect, clump forming, persistent for a number of years, leaves glaucous and narrow, leaf sheaths smooth, inflorescence compact and narrow linear, a panicle with the spikelets arranged in 2 terminal racemes, rachis ciliate and spathes elliptic, spikelets occur in pairs, unawned or awned, racemes at first erect and then deflexed, sessile spikelet flat or concave on the back with winged keels, lower glume of sessile spikelet flat and more or less winged, ornamental, cultivated, invasive and very competitive, very resistant to fire, feeding value low, browsed the young growth, unpalatable to cattle, generally is avoided in grazing, essential oil lemon-scented, flavouring, used as tea, a source of insect repellent and disinfectants, may irritate sensitive skin, useful in perspiration and oily skin, temporary relief of symptoms of cold and flu, good thatching and mulching material, growing on roadsides and waste ground, hills, grassland, deciduous bushland, poor soils, see *Species Plantarum* 2: 1046. 1753, *Synopsis Plantarum Glumacearum* 1: 385, 388. 1854, *Flora* 39: 86. 1856, *Monographiae Phanerogamarum* 6: 604. 1889, *Fl. C. nervatus (Hochst.) Chiov. (*Andropogon nervatus* Hochst.; *Andropogon schoenanthus* subsp. *nervatus*)

(Hochst.) Hack.; *Cymbopogon nervatus* var. *aerythraeum* Chiov.; *Gymnanthelia nervata* (Hochst.) Asch. ex Schweinf.)

Asia, Southeast Asia, Africa, Ethiopia, Sudan. Annual or short-lived perennial, erect, fragrant, glaucous, simple, ligule membranous, leaves with rounded base, false panicle linear to oblong, racemes in pairs, sessile spikelet elliptic, lower glume membranous, upper lemma awned, fodder, used for thatching huts and houses, on sandy soils, moist and cultivated habitats, savannah, semideserts, see *Flora* 27: 243. 1844, *Beitrag zur Flora Aethiopiens* ... 306. 1867, *Monographiae Phanerogamarum* 6: 611. 1889 and *Intorno ad alcune graminacee da essenze ed a quelle della Colonia Eritrea*. Roma 1909.

in Sudan: naal

C. obtectus S.T. Blake (*Cymbopogon bombycinus* sensu J. Black, non (R. Br.) Domin) (Latin *obtectus* "hidden, concealed, protected")

Western Australia, Northern Territory, Victoria, South Australia, Queensland, New South Wales. Perennial, slender, tall and leafy, forming erect tussocks, compact base with yellow roots, smooth and aromatic blue green leaves, sheath silky and persistent, shortly branched and compact panicle, racemes paired and densely villous, sheathing bract, spikelets reddish and silky, sessile spikelets awned, very hardy, not usually grazed, may be eaten when young, the plant is generally ignored when mature due to the lemon scent, handsome, ornamental when in flower, revegetation, Aborigines used for medicinal purposes, lemon scented essential oil may be suitable for perfumes, generally found as scattered plants on sandy red earths, dry areas or near water courses, red sands, stony soils, see *University of Queensland Papers: Department of Biology* 2(3): 55. 1944.

in English: silky-heads

C. osmastonii R. Parker (named for Bertram Beresford Osmaston, 1868-1961)

India, Uttar Pradesh; Bangladesh. Perennial vulnerable species, tufted, aromatic, slender, glabrous, culms slightly compressed, ligule ciliolate, leaf blades rounded at the base and acutely pointed, inflorescence a narrow panicle with paired racemes, spikelets awnless, growing in dry habitats, see *Feddes Repertorium* 31: 126. 1932, *Journal of the Bombay Natural History Society* 60: 709-710. 1963.

C. parkeri Stapf (*Andropogon laniger* Desf.)

Qatar, Southeast Asia, India, Jammu and Kashmir, Africa. Perennial grass, erect, caespitose, slender, simple below the inflorescence, hairy sheaths, leaf blades folded and linear with a filiform tip, basal leaves not twisted, panicle spatheate and narrow, 1 sessile raceme, glumes subequal, plant possess antispasmodic properties, useful for erosion control, found in dry rocky areas, see *Bulletin of Miscellaneous*

Information Kew 1929(1): 10-11. 1929, *Proceedings of the Indiana Academy of Sciences* 71: 96. 1970.

in Arabic: askhabar, skhabar

in India: gundar, khawi, runa, san, solara

C. pendulus (Nees ex Steudel) J.F. Watson (*Andropogon nardus* L. var. *grandis* Hackel; *Andropogon pendulus* Nees ex Steud.)

India, Jammu and Kashmir. Aromatic, lemon-scented, leaves glaucous, an oil obtained from this plant was found to be rich in elemicin (53.7%, 5-allyl-1,2,3-trimethoxybenzene), a starting material for a systemic antibacterial drug, see *Synopsis Plantarum Glumacearum* 1: 388. 1854, *Gaz. N.W. Prov. India* 392. 1882.

in English: Jammu lemongrass

C. plurinodis (Stapf) Burt Davy (*Andropogon plurinodis* Stapf; *Cymbopogon pospischilii* (K. Schum.) C.E. Hubb.)

South Africa. Perennial, erect, tufted, leaves sometimes villous, lower glume of sessile spikelets concave and wingless, growing on open grassland, stony places, see *Flora Capensis* 7: 353. 1898 and *Annals of the Transvaal Museum* 3: 121. 1912.

in English: bitter turpentine grass

C. polyneuros (Steud.) Stapf (*Andropogon polyneuros* Steud.; *Andropogon schoenanthus* var. *versicolor* (Nees ex Steud.) Hack.; *Andropogon schoenanthus* L. var. *versicolor* Hook.f.; *Andropogon schoenanthus* var. *versicolor* (Steud.) Hack.; *Andropogon versicolor* Nees ex Steud.; *Cymbopogon versicolor* (Nees ex Steud.) J.F. Watson)

Asia, India. Perennial, tufted, knotted woody rootstock, leaf blades subcordate at base, erect false panicle oblong, racemes ciliate, sessile raceme with lowest pedicel not swollen, sessile spikelet oblong-elliptic, fodder for horses, grassy hills, see *Species Plantarum* 2: 1046. 1753, *Synopsis Plantarum Glumacearum* 1: 385, 388. 1854, *Himalayan Districts of the North-western Provinces of India* 392. 1882, *Monographiae Phanerogamarum* 6: 610. 1889 and *Handb. Fl. Ceylon* 5: 241. 1900, *Bulletin of Miscellaneous Information Kew* 1906: 345. 1906, *Handb. Fl. Ceylon* 6: 335. 1931, *Grasses of Ceylon* 192. 1956, *Grasses of Burma* ... 131. 1960.

C. pospischilii (K. Schum.) C.E. Hubbard (*Andropogon nardus* L. var. *stracheyi* Hook.f.; *Andropogon plurinodis* Stapf; *Andropogon pospischilii* K. Schum.; *Cymbopogon plurinodis* (Stapf) Burt Davy; *Cymbopogon plurinodis* (Stapf) Stapf ex Burt Davy)

Eastern Africa, Nepal, Pakistan, Tanzania, Kenya. Perennial, tufted, erect, usually unbranched, leaves mostly basal, dense mass of leaves on the basal portions of the plant, lower portions of the stem covered with old leaf sheaths, ligule prominent and membrane-like, leaf sheath rounded and smooth, leaf folded or thread-like, leaf blade widest in the middle, inflorescence a false panicle linear to oblong,

paired racemes each with a leaflike spathe, spikelets paired, 1 spikelet sessile and awned, lowermost pedicel not swollen, lower glume papery, male pedicelled spikelet narrowly lanceolate, strong turpentine smell, fodder grass, poorly utilized, more or less unpalatable, eaten by baboons, low grazing value, grows in dry areas, subdesert grassland, deciduous bushland, bushveld, semiarid and arid rangelands, degraded areas, hillsides, limestone, see *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 24(3): 328. 1897 [1898?] and *Kew Bulletin* 4: 175. 1949.

in English: bitter turpentine grass, bushveld turpentine grass, narrow-leaved turpentine grass

in South Africa: terpenyngras, smalblaarterpenyngras, bosveldterpenyngras, bitterterpenyngras, schmalblättriges pfeffergras, stinkwildebeesgras, suurgras, pepergras, bittergras, bitterpol, bitterrooigras, blouaadgras, breëaarrooigras, breësaadgras, heuninggras, koperdraadgras, rooiangelgras, rooiberggras, rooigras

in Somalia: beili, baila, beli

C. procerus (R. Br.) Domin (*Andropogon exaltatus* R. Br.; *Andropogon procerus* R. Br.; *Cymbopogon exaltatus* (R. Br.) Domin; *Cymbopogon nardus* subvar. *exaltatus* (R. Br.) Roberty; *Cymbopogon procerus* (R. Br.) A. Camus, nom. illeg., non *Cymbopogon procerus* (R. Br.) Domin; *Sorghum exaltatum* (R. Br.) Kuntze; *Sorghum procerum* (R. Br.) Kuntze) (the specific name from the Latin *procerus*, *a*, *um*, "high, tall")

Western Australia, Northern Territory. Perennial, tall, tufted, robust, forming erect and slender tussocks, aromatic leaves gray-green, hairy and branched panicles, woolly and glaucous spikelets, ornamental and attractive, very hardy, an increaser species, rocky soils, see *Prodromus Florae Novae Hollandiae* 1: 202. 1810, *Revisio Generum Plantarum* 2: 791. 1891, *Catalogue of the African Plants Collected by Dr. F. Welwitsch in 1853-61* 2(1): 155. 1899 and *Revue de Botanique Appliquée & d'Agriculture Coloniale* 1: 289. 1921, *Bibliotheca Botanica* 85: 273. 1915, *Boissiera*. 9: 174, 176. 1960.

C. prolixus (Stapf) E. Phillips (*Andropogon nardus* var. *prolixus* Stapf; *Andropogon prolixus* (Stapf) Stapf)

South Africa. Perennial, tufted, erect, ligule membranous, inflorescence paniculate, racemes more or less glabrous, lower glume of sessile spikelets winged, grass with lemon smell, unknown grazing value, found in savannah, grassland, along roadsides, rocky places, rocky hillsides, see *Flora Capensis* 7: 352. 1898.

in English: Tambuki grass (Tambuki or Amathembu, a tribe in South Africa)

in South Africa: Tamboekiegras

C. ramnagarensis B.K. Gupta

India, Jammu and Kashmir. Indeterminate species, see *The Flora of British India* 7(21): 207. 1897 [1896] and *Indian Forester* 80: 44. 1954, *J. Bombay Nat. Hist. Soc.* 52: 159. 1954, *Proceedings of the Indian Academy of Sciences* 71: 86. 1970.

C. refractus (R. Br.) A. Camus (*Anatherum refractum* (R. Br.) P. Beauv.; *Andropogon refractus* R. Br.; *Andropogon tahitensis* Hook. & Arn.; *Cymbopogon nardus* var. *refractus* (R. Br.) Roberty; *Sorghum refractum* (R. Br.) Kuntze)

Queensland, New South Wales, Northern Territory, Victoria. Perennial bunchgrass, coarse, tough, slender and stiff, caespitose, forming erect and slender tussocks, rough and aromatic leaves, very narrowly-linear panicle with reflexed branches and glabrous racemes, raceme segments with slender recurved pungently tipped pedicelled spikelets, narrow spathes often reddish, blue-green to reddish spikelets, the seeds clings to fur of animals, avoided by livestock because of its taste, waxy or soapy secretions, noxious weed, invasive, very prolific seeder, revegetation, very hardy, forage, Aborigines used for medicinal purposes, found on poor soils, dry forests, coastal dunes, see *Prodromus Florae Novae Hollandiae* 1: 202. 1810, *Essai d'une Nouvelle Agrostographie* 128, 150. 1812, *The Botany of Captain Beechey's Voyage* 72. 1832, *Revisio Generum Plantarum* 2: 792. 1891, *Catalogue of the African Plants Collected by Dr. F. Welwitsch in 1853-61* 2(1): 155. 1899 and *Revue de Botanique Appliquée & d'Agriculture Coloniale* 1: 279. 1921, *Boissiera*. 9: 176. 1960.

in English: barbwire grass, barbed wire grass, soap grass, turpentine grass, ginger grass

C. schoenanthus (L.) Sprengel (*Andropogon circinnatus* Hochst. & Steud.; *Andropogon iwarancusa* subsp. *laniger* (Desf.) Hook.f., also spelled *jwarancusa*; *Andropogon laniger* Desf.; *Andropogon lanigerum* Desf.; *Andropogon schoenanthus* L.; *Cymbopogon circinnatus* Hochst.; *Cymbopogon densiflorus* (Steud.) Stapf; *Cymbopogon proximus* (Hochst. ex A. Rich.) Stapf; *Trachypogon schoenanthus* (L.) Nees)

Saudi Arabia, Chad, Egypt, Mali, Niger, Algeria. Perennial, compact, desert grass, erect and slender, densely tufted, aromatic to strongly smelling, leaves filiform and glaucous, narrow panicles composed of clustered racemes, lowermost pedicel of the sessile raceme hard and swollen, glumes chartaceous or papery, upper floret shortly bifid, awn slightly twisted, sessile spikelets acuminate to linear-lanceolate, pedicelled spikelet narrowly lanceolate, lower glume of sessile spikelet concave and wingless, essential oils extracted by steam distillation, significant insecticidal activity and medicinal value, antimicrobial and analgesic properties, relieving muscular aches and pains, treatment of acne and oily skin, treatment of tinea by topical application, may irritate sensitive skin, leaf tea tonic and calmative, oil applied in rheumatism and neuralgia, decoction of grass

febrifuge, an extract from the leaves it has analgesic properties and improves muscle and skin tone, forage, a common camel fodder, used for thatching, wild or cultivated, cataplasm for wounds of camels, decoction of a mixture of this grass and *Ambrosia maritima* L. (Asteraceae, alt. Compositae) used for diabetes, grows in degraded areas, arid foothills, rocky and stony places, sand dunes, hillsides, subdesert plains and bushlands, arid stony plains, limestone, south Sahara, *Acacia* and *Commiphora* bushes, see *Species Plantarum* 2: 987-988, 1046. 1753, *Asiatic Researches* 4: 237-312. 1795, *Flora Atlantica* 2: 379. 1800, *Plantarum Minus Cognitarum Pugillus* 2: 15. 1815, *Flora Brasiliensis seu Enumeratio Plantarum* 341. 1829, *Linnaea* 7: 281. 1832, *Synopsis Plantarum Glumacearum* 1: 386-387. 1854, *The Flora of British India* 7(21): 203. 1897 [1896] and *Flora of Tropical Africa* 9: 289. 1919, *Fl. Libya* 107: 120. 1983, *Taxon* 49(2): 246. 2000.

in English: camel grass, camel's hay, canal grass, lemon grass, hemplike grass, gingergrass, sweet rush, rusa grass, geranium grass

in French: herbe à chameau, chiendent pied de poule, cheveu de sable, paille de la Mecque, alfa de la Mecque, jonc aromatique, jonc odorant

Chiov.; *Cymbopogon sennarensis* var. *proximus* (Hochst. ex A. Rich.) Chiov.)

Tropical Africa. Racemes clustered, aromatic, good forage, used for thatching, see *Tentamen Florae Abyssinicae ...* 2: 464. 1850, *Monographiae Phanerogamarum* 6: 601. 1889 and *Flora of Tropical Africa* 9: 271. 1919, *Flore de l'Afrique du Nord*: 1: 287. 1952.

C. schoenanthus (L.) Sprengel subsp. **schoenanthus**

Africa, Somalia, India. Aromatic, traditional drug plant, young shoots grazed by stock, low grazing value, used for thatching.

C. siamensis Bor (*Andropogon cambogiensis* Balansa; *Cymbopogon cambogiensis* (Balansa) E.G. Camus & A. Camus)

Thailand. Indeterminate species, see *Journal de Botanique, rédigé par une société de botanistes* 4: 114. 1890 [*Journal*

de Botanique (Morot)] and Flore Générale de l'Indo-Chine 7: 351. 1922, *Dansk Botanisk Arkiv* 23: 158. 1965.

in Thailand: yaa frik fran, yaa phrik phraan, ya phrik phran
C. tortilis (J. Presl) A. Camus (*Anthistiria tortilis* J. Presl; *Cymbopogon tortilis* (J. Presl) Hitchc.)

Southeast Asia, Korea, Japan. Useful for erosion control, found in open areas, open fields, see *Reliquiae Haenkeanae* 1(4-5): 347. 1830, *Flora* 24: 22. 1846 and *Revue de Botanique Appliquée & d'Agriculture Coloniale* 5: 206. 1925, *Lingnan Science Journal* 7: 246. 1929, *Symbolae Sinicae* 7(5): 1314-1315. 1936, *Grasses of Japan and its Neighboring Regions* 498. 1987.

in Japan: o-karu-kaya, karu-kaya

C. traninhensis (A. Camus) S. Soenarko (*Cymbopogon confertiflorus* var. *traninhensis* A. Camus; *Cymbopogon khasianus* var. *nagensis* Bor)

Asia. See *Bulletin of Miscellaneous Information Kew* 1906: 318. 1906, *Bulletin du Muséum d'Histoire Naturelle* 26: 565. 1920, *Journal of the Bombay Natural History Society* 52: 169. 1954, *Reinwardtia* 9(3): 347. 1977.

C. travancorensis Bor

Asia. Whitish culms, usually a synonym of *Cymbopogon flexuosus* (Nees ex Steudel) J.F. Watson, sometimes considered as a separate species, see *Synopsis Plantarum Glumacearum* 1: 388. 1854, *Gaz. N.W. Prov. India* 392. 1882 and *Journal of the Bombay Natural History Society* 52: 174-176, f. 24. 1954, *J. Bombay Nat. Hist.* 51: 903. 1954.

C. validus (Stapf) Burtt Davy (*Andropogon nardus* var. *validus* Stapf; *Cymbopogon afronardus* Stapf; *Cymbopogon classensii* Robyns; *Cymbopogon validus* (Stapf) Stapf ex Burtt Davy)

South Africa, Swaziland. Perennial, tufted, very robust thatching grass, leaf narrow at base, membranous ligule prominent, groups of paired racemes each partially enclosed by a leaflike spathe, spikelets paired, 1 spikelet sessile and awned, strong turpentine smell when crushed, unpalatable, low grazing value, antimicrobial activity, grows in moist veld types and forest margins, loamy soil, wet sites, in mountainous grassland, along roadsides, wetlands or disturbed grasslands, vleis, stony slopes, see *Flora Capensis* 7: 352. 1898 and *Annals of the Transvaal Museum* 3: 129. 1912, *Flora of Tropical Africa* 7: 279. 1919, *Flore Agrostologique du Congo Belge* 1: 145. 1929.

in English: giant turpentine grass, turpentine grass, tambookie grass, tambuti

in Burundi: Ibikenkekenke

in Southern Africa: reuse terpentyngas, tamboekiegras; isigunga (Zulu); umqunga (Xhosa)

C. winterianus Jowitt ex Bor (*Cymbopogon nardus* var. *mahapangiri* auct.; *Cymbopogon winterianus* Jowitt) (to honor A.W. Winter)

India, Southeast Asia, Sri Lanka. Perennial, large, tall, herbaceous, terete, smooth, glabrous, tufted, forming large clumps, somewhat glaucous, flowering culms arching, leaf blades smooth and gradually narrowed at the base, shortly rhizomatous, leaves sheathing and drooping, loose inflorescence, large false panicle much branched, spatheoles linear-lanceolate subtending a pair of racemes, racemes ciliate, lowest pedicel not swollen, sessile spikelet with 2 florets, lower floret reduced to an empty lemma, upper floret hermaphrodite, lower glume concave and winged, palea absent, 2 lodicules, 3 stamens, plumose stigmas, pedicelled spikelet male or sterile with florets reduced to a scale, ornamental, aromatic foliage, widely cultivated, scented essential oils used in perfumery and for insect repellents, deodorant, medicinal, antibacterial, antidepressant, antispasmodic, rheumatism and arthritic pain, useful for erosion control, intolerant of salinity, tolerates only short periods of waterlogging, best on neutral to slightly acid well-drained loamy soils, very similar to *Cymbopogon flexuosus* (Nees ex Steud.) J.F. Watson, see *Annals of the Royal Botanic Gardens. Peradeniya* 4: 188. 1908, *Handb. Fl. Ceylon* 6: 335. 1931, *Grasses of Ceylon* 193. 1956, *Grasses of Burma ...* 132. 1960, *Österreichische Botanische Zeitschrift* 112(1-2): 185. 1965, B. R. Rajeswara Rao, "Biomass Yield and Essential Oil Yield Variations in Java Citronella (*Cymbopogon winterianus* Jowitt), Intercropped with Food Legumes and Vegetables." *Journal of Agronomy and Crop Science* 185(2): 99-103. Sep 2000.

in English: Java citronella, Java citronella grass, Java citronella oil, old citronella grass, maha pangiri grass, Winter's grass

in French: herbe citron de Java, citronnelle de Java

in Spanish: citronela

in Indonesia: serai wangi, sere wangi, sereh wangi

in Malaysia: serai wangi

in Sri Lanka: maha pangiri, maha pengiri

in Thailand: takhrai-daeng, takhrai-hom, takhrai ma-khuut

in Vietnam: s[ar] d[or], s[ar] Java

Cymbosetaria Schweick. = *Setaria* P. Beauv.

From the Greek *kymbe* "boat" plus *Setaria*.

One species, Africa. Panicoideae, Panicoideae, Paniceae, or Panicoideae, Paniceae, Setariinae, annual, herbaceous, more or less branched, auricles absent, leaf blades sagittate, ligule a membrane-like more or less fringed, plants bisexual, spicate inflorescence nondigitate, each spikelet subtended by a bristle, compressed spikelets, 2 glumes very unequal, lower glume 3-nerved, upper glume 5- to 7-nerved, lemmas cymbiform, palea present, free and fleshy lodicules, 3 stamens, ovary glabrous, 2 stigmas, often in *Setaria*, type *Cymbosetaria sagittifolia* (Hochst. ex A. Rich.) Schweick.,

see *Essai d'une Nouvelle Agrostographie* 51, 178. 1812 and *Contr. U.S. Natl. Herb.* 22(3): 156. 1920, *Hooker's Icones Plantarum* 34: t. 3320. 1936, *J. Wash. Acad. Sci.* 44: 116-122. 1954, *Cytologia* 19: 97-103. 1954, *Illinois Biological Monographs* 29: 1-132. 1962, *Flora of the Netherlands Antilles* 1: 121-203. 1963, *Adansonia* sér. 2, 6: 105. 1966, *Austral. J. Bot.* 16: 539-544, 551-554. 1968, *Novosti Sist. Vyss. Rast.* 8: 71. 1971, *Willdenowia* 8: 67-79. 1977, *Contributions from the United States National Herbarium* 46: 569-593. 2003.

Species

C. sagittifolia (Hochst. ex A. Rich.) Schweick. (*Cymbosetaria sagittifolia* (A. Rich.) Schweick.; *Panicum barbigerrum* Bertol.; *Panicum sagittifolium* (Hochst. ex A. Rich.) Steud.; *Pennisetum sagittifolium* Hochst. ex A. Rich.; *Setaria barbiger* (Bertol.) Stapf; *Setaria sagittifolia* (Hochst. ex A. Rich.) Walp.; *Setaria sagittifolia* (A. Rich.) Walp.)

Tropical Africa, Yemen. Annual, tufted, open, slender, weak, erect or geniculate, rounded spikelets and characteristic sagittate leaves pseudopetiolate, leaf sheaths rounded at the top, basal sheaths slightly compressed, ligule membranous and thin, inflorescence of several spike-like racemes, open panicle oblong to ovate, unilateral branches arranged horizontally in whorls, spikelets with a single bristle, lower floret male or barren, lower lemma rugose, upper lemma gibbous and keeled, a palatable pioneer grass, of little agricultural value, food for seed-eating birds, forms dense stands, grows in shaded places often near rivers, riverine forest, in open to dense bushveld and in forests, mostly in sandy soil, savannah woodland, stony and gravelly banks by wadis, see *Tentamen Florae Abyssinicae* ... 2: 379-380. 1850, *Memorie della Reale Accademia delle Scienze dell'Istituto di Bologna* 3: 250, t. 19, f. 1-2. 1851, *Annales Botanicae Systematicae* 3: 721. 1852, *Synopsis Plantarum Glumacearum* 1: 54. 1853 and *Flora of Tropical Africa* 9: 862. 1930, *Hooker's Icones Plantarum* 34: t. 3320. 1936.

in English: arrow grass

in South Africa: pylblaargras, eenjarige pylblaargras, pfeilblatthirse

x *Cynochloris* Clifford & Everist

Cynodon x *Chloris*.

Two hybrids species, Australia. Cynodonteae, perennial, type x *Cynochloris macivorii* Clifford & Everist, see Harold Trevor Clifford (b. 1927) and Selwyn Lawrence Everist (1913-1981), in *Proceedings of the Royal Society of Queensland*. 75: 46. 1964, *Austrobaileya* 1(5): 460. 1982 [1983], *Flora of Australia* 44B: 300-301. 2005.

Species

x ***C. macivorii*** Clifford & Everist (a Mr. McIvor)

Queensland. Erect or decumbent.

x ***C. reynoldensis*** B.K. Simon (Reynolds Creek, Moreton District, Queensland)

Queensland. Decumbent or geniculate.

***Cynodon* L.C. Richard** = *Capriola* Adans., *Dactilon* Vill., *Fibichia* Koeler

From the Latin *cynodon* and Greek *kynodous* "teeth of a saw, canine tooth, having pairs of projecting teeth," *kynos* and *odontos* "a tooth," referring to the scaly rhizomes, to the basal buds on the rhizomes, or to the spikes; see Christiaan Hendrik Persoon, (1761/1762-1836), *Synopsis plantarum*, seu enchiridium botanicum complectens enumerationem systematicam specierum hucusque cognitorum. 1: 85. Paris 1805.

About 8-10 species, Old World tropics, subtropical, tropical, warm temperate regions. Chloridoideae, Cynodonteae, Chloridinae, perennial, terete or compressed, mostly rhizomatous and stoloniferous, creeping or spreading, herbaceous, leafy and much-branched, erect or ascending, decumbent and rooting at nodes, nodes glabrous, hollow internodes, no auricles, short leaf sheath smooth and rounded, ligule membrane-like and fringed or ciliate, short leaves linear to filiform more or less opposite on the stolons, plants bisexual, erect flowering shoots, terminal inflorescence umbellate or spicate and digitate, rachis flat or semiterete, sessile spikelets strongly laterally compressed and disarticulating above or between the glumes, spikelets solitary and secund, erect flowering shoots produced at the nodes, 1 bisexual floret, 2 narrow glumes keeled and papery, lemmas with a ciliate keel and awnless, free and fleshy minute lodicules, stamens 3, ovary glabrous, 2 red stigmas, fruit small and trigonous, ornamental, occasionally causing cyanide poisoning or often HCN poisonous, attractive inflorescence, vigorous, often sward-forming, weed species, native pasture species, fodder grass, lawns, turf, playing fields, growing in sandy places, open habitats, grazed or weedy places, arable land, seashores, disturbed land, pampas, rainforest, roadsides, interspecific hybridization, developed many improved varieties, intergeneric hybrids with *Chloris* Sw. with which it is related, type *Cynodon dactylon* (L.) Pers., see *Familles des Plantes* 2: 31, 532. 1763, *Histoire des Plantes de Dauphiné* 2: 69. 1787, *Descriptio Graminum in Gallia et Germania* 302, 308. 1802, *Syn. Pl.* 1: 85. 1805, *Essai d'une Nouvelle Agrostographie* 122, 146, 150. 1812, *Genera Plantarum* 3(2): 1164. 1883 and *Fieldiana, Botany* 24(2): 38-331. 1955, *Proceedings of the Zoological Society of London* 139: 181-220. 1962, *Amer. J. Bot.* 56: 944-950. 1969, *Kurtziana* 5: 191-252. 1969 [Las especies de *Cynodon* (Gramineae) de la República Argentina.],

Species

C. aethiopicus W.D. Clayton & J.R. Harlan

Eastern coasts of Africa, Ethiopia, Zimbabwe, Uganda, Tanzania. Perennial, tall, coarse, woody, large, robust, stoloniferous, erect, not rhizomatous, stolon internodes flat, ligule a ciliate membrane, foliage stiff and harsh, inflorescence reddish or purple or dark red, stiff racemes, lemma keel usually glabrous, weed, native pasture species naturalized

elsewhere, medicinal use, palatable, good grazing, fodder, useful for erosion control, found in coastal plains, wastelands, abandoned cultivations, crops and pastures, on roadsides, see *Kew Bulletin* 24: 187. 1970.

in English: cynodon couch, budgee grass, Bermudagrass, Ethiopian dog's-tooth grass, Ethiopian dogstooth grass, giant quickgrass, Nakuru grass, giant star grass, star grass, African star grass

in Spanish: pasto estrella gigante

in South Africa: reusekweekgras, stergras

C. arcuatus J. Presl (*Cynodon dactylon* var. *intermedius* (Rang. & Tadulingham) C.E.C. Fischer; *Cynodon intermedius* Rang. & Tadul.; *Cynodon leptochloides* Steud.; *Digitaria radiata* (Roth) Spreng.)

Southeast Asia, India, Australia. Perennial, glabrous, compressed, decumbent or prostrate, branched, stoloniferous and rhizomatous, auricles glabrous, stiff leaf blades, flowering culms erect, spikes curved and spreading, glumes equal, grazed by cattle, open habitat, dry areas, disturbed places, seasonally flooded sites, along roadsides, open sandy sites, old cultivations, edge of forest, stony places, see *Systema Vegetabilium* 2: 411. 1817, *Novae Plantarum Species* 38. 1821, *Systema Vegetabilium, editio decima sexta* 1: 272. 1825, *Reliquiae Haenkeanae* 1(4-5): 290. 1830 and *Journal of the Bombay Natural History Society* 26: 304. 1918, *Flora of the Presidency of Madras* 10: 1835. 1934, *Grasses of Ceylon* 90, pl. 13. 1956, *Grasses of Burma* ... 469. 1960.

C. aristiglumis Caro & E.A. Sánchez (*Cynodon dactylon* (L.) Pers.)

South and Central America. Waste places and areas, see *Species Plantarum* 1: 58. 1753, *Syn. Pl.* 1: 85. 1805 and *Kurtziana* 5: 236, f. 11. 1969.

C. barberi Rang. & Tadul. (named for the British Charles Alfred Barber, 1860-1933, a sugarcane specialist, lecturer in tropical agriculture at Cambridge, 1860-1870 South Africa, 1898 India as Director of the Botanical Survey of Southern India, author of *Studies in Indian Sugarcanes...* Calcutta 1915-1919; see Frans A. Stafleu and Erik A. Mennega, *Taxonomic literature. Supplement I: A-Ba.* 37-314-315. Königstein 1992; J.H. Barnhart, *Biographical notes upon botanists.* 1: 119. 1965; E.M. Tucker, *Catalogue of the library of the Arnold Arboretum of Harvard University.* 1917-1933)

Southern India, Sri Lanka. Perennial, stoloniferous and rhizomatous, flowering culms erect, glabrous, loosely matted, leaf sheaths keeled, leaf blades lanceolate, spicate inflorescence spreading and more or less curved, glumes unequal and scarious, lemma ciliate, grazed by cattle, found in wet places, open damp sites, sandy soils, roadsides, gravelly soils, often confused with *Cynodon arcuatus* J. Presl and *Cynodon dactylon* (L.) Pers., see *Journal of the Bombay*

Natural History Society 24: 846. 1916, *Grasses of Ceylon* 91. 1956, *Ceylon J. Sci., Biol. Sci.* 2(2): 125. 1959, *Grasses of Burma ...* 469. 1960.

Lam.; *Paspalum umbellatum* Lam.; *Phleum dactylon* Pall. ex Georgi) (from the Greek *daktylos* “a finger”)

Cosmopolitan. Perennial, vigorous, highly to extremely variable, long-lived and hardy, tough, gray to gray-green or glaucous, slender, wiry, creeping or prostrate and forming a dense mat, often strongly rooting at the nodes, rhizomatous and/or strongly stoloniferous, both stolons and rhizomes, woody stolons and underground scaly rhizomes, culms erect or geniculate, internodes flattened, auricles bearded, leaf sheaths keeled and shiny, ligule short and fringed with hairs, glabrous distichous leaves, green or purplish or reddish brown erect and slender digitate spikes, broad spikelets sessile and laterally compressed, glumes acuminate and more or less persistent, lemma boat-shaped and mucronate, palea with 2 longitudinal ridges, 2 lodicules, 3 stamens, purple stigmas, grains turgid, ornamental when in flower, sacred to Hindus, in India tender leaves and shoots eaten, excellent fodder grass, forage, good pasture species, relished by all classes of livestock, roots edible, scaly rhizomes given to horses, a noxious weed of annual and perennial crops, highly invasive, difficult to eradicate without herbicides, a valuable herbal medicinal, tea from roots for kidneys, a good medicine for skin diseases, in folk medicine

used as a diuretic and emollient, the fresh juice used as a snuff in epistaxis, numerous cultivars have been developed, withstands long periods of drought, widely planted for lawns and/or playing fields, groundcover, turf, useful for erosion control, sand binder for coastal districts, useful stabiliser of disturbed beach dunes, sometimes used to bind soil embankments, usually found in wetlands and river edges, in riparian areas and in grasslands adjacent to streams and marshes, disturbed places, cultivated lands, bare damp ground, alluvium, floodplain margin, along stream banks, in the understory of open woods, along sand dunes, coarse sand, on waste grounds, trampled areas, in lawns, along roadsides and railroads, on roadside gravel, silty outwash area, on beach sand, uncultivated areas, on sandy wastes, overgrazed areas, in very poor soils, desert, see *Species Plantarum* 1: 58. 1753, *Flora Carniolica, Editio Secunda* 1: 52. 1772, *Histoire des Plantes de Dauphiné* 2: 69. 1787, *Flora Caroliniana, secundum ...* 82. 1788, *Tableau Encyclopédique et Méthodique ...  in Pacific: mosie molulu

C. dactylon (L.) Pers. subsp. *nipponicus* (Ohwi) T. Koyama (*Cynodon dactylon* var. *nipponicus* Ohwi)

Japan. See *Grasses of Japan and its Neighboring Regions* 498. 1987.

C. dactylon (L.) Pers. var. *afghanicus* J.R. Harlan & de Wet
 Afghanistan. See *Crop Science* vol. 9. Madison, Wisconsin 1969.

C. dactylon (L.) Pers. var. *aridus* J.R. Harlan & de Wet
 Israel, Tanzania, South Africa, Sri Lanka, India. Useful for erosion control, fodder, forage, noxious weed, invasive, ornamental, see *Syn. Pl.* 1: 85. 1805 and *Crop Science* vol. 9: 774. Madison, Wisconsin 1969.

in English: giant Bermuda grass

C. dactylon (L.) Pers. var. *coursii* (A. Camus) J.R. Harlan & de Wet (*Cynodon coursii* A. Camus)

Madagascar. Found in dry sites, sandy areas, open habitats, see *Notulae Systematicae. Herbarium du Muséum de Paris* 16: 323. 1961, *Crop Science* vol. 9. Madison 1969.

C. dactylon (L.) Pers. var. *dactylon* (*Capriola dactylon* (L.) Kuntze; *Cynodon pascuus* Nees; *Digitaria stolonifera* Schrad.; *Panicum dactylon* L.)

Cosmopolitan. Worldwide weed, forage, fodder, ornamental, useful for erosion control, see *Syn. Pl.* 1: 85. 1805, *Flora Brasiliensis seu Enumeratio Plantarum* 2: 425. 1829 and *Iheringia, Série Botânica* 44: 85-102. 1994.

in English: Bermuda grass, quick grass, devil's grass, Hariali grass, Bahama grass

in French: grand chiendent

in Spanish: grama rastrera, zacate de Bermuda

in India: dhub, doob

in Southern Africa: kweekgras

C. dactylon (L.) Pers. var. *elegans* Rendle (*Cynodon dactylon* (L.) Pers.)

South Africa, Mozambique, Angola. Along roadsides, poorly drained roadside ditch, flat country, grayish black soil, see *Syn. Pl.* 1: 85. 1805, *Catalogue of the African Plants Collected by Dr. F. Welwitsch in 1853-61* 2(1): 221. 1899.

C. dactylon (L.) Pers. var. *polevansii* (Stent) J.R. Harlan & de Wet (*Cynodon polevansii* Stent)

South Africa. Perennial, rare, compact, dense, rhizomatous, low-growing, rigid to very rigid leaves, spikes not reflexed, along roadsides, sandy soils, sandy roadsides, moist areas, see *Bothalia* 2: 283. 1927, *Crop Science* vol. 9. Madison, Wisconsin 1969.

in S. Africa: kweek

C. dactylon (L.) Pers. var. *pulchellus* F. Muell. ex Benth.

Australia. See *Fl. Austral.* 7: 609. 1878.

C. hirsutissimus (Litard. & Maire) Caro & E.A. Sánchez (*Cynodon dactylon* f. *glabrescens* (Beck.) Soó; *Cynodon dactylon* subvar. *hirsutissima* Litard. & Maire; *Cynodon dactylon* var. *hirsutissimus* (Litard. & Maire) Maire)

North Africa, Morocco. See *Mémoires de la Société des Sciences Naturelles du Maroc* 4(1): 25. 1924, *Bulletin de la Société d'Histoire Naturelle de l'Afrique du Nord* 30: 368. 1939, *Kurtziana* 5: 191-252. 1969, *Flora de la Provincia de Buenos Aires* 4(2): 395-404. 1970, *Acta Botanica Academiae Scientiarum Hungaricae* 17(1-2): 123. 1971 [1972].

C. hirsutus Stent (*Cynodon incompletus* Nees var. *hirsutus* (Stent) de Wet & J.R. Harlan)

South Africa. Perennial, herbaceous, erect or decumbent or geniculate, stoloniferous, not rhizomatous, 3-nerved upper glume, in the upper half a wing on the lemma keel, very similar to *Cynodon bradleyi* Stent and *Cynodon incompletus* Nees, see *Linnaea* 7(3): 301. 1832 and *Bothalia* 2: 277, 286. 1927, *Revista Argentina de Agronomía* 17(3): 216, f. 14. 1950, *Crop Science* vol. 9: 291. Madison, Wisconsin 1969.

in English: dog grass, hairy couch, hairy quickgrass, red quickgrass, Transvaal quickgrass

in Southern Africa: fynkweekgras, harige kweekgras, kwagkakweek, mossiekweek, perdekweek, rooikweek, soetkweek, Transvaalsekweekgras, Transvaalsekweek, wildekweek; mohlwa (Sotho)

C. hirsutus Stent var. *sesquiflorus* Parodi

Argentina. See *Revista Argentina de Agronomía* 17(3): 216, f. 14. 1950, *Kurtziana* 5: 191-252. 1969, *Flora de la Provincia de Buenos Aires* 4(2): 395-404. 1970, *Monographs in Systematic Botany from the Missouri Botanical Garden* 47: i-xi, 1-178. 1994.

C. incompletus Nees (*Cynodon hirsutus* Stent)

South Africa. Perennial, erect, stoloniferous, herbaceous, usually without rhizomes, ligule membranous, leaf blades flat, spikes usually pale green, spikelets narrowly ovate, glumes acute to acuminate, lemma blunt or shortly mucronate, lemma keel winged, weed species naturalized elsewhere, good feed relished by cattle, quick growing, used for controlling erosion, poisonous, grows on roadsides and heavily grazed pastures, very close to *Cynodon hirsutus* Stent, see *Linnaea* 7(3): 301. 1832 and *Bothalia* 2: 277, 286. 1927, *Revista Argentina de Agronomía* 17(3): 216, f. 14. 1950, *Crop Science* vol. 9: 291. Madison, Wisconsin 1969, *Australian Journal of Botany, Supplementary Series* 5: 1-51. 1972.

in English: dog grass, blue couch, blue couch grass, fine couch, fine quick, hairy quickgrass, Karoo quickgrass, Karoo quick grass, red quickgrass

in South Africa: fynkweekgras, harige kweekgras, Karookweekgras, kwagkakweek, regtekweek, rooikweek, soetkweek, Transvaalsekweekgras

C. incompletus Nees var. *hirsutus* (Stent) de Wet & J.R. Harlan (*Cynodon bradleyi* Stent; *Cynodon hirsutus* Stent)

South Africa. Prostrate to low, dark green, rapid growing, stoloniferous, rhizomes absent, sod-forming, extremely vigorous, leaves densely or sparsely hairy, lemma keel not winged, ornamental, lawn grass, found on stony areas, dry sites, dry sandy clay, rocky soil, along roadsides, fertile well-drained soils, see *Linnaea* 7(3): 301. 1832 and *Bothalia* 2: 277, 286. 1927, *Revista Argentina de Agronomía* 17(3): 216, f. 14. 1950, *Crop Science* vol. 9: 291. Madison, Wisconsin 1969.

in English: Bradley Bermuda grass, Bradley grass, Bradley, red quick grass

C. incompletus Nees var. *incompletus*

South Africa. Found along roadsides, dry rocky habitat, sandy-loam soil, on sandy soil and sandy alluvial streambank, see *Linnaea* 7(3): 301. 1832.

in English: Magennis Bermuda grass, Magennis' dog's-tooth grass, Magennis

C. nlemfuensis Vanderyst (*Cynodon dactylon* (L.) Pers. var. *sarmentosus* Parodi; *Cynodon parodii* Caro & E.A. Sánchez)

Tropical Africa. Perennial, extremely variable, stout, leafy, large, robust to slender, tough, deep rooted, creeping, vigorous, sward-forming, no rhizomes, strongly stoloniferous, stout woody stolons flat on the ground, rooted runners, small inconspicuous membranous ligule, leaf sheath glabrous and keeled, leaves flat, inflorescence of 4-13 digitate 1-sided spikes whorled, spikes slender and flexuous, spikelets 1-flowered and imbricate in 2 rows, glumes shorter than the florets, lemma silky with not winged keel, 2 lodicules, 3 stamens, native pasture species, forage, grazed by ruminants, not particularly palatable, extremely palatable when young, troublesome, aggressive, good ground cover, it does not tolerate long periods of flooding, used mainly for soil conservation works, useful for erosion control and for waterways, a pioneer grass on wasteland, weed of arable land and perennial crops, found in disturbed areas, weedy grassy sandy places, along roadsides, in grassland, on moist alluvium, in moist areas near rivers and streams, in saturated soil, uncultivated lands, in open and dense bushveld, in orchards and fields, cattle kraals, sometimes confused with *Cynodon plectostachyus* (K. Schum.) Pilg., see *Bulletin agricole du Congo Belge* 11: 121. 1921 [1920], *Bulletin agricole du Congo Belge* 13: 342. 1922, *Revista Argentina de Agronomía* 23: 185. 1956, *Kurtziana* 5: 193. 1970, *Kew Bulletin* 24: 185-189. 1970, *Taxon* 19: 565-569. 1970.

in English: African Bermuda grass, East African couch, East African star grass, African star grass, Rhodesian star grass, giant quickgrass, giant star grass, robust star grass, star grass
in Spanish: yerba estrella, pasto estrella, estrella

in East Africa: chemorut, emurwa, kakodongo, lugowi, ruchwamba, rugoli

in South Africa: gifgras, Oos-Afrikaanse kweek, Oos-Afrikaanse stergras, reusekweekgras, robuustekweekgras, stergras, sterkgras, vreemdevingergras

in the Philippines: galud-galud, kolatay, rukut-dukut

in Thailand: ya sata

C. nlemfuensis Vanderyst var. **nlemfuensis** (*Cynodon dactylon* (L.) Pers. var. *sarmentosus* Parodi)

Tropical East Africa, Kenya, Uganda, Tanzania. Perennial, purplish, tufted, stoloniferous, erect, leaf sheath more or less glabrous or pubescent, ligule membranous and fringed, adapted to tropical and subtropical regions, open spaces, see *Bulletin agricole du Congo Belge* 13: 342. 1922, *Revista Argentina de Agronomía* 23: 185. 1956, *Kew Bulletin* 24(1): 185-189. 1970.

C. nlemfuensis Vanderyst var. **robustus** Clayton & J.R. Harlan

Tropical East Africa. Perennial, stout, green, open spaces, bush, forest, see *Kew Bulletin* 24: 189. 1970.

C. plectostachyus (K. Schum.) Pilg. (*Cynodon plectostachyus* var. *ruspolianus* (Chiov.) Chiov.; *Cynodon ruspolianus* Chiov.; *Leptochloa plectostachyus* K. Schum., also spelled *plectostachya*) (Greek *plektos* “twisted, plaited” and *stachys* “spike”)

Tropical Africa, Tanzania, Kenya, Ethiopia, Uganda. Perennial weed species, large, robust, stout and woody, spreading, forming dense turf, stoloniferous, rhizomes absent, soft foliage, small glumes, aggressive, naturalized elsewhere, under certain conditions could develop toxic properties, useful pasture grass and hay, not particularly palatable, good grazing for livestock, forage, fodder, whole plant eaten by baboons, used mainly for soil conservation works and for erosion control, tolerates temporary flooding, can stand heavy grazing, drought-tolerant, found in dry areas, semi-arid areas, deciduous bushland, along roadsides, disturbed sites, black cracking clay soils, weedy places, red clay soil, bare land, sandy loams, on dry lake beds, alluvial silts and clays, overgrazed land, see *Die Pflanzenwelt Ost-Afrikas* 112. 1895, *Annuario del Reale Istituto Botanico di Roma* 7: 70, t. 7. 1897 and *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 40: 82. 1907, *Webbia* 8: 111. 1951, *Flora Illustrada de Entre Ríos (Argentina)* 6(2): 1-551. 1969, *Kew Bulletin* 24(1): 185-189. 1970, *Ceiba* 19(1): 1-118. 1975.

in English: feathery couch, giant quickgrass, Naivasha star grass (= Kenya, Rift Valley, Lake Naivasha), giant star grass, star grass

in Spanish: estrella, estrella Africana, pasto estrella

in Mexico: pasto estrella

in South Africa: gifgras, reusekweekgras, stergras, vreemdevingergras

C. radiatus Roth (*Cynodon arcuatus* J. Presl; *Cynodon dactylon* var. *intermedius* (Rang. & Tadulingham) C.E.C. Fisch.; *Cynodon intermedius* Rang. & Tadul.; *Cynodon leptochloides* Steud.; *Digitaria radiata* (Roth) Spreng.)

Southeast Asia, Madagascar, Vietnam, Thailand, India, Indonesia, Philippines. Erect, wiry, coarse, not rhizomatous, vigorous, spreading, coloniser, open habitats, disturbed sites, dry areas, along roadsides, open sandy sites, edge of forest, stony places, see *Systema Vegetabilium* 2: 411. 1817, *Novae Plantarum Species* 38. 1821, *Systema Vegetabilium, editio decima sexta* 1: 272. 1825, *Reliquiae Haenkeanae* 1(4-5): 290. 1830 and *Journal of the Bombay Natural History Society* 26: 304. 1918, *Flora of the Presidency of Madras* 10: 1835. 1934.

C. transvaalensis Burt Davy

South Africa. Perennial, creeping, decumbent, herbaceous, slender, forming fine dense uniform turf, bright green to reddish purple, densely stoloniferous and/or rhizomatous, culms prostrate, ligule a short hairy membrane, leaf blades bristle-like, very fine green leaves linear to linear-triangular, inflorescence of green or purplish digitate spikes, narrow spikelets laterally compressed, spikes reflexed at maturity, short acuminate glumes, lemma acute and keeled, ornamental, readily grazed, a lawn grass and a troublesome weed, useful for turf purposes, growing in clay soil, roadsides, weedy places, similar and close to *Cynodon dactylon* (L.) Pers., see *Bulletin of Miscellaneous Information Kew* 1921: 281. 1921, *Adansonia: recueil périodique d'observations botanique, n.s.* 6: 248. 1966.

in English: African Bermuda grass, African bermudagrass, African Bermuda, African dog's-tooth grass, African dogstooth grass, Uganda grass, Florida grass, Transvaal quick, Transvaal quick grass, Transvaal dogtooth grass

Local name: masindi

C. x magennisii Hurcombe (= *Cynodon dactylon* (L.) Pers. x *Cynodon transvaalensis* Burt Davy) (also spelled **magennisii** and **magenisii**)

South Africa. Ornamental, turf, cultivated, see *Journal of South African Botany* 13: 19. 1947.

Cynosurus L. = *Falona* Adans., *Phalona* Dumort.

Hound's tail, from the Greek *kynos*, *kyon* “a dog” and *oura* “a tail,” referring to the shape of the panicle; Latin *cynosura*, *ae* “a constellation near the north pole, Ursa Minor”; see Carl Linnaeus, *Species Plantarum*. 72. 1753 and *Genera Plantarum*. edition 5. 33. 1754.

About 5-8 species, Europe, North Africa, Middle East. Pooideae, Poodae, Poeae, or Pooideae, Poeae, Cynosurinae, annual or perennial, tufted, sometimes rhizomatous, stems clumped, herbaceous, erect or spreading, slender, glabrous,

unbranched, culm nodes exposed and glabrous, culm internodes hollow, leaves nonauriculate, ligule obtuse and membrane-like, sheaths not keeled and rounded on the back, leaves linear and flat, plants bisexual, inflorescence 1-sided panicle spicate and contracted, panicle spiciform or capitate, spikelets paired and sessile, inner spikelet fertile, outer or lower spikelet sterile, bisexual spikelets more or less concealed by persistent sterile spikelets, 2 subequal glumes narrow, lower glume 1- to 2-nerved, upper glume 1-nerved, lemmas leathery or coriaceous with apex acute to awned, short or long awned, palea keels wingless, 2 free and toothed or bilobed apically lodicules, 3 stamens, ovary glabrous, 2 stigmas, pasture and hay grasses, weed species naturalized elsewhere, cultivated fodder, grazed pastures, open habitats, weedy places, meadows, disturbed ground, waste areas, grasslands, open and grassy habitats, lawns and playing fields, similar to *Lamarckia* Moench and *Lolium* Krecz. & Bobrov, type *Cynosurus cristatus* L., see *Species Plantarum* 1: 59-60, 72-73. 1753, *Familles des Plantes* 2: 496. 1763, *Observations sur les Graminées de la Flore Belgique* 114. 1823 [1824], *Genera Plantarum* 3(2): 1183. 1883, *Die Natürlichen Pflanzenfamilien* 2(2): 73. 1887 and *Novitates Botanicae et Delectus Seminum Horti Botanici Universitatis Carolinae Pragensis* 1964: 23-27. Prague 1964, *Boletim da Sociedade Broteriana, ser. 2* 63: 153-205. 1990, *Berichte des Geobotanischen Instituts der Eidg. Techn. Hochschule Stiftung Rübel* 57: 182-192. 1991, *Bot. Zhurn. (Moscow & Leningrad)* 76: 1331-1332. 1991, *Boletim da Sociedade Broteriana, ser. 2* 64: 35-74. 1991, *Flora Mesoamericana* 6: 228-229. 1994, *Newslett. Int. Organ. Pl. Biosyst. (Oslo)* 26/27: 13-14. 1997, *Opera Botanica* 137: 1-42. 1999, *Grass and Forage Science* 54(1): 1-18. Mar 1999, *Grass and Forage Science* 54(2): 99-115. June 1999 [Hay production from lowland seminatural grasslands: a review of implications for ruminant livestock systems.], *Functional Ecology* 13(5): 650-660. 108-114. Nov 2004 [Swards and structure: the interactions between farming practices and bird food resources in lowland grasslands.], *Functional Ecology* 19(1): 27-37. Feb 2005.

Species

C. coloratus Lehm. ex Nees (*Cynosurus coloratus* Lehm. ex Steudel)

Mediterranean. Annual, rare, tufted or loosely tufted, awns purple at the base, common in rocky areas, see *Nomenclator Botanicus. Editio secunda* 1: 465. 1840, *Florae Africae Australioris Illustrationes Monographicae* 439. 1841.

C. cristatus L. (*Phleum cristatum* (L.) Scop.)

Eurasia. Perennial, tufted, compact, erect or shortly geniculate, glabrous, stiff, unbranched, auricles absent, ligule not lobed and blunt, sheaths smooth and subcoriaceous, leaves flat and ribbed or grooved, a green to purple spike-like panicle narrow-oblong to linear and not secund, spikelets densely overlapping, fertile spikelets surrounded by sterile spikelets, glumes persistent and keeled, lemmas of fertile florets more or less hairy and shortly to very shortly awned, palea hyaline narrowly ovate to narrowly elliptic, anthers yellow, fruit not grooved, drought resistant, grown for hay production, fodder and pasture especially for sheep, used for weaving mats and baskets, a weedy species of waste and cultivated areas, moist and very wet places, damp or dry soils, grassy area under woods, along roadsides, grasslands, seasonally inundated fields, open habitats, swamp margins, see *Flora Carniolica, Editio Secunda* 1: 57. 1771 and *Regnum Veg.* 127: 41. 1993.

in English: crested dog's tail, crested dogtail

in Spanish: cola de perro

C. echinatus L. (*Falona echinata* (L.) Dumort.; *Phalona echinata* (L.) Dumort.)

Southern Europe, Mediterranean. Annual, tufted or solitary, erect or decumbent or geniculate at base, slender, open leaf sheaths loose and enlarged to inflated, auricles absent, ligule blunt to rounded, leaves glabrous and flat, ovoid to globose to ovate-oblong spike-like green to purple panicle, inflorescence very bristly and along top of stem, spikelets densely crowded and mostly in pairs, individual florets above long bristle, fertile spikelets surrounded by sterile spikelets, glumes persistent narrow-lanceolate, lemmas convex and conspicuously long-awned, palea 2-keeled with the keels green, yellow anthers, cultivated, invasive species growing in colonies and naturalized elsewhere, weed of waste and disturbed places, crops, hillsides, damp or dry soils, dry bare soil, open grasslands, meadows, open habitats, coniferous woodlands, well-drained soils, along roadsides and trails, pasture, often in shade, see *Observations sur les Graminées de la Flore Belgique* 114. 1823 [1824] and *Berichte des Geobotanischen Instituts der Eidg. Techn. Hochschule Stiftung Rübel* 57: 182-192. 1991, *Newslett. Int.*

Organ. Pl. Biosyst. (Oslo) 26/27: 13-14. 1997, *Taxon* 49(2): 249. 2000.

in English: dogtail, bristled dog's tail, bristly dog's tail, bristly dog's tail grass, crested dog's tail, rough dog's tail, rough dogstail, rough dog's tail grass, hedgehog dogtail

C. elegans Desf. (*Cynosurus junceus* Murb.; *Falona elegans* (Desf.) Jir. & Chrtek; *Falona juncea* (Murb.) Jir. & Chrtek)

Israel. Lax inflorescence, awns silky and longer than lemmas, see *Flora Atlantica* 1: 182. 1789 and *Novitates Botanicae ex Universitate Carolinae* 1964: 26. 1964.

Cyperochloa Lazarides & L. Watson

From the Greek *kypeiron*, *kyperos*, *kypeiros* "a sedge" and *chloe*, *chloa* "grass, young grass."

One species, Australia. Arundinoideae, Cyperochloaeae, or Centothecoideae, perennial, tufted, herbaceous, erect, sedge-like, solid, auricles absent, setaceous leaf blades narrow, ligule fringed, leaves mostly basal, plants bisexual, inflorescence paniculate capitate spatheate contracted, bracteate spikelets, 2 glumes unequal 3- to 5-nerved, lemma 5- to 7-nerved, palea present, 2 free lodicules, 3 stamens, ovary glabrous, 2 stigmas, open habitats, type *Cyperochloa hirsuta* Lazarides & L. Watson, see Michael Lazarides and L. Watson, "Cyperochloa, a new genus in the Arundinoideae Dumortier (Poaceae)." *Brunonia* 9(2): 216. 1987 [1986], Nigel P. Barker, "The relationships of *Amphipogon*, *Elytrophorus* and *Cyperochloa* (Poaceae) as suggested by rbcL sequence data." *Telopea* 7(3): 205-213. 1997, C. Hsiao, S.W.L. Jacobs, N.P. Barker and N.J. Chatterton, "A Molecular Phylogeny of the Subfamily Arundinoideae (Poaceae) Based on Sequences of rDNA." *Australian Systematic Botany* 11(1): 41-52. 1998, C. Hsiao, S.W.L. Jacobs, N.J. Chatterton and K.H. Asay, "A Molecular Phylogeny of the Grass Family (Poaceae) Based on the Sequences of Nuclear Ribosomal DNA (ITS)." *Australian Systematic Botany* 11(5-6): 667-688. 1998, Sarah Mathews, Rocky C. Tsai and Elizabeth A. Kellogg, "Phylogenetic structure in the grass family (Poaceae): evidence from the nuclear gene phytochrome B." *Am. J. Bot.* 87: 96-107. 2000, M.R. Duvall, J.D. Noll and A.H. Minn, "Phylogenetics of Paniceae (Poaceae)." *Am. J. Botany* 88(11): 1988-1992. 2001, E.A. Kellogg, "Evolutionary History of the Grasses." *Plant Physiology* 125(3): 1198-1205. 2001, *Flora of Australia* 43: 27, 28, 97, 104, 106, 265. 2002, G.H. Rua, "Centothecoid grasses and the evolution of panicoid spikelets." *Plant Systematics and Evolution* 240(1-4): 83-89. 2003.

Species

C. hirsuta Lazarides & L. Watson

Southwestern Australia. Dry sandy places.

Cyphochlaena Hackel = *Boivinella* A. Camus, *Sclerolaena* A. Camus

From the Greek *kyphos* "bent, curved, humped, tumour" and *chlaena* "cloak."

About 2 species, Madagascar. Panicoideae, Panicoideae, annual or perennial, trailing, herbaceous, auricles absent, ligule fringed, plants bisexual, inflorescence spicate, unilateral racemes, paired dimorphic spikelets, female spikelets laterally compressed, 2 glumes subequal, upper glume coriaceous, lower glume with a deciduous apical awn, lower lemma gibbous, male spikelet upper glume and lower lemma membranous, palea present, 2 free lodicules, 3 stamens, ovary glabrous, 2 stigmas, in damp places, related to *Pseudechinolaena*, type *Cyphochlaena madagascariensis* Hack., see *Species Plantarum* 1: 55. 1753, *Flore d'Oware* 2: 14. 1807 [1810], *Prodromus Florae Novae Hollandiae* 410. 1810 and *Österreichische Botanische Zeitschrift* 51: 465. 1901, *Bulletin de la Société Botanique de France* 72: 175-176, 622. 1925, *Bulletin du Muséum d'Histoire Naturelle* 31: 390. 1925, *Adansonia: recueil périodique d'observations botanique, n.s.* 5: 411-413. 1965, *Mem. Torrey Bot. Club* 23: 1-97, 126-130. 1977.

Species

C. madagascariensis Hack. (*Boivinella comorensis* A. Camus; *Oplismenus nossibensis* Mez; *Sclerolaena comorensis* Boivin ex A. Camus; *Sclerolaena comorensis* Boivin)

Madagascar. See *Notizblatt des Königlichen botanischen Gartens und Museums zu Berlin* 7: 53. 1917.

C. sclerioides (A. Camus) Bosser (*Boivinella sclerioides* A. Camus; *Panicum sclerioides* Boivin ex A. Camus)

Madagascar.

Cypholepis Chiov. = *Coelachyrum* Hochst. & Nees

From the Greek *kyphos* "bent, curved, tumour" and *lepis* "scale."

One species, Africa. Chloridoideae, Eragrostideae, type *Cypholepis yemenica* (Schweinf.) Chiov., perennial, herbaceous, unarmed, caespitose, densely tufted, ligule a fringed membrane, plants bisexual, spikelets flattened, 2 glumes subequal, lemma thinly coriaceous, short awnless palea, 2 fleshy lodicules, 3 stamens, 2 stigmas, smooth grains, often in *Coelachyrum*, see *Nomenclator Botanicus. Editio secunda* 1: 394. 1840, *Linnaea* 16(2): 221. 1842 and *Annuario del Reale Istituto Botanico di Roma* 8(3): 357-358. 1908, *Kirkia* 3: 117, 131-134. 1963, *Annalen des Naturhistorischen Museums in Wien* 75: 23. 1971[1972].

Species

C. yemenica (Schweinf.) Chiov. (*Coelachyrum yemenicum* (Schweinf.) S.M. Phillips; *Eleusine yemensis* (Schweinf.) Chiov.; *Eragrostis yemenica* Schweinf.; *Leptochloa appletonii* Stapf)

Tropical East Africa, South Africa, Ethiopia, Somalia, Yemen, Arabia. Annual or perennial, slender, densely tufted, erect or geniculate, ascending, without stolons, sheaths keeled, leaf blades narrowly linear, narrow inflorescence racemose, erect racemes spaced, 7- to 12-flowered, spikelets elliptic to narrowly lanceolate-elliptic, florets closely imbricate, glumes lanceolate-oblong 1-nerved, lemmas coriaceous and obtuse, growing on red sandy soil, grassland, open areas, in *Acacia* scrub, open shrubland, rocky places, sandstone, limestone, open stony ground, see *Bulletin de l'Herbier Boissier* 2(App. 2): 41. 1894 and *Bulletin of Miscellaneous Information Kew* 6: 223. 1907, *Annuario del Reale Istituto Botanico di Roma* 8(3): 357-358. 1908, *Annali di Botanica* 10: 410. 1912, *Kew Bulletin* 37(1): 159. 1982, *Grass. Saudi Arabia* 274. 1989.

Cyrene F. Allam.

See *Nova Acta Leop.-Carol. Nat. Cur.* 4: 94. 1770 [also *Nova Acta Phys.-Med. Acad. Caes. Leop.-Carol. Nat. Cur.*] and *Genera Graminum* 376. 1999.

Cyrtococcum Stapf = *Loxostachys* Peter, *Pseudechinolaena* Stapf

Greek *kyrtos* "curved, arched" and *kokkos* "a berry," alluding to the nature of the fruits, to the gibbous spikelets.

About 11-12 species, Old World tropics, Sri Lanka. Panicoideae, Panicoideae, Isachneae, or Panicoideae, Paniceae, Panicinae, annual or perennial, leafy, creeping, herbaceous, branched, stoloniferous or decumbent and rooting from the nodes, internodes hollow, auricles absent, ligule a membrane-like more or less fringed, leaves lanceolate to ovate to linear-lanceolate, plants bisexual, inflorescence a more or less loose panicle open or contracted, spikelets laterally compressed and asymmetrically obovate or gibbous, florets 2, lower floret sterile, upper floret perfect or bisexual, small crest on the upper floret, 2 glumes more or less equal and shorter than the spikelets, upper glume nerved and obtuse, lemmas boat-shaped, lower lemma obtuse, upper lemma laterally compressed, palea present, 2 free and fleshy lodicules, 3 stamens, ovary glabrous, 2 plumose stigmas, weed species, native pasture species, lower montane forest, shade species, lowland, open areas, related to *Panicum*, type *Cyrtococcum setigerum* (P. Beauv.) Stapf, see *Species Plantarum* 1: 55. 1753, *Syst. Veg.* 2: 884. 1817 and *Flora of Tropical Africa* 9: 15. (July) 1917 and 9: 745-746. (Aug) 1920, *J. Bot.* 69: 55. 1931, *Repert. Spec. Nov. Regni Veg.*

Beih. 40(1): 203, Anh. 55. 1930, *Flora Mesoamericana* 6: 328-329. 1994, *Am. J. Bot.* 88: 1993-2012. 2001, *Flora of Australia* 43: 113, 277. 2002, *Contributions from the United States National Herbarium* 46: 169, 285, 542-543. 2003.

Species

C. accrescens (Trin.) Stapf (*Panicum accrescens* Trin.)

Asia. Perennial, decumbent, rooting from the lower nodes, large and open inflorescence, fodder grass, see *Species Graminum* 1: t. 88. 1828[1827] and *Bulletin du Muséum National d'Histoire Naturelle* 27(1): 118. 1921, *Hooker's Icon. Pl.* 31(4): sub t. 3096. 1922, *Acta Phytotaxonomica et Geobotanica* 11(1): 47-48. 1942.

in Thailand: yaa ngaat, yaa raat

C. capitis-york B.K. Simon

Australia. Upper glume 3-nerved, spikelets compressed laterally and falling with glumes, see *Austrobaileya* 3(4): 592, f. 3. 1992.

C. chaetophoron (Roem. & Schult.) Dandy (*Cyrtococcum setigerum* (P. Beauv.) Stapf; *Isachne jardinii* (Steud.) Durand & Schinz; *Panicum chaetophorum* Roem. & Schult.; *Panicum jardinii* Steud.; *Panicum patens* L.; *Panicum setigerum* Retz.; *Panicum setigerum* P. Beauv., nom. illeg., non *Panicum setigerum* Retz.)

Tropical Africa. Perennial, loose, delicate, ascending, magical application, forest shade, see *Species Plantarum* 1: 58. 1753, *Observationes Botanicae* 4: 15. 1786, *Flore d'Oware* 1: 49, 82. 1804, *Prodromus Florae Novae Hollandiae* 196. 1810, *Systema Vegetabilium* 2: 884. 1817, *Synopsis Plantarum Glumacearum* 1: 95. 1854[1855], *Conspectus Florae Africae* 5: 739. 1896 and *Journal of Botany, British and Foreign* 69(2): 55. 1931.

in Ivory Coast: bikakosiré

C. deccanense Bor (*Cyrtococcum patens* sensu Senaratna, non (L.) A. Camus; *Panicum patens* sensu Hook.f., pro parte, non L.)

Southern India, Sri Lanka. Perennial, erect, decumbent, creeping, prostrate, rooting from the lower nodes, leaf sheaths keeled, panicles open and diffuse, upper floret pitted, forest shade, mountains, jungle, damp places, see *Handb. Fl. Ceylon* 5: 159. 1900, *Kew Bulletin* 1956: 255-256. 1956, *Grasses of Ceylon* 120. 1956, *Grasses of Burma* ... 291. 1960.

C. multinode (Lam.) Clayton (*Panicum cyrtococcoides* Napper; *Panicum multinode* Lam.; *Panicum multinode* J. Presl, nom. illeg., non *Panicum multinode* Lam.)

Tropical Africa. See *Encyclopédie Méthodique, Botanique* 4: 747. 1796, *Reliquiae Haenkeanae* 1(4-5): 303. 1830 and *Kirkia* 3: 126. 1963, *Kew Bulletin* 33(1): 22. 1978.

C. oxyphyllum (Hochstetter ex Steudel) Stapf (*Panicum oxyphyllum* Hochst. ex Steud.; *Panicum pilipes* Nees &

Arnott ex Büse, nom. illeg., non *Panicum pilipes* Nees) (Greek *oxys* “sharp” and *phyllon* “leaf”)

Southeast Asia, China, India, Indonesia, Sri Lanka, Australia. Perennial, weed species, slender, prostrate, erect, creeping, rooting at the nodes, leaf sheaths keeled at the tip, ligule minutely ciliolate, sheaths and blades often densely hairy below, leaf blades lanceolate, leaves more or less appressed and pubescent, flowering stems ascending, inflorescence very dense and narrow panicles long pilose, panicles contracted, asymmetrical spikelets dark orange and shining, sterile glumes keeled, fodder grass, in forest shade, old taro plantations, in forest clearings, easily confused with species of *Oplismenus* P. Beauv., see *Synopsis Plantarum Glumacearum* 1: 65. 1854, *Plantae Junghuhnianae* 3: 376. 1854, Henry Trimen (1843-1896), *A Systematic Catalogue of the Flowering Plants and Ferns Indigenous to or Growing Wild in Ceylon* 105. Colombo 1885 and *Handb. Fl. Ceylon* 5: 158. 1900, *Hooker's Icones Plantarum* 31(4): t. 3096. 1922, *Handb. Fl. Ceylon* 6: 322. 1931, *Grasses of Ceylon* 120. 1956, *Grasses of Burma ...* 291. 1960.

C. patens (L.) A. Camus (*Cyrtococcum accrescens* (Trinius) Stapf; *Cyrtococcum muricatum* (Retz.) Bor; *Cyrtococcum radicans* (Retz.) Stapf; *Panicum accrescens* Trin.; *Panicum carinatum* J. Presl; *Panicum carinatum* Torr., nom. illeg., non *Panicum carinatum* J. C. trigonum (Retz.) A. Camus (*Loxostachys lachnantha* Peter; *Panicum difforme* Roth; *Panicum trigonum* Retz.)

Southeast Asia, Sri Lanka. Perennial, creeping, matted, prostrate, erect, rooting at lower nodes, ligule glabrous, leaf sheath smooth with hairy margin, leaves lanceolate and acuminate, open inflorescence, shade species, fodder grass, common at the edge of woods, along roadsides, secondary growth, swamps, along paths, open areas, similar and confused with *Cyrtococcum patens* (L.) A. Camus, see *Sp. Pl.* edition 1. 1: 58. 1753, *Obs. Bot.* 3: 9. 1783, *Systema Vegetabilium* 2: 433. 1817, *Enum. Pl. Zeyl.* 359. 1864, *A Systematic Catalogue of the Flowering Plants and Ferns Indigenous to or Growing Wild in Ceylon* 105. 1885 and *Handb. Fl. Ceylon* 5: 157. 1900, *Bull. Mus. Hist. Nat.* (Paris) 27: 118. 1921, *Hooker's Icon. Pl.* t. 3096. 1922, *Repertorium Specierum Novarum Regni Vegetabilis, Beihefte* 1: 55, f.14/1. 1930 [1931], *Handb. Fl. Ceylon* 6: 322. 1931, *Grasses of Ceylon* 120. 1956, *Grasses of Burma ...* 292. 1960.

in India: abbu garike

C. trigonum (Retz.) A. Camus var. **celebicum** Jansen

Southeast Asia, Celebes. See *Reinwardtia* 2(2): 258. 1953.

Cyrtopogon Spreng. = *Aristida* L., *Curtopogon* P. Beauv.

From the Greek *kyrtos* “curved, arched” and *pogon* “a beard.”

Arundinoideae, Aristideae, or Aristidoideae, Aristideae, see *Species Plantarum* 1: 82. 1753, *Flora Boreali-Americana* 1: 41. 1803, *Ess. Agrostogr.* 32, 159, t. 8, f. 7. 1812, *Systema Vegetabilium, editio decima sexta* 1: 266. 1824[1825] and *Kurtziana* 1: 123-206. 1961, *Flora Mesoamericana* 6: 253-257. 1994, *Flora del Valle de Tehuacán-Cuicatlán* 3: 1-35. 1994, *Flora of Ethiopia and Eritrea* 7: 76-85. 1995, *Annals of the Missouri Botanical Garden* 82: 593-595. 1995, *Candollea* 53(2): 466-470. 1998, *Bot. Rev.* 64: 1-85. 1998, *Boletim do Instituto de Botânica (São Paulo)* 12: 113-179.

1999, *Acta Botánica Mexicana* 63: 1-45. 2003, *Contributions from the United States National Herbarium* 46: 69-104, 166, 169. 2003.

Czerniaevia (Ledeb.) Ledeb. = *Czerniaevia* Ledeb., *Deschampsia* P. Beauv.

Pooideae, Poodae, Aveneae, or Pooideae, Poae, Airinae, in syn. sub *Deschampsia bottnica* (Wahlenb.) Trin., see *Flora Lapponica* 1: 36, t. 4. 1812, *Essai d'une Nouvelle Agrostographie* 91, 149, 160. 1812, *Fundamenta Agrostographiae* 158. 1820, *Flora Rossica* 4(13): 422. 1852 and *Contributions from the United States National Herbarium* 48: 245-256. 2003.

Czerniaevia Turcz. ex Griseb. = *Deschampsia* P. Beauv.

Pooideae, Poodae, Aveneae, or Pooideae, Poae, Airinae, in syn. sub *Deschampsia bottnica* var. *melicoides* (?), see *Flora Lapponica* 1: 36, t. 4. 1812, *Essai d'une Nouvelle*

Agrostographie 91, 149, 160. 1812, *Fundamenta Agrostographiae* 158. 1820, *Flora Rossica* 4(13): 422. 1852 and *Contributions from the United States National Herbarium* 48: 242, 245-256. 2003.

Czernya Presl = *Phragmites* Adans.

Arundinoideae, Arundineae, see *Species Plantarum* 1: 81. 1753, *Familles des Plantes* 2: 34, 559. 1763, *Archiv für die Botanik* 1(3): 37. 1798, *Systema Vegetabilium* 2: 29, 501. 1817, *Cyperaceae et Gramineae Siculae...* Pragae 1820, *Fundamenta Agrostographiae* 134. 1820 [1822], *Synopsis Plantarum Glumacearum* 1: 197. 1855 [1854], *Journal of the Linnean Society Bot.* 19: 112. 1881, Hermann Karsten (1817-1908), *Deutsche Flora. Pharmaceutisch-medizinische Botanik...* 379. Berlin 1881 and *Kew Bulletin* 21: 113-117. 1967, *Taxon* 17: 168-169. 1968, H.I. Aston, *Aquatic Plants of Australia*. 207-210. 1973, *Journal of Shenyang Agricultural University* 24(2): 89-94. 1993, *Contributions from the United States National Herbarium* 46: 169, 537-539. 2003.

D

Dactilon Vill. = *Cynodon* Rich.

Greek *daktylos* "a finger."

Chloridoideae, Cynodonteae, Chloridinae, type *Dactilon officinale* Vill., see *Species Plantarum* 1: 58. 1753, *Histoire des Plantes de Dauphiné* 2: 69. 1787, *Syn. Pl.* 1: 85. 1805 and *Contributions from the United States National Herbarium* 41: 59-63, 64. 2001.

Dactylis L. = *Amaxitis* Adans., *Trachypoa* Bub.

From the Latin *dactylis* and Greek *daktylos* for a kind of grape or a sort of grass (Plinius) or the date, perhaps referring to the stiff branches of the flower head; see Carl Linnaeus (1707-1778), *Species Plantarum*. 71. 1753 and *Genera Plantarum*. Edition 5. 32. 1754.

About 1-5 species, Europe, Mediterranean, North Africa, temperate Asia. Pooideae, Poodae, Poeae, or Pooideae, Poeae, Dactylidinae, perennial, extremely variable, bulbous base, herbaceous, unbranched, densely tufted, young shoots strongly flattened, rhizomatous or stoloniferous, short and oblique rhizomes, hollow internodes, auricles absent, ligule membranous and unfringed, leaf sheaths keeled and compressed, leaf blades linear to linear-lanceolate and broad or narrow, old leaf sheaths persistent and fibrous, plants bisexual, panicle compound and contracted or open, spikelets densely crowded in thick clusters, 2-5 florets, vestigial foliar structure subtending the inflorescence rarely present or absent, 2 persistent and subequal glumes keeled and acute, stiff lemmas keeled and mucronate, lemma spinulose on keel, palea keels wingless, 2 lodicules free and membranous, 3 stamens, ovary glabrous, anthers yellowish cream, 2 stigmas white plumose, weed species, pasture grass, cultivated fodder, shade species, habitat variable, grows in meadows, moist and fertile soils, stony hills, open habitats, wastelands, woodlands and disturbed ground, in moist to dry places, a segregate from *Poa*, type *Dactylis glomerata* L., see *Species Plantarum* 1: 54-55, 71, 73-78. 1753, *Familles des Plantes* 2: 34, 515. 1763 and *Flora Pyrenaea* ... 4: 359. 1901, *Acta Botanica Bohemica* 14: 1-147. 1943, *University of California Publications in Botany* 31(1): 1-40. 1959 [Cytogenetic and evolutionary studies in the genus *Dactylis*. Species

D. glomerata L. (*Bromus glomeratus* (L.) Scop.; *Dactylis glaucescens* Willd.; *Dactylis glomerata* var. *ciliata* Petermann; *Dactylis glomerata* var. *detonsa* Fries, *Dactylis glomerata* var. *vivipara* Parl.; *Dactylis hispanica* Roth; *Festuca glomerata* (L.) All.; *Festuca glomerata* (L.) Spreng., nom. illeg., non *Festuca glomerata* (L.) All.; *Limnetis glomerata* (L.) Eaton; *Phalaris glomerata* Gueldenst.; *Trachypoa vulgaris* Bubani)

North Africa, Mediterranean, Europe. Long-lived perennial bunchgrass, very variable, densely and strongly tufted, dark green to light green to grayish green, tall, robust, coarse, erect or spreading, tussocks forming, strong and extensive fibrous

root system, has no stolons and only rarely has short rhizomes, auricles absent, leaf sheaths keeled, ligule membranous and smooth, long linear and flat leaves, panicle usually contracted and well exerted from uppermost sheath, spikelets ovate and crowded in dense and compact 1-sided clusters, vestigial foliar structure subtending the inflorescence rarely present or absent, 2 glumes persistent and finely pointed, lemmas with a terminal mucro or a short awn, paleas 2-keeled with hairy keels, ovary glabrous, reproduces sexually by seed production and asexually by tiller formation, sometimes a noxious weed species, can withstand heavy grazing, moderately nutritious and highly palatable, cultivated fodder, meadow and pasture grass, forage, cause of hay fever, ornamental honey plant, drought- and shade-tolerant, frost- and heat-resistant, requires good drainage, excellent ground cover, recommended and used for a variety of rehabilitation applications, used for rehabilitation of sites disturbed by mining, may be used for soil erosion control on cut-over forest land, found in moist soils, in timbered areas after fire, in open habitats, gardens, fields, in disturbed places and along roadsides, orchards, waste places and depleted sites, meadows, dune hollows, sandy soil, clays and clay loams, in irrigated and high rainfall areas, on logging roads, on normally drained to dry soils, might be confused with *Phalaris arundinacea* L., see *Species Plantarum* 71. 1753, *Flora Carniolicæ, Editio Secunda* 1: 76-77. 1771, *Flora Pedemontana* 2: 252. 1785, *Reisen durch Russland und im Caucasischen Gebürge* 2: 214. 1791, *Plantarum Minus Cognitarum Pugillus* 2: 22. 1815, *A Manual of Botany for the Northern States* 14. 1817 and *Handb. D. glomerata L. subsp. **slovenica** (Domin) Domin (*Dactylis glomerata* subsp. *slovenica* Domin; *Dactylis slovenica* Domin)

Central Europe.

D. glomerata L. subsp. **smithii** (Link) Stebbins & Zohary (*Aeluropus smithii* (Link) Steud.; *Dactylis smithii* Link; *Poa smithii* (Link) Kunth)

Europe, Portugal, Spain, Canary Islands, Madeira. Perennial, useful for erosion control, see *Révision des Graminées* 1: 111. 1829, *Nomenclator Botanicus* edition 2 1: 30. 1840 and *University of California Publications in Botany* 31(1): 18, f. 12. 1959.

D. glomerata L. subsp. **woronowii** (Ovcz.) Stebbins & Zohary (*Dactylis woronowii* Ovcz.)

Asia temperate, Eurasia, Iran, Turkey. Perennial, useful for erosion control, see *Flora URSS* 2: 262, 752. 1934, *University of California Publications in Botany* 31(1): 9, f. 5. 1959.

D. marina Borrill (*Dactylis glomerata* subsp. *marina* (Borrill) Greuter; *Dactylis glomerata* L. var. *maritima* (Hack.) K. Richt.; *Dactylis glomerata* var. *marina* (Borrill) Speranza & Christof.; *Dactylis hispanica* Roth var. *maritima* Hack.; *Dactylis maritima* (Hack.) Rivas Mart., nom. illeg.; *Dactylis smithii* subsp. *marina* (Borrill) P.F. Parker)

Europe, Mediterranean, Portugal, Canary Islands, Spain. Perennial, drought-resistant, slow growth rate, low water requirement, useful for erosion control, growing in coastal cliffs, limestone rocks, see *Journal of the Linnean Society, Botany* 56: 437. 1961, *New Phytologist* 71(2): 376. 1972, Norris IB, Thomas H., "Variation in growth of varieties and ecotypes of *Lolium*, *Dactylis* and *Festuca* subjected to contrasting soil moisture regimes." in *Journal of Applied Ecology*. 19: 881-889. 1982, *Willdenowia* 13(1): 72. 1983, *Webbia* 39(2): 394. 1986.

in English: cocks foot

D. smithii Link (*Aeluropus smithii* (Link) Steud.; *Dactylis glomerata* subsp. *smithii* (Link) Stebbins & D. Zohary; *Poa smithii* (Link) Kunth)

Europe, Portugal, Spain, Canary Islands, Madeira. Rare species, see *Révision des Graminées* 1: 111. 1829, *Nomenclator Botanicus* edition 2 1: 30. 1840 and *University of California Publications in Botany* 31(1): 18, f. 12. 1959.

Dactyloctenium Willd.

From the Greek *daktylos* “a finger” and *ktenion* “a little comb,” *kteis*, *ktenos* “a comb,” referring to the arrangement of the spikes in the inflorescence; see Carl Ludwig Willdenow (1765-1812), *Enumeratio plantarum horti regii botanici berolinensis*. 1029. 1809; Mariella Azzarello Di Misa, a cura di, *Il Fondo Antico della Biblioteca dell'Orto Botanico di Palermo*. 293-294. Regione Siciliana, Palermo 1988.

A genus of 14 species, warm regions, Indian Ocean, Africa, India, Australia. Chloridoideae, Eragrostideae, or Chloridoideae, Cynodonteae, annual or perennial, herbaceous, branched, caespitose, mat-forming, often stoloniferous, prostrate to erect, decumbent and ascending, solid or hollow, auricles absent, ligule a ciliolate membrane or a rim of hairs, leaf sheath keeled with scabrous margins, leaves linear to linear-lanceolate and finely tapered to pungent, plants bisexual, inflorescence a panicle exerted, paired or digitate racemes each terminating in a bare point, primary branches digitate reflexed or spreading, spikelets solitary and laterally compressed, terminal floret barren, 2 glumes more or less equal and strongly keeled, lower glume persistent and ovate, upper glume more or less persistent and mucronate or short-awned below the tip, strongly keeled lemmas acute or acuminate to shortly awned, palea 2-keeled, 2 fleshy lodicules truncate, 3 stamens, ovary glabrous, 2 stigmas, small fruit sculptured or rugose, shade-tolerant, sand binder, soil stabilizer, fruits edible, rhizomes chewed like sugarcane, lawns and playing fields, weed species, cultivated fodder, native pasture species, reputed to contain cyanogenetic glucosides, a taxonomically difficult genus, common in open habitats, arid and semiarid places, saline habitats, dunes, on dry sandy soils, rainforest, taxonomically difficult genus, closely related to *Eleusine* Gaertn., type *Dactyloctenium aegyptium* (L.) Willd., see *De Fructibus et Seminibus Plantarum* . . . 1: 7. 1788, *Enumeratio plantarum horti regii botanici berolinensis*. 1029. 1809 and *U.S.D.A. Bull.* (1915-23) 772: 175. 1920, *Annals of the Natal Museum* 10(1): 47-77. 1941 [A critical account of the species of *Dactyloctenium* Willd. in Southern Africa.], *Kariba Studies*, vol. II. Old World tropics, tropical and subtropical regions. Tufted annual or short-lived perennial, highly variable to exceedingly variable, quick growing, ruderal, glaucous, robust, richly branched, spreading, open, creeping, mat-forming, more or less stoloniferous with stolons creeping, culms

ascending and often rooting at the lower nodes, leaf sheaths glabrous and keeled, slightly succulent leaves linear-acuminate, ligule fringed and membranous, inflorescence branches spicate digitate and sided, stout spikes, spikelets broad-ovate arranged in 2 rows on one side of the secondary axes, rachis straight, glumes 2 persistent, lower glume ovate and acute, upper glume oblong-elliptic and with the keel extended into a divergent awn, lemmas ovate and mucronate, palea membranous and 2-nerved, 2 lodicules, 3 stamens, anthers pale yellow, grain wrinkled or very rugose, seed head resembles a crow's foot, lactogogue grass, a troublesome weed in crops, drought-resistant, sand-binder and stabilizer, lawns and playing fields, tolerant of alkaline soils, nitrate poisoning has been reported, native pasture species, valuable to excellent fodder grass, forage, quite palatable and nutritious, used by indigenous people to treat amenorrhea and stomach ache, edible grains, seeds dried and ground used for porridge during scarcity in Africa, a decoction from seeds used for kidney inflammations, common in arable land and waste areas, low dry stony hills, in wet places, in disturbed areas near water, ricefields, in gardens and along roadsides, disturbed ground, lowlands in secondary situations, beach sand, loose sand, white sand, reddish brown loamy soils, alluvial soils, waste and cultivated lands, in roadbed, river edges, uncultivated savannah, sandy soils along the coast, arid and semiarid places, in high rainfall areas, steep wooded hills, fields and open ground, floodplains, generally on poor soil, poor dry soils, see *Species Plantarum* 72-73, 1050. 1753, *Flora Caroliniana, secundum ...* 249. 1788, *Tableau Encyclopédique et Méthodique ... Botanique* 1: 203, t. 48, f. 2. 1791, *Flora Atlantica* 1: 85. 1798, *Methodus Plantas Horti Botanici ...* (Suppl.) 68. 1802, *Flora Boreali-Americana* 1: 59. 1803, *Syn. D. aristatum Link (*Dactyloctenium aegyptium* var. *aristatum* (Link) A. Chev.; *Dactyloctenium radulans* auct. non (R. Br.) P. Beauv.; *Dactyloctenium seminipunctatum* Courbon)

Eastern Africa, Egypt, northwestern India. Annual, geniculate and ascending often rooting at the lower nodes, sprawling, leaves hispid, inflorescence compact clustered in a dense head, glumes subequal, lemmas mucronate, deep sand, hillsides, coastal dunes, disturbed areas, see *Hortus Regius Botanicus Berolinensis* 1: 59. 1827, *Annales des Sciences Naturelles; Botanique, série 4* 18: 135. 1862 and *Revue de Botanique Appliquée et d'Agriculture Tropicale* 14(150): 130. 1934.

D. australe Steudel

South Africa. Perennial, dark green, sod forming, stoloniferous, with wiry and flattened stolons, rhizomes absent, erect or geniculate, leaf sheath slightly compressed, ligule a short membrane, leaves shining, digitate and unilateral spikes, spikelets elliptic-oblong and flattened, lower glume ovate and truncate, upper glume with the keel extended into an awn, lemmas ovate, permanent ground cover, salt-spray-tolerant, ornamental, useful as a shade-tolerant lawn grass and sand-binder, turf, often used in conjunction with *Stenotaphrum secundatum* (Walter) Kuntze, forage, palatable pasture grass, grazed by stock, good sandbinder, useful for erosion control, recommended for heavily shaded areas, sometimes weedy, common in urban and coastal regions, along forest roads, sandy seaside area, dunes, disturbed sites, under older orchards, sometimes confused with *Dactyloctenium aegyptium*, see *Synopsis Plantarum Glumacearum* 1: 212. 1854.

in English: Durban grass, Durban, Natal crowfoot, L.M. grass, sweet smother grass, smothergrass

in South Africa: Natal hoenderspoor, Natakweek, L.M. grass

D. buchananensis B.K. Simon

Australia, Lake Buchanan. Annual or short-lived perennial, halophytic, caespitose, erect or geniculate, tufted, without stolons or rhizomes, extremely short spikes, on saline clays, see *Flora of Australia* 44B: 459. 2005.

D. geminatum Hack. (*Dactyloctenium bogdani* S.M. Phillips, named for Alexis V. Bogdan; *Dactyloctenium glaucophyllum* Courbai var. *somalicum* Chiov.)

Eastern Africa, Mozambique, South Africa. Perennial, creeping, mat-forming, stoloniferous and long rhizomatous, leaves flat and tough, inflorescence open, unilateral spikes arranged digitately, straight or slightly falcate racemes, flattened spikelets, glumes subequal, lemma acute and often mucronate, fertile stems tufted, dune pioneer, useful for erosion control on brackish and sandy soils, occurs in sandy areas, sandy and alluvial soils, open grassveld, escarpments, on sand dunes, lawn, cultivated fields, coarse sand, near rivers and along water-courses, along roadsides, on brackish soils, in coastal regions, alkaline flats, see *Bulletin de l'Herbier Boissier* 7(1): 26. 1899 and *Annali di Botanica* 13(3): 371. 1915, *Kew Bulletin* 29: 268. 1974.

in English: sign grass

in South Africa: wysergras

D. giganteum B.S. Fisher & Schweick.

Tropical Africa, southern Africa, Namibia, Swaziland. Annual, robust and erect, tufted, soft, branched culms, geniculate, prostrate, without rhizomes, sometimes rooting at the lower nodes, lower nodes decumbent, leaf sheath keeled and flattened, ligule a ciliate membrane with wavy margin, broad leaves tapering to a sharp point, unilateral spikes, spikelets strongly flattened arranged in two rows on one side of the secondary axes, upper glume with short awn, lemma keels scabrid, fruits with spiky hairs, grains eaten by local people, cultivated fodder, soft leafy hay, very palatable pasture grass, weed species, pioneer grass, does not tolerate flooding, drought-tolerant, useful for erosion control, ground cover, common in sandy soils, along riverbanks near water, alluvial savannah, along lakeshore, sandveld, red earths, trampled areas, grassland, on disturbed areas, roadsides, uncultivated lands, under trees, under forest thickets, see *Annals of the Natal Museum* 10: 53. 1941.

in English: giant crowfoot, L.M. grass, giant button grass

in Southern Africa: reusehoenderspoor, reuse hoenderspoor, sterretjiegras, großessschirmgras; nsonko (Tsonga); rathathe (Ngami)

D. henrardianum Bor (*Acrachne eleusinoides* Wight & Arn. ex Steudel; *Acrachne henrardiana* (Bor) S.M. Phillips; *Arthrochloa henrardiana* (Bor) J.W. Lorch; *Dactylis interrupta* Rottler ex Bor; *Normanboria henrardianum* (Bor) F. Butzin)

India. See *Species Plantarum* 1: 71. 1753, *Nomenclator Botanicus* edition 2 1: 21. 1840 and *Annuario del Reale*

Istituto Botanico di Roma 8(3): 361. 1908, *Blumea, Supplement* 3: 44. 1946, *Journal of the Indian Botanical Society* 39(3): 490, f. 1-5. 1960, *Grasses of Burma, Ceylon, India and Pakistan (excluding Bambuseae)* 489. 1960, *Taxon* 27(2-3): 301. 1978, *Kew Bulletin* 37(1): 158. 1982.

D. radulans (R. Br.) P. Beauv. (*Dactyloctenium aegyptium* sensu J. Black, non (L.) P. Beauv.; *Eleusine aegyptiaca* sensu Benth., non Pers.; *Eleusine radulans* R. Br.) (Latin *radula*, *ae* “scraper”)

Australia. Annual or short-lived perennial, ephemeral, slender, tufted, semierect or rarely erect, sometimes prostrate or decumbent and ascending, rosette of leafy stems, rapid-growing, leaves flat and sometimes ciliate to sparsely hairy, deciduous spikes digitate and finally spreading in a starlike cluster, each spike with 2 rows of crowded overlapping flat spikelets, 2-4 florets, glumes scabrous on the keel, upper glume with the keel extended into an awn, lemmas ovate and scabrous on the keel, pasture grass, fodder, highly palatable especially to sheep, nutritious, can be toxic to cattle, sometimes can cause nitrate-nitrite poisoning, sometimes a weed of cultivation and gardens, found in sandy soils, roadside gravel, on coarse sands, dry areas, in disturbed or trampled areas, saline soil or calcareous, alluvial places, cracking clays, near the coast, see *Prodromus Florae Novae Hollandiae* 186. 1810, *Essai d'une Nouvelle Agrostographie* 72, 160. 1812.

in English: button grass, finger grass, coast button grass

D. robecchii (Chiov.) Chiov. (*Eleusine robecchii* Chiov.)

Oman, Arabia, Yemen. Perennial, tough, robust, woody or shrubby, mat-forming, stoloniferous with scaly stolons, pungent leaves rigid and short, inflorescence a compact head, spikelets ovate, glumes subequal, lemmas elliptic and mucronate, grows in floodplains, alluvial soils, slopes, rocky areas, see *Annuario del Reale Istituto Botanico di Roma* 6: 171, t. 19. 1896.

D. scindicum Boiss. (also spelled *sindicum*) (*Dactyloctenium glaucophyllum* Courbai; *Dactyloctenium glaucophyllum* var. *elongatior* Courbai; *Dactyloctenium glaucophyllum* var. *robustior* Courbai; *Eleusine glaucophylla* (Courbai) Munro ex Benth.; *Eleusine scindica* (Boiss.) Duthie)

Northeastern Africa, India, Arabia, Middle East. Perennial, halophyte, erect, slender, mat-forming desert grass, stoloniferous with woody stolons, stems swollen below, leaves tough and hispid, ligule ciliate, inflorescence a compact head with racemes often falcate, rachis strongly curved upward, glumes subequal, lower glume oblong and acute, lemmas lanceolate and mucronate, a good fodder, grain eaten, growing in alluvial plains, stony plain, in open *Acacia* scrub, grassland, shrubland, sandy soils, margins of irrigation ditches, see *Diagnoses plantarum orientalium novarum*, ser. 2, 4: 131. 1859, *Annales des Sciences Naturel-*

les; Botanique, série 4 18: 133-134. 1862, *Journal of the Linnean Society, Botany* 19: 107. 1881, *The Fodder Grasses of Northern India* 58. 1888.

in India: bhobra, bobriya, ganthi, ganthya, ganti ghas, jangli malicha, kharo makro, mandjiro, tantia ghas,

in Somalia: duyo, dooyo

Dactyloides Kuntze = *Tripsacum* L.

Resembling fingers.

Panicoideae, Andropogonodae, Maydeae, or Panicoideae, Andropogoneae, Tripsacinae, see C. Linnaeus, *Systema Naturae, Editio Decima* 1253, 1261, 1379. 1759, *Familles des Plantes* 2: 38, 550. 1763, *Revisio Generum Plantarum* 2: 772. 1891 and *Botanical Gazette* 41: 294. 1906, *Boletín de la Sociedad Botánica de México* 25: 1-21. 1941, *Rhodora* 66: 371-374. 1964, *Bot. Peterson, “Systematics of the Muhlenbergiinae (Chloridoideae: Eragrostidae).” *Grasses: Systematics and Evolution* 195-212. 2000, *Contributions from the United States National Herbarium* 41: 65, 143-173. 2001.

Dactylus Asch. = *Cynodon* Rich., *Dactylus* Forsskal (Ebenaceae)

Latin *dactylis*, *dactylus* and Greek *daktylos* for “a kind of grape or a sort of grass” (Plinius) or “the date.”

Chloridoideae, Cynodonteae, Chloridinae, see *Species Plantarum* 1: 58. 1753, *Flora Aegyptiaco-Arabica* xxxvi. 1775, *Histoire des Plantes de Dauphiné* 2: 69. 1787, *Syn. Pl.* 1: 85. 1805, *Fl. Brandenburg* 1: 810. 1864 and *Contributions from the United States National Herbarium* 41: 59-63. 2001.

Daknopholis W.D. Clayton

From the Greek *dakno* “bite, to bite, sting” and *pholis* “a horny scale.”

One species, Indian Ocean islands, Madagascar. Chloridoideae, Cynodonteae, annual, herbaceous, unarmed, prostrate, stoloniferous, auricles absent, ligule a fringed membrane, plants bisexual, inflorescence spicate and digitate, racemes digitate, spikelets strongly laterally flattened, 1-flowered, 2 glumes membranous more or less equal, upper glume acute to truncate, lemma keeled and bidentate, awned or rarely awnless, palea present, 2 free and fleshy lodicules, 3 stamens, ovary glabrous, 2 stigmas, coastal, open places, sand dunes, seashore, beaches, resembling *Chloris* and *Cynodon*, type *Daknopholis boivinii* (A. Camus) Clayton, see *Nova Genera et Species Plantarum seu Prodromus* 1, 25. 1788, *Bull. Soc. Bot. France* 79: 845. 1932, *Not. Syst. Herbier Mus. Hist. Nat. Paris* 12: 155. 1946, *Bulletin de la Société Botanique de France* 96: 93. 1949, *Kew Bulletin* 21: 102. 1967, *Brigham Young University Science Bulletin: Biological Series* 19(2): 1-133. 1974 [Taxonomy of the genus *Chloris* (Gramineae)].

Species

D. boivinii (A. Camus) Clayton (*Chloris boivinii* A. Camus; *Chloris perrieri* A. Camus; *Chloris ramosissima* A. Camus)

East African coasts, Madagascar. See *Bulletin de la Société Botanique de France* 79: 845. 1932.

Dallwatsonia B.K. Simon

One species, Australia, Queensland. Panicoideae, Panicodae, Paniceae, or Digitariinae, perennial, herbaceous, branched, leaves linear, ligule a fringed membrane, plants bisexual, inflorescence spicate or paniculate, spikelets laterally compressed, 2 glumes unequal, lower glume ovate, palea reduced, 2 free and fleshy lodicules, 3 stamens, ovary glabrous, 2 stigmas, type *Dallwatsonia felliana* B.K. Simon, see B.K. Simon, “*Alexfloydia*, *Cliffordiochloa* and *Dallwatsonia*, three new panicoid grass genera from eastern Australia.” in *Austrobaileya* 3(4): 669-691. 1992, *Flora of Australia* 43: 120. 2002.

Species

D. felliana B.K. Simon

Queensland.

Dalucum Adans. = *Melica* L.

Pooideae, Meliceae, see *Species Plantarum* 1: 66-67. 1753, *Observations sur les Graminées de la Flore Belgique* 109. 1823 [1824], *Anales de la Sociedad Española de Historia Natural* 28(Mem.): 8-9. 1899 and *Bull. Danthonia Post & Kuntze

Orthographic variant of *Danthonia* DC., see Tomas Erik von Post & C.E.O. Kuntze, *Lexicon generum Phanerogamarum*. 163. 1903.

Danthonia DC. = *Austrodanthonia* H.P. Linder, *Brachatera* Desv., *Brachyathera* Kuntze, *Merathrepta* Raf., *Notodanthonia* Zotov, *Rytidosperma* Steudel, *Sieglingia* Bernhardt, *Wilibald-Schmidtia* Conrad

Dedicated to the French botanist D. (Étienne) Danthoine, fl. 1788, agrostologist; see Georg Christian Wittstein, *Etymologisch-botanisches Handwörterbuch*. 369. Ansbach 1852.

A genus of about 20-33 species (about 100 including *Rytidosperma* Steudel), New Zealand, America, Australia. Arundinoideae, or Danthonioideae, Danthonieae, perennial or rarely annual, tufted or caespitose, shortly rhizomatous, forming small to large clumps or tussocks, herbaceous and unbranched above, erect or ascending, hollow, ligule a ciliate rim, flat or involute leaf blades, more or less erect leaves filiform and narrow, plants bisexual, with hidden cleistogenes or without hidden cleistogenes, cleistogenes usually present in culm sheaths, inflorescence a crowded solitary panicle or raceme few spikeleted, panicle open or contracted, spikelets solitary or in clusters, spikelets dimorphic, several bisexual florets, reduced floret at apex, glumes subequal as long as spikelets, glumes papery and acute to oblong-lanceolate and rounded to keeled, lemmas pilose and boat-shaped, geniculate awn, flattened and twisted awns from between 2 teeth at the tip of the lemma, callus sharp and bearded, palea 2-keeled, 2 usually glabrous lodicules free and fleshy or lodicules absent, 3 stamens, anthers purple or yellow, 2 stigmas, small fruit longitudinally grooved, great variability, ornamental, some species highly palatable and with a high nutritive value, important component of native pastures, most species very hardy, used for regeneration,

most commonly found near scrub or forest margins on poorer soils, grasslands, infertile soils, open woodlands, dry conditions, intergeneric hybrids with *Sieglingia* Bernh., the genus *Danthonia* DC. described as among the most variable, native species formerly in *Danthonia* are now mostly included in *Austrodanthonia*, *Notodanthonia* and *Rytidosperma*, see *Species Plantarum* 1: 79-81. 1753, *Systematisches Verzeichnis* 20, 44. Erfurt 1800, *Flore Française. Southern America, Brazil, Uruguay, Bolivia, Argentina. Perennial, erect, leaf blades filiform, shortly rhizomatous, dense panicle oblong, 5- to 12-flowered, glumes lanceolate

and subequal, stony places, arid and desert, see *Mémoires de la Société d'Agriculture, Sciences et Arts d'Angers* 1: 204. 1831, *Anales del Museo Nacional de Montevideo* 1: 367, t. 40. 1896, *Revisio Generum Plantarum* 3(3): 349. 1898 and *Boletín de la Academia Nacional de Ciencias, Córdoba, Argentina* 16: 38. 1900, *Anales del Museo Nacional de Buenos Aires* 21: 112. 1911, *Kurtziana* 10: 249. 1977, *Gramíneas de Bolivia* 262, f. 52. 1998.

D. clelandii Vickery (*Joycea clelandii* (Vickery) Linder; *Notodanthonia clelandii* (Vickery) Veldkamp; *Rytidosperma clelandii* (Vick.) Connor & Edgar) (species dedicated to the Australian naturalist Sir John Burton Cleland, 1878-1971, botanist, ethnologist, explorer and plant collector)

South Australia. Robust, perennial, ornamental, tufted, forming erect tussocks, leaves flat or inrolled, culms erect and stout, loose panicle exserted and linear-oblong, spikelets with red hanging anthers, central awn twisted, poor soils, see *Contributions from the New South Wales National Herbarium* 1: 297. 1950, *New Zealand Journal of Botany* 17(3): 332. 1979, *Taxon* 29: 296. 1980, *Telopea* 6(4): 612. 1996.

in Australia: wallaby-grass

D. compressa Austin (*Danthonia allenii* Austin (also *allenii*); *Danthonia faxonii* Austin; *Danthonia spicata* var. *compressa* (Austin) Alph. Wood; *Merathrepta compressa* (Austin) A. Heller; *Pentameris compressa* (Austin) A. Nelson & J.F. Macbr.) (Charles Edward Faxon, 1846-1918)

North America, U.S., Canada. Perennial bunchgrass, slender, compressed, sometimes decumbent, dense growth habit, leaves mostly basal, inflorescence a panicle, awn bent, forage, pasture grass, susceptible to drought, growing in open woodlands, well-drained sites, on dry sites, logged and burned areas, on disturbed sites, mountain meadows and clearings, in forest openings, see *Systema Vegetabilium* 2: 690. 1817, *Annual Report of the New York State Museum* 22(87): 55. 1869, *The American Botanist and Florist* 2: 396. 1871, *Bulletin of the Torrey Botanical Club* 3(4): 21. 1872, *Bulletin of the Torrey Botanical Club* 6(36): 190. 1877 and *Muhlenbergia: A Journal of Botany* 5: 120. 1909, *Botanical Gazette* 56(6): 469. 1913.

in English: flat-stem oat grass, flattened oatgrass, slender oatgrass, mountain oat grass

D. cumminsii Hook.f. (*Danthonia jacquemontii* Bor; *Danthonia jacquemontii* var. *minor* (Hook.f.) Bor; *Danthonia schneideri* Pilger)

Asia, India. A very variable species, good fodder, see *The Flora of British India* 7: 282. 1897 and *Kew Bulletin* 1952: 80-81. 1952.

in English: native oat grass

D. cunninghamii Hook.f. (*Agrostis pilosa* Retz.; *Agrostis pilosa* A. Cunn., nom. illeg., non *Agrostis pilosa* Retz.;

Chionochloa conspicua subsp. *cunninghamii* (Hook.f.) Zotov) (after the (British-born, Wimbledon, Surrey) Australian botanist Allan Cunningham, 1791-1839 (Sydney), botanist in New South Wales (Australia), plant collector, explorer, botanical collector for Kew, 1814-1816 to Brazil with James Bowie (ca. 1789-1869), in New Zealand 1826 and 1838, Superintendent of Botanic Garden at Sydney, his works include *Florae Insularum Novae Zelandiae Precursor*; or, a Specimen of the Botany in the Islands of New Zealand. London 1837-1840; see Ida Lee (afterwards Marriott), *Early Explorers in Australia*. From the log-books and journals, including the Diary of Allan Cunningham. [Selections from his journal from Mar 1817-Nov 1818.] London 1925; Barron Field (1786-1846), *Geographical Memoirs on New South Wales*. By various hands ... Edited by B.F. Veldkamp; *Rytidosperma glabrum* (Phil.) Nicora; *Rytidosperma lechleri* Steud.)

Southern America, Argentina, Chile. See *Synopsis Plantarum Glumacearum* 1: 425. 1854, *Anales de la Universidad de Chile* 94: 30. 1896, *Bulletin of the Torrey Botanical Club* 24(1): 43-44. 1897 and *Darwiniana* 18: 87, f. 2A-F. 1973, *Taxon* 29: 297. 1980.

D. gracilis Hook.f. (*Danthonia semiannularis* var. *gracilis* (Hook.f.) Hook.f.; *Notodanthonia gracilis* (Hook.f.) Zotov; *Rytidosperma gracile* (Hook.f.) Connor & Edgar; *Thonandia gracilis* (Hook.f.) H.P. Linder)

Tasmania, New Zealand. Perennial, ornamental, erect, tussocks forming, softly hairy leaves flat or inrolled, panicle hairy and compact, hairy spikelets, yellow anthers, a graceful species, see *Prodromus Florae Novae Hollandiae* 177. 1810, *Flora Novae-Zelandiae* 1: 303, t. 69B. 1853, *Handbook of the New Zealand Flora* 333. 1864 and *Transactions of the Royal Society of New Zealand* 73(3): 234. 1943, *New Zealand J. Bot.* 1: 123. 1963, *New Zealand Journal of Botany* 17(3): 330. 1979, *Telopea* 6(4): 612. 1996.

in Australia: wallaby-grass

D. holm-nielsenii Laegaard (named for Lauritz B. Holm-Nielsen)

Ecuador. Perennial, slender, densely caespitose, leaves hispid, inflorescence a short panicle, spikelets 7- to 8-flowered, pilose florets, glumes subequal lanceolate, palea with finely ciliolate keels, 3 stamens, in dry sites, related to *Danthonia secundiflora* Presl, see *Flora of Ecuador* 214(1) *Gramineae* (part 1): 15, 17-18. 1997.

D. intermedia Vasey (*Avena riabuschinskii* Kom.; *Danthonia canadensis* Baum & Findlay; *Danthonia cusickii* (T.A. Williams) Hitchc.; *Danthonia intermedia* subsp. *riabuschinskii* (Kom.) Tzvelev; *Danthonia intermedia* var. *cusickii* Williams; *Merathrepta intermedia* (Vasey) Piper; *Merathrepta intermedia* subsp. *cusickii* (T.A. Williams) Piper; *Pentameris intermedia* (Vasey) A. Nelson & J.F. Macbr.; *Trisetum williamsii* Louis-Marie) (William Conklin Cusick, 1842-1922)

Northern America, U.S., Canada. Perennial bunchgrass, densely caespitose, erect, basal meristems, shallow and fibrous root system, auricles absent, ligules shortly hairy, smooth leaf sheaths, leaves mostly basal, old sheaths and blades often persistent, spiky flower heads, inflorescence a narrow panicle, flowers rarely visible, cleistogamous or self-fertilized spikelets, lemmas hairy, bent and twisted awn, palatable, forage for livestock and wildlife, species ecologically very versatile, grazing-tolerant, grows in small openings, shallow to deep soils, on dry to moist sites, slopes, on loam and silt-loam soils, beaches, gravelly and rocky sites, on alluvial flats of river floodplains, subalpine meadows and mountain meadows, openings in woods, dry meadows, prairies and grasslands, subalpine and alpine grasslands, see *Bulletin of the Torrey Botanical Club* 10:

52. 1883 and *Circ. Div. Agrostol. U.S.D.A.* 30: 6-7. 1901 [also *Bulletin, Division of Agrostology United States Department of Agriculture*], *Contributions from the United States National Herbarium* 11: 122. 1906, *Botanical Gazette* 56(6): 470. 1913, *Repertorium Specierum Novarum Regni Vegetabilis* 13: 86. 1914, *American Journal of Botany* 2: 305. 1915, *Rhodora* 30: 221. 1928, *Canadian Journal of Botany* 52(7): 1577. 1974, *Zlaki SSSR* 610. 1976, *Sendtnera* 3: 42. 1996.

in English: intermediate oat grass, timber oat grass, timber danthonia, wild oat grass

D. longifolia R. Br. (*Avena longifolia* (R. Br.) Spreng., nom. illeg., non *Avena longifolia* Thore; *Danthonia penicillata* var. *longifolia* (R. Br.) F. Muell. ex Maiden & Betche; *Notodanthonia longifolia* (R. Br.) Veldkamp; *Rytidosperma longifolium* (R. Br.) Connor & Edgar; *Thonandia longifolium* (R. Br.) H.P. Linder)

Tasmania, Victoria, Queensland, New South Wales. Perennial, densely caespitose, erect, wiry, slender weeping leaves become inrolled and curled with age, dense and many-flowered gray-brown panicles, spikelets crowded and white hairy, hardy grass, grows on sandy and infertile soils, commonly found on drier rocky sites, immature heads are attractive, can produce a vigorous dark green basal tussock of fine leaves with some red tinges in moist well-drained sites or a sparse tuft of finely inrolled flexuose leaves with reddish coloring on drier ground, see *Prodromus Florae Novae Hollandiae* 176. 1810, *Essai d'une Nouvelle Agrostographie* 92, 153, 160. 1812, *Systema Vegetabilium, editio decima sexta* 1: 336. 1825 and *A Census of New South Wales Plants* 22. 1916, *New Zealand Journal of Botany* 17(3): 332. 1979, *Taxon* 29: 296. 1980, *Telopea* 6(4): 613. 1996.

in English: long-leaf wallaby-grass, long-leaved wallaby-grass, wallaby-grass

D. montevidensis Hack. & Arechav. (*Danthonia secundiflora* J. Presl)

South America, Argentina, Uruguay. Perennial, short, see *Reliquiae Haenkeanae* 1(4-5): 255. 1830, *Anales del Museo Nacional de Montevideo* 1: 369. 1896.

D. nitens D.I. Morris (*Rytidosperma nitens* (D.I. Morris) H.P. Linder)

Tasmania. Rare species, see *Muelleria* 7(2): 155-157, f. 7, 8a. 1989, *Telopea* 6(4): 614. 1996.

D. nivicola Vickery (*Notodanthonia nivicola* (Vickery) Veldkamp; *Rytidosperma niviculum* (Vickery) Connor & Edgar)

Tasmania, Victoria, New South Wales. Perennial, tufted, small, shortly rhizomatous, slender, erect, leaves smooth and inrolled, leaf blade fine and bristle-like, culms stiff, reddish flowering stems, panicle dense and open at maturity, spikelets hairy, 4 florets, glumes longer than florets, awns exerted, grows at high altitude on slopes or amongst rocks,

moist situations, often associated with *Danthonia nudiflora* P. Morris, ornamental, container plants, see *Contributions from the New South Wales National Herbarium* 1: 300. 1950, *New Zealand Journal of Botany* 17(3): 332. 1979, *Taxon* 29(2-3): 296. 1980.

in Australia: snow wallaby-grass

D. nuda Hook.f. (*Notodanthonia nuda* (Hook.f.) Zotov; *Rytidosperma nudum* (Hook.f.) Connor & Edgar)

New Zealand. See *Flora Novae-Zelandiae* 2: 337. 1855 and *New Zealand Journal of Botany* 1: 112. 1963, *New Zealand Journal of Botany* 17(3): 322. 1979.

D. nudiflora P. Morris (*Notodanthonia nudiflora* (P. Morris) Veldkamp; *Rytidosperma nudiflorum* (P. Morris) Connor & Edgar)

Tasmania, Victoria, New South Wales. Perennial, tufted, small or short, erect, sometimes rhizomatous, leaf blade inrolled, stiff and spiny or somewhat prickly leaves, short panicle linear and dense, spikelets crowded and very hairy, 5-6 florets, glumes subequal with membranous margins, awns exserted, grows in grassland at high altitude, moist conditions, ornamental, container plants, see *Victoria Naturalist* 52: 111. 1935, *New Zealand Journal of Botany* 17(3): 332. 1979, *Taxon* 29(2-3): 296. 1980.

in English: alpine wallaby-grass

D. oreoboloides (F. Muell.) Stapf (*Festuca oreoboloides* F. Muell.; *Monostachya oreoboloides* (F. Muell.) Hitchc.; *Notodanthonia oreoboloides* (F. Muell.) Veldkamp; *Rytidosperma oreoboloides* (F. Muell.) H.P. Linder)

Asia. Tussocky, low, found in open places, wet areas, see *Hooker's Icones Plantarum* 27(1): t. 2606. 1899, *Transactions of the Royal Society of Victoria* 1(2): 38-39. 1889 and *Philippine Journal of Science* 5: 330. 1910, *Brittonia* 2(2): 107. 1936, *Taxon* 29: 298. 1980, *Telopea* 6(4): 614. 1996.

D. parryi Scribner (*Danthonia parryi* var. *longifolia* Scribn.; *Merathrepta parryi* (Scribn.) A. Heller) (for the English-born American botanist Charles Christopher Parry, 1823-1890 (Davenport, Iowa, U.S.), 1832 to America, M.D. Columbia College 1846, plant collector, explorer (Colorado, Oregon, Western Wyoming, Rocky Mountains, Utah, Nevada, California, Mexico), physician, from 1849 to 1861 with the Mexican Boundary Survey, 1861 Colorado Expedition, 1862 the Parry, Hall and Harbour Expedition, expedition of 1864 (Hot Sulphur Springs, excursion to Long's Peak), 1869-1872 USDA, his writings include *Botanical Observations in Western Wyoming*. Salem 1874 and "California manzanitas." *Bull. Calif. Acad. Sci.* 2: 483-496. 1886-1887. See J.H. Barnhart, *Biographical notes upon botanists*. 3: 52. 1965; Ray Desmond, *Dictionary of British & Irish Botanists and Horticulturists*. 537. London 1994; T.W. Bossert, *Biographical dictionary of botanists represented in the Hunt Institute portrait collection*. 301. 1972; H.N. Clouke, *Account of the Herbaria of the Department of Botany in*

D. pauciflora R. Br. (*Notodanthonia pauciflora* (R. Br.) Veldkamp; *Rytidosperma pauciflorum* (R. Br.) Connor & Edgar)

Tasmania. Perennial, wiry, forming small spreading tufts, leaves slender and stiff, culms smooth and slender, panicle

crowded, spikelets crowded and purplish, ornamental, wet and peaty soils, container, see *Prodromus Florae Novae Hollandiae* 177. 1810, *Flora Australiensis: A Description ...* 7: 596. 1878 and *New Zealand Journal of Botany* 17(3): 332. 1979, *Taxon* 29(2-3): 297. 1980.

D. penicillata (Labill.) R. Br. ex P. Beauv. (*Arundo penicillata* Labill.; *Danthonia penicillata* (Labill.) F. Muell., nom. illeg., non *Danthonia penicillata* (Labill.) R. Br. ex P. Beauv.; *Notodanthonia penicillata* (Labill.) Zotov; *Rytidosperma penicillatum* (Labill.) Connor & Edgar)

Australia. See *Novae Hollandiae Plantarum Specimen* 1: 26, t. 34. 1804, *Essai d'une Nouvelle Agrostographie* 92, 153, 160. 1812, *Fragmenta Phytographiae Australiae* 8: 135. 1873 and *New Zealand Journal of Botany* 1: 122. 1963, *New Zealand Journal of Botany* 17(3): 327. 1979.

in Australia: slender wallaby-grass

D. penicillata (Labill.) R. Br. ex P. Beauv. var. *villosa* (Labill.) P. Beauv.

Australia.

D. pilosa R. Br. (*Austrodanthonia pilosa* (R. Br.) H.P. Linder; *Danthonia penicillata* var. *pilosa* (R. Br.) F. Muell. ex Maiden & Betche; *Notodanthonia pilosa* (R. Br.) Zotov; *Rytidosperma pilosum* (R. Br.) Connor & Edgar)

Tasmania, Australia. Forage, see *Prodromus Florae Novae Hollandiae* 177. 1810 and *A Census of New South Wales Plants* 22. 1916, *New Zealand Journal of Botany* 1: 118. 1963, *New Zealand Journal of Botany* 17(3): 326. 1979, *Telopea* 7(3): 272. 1997.

D. popinensis D. Morris (*Austrodanthonia popinensis* (D.I. Morris) H.P. Linder; *Notodanthonia popinensis* (D.I. Morris) H.P. Linder)

Tasmania. Endangered species, see *Muelleria* 7(2): 157-159, f. 8b, 9. 1989, *Telopea* 6(4): 616. 1996, *Telopea* 7(3): 273. 1997.

D. procera Vick. (*Austrodanthonia procera* (Vickery) S.W.L. Jacobs; *Notodanthonia procera* (Vick.) Veldkamp; *Rytidosperma procerum* (Vickery) Connor & Edgar) (from the Latin *procerus*, *a*, *um*, "high, tall")

Victoria, New South Wales, Tasmania. Perennial, tall, robust, stout, densely caespitose, forming coarse tussocks, leaves narrow and pointed, culms slender with purple dots, panicle open and loosely spreading, spikelets 4- to 5-flowered in small clusters, glumes subequal, decorative, see *Contributions from the New South Wales National Herbarium* 2: 306. 1956, *New Zealand Journal of Botany* 17(3): 332. 1979, *Taxon* 29: 297. 1980, *Telopea* 9(3): 741. 2001.

in Australia: tall wallaby-grass

D. purpurascens Vick. (*Danthonia tenuior* (Steud.) Conert; *Notodanthonia purpurascens* (Vickery) Zotov; *Notodanthonia tenuior* (Steud.) S.T. Blake; *Plinthanthesis tenuior* Steud.; *Rytidosperma tenuius* (Steud.) Connor & Edgar,

nom. illeg., non *Rytidosperma tenuius* (Steud.) O.E. Erikss., A. Hansen & Sunding)

Victoria, New South Wales, Tasmania, South Australia, Queensland. Perennial, ornamental, slender, forming erect tussocks, leaves glabrous or hairy, culms tall and smooth, hairy panicle narrow and loose, spikelets purplish, anthers orange, see *Synopsis Plantarum Glumacearum* 1: 14. 1855 and *Contributions from the New South Wales National Herbarium* 1(5): 301. 1950, *Contributions from the New South Wales National Herbarium* 2: 298. 1956, *New Zealand Journal of Botany* 1: 114. 1963, *Contributions from the Queensland Herbarium* 14: 3. 1972, *Senckenbergiana Biologica* 56: 163. 1975, *New Zealand Journal of Botany* 17(3): 324. 1979.

in English: wallaby-grass

D. racemosa R. Br. (*Austrodanthonia racemosa* (R. Br.) H.P. Linder; *Danthonia penicillata* var. *racemosa* (R. Br.) F. Muell. ex Maiden & Betche; *Notodanthonia racemosa* (R. Br.) Zotov; *Rytidosperma racemosum* (R. Br.) Connor & Edgar)

Tasmania, Australia. See *Prodromus Florae Novae Hollandiae* 177. 1810 and *A Census of New South Wales Plants* 22. 1916, *New Zealand Journal of Botany* 1: 121. 1963, *New Zealand Journal of Botany* 17(3): 327. 1979, *Telopea* 7(3): 273. 1997.

D. raoulii Steud. (*Chionochloa rigida* (Raoul) Zotov; *Danthonia rigida* Raoul) (named for the French naval surgeon Édouard Fiacre Louis Raoul, 1815-1852, botanist, from 1840 to 1842 on the *Allier* (with Joseph-Fidèle-Eugène du Bouzet, 1805-1867), from 1842 to 1843 on the *Aube*, from 1840 to 1846 collected and studied New Zealand plants, from 1849 professor of medicine at Brest, France, wrote *Choix de plantes de la Nouvelle-Zélande* recueillies and décrites par M.E. Raoul. Paris, Leipzig 1846 and *Des rapports des maladies aiguës et chroniques du coeur avec les affections dites rhumatismales*. Paris 1839. See J.H. Barnhart, *Biographical notes upon botanists*. 3: 129. 1965; John Dunmore, *Who's who in Pacific navigation*. Honolulu 1991; Thomas Frederick Cheeseman (1846-1923), *Manual of the New Zealand Flora*. Arrill.; *Danthonia tenuifolia* Döll) (Brazil, Rio Grande do Sul, Estancia Charrua, south of Santa Victoria do Palmar) (species dedicated to the Swedish botanist Per Karl Hjalmar Dusén, 1855-1926, explorer and botanical collector (West Africa), civil engineer, bryologist, author of *New and Some Little Known Mosses from the West Coast of Africa*. Stockholm 1895, 1896; see F.N. Hepper & Fiona Neate, *Plant Collectors in West Africa*. 27. 1971; G. Murray, *History of the collections contained in the Natural History Depart-*

ments of the British Museum. London 1904; Benjamin Daydon Jackson (1846-1927), "A list of the contributors to the herbarium of the Royal Botanic Gardens, Kew, brought down to 31st December 1899." *Bull. Misc. Inf. Kew*. 1901 and "A list of the collectors whose plants are in the herbarium of the Royal Botanic Gardens, Kew, to 31st December 1899." in *Kew Bulletin*. 1-80. 1901; J.H. Barnhart, *Biographical notes upon botanists*. 1: 486. 1965; T.W. Bossert, *Biographical dictionary of botanists represented in the Hunt Institute portrait collection*. 110. 1972)

Uruguay, Peru, Brazil, Mexico to Argentina. Perennial, striate, hollow, loosely tufted, sheaths slightly inflated, ligule a ring of short hairs, inflorescence a slender panicle with erect branches hispid, 5-8 fertile florets and an apical rudiment, glabrous glumes narrowly lanceolate, lemma deeply bifid with an awn inserted in the apical cleft, 3 stamens, in swampy places, moist sites, sandy soils, see *Reliquiae Haenkeanae* 1(4-5): 255. 1830, *Flora Brasiliensis* 2(3): 101-102, pl. 30, f. 1. 1878, *Anales del Museo Nacional de Montevideo* 1: 369. 1896 and *Arkiv för Botanik utgivet av K. Svenska Vetenskapsakademien* 10(17): 24, t. 1, f. 5, t. 6, f. 13. 1911, *Contributions from the Gray Herbarium of Harvard University* 52: 60. 1917, *Comunicaciones Botánicas del Museo de Historia Natural de Montevideo* 3(29): 1-2. 1961, *Boletín de la Facultad de Agronomía de Universidad de la República, Montevideo* 71: 26-27. 1963, *Sendtnera* 3: 51. 1996.

D. semiannularis (Labill.) R. Br. (*Arundo semiannularis* Labill.; *Danthonia semiannularis* Buchanan; *Notodanthonia semiannularis* (Labill.) Zotov; *Rytidosperma semiannulare* (Labill.) Connor & Edgar)

South Australia, Western Australia, Tasmania, Victoria, New South Wales, New Zealand. Perennial, erect and slender, caespitose, clustered in tussocks, leaves narrow and involute, panicles much exerted and contracted, spikelets not very closely packed, florets loose, glumes subequal, outer glumes acute, lemma lanceolate and villous, hairy callus, central awn twisted at the base and then geniculate, palatable, grows on sandy soils in woodland, see *Novae Hollandiae Plantarum Specimen* 1: 26, t. 33. 1804, *Prodromus Florae Novae Hollandiae* 177. 1810, *Manual of the Indigenous Grasses of New Zealand* t. 34(2A). 1879 and *New Zealand Journal of Botany* 1: 116. 1963, *New Zealand Journal of Botany* 17(3): 332. 1979.

Macbr.; *Triodia glumosa* P. Beauv.)

Northern America, U.S., British Columbia. Perennial bunchgrass, densely caespitose, low growing, fibrous roots, sheaths open and smooth to slightly hairy, old basal leaves curling upon drying, no auricles, inflorescence a compressed panicle, small and narrow flower head, chasmogamous and cleistogamous florets, basal cleistogamous flowers, slender glumes, lemmas rounded on the back with two apical teeth, lemma hairy on the back and margins, twisted and pubescent awns, awn often basally coiled,

pioneer grass, useful for erosion control, colonizer, good forage, unpalatable or palatable, poor to good palatability, useful for erosion control, growing in sandy soil or rocky, stony sites, in overgrazed pastures, trampled ground, woodland margins, dry slopes, along lakeshores, disturbed and grazed areas, dry sterile soil, dry meadows, roadsides, see *Species Plantarum* 1: 64, 79-81. 1753, *Flora Boreali-Americana* 1: 72. 1803, *Prodromus Florae Novae Hollandiae* 182. 1810, *Essai d'une Nouvelle Agrostographie* 12, 92, 153-154, 160, t. 18, f. 7. 1812, *Systema Vegetabilium* 2: 690. 1817, *Annual Report of the New York State Museum* 22(87): 55. 1869, *The American Botanist and Florist* 2: 396. 1871, *Bulletin of the Torrey Botanical Club* 6(36): 190. 1877, *Index Kewensis* 2: 211. 1894, *Annual Report of the New York State Museum* 47: 168. 1894, *Erythea* 7: 103. 1899 and *Bulletin, Division of Agrostology United States Department of Agriculture* 30: 5-7. 1901, *Contributions from the United States National Herbarium* 11: 122. 1906, *Contr. Danthonidium C.E. Hubb.

Resembling *Danthonia*.

One species, India. Arundinoideae, Danthonieae, annual, tufted, wiry, herbaceous, unbranched, auricles absent, ligule fringed, leaves linear, plants bisexual, inflorescence shortly racemose, many-sided raceme, spikelets 1-flowered, 2 glumes unequal or subequal, lemmas convolute and cylindrical, palea small, 2 free and fleshy lodicules, 3 stamens, ovary glabrous, 2 stigmas, open habitats, open grasslands, crevices, rocky places, similar to *Rytidosperma* and *Anisopogon*, see *Hooker's Icones Plantarum* 34: t. 3331. 1937.

Species

D. gammiei (Bhide) C.E. Hubbard

Kerala, Maharashtra.

Danthoniopsis Stapf = *Gazachloa* J.B.

Phipps, *Jacquesfelixia* J.B. Phipps, *Petrina* J.B.

Phipps, *Pleioneura* (C.E. Hubb.) J.B. Phipps,

Ratraya J.B. Phipps, *Xerodanthia* J.B. Phipps

Resembling a grass genus, *Danthonia*, Greek *opsis* “resemblance, resembling.”

About 20 species, central and south Africa, Arabia, Sudan to Pakistan, Sierra Leone. Panicoideae, Panicoideae, Arundinelleae, perennial or rarely annual, variable, herbaceous, unarmed, tufted to densely tufted, long stem bases, auricles absent, ligule a fringe of hairs, leaves flat, plants bisexual, open or contracted inflorescence paniculate, spikelets paired or usually in groups of 3, proximal florets male, short blunt callus, 2 nearly glabrous unequal glumes, lemmas nerved, lower lemma 5- to 9-nerved, upper lemma with 2 shortly awned lobes, the main awn bent about the middle with a spirally twisted column, palea keels winged, 2 free and fleshy lodicules, 3 stamens, ovary glabrous, 2 stigmas, open habitats, among rocks, savannah woodland, river edges in flowing water, desert margins, linked to *Loudetia*, type *Danthoniopsis gossweileri* Stapf, see *Synopsis Plantarum Glumacearum* 1: 238. 1854 and *Hooker's Icones Plantarum* 31: t. 3075. 1916, *Bulletin of Miscellaneous Information Kew* 1936(5): 320, 321, 324. 1936, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 75: 357. 1951, *Kirkia* 4: 100-101, 115-118, t. 10, f. 1. 1964, *Kirkia* 5(2): 230-231, 235-258. 1966, *Kew Bulletin* 21(1): 119-124. 1967, *Kew Bulletin* 26(1): 111-123. 1971, *Boletim da Sociedade Broteriana, ser. 2* 46: 418-419, 421-423. 1972 [1973], *Taxon* 27(2-3): 301. 1978, Sarah Mathews, Rocky C. Species

D. barbata (Nees) C.E. Hubb. (*Loudetia barbata* (Nees) A. Br. ex Steudel; *Sorghum barbatum* Steud. & Hochst. ex Steud.; *Trichopteryx barbata* (Nees) Hackel ex Durand & Schinz; *Trichopteryx somalensis* Engl.; *Tristachya barbata* Nees; *Tristachya bricchettiana* Chiov.; *Tristachya somalensis* Franch.; *Xerodanthia barbata* (Nees) J.B. Phipps)

Sudan, southern Arabia, Ethiopia. Perennial, tufted to densely tufted, erect, tough, knotty base, nodes bearded to villous, flat leaves distichous and pungent, panicle contracted, spikelets usually in triplets, glumes glabrous, upper lemma with awned lobes, awns falcate, found in stony areas, hillsides, lava plains, rocky places, see *Florae Africae Australioris Illustrationes Monographicae* 269. 1841, *Nomenclator Botanicus. Editio secunda* 2: 612. 1841, *Synopsis Plantarum Glumacearum* 1: 238. 1854, A.R. Franchet (1834-1900), *Sertulum Somalense*. Paris 1882, *Abhandlungen der Königlichen Akademie der Wissenschaften in Berlin* 2: 130. 1892, *Conspectus Florae Africae* 5: 846. 1892 and *Bulletin of Miscellaneous Information Kew* 1934: 435. 1934, *Kirkia* 5(2): 231. 1966, *Flora of Ethiopia and Eritrea* 7: 285-286. 1995.

in East Africa: dramogale, dramoh ghale

D. betsileensis (A. Camus) A. Camus (*Isalus betsileensis* (A. Camus) J.B. Phipps; *Tristachya betsileensis* A. Camus)

Africa. See *Bulletin de la Société Botanique de France* 104: 160. 1957, *Bulletin de la Société Botanique de France* 105: 246. 1958, *Kirkia* 5(2): 233. 1966.

D. catangensis (Chiov.) Kiwak & Duvign. (*Danthoniopsis gossweileri* var. *catangensis* Chiov.)

Africa. See *Bulletin de la Société Botanique de Belgique* 85: 73. 1952.

D. chevalieri A. Camus & C.E. Hubbard (*Arundinella chevalieri* (A. Camus & C.E. Hubb.) Roberty)

Tropical Africa. Perennial, tufted, medicinal use, grazed, thatching grass, savannah, see *Revue de Botanique Appliquée et d'Agriculture Tropicale* 14: 780. 1934, *Petite Flore de l'Ouest-Africain* 392. 1954, *Bulletin de l'Institut Française d'Afrique Noire* 17: 55. 1955.

in Senegal: fuadobi, tesegbe na, wandeusse

D. chimanimaniensis (J.B. Phipps) Clayton (*Gazachloa chimanimaniensis* J.B. Phipps)

South Africa, southern Rhodesia, Chimanimani Mountains. Perennial, tufted, purple spikelets, lower lemma 5-nerved, lobes aristulate, growing on rocky areas, in the middle of dry stream beds, see *Kirkia* 4: 116. 1964, *Kew Bulletin* 21(1): 123. 1967, *Kew Bulletin* 26(1): 111-123. 1971.

D. dinteri (Pilg.) C.E. Hubb. (*Jacquesfelixia dinteri* (Pilg.) J.B. Phipps; *Trichopteryx dinteri* Pilg.) (after the German Professor Moritz Kurt Dinter, 1868-1945 (Saxony), botanist and plant collector in southwest Africa, explorer in

Namibia, author of "Noterelle botaniche dell'Africa meridionale." *Malpighia*. 11: 339-343. 1897, *Deutsch-Südwest-Afrika. Flora*. Leipzig (T.O. Weigel) 1909 and *Neue und wenig bekannte Pflanzen Deutsch-Südwest-Afrikas*. 1914; see Albert F. Calvert, *South-West Africa, during the German Occupation 1894-1914*. Rotterdam 1982; Gordon Douglas Rowley, *A History of Succulent Plants*. California 1997; Mary Gunn & Leslie E. Codd, *Botanical Exploration of Southern Africa*. Cape Town 1981)

South Africa. Annual, tufted, robust, thick and woody, erect, unbranched, leaf blade expanded and glabrous, ligule a fringe of hairs, leaf sheaths of basal leaves keeled, inflorescence an open panicle, purple-tinged spikelets in lax triads, awn slightly bent, upper lemma hairy, pasture, of little agricultural value, grazed by animals in the young stages, useful for erosion control, common on rocky soil, on mountains, see *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 51(3-4): 414. 1914, *Bulletin of Miscellaneous Information Kew* 1934: 436. 1934, *Kirkia* 4: 115. 1964.

in South Africa: berghawer, rohrhafer

D. gossweileri Stapf (*Danthoniopsis viridis* (Rendle) C.E. Hubb.; *Trichopteryx viridis* Rendle)

Africa, Angola. See *Hooker's Icones Plantarum* 31: t. 3075. 1916.

D. lignosa C.E. Hubb. (*Petrina lignosa* (C.E. Hubb.) J.B. Phipps)

South Africa. Perennial, tufted, robust, woody, inflorescence dense, spikelets in pairs, upper lemma nerved, see *Kew Bulletin* 1949: 351. 1949, *Kirkia* 4: 118. 1964.

D. occidentalis Jacq.-Fél.

Tropics. See *Revue internationale de botanique appliquée et d'agriculture tropicale* 30: 424. 1950.

D. parva (J.B. Phipps) Clayton (*Petrina parva* J.B. Phipps)

South Africa, Transvaal. Perennial, tufted, delicate, spikelets paired, upper glume 5-nerved, lower lemma 3-nerved, see *Kirkia* 4: 118. 1964, *Kew Bulletin* 21(1): 123. 1967.

D. petiolata (J.B. Phipps) Clayton (*Pleioneura petiolata* (J.B. Phipps) J.B. Phipps; *Ratraya petiolata* J.B. Phipps)

Zimbabwe, southern Rhodesia. False petiole, see *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 75: 357. 1951, *Kirkia* 4: 101, t. 10, f. 1. 1964, *Kew Bulletin* 21(1): 123. 1967, *Boletim da Sociedade Broteriana, ser. 2* 46: 421. 1972 [1973].

D. pruinosa C.E. Hubb. (*Petrina pruinosa* (C.E. Hubb.) J.B. Phipps)

South Africa. Perennial, tufted, brittle, waxy bloom below the nodes, woody rhizomes, upper glume 3-nerved, lower lemma 3-nerved, lower lemma hairy, useful for erosion control, see *Bulletin of Miscellaneous Information Kew* 1934: 436. 1934, *Kirkia* 4: 118. 1964.

in English: rock powder grass

D. ramosa (Stapf) Clayton (*Loudetia anomala* C.E. Hubb. & Schweick.; *Loudetia ramosa* (Stapf) C.E. Hubb.; *Pleioneura anomala* (C.E. Hubb. & Schweick.) J.B. Phipps; *Ratraya anomala* (C.E. Hubb. & Schweick.) Butzin; *Trichopteryx ramosa* Stapf)

Southwest Africa. Perennial, tufted, low, wiry, shrubby, profusely branched, obliquely growing rhizomes with swollen nodes, leaf blade expanded, ligule a fringe of short hairs, leaf sheaths surrounding the culm at the base, purplish inflorescence paniculate, spikelets solitary or paired, two flowers, lower flower male or sterile, upper flower bisexual and long awned, lower lemma glabrous, upper lemma hairy, on dolomitic soil, among rocks, between stones, mountains, on the slopes, see *Bulletin of Miscellaneous Information Kew* 1897: 298. 1897 and 1936(5): 321, 324. 1936, *Kew Bulletin* 21(1): 123. 1967, *Taxon* 27(2-3): 301. 1978.

in South Africa: kliphawer, felshafer

D. scopulorum (J.B. Phipps) J.B. Phipps (*Gazachloa scopulorum* J.B. Phipps) (Latin *scopulus*, *i* "a rock, cliff," Greek *skopelos* "peak, promontory," Latin *scopulae, arum* "a little broom," *scopula* "a broom-twig")

South Africa. Perennial, tufted, leaves linear to filiform, spikelets in triads, see *Kirkia* 5(2): 229. 1966.

Danthorhiza Tenore = *Avenula* (Dumort.) Dumort., *Helictotrichon* Besser, *Helictotrichon* Besser ex Schult. & Schult.f.

Pooideae, Poodae, Aveneae, or Pooideae, Poeae, Aveninae, see *Histoire des Plantes de Dauphiné* 142, t. 4. 1787, *Observations sur les Graminées de la Flore Belgique* 122. 1824, Michele Tenore (1780-1861), *Flora Napolitana* Napoli 1811[-1838], *London Journal of Botany* 2: 420. 1843, *Synopsis Plantarum Glumacearum* 1: 328. 1854, *Bulletin de la Société Botanique de Belgique* 7(1): 68. 1868 and Jason Richard Swallen (1903-1991), "The grass genus *Amphibromus*." *Amer. J. Bot.* 18: 411-415. 1931, *Feddes Repertorium* 45: 7. 1938, *N. Amer. Fl.* 17: 568. 1939, S.W.L. Jacobs & L. Lapinuro, "The Australian species of *Amphibromus* (Poaceae)." in *Telopea* 2: 715-729. 1986, *A Key to Australian Grasses* 1-150. 1990, *Contributions from the United States National Herbarium* 48: 108-109, 139-140. 2003.

x *Danthosieglingia* Domin

Danthonia x *Sieglingia*.

See *Preslia* 13-15: 39. 1935, *Genera Graminum* 374. 1986.

Dasiola Raf. = *Vulpia* Gmelin

Pooideae, Poodae, Poeae, or Pooideae, Poeae, Loliinae, type *Dasiola elliptea* Raf., see *Flora Badensis Alsatica* 1: 8. 1805, *Neogenyton* 4. 1825, *Prodromus Florae Hispanicae* 1: 91. 1861 and *Rhodora* 47(556): 106. 1945, *Flora Mesoamericana* 6: 228. 1994, *Bothalia* 27: 75-82. 1997, *Flora Mediterranea* 8: 307-313. 1998, *Bothalia* 29(2): 335-341. 1999, *Systematic Botany* 27(2): 241-251. 2002, *Contributions from the United States National Herbarium* 48: 244-245, 690-694. 2003.

***Dasyochloa* Willd. ex Rydb.** = *Dasyochloa* Rydberg, *Dasyochloa* Willd. ex Steud., *Erioneuron* Nash

From the Greek *dasy* "shaggy, thick, hairy, rough" and *chloe*, *chloa* "grass, young grass."

One species, New World. Chloridoideae, Cynodonteae, Munroinae, or Eragrostideae, perennial, wiry, erect or decumbent, ascending, caespitose, stoloniferous, leaves mostly basal, sheaths ciliate, ligule a line of hairs, leaf blades linear often curved and pungent, plants bisexual, white-woolly inflorescence a raceme or a panicle partially included in upper sheath, primary branches appressed to main axis, disarticulation above glumes, spikelets solitary laterally compressed, 4-10 florets per spikelet, 2 glumes more or less equal, second glume awned, lemma lobed or

cleft, palea hairy, 3 stamens, ovary glabrous, 2 white stigmas, widespread in creosote-tarbrush scrub, open habitats, rocky places, slopes, closely related to *Munroa* and *Erioneuron*, type *Dasyochloa pulchella* (Kunth) Willd. ex Rydb., see *Systema Vegetabilium* 2: 34, 599. 1817, *Nomenclator Botanicus. Editio secunda* 1: 484. 1840 and *Flora of the Southeastern United States* ... 143, 1327. 1903, *Agricultural Experiment Station of the Agricultural College of Colorado. Bulletin* 100: 18, 37. 1906 (also *Flora of Colorado*, in *Bulletin of the Colorado State University Agricultural Experiment Station* 100: 1-447. 1906), *Contributions from the United States National Herbarium* 17: 181-189. 1913, *Bot. Jahrb.* 76: 281-384. 1954, *Die natürlichen Pflanzenfamilien, Zweite Auflage* 14d: 36. 1956, *American Journal of Botany* 48(7): 565-573. 1961, *Kurtziana* 10: 51-67. 1977, *Dominguezia* 2: 1-17. 1981, *Kew Bulletin* 37: 133-162. 1982, *Lilloa* 36: 131-138. 1983, *Sida* 14: 531-549. 1991, *American Journal of Botany* 81: 622-629. 1994, *Sida* 16(3): 413-426. 1995 [Anatomical study of *Erioneuron* and *Dasyochloa* (Poaceae: Chloridoideae: Eragrostideae) in North America], *Sida* 17(4): 645-666. 1997 [A revision of *Erioneuron* and *Dasyochloa* (Poaceae: Eragrostideae)], *Smithsonian Contr. Bot.* 87: 27. 1997, *Contributions from the United States National Herbarium* 41: 65-66, 115-116. 2001.

Species

D. pulchella (Kunth) Willd. ex Rydberg (*Dasyochloa pulchella* (Kunth) Rydberg)

Central Mexico, southwestern U.S. A desert grass, see *Nova Genera et Species Plantarum* 1: 126[folio], 1: 155-156[quarto], t. 47. 1816, *Systema Vegetabilium, editio decima sexta* 1: 332. 1825, *Révision des Graminées* 1: 108. 1829, *Nomenclator Botanicus. Colorado* 18, 37. 1906, *A Flora of California* 1: 141. 1912, *American Journal of Botany* 48(7): 572. 1961, *Memoir San Diego Society of Natural History* 12: 1-140. 1981, *Flora Novo-Galiciana* 14: 1-436. 1983, *Smithsonian Contr. Bot.* 87: 27. 1997, *Sida* 17(4): 645-666. 1997.

in Mexico: zacate borreguero

***Dasypoa* Pilger** = *Poa* L.

From the Greek *dasy* "shaggy, thick, hairy, rough" and *poa* "grass, pasture grass."

One-three species, Peru, Guatemala, Mexico. Pooideae, Poodae, Aveneae, or Pooideae, Poodae, Poeae, or Pooideae, Poeae, Poinae, annual or perennial, unarmed, herbaceous, caespitose, auricles absent, leaf blades linear, ligule an unfringed membrane, plants bisexual, open inflorescence paniculate, spikelets flattened, hairy callus, 2 glumes more

or less equal or subequal, upper glume saccate, palea present, 2 membranous lodicules, 3 stamens, ovary glabrous, 2 stigmas, often referred to *Poa*, type *Dasypoa tenuis* Pilger, see *Species Plantarum* 1: 67-70. 1753, *Encyclopédie Méthodique, Botanique* 2: 462. 1788, *Flora Antarctica* 397. 1847, *Synopsis Plantarum Glumacearum* 1: 426. 1854, *Linnaea* 30(1): 8. 1859, *Anales de la Universidad de Chile* 94: 164. 1896, *Revista de la facultad de Agronomía; Universidad Nacional de La Plata* 3: 628. 1897, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 25(5): 716-717. 1898 and *Contr. U.S. Natl. Herb.* 17(3): 374. 1913, *Anales de Sociedad Científica Argentina* 86: 238. 1918, *Novon* 8(2): 187-202. 1998, *Contributions from the United States National Herbarium* 48: 245, 505-580. 2003.

Species

D. tenuis Pilger (*Poa anfamensis* Negritto & Anton; *Poa conglomerata* Rupr. ex Peyr.; *Poa conglomerata* Rupr.; *Poa dactyliformis* Steud.; *Poa maullinica* Phil.; *Poa micranthera* Hack.; *Poa scaberula* Hook.f.) (Chile, Maullin)

Argentina, Chile, Peru, Mexico. Tufted, inflorescence erect, green and purplish florets, lower glume 1-nerved, upper glume 3-nerved, moist places, riverbanks, flats, along streams, see *Bulletin de l'Académie Royale des Sciences et Belles-lettres de Bruxelles* 9(2): 235. 1842, *Flora Antarctica* 2: 378. 1846, *Synopsis Plantarum Glumacearum* 1: 426. 1854, *Linnaea* 30(1): 8. 1859, *Anales de la Universidad de Chile* 94: 164. 1896, *Revista de la facultad de Agronomía; Universidad Nacional de La Plata* 3: 628. 1897, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 25(5): 716-717. 1898 and *Anales del Museo Nacional de Buenos Aires* 21: 154. 1911, *Contr. Dasypyrum (Cosson & Durieu) T. Durand
= *Dasypyrum* (Cosson & Durieu) Maire,
Haynaldia Schur, *Pseudosecale* (Godron)
Degen, *Secalidium* Schur

From the Greek *dasy* "thick" and *pyros* "grain, wheat."

About 2-5 species, Mediterranean region, southeast Europe, Turkey, North Africa. Pooideae, Triticodae, Triticeae, or Pooideae, Triticeae, Triticinae, annual or perennial, herbaceous, auricles present, leaf blades linear, ligule an unfringed membrane, plants bisexual, dense inflorescence spicate, raceme narrowly oblong, single spikelets, 2- to 4-flowered, the 2 lowest florets bisexual, 2 hairy glumes more or less equal or subequal and tapering into the awns, glumes 2-keeled and 3- to 4-nerved, lemmas keeled and awned, palea present, 2 free and membranous lodicules, 3 stamens,

ovary hairy, 2 stigmas, stony slopes, intergeneric hybrids with *Aegilops*, type *Dasypyrum villosum* (L.) P. Candargy, see *Species Plantarum* 1: 84-87. 1753, *Novi Commentarii Academiae Scientiarum Imperialis Petropolitanae* 14(1): 539. 1770, *Index Sem. Horto Bot. Berol.* 1846: 13. 1846, *Sert. Fl. Crete. See *Flora Taurico-Caucasica* 3: 94. 1819, *Hortus Regius Botanicus Berolinensis* 1: 31. 1827 and *Verhandlungen des Botanischen Vereins für die Provinz Brandenburg und die angrenzenden Länder* 76: 38. 1936, *Taxon* 49(2): 257. 2000.

Davidsea Soderstrom & Ellis =
Schizostachyum Nees

Named for the botanist Gerrit Davidse, agrostologist, Missouri Botanical Garden.

One species, Sri Lanka. Bambusoideae, Bambusodae, Bambuseae, Bambusinae, or Bambusoideae, Bambusodae, Bambuseae, Melocanninae, perennial, erect and arching, branched, unarmed, uniaespitose, sympodial, leafy, cylindrical, woody, persistent, densely clumped, culm sheaths deciduous, rhizomes pachymorph shortly necked, plants bisexual, inflorescence determinate, 1 glume per spikelet, upper glume 11- to 15-nerved, 2 bracts, lemmas convolute, palea 2-keeled, 3 free and membranous ciliate lodicules, 6 stamens, yellow anthers, ovary glabrous, 3 stigmas shortly plumose, used for making baskets, type *Davidsea attenuata* (Thwaites) Soderstr. & R.P. Ellis, see *Enum. Pl. Zeyl.* 375. 1864, *Trans. Linn. Soc. London* 26: 143-144. 1868 and *Handb. Fl. Ceylon* 5: 317. 1900, *Lingnan Science Journal* 14: 567-602. 1935, *Blumea* 2: 86-97. 1936, *Fieldiana, Botany* 24(2): 38-331. 1955, *Grasses of Ceylon* 25. 1956, *Kew Bulletin* 38(2): 321-331. 1983, *Grass Systematics and Evolution* 225-238. 1987, *Smithsonian Contrib. Bot.* 72: 59-64, f. 38-41. 1988, *Florae Indicae Enumeratio: Monocotyledonae, Bambusoideae* Botanical Survey of India, Flora of India, Series 4, 272-283. Calcutta 1989, *Plant Resources of South-East Asia (PROSEA)* (Pl Res SEAs) vol. 7: 130-145, 153-154. 1995 [Bamboos], *Contributions from the United States National Herbarium* 39: 112. 2000.

Species

D. attenuata (Thwaites) Soderstr. & Ellis (*Bambusa attenuata* Thwaites; *Teinostachyum attenuatum* (Thw.) Munro, also spelled *attenuata*)

Sri Lanka. Uniaespitose, tough, hard, erect, strongly arching, rhizomes sympodial, glume many-nerved

Davyella Hackel = *Neostapfia* Burt Davy

For the British botanist Joseph Burt Davy, 1870-1940 (d. Birmingham), traveler, farmer, 1903 Fellow of the Linnean Society, agrostologist, student of the flora of California and author of *Check-Lists of the Forest Trees and Shrubs of the British Empire*. Oxford 1935, *A Manual of the Flowering Plants and Ferns of the Transvaal with Swaziland, South Africa*. London (Longmans, Green & Co.) 1926-1932, "The vernacular and botanical names of some South African plants." *Transv. Agric. Decandolia Bastard = *Agrostis* L.

Named after the Swiss botanist Augustin Pyramus de Candolle, 1778-1841, among his most valuable writings are *Plantarum historia succulentarum*. Paris 1798-1837, *Catalogus plantarum horti botanici monspeliensis*. Montpellier, Paris, Strasbourg 1813 and *Plantes rares du Jardin de Genève*. Genève, Paris 1825 [-1827]; see J.H. Barnhart, *Biographical notes upon botanists*. 1: 306. 1965; Jacques Julien Houtton de Labillardière (1755-1834), *Novae Hollandiae plantarum specimen*. 2: 33, t. 176. 1806; T.W. Bossert, *Biographical dictionary of botanists represented in the Hunt Institute portrait collection*. 64. 1972; Ida Kaplan Langman, *A Selected Guide to the Literature on the Flowering Plants of Mexico*. University of Pennsylvania Press, Philadelphia 1964; P.E. Pilet, in *D.S.B.* 3: 43-45. 1981; Stafleu & Cowan, *Taxonomic literature*. 1: 438-452. Utrecht 1976; Gordon Douglas Rowley, *A History of Succulent Plants*. 1997.

Pooideae, Poeae, Agrostidinae, type *Decandolia stolonifera* (L.) Bastard, see *Species Plantarum* 1: 61-63. 1753, *Essai sur la Flore du Département de Maine et Loire* 15, 28-29. 1809, *Essai d'une Nouvelle Agrostographie* 5, 146-147, t. 3, f. 2, t. 4, f. 7. 1812 and *Fl. N. Amer.* 17: 515. 1937, *Taxon* 41: 556. 1992, *Taxon* 44: 611-612. 1995, *Contributions from the United States National Herbarium* 48: 42-89, 245. 2003.

Decaryella A. Camus

The genus was named after M. Raymond Decary, ca. 1890-1973, plant collector in Madagascar, he collected about 19,000 specimens of vascular plants, fungi and bryophytes; see Raymond Decary & Ravoanarivo, "La médication anti-rabique chez les Antandroy." in *Bull. Acad. Malg.* 9: 17. 1926; Laurence J. Dorr, *Plant Collectors in Madagascar and the Comoro Islands*. 115-116. 1997.

One species, Madagascar. Chloridoideae, Cynodonteae, annual, herbaceous, auricles absent, ligule a fringed membrane, plants bisexual, inflorescence racemose, single loose raceme, solitary spikelets flattened, long pungent pedicel, 2 glumes coriaceous more or less equal, stiff subulate awn, lemma 1-3-nerved, palea present, open habitats, dry areas, dry bushland, type *Decaryella madagascariensis* A. Camus, see *Bulletin de la Société Botanique de France* 78: 177. 1931.

Species

D. madagascariensis A. Camus

Madagascar. Glumes 5-nerved

Decaryochloa A. Camus = *Hickelia* A. Camus

After M. Raymond Decary, ca. 1890-1973, plant collector in Madagascar.

One species, Madagascar. Bambusoideae, Bambusodae, Bambuseae, Bambusinae, Hickeliinae, perennial, persistent, branching, climber, scandent, leafy, woody, several branch complement, rhizomes pachymorph, plants bisexual, inflorescence compound, 1-3 spikelets with a spatheform sheath, 1-flowered, 2-4 glumes, lowest glumes 13-nerved and the others 21-23-nerved, lemma coriaceous and convolute, palea coriaceous and convolute, small lodicules, 6 stamens diadelphous, ovary hairy, 3 stigmas, fleshy pericarp, in forest, forest shade or sunny sites, type *Decaryochloa diadelpa* A. Camus, see *Reliquiae Haenkeanae* 1: 256. 1830 and *Comptes Rendus Hebdomadaires des Séances de l'Académie des Sciences* 179: 479-480. 1924, *Bulletin de la Société Botanique de France* 71: 899. 1925, *Archives du Muséum d'Histoire Naturelle*, sér. 6, 12: 603. Paris 1935, *Bulletin de la Société Botanique de France* 93: 242. 1946 [1947], *Kew Bulletin* 52(3): 593-600. 1997.

Species

D. diadelpa A. Camus

Madagascar. Scandent, see *Bulletin de la Société Botanique de France* 93: 244. 1946 [1947].

Deina Alef. = *Triticum* L.

Pooideae, Triticeae, Triticinae, type *Deina polonica* (L.) Alef., see *Species Plantarum* 1: 85-87. 1753, *Species Plantarum, Editio Secunda* 127. 1762, *Oekonomisch-technische Flora Böhmens* 1: 425. 1836, *Annales des Sciences Physiques et Naturelles, d'Agriculture et de l'Industrie, Publiées par la Société Royale d'Agriculture, etc., de Lyon*. 5: 103-196, pl. 2-10. 1842 [*Descriptions et figures des céréales européennes*], *Landwirtschaftliche Flora* 335-336. 1866, *Botanisches Centralblatt* 73: 339. 1898 and A.

Prati, *Vocabolario etimologico italiano*. Torino 1951, *Feddes Repert.* 95(7-8): 497. 1984, *Taxon* 35: 144-149. 1986, *Bot. Zhurn. (Moscow & Leningrad)* 75: 37-44. 1990, *Wageningen Agricultural University Papers* 94-7: 1-512. 1994, *Contributions from the United States National Herbarium* 48: 245, 676-684. 2003.

Demazeria Dumort.

Orth. var., referring to *Desmazeria* Dumort.

Pooideae, Poeae, Ammochloinae, see *Commentationes Botanicae* 26-27. 1822, Johann Heinrich Friedrich Link (1767-1851), *Hortus regius botanicus berolinensis*. 1: 159. Berolini [Berlin] 1827 and *Nord. J. Bot.* 1: 20. 1981, *Contributions from the United States National Herbarium* 48: 256. 2003.

Dendragrostis Nees ex B.D. Jacks. = *Chusquea* Kunth, *Dendragrostis* B.D. Jacks., *Dendragrostis* Nees

From the Greek *dendron* "a tree" and *agrostis*, *agrostidos* "weed, couch grass," an allusion to the habit of the plant.

Bambusoideae, Bambuseae, Chusqueinae, see *Synopsis Plantarum* 1: 254. 1822, *Journal de Physique, de Chimie, d'Histoire Naturelle et des Arts* 95: 151. 1822, *Linnaea* 9(4): 467. 1835, *Index Kewensis* 727. 1893 and *Flora Mesoamericana* 6: 202-210. 1994, *The Bamboos* 33-44. 1997 [Diversity, biogeography and evolution of *Chusquea*.], Emmet J. Judziewicz et al., *American Bamboos* 199-223. Smithsonian Institution Press, Washington and London 1999, *Contributions from the United States National Herbarium* 39: 36-52. 2000.

Dendrocalamopsis (L.C. Chia & H.L. Fung)

Keng f. = *Bambusa* Schreb., *Dendrocalamopsis* Q.H. Dai & X.L. Tao

Resembling the genus *Dendrocalamus* Nees.

About two species, tropics, Asia. Bambusoideae, Bambusodae, Bambuseae, or Bambusoideae, Bambuseae, Bambusinae, sympodial, manifold branching, main branch thick and long, culm sheath deciduous, sheath auricles small, sheath blade erect, leaf large, pseudopanicule, 6 stamens, 3 stigmas, type *Dendrocalamopsis oldhamii* (Munro) Keng f., see *Genera Plantarum* 1: 236. 1789, *Species Plantarum, Editio quarta* 2: 245. 1799, *Linnaea* 9(4): 476-477. 1835, *Transactions of the Linnean Society of London* 26(1): 109. 1868 and *Indian Forester* 58: 7. 1932, *Lingnan University Science Bulletin* 9: 66-67. 1940, *Acta Phytotaxonomica Sinica* 18(2): 211-216. 1980, *Acta Phytotaxonomica Sinica* 20: 210. 1982, *Journal of Bamboo Research* 2(2): 11-12, 148.

1983, *Kew Bulletin, Additional Series* 13: 54-55. 1986, *Journal of Bamboo Research* 7(4): 9, 13. 1988, *Journal of South China Agricultural University* 10(2): 43, 45-46. 1989, *Bamboo Research in Asia* 1990(1): 3. 1990, Z.-L. Li, The *Flora of China* Bambusoideae project, problems and current understanding of bamboo taxonomy in China. *The Bamboos* 5: 61-81. 1997, *Contributions from the United States National Herbarium* 39: 29-35, 54-55. 2000, *Taxon* 53(2): 527-528. 2004.

Species

D. beecheyana (Munro) Keng f. (*Arundarbor beecheyana* (Munro) Kuntze; *Bambusa beecheyana* Munro; *Bambusa beecheyana* var. *pubescens* (P.F. Li) W.C. Lin; *Dendrocalamopsis beecheyana* var. *beecheyana*; *Dendrocalamopsis beecheyana* var. *pubescens* (P.F. Li) Keng f.; *Neosinocalamus beecheyanus* (Munro) Keng f. & T.H. Wen; *Sinocalamus beecheyanus* (Munro) McClure; *Sinocalamus beecheyanus* var. *pubescens* P.F. Li) (named for the English Frederick William Beechey, 1796-1856, traveler, geographer and explorer; see Sir William J. Hooker & G.A.W. Arnott, 1799-1868, *The Botany of Captain Beechey's Voyage*; comprising an account of the Plants collected by Messrs. Lay and Collie ... during the voyage to the Pacific and Bering's Strait, performed in H.M.S. *Blossom* ... 1825-1828. Asia, China, Guangxi, Guangdong. Tall, pruinose, massive culms with the upper portion arched and drooping, culm top bending, leathery culm-sheaths green with orange tips when fresh, leaf blades lanceolate and glabrous with a toothed margin, auricles with elongate tips and hairy margins, leaf sheath with longitudinal stripes and fine white hairs on the back, ligule with a toothed edge, spikelets purple and grouped at each node, ornamental, young shoots edible, culms used for water pipes and construction materials, see *Transactions of the Linnean Society of London* 26(1): 108. 1868, *Revisio Generum Plantarum* 2: 761. 1891 and *Lingnan University Science Bulletin* 9: 67. 1940, *Sun-yatsenia* 6(3-4): 205-212, pl. 36-38. 1946, *Journal of Bamboo Research* 2(1): 12. 1983.

in English: Beechey bamboo, silk-ball bamboo

D. beecheyana (Munro) Keng f. var. ***pubescens*** (P.F. Li) Keng f. (*Bambusa beecheyana* Munro; *Bambusa beecheyana* var. *pubescens* (P.F. Li) Lin; *Sinocalamus beecheyanus* var. *pubescens* P.F. Li, also *beecheyana*; *Sinocalamus pubescens* (P.F. Li) Keng f.)

China. Top slightly bending but not drooping, basal internodes pubescent, branching at lower part of the culm

D. oldhamii (Munro) Keng f. (*Arundarbor oldhamii* (Munro) Kuntze; *Bambusa oldhamii* Munro; *Dendrocalamopsis oldhamii* (Munro) Keng f.; *Dendrocalamopsis oldhamii* f. *oldhamii*; *Leleba oldhamii* (Munro) Nakai; *Sinocalamus oldhamii* (Munro) McClure) (named for the English botanical collector Richard Oldham, 1837-1864, Kew gardener who collected in China and eastern Asia; see Emil Bretschneider (1833-1901), *History of European Botanical Discoveries in China*. 682-688, 1091. [Reprint of the original edition, St. Petersburg 1898.] Leipzig 1981; Alice Margaret Coats, *The Quest for Plants: A History of the Horticultural Explorers*. London 1969; Ray Desmond, *Dictionary of British & Irish Botanists and Horticulturists*. 526. London 1994)

Southern China, Taiwan. Erect, tall, robust, large, caespitose, young culms covered with white waxy powder, clump forming, strong culms growing in a cluster, thick-walled and soft, glabrous, dense fastigiata to semifastigiata habit, internodes glaucous when young, branching at the higher part of the culm, branches several from each node and most of branches fascicled, culm leaves deciduous, culm sheath very large and glabrous, ligule very short, sheath auricles tiny or absent, irritating hairs, leaf sheath glabrous, inflorescence a leafy panicle, spikelets narrowly

ovate and sessile in small clusters, glumes ovate and obtuse, lemmas broadly ovate and coriaceous, palea soft, 3 lanceolate lodicules, stamens exerted, hairy ovary ovoid, 3 feathery stigmas, ornamental, cultivated as an orchard wind-break, shoots soft and tasty, young shoots cooked or raw, canes used as a source of pulp, for making furniture and weaving, requires moist soil, along roadsides and riverbanks, see *Transactions of the Linnean Society of London* 26(1): 109. 1868, *Revisio Generum Plantarum* 2: 761. 1891 and *Journal of Japanese Botany* 9(1): 16. 1933, *Lingnan University Science Bulletin* 9: 67. 1940, *Journal of Bamboo Research* 2(1): 12. 1983.

in English: Oldham bamboo, Oldham's bamboo

in Japan: ryoku-chiku (= green bamboo)

in Okinawa: matakku, matuku

D. oldhamii (Munro) Keng f. forma *revoluta* (W.T. Lin & J.Y. Lin) W.T. Lin (*Bambusa oldhamii* Munro f. *revoluta* W.T. Lin & J.Y. Lin)

China, Guangdong. Internodes dark green with yellow stripes, sheath glabrous, sheath ligule denticulate.

Dendrocalamus Nees = Klemachloa R.

Parker, *Neosinocalamus* Keng f.,

Patellocalamus W.T. Lin, *Sellulocalamus* W.T.

Lin, *Sinocalamus* McClure

From the Greek *dendron* "a tree" and *kalamos* "a reed, cane," referring to the shape of the stems of these huge clump-forming woody bamboos; Latin *calamus*, *i* (Plinius).

About 30-35/55 species, tropical and subtropical, Southeast Asia, Indomalayan region, India, Sri Lanka, China, Philippine Islands. Bambusoideae, Bambusodae, Bambuseae, or Bambusoideae, Bambuseae, Bambusinae, perennial, tall, sympodial, usually erect, pluricaespitose, unarmed, arborescent, woody and persistent, densely to strongly tufted, huge clump-forming woody bamboos, culms cylindrical and thin-walled, culm tops usually drooping, densely ramified rootstock, rhizomes pachymorph, the flowering culms leafy, culms with furry wax, white waxy powder on the young culms, branched above, a dominant middle branch, branches usually borne from midculm nodes, culm nodes glabrous, culm sheaths deciduous in their entirety, sheath auricles indistinct, sheath blade often turned outside down, culm internodes solid or hollow, small to inconspicuous auricles of the culm leaves, plants bisexual, flowering iterant, inflorescence a large panicle, pseudospikelets in groups at nodes of flowering branches, spikelets with perfect florets and 1 sterile or reduced, few florets usually perfect, bracts with 1 ciliate keel, glumes 2-3 or more, lemmas sometimes with an awn point, palea of lower florets 2-keeled, lodicules absent or three, 6 stamens, ovary ovoid-obovoid and hairy above, 1-3 short-hairy stigmas, can be

propagated by cutting, weed species, used for making baskets and for paper manufacturing, construction equipment, edible shoots, important timber bamboos, growing in open disturbed forests, valleys, dry areas with a monsoon season, wet and humid tropics, type *Dendrocalamus strictus* (Roxb.) Nees, see *Linnaea* 9(4): 476-477. 1835 and *Indian Forester* 58: 7. 1932, *Lingnan University Science Bulletin* 9: 66-67. 1940, *Flora of Java* 3: 633. 1968, *Acta Phytotaxonomica Sinica* 18: 211-216. 1980, *Journal of Bamboo Research* 2: 12, 148. 1983, *Genera Graminum* 40, 41, 54-55. 1986 [*Kew Bulletin, Additional Series* 13], *Journal of Bamboo Research* 7(3): 1-19 and 7(4): 1-19. 1988, *Journal of South China Agricultural University* 10(2): 40-47. 1989 [The genus *Dendrocalamus* Nees and its neighboring two new genera from China.], *Journal of Bamboo Research* 8(1): 25-43, f. 6-10 and 8(4): 30-36. 1989, *Bamboo Research in Asia* 1990(1): 3. 1990, *Bamb. Res.* 42: 5-6. 1990, Z.-L. Li, The *Flora of China* Bambusoideae project, problems and current understanding of bamboo taxonomy in China. *The Bamboos* 5: 61-81. 1997, *Contributions from the United States National Herbarium* 39: 54-55, 64, 79, 97, 112, 113. 2000.

Species

D. asper (Schult. & Schult.f.) Backer ex K. Heyne (*Arundarbor asper* Rumphius; *Arundarbor bitung* (J.H. Schultes) Kuntze; *Arundo aspera* (J.H. Schultes) Oken; *Bambusa aspera* Schult. & Schult.f.; *Bambusa aspera* Schult.f.; *Bambusa bitung* J.H. Schultes; *Bambusa flagellifera* Griffith ex Munro; *Bambusa macroculmis* A. & C. Rivière; *Dendrocalamus asper* (J.H. Schultes) Backer ex K. Heyne; *Dendrocalamus flagellifer* Munro; *Dendrocalamus macroculmis* (A. Rivière) Houzeau; *Dendrocalamus merrillianus* (Elmer) Elmer; *Gigantochloa aspera* (Schult. & Schult.f.) Kurz; *Gigantochloa aspera* (Schult.f.) Kurz; *Gigantochloa aspera* Kurz ex Teijsmann & Binn.; *Schizostachyum bitung* (J.H. Schultes) Steudel; *Schizostachyum loriforme* Munro; *Sinocalamus flagellifer* (Munro) Nguyen; *Sinocalamus macroculmis* (A. Rivière) Nguyen)

Southeast Asia, origin not certain. Very tall, hollow, densely tufted, sympodial, closely growing, erect, pendulous tips, young culms densely pubescent, mature culms very large and very strong and durable, thick-walled, swollen nodes, upper internodes longer than the lower, internodes at culm base very short, lowest nodes with many aerial roots, old sheaths caducous, sheath ligule narrow and wavy, sheath blade ovate-lanceolate, 5-9 leaves on each twig, pseudospikelets often in spherical dense clusters at the nodes of leafless branches, spikelets slightly laterally compressed, 4-5 florets, 1-2 glumes, lemmas fringed, palea keels fringed, no lodicules, 6 stamens, propagated by cuttings, widely cultivated in tropical Asia, naturalized, ornamental, edible young shoots, sheaths often used for making masks,

internodes used as containers for water, culms used for building material and also for lighting fire by friction, found in wastelands, on various soil types, slopes of hills, well-drained heavy soils, on sandy and rather acidic soils, can be confused with *Gigantochloa levis* (Blanco) Merrill, see *Herbarium Amboinense* 4: 11. 1743, *Syst. Veg.* 7(2): 1352-1354. 1830, *Syn. Pl. Glumac.* 1: 332. 1854, *Catalogus Plantarum in Horto Botanico Bogoriensi* 20. 1866, *Trans. Linn. Soc. D. bambusoides Hsueh & D.Z. Li (*Sellulocalamus bambusoides* (Hsueh & D.Z. Li) W.T. Lin)

China, Yunnan. Top slightly bending, thick-walled, pruinose, glabrous, basal internodes with yellow stripes, culm sheath caducous and coriaceous, sheath auricles absent, sheath blade erect, cultivated, used as timber bamboo, see *Journal of Bamboo Research* 6(2): 16, f. 4. 1987, *Journal of South China Agricultural University* 10(2): 44. 1989.

D. barbatus Hsueh & D.Z. Li

China, Yunnan. Culm top bending and drooping, internodes pruinose, sheath caducous and densely pubescent, sheath auricles wavy, sheath ligule dentate, cultivated, ornamental, timber bamboo, see *Journal of Bamboo Research* 7(4): 4, f. 1. 1988.

D. barbatus Hsueh & D.Z. Li var. *internodiiradicatus* Hsueh & D.Z. Li

China. Basal internodes rooted with aerial roots, sheath auricles not bristly, see *Journal of Bamboo Research* 7(4): 6. 1988.

D. bengkalisensis Widjaja

Indonesia. See *Reinwardtia* 11(2): 57-152. 1997.

D. birmanicus A. Camus (*Sinocalamus birmanicus* (A. Camus) W.T. Lin)

China, Burma/Myanmar. Culm top drooping, young internodes hairy, coriaceous culm sheath caducous, sheath auricle absent or not developed, sheath ligule denticulate, see *Bull. Mus. Nation. Hist. Nat. Paris* sér. 2 4: 1044. 1932, *Journal of Bamboo Research* 7(4): 7, f. 2. 1988.

D. brandisii (Munro) Kurz (*Arundarbor brandisii* (Munro) Kuntze; *Bambusa brandisii* Munro; *Sinocalamus brandisii* (Munro) Keng f.)

China, India, origin not known. Sympodial, strong, large to very large, tufted or loosely tufted, evergreen, erect with pendulous tips, culm top drooping, culm walls tomentose, nodes slightly swollen, aerial roots on lower half of the culm, sheath caducous, sheath ligule dentate, sheath blade ovate-lanceolate more or less erect, young shoots conical, leaves surface more or less wavy, inflorescence with bracteate heads, much-branched panicle, many small pseudospikelets, spikelet ovoid and minutely pubescent, 2-4 florets, 1-2 empty glumes, lemmas ciliate on the margins, paleas acute or 2-mucronate, 1-2 lodicules or sometimes absent, stamens exerted, ovary hairy, wild and cultivated, human food, young shoots eaten as a vegetable, cane and fiber for construction and basketry, handicrafts, found growing in the tropical forests, in moist west coast climate (in India), evergreen tropical forest, wet areas, along the rivers, well-drained loamy soil, limestone, black loam, see *Trans. Linn. Soc. London* 26: 109. 1868, *Forest Flora of British Burma* 2: 560-561. 1877, *Rev. Gen. Pl.* 2: 761. 1891, *Annals of the Royal Botanic Garden, Calcutta* 7: 90-91, plate 79. 1896 and *Pl. Resources S.E. Asia* 7: 83. 1995.

in English: velvet-leaf bamboo

in India: bulka, wanan

in Laos: hok

in Myanmar: kya-lo-wa, wabo, wa pyu, wapyu

in Thailand: bong, bong yai, maipo, maipuk, maisangmon, maisangyen, phai-bongyai, phai-sangyen, puk, sang yen, saang yen, wa khru, wa khlu, waa khlu pho, wa khlu pho, wa kluea, wakhlu, wa tong tiang

D. buar Widjaja

Indonesia. See *Reinwardtia* 11(2): 57-152. 1997.

D. calostachyus (Kurz) Kurz (*Bambusa calostachya* Kurz; *Sinocalamus calostachyus* (Kurz) Keng)

Upper Myanmar, China Yunnan, India. Large, tufted, thick, sheath densely pubescent, sheath ligule very short, leaves lanceolate shortly pubescent beneath, large panicle, curved spikes, spikelets clustered in heads with few small bracts at base, 2-3 glumes many-nerved and with transverse veinlets, stamens exerted, ovary hairy, fringed purple stigma, used for construction purposes and for water vessels (*chungas*), papermaking, could be confused with *Bambusa*

balcooa Roxb., see *J. Asiat. Soc. Bengal* n.s. 42, 2: 250. 1873 and *J. Nanjing Univ.* 1962(1): 34. 1962.

in Myanmar: ura, wapyu, wara, wa pyu, wabo

D. cinctus R.B. Majumd. ex Soderstr. & Ellis

Sri Lanka. Unicaespitose, erect, hard, hollow, thick-walled, culm sheaths hard and brittle, culm leaves deciduous, sympodial pachymorph rhizome, forest, see *Smithsonian Contrib. Botany* 72: 45, f. 30-32. 1988.

D. colletianus Gamble (dedicated to the British botanist Sir Henry Collett, 1836-1901 (Kew, Surrey), plant collector, 1855 Bengal Army, in 1879 a Fellow of the Linnean Society, author of *Flora simlensis*. Calcutta, Simla and London 1902; see J.H. Barnhart, *Biographical notes upon botanists*. 1: 367. 1965; R. Zander, F. Encke, G. Buchheim and S. Seybold, *Handwörterbuch der Pflanzennamen*. 14. Aufl. Stuttgart 1993; Frans A. Stafleu & Erik A. Mennega, *Taxonomic literature. Supplement IV*. 269-270. Königstein 1997; I.C. Hedge & J.M. Lamond, *Index of Collectors in the Edinburgh Herbarium*. Edinburgh 1970; A. White & B.L. Sloane, *The Stapelieae*. Pasadena 1937)

Myanmar. Inflorescence a large compound panicle, soft pubescent spikelets, 2-4 fertile flowers with 1 imperfect terminal flower, flowering glume blunt, see *Ann. Royal Bot. Gard. Calcutta* 7: 93, pl. 83. 1896.

D. dumosus (Ridley) Holttum (*Schizostachyum dumosum* Ridl.)

Peninsular Malaysia, Thailand. See *Gard. Bull. Sing.* 11: 296. 1947, *Gard. Bull. Sing.* 16: 96. 1958.

D. elegans (Ridl.) Holttum (*Schizostachyum elegans* Ridl.)

Peninsular Malaysia. See *Journal of the Straits Branch of the Royal Asiatic Society* 73: 146. 1916, *Gard. Bull. Sing.* 11: 296. 1947, *Gard. Bull. Sing.* 16: 95. 1958.

D. farinosus (Keng & P.C. Keng) Chia & H.L. Fung (*Lingnanian farinosa* (Keng & P.C. Keng) P.C. Keng; *Neosinocalamus farinosus* (Keng & P.C. Keng) P.C. Keng; *Sinocalamus farinosus* Keng & P.C. Keng)

India, Laos, Myanmar, China, Guangdong, Guangxi. Slender, drooping, arcuate, young culms pruinose, sheath blade long lanceolate and acuminate, cultivated, ornamental, edible shoots, culm used as construction material and for weaving, found growing on stream banks, hills, limestone foothills, see *J. Wash. Acad. Sci.* 36(3): 79. 1946, *Acta Phytotax. Sin.* 18(2): 215. 1980.

D. farinosus (Keng & P.C. Keng) Chia & H.L. Fung f. ***flavostriatus*** Yi (also spelled ***flavo-striatus***) (*Neosinocalamus farinosus* (Keng & P.C. Keng) P.C. Keng f. *flavostriatus* (Yi) Ohrnb.)

China. See *Bull. Bot. Res.* 6(4): 28. 1986.

D. fugongensis Hsueh & D.Z. Li (*Sinocalamus fugongensis* (Hsueh & D.Z. Li) W.T. Lin)

China, Fugong, Yunnan. Culm top drooping, young culms pruinose, culm sheath caducous, sheath ligule denticulate, leaves erect, edible shoots, culm used as construction material, see *Journal of Bamboo Research* 7(4): 9, f. 3. 1988, *Bamb. Res.* 42: 6. 1990.

D. giganteus Munro (*Bambusa gigantea* Wallich; *Bambusa gigantea* (Munro) Wall. ex A. & C. Rivière; *Dendrocalamus giganteus* Wall. ex Munro; *Sinocalamus giganteus* (Wall. ex Munro) A. Camus; *Sinocalamus giganteus* (Munro) A. Camus)

Southeast tropical Asia, southern Myanmar, northwestern Thailand. Densely tufted, sympodial, culms clustered, thick- or thin-walled, tall and large, young culm pruinose, very fast and rapid growth, erect with arching tips, culm top drooping, branched above, branches clustered and slender, nodes not swollen, lower nodes bearing aerial roots, culm sheaths caducous, auricles of the sheaths without bristles, culm sheaths blades reflexed or bent backwards, leaf blades acuminate or oblique-oblong to round-lanceolate, young shoots purplish, large panicle with slender curved branchlets, few to many pseudospikelets, spikelets ovate and pungent, 4-6 florets, uppermost floret sometimes imperfect, 2 or 3 glumes mucronate, thin mucronate lemmas, 6 stamens, anthers acuminate, ovary hirsute, long style hirsute, fruit oblong, flowers gregariously, the clump dies after flowering, weed species, widely cultivated in tropics, naturalized, ornamental, propagated by clump division, cane used for construction and rural housing, young shoots softly creamy and tender when cooked, a liquor from the leaves, culm sheaths used to make hats and for wrapping, found in humid tropical highlands, natural forests, tropical lowlands, on rich alluvial soils, useful for erosion control, see *Cat. Bot. Gard. Calcutta* 79. 1840, *Trans. Linn. Soc. London* 26(1): 150. 1868, *Bull. Soc. Acclim. sér. 3* 5: 685. 1878, *Fl. Br. Ind.* 7: 406. 1897 and *Grasses of Ceylon* 26. 1956, *Gard. Bull. Sing.* 16: 103-104. 1958, *Bano Biggyan Patrika* 11: 56-62. 1982, *Materials and Organisms* 22: 289-296. 1987, *Edinburgh Journal of Botany* 48: 73-80. 1991, *Cuscatlania* 1: 1-29. 1991, *Edinburgh Journal of Botany* 51: 23. 1994.

in English: bamboo, giant bamboo

in Bengali: tokla bans

in Burma: wa-bo, wabo, ban

in Cambodia: russey prey

in India: bhaloo bans, maroobob, worra

in Indonesia: bambu sembilang, buloh betong

in Japan: kyo-chiku

in Laos: po, po'

Malayan names: buloh sembilang, buloh beetong

in Nepali: rachasi bans, rachhasi bans, dhungre bans, burra bans

in Talaing: dunkaloik

in Thailand: mai-po, phai-pao, phai-pok, poh, pok, po, wa kwa, waa kwaa, waan, wan

in Vietnam: m[aj]nh t[oo]ng to

D. hait Widjaja

Indonesia. See *Reinwardtia* 11(2): 57-152. 1997.

D. hamiltonii Munro (*Bambusa falconeri* Munro; *Bambusa maxima* Buchanan-Hamilton; *Bambusa monogynia* Griffith, also spelled *monogyna*; *Dendrocalamus hamiltonii* Nees & Arnott ex Munro; *Dendrocalamus hamiltonii* Nees; *Dendrocalamus maximus* (Buchanan-Hamilton) Kuntze; *Sinocalamus hamiltonii* (Nees & Arnott ex Munro) Nguyen) (after the Scottish botanist Francis Hamilton (*olim* Buchanan), 1762-1829 (Leny, Scotland), M.D. Edinburgh 1783, surgeon in the East India Company (Bengal Medical Service), plant collector, explorer and naturalist, sent by Wellesley (Governor General of India) to study the lands possessed by the East India Company, 1806 Fellow of the Royal Society and in 1816 of the Linnean Society, 1814-1815 Superintendent of the Botanic Garden, Calcutta, among his many works are *A Journey from Madras through the Countries of Mysore, Canara and Malabar*. London 1807, *Genealogies of the Hindus, Extracted from Their Sacred Writings*. Edinburgh 1819 and *An Account of the Fishes Found in the River Ganges and Its Branches*. Edinburgh 1822. See *Claim of Dr. Francis Hamilton Buchanan of Spittal*. (A statement of the claim of the family of Buchanan of Spittal to be considered the chief of the name.) Edinburgh 1826; J. Lanjouw & F.A. Stafleu, *Index Herbariorum*. Part II, *Collectors A-D*. Regnum Vegetabile vol. 2. 1954; D.G. Crawford, *A History of the Indian Medical Service, 1600-1913*. London 1914; Antoine Lasègue (1793-1873), *Musée botanique de M. Benjamin Delessert*. 138-141. Paris, Leipzig 1845; R. Desmond, *The European Discovery of the Indian Flora*. Oxford 1992; *Memoir and Correspondence of ... Sir J.E. Smith ...* Edited by Lady Pleasance Smith. London 1832; M. Archer, *Natural History Drawings in the India Office Library*. London 1962; Isaac Henry Burkill, *Chapters on the History of Botany in India*. Delhi 1965)

Himalayas, Laos, Nepal, Bhutan, Thailand, China. Caespitose, large, thin-walled or relatively thick-walled, pendulous and flexible, sometimes tall and erect, sometimes culms curved downward, long internodes, grayish white when young then green, unarmed, much branched above, profusely branched root stock, basal internodes with aerial roots, curving branchlets, sheath caducous or persistent and triangular, culm sheaths with triangular auricles and rounded ligule, leaf-sheaths with stiff white hairs, leaf blades ovate-lanceolate, inflorescence borne on a large leafless branch, at the nodes semiglobular heads of pseudospikelets, spikelets blunt or bell-shaped, usually 2 glumes, lemmas recurved and ciliate, stamens exerted and pendulous, ovary hairy, 3 stigmas plumose, flowering sporadically, employed for paper-making, wild and often

cultivated, propagated by culm or branch cuttings, impenetrable thickets of stems, new shoots edible and used for the preparation of a sour pickle (*hiyup*), leaves used as fodder, cane for weaving and basket-making, mats, for temporary constructions and for water conduits, for making the walls of huts, found in mixed forest, rich loamy soil, valleys, along streams, moist places, in moist deciduous and semi-evergreen forests, see *Notulae ad Plantas Asiaticas* 3: 63. Calcutta 1851, *Trans. Linn. Soc. London* 26: 95, 151. 1868, *Rev. Gen. Pl.* 2: 773. 1891.

in English: tama bamboo

D. hamiltonii Munro var. *edulis* Munro (*Dendrocalamus edulis* Munro)

India, Myanmar. Soft spikelets, palatable shoots, see *Trans. Linn. Soc. London* 26: 152. 1868 and *Edinb. J. Bot.* 51(1): 24. 1994.

Local names: choya bans, gulyo tama bans, gulyo tama bans, pag shi, tama bans, su, rugvi

D. hamiltonii Munro var. *hamiltonii*

India, Bhutan, Nepal. Pendulous, thin walls, internodes with long aerial roots, culm sheaths persistent, inflorescence densely globular, wild and cultivated, in deciduous forest, used for weaving, edible shoots, animal fodder, see *Trans. Linn. Soc. London* 26: 152. 1868 and *Edinb. J. Bot.* 51(1): 24. 1994.

Local names: choya bans, pag shi, tama bans, lee shing

D. hamiltonii Munro var. *undulatus* Stapleton

India, Nepal. Erect, drooping, arching, culm sheath blades wavy, see *Trans. Linn. Soc. London* 26: 152. 1868 and *Edinb. J. Bot.* 51(1): 24, f. 7. 1994.

Local names: dhungre bans

D. hirtellus Ridl. (*Bambusa klossii* Ridl.) (for the British botanist Cecil Boden Kloss, born 1877, zoologist, Director of Museums in the Straits Settlements and Federated Malay States, plant collector with Herbert Christopher Robinson (1874-1929), 1903 and 1907 Singapore Botanic Gardens, 1923-1931 Director Raffles Museum at Singapore, among his writings are *In the Andamans and Nicobars*. London 1903 and "Mount Kinabalu: A note." *Journ. Fed. Malay*

States Mus. vol. XVI. 1931, in 1928 Mount Kinabalu with J.L. Humphreys (then Governor of North Borneo) and two District Officers, R.F. Evans and G.H. Vinen)

Peninsular Malaysia, Borneo. Slender, attenuated, flexuous, with pendulous tip, whitish and waxy when young, young shoots orange to yellowish, culm sheath with white wax and light brown hairs, sheath blade spreading to reflexed, sheath auricles curled and bristly, leaves lower surface velvet-hairy, inflorescence on leafless branches, spikelets 1- to 2-floreted, culms used for basketry, found in open areas, forest fringes, disturbed forest, open ground, see *Journal of the Straits Branch of the Royal Asiatic Society* 73: 146. 1916, *Fl. Malay Peninsula* 5: 259. 1925, *Gard. Bull. Sing.* 16: 93. 1958.

in Malaysia: buloh kapur, buluh kapur

D. hookeri Munro (*Bambusa altissima* hort. ex Camus; *Bambusa hookeri* Rivière & C. Rivière; *Sinocalamus hookeri* (Munro) Nguyen)

India, Uttar Pradesh, Bhutan, Sikkim, Nepal. Large, flowering sporadically, dense furry wax on the culms, usually naked below, curving branches above, nodding to drooping, stems tufted and thin-walled, nodes with short aerial roots, branches tufted, stem-sheaths very hairy and deciduous, culm sheaths deciduous with round auricles and bristles, leaf-sheaths glabrous and without auricles, large leaves acuminate, large inflorescence paniculate, spikelets ovate or acute, 2 glumes, 6 stamens, ovary hairy, 2-3 plumose stigmas, used for construction and fencing, for making baskets and for vessels, water-buckets, animal fodder, shoots bitter, growing in moist forests, see *Trans. Linn. Soc. London* 26: 151. 1868, *Bull. Soc. Acclim. sér. 3* 5: 642. 1878 and *Edinb. J. Bot.* 51(1): 26. 1994.

in India: denga, ooei, patu, seiat, sejsai, siejong, sijong, skhenheh, skongiong, tili bans, ukotang, ussey

in Bhutan: patu, pagshi, pag shi, bhalu, bhalu bans, kalo bans

in Nepal: tili bans

D. hookeri Munro var. *parishii* (Munro) Blatter

India, Himachal Pradesh, Himalaya. Inflorescence paniculate with globose densely flowered heads, spikelets flattened, 2-3 fertile florets, 1-2 glumes ciliate and minutely pubescent, lemma of upper floret mucronate, paleas ciliate and pubescent, ovary hairy, feathery stigma, see *Trans. Linn. Soc. London* 26: 149. 1868 and *Indian For.* 55: 594. 1929, *Bamb. Res.* 42: 6. 1990.

D. inermis (Keng & P.C. Keng) Yi (*Bambusa sinospinosa* var. *inermis* Keng & P.C. Keng; *Dendrocalamus factitius* Yi)

China. Unarmed, see *Journal Washington Acad. Sci.* 36(3): 80. 1946, *Bull. Bot. Res.* 2(4): 102. 1982, *Journal of Bamboo Research* 10(1): 30, f. 2. 1991, *Journal of Bamboo Research* 12(2): 54. 1993.

D. jianshuiensis Hsueh & D.Z. Li (*Sinocalamus jianshuiensis* (Hsueh & D.Z. Li) W.T. Lin)

China, Yuanyang, Janshui, Yunnan. Culm top drooping, young culm pruinose, culm sheath caducous and coriaceous, sheath auricle not prominent, sheath ligule denticulate, used for construction and fencing, see *Journal of Bamboo Research* 7(4): 14, f. 4. 1988, *Bamb. Res.* 42: 6. 1990.

D. latiflorus Munro (*Bambusa latiflora* (Munro) Kurz; *Bambusa latiflora* Kurz; *Bambusa verticillata* Benthams; *Sinocalamus latiflorus* (Munro) McClure)

Southeast Asia, Taiwan, China, Guangdong, Vietnam, Burma. Erect and arching, pendulous tip, young culm pruinose, densely tufted, sympodial, culm wall thick, each node with several branches at a right angle to culms, lower nodes with aerial roots, coriaceous leaf sheaths, small sheath auricles, sheath ligule with denticulate margin, culm sheaths densely covered with black hairs, small and triangular sheath-blades, leaves oblong-lanceolate to elliptical arranged toward the top of branches, inflorescence a large panicle, clusters of 1-7 pseudospikelets, spikelets ovoid or ovate-oblong and laterally compressed, 6-9 florets all perfect, 3 glumes ovate-triangular, lemmas broadly ovate, palea present, lodicules none, 6 stamens exerted, apex of anthers variable, ovary ovate and hairy, a simple feathery stigma, vegetatively propagated by cuttings, seed rapidly loses its viability, edible young shoots, ornamental, cultivated, used for paper material, sheaths used for wrapping, leaves used to make hats, cane for construction and water pipes, basketry, cultivated elsewhere in Asia, culms clustered, growing in moist fertile soils, high rainfall, see *Fl. Hongk.* 434. 1861, *Transactions of the Linnean Society of London* 26(1): 152, pl. 6. 1868, *Journal of the Asiatic Society of Bengal* 42(2): 250. 1873 and *Lingnan University Science Bulletin* 9: 67. 1940, *Canopy International* 4(4): 6-7. 1978, *The Philippine Agriculturist* 71(2): 199-228. 1988, *Plant Resources of South-East Asia* (PROSEA) (Pl Res SEAs) 7: 87-90. 1995.

in English: ma bamboo, Taiwan giant bamboo, sweet bamboo, sweet giant bamboo

in China: ma chu, ma zhu

in Indonesia: bambu taiwan

in Japan: ma-chiku, machiku, mino-machiku (dark green stripes on the yellow green background of the culms), koro-machiku (with swollen lower part on each internode)

in Malay: rebung

in Myanmar: ura, wa bo, wa ni, wani, wara

in the Philippine Islands: botong, buntong, labong, machiku

in Thailand: khao khwai, mai sangkham, phai zangkum, saang kham, sang kham, wa krue

in Vietnam: m[aj]nh t[oo]ng hoa to, tre ta[uf]

D. latiflorus Munro var. ***magnus*** (Wen) Wen (*Sinocalamus latiflorus* (Munro) McClure var. *magnus* Wen)

China. Erect, not arching, puberulent branches, leaves with transverse veinlets, see *Journal of Bamboo Research* 1(1): 34. 1982, *Journal of Bamboo Research* 10(1): 23. 1991.

D. liboensis Hsueh & D.Z. Li (*Sinocalamus liboensis* Hsueh & D.Z. Li)

China, Guizhou, Libo. Erect, arching and pendulous, young culm pruinose and tomentose, culm sheath coriaceous and caducous, sheath auricles wavy, sheath ligule hairy, 3-9 leaves on each small branch or twig, see *Journal of Bamboo Research* 7(3): 19. 1988, *Journal of Bamboo Research* 8(1): 37, f. 10. 1989.

D. longifimbriatus Gamble (*Sinocalamus longifimbriatus* (Gamble) Nguyen)

Thailand, Vietnam. See *Ann. Roy. Bot. Gard. Calcutta* 7: 92, pl. 81. 1896.

in Myanmar: myinwa, wamyin, wa pyaw

D. longispathus (Kurz) Kurz (*Bambusa longispatha* Kurz; *Dendrocalamus longispathus* Kurz)

Northern Thailand, India, Myanmar, Bangladesh. Caespitose, huge, large, tufted, glaucous green when young, nodes slightly swollen and often bearing aerial roots, long papery culm-sheath, sheath blade lanceolate reflexed, sheath auricles membranaceous and bristly along the edge, sheath ligule toothed with brown bristles, inflorescence on leafless or leafy branches, large panicles, spikelets few to many-flowered, 2-3 glumes, spicate clusters of spikelets, ovary sometimes acute, stigma hairy, propagation by 1-year-old culms, ornamental, young shoots edible, used for papermaking, as a fuel, for baskets and containers of food grains, temporary constructions, furniture, mats, found along rivers and streams, fertile loam, moist hill slopes, in mixed and disturbed forest, moist areas, moist mixed forests, see *J. Asiat. Soc. Bengal* n.s. 42, 2: 250. 1873.

in India: goti, khang, ooei, ora, orah, rupai, rawnal

in Myanmar: waya, talagu, talagu wa

in Thailand: bong paa, bong pa, hok dam, lamma lok, lammalok, mai hokdam, mai sang phai, phai lammalok, ya

D. macroculmis (Rivière) J. Houz. (*Bambusa macroculmis* Rivière)

Asia. See *Herbarium Amboinense* 4: 11. 1743, *Syst. Veg.* 7: 1352-1354. 1830, *Syn. Pl. Glumac.* 1: 332. 1854, *Catalogus Plantarum in Horto Botanico Bogoriensi* 20. 1866, *Trans. Linn. Soc. London* 26: 150. 1868, *Indian Forester* 1: 221. 1876, *Bull. Soc. Acclim. sér. 3* 5: 624. 1878, *Rev. Gen. Pl.* 2: 761. 1891 and *Bamb.* 2: 263. 1908, *Gard. Bull. Singapore* 16: 100, f. 25. 1958, *Pl. Resources S.E. Asia* 7: 80. 1995.

D. membranaceus Munro (*Dendrocalamus strictus* not Nees; *Oxytenanthera lacei* Gamble)

Myanmar. Strong, culm top bending, straight to very straight, sympodial, loosely clumped, young culms pruinose, nodes ringed and prominent, basal nodes with aerial roots, branched from all nodes, culm sheath glabrous or pubescent and often longer than the internode, sheath auricles wavy and not prominent, sheath ligule dentate, sheath blade ovate-lanceolate, leaf blades lanceolate to narrowly lanceolate, leaves hispid above and hairy beneath, inflorescence of globular spinescent heads, spikelets slightly flattened and nearly glabrous, 2-3 fertile florets, 2 empty glumes, lemmas mucronate, stamens exerted, ovary hispid and glabrous, plumose stigma, can be propagated by seed and by rhizome and culm cuttings, flowers gregariously, flowering cycle unknown, raised as an ornamental plant, used for building purposes, basketry, matting, weaving, handicrafts and furniture, edible young shoots with a slight bitter taste, occurs in moist forests, deciduous forest, lowlands, monsoon forest, similar to *Dendrocalamus strictus* (Roxb.) Nees, see *Transactions of the Linnean Society of London* 26(1): 149. 1868 and *Bull. Misc. Inform. Kew* 385. 1910, *The Indian Journal of Experimental Biology* 22: 312-332. 1984, *Journal of Bamboo Research* 7(4): 2. 1988, *The Indian Forester* 114: 637-649. 1988, *Plant Resources of South-East Asia* 7: 90-92. 1995, *Kew Bulletin* 52: 238. 1997.

D. messeri Blatter

Myanmar. See *The Grasses of Burma* Calcutta 1945.

in Myanmar: wabo-e

D. mianningensis Q. Li & X. Chiang

China, Sichuan, Mianning. Culm top drooping, thin, slender, long, young culms pruinose, sheath ligule irregular, sheath blade lanceolate, clustered branching, 5-7 leaves on each twig, leaves lanceolate white pubescent beneath.

D. minor (McClure) Chia & H.L. Fung (*Sinocalamus minor* McClure)

China. Culm top bending and drooping, young culms pruinose, sheath auricles minute, sheath ligule with ciliate margin, sheath blade ovate-lanceolate or lanceolate, leaves broadly lanceolate, cultivated, used for construction purposes and for weaving, along streams and riverbanks, see *Sunyatsenia* 6(1): 47, pl. 11-12. 1941, *Acta Phytotax. Sin.* 18(2): 215. 1980.

D. minor (McClure) Chia & H.L. Fung f. ***amoenus*** (Q.H. Dai & C.F. Huang) Ohrnb. (*Dendrocalamus minor* var. *amoenus* (Q.H. Dai & C.F. Huang) Hsueh & D.Z. Li; *Sinocalamus minor* var. *amoenus* Q.H. Dai & C.F. Huang)

China, Guangxi, Guangdong. Culm top bending and drooping, young culms pruinose, internodes yellowish, leaves broadly lanceolate, ornamental, cultivated, used for construction purposes and for weaving, see *Acta Phytotax. Sin.* 19(2): 261, f. 1. 1981, *Journal of Bamboo Research* 8(1): 39. 1989.

D. multispiculatus Lauterbach & K. Schumann

Papua New Guinea. See *Die Flora der deutschen Schutzgebiete in der Südsee* 187, 189. 1901.

D. nudus Pilger (*Sinocalamus nudus* (Pilger) Nguyen)

Thailand. See *Repertorium Specierum Novarum Regni Vegetabilis* 3: 117. 1906.

D. ovatus N.H. Xia & Chia

China. Along watersides, streams and riverbanks, see *Acta Phytotax. Sin.* 31(1): 61, f. 1. 1993.

D. pachystachyus Hsueh & D.Z. Li (*Sinocalamus pachystachyus* (Hsueh & D.Z. Li) W.T. Lin)

China, Yunnan. Erect, arching, bending or slightly drooping, young internodes pruinose, culm sheath caducous almost solid, sheath ligule denticulate, leaves pubescent, edible shoots, see *Journal of Bamboo Research* 7(3): 17. 1988, *Journal of Bamboo Research* 8(1): 25, f. 6. 1989, *Bamb. Res.* 42: 6. 1990.

D. parishii Munro (*Dendrocalamus hookeri* Munro var. *parishii* (Munro) Blatter; *Sinocalamus parishii* (Munro) W.T. Lin) (for the English (b. Calcutta) botanist Rev. Charles Samuel Pollock Parish, 1822-1897 (d. Somerset), collector of plants in Burma and the Andaman Islands, from 1852 to 1878 chaplain at Maulmain (or Moulmein), Burma (Myanmar), an authority on Burmese orchids, contributed to *Journ. As. Soc. Bengal*. See Pahpoo, editor, *The Instructor and Morning Star*. Maulmain 1853-1857, [continued as:] *The Morning Star*. Maulmain 1858; Ernest Nelmes &

William Cuthbertson, *Curtis's Botanical Magazine Dedications, 1827-1927*. 171-172. [1931]; Merle A. Reinikka, *A History of the Orchid*. Timber Press 1996; Ray Desmond, *Dictionary of British & Irish Botanists and Horticulturists*. 534. 1994; I.H. Vegter, *Index Herbariorum*. Part II (5), *Collectors N-R*. Regnum Vegetabile vol. 109. 1983)

India, Himachal Pradesh, China, Yunnan. Inflorescence paniculate with globose densely flowered heads, spikelets flattened, see *Trans. Linn. Soc. London* 26: 149. 1868 and *Indian For.* 55: 594. 1929, *Bamb. Res.* 42: 6. 1990.

D. patellaris Gamble (*Ampelocalamus patellaris* (Gamble) Stapleton; *Dendrocalamus patellaria* Gamble)

India, Nepal, China. Caespitose, evergreen, soft, top drooping, thin walled, nodes with soft hairy ring, internodes whitish below the nodes, leaf sheath densely pubescent and fringed on the margins, sheath blade revolute, leaves shortly petiolate, 1-2 glumes membranous, lemmas ciliate and densely tomentose, paleas ciliate on the keels, 0-2 lodicules, stamens exerted, ovary hairy above, 3 stigmas plumose, used for making arrow heads and baskets, as construction material and for weaving, see *Ann. Roy. Bot. Gard. Calcutta* 7: 86, pl. 75. 1896 and *Edinb. J. Bot.* 51(3): 321. 1994, *Kew Bulletin* 51(4): 811. 1996.

in India: footoong, lyas, nibha, pagjiok, pagjiok pao

D. peculiaris Hsueh & D.Z. Li (*Sinocalamus peculiaris* (Hsueh & D.Z. Li) W.T. Lin)

China, Yunnan. Erect, arching, drooping, internodes pubescent, culm sheath caducous, sheath auricles ciliate, sheath ligule serrate, leaves ovate and erect, ornamental, timber bamboo, see *Journal of Bamboo Research* 7(3): 18. 1988, *Journal of Bamboo Research* 8(1): 32, f. 8. 1989, *Bamb. Res.* 42: 7. 1990.

D. pendulus Ridl. (*Cephalostachyum malayense* Ridley; *Schizostachyum subcordatum* Ridley)

Peninsular Malaysia. Sympodial, slender, smooth, attenuated, closely tufted, flexuous, dark green, erect and arching over, pendulous tip, white wax below the prominent nodes, slender and very long branches, culm sheath narrowing toward the apex, leaf blade glabrous, inflorescence of pseudospikelets densely clustered in heads at each node, several glumes, one or rarely two perfect florets, used for basketry and handicrafts, growing in forest margins, foothills, hillsides, secondary forest, disturbed areas, see *Journal of the Straits Branch of the Royal Asiatic Society* 44: 210. 1905, *Journal of the Straits Branch of the Royal Asiatic Society* 57: 5-122. 1911, *Journal of the Straits Branch of the Royal Asiatic Society* 82: 168-204. 1920, *Gard. Bull. Singapore* 16: 90-93, f. 22-23. 1958, *Journal of the American Bamboo Society* 7(1-2): 1-15. 1989, *Pl. Resources S.E. Asia* 7: 92-93. 1995.

in Peninsular Malaysia: buloh akar, buloh tali, buluh akar

D. poilanei A. Camus (for Eugène Poilane, 1887/1888-1964, a plant collector; see I.H. Vegter, *Index Herbariorum*. Part II (5), *Collectors N-R*. Regnum Vegetabile vol. 109. 1983; Clyde F. Reed, *Bibliography to Floras of Southeast Asia*. 146. [Dedicated to E. Poilane & M. Poilane.] Baltimore, Maryland 1969)

Vietnam. See *Bull. Mus. Nation. Hist. Nat. Paris* 31: 205. 1925.

D. pulverulentus Chia & But

China, Guangdong. Young culm pruinose, almost glabrous, culm sheath caducous, sheath auricles absent or minute, sheath ligule ciliate, sheath blade lanceolate, used for weaving, see *Hong Kong Bamb.* 62. 1985, *Kew Bulletin* 43(1): 115, f. 1. 1988.

in English: powdered giant bamboo

D. ronganensis Q.H. Dai & D.Y. Huang

China. See *Journal of Bamboo Research* 14(3): 3, f. 2. 1995.

D. rongchengensis Yi & C.Y. Sia (*Bambusa rongchengensis* (Yi & C.Y. Sia) D.Z. Li)

China, Sichuan. Young culms pruinose, basal internodes often with aerial roots, most of the branches fascicled, sheath caducous, sheath auricles delicate, sheath ligule more or less truncate or arched and ciliate, sheath blade ovate triangular, leaf blades ovate-lanceolate or long lanceolate, see *Journal of Bamboo Research* 7(4): 20, f. 1. 1988, *Acta Bot. Yunn.* 16(1): 41. 1994.

D. sahnii Naithani and Bahadur

India, Himalaya, Arunachal Pradesh. Caespitose, striate, thin-walled, internodes glabrous, thick nodes, culm sheaths glabrous and shining inside rough and hairy outside, ligule dentate or fimbriate, inflorescence paniculate, heads of bracteate spikelets, 2 glumes ciliate, lemmas ciliate, paleas 2-keeled, 6 stamens, ovary hairy, stigma hairy, see *Indian Journal of Forestry* vol. 4(4): 280-286. 1981, *Indian For.* 108: 212, f. 1. 1982.

D. sapidus Q.H. Dai & D.Y. Huang

China. See *Journal of Bamboo Research* 14(3): 1, f. 1. 1995.

D. semiscandens Hsueh & D.Z. Li

China, Yunnan. Erect, top drooping, arching to scandent or slant, young culms tomentose, sheath caducous, sheath ligule truncate and entire, sheath blade erect and lanceolate to triangular, leaves ovate-lanceolate, edible shoots, see *Journal of Bamboo Research* 7(3): 17. 1988, *Journal of Bamboo Research* 8(1): 28, f. 7. 1989.

D. sericeus Munro (*Dendrocalamus strictus* (Roxb.) Nees var. *sericeus* (Munro) Gamble)

India. Strong culms, densely tufted, culm sheaths long ciliate on the edges, leaves lanceolate long-acuminate, leaf sheaths striate and keeled, ligule narrow and fimbriate

in Thailand: saang mon, sang mon

D. sikkimensis Oliver (*Dendrocalamus sikkimensis* Gamble ex Oliver)

East Nepal, Bhutan, Sikkim, India, China, Yunnan. Large, stems tufted and thin-walled, erect to nodding, top bending, few culms, aerial roots, branched at the top, sheaths densely covered with brown to orange hairs, culm sheaths deciduous, leaf sheath with long bristles, long bristles on the large auricles on the culm sheaths, new shoots with horizontal culm sheath blades, sheath ligule denticulate, inflorescence with stiff nodose branches, upper floret sterile and reduced, spikelets ovate or in dense globular heads, 3-4 empty glumes, lemmas mucronate and ciliate, 6 stamens exerted, ovary hairy, stigma hairy, wild or cultivated, used for water and milk vessels (*chungas*), as construction materials, shoots bitter edible, the foliage used as animal fodder, can be used for pulp and paper, according to some author the foliage could be poisonous, growing in mixed forest, see *Hooker's Icon. Pl.* 18(3): t. 1770. 1888 and *Edinb. J. Bot.* 51(1): 26. 1994.

in Bhutan: pougriang, pugriang, zhang, demtshar, dem chherring, dhungre bans

in India: bhalu bans, pugriang, rawami, rawmi, sangau, wadah, wedah

in Nepal: bhalu bans

D. sinicus Chia & J.L. Sun (*Sinocalamus sinicus* (Chia & J.L. Sun) W.T. Lin)

China. Large, culm top drooping, internodes cylindrical, young culm pruinose, sheath coriaceous to solid, sheath auricles narrow and wavy, sheath blade broadly lanceolate and erect, sheath ligule truncate, leaves ovate-lanceolate, used as construction material, for water pipes, probably the largest bamboo species in China, see *Bamb. Res.* 1(1): 10. 1982, *Bamb. Res.* 42: 6. 1990.

in China: mai-bo

D. sinuatus (Gamble) Holttum (*Gigantochloa sinuata* (Gamble) Nguyen; *Oxytenanthera sinuata* Gamble; *Pseudoxytenanthera sinuata* (Gamble) Nguyen)

Asia, Laos, Vietnam, Malaysia. Used for basketry, see *Ann. Roy. Bot. Gard. Calcutta* 7: 71, pl. 62. 1896 and *Gard. Bull. Sing.* 11: 296. 1947, *Gard. Bull. Sing.* 16: 97. 1958.

in Malay: buloh akar

D. somdevai Naithani

India. Caespitose, appressed culms, see *The Indian Forester* 119(6): 504-506. 1993.

D. strictus (Roxb.) Nees (*Arundo hexandra* Roxb. ex Munro; *Bambos stricta* Roxb.; *Bambusa hexandra* Roxb. ex Munro; *Bambusa glomerata* Royle ex Munro; *Bambusa pubescens* Loddiges ex Loudon; *Bambusa pubescens* Loddiges ex Lindley; *Bambusa stricta* (Roxb.) Roxb.; *Bambusa stricta* Roxb.; *Bambusa tanaea* Buch.-Ham.; *Bambusa verticillata* Rottler; *Dendrocalamus prainiana* Varmah &

Bahadur; *Dendrocalamus strictus* var. *prainiana* Gamble; *Nastus strictus* (Roxb.) Sm.)

Nepal, Himalayas, Myanmar, India, Thailand. Sympodial, polymorphic, densely to strongly tufted, erect-drooping, slightly bending, much curved above half of its height, solid culms variable in size according to the locality, stems usually hollow with thick walls, densely packed clumps, rhizome pachymorph, nodes somewhat swollen, young stems green with a white waxy bloom, basal nodes often with aerial roots, culm sheaths usually hairy and triangular in shape, branches and branchlets produced along the whole length of the stem, leaf sheaths glabrous, sheaths auricles distinct and tiny, leaf blades linear-lanceolate, leaves rough and hairy, inflorescence in dense globular heads, spikelets in large leafless pseudopanicles, spikelets spiny-tipped, fertile spikelets with 2-3 perfect florets and 2 or more empty glumes, fertile spikelets intermixed with many sterile smaller ones, 6 anthers, ovary ovate, 1 feathery stigma purple, flowering sporadically and flowering culms die after flowering, gregarious flowering cycle varies from 25-45 years, cultivated elsewhere in tropics, can be successfully propagated by seed and by rhizome cuttings, ornamental, medicinal, tonic and astringent, suitable for reclamation of ravine land, very drought-resistant, in dry areas is deciduous, young shoots and seeds commonly used as food, leaves readily eaten by cattle, leaves given to horses in cough infections, stems used extensively for building and furniture, scaffolding, poles, for making baskets and mats, used for spear staffs, valuable in paper manufacture, hollowed out stems utilized for water pipes for irrigation purposes, occurs naturally in tropical and subtropical regions of South Asia, grows on all soils with good drainage, sandy loams, in dry or moderately dry regions, deciduous forest, mixed deciduous forest, see *Plants of the Coast of Coromandel* 1(4): 58. London 1795-1820, *Hort. Beng.* 25. 1814, *Hort. Brit.* 124. 1830, *Linnaea* 9(4): 476-477. 1835, *Trans. Linn. Soc. London* 26: 147. 1868, *Ann. Roy. Bot. Gard. Calcutta* 7: 78, 80, pl. 68-69. 1896, *Fl. Brit. Ind.* 7: 404. 1897 and *Indian Forest Records* (new series, *Silviculture*) 2(4): 75-173. 1936, *Gard. Bull. Sing.* 16: 98. 1958, *Bamb. Res. Asia* 22. 1980, *The Indian Forester* 114: 637-649. 1988, *The Indian Forester* 117: 621-624. 1991, *Pl. Resources S.E. Asia* 7: 93-97. 1995.

D. tsiangii (McClure) Chia & H.L. Fung f. *viridistriatus* Z.H. Song

China, Guizhou, Libo. Culms yellow with green stripes

D. wabo Brandis ex Camus

Myanmar.

Local name: wabo

D. yunnanicus Hsueh & D.Z. Li (*Sinocalamus yunnanicus* (Hsueh & D.Z. Li) W.T. Lin)

China. Culm top drooping, young culm slightly pruinose, culm sheath caducous and coriaceous, sheath ligule truncate and wavy, sheath auricles small and wavy, sheath blade ovate-lanceolate, cultivated, shoots edible, culms used as construction materials, for water pipes, see *J. Bamb. Res.* 7(4): 17, f. 5. 1988, *Bamb. Res.* 42: 7. 1990.

Dendrochloa C.E. Parkinson = *Schizostachyum* Nees

From the Greek *dendron* "a tree" and *chloe, chloa* "grass, young grass."

A monotypic genus, Burma/Myanmar. Bambusoideae, Bambusodae, Bambuseae, Bambusinae, or Bambusoideae, Bambuseae, Melocanninae, perennial, woody, unarmed, pluricaespitose, leaf blades pseudopetiolate linear-lanceolate, rhizomes leptomorph, plants bisexual, inflorescence paniculate determinate, spikelets solitary compressed laterally, 2 glumes, palea present, 3 lodicules membranous, 6 stamens, ovary glabrous, 3 stigmas, often referred to *Schizostachyum*, type *Dendrochloa distans* C.E. Parkinson, see *Flora Brasiliensis seu Enumeratio Plantarum* 2: 535. 1829 and *Indian Forester* 59: 707-709. 1933, *Lingnan Science Journal* 14: 567-602. 1935, *Blumea* 2: 86-97. 1936, *Fieldiana, Botany* 24(2): 38-331. 1955, *Kew Bulletin* 38(2): 321-331. 1983, *Grass Systematics and Evolution* 225-238. 1987, *Florae Indicae Enumeratio: Monocotyledonae, Bambusoideae* Botanical Survey of India, Flora of India, Series 4, 272-283. Desv., *Podinapus* Dulac, *Rytidosperma* Steud., *Vahlodea* Fries

Genus dedicated to the French botanist Louis Auguste Deschamps, 1765-1842, naturalist, surgeon, participant in the voyage of *La Recherche* with d'Entrecasteaux. See Maurice Hocquette, *Louis-Auguste Deschamps. 1765-1842: sa vie, son oeuvre.* [Bulletin trimestriel de la Société académique des antiquaires de la Morinie: Mémoire. tom. 39 - *Journal de mon voyage sur la Recherche* by Deschamps, 7-51.] 1970; J.H. Barnhart, *Biographical notes upon botanists.* 1: 445. 1965; Jonathan Wantrup, *Australian Rare Books, 1788-1900.* Hordern House, Sydney 1987; Cornelis Gijbert Gerrit Jan van Steenis (1901-1986) et al., *Louis Auguste Deschamps.* London 1954 [Bulletin of the British Museum (Natural History). Historical Series. vol. 1. no. 2]; Ambroise Marie François Joseph Palisot de Beauvois, *Essai d'une nouvelle Agrostographie, ou nouveaux genres des Graminées.* 91. Paris 1812.

About 40/50(-60) species, temperate and circumpolar regions of both hemispheres, tropical mountains and tropics at high altitudes. Pooideae, Poodae, Aveneae, or Pooideae, Poeae, Airinae, perennial or annual, glabrous, herbaceous, unbranched, tussock-forming, usually caespitose or decumbent, tufted, erect and slender, rhizomatous or stoloniferous, glabrous nodes, hollow internodes, auricles absent, ligule membranous, leaves rough or scabrous mostly basal and shorter than the culms, leaf blades linear and usually flat, plants bisexual, sometimes viviparous, inflorescence a panicle loose to compact and much-branched, small and delicate spikelets compressed laterally, 2-flowered, lower floret sessile, 2 glumes subequal and acute, lemmas thin and denticulate with a slender dorsal or subapical awn or awnless, callus small and shortly bearded to pubescent, palea present, 2 lodicules joined or free, 3 stamens or sometimes 1-2, ovary glabrous without the apical appendage, endosperm solid, weed species, native pasture species, grows in wet areas at high altitudes, meadows, moist and fertile soils, upland grasslands, woods, woodland, rainforest, pampas, grasslands, moorland, in shade and in open habitats, similar to *Aira*, *Helictotrichon* and *Trisetum*, type *Deschampsia cespitosa* (L.) P. Beauv., see *Species Plantarum* 1: 61-70. 1753, *Essai d'une Nouvelle Agrostographie* 91, 149, 160. 1812, *Hortus Regius Botanicus Berolinensis* 1: 122. 1827, *Flora Germanica Excursoria* 50. 1830, *Flora Excursoria Hafniensis* 32. 1838, *Botaniska Notiser* 1842:

Cosmopolitan. Perennial bunchgrass, very variable and highly complex, very polymorphic species, large, coarse, stiff, leafy at base, erect or ascending or slightly geniculate at base, hairless, slender to robust, densely tufted, shortly rhizomatous or no rhizomes, forming large tussocks, fibrous root system, entire conspicuous ligule acute and membranous, keeled sheath, leaf blade flat or convolute or sometimes inrolled, coarse leaves rigid and ridged above, paniculate inflorescence turns dark or purple color at maturity, lax and open panicle pyramidal to cylindrical, hermaphrodite florets homogamous, shining spikelets narrow and silvery-purple, chasmogamous spikelets, glumes membranous and keeled, lemma apices deeply notched, lemmas with a straight awn variable in length, palea acute and 2-toothed, anthers yellow or purple, glabrous grain laterally compressed and brown, showy ornamental, useful for erosion control and for wetland restoration, suitable for reclamation of disturbed sites, coarse fodder, forage, can be grazed throughout the year, weed species, can be used for hay and for doormats, container plant, very resistant to cold and to a long snowy period, widespread, found in wet areas at high altitudes, temperate regions of the world, on

alpine-subalpine meadow, disturbed stony places, in coastal marshes and swamps, gravelly shores, thickets, sandy shores, wet flush in alpine herbfield, serpentine barrens, fields, wetland, in bogs and along streams, fresh wet meadows, in wet mountain meadows, boggy areas, springs and stream banks, riverbanks, moist position, see *Species Plantarum* 1: 64-65. 1753, *Prodromus stirpium in horto ad Chapel Allerton vigentium*. 23. Londini [London] (Nov-Dec) 1796, *Flora Boreali-Americana* 1: 61. 1803, *Essai d'une Nouvelle Agrostographie* 91, 149, 160, t. 18, f. 3. 1812, *Flora Americae Septentrionalis; or, ...* 1: 77. 1814, *Descriptio uberior Graminum* 85. 1817, *A Flora of the Northern and Middle Sections of the United States* 1: 132. 1823, *Mantissa* 2: 380. 1824, *Hortus Regius Botanicus Berolinensis* 1: 122. 1827, *Agrostographia Germanica* 1: t. 96, f. 1682. 1834, *Choix Pl. Dulac; *Salmasia flexuosa* (L.) Bubani)

Boreal eastern North America and Eurasia, South America. Perennial, tufted, hairless, slender and wiry stems, erect or geniculate at base, turf making, sometimes with short rhizomes, obtuse ligule deeply lobed and truncate, leaf sheath rounded membranous to submembranous, tightly inrolled wavy and glabrous leaves thread-like and dark green, open and loose inflorescence more or less erect, spikelets tinged purple and silvery white, glumes subequal, lemma awned and scabrous, lemma apices notched or minutely denticulate, awns twisted and bent to geniculate, weed species,

useful for erosion control, native pasture species, forage, very resistant to cold and to a long snowy period, occurs in acidic soils, damp ground, turfy places, ledges dry open soils, dry woods, wet meadows, rocky slopes, dry to wet sandy loam soil, wasteland, see *Species Plantarum* 1: 65. 1753, *Manuel d'Herborisation en Suisse et en Valais* 16. 1811, *Systema Vegetabilium* 2: 679. 1817, *Reliquiae Haenkeanae* 1(4-5): 251. 1830, *Bull. D. novae-zelandiae Petrie

New Zealand. Lemma minutely denticulate, awnless, see *Fl. Antarct.* 1: 102, t. 56. 1845, *J. Linn. Soc. Bot.* 19: 111. 1881, *Transactions and Proceedings of the New Zealand Institute* 23: 401-402. 1891, *Rev. Gen. Pl.* 2: 789. 1891, *J. Bot.* 29: 238. 1891 and *New Zealand Journal of Botany* 27: 553. 1989, *New Zealand Journal of Botany* 29: 101-116. 1991, *Fl. New Zealand* 5: 309. 2000.

D. nubigena Hillebr. (*Aira nubigena* (Hillebr.) Hitchc.; *Deschampsia australis* Hillebr.; *Deschampsia australis* auct. non Nees ex Steud.; *Deschampsia australis* Nees ex Steud. subsp. *nubigena* (Hillebr.) Skottsberg; *Deschampsia australis* Nees ex Steud. var. *gracilis* Skottsberg; *Deschampsia australis* Nees ex Steud. var. *nubigena* (Hillebr.) Skottsberg; *Deschampsia australis* Nees ex Steud. var. *tenuissima* (Skottsberg) Skottsberg; *Deschampsia pallens* Hillebr.)

U.S., Hawaii. Perennial tussock-forming, growing in sub-alpine grassland, slopes, in alpine dry shrubland, see *Flora of the Hawaiian Islands* 520-521. 1888 and *Memoirs of the Bernice Pauahi Bishop Museum* ... 8(3): 145, f. 30. 1922, *Acta Horti Gothoburgensis* 15: 279. 1944.

in English: alpine hairgrass, hairgrass

in Hawaii: kalamaloa

D. parvula (Hook.f.) Desv. (*Aira parvula* Hook.f.; *Deschampsia parvula* (Hook.f.) Macloskie, nom. illeg., non *Deschampsia parvula* (Hook.f.) Desv.; *Trisetum parvulum* (Hook.f.) Speg.)

South America. See *Flora Antarctica* 2: 377. 1846, *Flora Chilena* 6: 339. 1854, *Anales Museo Nacional de Historia Natural de Buenos Aires* 5: 89. 1896 and *Reports of the Princeton University Expeditions to Patagonia, 1896-1899, Volume viii, I [2]*, *Botany* 8(1,5,1): 202-203. 1904.

D. patula (Phil.) Pilg. ex Skottsberg. (*Deschampsia elegantula* var. *patula* (Phil.) Parodi; *Monandraira patula* Phil.)

South America. See *Anales de la Universidad de Chile* 43: 565. 1873 and *Kongliga Svenska Vetenskapsakademiens Handlingar* 56: 175. 1916, *Darwiniana* 8: 454. 1949.

D. pusilla Petrie

New Zealand. Alpine, tufted, compact, leafy, branched at base, ligule acute, leaf sheath membranous, panicle more or less compact and dense, glumes equal to subequal, lemma toothed with short terminal mucro, see *Transactions and Proceedings of the New Zealand Institute* 23: 403. 1891

and *New Zealand Journal of Botany* 29: 101-116. 1991, *Fl. New Zealand* 5: 313. 2000.

D. refracta (Lag.) Roem. & Schult. (*Deschampsia media* (Gouan) Roem. & Schult. subsp. *refracta* (Lag.) Paunero)

Asia, Europe. See *Illustrationes et Observationes Botanicae* 3. 1773 and *Bulletin de la Société Botanique de France* 125(5-6): 318. 1978, *Collectanea Botanica a Barcinonensi Botanico Instituto Edita* 12: 87. 1981.

D. reuteri Pilg. (*Homalachna grandiflora* (Boiss. & Reut.) Pilg.) (after the Swiss botanist George François Reuter, 1805-1872, botanical collector. See J.H. Barnhart, *Biographical notes upon botanists*. 3: 147. 1965; T.W. Bossert, compil., *Biographical dictionary of botanists represented in the Hunt Institute portrait collection*. 330. Boston, Mass. 1972; A. Lasègue, *Musée botanique de Benjamin Delessert*. Paris 1845; Ethelyn Maria Tucker, *Catalogue of the library of the Arnold Arboretum of Harvard University*. Benjamin Delessert*. 1845; Stafleu & Cowan, *Taxonomic literature*. 6: 537-541. 1986; R. Zander, F. Encke, G. Buchheim and S. Seybold, *Handwörterbuch der Pflanzennamen*. 14. Aufl. Stuttgart 1993; N. Hall, *Botanists of the Eucalypts*. Melbourne 1978 and Supplement 1980)

Russia, Irkutsk. Indeterminate species, see *Species Plantarum* 1: 64-65. 1753, *Essai d'une Nouvelle Agrostographie* 91: 91. 1812.

D. venustula Parodi

South America. See *Darwiniana* 8: 450, f. 12. 1949.

D. wacei C.E. Hubb.

Tristan da Cunha. Indeterminate species, see N.M. Wace & M.W. Holdgate, *Man and Nature in the Tristan da Cunha Islands*. Gland and Cambridge, IUCN. (IUCN Monograph No. 6) 1976, *Bulletin of the British Museum (Natural History)*, Botany 8: 392. 1981, Y.M. Chamberlain, M.W. Holdgate and N.M. Wace, "The littoral ecology of Gough Island, South Atlantic Ocean." *Tethys*. 11: 302-319. 1985.

Desmazeria Dumort. = *Brizopyrum* Link,
Cutandia Willk., *Sclerochloa* P. Beauv.,
Scleropoa Griseb.

Commemorating the French botanist John (Jean) Baptiste Henri Joseph Desmazieres, 1786-1862, merchant, horticulturist, author of *Plantes cryptogames du Nord de la France*. Lille 1825-1851; see J.H. Barnhart, *Biographical notes upon botanists*. 1: 447. 1965; Barthélemy Charles Joseph Dumortier (1797-1878), *Commentationes Botanicae*. 26. Tournay 1822.

About 3-5 species, Mediterranean, Europe. Pooideae, Poodae, Poeae, or Pooideae, Poeae, Ammochloinae, annual, glabrous, herbaceous, culm internodes hollow, leaves linear and narrow, plants bisexual, inflorescence a single raceme or paniculate, panicle rigid and 1-sided, spikelets on stout pedicels, 2 glumes unequal and coriaceous, upper glume longer, lower glume 3-nerved, lemmas narrowly ovate and keeled, awnless, palea present, 2 free and membranous lodicules, 3 stamens, 2 stigmas, sandy places, open habitats, dry sandy places, related to *Cutandia* Willk., type *Desmazeria sicula* (Jacq.) Dumort., see *Species Plantarum* 1: 67-70, 72-76. 1753, *Essai d'une Nouvelle Agrostographie* 97-98, 174, 177. 1812, *Commentationes Botanicae* 26-27. 1822, Johann Heinrich Friedrich Link (1767-1851), *Hortus regius botanicus berolinensis*. 1: 44, 159, 280. Berolini [Berlin] 1827, *Spicilegium florum rumelicarum et bithynicarum* ... 2: 431. 1846, Vincenzo (Vincentius) Tineo (1791-1856), *Plantarum rariorum Siciliae minus cognitarum* ... 2: 17-18. Panormi 1846, *Botanische Zeitung*. Berlin 18: 130. 1860, *Catalogue Raisonné des Plantes Vasculaires de la Tunisie* 482. 1896 and *Contr. U.S. Natl. Herb.* 10: 2. 1906, *Botanical Journal of the Linnean Society* 76: 350-352. 1978, *Nord. J. Bot.* 1: 20. 1981, *Annali di Botanica* 45: 75-102. 1987, *Boletim da Sociedade Broteriana*, ser. 2 61: 281-304. 1988, *Anales del Jardín Botánico de Madrid* 47: 411-417. 1990, *Flora Mediterranea* 1: 229-236. 1991, *Contributions from the United States National Herbarium* 48: 151, 241, 256, 608-609. 2003.

Species

D. philistaea (Boiss.) H. Scholz (*Scleropoa philistaea* Boiss.)

Europe. See *Diagnoses plantarum orientalium novarum*, ser. 1, 13: 60. 1853, *Bulletin de la Société Botanique de France* 19: 83. 1872 and *Willdenowia* 6(2): 291. 1971, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 94: 556-561. 1974.

D. rigida (L.) Tutin (*Catapodium rigidum* (L.) C.E. Hubb. ex Dony; *Catapodium rigidum* (L.) Dony; *Catapodium rigidum* subsp. *rigidum*; *Festuca rigida* (L.) Rasp.; *Glyceria rigida* (L.) Sm.; *Poa rigida* L.; *Sclerochloa rigida* (L.) Link; *Scleropoa rigida* (L.) Griseb.)

Europe, Asia. Annual, small, rigid, stems geniculate at the base, panicle 1-sided and contracted, spikelets on a short thick pedicel, lemmas obtuse and 3-nerved, see *Flora Anglica* 10. 1754, *Amoen. Acad.* 4: 265. 1759, *Flora Caroliniana, secundum* ... 80. 1788, *Prodromus Florae Novae Hollandiae* 179. 1810, *Enumeratio Plantarum Horti Regii Berolinensis Altera* 1: 90. 1821, *English Flora* 1: 119. 1824, *Annales des Sciences Naturelles, Botanique* 5: 445. 1825, *Spicilegium florum rumelicarum et bithynicarum* ... 2: 431. 1844, *Flore de Département des Hautes-Pyrénées* 90. 1867, *Flora of the Southern United States* 609. 1897 and *Flora of the British Isles* 1434. 1952, Charles Abbot (1761-1817), *Flora Bedfordiensis*, ... 437. 1953, *Bot. in English: fern grass, hard poa, rigid fescue

in Morocco: mahadoun srhir

D. rigida (L.) Tutin subsp. *hemipoa* (Delile ex Spreng.) Stace (*Festuca hemipoa* Delile ex Spreng.; *Scleropoa hemipoa* (Delile ex Spreng.) Parl.)

Europe, Asia. See *Botanical Journal of the Linnean Society* 76: 352. 1778, *Systema Vegetabilium, editio decima sexta* 4(2): 36. 1827, *Flora italiana, ossia descrizione delle piante* ... 1: 472. 1848[-1850].

D. rigida (L.) Tutin var. *major* (C. Presl) Stace (*Sclerochloa patens* C. Presl; *Sclerochloa rigida* var. *major* C. Presl; *Scleropoa rigida* var. *major* (C. Presl) Lousley)

Europe, Asia. See *Botanical Journal of the Linnean Society* 76: 352. 1778, *Cyperaceae et Gramineae Siculae* 45. 1820, *Enumeratio Plantarum Horti Regii Berolinensis Altera* 1: 90. 1821, *Flora Sicula* (Presl) 1: xlv. Pragae [Praha] 1826 and *Journal of Botany, British and Foreign* 77: 22. 1939.

D. sicula (Jacq.) Dumort. (*Brizopyrum siculum* (Jacq.) Link; *Cynosurus siculus* Jacq.; *Demazeria sicula* (Jacq.) Dumort.; *Eragrostis sicula* (Jacq.) K. Koch; *Poa sicula* (Jacq.) Jacq.)

Europe. See *Observationum Botanicarum* 2: 22, t. 43. 1767, *Genera Plantarum* 23. 1776, *Collectanea* 2: 304. 1789, *Hortus Regius Botanicus Berolinensis* 1: 159. 1827, *Linnaea* 21(4): 408. 1848 and *Flora Sicula* (Lojacono) 3: 378. 1909.

Desmostachya (Hook.f.) Stapf =
Desmostachya (Stapf) Stapf, *Desmostachys*
 Miers (Icacinaeae), *Stapfiola* Kuntze

Greek *desmos* “a bond, band, binding material” and *stachys* “a spike, a narrow inflorescence,” possibly referring to the habit.

One species, Old World tropics. Chloridoideae, Eragrostidae, perennial, stout, herbaceous, erect, robust, rhizomatous, tufted, auricles absent, ligule a fringe of hairs, lower sheaths leathery and persistent around the base of the stem, leaves rigid ending in a filiform tip, plants bisexual, inflorescence narrow and cylindrical, numerous racemes erect or curving arranged on a long central axis, spikelets sessile and densely imbricate, spikelets falling entire, 2 acute glumes unequal to very unequal, lemmas keeled and acute, palea present, 2 lodicules free and fleshy, 3 stamens, ovary glabrous, 2 stigmas, a good desert fodder, species considered sacred among Hindus, open habitats, salt marshes, coastal, arid regions, dry soils, sandy wadis, closely related to *Eragrostis* Wolf, see *The Flora of British India* 7: 324. 1897, *Flora Capensis* 7: 316. 1898 and *Lexicon Generum Phanerogamarum* 532. 1903.

Species

D. bipinnata (L.) Stapf (*Briza bipinnata* L.; *Coelachyrum longiglume* Napper; *Cynosurus durus* Forssk., nom. illeg., non *Cynosurus durus* L.; *Desmostachya cynosuroides* (Retz.) Haines; *Desmostachya cynosuroides* Stapf ex Massey; *Eragrostis bipinnata* (L.) Muschl., nom. illeg., non *Eragrostis bipinnata* (L.) Schum.; *Eragrostis bipinnata* (L.) Schum.; *Eragrostis cynosuroides* (Retz.) P. Beauv., also spelled *cynosurioides*; *Leptochloa bipinnata* (L.) Hochst.; *Poa cynosuroides* Retz., also spelled *cynosurioides*; *Pogonarthria bipinnata* (L.) Chiov.; *Stapfiola bipinnata* (L.) Kuntze; *Uniola bipinnata* L.; *Uniola bipinnata* (L.) L.)

Northeast tropical Africa, Ethiopia, Sudan, Somalia, India, China. Perennial, harsh, vigorous, erect, stout, coarse, robust, tufted, tussocky, tall, leafy, branching from the base, rhizomatous, stout creeping rootstock, rhizomes spreading, leaf blades linear, sheaths glabrous, ligule a dense ring of hairs, leaves in compact basal rosette, basal leaves crowded, coarse inflorescence, cylindrical panicles spike-like, strongly compressed spikelets ovate to linear-oblong closely packed on short branches, glumes unequal, good fodder, low to good grazing value, grazed when young, used as a fodder in mixture with grain and wheat, weed species, thatching grass, culms and rhizomes considered diuretic, a good sand binder, useful for erosion control, produces a strong fiber used for making coarse ropes, common in arid regions, damp situations, plains, saline *usar* soils, savannah, sandy and waterlogged sites, banks of water courses, in dry hot situations, ditches, sandy desert areas and semidesert,

canal banks, waste ground, drains, this species is considered sacred by the Brahmins, see *Flora Palaestina* 12. 1756, *Species Plantarum, Editio Secunda* 1: 204. 1762, *Flora* 38: 422. 1855, *Die Pflanzenwelt Ost-Afrikas* 50: 113. 1895 and *Flora Capensis* 7: 632. 1900, *Lexicon Generum Phanerogamarum* 532. 1903, *Verhandlungen des Botanischen Vereins für die Provinz Brandenburg und die angrenzenden Länder* 49: 74. 1907, *Annuario del Reale Istituto Botanico di Roma* 8(3): 362. 1908, Nicholas B. Peet, Andrew R. Watkinson, Diana J. Bell and Uday. R. Sharma, “The conservation management of *Imperata cylindrica* grassland in Nepal with fire and cutting: an experimental approach.” *Journal of Applied Ecology* 36(3): 374-387. June 1999, *Taxon* 49(2): 248. 2000.

in English: halfa grass

in India: aswalayana darbha gaddi, barhi, chir, daab, daabh, dab, dabhat, dabvi, dabwi, darbh, darbha, darbha pull, darbhapullu, davoli, davolia, dhab, dharbe, dib, drab, drabh, dubha, durbha, durbka, durpa, durva, garbha, hrasva, khusa, koosha, kurava, kus, kusa, kush, kusha, kushadarbh, kushadarbha, kutha, kutupa, pavithra, sadanapu veduru, soochyagra, yainabhooshana

in Arabic: chalfi, halfa, hhalfe

in Egypt: halfa

in Mali: budaur, halfa

in Sahara (Tassili): taksést, tébastawt

in Sudan: halfa

in Yemen: halafi

Despretzia Kunth = *Senites* Adans., *Zeugites*
 P. Browne

Centothecoideae, Centothecae, or Panicoideae, Centothecae, type *Despretzia mexicana* Kunth, see *The Civil and Natural History of Jamaica in Three Parts* 341. 1756, *Systema Naturae, Editio Decima* 2: 1306. 1759, *Nomenclator Botanicus edition 3*, edition 3, 270. 1797, *Species Plantarum. Editio quarta* 4: 204. 1805, *Révision des Graminées* 2: 485, t. 157. 1831, *Nomenclator Botanicus. Editio secunda* 2: 798. 1841, *Bulletin de l'Académie Royale des Sciences et Belles-lettres de Bruxelles* 9(2): 247. 1842 and *Contributions from the United States National Herbarium* 12(3): 127. 1908, *Repertorium Specierum Novarum Regni Vegetabilis* 6: 158. 1908, *Symbolae Antillarum* 6: 3. 1909, *Contributions from the United States National Herbarium* 17(3): 370. 1913, *Contributions from the United States National Herbarium* 18(7): 392. 1917, *Symbolae Antillarum* 8: 51. 1920, *Flora Novo-Galiciana* 14: 413. 1983, *Flora Mesoamericana* 6: 248-249. 1994, *Contributions from the United States National Herbarium* 46: 177, 569, 639-641. 2003.

Devauxia Kunth = *Devauxia* R. Br.
(Centrolepidaceae), *Glyceria* R. Br.

Possibly after the French botanist Nicaise Auguste Desvaux, 1784-1856, in 1817 Director of the Angers Botanic Garden, among his works are *Nomologie botanique*. Angers 1817 and *Flore de l'Anjou*. Angers 1827. See J.H. Barnhart, *Biographical notes upon botanists*. 1: 447. 1965; Robert Brown (1773-1858), *Prodromus florae Novae Hollandiae*. 252. 1810; Ida Kaplan Langman, *A Selected Guide to the Literature on the Flowering Plants of Mexico*. University of Pennsylvania Press, Philadelphia 1964.

Pooideae, Poodae, Meliceae, see *Species Plantarum* 1: 67, 75. 1753, *Prodromus Florae Novae Hollandiae* 179, 252, 532. 1810, *Enumeratio Plantarum Omnium Hucusque Cognitarum* 1: 367. 1833, *Syn. Pl. Glum.* 1: 287, 317. 1854, *Bull. Soc. Roy. Bot. Belgique* 7: 67. 1868 and *Aquatic and Wetland Plants of Southeastern United States Monocotyledons* 1-712. 1979, *Contributions from the United States National Herbarium* 48: 256, 371-379. 2003.

Deyeuxia Clarion ex P. Beauv. =
Sclerodeyeuxia (Stapf) Pilger

Genus dedicated to the French Nicolas Deyeux, 1745-1837, professor of pharmacology at Paris, editor of *Bibliothèque physico-économique*, joint author with Antoine Auguste (Augustin) Parmentier (1737-1818) of *Précis d'expériences et observations sur les différentes espèces de lait*. [1799], among his publications are *Analyse des nouvelles eaux minérales de Passy*, communiquée à l'École de médecine de Paris. Paris 1808 and *Considérations chimiques et médicales sur le sang des ictériques*, présentées ... à l'École de médecine de Paris. Paris 1804; see Ambroise Marie François Joseph Palisot de Beauvois, *Essai d'une nouvelle Agrostographie, ou nouveaux genres des Graminées*. 43, pl. IX. Paris 1812; Antoine A. Parmentier, *Examen chymique des pommes de terre*. Paris 1773.

About 20-42/110-200 species, Australasia, Malaysia, New Guinea. Pooideae, Poodae, Aveneae, or Pooideae, Poeae, Agrostidinae, perennial, coarse, herbaceous, erect or decumbent at base, more or less scabrous, caespitose, forming clumps or tussocks, sometimes rhizomatous, ligule membranous, leaf sheath rounded, leaves more or less rigid and flat or inrolled, plants bisexual, inflorescence paniculate contracted and more or less spicate, panicle dense or open and spreading, spikelets numerous and overlapping or laterally compressed, chasmogamous or cleistogamous, 1 bisexual floret, spikelets rarely 2-flowered, 2 glumes awnless more or less equal and keeled, lemma stiff and membranous, when present fine dorsal awn bent and twisted,

callus hairy, palea hyaline and 2-keeled, 2 free and membranous lodicules, 3 stamens, ovary glabrous, 2 stigmas plumose, caryopsis compressed fusiform, ornamental, short flowering time, some species with awns early deciduous, found in highland and subalpine regions, pampas, there is considerable taxonomic confusion concerning this genus, this group is currently under revision and review, often included in *Calamagrostis* Adans., see also *Dichelachne* Endl. and the related genus *Agrostis* L., type *Deyeuxia montana* P. Beauv., see *Familles des Plantes* 2: 31, 530. 1763, *Tentamen Florae Germanicae* 1: 34. 1788, *Essai d'une Nouvelle Agrostographie* 43-44. 1812, *Observations sur les Graminées de la Flore Belgique* 126. 1824, *Conspectus Regni Vegetabilis* 50. 1828, *Révision des Graminées* 1: 77. 1829 and *Contr. Species

D. accedens Vickery (*Calamagrostis accedens* (Vickery) Govaerts)

Tasmania, New South Wales, Victoria. Perennial, caespitose, slender, ligule membranous and truncate, auricles absent, basal leaf sheaths scabrous, leaves mostly basal, leaves more or less scabrous and not hard-tipped, inflorescence a panicle open or contracted, spikelets laterally compressed, glumes keeled, lemma awned, palea broad and 2-keeled, fruit glabrous and longitudinally grooved, growing in open habitats, open forest, see *Contributions from the New South Wales National Herbarium* 1: 61. 1940, *World Checklist of Seed Plants* 3(1): 9. 1999.

D. acuminata Vickery (*Calamagrostis acuminata* (Vickery) Govaerts)

New South Wales, Victoria, Tasmania. Perennial, erect, loosely tufted, robust slender, ligule membranous and truncate, auricles absent, basal leaf sheaths scabrous, leaf blade deeply grooved or channelled, erect to nodding large panicle, glumes keeled and unequal, lemma ovate and awned, palea 2-keeled, fruit glabrous and longitudinally grooved, grows in woodland, see *Contributions from the New South Wales National Herbarium* 1: 73. 1940, *World Checklist of Seed Plants* 3(1): 9. 1999.

D. affinis M. Gray (*Calamagrostis affinis* (M. Gray) Govaerts)

New South Wales, Victoria. Perennial, rare, small, geniculate or ascending, loosely tufted, ligule membranous, auricles absent, basal leaf sheaths glabrous, leaves mostly basal, leaves stiff and more or less hirsute, a contracted and oblong panicle, glumes purple, lemma ovate and more or less awned, palea hyaline, fruit elliptical and longitudinally grooved, found in moist or rocky areas, alpine herbfield, see *Contributions from Herbarium Australiense* 26: 9. 1976, *World Checklist of Seed Plants* 3(1): 9. 1999.

D. angustifolia Vickery (*Calamagrostis angustifolia* Kom.; *Deyeuxia angustifolia* (Kom.) Y.L. Chang, nom. illeg., non *Deyeuxia angustifolia* Vickery)

New South Wales. Rare species, perennial, slender, densely tufted, ligule membranous and truncate, auricles absent, basal leaf sheaths scabrous, leaves mostly basal, oblong and erect panicle, glumes more or less subequal, lemma awned, callus glabrous, fruit glabrous and longitudinally grooved, grows in swamps, see *Contributions from the New South Wales National Herbarium* 1: 67. 1940, *Claves Plantarum Chinae Boreali-Orientalis* Beijing 1959.

in English: narrow-leaf bent-grass

D. appressa Vickery (*Calamagrostis appressa* (Vickery) Govaerts)

New South Wales. Endangered species, perennial, erect, ligule membranous and truncate, auricles absent, basal leaf sheaths densely pubescent, leaves mostly basal hairy to

pubescent, leaf blade grooved, erect and contracted panicle green or purple, spikelets compressed, glumes unequal and very acute, lemma narrow-lanceolate and awned, palea 2-keeled and narrowly truncate, fruit glabrous and longitudinally grooved, wet places, see *Contributions from the New South Wales National Herbarium* 1: 54. 1940, *World Checklist of Seed Plants* 3(1): 9. 1999.

D. apsleyensis D.I. Morris (from Apsley River area, north of Apsley Gorge, Tasmania)

Tasmania. Rare species, perennial, loosely tufted, ligule membranous and obtuse, auricles absent, basal leaf sheaths densely pubescent, leaves mostly basal, green to purple panicle, hermaphrodite florets 1 per spikelet, glumes subequal to unequal, lemma bidentate and awned, palea 2-keeled and 2-veined, fruit glabrous and longitudinally grooved, eucalypt forests, see *Muelleria* 7(2): 160, 162-164, f. 11b, 12. 1989.

in English: Apsley bent-grass

D. aucklandica (Hook.f.) Zotov (*Agrostis aucklandica* Hook.f.; *Agrostis setifolia* (Hook.f.) Hook.f., nom. illeg., non *Agrostis setifolia* Brot.; *Calamagrostis setifolia* (Hook.f.) Cockayne; *Deyeuxia filiformis* var. *aucklandica* (Hook.f.) Zotov; *Deyeuxia setifolia* Hook.f.)

New Zealand. Perennial, montane to alpine, small, tussocky, tufted, compact, erect or curved and sometimes geniculate at base, leaf blade folded, leaf sheath more or less coriaceous and ribbed, ligule truncate, panicle spike-like, glumes nerved and acute, lemma membranous ovate-lanceolate, awn stout and curved to reflexed, palea keels scabrous, grassland, see *Flora Antarctica* 1: 96. 1845 [1844?], *Flora Novae-Zelandiae* 1: 299, t. 65B. 1853, *Handbook of the New Zealand Flora* 329. 1864 and *New Zealand Department Lands Report Botanical Survey Tongariro National Park* 35. 1908, *Transactions of the Royal Society of New Zealand* 73: 235. 1943, *Records of the Dominion Museum* 5: 139. 1965, Frans A. Stafleu & Richard S. Cowan, *Taxonomic literature*. 2: 270. 1979, *New Zealand J. Bot.* 33: 6-7. 1995.

D. avenoides (Hook.f.) Buchanan (*Agrostis avenoides* Hook.f.; *Calamagrostis avenoides* (Hook.f.) Cockayne; *Deyeuxia avenoides* var. *brachyantha* Hack.)

New Zealand. Perennial, alpine, slender, erect or curved, decumbent base, tufted, leaf sheath membranous, ligule ciliate, inflorescence more or less erect or nodding, cleistogamous or chasmogamous, glumes lanceolate, lemma membranous, awned from near the base of the lemma, palea keels scabrous to scabrid, open areas, forest, grassland, see *Handbook of the New Zealand Flora* 330. 1864, *Indigenous Grasses of New Zealand* add. et corrig. 11. 1880 and *Manual of the New Zealand Flora* 871. 1906, *New Zealand Department Lands Report Botanical Survey Tongariro National Park* 35. 1908, *New Zealand J. Bot.* 33: 8, 10. 1995.

in English: mountain oat grass

D. benthamiana Vickery (*Calamagrostis benthamiana* (Vickery) Govaerts; *Deyeuxia scabra* Benth.)

Tasmania, Victoria. Perennial, rare species, caespitose or tufted, erect, ligule membranous and truncate, auricles absent, basal leaf sheaths scabrous, leaves mostly basal, leaf blade scabrous, panicle open to contracted, glumes subequal and keeled, lemma with short awn, fruit glabrous and longitudinally grooved, found in mountain forest, wet areas, resembles *Deyeuxia frigida* F. Muell. ex Benth., see *Contributions from the New South Wales National Herbarium* 1: 63. 1940, *World Checklist of Seed Plants* 3(1): 9. 1999. in English: Bentham's bent-grass

D. brachyathera (Stapf) Vickery (*Calamagrostis brachyathera* (Stapf) Govaerts; *Dichelachne brachyathera* Stapf)

Tasmania, Victoria, New South Wales. Perennial, rare species, erect, tufted, ligule membranous and truncate, auricles absent, basal leaf sheaths scabrous, leaves mostly basal, leaves flat and scabrous, green to purple contracted panicle, cleistogamous spikelets, glumes unequal and strongly keeled, lemma acute and awned, palea membranous and 2-keeled, fruit glabrous and longitudinally grooved, shade species, found in damp places, swamp, see *Bulletin of Miscellaneous Information Kew* 1906: 203. 1906, *Contributions from the New South Wales National Herbarium* 1: 68. 1940, *Blumea* 22(1): 5-12. 1974, *World Checklist of Seed Plants* 3(1): 9. 1999.

in English: short bent-grass

D. breviglumis Benth. (*Agrostis breviglumis* (Benth.) F. Muell.)

Australia. See *Flora Australiensis: A Description ...* 7: 584. 1878, *Systematic Census of Australian Plants ...* 133. 1882.

D. carinata Vickery (*Calamagrostis carinata* (Vickery) Govaerts)

Tasmania, New South Wales, Victoria. Perennial, tufted, erect or decumbent, ligule membranous and truncate, auricles absent, basal leaf sheaths scabrous, leaves mostly basal, dense cylindrical panicle green and purple, spikelets imbricate, cleistogamous spikelets or chasmogamous spikelets, glumes unequal and keeled, the lower glume mucronate, upper glume subacuminate, lemma awned, palea very narrow-truncate, fruit glabrous and longitudinally grooved, in montane areas, damp and swamps, see *Contributions from the New South Wales National Herbarium* 1: 58. 1940, *World Checklist of Seed Plants* 3(1): 10. 1999.

in English: keeled bent-grass

D. contracta (F. Muell. ex Hook.f.) Vickery (*Agrostis contracta* F. Muell. ex Hook.f.; *Deyeuxia scabra* sensu Rodway)

Tasmania, Victoria, New South Wales. Perennial, erect or ascending, caespitose, ligule membranous and obtuse, auricles absent, basal leaf sheaths scabrous or glabrous, leaves mostly basal, leaf blade flat or folded, green to purple panicle

erect or nodding, cleistogamous or chasmogamous spikelets, glumes unequal and acute, lemma lanceolate and awned, palea 2-keeled, fruit glabrous and longitudinally grooved, see *Flora Tasmaniae* 2: 116, t. 161. 1860.

D. crassiuscula Vickery (*Agrostis nivalis* F. Muell.; *Calamagrostis crassiuscula* (Vickery) Govaerts; *Calamagrostis nivalis* (F. Muell.) Maiden & Betche, nom. illeg., non *Calamagrostis nivalis* (Wedd.) Hack. ex Buchtien; *Deyeuxia nivalis* (F. Muell.) Benth., nom. illeg., non *Deyeuxia nivalis* Wedd.) (Latin *crassus*, a, um "thick")

Victoria, New South Wales. Perennial, erect or ascending, coarse, forming open and loose clumps or tussocks, ligule membranous and ciliate, auricles absent, basal leaf sheaths scabrous, leaves mostly basal, leaf blade rigid, broad and scabrous leaves flat and bright green, dense panicle shiny green and spike-like, spikelets turgid, glumes unequal, lemma lanceolate and awned, palea membranous and 2-dentate, fruit glabrous and longitudinally grooved, ornamental, found in subalpine and high altitudes grasslands, damp areas, see *Trans. & Proc. Vict. Inst. (Melbourne)* 43. 1854-1855, *Bulletin de la Société Botanique de France* 22: 176 (err. type. 156), 180. 1875 and *A Census of New South Wales Plants* 21. 1916, *Contributions from the New South Wales National Herbarium* 1: 59. 1940, *World Checklist of Seed Plants* 3(1): 10. 1999.

in English: bent-grass

D. curta Wedd. (*Calamagrostis cephalantha* Pilg.; *Calamagrostis curta* (Wedd.) Hitchc.; *Deyeuxia lagurus* Wedd.)

Southern America, Bolivia. See *Bulletin de la Société Botanique de France* 22: 176 (err. typ. 156), 179-180. 1875 and *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 42: 61. 1908, *Contributions from the United States National Herbarium* 24(8): 376. 1927.

D. curta Wedd. var. *longearistata* Turpe

Southern America, Argentina. Rare species, see *Mono-graphs in Systematic Botany from the Missouri Botanical Garden* 47: i-xi, 1-178. 1994.

D. decipiens (R. Br.) Vickery (*Agrostis decipiens* R. Br.; *Calamagrostis decipiens* (R. Br.) Govaerts; *Cinna decipiens* (R. Br.) Kunth; *Vilfa decipiens* (R. Br.) P. Beauv.)

Tasmania, Victoria, New South Wales. Perennial, rare, erect, caespitose, ligule membranous and obtuse, auricles absent, basal leaf sheaths scabrous, leaves mostly basal, a nodding panicle, palea hyaline, fruit glabrous and longitudinally grooved, grows on sandy soils, wet places, see *Prodromus Florae Novae Hollandiae* 172. 1810, *Révision des Graminées* 1: 67. 1829 and *Contributions from the New South Wales National Herbarium* 1: 70. 1940, *World Checklist of Seed Plants* 3(1): 10. 1999.

in English: trickery bent-grass

D. densa Benth. (*Agrostis densa* (Benth.) F. Muell.; *Calamagrostis austrodensa* Govaerts; *Calamagrostis densa* (Benth.) Maiden & Betche; *Calamagrostis minor* var. *densa* (Benth.) J.M. Black)

South Australia, Victoria, Tasmania. Perennial, rare, erect or geniculate, tufted, slender or stout, glabrous, ligule membranous and obtuse, auricles absent, basal leaf sheaths more or less glabrous, leaves mostly basal, green panicle dense and contracted, glumes subulate and subequal, lemma acute and more or less deeply 4-toothed or cleft, awn attached near the middle of the lemma, bristle present, palea acuminate and bidentate, glabrous fruit ovoid and longitudinally grooved, shade species, on stream banks, heaths and sedge-lands, open habitats, see *Flora Australiensis: A Description ... 7: 582*. 1878, *Systematic Census of Australian Plants ... 133*. 1882 and *World Checklist of Seed Plants* 3(1): 9. 1999.

in English: heath bent-grass

D. drummondii (Steudel) Vickery (*Deyeuxia drummondii* (Steud.) Benth.; *Pentapogon drummondii* Steud.)

Western Australia. Annual, decumbent, tufted or caespitose, ligule membranous and smooth, auricles absent, basal leaf sheaths glabrous, leaves mostly basal, leaves flat and linear, a contracted panicle green or purple, glumes green and purplish, lemma awned, palea shortly bifid, fruit glabrous and longitudinally grooved, extinct or presumed extinct species, see *Synopsis Plantarum Glumacearum* 1: 120. 1854, *Flora Australiensis: A Description ... 7: 580*. 1878 and *Contr. New South Wales Natl. Herb.* 1: 49 (1940).

D. frigida F. Muell. ex Benth. (*Agrostis frigida* F. Muell.; *Calamagrostis frigida* (F. Muell. ex Benth.) Maiden & Betche; *Deyeuxia accedens* Vickery; *Deyeuxia scabra* sensu Rodway)

Tasmania, Victoria, New South Wales. Perennial, tall and rather stout, caespitose, forming erect and slender tussocks, stems erect or geniculate and ascending, ligule membranous and obtuse, auricles absent, basal leaf sheaths glabrous or scabrous, leaves mostly basal, green leaves flat and flaccid, greenish to purple panicle open and spreading, cleistogamous or chasmogamous spikelets, glumes very unequal, prominent awns, fruit glabrous and longitudinally grooved, ornamental, found in cool and moist situations, alpine woodland and grassland.

in English: alpine bent-grass

D. gunniana (Nees) Benth. (*Agrostis breviglumis* (Benth.) F. Muell., l.c.; *Agrostis gunniana* (Nees) F. Muell.; *Calamagrostis breviglumis* (Benth.) Maiden & Betche; *Calamagrostis gunniana* (Nees) Reeder; *Deyeuxia breviglumis* Benth.; *Echinopogon gunnianus* Nees)

Tasmania, New South Wales, Victoria, Queensland. Perennial, slender, erect or ascending, tufted or caespitose, ligule membranous and obtuse, auricles absent, basal leaf sheaths scabrous, leaves mostly basal, inflorescence an erect panicle

green to purple, glumes ovate, lemma truncate and awned, palea membranous, fruit glabrous and longitudinally grooved, shady areas, damp places, swamps and margins of wet situations, riverbanks, see *London Journal of Botany* 2: 413. 1843, *Flora Australiensis: A Description ... 7: 584*. 1878, *Systematic Census of Australian Plants ... 133*. 1882 and *Journal of the Arnold Arboretum* 31: 323. 1950.

in English: Gunn's bent-grass

D. imbricata Vickery (*Calamagrostis imbricata* (Vickery) Govaerts) (overlapping, Latin *imbrico* "to cover with tiles," *imbrex* "a hollow tile")

Australia, Queensland, New South Wales. Perennial, caespitose, forming erect and slender tussocks, bright green leaves basal and tapered, smooth culms erect and striate, ligule membranous and truncate, auricles absent, basal leaf sheaths scabrous and pubescent, leaves mostly basal, green or purplish panicles dense and spike-like, small spikelets crowded and compressed, glumes unequal, lemma awned, palea keeled, fruit glabrous and longitudinally grooved, pasture grass, ornamental and attractive when in flower, see *Contributions from the New South Wales National Herbarium* 1: 55. 1940, *World Checklist of Seed Plants* 3(1): 10. 1999.

in English: bent-grass

D. inaequalis Vickery (*Calamagrostis inaequalis* (Vickery) Govaerts)

Western Australia. Annual, tufted, ligule membranous, auricles absent, basal leaf sheaths scabrous, leaves mostly basal, leaves linear and acute, a panicle dense and contracted, glumes dissimilar and keeled, lemma shortly dentate and awned, palea 2-keeled, fruit glabrous and longitudinally grooved, see *Contributions from the New South Wales National Herbarium* 1: 49. 1940, *World Checklist of Seed Plants* 3(1): 10. 1999.

D. innominata D.I. Morris

Tasmania, New South Wales, Victoria. Perennial, erect, slender, more or less densely tufted, ligule membranous and truncate, auricles absent, leaves mostly basal, leaf blade folded or inrolled, pale green or purple panicle, glumes subequal and acute, awn absent or readily deciduous, palea hyaline and with green keels, fruit glabrous and longitudinally grooved, in alpine moorlands, heaths, hillsides or slopes, see *Muelleria* 7(2): 164-167, f. 13-14. 1989.

D. kashmiriana Bor (*Calamagrostis kashmiriana* (Bor) Govaerts; *Deyeuxia hackelii* Bor, nom. illeg., non *Deyeuxia hackelii* (Lillo) Parodi)

India, Kashmir, Jammu. Indeterminate species, see Nayar, M.P. & Sastry, A.R.K. (eds.). (1987). *Red Data Book of Indian Plants*. vol. 1. Calcutta: Botanical Survey of India, *World Checklist of Seed Plants* 3(1): 10. 1999.

D. lacustris Edgar & Connor

New Zealand. Perennial, tufted, erect or geniculate at the base, cleistogamous, leaf blade folded, leaf sheath papery glabrous, ligule erose, compact cylindrical panicle, glumes subequal, awn twisted and recurved, see *New Zealand Journal of Botany* 37: 68-70, f. 5. 1999.

D. lawrencei Vickery (*Calamagrostis lawrencei* (Vickery) Govaerts) (the name honors Robert William Lawrence, 1807-1833 (in Tasmania), a young settler and botanical collector in Tasmania, Western Mountains, communicated specimens to Sir William Hooker; see M.N. Chaudhri, I.H. Vegter & C.M. De Wal, *Index Herbariorum*, Part II (3), *Collectors I-L*. Regnum Vegetabile vol. 86. 1972; N.S. Lander, "Revision of the Australian genus *Lawrencia* Hook. (Malvaceae: Malveae)." in *Nuytsia*. 5(2): 201-271. 1984; N.S. Lander, "Collections of *Lawrencia* Hook. destroyed by fire, April 1984." in *Kingia*. 1(1): 1-8. 1987; J.D. Hooker, *Flora Tasmaniae*. London 1855; Joseph Henry Maiden (1859-1925), "Records of Western Australian botanists." *W. Austral. Nat. Hist. Soc.* 3: 5-33. 1906; J.H. Willis, "Botanical pioneers in Victoria." *Vict. Naturalist*. 66(5): 83-89. 1949; A. Lasègue, *Musée botanique de Benjamin Delessert*. 328. Paris 1845; G. Bentham, *Flora Australiensis*. 189-190. 1863; W.J. Hooker, in *Hooker's Icones Plantarum*. 3: t. 261, 262. 1840)

Tasmania. Perennial, caespitose, ligule obtuse and membranous, auricles absent, leaves mostly basal, a green to purple panicle, spikelets imbricate, glumes subequal, lemma ovate and awned, palea truncate and minutely lacinate, fruit glabrous and longitudinally grooved, extinct or presumed extinct species, see *Contributions from the New South Wales National Herbarium* 1: 48. 1940, *World Checklist of Seed Plants* 3(1): 10. 1999.

in English: Lawrence's bent-grass

D. mckiei Vickery (*Calamagrostis mckiei* (Vickery) Govaerts) (for Ernest Norman McKie, 1882-1948)

New South Wales, Queensland. Perennial, erect, loosely tufted, leaves along the culm, ligule obtuse and membranous, auricles absent, basal leaf sheaths scabrous, inflorescence a large panicle spreading and nodding, glumes obtuse and keeled, lemma awned, callus short, palea bifid, fruit glabrous and longitudinally grooved, found in mountain forests, see *Contributions from the New South Wales National Herbarium* 1: 72. 1940, *World Checklist of Seed Plants* 3(1): 11. 1999.

D. mesathera Stapf ex Vickery (*Calamagrostis mesathera* (Stapf ex Vickery) Govaerts)

Tasmania, New South Wales, Victoria. Perennial, erect or geniculate, ligule truncate and membranous, basal leaf sheaths glabrous, auricles absent, leaves mostly basal, straw-colored and dense panicle, glumes keeled and more or less equal, lemma lanceolate and awned, fruit glabrous and longitudinally grooved, in swamps, on riverbanks, see *Contributions from the New South Wales National*

Herbarium 1: 53. 1940, *World Checklist of Seed Plants* 3(1): 11. 1999.

D. microseta Vickery (*Calamagrostis microseta* (Vickery) Govaerts)

New South Wales, Victoria. Perennial, erect, slender, loosely tufted, ligule obtuse and membranous, basal leaf sheaths scabrous, auricles absent, leaves mostly basal, an oblong panicle, spikelets compressed, glumes unequal, lemma lanceolate and awned, palea 2-keeled, elliptical fruit longitudinally grooved, in wet areas, see *Contributions from the New South Wales National Herbarium* 1: 66. 1940, *World Checklist of Seed Plants* 3(1): 11. 1999.

D. minor Benth. (*Agrostis minor* (Benth.) J.M. Black; *Agrostis minor* F. Muell. ex Benth.; *Agrostis quadriseta* var. *minor* F. Muell. ex Benth.; *Calamagrostis minor* (Benth.) J.M. Black; *Calamagrostis minor* Benth.; *Deyeuxia minor* F. Muell. ex Benth.)

South Australia, Victoria, Tasmania. Perennial, rare, slender, erect or decumbent, tufted, culms 3-noded, ligule obtuse and membranous, basal leaf sheaths scabrous to glabrous, auricles absent, leaves mostly basal, leaves filiform, more or less cylindrical spike-like green or purple panicle, glumes subequal and acute, lemma 4-nerved and 4-toothed, awn inserted near the middle of the lemma, bristle absent, palea shining and 2-keeled, fruit glabrous and longitudinally grooved, found in wet sclerophyll forest, see *Novae Hollandiae Plantarum Specimen* 1: 25, t. 32. 1805, *Prodromus Florae Novae Hollandiae* 1: 171. 1810, *Flora Australiensis: A Description ...* 7: 582. 1878 and *Transactions and Proceedings of the Royal Society of South Australia* 60: 165. 1936.

in English: small bent-grass

D. monticola (Roemer & Schultes) Vickery (*Agrostis monticola* Roem. & Schult.; *Agrostis montana* R. Br.; *Vilfa montana* (R. Br.) P. Beauv.; *Deyeuxia montana* (R. Br.) Benth., non P. Beauv.; *Deyeuxia quadriseta* var. *montana* (R. Br.) Ewart)

Tasmania, New South Wales, Victoria. Perennial, tufted or caespitose, erect or decumbent, ligule ciliate and membranous, basal leaf sheaths scabrous to glabrous, auricles absent, leaves mostly basal, leaf blade rolled, inflorescence a green to purple panicle dense and much contracted, spikelets imbricate, glumes unequal and keeled, lemma with a dorsal awn, fruit glabrous and longitudinally grooved, in woodland or grassland, in wet sclerophyll and rocky places, open habitats.

in English: mountain bent

D. monticola (Roemer & Schultes) Vickery var. *monticola*
Tasmania, New South Wales, Victoria. Inflorescence green to purple, leaves rolled.

D. monticola (Roemer & Schultes) Vickery var. *valida* Vickery

New South Wales. Inflorescence purple, basal leaf sheaths purple, leaves slightly rolled or involute.

D. nepalensis Bor

Western and Central Nepal. Perennial, terete, smooth, short ligule membranous, basal leaf sheath smooth, leaf blades linear mostly folded, leaves filiform, rhizomatous, inflorescence paniculate with smooth branches, spikelets acuminate, lower glumes flattened, lemma elliptic-oblong, palea 2-nerved, 3 stamens, stigmas plumose, along riverbanks, cliffs, streams, see *Kew Bulletin* 1957: 411. 1958.

D. nudiflora Vickery (*Calamagrostis nudiflora* (Vickery) Govaerts)

New South Wales. Perennial, geniculate at the lower nodes and ascending, slender, ligule truncate and membranous, basal leaf sheaths scabrous, auricles absent, leaves mostly basal, inflorescence green and few-flowered, glumes narrow and unequal, lemma truncate, callus glabrous, palea narrow and 2-keeled, awn absent, fruit glabrous and longitudinally grooved, shade species, in open habitats, see *Contributions from the New South Wales National Herbarium* 1: 67. 1940, *World Checklist of Seed Plants* 3(1): 11. 1999.

D. parviseta Vickery (*Calamagrostis parviseta* (Vickery) Reeder)

Tasmania, New South Wales, Victoria, Queensland. Perennial, erect or ascending, loosely tufted, ligule truncate and membranous, auricles absent, leaves mostly basal, panicle loose and spreading, glumes subequal and keeled, lemma truncate and awned, palea membranous and 2-keeled, fruit glabrous and longitudinally grooved, shade species, rainforest, damp sites, see *Contributions from the New South Wales National Herbarium* 1: 71. 1940, *Journal of the Arnold Arboretum* 31: 324. 1950.

D. parviseta Vickery var. *boormanii* Vickery (named after John Luke Boorman, fl. 1899-1919, botanist, plant collector in Australia)

Victoria, New South Wales. Glumes subequal, callus bearded and silky, see *Contr. New South Wales Natl. Herb.* 1: 72 (1940).

D. parviseta Vickery var. *parviseta*

New South Wales, Tasmania, Victoria, Queensland. Glumes unequal and shorter than the florets.

D. pungens N.G. Walsh

Victoria, East Gippsland. Perennial, caespitose, auricles absent, leaves mostly basal, ligule chartaceous and acute, leaves scabrous, a purple spike-like panicle, glumes more or less equal in length, lemma mucicous or awned, palea 2-keeled, fruit glabrous and longitudinally grooved, see *Muelleria* 7(4): 452. 1992.

D. quadriseta (Labill.) Benth. (*Agrostis diaphora* Trin.; *Agrostis lobata* R. Br.; *Agrostis quadriseta* (Labill.) R. Br.; *Agrostis quadriseta* var. *lobata* (R. Br.) Hook.f.; *Agrostis*

quadriseta var. *paniculata* Hook.f.; *Avena quadriseta* Labill.; *Bromidium lobatum* (R. Br.) Nees; *Bromidium quadriseta* (Labill.) Nees; *Bromidium quadrisetum* (Labill.) Nees; *Calamagrostis quadriseta* (Labill.) Sprengel; *Vilfa lobata* (R. Br.) P. Beauv.)

New Zealand, Australia. Perennial, variable to very variable, montane to subalpine, densely or loosely tufted, glabrous, rigid stems, slender to robust, erect or curved, forming sparse tussocks, auricles absent, leaves mostly basal, leaf sheaths subcoriaceous and ribbed, ligule membranous and obtuse, basal leaf sheaths glabrous or scabrous, leaf blade deeply channelled, stiff and dull green leaves more or less flat or inrolled, bright green panicles crowded and spike-like, spikelets small and crowded, glumes acute and subequal, lemma nerved and toothed, awn almost basal, central awn geniculate, bristle absent, anthers yellow or purple, fruit glabrous and longitudinally grooved, shade species, open habitats, damp places and moist areas, disturbed areas, along roadsides, boggy spots, clay, see *Novae Hollandiae Plantarum Specimen* 1: 25, t. 32. 1805, *Prodromus Florae Novae Hollandiae* 1: 171. 1810, *Systema Vegetabilium, editio decima sexta* 1: 253. 1824, *Hooker's Journal of Botany and Kew Garden Miscellany* 2: 416. 1843, *Flora Australiensis: A Description ...* 7: 581. 1878 and *Contributions from the New South Wales National Herbarium* 1: 43-82. 1940.

in English: reed bent-grass

D. reflexa Vickery (*Calamagrostis reflexa* (Vickery) Govaerts)

New South Wales. Perennial, loosely tufted, erect, rigid, auricles absent, ligule membranous and obtuse, leaves grooved or channelled and scabrous, basal leaf sheaths scabrous to pubescent, large and erect panicle spreading and nodding, glumes unequal, lemma awned, palea 2-keeled and narrowly truncate, fruit glabrous and longitudinally grooved, in montane woodland, along roadsides, see *Contributions from the New South Wales National Herbarium* 1: 69. 1940, *World Checklist of Seed Plants* 3(1): 11. 1999.

D. rodwayi Vickery (*Calamagrostis rodwayi* (Vickery) Govaerts)

Tasmania, New South Wales, Victoria, Queensland. Perennial, slender, erect or ascending, tufted, leaves mostly basal, auricles absent, ligule membranous and truncate, basal leaf sheaths scabrous, green to purple panicle contracted, cleistogamous spikelets, glumes unequal and diverging, lemma lanceolate and awned, palea 2-keeled, fruit glabrous and longitudinally grooved, in montane woodland, wet sclerophyll forests, see *Contributions from the New South Wales National Herbarium* 1: 60. 1940, *World Checklist of Seed Plants* 3(1): 11. 1999.

D. scaberula Vick. (*Calamagrostis austroscaberula* Govaerts; *Deyeuxia scabra* sensu Rodway)

Tasmania, New South Wales, Victoria. Perennial, erect, slender, tufted, leaves mostly basal, auricles absent, ligule membranous and truncate, basal leaf sheaths more or less scabrous, leaves usually rather scabrous, green and purple panicle open or contracted, cleistogamous or chasmogamous spikelets, glumes subequal, palea membranous and 2-keeled, fruit glabrous and longitudinally grooved, shade species, in rocky areas, see *Contributions from the New South Wales National Herbarium* 1: 64. 1940, *World Checklist of Seed Plants* 3(1): 9. 1999.

in English: rough bent-grass

D. simlensis Bor (*Calamagrostis simlensis* (Bor) G. Singh) India, Simla, Himachal Pradesh. Extinct to endangered species, perennial, erect, stout, glabrous, unbranched, leaf blades very narrow and rough, very long ligule membranous, loose panicles, spikelets lanceolate, lower glume lanceolate, upper glume lanceolate and recurved at the apex, lemma awned, straight awn exerted, 3 stamens, see *Indian Forest Records. Botany* 3(5): 149-150. 1941, *Grasses of Burma, Ceylon, India and Pakistan* 397-400. 1960, *Taxon* 33(1): 94. 1984, M.P. Nayar & A.R.K. Sastry (eds.), *Red Data Book of Indian Plants*. vol. 1: 292. Calcutta: Botanical Survey of India 1987.

D. talariata N.G. Walsh

Australia, Victoria, New South Wales. Perennial, shortly rhizomatous, ligule truncate, basal leaf sheaths more or less glabrous, leaves folded and mostly basal, auricles absent, a cylindrical and contracted panicle, lemma muticous or awned, plumose rachilla, long silky callus, palea membranous and 2-keeled, rare species, grows in *Sphagnum*-rich heath, closely allied to *Deyeuxia affinis* M. Gray, see *Muelleria* 7(3): 379-387. 1991.

D. youngii (Hook.f.) Buchanan (*Agrostis youngii* Hook.f.; *Calamagrostis petriei* Hack.; *Calamagrostis youngii* (Hook.f.) Petrie; *Calamagrostis youngii* var. *petriei* (Hack.) Petrie; *Deyeuxia petriei* (Hack.) Cheeseman; *Deyeuxia youngii* var. *petriei* (Hack.) Cheeseman)

New Zealand. Perennial, tufted, narrow, small, leaf blade stiff, leaf sheath papery and ribbed, ligule ciliate, panicle shortly branched, glumes more or less membranous, awn straight, anthers with a tuft of hairs to penicillate, open habitats, dry hillsides, rocky sites, see *Handbook of the New Zealand Flora* 330. 1864, *Indigenous Grasses of New Zealand* add. et corrig. 11. 1880 and *Transactions and Proceedings of the New Zealand Institute* 35: 380. 1903, *Manual of the New Zealand Flora* 872. 1906, *Transactions and Proceedings of the Royal Society of New Zealand* 47: 57. 1915, *Manual of the New Zealand Flora* 162. 1925, *New Zealand Journal of Botany* 33: 1-33. 1995.

Diachroa Nutt. = *Leptochloa* P. Beauv.

Greek *dia* "through" and *chroa* "color, to color."

Chloridoideae, Eragrostideae, or Chloridoideae, Cynodonteae, type *Diachroa procumbens* (Muhl.) Nutt., see *Essai d'une Nouvelle Agrostographie* 71, 161. 1812, *Descriptio uberior Graminum* 160. 1817, *Transactions of the American Philosophical Society, new series*, 5: 147. 1835, *Nomenclator Botanicus. Editio secunda* 1: 497. 1840 and *Contr. U.S. Natl.* 24(6): 180. 1925, S.T. Blake, "*Plinthanthesis* and *Danthonia* and a review of the Australian species of *Leptochloa* (Gramineae)." *Contributions from the Queensland Herbarium* 14: 3. 1972, *Brittonia* 31: 399-404. 1979, *Kew Bulletin* 37: 133-162. 1982, *American Journal of Botany* 81: 622-629. 1994, *Taxon* 43: 123. 1994, *Flora Mesoamericana* 6: 260-261. 1994, H.P. Linder & G.A. Verboom, "Generic limits in the *Rytidosperma* (Danthonieae, Poaceae) complex." *Telopea* 6(4): 597-627. 1996, H.P. Linder, "Nomenclatural corrections in the *Rytidosperma* complex (Danthonieae, Poaceae)." *Telopea* 7(3): 269-274. 1997, N. Snow, "Nomenclatural changes in *Leptochloa* P. Beauv. sensu lato (Poaceae, Chloridoideae)." *Novon* 8: 78. 1998, *Contributions from the United States National Herbarium* 41: 66, 130-137. 2001.

Diachyrium Griseb. = *Sporobolus* R. Br.

Greek *dia* "through" and *achyron* "chaff, husk."

Chloridoideae, Eragrostideae, or Chloridoideae, Cynodonteae, Sporobolinae, or Chloridoideae, Zoysieae, Sporobolinae, type *Diachyrium arundinaceum* Griseb., see *Prodromus Florae Novae Hollandiae* 169-170. 1810, *Fragments de Algunas Plantas Filipinas* 25. 1851, *Pl. Lorentz.* 209-210, t. 2, f. 8. 1874, *Nom. Bot.* 2: 1274. 1874, *Abhandlungen der Königlichen Gesellschaft der Wissenschaften zu Göttingen* 19: 257-258, t. 2, f. 8. 1874 and *Repertorium Specierum Novarum Regni Vegetabilis* 17(19-30): 300. 1921, *Flora of the Guianas, Series A: Phanerogams* 606-615. 1990, *Blumea* 35(2): 393-458. 1991, *American Journal of Botany* 81: 622-629. 1994, *Flora Mesoamericana* 6: 273-276. 1994, *Sida* 16: 529-544. 1995, *Memoirs of the New York Botanical Garden* 78: 509-540. 1996, *Australian Systematic Botany* 12(3): 375-448. 1999, *Contributions from the United States National Herbarium* 41: 66, 200-219. 2001.

Diacisperma Kuntze = *Disakisperma* Steud., *Leptochloa* P. Beauv.

Greek *ake, akis* "tip, thorn, a sharp point" and *sperma* "a seed."

Chloridoideae, Eragrostideae, or Chloridoideae, Cynodonteae, see *Essai d'une Nouvelle Agrostographie* 71, 161. 1812, *Synopsis Plantarum Glumacearum* 1: 287. 1854[1855] and *Lexikon Generum Phanerogamarum* 169. 1903, *Contr. U.S. Natl.* 24(6): 180. 1925, N. Snow, "Nomenclatural

changes in *Leptochloa* P. Beauv. sensu lato (Poaceae, Chloridoideae).” *Novon* 8: 78. 1998, *Contributions from the United States National Herbarium* 41: 66, 70, 130-137. 2001.

Diandranthus Liou = *Miscanthus* Andersson

From the Greek *di, dis* “two, double,” *aner, andros* “male, stamen” and *anthos* “flower.”

Panicoideae, Andropogonodae, Andropogoneae, Andropogoninae, see *Primitiae Florae Amurensis* 331. 1859 and *Journal of the Faculty of Science: University of Tokyo, Botany* 3(1): 391. 1930, *Journal of Japanese Botany* 25(1-2): 7. 1950, *Claves Generum et Specierum Graminearum Primarum Sinicarum Appendice Nomenclatione Systematica* 233. 1957, *Bull. Fac. Agric. Mie University* 17: 57, 59. 1958, *Pl. Taxonomic Soc. Korea, Seoul* 1972: 17-18. 1972, *Flora Xizangica* 5: 308. 1987, *Journal of Huazhong Agricultural University* (Suppl.): 56-60. 1989, *Flora Mesoamericana* 6: 378-379. 1994, *Sida* 16(2): 233-244. 1994, *Annals of the Missouri Botanical Garden* 81(4): 768-774. 1994, *Vascular Plants of the Hengduan Mountains* 2: 2297. 1994, *Sida* 16(3): 551-580. 1995, *J. Fujian Acad. Agric. Sci.* 11(3): 19-22. 1996, *Flora Reipublicae Popularis Sinicae* 10(2): 10. 1997, *Journal of Plant Research* 115: 381-392. 2002, *Contributions from the United States National Herbarium* 46: 294-295, 550-557. 2003.

Diandrochloa De Winter = *Eragrostis* Wolf, *Roshevitzia* Tzvelev

The generic name is derived from the Greek *di, dis* “two, double,” *aner, andros* “male, stamen” and *chloe, chloa* “grass, young grass” (Latin *helus* or *olus* or *holus, leris* “greens, garden herbs, legumes” used for *Smyrniolum olusatrum* L.), referring to the number of stamens, alluding to 2-staminate florets.

Australasia, Americas, Africa. Chloridoideae, Eragrostidae, Eragrostidinae, annual or perennial, tufted, unarmed, herbaceous, erect or geniculate, auricles absent, membranous ligule unfringed, plants bisexual, open or contracted panicle, spikelets solitary, glumes 2 very unequal or subequal, palea present, 2 lodicules fleshy and glabrous, 2 stamens, ovary glabrous, 2 stigmas, open habitats and in shade, sometimes referred to and often included in *Eragrostis* Wolf, type *Diandrochloa namaquensis* (Nees ex Schrad.) De Winter, see *Genera Plantarum* 23. 1776, *Icones et Descriptiones Graminum Austriacorum* 4: 15. 1809 and *Bothalia* 7(2): 387-390. 1960, *Acta Bot. Neerl.* 15: 157. 1966, *Bot. Zhurn. (Moscow & Leningrad)* 53: 311. 1968, *Rhodora* 80: 390-403. 1978, *Contributions from the United States National Herbarium* 41: 66, 81-115, 192. 2001.

Diandrolyra Stapf

Two-anthered *Olyra*, from the Greek *di, dis* “two, double,” *aner, andros* “male, stamen” and the genus *Olyra* L., referring to the reduced stamen number.

About 1-6 species, Panama, Brazil. Bambusoideae, Oryzodae, Olyreae, or Bambusoideae, Olyreae, Olyrinae, perennial, low growing, clump-forming, herbaceous, unbranched, unarmed, tufted, flowering culms leafy, decumbent floriferous culms, auricles absent, ligule a fringed membrane, leaf blades oblong oblong-lanceolate, plants monoecious, inflorescence shortly racemose and terminal, spikelets paired, female spikelet elliptic, glumes 2 subequal, male spikelets with glumes reduced or lacking, spikelets with 2-3 stamens and 3 staminodes, lemmas leathery, palea present, 3 lodicules free and fleshy, 2 plumose stigmas, male spikelet ovary sterile with 3 stigmas, shade species, in forest, undisturbed forest, moist sites, rainforests, along rivers and streams, related to *Piresia* and *Buergersiochloa*, type *Diandrolyra bicolor* Stapf, see *Bulletin of Miscellaneous Information Kew* 1906: 204. 1906, *Biotropica* 6: 141-153. 1974, *Brittonia* 37(1): 1-5. 1985 [*Diandrolyra tatiana* (Poaceae: Olyreae), a new herbaceous bamboo from Brazil], Emmet J. Judziewicz et al., *American Bamboos* 270-272. 1999, *Contributions from the United States National Herbarium* 39: 55-56. 2000.

Species

***D. bicolor* Stapf**

Panama, Brazil, origin unknown.

***D. tatiana* Soderstr. & Zuloaga** (named for Tatiana Sendlusky, b. 1922)

Brazil. Rhizomatous.

Diandrostachya (C.E. Hubb.) Jacq.-Fél. = Loudetiopsis Conert

Greek *di, dis* “two, double,” *aner, andros* “male, stamen” and *stachys* “a spike.”

South America, tropical Africa. Panicoideae, Panicodae, Arundinelleae, perennial or annual, herbaceous or with woody reedlike culms, large, unarmed, erect, hollow, auricles absent, ligule fringed, plants bisexual, open inflorescence paniculate, spikelets in triplets, 2 glumes very unequal, female-fertile lemma longer than the lower glume, palea present, 2 free and fleshy lodicules, 2 stamens, ovary glabrous, 2 red stigmas, suitable for thatching, open areas, savannah, woodland, damp or swampy areas, rocky places, bare ground, sometimes referred to and often placed in *Loudetiopsis*, see *Flora Brasiliensis seu Enumeratio Plantarum* 2: 458, 460. 1829 and *Bulletin of Miscellaneous Information Kew* 1934: 431. 1934, *Bulletin of Miscellaneous Information Kew* 1936(5): 320, 321, 322. 1936,

Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie 77(2-3): 226-354, f. 18. 1957, *Journal d'Agriculture Tropicale et de Botanique Appliquée* 7: 407-408. 1960, *Kirkia* 5: 235-258. 1966, *Kew Bulletin* 21(1): 119-124. 1967, *Kew Bulletin* 26(1): 111-123. 1971, *Contributions from the United States National Herbarium* 46: 177, 285. 2003.

Diarina Raf. = *Diarrhena* P. Beauv.

Greek *di* “two” and *arrhen* “male.”

Pooideae, Diarrheneae, type *Diarina sylvatica* Raf., see *Methodus Plantas Horti Botanici ...* 191. 1794, *Flora Boreali-Americana* 1: 67, t. 10. 1803, *Medical Repository, ser. 2*, 5: 352. 1808, *Essai d'une Nouvelle Agrostographie* 142, 160, 162, t. 25, f. 2. 1812, *Journal de Physique, de Chimie, d'Histoire Naturelle et des Arts* 89: 104. 1819 and *Rhodora* 34: 204. 1932, E.D. Merrill, *Index Rafinesquianus*. The plant names published by C.S. Rafinesque, etc. 75. Jamaica Plain, Massachusetts, U.S. 1949, *Bulletin of the Torrey Botanical Club* 118: 128-136. 1991 [A revision of *Diarrhena* (Poaceae) in the United States.], *Contributions from the United States National Herbarium* 48: 269. 2003.

Diarrhena P. Beauv. = *Corycarpus* Spreng., *Diarina* Raf., *Korycarpus* Lag., *Korycarpus* Zea ex Lag., *Neomolinia* Honda, *Neomolinia* Honda & Sakis., *Onoea* Franch. & Sav., *Roemeria* Roem. & Schult., *Roemeria* Zea ex Roem. & Schult.

From the Greek *di* “two” and *arrhen* “male,” referring to the stamens.

Four-five species, eastern U.S., Russia, East Asia, Japan. Pooideae, Diarrheneae, perennial, herbaceous, ligule membranous, leaf blades narrowly lanceolate, inflorescence an open or contracted panicle, spikelets laterally compressed, 2-5 fertile florets and an uppermost floret reduced, 2 glumes unequal, lemma cartilaginous to coriaceous, palea 2-nerved, 2 membranous lodicules, 1-3 stamens, ovary glabrous, 2 stigmas, grain knobbed or beaked at tip, in woodland, shade, type *Diarrhena americana* P. Beauv., see *Essai d'une Nouvelle Agrostographie* 142. 1812, *Genera et species plantarum*, quae aut novae sunt aut nondum recte cognoscuntur ... 4, 34. Matriti [Madrid] 1816, *Systema Vegetabilium* 1: 61, 287. 1817, Constantine Samuel Rafinesque, *Journal de Physique, de Chimie, d'Histoire Naturelle et des Arts*. 89: 104. Aug 1819, Kurt Polycarp Joachim Sprengel (1766-1833), *Systema Vegetabilium* Editio decima sexta 1: 123. Gottingae 1825[1824], *Enumeratio plantarum in Japonia sponte crescentium*. 2: 178. Paris [1873] 1875-1879 and *Journal of the Faculty of Science: University of Tokyo*,

Botany 3(1): 110. 1930, *Rhodora* 34: 204. 1932, *Flora of the Prairies and Plains of Central North America* 114. 1932, *Acta Phytotaxonomica et Geobotanica* 10: 134. 1941, E.D. Merrill, *Index rafinesquianus*. 75. 1949, *Bot. Mag. (Tokyo)* 70: 8-12. 1957, *Novosti Sist. Vyss. Rast.* 1968: 29. 1968, *Diss. Abstr. Int. B.* 32: 3812-3813. 1972, *Taxon* 29: 645-666. 1980, *Journal of the Arnold Arboretum* 66: 188. 1985, *Bulletin of the Torrey Botanical Club* 118: 128-136. 1991 [A revision of *Diarrhena* (Poaceae) in the United States.], *Ecological Research* 17(6): 705-716. Bateman, “Evolution of zygomorphy in monocot flowers: iterative patterns and developmental constraints.” *New Phytologist* 162(1): 25-44. Apr 2004.

Species

D. americana P. Beauv. (*Corycarpus diandrus* Kuntze; *Diarina festucoides* Raf.; *Diarina sylvatica* Raf.; *Diarrhena americana* var. *americana*; *Diarrhena arundinacea* (Zea ex Lag.) Rydb.; *Diarrhena diandra* Alph. Wood; *Diarrhena festucoides* (Raf.) Fernald; *Festuca americana* Michx. ex P. Beauv.; *Festuca diandra* Moench; *Festuca diandra* Michx., nom. illeg., non *Festuca diandra* Moench; *Korycarpus arundinaceus* Zea ex Lag.; *Roemeria zae* Roem. & Schult.)

U.S. See *Species Plantarum* 1: 73-76. 1753, *Methodus Plantas Horti Botanici ...* 191. 1794, *Flora Boreali-Americana* 1: 67, t. 10. 1803, *Medical Repository, ser. 2*, 5: 352. 1808, *Essai d'une Nouvelle Agrostographie* 142, 162, t. 25, f. 2. 1812, *Genera et species plantarum* 4. 1816, *Journal de Physique, de Chimie, d'Histoire Naturelle et des Arts* 89: 104. 1819, *A Class-book of Botany* 612. 1847, *Revisio Generum Plantarum* 2: 772. 1891 and *Flora of the Prairies and Plains of Central North America* 114. 1932.

D. mandshurica Maxim. (*Neomolinia mandshurica* (Maxim.) Honda)

Eurasia. See *Mélanges Biol. Bull. Phys.-Math. Acad. Imp. Sci. Saint Pétersbourg* 12: 932. 1888 and *Botanical Magazine* 46: 2. 1932.

D. obovata (Gleason) Brandenburg (*Diarrhena americana* var. *obovata* Gleason)

U.S. See *Phytologia* 4(1): 21. 1952, *Bulletin of the Torrey Botanical Club* 118(2): 135. 1991.

Diastemanthe Steudel = *Stenotaphrum* Trin.

Probably from the Greek *diastema*, *diastematos* “interval, distance” and *anthos* “flower.”

Panicoideae, Paniceae, Setariinae, or Panicoideae, Panicodae, Paniceae, see *Flora Caroliniana, secundum ...* 249. 1788, *Fundamenta Agrostographiae* 175-176. 1820, Ernst Gottlieb von Steudel, *Synopsis plantarum glumacearum*. 1: 360. 1854, *Revisio Generum Plantarum* 2: 794. 1891 and

Brittonia 24: 210. 1972, *Contributions from the United States National Herbarium* 46: 608-609. 2003.

Diastemenanthe Desv. = *Stenotaphrum* Trin.

Greek *diastema*, *diastematos* “interval, distance” and *anthos* “flower.”

Panicoideae, Paniceae, Setariinae, or Panicoideae, Panicodae, Paniceae, type *Diastemenanthe platystachys* Steud., see *Fundamenta Agrostographiae* 175-176. 1820, *Mémoires de la Société d'Agriculture, Sciences et Arts d'Angers* 1: 179, t. 8, f. 4. 1831, *Synopsis plantarum glumacearum*. 1: 360. 1854 and Jonathan Deininger Sauer (b. 1918), “Revision of *Stenotaphrum* (Gramineae: Paniceae) with attention to its historical geography.” *Brittonia* 24(2): 202-222. 1972, *Flora of Tropical East Africa* 451-898. 1982, *Crop Science (Florida)* 22: 469-473. 1982, *Boletim da Sociedade Broteriana, ser. 2* 64: 35-74. 1991, *Flora Mesoamericana* 6: 364. 1994, *Flora Fanerogámica Argentina* 19(1): 11-16. 1995, *Contributions from the United States National Herbarium* 46: 608-609. 2003.

Dichaetaria Nees ex Steudel

Greek *dicha* “in two,” *dis* “twice” and *chaite* “bristle, mane, long hair,” possibly referring to the nature of the spikes.

One species, southern India, Sri Lanka. Arundinoideae, Danthoniaeae, perennial, caespitose, tussocky, unarmed, unbranched, creeping, herbaceous, rhizomatous, woody rootstock, auricles absent, leaves mainly basal, ligule a fringed membrane, plants bisexual, open inflorescence paniculate or contracted racemose, sometimes branched in the lower part of the panicle, spikelets not falling entire, florets 2, lower floret perfect, awnlike sterile lemma, 2 glumes very unequal or equal, lower glume early deciduous, lemma minutely bifid and awned, palea present entire or notched, 2 free and membranous lodicules, 3 stamens, very long anthers, ovary glabrous, 2 stigmas, forest shade, dense woodlands, resembling *Gymnopogon*, type *Dichaetaria wightii* Nees ex Steud., see *Syn. Pl. Glumac.* 1: 145. 1854, *Enum. Pl. Zeyl.* 5: 372, 444. 1864 and *Handb. Fl. Ceylon* 5: 281. 1900, *Exkursionsflora von Java ...* 1: 152. 1911, *Ceylon J. Sci., Biol. Sci.* 2(2): 126. 1959, *Grasses of Burma ...* 471. 1960.

Species

D. wightii Nees ex Steud. (*Gymnopogon rigidus* Thw.; *Gymnopogon rigidus* Döll, nom. illeg., non *Gymnopogon rigidus* Thwaites; *Gymnopogon wightii* (Nees) Koord.)

Sri Lanka. Perennial, erect, rhizomatous, glabrous, leaves chiefly basal, leaf blades acuminate and pointed, panicle much exserted, lower lemma cartilaginous, callus acute,

palea furrowed between the keels, see *Essai d'une Nouvelle Agrostographie* 41, 164. 1812.

Dichantherium (Hitchc. & Chase) Gould = *Dicantherium* (Hitchc. & Chase) Gould, *Panicum* L.

Greek *dicha* “in two” and *anthele* “a type of inflorescence, a little flower,” *antheleon*, *anthyllion* is a diminutive of *anthos* “flower, blossom.”

About 120 species, America. Panicoideae, Panicodae, Paniceae, or Panicoideae, Paniceae, Panicinae, perennial, herbaceous, rhizomatous, auricles absent, ligule fringed or unfringed, basal leaves differing from culm leaves, often with hidden cleistogenes in the leaf sheaths, rosette of leaves, plants bisexual, cleistogamous or chasmogamous, inflorescence paniculate, 2 glumes very unequal, lower glume often tiny or minute, palea present, 2 free and fleshy lodicules, 3 stamens, ovary glabrous, 2 stigmas, weed species, often in *Panicum*, type *Dichantherium dichotomum* (L.) Gould, see *Species Plantarum* 1: 55, 58. 1753, *A Sketch of the Botany of South-Carolina and Georgia* 1(2): 123, 125-126, 129. 1816, *Mantissa* 2: 256. 1824, *De Graminibus Paniceis* 223. 1826, *Department of Agriculture. D. xanthophysum (A. Gray) Freckmann (*Dichantheium xanthophysum* (A. Gray) Freckmann; *Panicum xanthophysum* A. Gray; *Panicum xanthophysum* f. *amplifolium* Scribn.)

North America, Ontario, U.S., Wisconsin, Pennsylvania. Rare, perennial, hairy nodes, leaf sheaths hairy, dry sandy soils, open habitats, open woods and clearings, endangered in Pennsylvania, see *North American Gramineae and Cyperaceae* 1: no. 28. 1834 and *Flora of Vermont (edition 3)* 14, 104. 1900, *Phytologia* 39(4): 271. 1978.

in English: slender panic grass, panic grass, slender rosette grass, yellow panic grass, yellow-bladdered panic grass

in French: panic jaunâtre

Dichanthium Willemet = *Bothriochloa* Kuntze, *Capillipedium* Stapf, *Diplasanthum* Desv., *Eremopogon* Stapf, *Lepeocercis* Trin.

From the Greek *dicha* “in two” and *anthos* “a flower,” referring to the lower sessile spikelets or to the kinds of spikelets.

About 16/20(-30) species, Old World tropics. Panicoideae, Andropogonodae, Andropogoneae, Andropogoninae, or Panicoideae, Andropogoneae, Sorghinae, perennial or rarely annual, herbaceous, branched or simple, sometimes decumbent or geniculate, rhizomatous or stoloniferous, tufted, forming upright tussocks, sometimes with extensive creeping stolons, leaves sometimes aromatic or not, hairy or bearded culm nodes, auricles absent, ligule membranous

and usually ciliate or fringed, leaves usually glaucous, plants bisexual, inflorescence terminal or also axillary, solitary or compound racemes digitately or subdigitately arranged at the summit of the culm, homogamous pairs and obtuse sessile spikelets, lower or basal spikelets either male or sterile, sessile spikelets bisexual and dorsally compressed or imbricate, callus obtuse, fragile rachis, 2 glumes more or less equal or subequal, lower glume boat-shaped and chartaceous to cartilaginous, upper lemma entire and awned, glabrous awn bent about the middle, pedicellate spikelets male or sterile and unawned, palea absent or present, 2 lodicules free and fleshy, 1-3 stamens, ovary glabrous, 2 stigmas, fruits compressed, ornamental and attractive, weed species more or less aromatic, native pasture species, important fodder grasses, highly palatable and productive, woodland, disturbed ground, open places, marshes, subdesert, intergeneric hybridisation with *Bothriochloa* Kuntze and *Capillipedium* Stapf, type *Dichanthium nodosum* Willemet (*Dichanthium annulatum* (Forssk.) Stapf), see *Species Plantarum* 2: 1045. 1753, Paul Usteri (1768-1831), in *Annalen der Botanik*. [*Annalen der Botanik*] 18: 11. 1796, *Fundamenta Agrostographiae* 203, t. 18. 1820, *Mémoires de la Société d'Agriculture, Sciences et Arts d'Angers* 1: 170, t. 8, f. 1. 1831, *Die Natürlichen Pflanzenfamilien* 2(2): 28. 1887, *Revisio Generum Plantarum* 2: 762. 1891 and *Flora of Tropical Africa* 9: 182-183. 1917, *Boissiera* 9: 159, 163, 170. 1960, *Amer. annulatum Stapf; *Dichanthium nodosum* P. Willemet, nom. illeg.; *Lepeocercis annulata* (Forssk.) Nees)

Southeast Asia, India, China, tropical Africa. Perennial, herbaceous, very variable, often tufted to densely tufted, slender, usually simple or branched, geniculately ascending, twisting and ascending to semidecumbent to prostrate, creeping, forming erect tussocks or clumps, with elaborate root system, often stoloniferous, culm nodes hairy to often bearded, ligules a truncate membrane, leaf blades somewhat rigid, leaves glaucous and basal, paniculate inflorescence of compound and several racemes subdigitate and shortly pedunculated, racemes densely villous, spikelets subimbricate or closely overlapping, sessile spikelet bisexual, pedicelled spikelets male or neuter, lower floret barren, upper floret hermaphrodite, pedicellate spikelet without a pit, sessile spikelets narrowly oblong and awned, lower glume cartilaginous without a pit, upper lemma awned, 3 stamens, ovary glabrous, weed species, under grazing forms open turf, used for rough lawns, attractive, very palatable both as pasture and hay, excellent fodder, forage, readily eaten by horses and all kinds of cattle, suitable for silage, low nutritive value, drought-resistant, survives short-term flooding, stands very heavy grazing, naturalized, widely used for hay in India, tolerates saline soils well, useful for erosion control, excellent ground cover, occurs along roadsides, bushy places, open disturbed places, pasture, in grassland on rocky ground, stony and sandy plains, sandstone, waste ground, gravelly soil, open forest, by water, woodland, irrigated land, moist soil, slopes and disturbed clearings, canal banks, tropics and subtropics, stream channels, old established pastures, on calcareous substrates, see *Flora Aegyptiaco-Arabica* 173. 1775, *Hortus Bengalensis, or a catalogue ...* 7. 1814, *Hortus Regius Botanicus Berolinensis* 1: 239. 1827, *Catalogue of Indian Plants* 65-112. 1834, *The Botany of Captain Beechey's Voyage* 243. 1838, *Flora Africae Australioris Illustrationes Monographicae* 98. 1841, *Synopsis Plantarum Glumacearum* 1: 379. 1854, *Notizblatt des Botanischen Gartens und Museums zu Berlin-Dahlem* 1: 327. 1897 and *North American Flora* 17(2): 122. 1912, *Flora of Tropical Africa* 9: 178. 1917, *Journal of Cytology and Genetics* 18: 60-61. 1983, *Bulletin of Botanical Research* 6(1): 97-98, f. 1. 1986, *Journal of Cytology and Genetics* 23: 38-52. 1988, *Acta Botanica Indica* 18: 240-246. 1990, *Journal of Cytology and Genetics* 25: 140-143, 147-148, 322-323. 1990, *Annals of the Missouri Botanical Garden* 81(4): 775-783. 1994.

in English: Santa Barbara grass, Diaz blue stem, ringed beard grass, Hindi grass, brahman grass, Delhi grass, Kleberg grass, Kleberg bluestem, Angleton grass, marvel grass, Sheda grass

in Vietnam: song tha'o to

D. annulatum (Forssk.) Stapf var. ***annulatum*** (*Andropogon papillosus* Hochst. ex A. Rich.)

Tropical Africa, southwest Asia, India, Indonesia. Racemes subdigitate, sessile spikelet with lower glume pubescent to villous and not pitted, growing on dunes and alluvial plains, hillsides, plains, disturbed areas, cultivated grounds, irrigated fields.

D. annulatum (Forssk.) Stapf var. ***papillosum*** (Hochst. ex A. Rich.) de Wet & J.R. Harlan (*Andropogon annulatus* var. *papillosus* (Hochst. ex A. Rich.) Hook.f.; *Andropogon papillosus* Hochst. ex A. Rich.; *Dichanthium papillosum* (Hochst. ex A. Rich.) Stapf)

Southern Africa, Ethiopia, Tanzania, Kenya. Perennial, variable, branched, erect, tufted or densely tufted, shortly rhizomatous, ring of hairs around the nodes, ligule membranous, leaf blade flattened, leaf sheath glabrous, racemes subdigitate, spikelets paired, sessile spikelet with lower glume not pitted villous and fringed, pedicelled spikelet awnless, palatable, occurs on heavy soils, in moist areas, rocky stream beds, cultivated soils, wet places, vleis, riverbanks, omiramba, sometimes confused with *Bothriochloa* species, see *Tentamen Florae Abyssinicae ...* 2: 457. 1850, *The Flora of British India* 7(21): 197. 1897 [1896] and *Flora of Tropical Africa* 9: 179. 1917, *Willdenowia* 1: 269. 1954.

in English: medio bluestem

in South Africa: vleivingergras, vleyfingergras

D. aristatum (Poir.) C.E. Hubb. (*Andropogon aristatus* Poir.; *Andropogon aristatus* (L.) Raspail, nom. illeg., non *Andropogon aristatus* Poir.; *Andropogon caricosus* subsp. *mollicomus* (Kunth) Hack.; *Andropogon caricosus* L. var. *mollicomus* (Kunth) Hack.; *Andropogon mollicomus* Kunth; *Andropogon nodosus* Nash; *Andropogon nodosus* (Willemet) Nash; *Dichanthium annulatum* (Forssk.) Stapf;

Dichanthium nodosum Willemet; *Diplasanthum lanosum* Desv.; *Lepeocercis mollicoma* (Kunth) Nees)

India. Perennial, tufted or weakly tufted, vigorous, slender erect culms or ascending, velvety below the inflorescence, sometimes rooting from the lower nodes, culm nodes bearded by very short spreading hairs or glabrous when old, leaf blade flattened, ligule a fringed membrane, inflorescence terminal and axillary, compound racemes sparsely villous, spikelets imbricate and paired, sessile spikelets elliptic to obovate, pitless, lower glume pilose and fringed, weed species, very drought-resistant, very palatable, excellent fodder grass, forage, grown as a pasture grass, can stand heavy grazing, salt-tolerant, survives short-term flooding, naturalized, a prolific seeder, occurs in disturbed areas, calcareous substrates, moist areas, natural pastures, heavy soil, roadsides, uncultivated lands, closely related to *Dichanthium annulatum* (Forssk.) Stapf, see *Centuria II. Plantarum ... 2: 7*. 1756, *Species Plantarum, Editio Secunda* 1480. 1763, *Annalen der Botanick. editor Usteri* 18: 11. 1796, *Encyclopédie Méthodique. Botanique ... in Japan: oni-sasa-gaya

in South Africa: reënboogvleigras

D. armatum (Hook.f.) Blatter & McCann (*Andropogon armatus* Hook.f.)

India, Western Ghats, Maharashtra. Rare and threatened species, annual, erect, tufted, leaf blades linear, inflorescence subdigitate, lower glume of sessile spikelet pitted, lower glume of pedicellate spikelets bristly, on stony soils, see *The Flora of British India* 7(21): 197. 1897 [1896] and *Journal of the Bombay Natural History Society* 32: 425. 1928, *The Bombay Grasses* 5: 91-92, t. 59. 1935, *Grasses of Burma ...* 134. 1960.

D. caricosum (L.) A. Camus (*Andropogon caricosus* L.; *Andropogon caricosus* subsp. *genuinus* Hack.; *Andropogon filiformis* Pers.; *Andropogon filiformis* Roxb., nom. illeg., non *Andropogon filiformis* Pers.; *Andropogon serratum* Retz., nom. illeg., non *Andropogon serratus* Thunb.; *Dichanthium annulatum* (Forssk.) Stapf; *Dichanthium aristatum* (Poir.) C.E. Hubb.; *Dimeria filiformis* (Roxb.)

Hochst. ex Miq.; *Heteropogon concinnus* Thwaites; *Lepeocercis serrata* (Retz.) Trin.)

Asia temperate and tropical, southern China, Indonesia, India, Sri Lanka. Annual or perennial, forming small clumps, prostrate, creeping to very shortly creeping at base, geniculately ascending, rooting at the lower nodes, densely tufted, rhizomatous, often stoloniferous, slender culms simple or branched, erect, nodes bearded or glabrous, vigorous stolons, auricles absent, minute ligule short and membranous, sheaths flattened and glabrous, leaves glabrous and somewhat rigid, spiciform racemes silky and more or less nodding, spikelets beaked with tuft of short bristles at base, spikelets almost distichous and imbricate, sessile spikelets hermaphrodite, lower floret empty, upper floret bisexual, pedicelled spikelets male, first glume of the sessile spikelet not pitted, 3 stamens, ovary glabrous, weed species, native pasture species, drought-resistant, withstands rather long dry periods, quite tolerant of waterlogging, excellent or not very palatable, used as pasture and hay grass, good fodder grass, forage, persistent under heavy grazing, very resistant to heavy grazing, potential seed contaminant, colonize and spread by both seed and runners, grows poorly in dry weather, similar to *Dichanthium annulatum* (Forssk.) Stapf, found in dry sandy habitats, open sunny places, savannah, swampy places, open humid woodland, along roadsides, see *Species Plantarum, Editio Secunda* 1480. 1763, *Observationes Botanicae* 5: 21. 1789, C.H. Persoon, *Synopsis Plantarum* 1: 103. Paris 1805, *Hortus Bengalensis, or a catalogue ...* 6. 1814, *Fundamenta Agrostographiae* 203, t. 18. 1820, *Acta Societatis Regiae Scientiarum Indo-Neerlandicae* III. 4: 35. 1851, *Enumeratio Plantarum Zeylanicae* 368. 1864, *Monographiae Phanerogamarum* 6: 569. 1889 and *Flora of Tropical Africa* 9: 178. 1917, *Bulletin du Muséum National d'Histoire Naturelle* 27: 549. 1921, *Kew Bulletin* 1939: 654. 1939, *Grasses of Ceylon* 191. 1956, *Grasses of Burma ...* 134. 1960.

in English: hay grass, nadi blue grass, Nadi bluegrass, Nandi bluegrass, Antigua hay grass, Indian bluestem, nawai grass

in India: bari kail, bilaria kandi, detara, detta, kanda bathhada hullu, kartah, khel, kheral, killa machhar, marvel, motha marwel, palmanega gadi, parihullu, urukun hullu

in Sri Lanka: geta mana

in Thailand: yaa nuat chaochuu, ya nuat chao chu, ya waen, yaa waen

D. compressum (Hook.f.) Jain & Deshpande (*Andropogon compressus* Hook.f.)

India, Maharashtra. Rare and threatened species, perennial, densely tufted, leaf blades linear-lanceolate and finely acuminate, aromatic, lower glume of sessile spikelets hairy, forming patches, grows in gravelly soils, see *The Flora of British India* 7(21): 172-173. 1896 and *The Bombay Grasses* 83-84, t. 53. 1935, *Grasses of Burma ...* 106. 1960,

Bulletin of the Botanical Survey of India 20(1-4): 133. 1978[1979].

D. fecundum S.T. Blake

Western Australia, Queensland, Northern Territory. Perennial, slender, branched, erect or geniculate, forming erect tussocks, glaucous leaves, green or purplish racemes solitary or in group, a decreaser species, useful for erosion control, fodder, forage, very nutritious, attractive, produces good hay, in damp open places, grassland, woodland, see *University of Queensland Papers: Department of Biology* 2(3): 51. 1944.

in English: curly blue grass

D. foveolatum (Delile) Roberty (*Andropogon foveolatus* Delile; *Andropogon monostachys* Spreng.; *Andropogon strictus* Roxb.; *Eremopogon foveolatus* (Delile) Stapf; *Eremopogon strictus* (Roxb.) A. Camus; *Hypogynium foveolatum* (Delile) Haines)

Asia, Africa, India, Sri Lanka. Perennial, wiry, very slender, tufted or densely tufted, much-branched, erect or ascending, nodes bearded, spathiform leaf sheaths, basal sheaths silky, ligule membrane-like, leaves narrow almost filiform, terminal and axillary racemes solitary and long-exserted, awn on one side of spike, lower glume of sessile spikelet pitted, pedicelled spikelet pitted or not, upper lemma sometimes bidentate, palatable after seeding, good hay and silage, valuable desert fodder, used by cattle when young, sometimes a thatching grass, pioneer grass, a weed of irrigation, found in sandy areas, subdesert grassland, shallow sandy soils, sand dunes, bushland, deciduous bushland, sandy coastal plains, usually near the sea, open areas, rocky hillsides, rich black soil, see *Description de l'Egypte. Histoire naturelle*. Tom. second. 1: 16, pl. 8, f. 2. Paris 1812 and *Flora of Tropical Africa* 9: 183. 1917, *Boissiera*. 9: 170. 1960, *Grasses of Burma ...* 148-149. 1960, *Fl. Tamilnadu Carnatic* 2: 866-867, pl. 866, 867. 1982, *Fl. Pakistan, Poaceae* 143: 279-280. 1982, *Fl. Tamilnadu Carnatic* 3: 1834-1835. 1983.

in India: boari, gandhila, girgua, girji munhak, junjhli, kard gandhel, lokhandi, mujna, murjaini, murjnah, silkia marwel, sirwala, usar janewah

in Mali: okras, tirichit, tirikit

in Somalia: saren, dalan

D. humilius (Benth.) J.M. Black (*Andropogon annulatus* var. *humilis* Benth.)

Central Australia. See *Transactions and Proceedings of the Royal Society of South Australia* 60: 165. 1936.

D. maccannii Blatter

India, Maharashtra. Vulnerable and threatened species, annual, tufted, nodes bearded, leaf blades hairy, racemes solitary or two, growing in gravelly soils, open areas, grasslands, high rainfall areas, see *Journal of the Bombay Natural History Society* 32: 357-358, pl. 2. 1927, *The Bombay*

Grasses 5: 92, t. 60. 1935, *Grasses of Burma ...* 135. 1960, *Bol. Soc. Arg. Bot.* 12: 219. 1968.

D. mucronulatum Jansen

Malaysia, Malay Peninsula. Rare species, hairy awn, upper lemma sometimes bidentate, found on rocks, see *Acta Botanica Neerlandica* 1(3): 473, f. 2. 1952.

D. oliganthum (Hochst. ex Steud.) Cope (*Andropogon oliganthus* Hochst. ex Steud.; *Heteropogon oliganthus* (Hochst. ex Steud.) Blatt. & McCann; *Indochloa oligantha* (Hochst. ex Steud.) Bor)

Asia. See *Synopsis Plantarum Glumacearum* 1: 368. 1854 and *Journal of the Bombay Natural History Society* 32: 623. 1928, *Kew Bulletin* 1854: 79. 1954, *Kew Bulletin* 35(3): 703. 1980.

D. pallidum (Hook.f.) Stapf ex C.E. Fischer (*Apocopsis pallida* Hook.f.)

India, Tamil Nadu. Indeterminate species, see *The Flora of British India* 7: 143. 1896 and *Flora of the Presidency of Madras* 10: 1740, 1741. 1934.

D. panchaganiense Blatter & McCann (*Dichanthium panchaganiense* Blatt. & McCann)

India, Panchgani Plateau, Maharashtra. Rare and threatened species, small, annual, bearded nodes, leaf blades acuminate, racemes solitary or digitate, found on open rocky places, see *Journal of the Bombay Natural History Society* 32: 357-358, pl. 1. 1927, *The Bombay Grasses* 90-91, f. 58. 1935, *Grasses of Burma ...* 135. 1960, *Bol. Soc. Arg. Bot.* 12: 220. 1968.

D. queenslandicum B. Simon

Australia, Queensland. Vulnerable species, see *Austrobaileya* 1(5): 457. 1982.

in English: king bluegrass

D. sericeum (R. Br.) A. Camus (*Andropogon sericeus* R. Br.; *Andropogon affinis* R. Br.; *Dichanthium affine* (R. Br.) A. Camus; *Dichanthium sericeum* (R. Br.) Guillaumin, nom. illeg., non *Dichanthium sericeum* (R. Br.) A. Camus)

Asia tropical, Papua New Guinea, Western Australia, Queensland, Northern Territory, Victoria, New South Wales. Perennial, branched, erect and slender, tussocky nature, vigorous, bluish green and purplish, culm nodes bearded or with long white hairs, slender leaves sometimes hairy, sheath hairy, racemes with white and bluish silky hairs, spikelets paired and crowded, lowest pairs of spikelets sterile and reduced to glumes, callus shortly bearded, pedicellate spikelets sterile, a heavy seeder, not very extensive root system, natural pastures for sheep and cattle, cultivated, forage, good soft hay, highly nutritious and very palatable in the green state, eaten by stock and native animals, grains food for small birds, highly ornamental, declines under very high grazing pressures on poor soils, sensitive to frost, growing in open grassland on heavy black soils, full sun,

see *Bulletin du Muséum d'Histoire Naturelle* 27: 549. 1921, *Bulletin de la Société Botanique de France* 88: 791. 1942.

in English: Australian bluestem, silky bluegrass, silky bluestem, Queensland bluegrass

D. sericeum (R. Br.) A. Camus subsp. **humilius** (J.M. Black) B.K. Simon (*Dichanthium humilius* J.M. Black; *Dichanthium humilius* (Benth.) J.M. Black)

New South Wales. Annual, see *Transactions and Proceedings of the Royal Society of South Australia* 60: 165. 1936, *Austrobaileya* 3: 83. 1989.

D. sericeum (R. Br.) A. Camus subsp. **polystachyum** (Benth.) B.K. Simon (*Andropogon sericeus* var. *polystachyus* Benth.; *Andropogon superciliatus* Hack.; *Andropogon tenuiculmus* Reznik; *Andropogon tenuiculus* Steud.; *Dichanthium superciliatum* (Hack.) A. Camus; *Dichanthium tenuiculum* (Steud.) S.T. Blake; *Sorghum superciliatum* (Hack.) Kuntze)

Australia, Asia. See *Prodromus Florae Novae Hollandiae* 1: 201. 1810, *Synopsis Plantarum Glumacearum* 1: 371. 1854, *Flora Australiensis: A Description ...* 7: 530. 1878, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 6: 239. 1885, *Revisio Generum Plantarum* 2: 792. 1891 and *Bulletin du Muséum d'Histoire Naturelle* 27: 550. 1921, *Bulletin du Muséum d'Histoire Naturelle, sér. 2* 5: 495. 1933, *Proceedings of the Royal Society of Queensland* 80: 69. 1969, *Austrobaileya* 3(1): 84. 1989.

D. sericeum (R. Br.) A. Camus subsp. **sericeum** (*Dichanthium affine* (R. Br.) A. Camus)

New South Wales. Perennial, palatable, nutritious, high-yielding, makes good hay.

D. setosum S.T. Blake

Queensland, New South Wales, Western Australia. Perennial, erect, sheath glabrous, racemes hairy and purple, lowest pairs of spikelets male, callus often densely bearded, pedicellate spikelets male, a vulnerable species, woodland, grassland, *University of Queensland Papers: Department of Biology* 2(3): 50. 1944.

D. tenue (R. Br.) A. Camus (*Andropogon tenuis* R. Br.)

Queensland, New South Wales. Perennial, erect, sheath glabrous, racemes not hairy, lowest pairs of spikelets sterile, callus densely bearded, pedicellate spikelets male, see *Bulletin du Muséum d'Histoire Naturelle* 27: 549. 1921.

in English: small bluegrass

D. tenuiculum (Steudel) S.T. Blake (*Andropogon tenuiculum* Steud.; *Dichanthium superciliatum* (Hackel) A. Camus)

Western Australia, Queensland, Northern Territory. Perennial and robust grass, slender and vigorous tussocks, bearded nodes, leaves bluish green to blue and very scabrous, culms robust and branched, racemes in a terminal and digitate or tasselled inflorescence, very valuable pasture

grass, woodland and floodplains, wetter heavy soil, cracking clays, see *Synopsis Plantarum Glumacearum* 1: 371. 1854 and *Proceedings of the Royal Society of Queensland* 80: 69. 1969.

in English: tassel blue grass

D. woodrowii (Hook.f.) S.K. Jain & Deshpande (*Amphiphis woodrovii* (Hook.f.) A. Camus; *Andropogon woodrovii* Hook.f.; *Bothriochloa woodrovii* (Hook.f.) A. Camus)

India, Maharashtra. Vulnerable and threatened species, aromatic, tufted, woody rootstock, leaf blades scabrid, sessile spikelets oblong-lanceolate, plains, low rainfall areas, see *The Flora of British India* 7: 173. 1896 and *The Bombay Grasses* 84. 1935, *Grasses of Burma ...* 110. 1960, *Bulletin of the Botanical Survey of India* 20(1-4): 134. 1978[1979].

Dichelachne Endl.

From the Greek *dis* "twice," *chele* "a horse's hoof," *dicheilon* "bilabrum," *dicheleo* "divide the hoof" and *achne* "chaff, glume," referring to the bilobed lemmas, to the bifid palea; see Stephan L. Endlicher, *Prodromus florae Norfolkicae*. 20. (May-June) 1833.

About 5-9 species, New Guinea, Pacific, Australasia, New Zealand, Timor. Pooideae, Poodae, Aveneae, or Pooideae, Poeae, Agrostidinae, annual or perennial, tufted, herbaceous, slender, nodding, wiry, auricles absent, leaf sheaths pubescent to glabrous, ligule a short unfringed membrane truncate, leaf blade usually scabrous and flat or convolute, plants bisexual, inflorescence a dense contracted spike-like panicle, spikelets compressed laterally and solitary, cleistogamous or chasmogamous, 1 bisexual floret, 2 glumes acuminate equal or unequal, lemma entire or minutely bifid at apex, lemma with a long slender awn, the upper part of the lemma glabrous, hairy callus present, callus short and blunt, palea narrow, 2 lodicules free and hyaline or membranous, numbers of stamens variable 1-3, ovary glabrous, 2 stigmas plumose, grains can irritate the skin, pasture grasses, growing in upland grasslands, clearings, forest margins, open habitats, subalpine, often confused with *Calamagrostis* Adans., *Agrostis* L., *Stipa* and *Deyeuxia* Clarion ex P. Beauv., type *Dichelachne montana* Endl., see *Prodromus Florae Norfolkicae* 20. 1833 and *N.Z. J. Sci. Tech.* 34A: 369-371. 1952, *N.Z. J. Sci. Tech.* 38A: 742-751. 1957, *Blumea* 22(1): 5-12. 1974 [A taxonomic revision of *Dichelachne* Endl. (Gramineae) with some new combination in *Stipa* L. and *Oryzopsis*.], *New Zealand Journal of Botany* 20: 303-309. 1982, *New Zealand Journal of Botany* 29: 101-116. 1991, *Telopea* 5(2): 325-328. 1993 [Review of *Dichelachne* (Gramineae) in Australia], *Fl. Chapman, editor, *Australian Plant Name Index*. 981. Canberra 1991.

in English: long-hair plume-grass, longhair plumegrass, long-haired plumegrass, cloven-foot plumegrass, plume grass

D. hirtella N.G. Walsh

New South Wales, South Australia, Victoria. Annual or perennial, erect, often hairy, densely or sparsely tufted,

more or less tussocky, leaves mostly basal, auricles absent, ligule membranous, basal leaf sheaths keeled or not keeled, leaves channelled, contracted panicle green or green and purple, tall flowering stems, cleistogamous and chasmogamous spikelets, glumes subequal, lower glume shortly subulate, lemma hispid-pubescent and awned, palea membranous, anthers yellow or purple, fruit laterally and ventrally compressed, in open habitats, dry sclerophyll montane woodland, eucalypt woodland, heathy woodland, see *Muelleria* 7: 451-456. 1992.

D. inaequiglumis (Hackel ex Cheeseman) Edgar & Connor (*Dichelachne micrantha* (Cav.) Domin var. *inaequiglumis* (Hackel ex Cheeseman) Domin; *Dichelachne rara* sensu Jessop, non (R. Br.) Vickery; *Dichelachne sciurea* (R. Br.) Hook.f. var. *inaequiglumis* Hackel ex Cheeseman)

New Zealand, Tasmania, New South Wales, Victoria, Queensland. Perennial, tufted, more or less erect, more or less tussocky, rather small, leaves mostly basal, auricles absent, leaf sheath glabrous or scabrid, ligule membranous and truncate, basal leaf sheaths keeled, leaves flat and scabrid, panicle loose and few-branched, cleistogamous and chasmogamous, glumes unequal elliptic-lanceolate, lemma keeled, awn twisted with straight column, palea hyaline and 2-keeled, anthers yellow, fruit oblong and laterally compressed, lowland and montane zones, in eucalypt woodland, *Eucalyptus pauciflora* woodland, *Danthonia* grassland, moist area on open granite slope, swamp areas, wet sclerophyll forest, open habitats, often confused with *Dichelachne micrantha* (Cav.) Domin, see *Flora Novae-Zelandiae* 1: 294. 1853 and *Manual of the New Zealand Flora* 874. 1906, *Bibliotheca Botanica* 85: 353. 1915, *New Zealand Journal of Botany* 20(3): 307. 1982.

D. lautumia Edgar & Connor

New Zealand. Perennial, tufted, leaf sheath papery glabrous, ligule truncate and ciliate, dense panicle linear-lanceolate, glumes equal or subequal, awn column twisted, palea keels prickly, 3 stamens, see *New Zealand Journal of Botany* 33: 11. 1995 and 37: 67-68, f. 4. 1999.

D. longiseta Trinius & Rupr. (*Dichelachne crinita* sensu Jessop, non (L.f.) Hook.f.; *Dichelachne crinita* (L.f.) Hook.f.)

South Australia. Perennial, tufted, leaves flat and more or less glabrous, silvery panicle dense and spike-like, awn untwisted and flexuous, not grazed, see *Supplementum Plantarum* 90. 1781, *Species Graminum Stipaceorum* 5. 1842, *Flora Novae-Zelandiae* 1: 293. 1853.

in English: long-hair plume-grass

D. micrantha (Cav.) Domin (*Agrostis sciurea* R. Br.; *Dichelachne crinita* (L.f.) var. *intermedia* Hack. ex Cheesem.; *Dichelachne inaequiglumis* (Hack. ex Cheeseman) Edgar & Connor; *Dichelachne micrantha* var. *inaequiglumis* (Hack. ex Cheeseman) Domin; *Dichelachne micrantha* var. *micrantha*; *Dichelachne montana* Endl.;

Dichelachne sciurea (R. Br.) Hook.f.; *Dichelachne sciurea* var. *inaequiglumis* Hack. ex Cheeseman; *Dichelachne vulgaris* Trin. & Rupr.; *Muhlenbergia sciurea* (R. Br.) Trin. ex Kunth; *Muhlenbergia sciurea* (R. Br.) Trin., nom. illeg., non *Muhlenbergia sciurea* (R. Br.) Trin. ex Kunth; *Stipa dichelachne* Steud.; *Stipa micrantha* Cav.; *Vilfa sciurea* (R. Br.) P. Beauv.)

Australia, New Guinea, New Zealand, Pacific. Perennial, tufted, slender, erect, stout, rigid, leaves mostly basal, auricles absent, leaf sheath minutely hairy, ligule more or less membranous and truncate, basal leaf sheaths keeled, gray-green leaves flat and more or less glabrous and stiff, a green or green and purple erect panicle dense and spike-like, tall flowering stems, awns of the grass seed forming a dense cylindrical mass around the dense flowering spikes, cleistogamous spikelets and chasmogamous spikelets, glumes subequal or unequal, lemma chartaceous and awned, awn curving and twisted, palea narrowly oblong or narrowly ovate, anthers yellow or purple, fruit oblong and glabrous, shade-tolerant, not grazed, low fodder value, in dry or wet sclerophyll forest, roadsides, banks, on sandstone and clay soils, see *Icones et Descriptiones Plantarum, quae aut sponte ...* 5: 42, 467, f.2. 1799, *Prodromus Florae Novae Hollandiae* 171. 1810, *Essai d'une Nouvelle Agrostographie* 16, 148, 182. 1810, *Prodromus Florae Norfolkicae* 20. 1833, *Enumeratio Plantarum Omnium Hucusque Cognitarum* 1: 218. 1833, *Nomenclator Botanicus. Editio secunda* 1: 502. 1840, *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques, Physiques et Naturelles. in English: short-hair plume-grass, shorthair plumegrass

D. parva B.K. Simon

New South Wales, Victoria, Queensland. Perennial, caespitose, glabrous, leaves mostly basal, auricles absent, ligule membranous and obtuse, basal leaf sheaths glabrous or scabrous, leaves flat or involute, loose and open panicle, glumes unequal, lemma keeled and awned, palea hyaline and 2-keeled, anthers white cream or purple to brown, usually in woodland, in damp sites on sandstone or granite, in montane areas, closely related to *Dichelachne inaequiglumis* (Hackel ex Cheeseman) Edgar & Connor, see *Austrobaileya* 1(5): 462. 1982, *Telopea* 5: 325-326. 1993.

D. rara (R. Br.) Vickery (*Agrostis rara* R. Br.; *Dichelachne micrantha* var. *rara* (R. Br.) Domin; *Dichelachne novoguineensis* (Pilg.) Pilg.; *Dichelachne sieberiana* Trin. & Rupr.; *Muhlenbergia novoguineensis* Pilg.; *Muehlenbergia rara* (R. Br.) Trin.; *Muhlenbergia rara* (R. Br.) Nees ex Hook.;

Muhlenbergia rara var. *macrostachya* Nees ex Hook.; *Vilfa rara* (R. Br.) P. Beauv.)

New South Wales, Victoria, Tasmania. Perennial, tufted, more or less tussocky, stout or slender, ligule entire or lobed, leaves mostly basal, auricles absent, basal leaf sheaths glabrous or scabrous, leaves stiff and channelled, more or less lax panicle green or green and purple, glumes more or less equal or subequal, lemma oblong and awned, awn geniculate with twisted column, palea hyaline and 2-keeled, anthers yellow or purple or white, fruit oblong and ventrally compressed, usually in dry eucalypt woodland, open habitats, on stony ground, disturbed sites, among rocks in *Eucalyptus* forest, on rocky slopes in open *Eucalyptus* forest, granite hill, stringybark-whitegum forest, see *Prodromus Florae Novae Hollandiae* 1: 171. 1810, *Essai d'une Nouvelle Agrostographie* 16, 148, 182. 1810, *Species Graminum Stipaceorum* 2-3. 1842, *London Journal of Botany* 2: 414. 1843 and *Bibliotheca Botanica* 85: 353. 1915, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 62: 457. 1929, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 69: 254. 1938, *Contributions from the New South Wales National Herbarium* 1: 337. 1951, *Blumea* 22(1): 8. 1974, *New Zealand Journal of Botany* 20(3): 303. 1982.

D. sieberiana Trinius & Rupr. (also spelled *sieberana*) (*Dichelachne micrantha* (Cav.) Domin var. *setifolia* Benth.; *Dichelachne rara* (R. Br.) Vickery; *Dichelachne rara* (R. Br.) Vickery subsp. *asperula* Veldkamp; *Dichelachne rara* subsp. *rara*; *Dichelachne sciurea* (R. Br.) Hook.f. var. *setifolia* Benth.) (for the Bohemian naturalist Franz Wilhelm Sieber, 1789-1844 (d. Prague), natural history collector and traveler, botanist, plant collector in South Africa, Mauritius and Australia, in 1823 in New South Wales, among his publications are *Herbarium florae aegyptiacae*. Wien 1820, *Reise nach der Insel Kreta*. Leipzig und Sorau 1823 and *Reise von Cairo nach Jerusalem*. Prag, Leipzig 1823, sent Andreas Döllinger, Franz (Francis) Kohaut (d. 1822) and Joseph Schmidt to collect for him in Sénégal; see J.H. Barnhart, *Biographical notes upon botanists*. 3: 275. 1965; R. Zander, F. Encke, G. Buchheim and S. Seybold, *Handwörterbuch der Pflanzennamen*. 14. Aufl. Stuttgart 1993; F.C. Dietrich, in *Jahrb. Konigl. Bot. Gart. Mus. Berlin*. 1: 278-306. 1881; D.J. Carr & S.G.M. Carr, editors, *People and Plants in Australia*. 1981; Mariella Azzarello Di Misa, a cura di, *Il Fondo Antico della Biblioteca dell'Orto Botanico di Palermo*. 257. Palermo 1988; Mary Gunn & Leslie E. Codd, *Botanical Exploration of Southern Africa*. 322-323. A.A. Balkema Cape Town 1981; Joseph Vallot, "Études sur la flore du Sénégal." in *Bull. Soc. Bot. de France*. 29: 191-192. Paris 1882; Heinrich Gottlieb Ludwig Reichenbach (1793-1879), *Conspectus Regni Vegetabilis*. 145. Lipsiae 1828; F.N. Hepper & Fiona Neate, *Plant Collectors in West Africa*. 74. 1971; H.N. Clokie, *Account of the Herbaria of the Department of Botany in the University of Oxford*.

244. Oxford 1964; A. Lasègue, *Musée botanique de Benjamin Delessert*. Paris 1845; E.M. Tucker, *Catalogue of the library of the Arnold Arboretum of Harvard University*. Cambridge, Mass. 1917-1933; N. Hall, *Botanists of the Eucalypts*. Melbourne 1978 and Supplement 1980; G. Schmid, *Goethe und die Naturwissenschaften*. Halle 1940)

Eastern Australia. Annual or short-lived perennial, stout or slender, scabrous to pubescent, tufted, small compact tussocks, ligule membranous not lobed, leaves mostly basal, auricles absent, basal leaf sheaths keeled, leaves stiff and channelled, green or green and purple panicle more or less contracted or very lax, spikelets sparse, cleistogamous and chasmogamous, glumes unequal, lemma scabrous, awn usually geniculate at the base of the column, awn column very tightly twisted, palea membranous and 2-keeled, yellow or purple anthers, fruit oblong and laterally compressed, found in woodland, moist area on open granite slope, along roadsides, waste ground, tall eucalypt woodland, stony slope of mountain, mixed dry sclerophyll forest, see *Prodromus Florae Novae Hollandiae* 1: 171. 1810, *Species Graminum Stipaceorum* 2-3. 1842, *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques, Physiques et Naturelles. Seconde Partie: Sciences Naturelles* 5: 2. 1843 and *Contributions from the New South Wales National Herbarium* 1: 337. 1951.

in English: Sieber's plume-grass, plume-grass

Dichromus Schldl. = Paspalum L.

From the Greek *dichromos* "of two colors."

Panicoideae, Paniceae, Paspalinae, see *Systema Naturae, Editio Decima* 846, 855, 1359. 1759, *Transactions of the Linnean Society of London* 2: 83, t. 16. 1794, *Graminum Monographiae ... Pars. I. Paspalum. Reimaria* 216. 1810, *Mémoires de la Société d'Agriculture, Sciences et Arts d'Angers* 1: 163. 1831, *Botanische Zeitung. Berlin* 10: 17. 1852 and *Contr. U.S. Natl. Herb.* 12: 116. 1908, *Contributions from the United States National Herbarium* 46: 193, 443-527. 2003.

Dictyochloa (Murb.) E.G. Camus = Ammochloa Boiss.

From the Greek *diktyon* "a net" and *chloe, chloa* "grass."

Pooideae, Poodae, Aveneae, see *Diagnoses plantarum orientarium novarum* ser. 1. 2(13): 51-52. 1854, *Annales des Sciences Naturelles, Botanique, sér. 4* 1: 229. 1854 and *Acta Universitatis Lundensis* 36(4): 12. 1900, *Repertorium Specierum Novarum Regni Vegetabilis, Beihefte* 63: 1. 45. 1931, *Kew Bulletin, Additional Series* 13: 109. 1986 [*Genera Graminum*].

Didactylon Zoll. & Moritzi = Dimeria R. Br.

From the Greek *didactylos, didaktylon* "two-fingered, two-toed."

Panicoideae, Andropogonodae, Andropogoneae, Andropogoninae, type *Didactylon simplex* Zoll. & Morr., see *Prodromus Florae Novae Hollandiae* 1: 204. 1810, *Systematisches Verzeichniss der von H. Zollinger in den Jahren 1842-1844* 99. 1845-1846.

Didymochaeta Steudel = Agrostis L., Bromidium Nees & Meyen

From the Greek *didymos* "double" and *chaite* "bristle, mane, long hair," see Ernst Gottlieb von Steudel (1783-1856), *Synopsis plantarum glumacearum*. 1: 185. Apr 1854.

Pooideae, Poeae, Agrostidinae, see *Species Plantarum* 1: 61-63. 1753, *Essai d'une Nouvelle Agrostographie* 43. 1812, *Fundamenta Agrostographiae* 128, t. 10. 1820, *Gramineae* 22-23. 1841, *Nova Acta Phys.-Med. Acad. Caes. Leop.-Carol. Nat. Cur.* 19(Suppl. 1): 154. 1843, *Flora Chilena* 6: 320. 1854, *Synopsis Plantarum Glumacearum* 1: 185. 1854 and *Records Dom. Mus.* 5(15): 142-143. 1965, *Fl. Fenn.* 5: 29. 1971, *Darwiniana* 24(1-4): 187-216. 1982, *Taxon* 41: 556. 1992, *New Zealand Journal of Botany* 33: 1-33. 1995, *Taxon* 44: 611-612. 1995, *Telopea* 9(3): 439-448. 2001, *Contributions from the United States National Herbarium* 48: 152-153, 270, 419-420. 2003.

Diectomis Kunth = Andropogon L.

Perhaps from the Greek *diektenno* "divide through the midst," or from *diek* "out through" and *tome* "stump" or *tomis* "knife."

One species, tropics. Panicoideae, Andropogonodae, Andropogoneae, Andropogoninae, annual, caespitose, solid, auricles absent, ligule an unfringed membrane, plants bisexual, inflorescence paniculate, spikelets paired and flattened, 2 glumes subequal, palea present, 2 fleshy lodicules, 3 stamens, ovary glabrous, 2 stigmas, native pasture species, forest and savannah, sandy soils, grassland, often in *Andropogon*, type *Diectomis fastigiata* (Sw.) P. Beauv., see *Species Plantarum* 2: 1045-1046. 1753, *Essai d'une Nouvelle Agrostographie* 132, 160. 1812, *Mémoires du Muséum d'Histoire Naturelle* 2: 69. 1815, *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques, Physiques et Naturelles* 2(3): 268. 1832, *Flora Brasiliensis* 2(4): 303. 1883 and *Bolletino della Società Botanica Italiana* 1917: 57. 1917, *Fl. Trop. E. Afr. Gramineae* 770. 1982, *Taxon* 41: 556. 1992, *Taxon* 44: 611-612. 1995, *Contributions from the United States National Herbarium* 46: 20-64, 193. 2003.

Species

D. fastigiata (Sw.) P. Beauv. (*Andropogon diatherus* Steud.; *Andropogon fastigiatus* Swartz; *Andropogon hochstetteri* Steud.; *Cymbachne fastigiata* (Sw.) Roberty; *Diectomis fastigiata* Kunth; *Diectomis fastigiata* (Swartz) Kunth, nom. illeg., non *Diectomis fastigiata* (Sw.) P. Beauv.; *Heteropogon hochstetteri* (Steud.) Schweinf.; *Heteropogon hochstetteri* (Steud.) Andersson ex Schweinf.; *Pollinia fastigiata* (Sw.) Spreng.; *Sorghum fastigiatum* (Sw.) Kuntze)

Tropical Africa. Annual, tufted, rare, erect, herbaceous, coarse, leaf blades flat and linear, ligule a glabrous membrane, solitary racemes terminal and lateral, inflorescence often partially enclosed by the upper leaf sheaths, racemes single and axillary, lower glume of sessile spikelet deeply grooved, lower glume of pedicellate spikelet papery and long-awned, forage, grazed when young, used for thatching, found in dry sandy soil, shallow soil, loamy sand, bare gravelly soil, on lava flow, riverbank, edge of forest, rocky hillsides, along roadsides, dry bushland, open areas, open pine forest, dry savannah, dry fallows, open savannah, sandstone, see *Nova Genera et Species Plantarum seu Prodrromus* 26. 1788, *Essai d'une Nouvelle Agrostographie* 132, 160. 1812, *Plantarum Minus Cognitarum Pugillus* 2: 13. 1815, *Nova Genera et Species Plantarum* 1: 193. 1815 [1816], *Synopsis Plantarum Glumacearum* 1: 378, 384. 1854, *Revisio Generum Plantarum* 2: 791. 1891 and *Boissiera*. 9: 255. 1960, *Flowering Plants of Jamaica* 1972, *Phytologia* 37(4): 317-407. 1977, *Fieldiana: Botany, New Series* 4: 1-608. 1980, *Annals of the Missouri Botanical Garden* 77(1): 125-201. 1990, *Cuscatlania* 1(6): 1-29. 1991.

in Guinea: fugolo

in Nigeria: bayan maraya, garbazam, jam bauje, yama

in Mexico: pastomato común

Diectomis P. Beauv. = Anadelphia Hack.

Perhaps from the Greek *diektenno* "divide through the midst," or from *diek* "out through" and *tome* "stump" or *tomis* "knife."

Panicoideae, Andropogonodae, Andropogoneae, Andropogoninae, see *Species Plantarum* 2: 1045. 1753, *Essai d'une Nouvelle Agrostographie* 132-133, 160, t. 23. 1812, *Mémoires du Muséum d'Histoire Naturelle* 2: 69. 1815, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 6: 240-241. 1885, *Die Natürlichen Pflanzenfamilien* 2(2): 27. 1887 and *Journal de Botanique (Morot)* 19: 100. 1905, *Flora of Tropical Africa* 9: 399-400. 1919, *Revue internationale de botanique appliquée et d'agriculture tropicale* 30: 172. 1950, *Kew Bulletin* 20: 275-285. 1966.

Dielsiochloa Pilg.

In honor of the German botanist Friedrich Ludwig Emil Diels, 1874-1945, from 1900-1901 plant collector in Western Australia, Director of Berlin-Dahlem Botanic Garden and Museum, friend and companion of Ernst Georg Pritzel (1875-1946), contributed to H.G.A. Engler & K.A.E. Prantl *Die Natürlichen Pflanzenfamilien* edition I and edition 2, to Engler *Das Pflanzenreich*, his works include *Beiträge zur Kenntniss der Vegetation und Flora von Ecuador*. Stuttgart 1937, *Ersatzstoffe aus dem Pflanzenreich*. [Edited by Diels.] Stuttgart 1918, *Jugendformen und Blütenreife im Pflanzenreich*. Berlin 1906 and *Die Pflanzenwelt von West-Australien südlich des Wendekreises*. Leipzig 1906; see J.H. Barnhart, *Biographical notes upon botanists*. 1: 454. 1965; Gottfried Wilhelm Johannes Mildbraed (1879-1954), in *Bot. Jb.* 74(2): 173-198. 1948 (Obituary and bibliography); Friedrich Ludwig Emil Diels (1874-1945) & Ernst Georg Pritzel (1875-1946), in *Botanische Jahrbücher*. 35: 88, f. 6 A-L. Apr 1904; T.W. Bossert, *Biographical dictionary of botanists represented in the Hunt Institute portrait collection*. 102. 1972; Ida Kaplan Langman, *A Selected Guide to the Literature on the Flowering Plants of Mexico*. 241. University of Pennsylvania Press, Philadelphia 1964.

One species, Peru. Pooideae, Poodae, Aveneae, perennial, tufted, herbaceous, ligule membrane-like, plants bisexual, compact inflorescence paniculate, oblong panicle, 6-10-flowered, lower 2-3 florets fertile, wavy rachilla, 2 glumes unequal, lower glume 1-nerved, upper glume 3-nerved, lemmas membranous and keeled, straight dorsal awn, palea and lodicules present, 2-3 stamens, ovary glabrous, 2 stigmas, open habitats, grassland, montane, related to *Trisetum*, type *Dielsiochloa floribunda* (Pilg.) Pilg., see *Species Plantarum* 1: 76-78. 1753, *Syn. Pl.* 1: 97. 1805 and *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 73: 99. 1943.

Species

D. floribunda (Pilg.) Pilg. (*Bromus mandonianus* Henrard; *Dielsiochloa floribunda* var. *floribunda*; *Dielsiochloa floribunda* var. *majus* Pilg.; *Dielsiochloa floribunda* var. *weberbaueri* (Pilg.) Pilg.; *Trisetum floribundum* Pilg.; *Trisetum floribundum* var. *weberbaueri* (Pilg.) Louis-Marie; *Trisetum weberbaueri* Pilg.)

South America. Spikelets disarticulating only above glumes, upper florets sterile, lemma dorsally awned, see *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 37: 505-506. 1906, *Repertorium Specierum Novarum Regni Vegetabilis* 23: 177. 1926, *Rhodora* 30(359): 244. 1928, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 73: 101. 1943.

Digastrium (Hackel) A. Camus =
Ischaemum L.

Greek *di, dis* “two, double” and *gaster* “belly, paunch.”

Two species, Australia. Panicoideae, Andropogonodae, Andropogoneae, Andropogoninae, or Panicoideae, Andropogoneae, Ischaeminae, perennial, herbaceous, auricles absent, ligule membranous, plants bisexual, inflorescence spicate or racemose, inflated joints and pedicels, spikelets paired sessile and pedicellate, 2 glumes subequal 5- to 7-nerved, palea and lodicules present, 3 stamens, ovary glabrous, 2 stigmas, pedicellate spikelets sterile reduced to glumes, usually *Ischaemum* sect. *Digastrium* (A. Camus) Roberty, see *Species Plantarum* 2: 1045, 1049. 1753, *Monographiae Phanerogamarum* 6: 250. 1889 and *N. Amer. Fl.* 17: 94. 1909, Aimée Antoinette Camus (1879-1965), in *Bulletin du Muséum d'Histoire Naturelle.* 27: 372. Paris 1921, *Boissiera* 331. 1960, *Flora Mesoamericana* 6: 386-387. 1994, *Contributions from the United States National Herbarium* 46: 275-276. 2003.

Species

D. baileyi (C.E. Hubb.) Pilg. (*Ischaemum baileyi* C.E. Hubb.)

Australia, Queensland. See *Icones Plantarum* 33 (pl. 3263): 2. 1935, *Die natürlichen Pflanzenfamilien, Zweite Auflage* 14e: 128. 1940.

D. fragile (R. Br.) A. Camus (*Ischaemum fragile* R. Br.)

Australia. See *Prodromus Florae Novae Hollandiae* 202, 205. 1810 and *Bulletin de la Société Botanique de France* 70: 850. 1923.

Digitaria Adans. = *Tripsacum* L.

Latin *digitus* “a finger.”

Panicoideae, Andropogonodae, Maydeae, or Panicoideae, Andropogoneae, Tripsacinae, see C. Linnaeus, *Systema Naturae, Editio Decima* 1253, 1261, 1379. 1759, *Familles des Plantes* 2: 38, 550. 1763, *Revisio Generum Plantarum* 2: 772. 1891 and *Botanical Gazette* 41: 294. 1906, *Boletín de la Sociedad Botánica de México* 25: 1-21. 1941, *Rhodora* 66: 371-374. 1964, *Bot. Mus. Leafl. Harv.* 20: 289-316. 1964, *Bot. Mus. Leafl. Digitaria Heist. ex Fabr. = *Digitaria* Fabr.,
Gramerium Desv., *Paspalum* L., *Syntherisma*
Walter

Latin *digitus* “a finger.”

Panicoideae, Paniceae, Paspalinae, see *Enumeratio Methodica Plantarum* 207. 1759, *Flora Caroliniana, secundum ...* 76. 1788, *Mémoires de la Société d'Agriculture, Sciences et Arts d'Angers* 1: 165, t. 7, f. 1. 1831 and *Contributions from the United States National Herbarium* 46: 443-527. 2003.

Digitaria Haller = *Acicarpa* Raddi, *Digitaria*
Adans., *Digitaria* Heist. ex Fabr., *Digitariella*
De Winter, *Digitariopsis* C.E. Hubb.,
Elytrobalepharum (Steud.) Schltld.,
Elytrobalepharum Steud., *Eriachne* Phil.,
Gramerium Desv., *Leptoloma* Chase,
Sanguinaria Bubani, *Sanguinella* Gleichen,
Syntherisma Walter, *Trichachne* Nees, *Valota*
Adans.

From the Latin *digitus, i* (possibly from *dic-idus* see *dic-is* and *dicere*) “a finger;” referring to the spikes, to the shape of the radiating inflorescence branches; see Albrecht von Haller (1708-1777), *Historia stirpium indigenarum Helvetiae inchoata.* 244. Bernae 1768; Giovanni Semerano, *Le origini della cultura europea.* Dizionario della lingua Latina e di voci moderne. 2(2): 385. Leo S. Olschki Editore, Firenze 1994.

About 200-330 species, cosmopolitan, mainly in tropical and warm temperate regions. Panicoideae, Paniceae, or Panicoideae, Paniceae, Digitariinae, annual or perennial, habitat variable, herbaceous, rhizomatous or stoloniferous, caespitose, erect or decumbent at base and rooting from lower nodes, glabrous nodes, blade rolled in bud, auricles absent, ligule membranous and unfringed, leaves often soft and hairy linear to lanceolate, plants bisexual, extremely variable in inflorescence, slender-fingered inflorescences, digitate inflorescence linear racemose and spicate, spikelets rarely solitary usually paired or ternate, spikelets sessile and pedicellate, 2 florets, upper floret bisexual or perfect, lower floret sterile or staminate or neuter, glumes 1 per spikelet or 2 and very unequal, lower glume tiny or absent, upper glume variable, fertile lemma awnless and tough, when present hidden cleistogenes in the leaf sheaths, palea present, 2 lodicules glabrous and fleshy, 3 stamens, ovary glabrous without the apical appendage, 2 red stigmas, fruit compressed, many weedy species, weeds of pasture plants, cultivated fodder, lawns and/or playing fields, native pasture species, grain crop, staple crop, cereals on infertile soils, eaten like millet, most species in the genus

are still considered good forage grasses, ornamental and attractive when in flower, open habitats, infertile soils, pampas, rainforest, grasslands, weedy ground, sandy beaches, sandy soils, a difficult genus often difficult to recognize, serious taxonomic problems, type *Digitaria sanguinalis* (L.) Scop., see *Species Plantarum* 1: 55. 1753, *Enumeratio Methodica Plantarum* 207. 1759, *Systema Naturae, Editio Decima* 846, 855, 1359. 1759, *Familles des Plantes* 2: 38, 495, 550. 1763, *Neuste Reich. Tropical Africa, Ethiopia, Gabon, Tanzania, Nigeria, South Africa, Uganda, Zimbabwe, Kenya, Sri Lanka, Arabia.

Perennial, erect and decumbent, weak, trailing, creeping at base, mat-forming, ruderal, rhizomatous with wiry slender long rhizomes, roots fibrous, culms branched, leaf blade flat and bluish green, basal sheaths glabrous, ligule membranous, leaves linear to lanceolate, solitary or whorled racemes on a short axis, spikelets glabrous and paired, upper glume and lower lemma glabrous, lower glume a membranous scale, noxious weed species, invasive, pioneer coloniser, useful to control erosion, good soil-binder, a troublesome weed of many crops, economic plant, cultivated pasture, fairly palatable when young, nutritious, common in more humid areas, found in moist shady places and roadsides, mountains, along streams, rich soils and cultivated land, sandy loam, slopes, dry soils and muddy soils, disturbed ground, riverbanks, in clumps on bare roadside bank, clearings, rocky roadside, grassland and wetland, forest edge, abandoned fields, gardens, see *Tentamen Florae Abyssinicae* ... 2: 360, 362. 1850, *Memorie della Reale Accademia delle Scienze di Torino* 2 14: 356, f. 22. 1854, *Bulletin de l'Herbier Boissier* 2, App. 2: 20. 1894, *Annuario del Reale Istituto Botanico di Roma* 6: 166, t. 9. 1896, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 24(3): 334. 1897 and *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 30(1): 119. 1901, *Bulletin of Miscellaneous Information Kew* 1907: 213. 1907, *Journal of the Linnean Society, Botany* 40: 229. 1911, *Resultati scientifici della Missione Stefanini-Paoli nella Somalia italiana. North and South America. Annual weed species, branching and spreading, decumbent base, creeping and rooting by runners, prostrate to ascending, forming dense mats, leaf sheaths long papillose-pilose, leaf blades glabrous or sparingly pilose below, flowering shoots ascending, rachis winged, racemes digitate, spikelets narrow ellipsoid, first glume small and scale-like, spreads rapidly, propagation by seed and runners, palatable to livestock, used for fodder and hay, found in moist areas, wayside, stream bed, waste places, near or along roadsides, riverbanks, lawns and cultivated areas, gardens, see *Species Plantarum* 1: 57. 1753, *Flora Carniolica, Editio Secunda* 1: 52. 1771, *Observationes Botanicae* 4: 16. 1786, *Descriptio Graminum in Gallia et Germania* 27. 1802, *Nova Genera et Species Plantarum* 1: 97. 1815 [1816], *Hortus Regius Botanicus Hafniensis* 8. 1819, *Enumeratio Plantarum Horti Regii Berolinensis Altera* 1: 102-103. 1821, *Linnaea* 7(3): 274. 1824, *Systema Vegetabilium, editio decima sexta* 1: 271. 1825, *Hortus Regius Botanicus Berolinensis* 1: 225-226. 1827, *Révision des Graminées* 1: 32. 1829, *Mantissa* 2: 262. 1832, *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Hitc.)

Southern Brazil, Uruguay, Argentina, Chile. Annual, herbaceous, erect or geniculate, tufted, stoloniferous, sometimes rooting from lower nodes, leaves linear and acuminate, sheath glabrous or hairy, panicle of slender digitate racemes, spikelets in pairs, lower glume absent, second glume and first lemma more or less equal, fertile floret smooth, roadside weed, sandy soils, swampy ground, coastal areas, very similar to *Digitaria ciliaris* (Retz.) Koeler, see *Flora Atlantica* 1: 59. 1798, *Enumeratio Plantarum Horti Regii Berolinensis Altera* 91. 1809, *Flora Brasiliensis seu Enumeratio Plantarum* 2: 63. 1829, *Nomenclator Botanicus. South America. See *Flora Brasiliensis seu Enumeratio Plantarum* 63. 1829 and *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 56(Beibl. 125): 8. 1921, *Mededeelingen van's Rijks-Herbarium* 61: 5. 1930, *Monograph of the Genus Digitaria* 29, 370. 1950.

D. ambigua (Lam. & DC.) Mérat (*Paspalum ambiguum* Lam. & DC.)

Europe. See *Flore Française ... Troisième Édition* 3: 16. 1805.

D. ammophila Hughes (*Digitaria ammophila* var. *macrolepis* Henrard; *Panicum ammophilum* F. Muell., nom. illeg., non *Panicum ammophilum* Steud.; *Panicum divaricatissimum* R. Br. var. *ammophilum* (Trin.) Benth.; *Panicum divaricatissimum* var. *ammophilum* (F. Muell.) Benth.) (from the Greek *ammos* "sand" and *philos* "loving")

South Australia, Western Australia, Queensland, Northern Territory, New South Wales, Victoria. Perennial, tough, grayish pubescent, caespitose, forming erect tussocks, slender culms erect or geniculate, sheath velvety, villous or softly hairy leaves, long and rigid racemes spreading at maturity, spikelets covered with long white silky hairs, first glume minute and ovate, upper glume and sterile lemma densely villous, fertile floret pointed, ornamental when in flower, useful pasture grass, natural mixed pastures, dry regions, sandy soils, sand hills, red soils, drought-resistant, see *Transactions and Proceedings of the Victorian Institute for the Advancement of Science* 1854-1855: 46. 1855, *Flora Australiensis: A Description ...* 7: 468. 1878 and *Bulletin of Miscellaneous Information Kew* 1923(9): 313. 1923, *Monograph of the Genus Digitaria* 810. 1950.

in English: hairy umbrella grass, silky umbrella grass, spider grass

D. andringitrensis A. Camus

Madagascar. See *Bulletin de la Société Botanique de France* 73: 915. 1926.

D. angolensis Rendle (*Digitaria verrucosa* C.E. Hubb.; *Digitaria yokoensis* Vanderyst; *Panicum angolense* (Rendle) K. Schum.)

Tropical Africa. Annual, loosely tufted, often decumbent, racemes digitate or subdigitate, spikelets in triplets, upper glume and lower lemma hairy, usually in sandy soils, dry edge of swamp, see *Catalogue of the African Plants Collected by Dr. F. Welwitsch in 1853-1861* 2(1): 165. 1899 and *Botanischer Jahresbericht* 27: 1. 457. 1901, *Bulletin of Miscellaneous Information Kew* 1928(1): 40. 1928, *Bulletin agricole du Congo Belge* 16: 659, 660. 1963, *Flora of Tropical East Africa* 451-898. 1982.

D. apiculata Stent (*Digitaria maitlandii* Stapf & C.E. Hubb.)

Africa, Swaziland. Weedy, cultivated fields, along trails, see *Bulletin of Miscellaneous Information Kew* 1927: 266. 1927, *Bothalia* 3: 155. 1930, *Bulletin du Jardin Botanique National de Belgique* 32: 127. 1932.

in English: sand witch grass, sand crab grass

D. argillacea (A.S. Hitchc. & Chase) Fernald (*Digitaria hirtigluma* Hitchc.; *Digitaria lecardii* (Pilg.) Stapf; *Syntherisma argillacea* A.S. Hitchc. & Chase)

Southern America, Guatemala, Honduras, Nicaragua, U.S., Texas. Annual, herbaceous, erect, forage, invasive, a weed of cultivation, along roadsides and trails, waste places, fallows, see *Contributions from the United States National Herbarium* 18(7): 296. 1917, *Rhodora* 22(258): 104. 1920, *Proceedings of the Biological Society of Washington* 40: 83. 1927, *Willdenowia* 9(1): 68. 1979, *Darwiniana* 40(1-4): 175. 2002.

in English: tropical crab grass

in Nigeria: sialbo

in Senegal: fono ni kafini

D. argillacea (A.S. Hitchc. & Chase) Fernald var. ***argillacea***

Southern America.

D. argillacea (A.S. Hitchc. & Chase) Fernald var. ***nulliseta*** A.S. Vega & Rúgolo

Ecuador. See *Darwiniana* 40(1-4): 175, f. 1. 2002.

D. argyrograpta (Nees) Stapf (Greek *argyros* “silver, silvery” and *graptos* “painted”)

Mozambique, South Africa, Swaziland. Perennial, tufted, rhizomatous, rhizomes knotty, culms branched from the lower nodes, leaf blade flattened or folded, ligule a papery membrane, basal sheath hairy, upright paired racemes, spikelets silky with sharp tips, palatable grass, high grazing value, drought-resistant, a weed in lawns, occurs in semiarid grassland, on stony or heavy soils, in open grassland, in bushveld, disturbed areas.

in English: silver finger grass, small finger grass

in South Africa: silvervingergas, kleinvingergas

D. argyrotricha (Andersson) Chiov. (*Digitaria argyrotricha* (Andersson ex Peters) Chiov.; *Digitaria xanthotricha* auct. non (Hack.) Stapf; *Panicum argyrotrichum* Andersson; *Panicum argyrotrichum* Andersson ex Peters; *Panicum argyrotrichum* var. *tenne* Andersson ex Peters, also spelled *tenu*e)

Tropical Africa, Mozambique, Tanzania, Ghana. Annual, cup-shaped, erect or sprawling, tufted or trailing, geniculately ascending, rooting at lower nodes, leaves linear or lanceolate, inflorescence of digitate racemes, fluffy spikelets in threes, a weed of cultivation, used as a binder, growing in disturbed areas, coastal dunes, sandy soils, sandy coastal sites, see *Naturwissenschaftliche Reise nach Mosambique ...* 548. 1864 and *Resultati Scientifici della*

Missione Stefanini-Paoli nella Somalia Italiana 1: 183. 1916, *Flora of Tropical Africa* 9: 451. 1919.

D. aridicola Napper

Africa. Native pasture species, see *Kirkia* 3: 123. 1963.

D. aristulata (Steudel) Stapf (*Panicum aristulatum* Steud.)

Africa, Mali, Senegal. Rare species, see *Synopsis Plantarum Glumacearum* 1: 42. 1853.

D. atra Luces

Venezuela. Perennial or annual, elegant, caespitose, shortly rhizomatous, lower sheaths persistent at the base, ligule membranous, ternate spikelets, very dark upper florets, membranous glumes, lower glume truncate and reduced or absent, spikelets lack both glumes, lower floret with cartilaginous lemma, see *Journal of the Washington Academy of Sciences* 32(6): 157, 159, f. 4. 1942, Andrea S. Vega & Zulma Rúgolo de Agrasar, “Morphological interpretation of the spikelet in *Digitaria atra* (Poaceae: Panicoideae: Paniceae) and emended generic description.” *Am. J. Bot.* 88: 1670-1674. 2001.

D. badia (Scribn. & Merr.) Fernald (*Panicum badius* Scribn. & Merr.; *Syntherisma badia* (Scribn. & Merr.) Chase) (from the Latin *badius*, *a*, *um* “brown, chestnut-colored”)

U.S., Mexico. See *Bulletin, Division of Agrostology United States Department of Agriculture* 24: 12, f. 3. 1901, *Proceedings of the Biological Society of Washington* 19(34): 191. 1906, *Rhodora* 22: 104. 1920.

D. bailey (Benth.) Hughes (*Panicum baileyi* Benth.)

Australia. See *Flora Australiensis: A Description ...* 7: 471. 1878 and *Bulletin of Miscellaneous Information Kew* 1923(9): 311. 1923.

D. bakeri (Nash) Fernald (*Digitaria gracillima* (Scribn.) Fernald; *Panicum gracillimum* Scribn.; *Syntherisma bakeri* Nash) (for C.H. Baker)

America, U.S. See *Bulletin of the Torrey Botanical Club* 23: 146. 1896, *Bulletin of the Torrey Botanical Club* 25: 296. 1898 and *Rhodora* 22(258): 101-102. 1920.

D. balansae Henr.

Paraguay. See *Mededeelingen van's Rijks-Herbarium* 61: 2. 1930.

D. barbinodis Henr.

Tropical Africa, Mali, Nigeria. Annual, clumped, slender. in Nigeria: ndai, nde

D. benthamiana Henrard (*Digitaria papposa* (R. Br.) P. Beauv.; *Panicum autumnale* F. Muell., nom. illeg., non *Panicum autumnale* Bosc ex Spreng.; *Panicum papposum* var. *leiostachyum* Benth.)

Australia. See *Prodromus Florae Novae Hollandiae* 192. 1810, *Essai d'une Nouvelle Agrostographie* 51, 160. 1812, *Systema Vegetabilium, editio decima sexta* 1: 320. 1825,

Nash, also spelled *barbata*; *Syntherisma fimbriatum* (Link) Nash)

Tropics and subtropics. Annual, sometimes perennial, flexible, more or less branched, upright to decumbent, geniculate-spreading, diffuse, scrambling, trailing, caespitose, stoloniferous, rooting at nodes, ligule membrane-like, leaves pubescent or hairy or often hispid, inflorescence irregularly whorled, racemes arranged in pairs along a common axis, paired spikelets one subsessile and one pedicelled, first glume minute or absent, second glume ciliate or villous, fertile lemma not hard, weed species, economic plant, fodder, found along roadsides, disturbed places, waste places, drained soils, cultivated grounds, on sandy riverbanks, sandy sites, wet sand, wet riverbed, dry hillsides, open areas, in soybean and corn fields, often confused with *Digitaria ciliaris* (Retz.) Koeler, see *Species Plantarum* 1: 57. 1753, *Observationes Botanicae* 3: 8. 1783, *Tableau Encyclopédique et Méthodique ... Botanique* 1: 176. 1791, *Descriptio Graminum in Gallia et Germania* 27. 1802, *Der Gesellschaft Naturforschender Freunde zu Berlin, neue Schriften* 4: 193. 1803, *Enumeratio Plantarum Horti Botanici Berolinensis, ...* 1: 91-92. 1809, *Systema Vegetabilium* 2: 470-471. 1817, *Linnaea* 7(3): 274. 1824, *Hortus Regius Botanicus Berolinensis* 1: 226. 1827, *Révision des Graminées* 1: 33. 1829, *Flora Brasiliensis seu Enumeratio Plantarum* 100. 1829, *Hort. in English: Asian crab grass, Asia crab grass, southern crab grass, tropical crab grass, finger grass

in the Caribbean: zèb fin, herbe fine

in Mexico: cangrejo

in Spanish: horquetilla, falsa pata de gallina, zacate seleya

in El Salvador: zacate seleya

D. blakei Henrard (*Digitaria orbata* Hughes)

Australia. See *Bulletin of Miscellaneous Information Kew* 1923(9): 312. 1923, *Monograph of the Genus Digitaria* 78-79, 895. 1950.

D. bonplandii Henrard (*Digitaria corynotricha* (Hack.) Henrard; *Panicum gerdessii* f. *pleostachya* Hack.)

Brazil. Erect, ascending, see *Österreichische Botanische Zeitschrift* 51: 333, 335. 1901, *Bulletin de l'Herbier Boissier*, sér. 2, 4(3): 271. 1904, *Mededeelingen van 's Rijks-Herbarium* 61: 2. 1930, *Monograph of the Genus Digitaria* 80-82. 1950.

D. brazzae (Franch.) Stapf (*Digitaria lomanensis* Mez; *Digitaria moninensis* Rendle; *Digitaria sulcigluma* Chiov.; *Panicum brazzae* Franch.; *Panicum moninense* (Rendle) Schum.) (for the Italian-born (Castel Gandolfo, Rome) French explorer Count Pierre (Pietro) Paul François Camille Savorgnan de Brazza, 1852-1905 (Dakar, Senegal, French West Africa), colonial administrator who founded the French (Middle) Congo, entered the French naval academy, 1874 became a French citizen, explored Equatorial Africa (he added an area three times the size of France to the French empire in Africa), between 1875 and 1878 this first mission covered 900 miles of inland territory (discovering many plant and animal species unknown in Europe), 1879-82 the French government authorized a second mission, 1880 he reached the Congo River, founded Brazzaville, in 1886 he was named governor general of the French Congo, wrote *Conférences et lettres de P. Savorgnan de Brazza sur ses trois explorations dans l'Ouest africain, de 1875 à 1886*. Paris 1887. See C. de Chavannes, *Avec Brazza. Souvenir de la mission de l'Ouest-Africain*. 1935; Francesco Savorgnan di Brazza, *L'Uomo che donò un Impero*. Vita e opera di Pietro Savorgnan di Brazza. Firenze 1945; Robert de Saint Jean, "Deux témoignages sur les colonies: Las Casas et André Gide." *La Revue hebdomadaire*. 36e année, n 47: 358-364. 19 novembre 1927; Peter Forbath, *The River Congo: The Discovery, Exploration, and Exploitation of the World's Most Dramatic River*. NY, Harper 1977)

Tropical Africa, Namibia, Kalahari. Perennial, tufted to densely tufted, unbranched, hairy nodes, ligule membranous, basal sheaths densely hairy, basal leaves flat and velvety, racemes digitately arranged, hairy spikelets, lower lemma depressed, generally on sandy soils, in open bushveld, woodland, in sour grassland, stony slopes and hill-sides, see *Bulletin de la Société d'Histoire Naturelle d'Autun* 8: 354. 1895, *Catalogue of the African Plants Collected by Dr. F. Welwitsch in 1853-1861* 2: 164. 1899 and *Annali di Botanica* 13: 41. 1914, *Flora of Tropical Africa* 9: 447. 1919, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 57: 192. 1921.

in English: brown finger grass

in South Africa: bruinvingergras

D. breviglumis (Domin) Henrard (*Digitaria diminuta* Hughes; *Digitaria fumida* S.T. Blake; *Panicum breviglume* Domin)

Queensland, New South Wales. Perennial, loosely caespitose, sheath with fine hairs, leaves hairy, spikelets loosely arranged, lower glume minute, upper glume glabrous, sterile lemma glabrous, fertile lemma apiculate and yellowish to black at maturity, in dry woodland, among shrubs, on sandy soils, see *Bulletin of Miscellaneous Information Kew* 1923(9): 312. 1923, *Monograph of the Genus Digitaria* 92. 1950, *Proceedings of the Royal Society of Queensland* 84(5): 62. 1973.

D. brownii (Roemer & Schultes) Hughes (*Digitaria brownii* var. *monostachya* (Benth.) Hughes; *Panicum brownii* Roemer & Schultes, also *brownii*; *Panicum glarae* F. Muell.; *Panicum laniflorum* Nees; *Panicum leucophaeum* Benth., nom. illeg., non *Panicum leucophaeum* Kunth; *Panicum leucophaeum* Kunth var. *monostachyum* Benth.; *Panicum villosum* R. Br., nom. illeg., non *Panicum villosum* Lam.; *Trichachne brownii* (Roem. & Schult.) Henrard) (from the Greek *leukophaes* "white-gleaming," *leukophaeos* "whitish gray, ash-colored") (after the Scottish botanist Robert Brown, 1773-1858, taxonomist, naturalist and plant collector, 1795 took an M.D. at the University of Edinburgh, 1801-1803 circumnavigated Australia on Flinders' voyage, 1811 Fellow of the Royal Society, 1822 Fellow of the Linnean Society and President of that Society (1849-1853), 1827 Keeper of Botany Dept. in the British Museum, London, librarian to Sir Joseph Banks and to the Linnean Society of London, among his many works are *On the Natural Order of Plants Called Proteaceae*. London 1810, *On the Asclepiadeae*. London 1810, *A Brief Account of Microscopical Observations ... on the Particles Contained in the Pollen of Plants*. [The supplemental paper, "Additional Remarks on Active Molecules," appeared in the *Philosophical Magazine* in September 1829] London 1828 and *Prodromus florae Novae Hollandiae et Insulae van-Diemen*. London 1810)

South Australia, Queensland, New South Wales, Victoria, Western Australia, Northern Territory. Perennial, rhizomatous, erect, forming thick tussocks, culms slender and geniculate, base slightly swollen and densely hairy, leaves narrow and flaccid with wavy margins, panicle of digitate and spreading racemes, spikelets in pairs silky-white or purplish, first glume minute, sterile lemma densely hairy, palatable foliage and stems, readily eaten by stock, moderate nutritive value, valuable pasture grass and forage species, attractive when in flower, silvery brown to purple fluffy seed heads that grow on weeping stems, leaves curl and twist as they dry, drought-tolerant, common in mulga and bloodwood communities on sandy and hard red earths, occurs on medium-textured red earths and shallow soils, dry areas, sandy soils, common in upland and lowland areas, can also be found in creek banks, see *Prodromus Florae Novae Hollandiae* 1: 192. 1810, *Systema Vegetabilium* 2: 462. 1817, *London Journal of Botany* 2: 410. 1843, *Linnaea* 25(4): 445. 1853, *Flora Australiensis: A Description ...* 7: 472. 1878 and *Bulletin of Miscellaneous Information Kew* 1923(9): 313. 1923, *Mededeelingen van 's Rijks-Herbarium* 61: 10. 1930.

in English: cotton panic grass, weeping cotton grass, cotton grass

D. brunoana Raimondo

East Africa. Perennial, rhizomatous, leaves triangular, digitate racemes, spikelets in threes, lower glume often absent, upper glume hairy, lower lemma pubescent, on sandy soils, coastal, coastal sand, see *Giornale Botanico Italiano* 122(5-6): 252. 1988[1989].

D. caespitosa Ridl. (*Digitaria caespitosa* Boivin ex A. Camus, nom. illeg., non *Digitaria caespitosa* Ridl.; *Digitaria caespitosa* Boivin ex Baron; *Digitaria longiflora* (Retz.) Pers.; *Paspalum longiflorum* Retz.)

Chase; *Trichachne saccharatum* (Buckley) Nash; *Valota saccharata* (Buckley) Chase)

Northern and southern America, U.S., New Mexico, Texas, Arizona, Mexico, Uruguay, Argentina, Bolivia, Peru. Perennial bunchgrass, long-lived, rhizomatous, desert grass, slender, dark bluish green, hard round and succulent stems, smooth purple to green internode, spikelets covered with

white silvery hairs, seeds drop from the branches at maturity, useful grass, rapid growth, highly palatable green forage, frequently overgrazed, tolerates relatively heavy grazing over long periods, forage for livestock and wildlife, common in arid and semiarid grasslands, found on plains and hillsides, disturbed areas, along roadsides, on well-drained sites, semidesert grassland, wooded savannah, very closely related to *Digitaria sellowii* (Müll. Hal.) Henrard, see *The Botany of the Voyage of H.M.S. Sulphur, Under the Command of Captain Sir Edward Belcher ... during the Years 1836-1842*. London 1844[-1846], *Pacif. Railr. Rep.* 7(3): 21. 1855, *Botanische Zeitung. Pantropical. Annual, vigorous, hairy, spreading or trailing stems, geniculately ascending, erect or decumbent at base and rooting from lower nodes, branching culms, tufted, sheath keeled and pilose, ligule membranous and truncate, leaves oblong-lanceolate acute and hispid or glabrous or sparsely pilose, erect inflorescences, slender and digitate or subdigitate racemes, green-grayish or purplish spikelets paired and lanceolate, fertile floret grayish or slightly purplish, lower glume nerveless and very small or absent, second glume villous, lower lemma hairy, grains used as a famine food, economic plant, a variable and polymorphic species widely naturalized, forage species, good green fodder, best fed after flowering, quite palatable, good pasture, good hay, for silage used only after flowering, a common bad weed of crops, a weed of maize and rice in the tropics, occasional weed in roadbed, useful for erosion control, grows on poor soils, lawn, weedy places, open habitats, along trails, sandy soils and loams, rocky soil along river margin, in sand behind beach, field borders, disturbed areas and waste places, open savannah, coarse sand, alluvial plains, ditches, very similar to *Digitaria sanguinalis* (L.) Scopoli, see *Species Plantarum* 1: 57. 1753, *Flora Carniolica, Editio Secunda* 1: 52. 1771, *Observationes Botanicae* 3: 8. 1783, *Observationes Botanicae* 4: 16. 1786, *Tableau Encyclopédique et Méthodique ... Parodi; *Digitaria eriantha* Steud.; *Digitaria eriantha* subsp. *pentzii* (Stent) Kok; *Digitaria pentzii* Stent; *Digitaria pentzii* var. *minor* Stent) (after Carolus Johannes Pentz, author of *De Diosma*. Praeside Carolo Petro Thunberg dissertationes academicae. Upsaliae [1797]; see Carl Peter Thunberg (1743-1828), *Prodromus plantarum Capensium: quas in promontorio Bonae Spei Africes, annis 1772-1775 collegit ...* Upsaliae 1800)

South Africa, Transvaal. Perennial, creeping, stoloniferous, much-branched, decumbent, often rooting from the lower nodes, glabrous spikelets, no viable seeds, spreads very rapidly by stolons, grows vigorously when established, weed species, cultivated fodder under irrigation, low in

protein, susceptible to frosts, tolerates heavy grazing, resists trampling, will survive droughts, can withstand temporary flooding, produces good pasture when grown with legumes, found in grassy areas, fertile well-drained soils, black soil, wet sand, heavy clays, see *Flora* 12: 468. 1829, *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques, Physiques et Naturelles. Seconde Partie: Sciences Naturelles* 3,1(2-3): 206. 1834 and *Physis. Mascarene Islands, Queensland, New South Wales, Asia. Perennial, slender, low growing, short, erect, stoloniferous and rhizomatous, shallow rooted, often forming a dense turf, branching and rooting from the nodes, glaucous to bluish green, ligule truncate, lowermost sheath pilose or hirsute, inflorescence stiffly erect, racemes digitate, spikelets appressed and paired on unequal pedicels, lower glume minute or absent, upper glume white hairy, sterile lemma finely hairy, fertile floret yellowish and smooth, ornamental, cultivated, palatable, native pasture species, provides useful grazing for steers, a pioneer of cleared land, survives droughts and temporary flooding, grown as a lawn grass, playing fields, putting greens, turf grass, good ground cover, excellent value for erosion control, spreads rapidly by runners, invades speargrass pastures, forms a dense mat which resists the invasion of most weeds, grows in damp sandy soils, disturbed sites and swamps, best on sandy loams and loams, see *Enumeratio Plantarum Horti Botanici Berolinensis*, ... 91. 1809, *Systema Vegetabilium, editio decima sexta* 4(2): 33. 1827, *Flora* 11: 300. 1828, *Révision des Graminées* 1: 33. 1829, *Florae Africae Australioris Illustrationes Monographicae* 26. 1841, *Synopsis Plantarum Glumacearum* 1: 41. 1853, *Flore de la Polynésie Française* 250. 1893 and *Agricultural Gazette of New South Wales* 21: 789. 1910, *Notulae Systematicae. Newbold (*Digitaria smutsii* Stent dedicated to the South African amateur botanist Jan Christiaan Smuts, 1870-1950 (d. near Irene, Transvaal), philosopher, plant collector; see Mary Gunn & Leslie E. Codd, *Botanical Exploration of Southern Africa*. 326-327. 1981; Gilbert Westacott Reynolds, *The Aloes of South Africa*. Balkema, Rotterdam 1982) (*Digitaria stentiana* Henr. named for the South African botanist Sydney Margaret Stent, 1875-1942 (d. Pretoria), agrostologist; see M. Gunn & L.E. Codd, *Botanical Exploration of Southern Africa*. 334. 1981)

Subtropical southern Africa, Tanzania, Angola, Mozambique, Namibia, Swaziland, South Africa, Zimbabwe. Perennial, robust, stout, densely tufted, erect or slightly curved, ascending, extremely variable, branched or unbranched, dense basal leaf cover, forming small clumps, forming open turf, often rooting from the lower nodes, stoloniferous with strong-growing stolons, knotty compact rhizomes, basal leaf sheaths hairy and silky, ligule membranous, upper area of the leaves smooth and glabrous, inflorescence racemose, densely packed erect racemes arranged digitately, lower glume a membranous scale sheath, usually retain its seed in the inflorescence, economic plant, weed species, aggressive, slow to establish, excellent hay, high feeding value, cultivated fodder grass, very high grazing value, excellent pasture grass, highly digestible, highly palatable when young and vigorous, useful for erosion control and slope conservation, improves soil structure, tolerates drought well, withstands trampling and overgrazing, it does not produce viable seeds, often found on sandy soils, in shelter of shrubs, rocky or stony ground, in sandy and stony soil, shale banks, on damp soil, plains and hills, along vleis, along rivers, granite sands, poor soils or fertile clay, on wet sands or heavy clays, woodland savannah, highveld, among boulders, closely related to *Digitaria milanijana* (Rendle) Stapf, taxonomy of *Digitaria eriantha* is complicated, see *Flora* 12: 468. 1829, *Flora Capensis* 7: 375. 1898 and *Bothalia* 1: 268, t. 5-6. 1924, *Bulletin de la Société Botanique de France* 73: 914. 1927, *Bothalia* 3: 147-152, 154. 1930, *Blumea* 1(1): 97. 1934, *Monograph of the Genus Digitaria* 295, 544, 975. 1950, *Flore de l'Afrique du Nord*: 1: 301. 1952, *Bothalia* 13(3-4): 357, 457. 1981.

in English: finger grass, common finger grass, Smuts finger grass, woolly finger grass, Pongola finger grass, Pangola finger grass, digit grass, Pangola digit grass, pongola grass, Pangola grass, Pangola river grass

in Spanish: pangola, pasto pangola

in Southern Africa: bloukruisgras, gewone vingergras, hoenderspoortgras, kleinvingergras, kortbeenhoenderspoortgras, kruisgras, Smuts vingergras, vingergras, wolliges fingergras, wolvingergras; isikonko (Zulu); mangole maseka (Tswana); moeane (Sotho); mmoyane (South Sotho)

D. eriogona (Roth) G.K. Link (*Digitaria stricta* Roth)

Africa. See *Systema Vegetabilium* 2: 474. 1817, *Hortus Regius Botanicus Berolinensis* 1: 227. 1827.

D. eriostachya Mez (*Digitaria eriostachya* Peter, nom. illeg., non *Digitaria eriostachya* Mez; *Digitaria fallens* Parodi)

Southern America, Argentina, Brazil, Paraguay. Perennial, found in moist areas, see *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 56(Beibl. 125): 8. 1921, *Feddes Repertorium, Beiheft* 40(1): 216. 1931.

Zaire. Annual, herbaceous, erect, see *Bulletin du Jardin Botanique de l'État* 28(1): 88. 1958.

D. exasperata Henrard (*Digitaria milanijana* (Rendle) Stapf; *Panicum milanijanum* Rendle)

Zanzibar. See *Transactions of the Linnean Society of London, Botany* 4: 56. 1894 and *Flora of Tropical Africa* 9: 430. 1919, *Monograph of the Genus Digitaria* 236. 1950.

D. exilis (Kippist) Stapf (*Panicum exile* (Kippist) Stapf ex A. Chev.; *Paspalum exile* Kippist; *Syntherisma exilis* (Kippist) Newbold)

West Africa. Annual, delicate, free-tillering, erect, inflorescence aterminal digitate panicle, slender sessile racemes, spikelets acute, sterile lower floret, bisexual fertile upper floret, staple crop, tolerant of poor sandy soils, economic plant, host of some mycotoxins, human and animal food, extremely nutritious cereal, a very important crop, can be utilized in ways similar to rice, straw used as forage, cereals on infertile soils, fodder, only cultivated, can be cut for silage, very small grains used as a famine food, resembles mustard seeds, ground into flour and cooked as a gruel, in Nigeria a flour from acha and baobab grains used together, grains used for brewing beer, grows well on poor sandy and infertile soils, adapted to wetter areas, commonly grown along rivers, often confused with and considered by many authors as a synonym of *Digitaria iburua* Stapf, see *Proceedings of the Linnean Society of London* 1: 157. 1842 and *Bulletin of Miscellaneous Information Kew* 1915: 385. 1915, *Exploration Botanique de l'Afrique Occidentale Française ...* 1: 726. 1920, National Research Council, Board on Science and Technology for International Development, *Lost Crops of Africa, Vol I: Grains*. D. hystrioides Vickery (Greek *hystrix*, *hystrichos* "porcupine, bristles")

Western Australia, Queensland, New South Wales. Perennial, grayish, base swollen and very hirsute, leaf sheaths densely hirsute, long and rigid racemes spreading at maturity, densely hairy spikelets, lower lemma sterile, fertile lemma shining, dry areas, grassland, see *Contributions from the New South Wales National Herbarium* 1(6): 324-327. 1950 [1951].

in English: umbrella grass

D. iburua Stapf (*Syntherisma iburua* (Stapf) Newbold)

Benin, Nigeria, Togo, West Africa, sub-Saharan Western Africa. Annual, very variable, loosely tufted, dark brown spikelets, white grain, grains used as a famine food, eaten like millet, can be utilized in ways similar to rice, cereals on infertile soils, grows well on poor sandy soils, similar to couscous, economic and useful plant, also cultivated, found in isolated pockets, often confused with and considered by many authors as a synonym of *Digitaria exilis* (Kippist) Stapf, see *Bulletin of Miscellaneous Information Kew* 1915: 382, f. 1. 1915, National Research Council, Board on Science and Technology for International Development, *Lost Crops of Africa, Vol I: Grains*. National Academy Press, Washington, D.C. 1996.

in English: black acha, black fonio, little fonio, ibourou, iburuza millet

in French: fonio noir, manne noir, ibourou

in Nigeria: abouru, aburo, aburoo, aburu, acca, accà, alas, but, cub yey, cun ceren, cun yei, dere, ibiroo, ibiròdò, ibulu, iburoo, iburòdò, iburuu, impwinci, makari, nas, ndat, ngas, nunghe, nunghwe, san, sin, uete suit, utangho, utango, wete swit, wusuwusu

in Togo: afio-ouaroun, afio uarun, tchapalo

in West Africa: iburu

Tropical America, Mexico, Argentina, Brazil, Bolivia, Venezuela, southern U.S., Florida, Jamaica. Perennial bunchgrass, straight, dense tuft-forming, sometimes sticky, caespitose, more or less erect, hard and knotty rhizomes, cataphylls densely soft-hairy, spreading at the base, leaves flat, sheaths apically carinate, ligule membranous, lowermost sheaths densely hairy, panicle contracted and dense, spikelets with long hairs, fertile lemma dark brown and lanceolate-acuminate, glume and sterile lemma with brown ascending hairs, fruit beaked, widely naturalized elsewhere,

noxious weed, usually avoided by livestock, in wetlands or nonwetlands, in dry regions at lower elevations, pastures, waste places, rangelands, cultivated soils, grazed areas, along roadsides, disturbed places, pineapple fields, coffee plantations, sandy plains, often occurs after burning, see *Systema Naturae, Editio Decima* 1304. 1759, *Deliciae gallo-belgicae* 37. 1768, *Descriptiones Plantarum Rariorum* 28. 1772, *Acta Literaria Universitatis Hafniensis* 1: 269, t. 1, f. 2. 1776, *Nova Genera et Species Plantarum seu Prodrum* 24. 1788, *Essai d'une Nouvelle Agrostographie* 13, 49, t. 5, 10, f. 5, 9. 1812, *Nova Genera et Species Plantarum* 1: 97. 1815 [1816], *Systema Vegetabilium* 2: 468. 1817, *Primitiae Florae Essequeboensis* ... 60. 1818, *Agrostografia Brasiliensis* 31, t. 1, f. 4. 1823, *Annales des Sciences d'Observation* 1: 448. 1829, *Flora Brasiliensis seu Enumeratio Plantarum* 2: 86-87. 1829, *Mémoires de la Société d'Agriculture, Sciences et Arts d'Angers* 1: 190. 1831, *Enumeratio Plantarum Omnium Hucusque Cognitarum* 1: 124. 1833, *Nomenclator Botanicus* edition 2 1: 43. 1840, *Historia Fisica Politica y Natural de la Isla de Cuba, Botanica* 11: 306. 1850, *Synopsis Plantarum Glumacearum* 1: 67, 93. 1854, *Berberides Americae Australis* 56. 1857, *Abhandlungen der Königlichen Gesellschaft der Wissenschaften zu Göttingen* 7: 265. 1857, *Flora Brasiliensis* 2(2): 137. 1877, *Anales de Sociedad Científica Argentina* 16: 102. Tropical and subtropical Africa. Perennial or annual, variable, vigorous, erect or geniculately ascending, creeping and ascending, straight, tufted to loosely tufted, strongly stoloniferous, long mauvish colored stolons, rhizomatous with branched rhizomes elongate, dense foliage, basal sheaths glabrous to hairy, leaves rough and linear, racemes digitate or subdigitate, pubescent to rough spikelets in pairs, triquetrous winged rachis, lower glume ovate, upper glume nerved and ciliate, spiny bristles on the lemmas present or absent, nerves of the lower lemma scaberulous, grains eaten by baboons, stock fodder, very high grazing value, highly palatable, natural pasture, forage, suitable for horses and cattle, economic plant, requires moist conditions, prefers fertile soils, it does not tolerate waterlogging, naturalized,

coloniser, a weed of cultivation, excellent drought resistance, persistent under heavy grazing, usually found in small patches among trees, occurs on red soil stream banks, woodland and thicket, open spaces, irrigated land, on heavy black seasonally waterlogged soils, seasonally waterlogged grassland, mixed deciduous woodland, sandy soils, on moist sandy soils, disturbed areas and abandoned cultivations, related to *Digitaria eriantha* Steudel, see *Transactions of the Linnean Society of London, Botany* 4: 56. 1894 and *Denkschriften der Kaiserlichen Akademie der Wissenschaften. Mathematisch-naturwissenschaftliche Klasse* 78: 399. 1905, *Journal of the Linnean Society, Botany* 40: 227, t. 6, f. 6-10. 1911, *Resultati scientifici della Missione Stefanini-Paoli nella Somalia italiana. in English: Timorese crab grass

D. ramularis (Trin.) Henrard (*Digitaria tenuissima* Hughes; *Panicum ramulare* Trin.; *Panicum tenuissimum* Benth., nom. illeg., non *Panicum tenuissimum* Mart. ex Schrank)

Queensland, New South Wales. Perennial, slender, villous at the base, leaves hairy, sheath villous to hirsute, spikelets paired and loosely arranged, upper glume glabrous, sterile lemma glabrous, fertile lemma dark or black at maturity, see *De Graminibus Paniceis* 244. 1826 and *Bulletin of*

Miscellaneous Information Kew 1923(9): 312. 1923, *Blumea* 1(1): 101. 1934, *Monograph of the Genus Digitaria* 735-736. 1950, *Blumea* 21: 52. 1973, *Brunonia* 6: 202-203. 1984.

D. recta Hughes (*Digitaria violascens* Link)

Australia, Queensland. See *Hortus Regius Botanicus Bero-linensis* 1: 229. 1827 and *Bulletin of Miscellaneous Information Kew* 1923(9): 311. 1923.

D. remota Henrard (*Digitaria wallichiana* (Henrard) Veldkamp; *Digitaria wallichiana* subsp. *remota* (Henrard) Veldkamp)

Indonesia. See *Blumea* 3(3): 474. 1940, *Blumea* 21(1): 50. 1973.

D. remotigluma (De Winter) Clayton (*Digitaria remotigluma* De Winter; *Digitariella remotigluma* De Winter)

East Africa, South Africa, Namibia. Annual, tufted, decumbent at the base and rooting from the lower nodes, racemes digitate, spikelets in pairs, internode between lower and upper glume, upper glume acute to acuminate, lower lemma acute, common in sandy soil, damp areas, see *Bothalia* 7: 467. 1961, *Kew Bulletin* 29(3): 520. 1974.

D. richardsonii Mez (*Digitaria leptorhachis* (Pilg.) Stapf) Nigeria. See *Flora of Tropical Africa* 9: 462. 1919, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 57: 193. 1921.

D. rigida Stent (*Digitaria natalensis* Stent)

South Africa. See *Bothalia* 3: 151. 1930.

D. rivae (Chiov.) Stapf (*Digitaria botryostachya* Stapf; *Panicum rivae* Chiov.)

Tropical Africa, eastern Africa, Ethiopia. Perennial, tufted to densely tufted, shortly rhizomatous with knotty rhizomes, basal sheaths silky, linear to lanceolate leaves, spikelets paired and narrowly ovate, lower glume a scale, upper glume hairy to villous, lower lemma silky, a weed of cultivated fields, growing in moist areas, alluvial soils, floodplains, sandy soils, flooded places, under the light shade of trees, see *Annuario del Reale Istituto Botanico di Roma* 7: 62, t. 3, f. 2. 1897 and *Bulletin of Miscellaneous Information Kew* 1907: 213. 1907, *Flora of Tropical Africa* 9: 456. 1919. in East Africa: domar, gharo-gharo, garogaro

D. rukwae Clayton

Africa, Tanzania, Chunya, Rukwa. Perennial, rhizomatous, tufted, scaly rhizomes, basal sheath glabrous or silky, inflorescence panicle-like, racemes arranged irregularly, upper floret brown, lower lemma with fine brown hairs, flood plain grassland, alluvial soils, see *Kew Bulletin* 29(3): 521. 1974.

D. sabulicola Henrard

Brazil. See *Blumea* 1(1): 108. 1934.

Cosmopolitan, Eurasia. Annual, tufted, hairy, spreading, often purplish, stems slender and ascending, branched at the base, base decumbent, creeping and rooting at the nodes, leaf sheath with long ciliate hair, ligule membranous, auricles absent, leaves narrow and linear-lanceolate with thickened margins, youngest leaf rolled, racemes slender and spreading or digitate, spikelets usually paired and elliptic, upper glume and lemma spiny along the nerves, lower glume minute and nerveless, fertile floret grayish or purplish, lemma of lower floret scabrid, palatable, fodder, forage grass in pastures, low grazing value, a variable species widely naturalized, invasive, noxious, strongly rooted, weed species of maize and peanuts, economic plant, grown for hay, used in making paper, edible seed used as a flour, a decoction of the plant is used in the treatment of gonorrhoea, leaves might be cyanogenic, very similar to *Digitaria ciliaris* (Retz.) Koeler, occurs in disturbed places and habitats, cultivated fields, waste places, gardens, sandy soils, lawns, poor soils, along roadsides, see *Species Plantarum* 1: 57. 1753, *Flora Carniolica, Editio Secunda* 1: 52. 1771, *Observationes Botanicae* 4: 16. 1786, *Histoire des Plantes de Dauphiné* 2: 69. 1787, *Flora Caroliniana, secundum ...* 76. 1788, *Tableau Encyclopédique et Méthodique ... North America. See *Rhodora* 76(805): 57. 1974.

D. sanguinalis (L.) Scop. f. *sanguinalis*
America.

D. sejuncta (Hack. ex Pilg.) Henrard (*Digitaria sanguinalis* (L.) Scop.; *Panicum sejunctum* Hack. ex Pilg.)

South America. Along roadsides, grassy roadsides, see *Species Plantarum* 1: 57. 1753, *Flora Carniolica, Editio Secunda* 1: 52. 1771, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 27(1-2): 19.

1899 and *Mededeelingen van's Rijks-Herbarium* 61: 5. 1930.

D. sellowii (Müll. Hal.) Henrard (*Digitaria similis* Beetle ex Gould; *Digitaria similis* Beetle; *Digitaria swalleniana* Henrard; *Trichachne affinis* Swallen; *Trichachne sellowii* Müll. Hal.)

Brazil. Along roadsides, very closely related to *Digitaria californica* (Benth.) Henr., see *Botanische Zeitung. Berlin* 19(43): 315. 1861 and *Blumea* 1: 99. 1934, *Contributions from the United States National Herbarium* 29(6): 264-265. 1948 [1949], *Monograph of the Genus Digitaria* 722. 1950, *Rhodora* 65(764): 355. 1963, *Phytologia* 37(4): 344. 1977, *Journal of the Arnold Arboretum* 60(2): 320. 1979.

D. seminuda Stapf (*Digitaria atrofusca* (Hack.) A. Camus; *Panicum atrofuscum* Hack.)

Sierra Leone. See *Journal of the Linnean Society, Botany* 29: 63. 1891 and *Flora of Tropical Africa* 9: 446. 1919, *Bulletin du Muséum d'Histoire Naturelle* 30: 106. 1924, *Kew Bulletin* 29: 519. 1974, *Flora of Tropical East Africa* 451-898. 1982.

D. seriata Stapf (*Digitaria bulbosa* (Henrard) Peter subsp. *polevansii* (Stent) Henrard; *Digitaria polevansii* Stent)

Tropical Africa, Kalahari. Perennial, tufted, erect, base bulbous with hairy scales, stoloniferous and rhizomatous, knotty and woody rhizomes, ligule membranous, leaf blade expanded, basal leaf sheaths keeled and silky, racemes digitate or subdigitate, spikelets hairy, palatable, mostly on sandy soils, see *Flora of Tropical Africa* 9: 432. 1919, *Bothalia* 3: 149. 1930.

in English: Kuruman finger grass

in Southern Africa: Kurumanvingergras, sandveld fingergras

D. sericea (Honda) Honda (*Syntherisma sericea* Honda)

Asia, Japan. See *Botanical Magazine* 38: 127. 1924, *Journal of the Faculty of Science: University of Tokyo, Botany* 3: 298. 1930, *Acta Phytotaxonomica et Geobotanica* 11: 28. 1942.

D. serotina (Walt.) Michx. (*Paspalum serotinum* (Walter) Fluegge; *Syntherisma serotina* Walt.)

U.S., Florida, Louisiana. Perennial or annual, mat-forming, stoloniferous with creeping stolons, membranous ligule, leaves crowded, very short blades, hairy leaves and sheaths, flowering stems ascending or erect, reproduces by seed and stolons, a lawn weed, found in pastures and moist disturbed areas, lawns and low wet places, a weed in St. Augustine lawn, *Stenotaphrum secundatum* (Walter) Kuntze, see *Flora Caroliniana, secundum ...* 76. 1788, *Flora Boreali-Americana* 1: 46. 1803, *Graminum Monographiae ... Pars I. Paspalum. Reimaria* 145. 1810.

in English: dwarf crab grass, blanket crab grass, rabbit crab grass, late-fruited crab grass

D. setifolia Stapf (*Digitaria bovonii* Chiov.; *Digitaria nardifolia* Stapf; *Panicum fibrosum* Hack.)

South Africa. Perennial, densely tufted, racemes subdigitate, spikelets in pairs or in threes, female fertile floret dark, upper glume and lower lemma with brown hairs, growing in damp places or vleis, in mountain sourveld areas, see *Flora Capensis* 7: 376. 1898 and *Österreichische Botanische Zeitschrift* 51(9): 330. 1901, *Bulletin of Miscellaneous Information Kew* 1912(10): 428. 1912, *Annali di Botanica* 13: 40. 1914, *Flora of Tropical Africa* 9: 444. 1919.

in English: fine-leaved finger grass

in English: black-seed finger grass, blackseed crab grass

in Cameroon: fafabo debbo

in Southern Africa: soetvingergras, swartsaadvingergras; moeane, moqopshwe (Sotho)

in India: bili akkaabu hullu

D. texana A.S. Hitchc. (*Digitaria albicoma* Swallen; *Digitaria runyonii* A.S. Hitchc.; *Digitaria subcalva* A.S. Hitchc.)

Northern America, U.S., Texas. Found in sandy areas, oak wood, flats, sandy woods, low ground, sand flats near the riverbanks, near a marsh, sandy oak woods, see *Proceedings of the Biological Society of Washington* 41: 162. 1928, *Journal of the Washington Academy of Sciences* 23(10): 455. 1933, *American Journal of Botany* 21(3): 138, f. 4. 1934, *Journal of the Washington Academy of Sciences* 30(5): 214, f. 3. 1940.

in English: Texan crab grass, Texan finger grass

D. thouaresiana (Fluegge) A. Camus (*Digitaria melanochila* Stapf; *Digitaria scaettae* Robyns; *Digitaria scaettae* var. *glabra* Robyns & Van der Veken; *Digitaria tricolostulata* (Hack.) Henrard; *Panicum puberulum* var. *tricolostulatum* Hack.; *Paspalum thouarsianum* Fluegge) (after the French botanist Louis-Marie Aubert du Petit-Thouars, 1758-1831, traveler and plant collector, among his publications are *Mélanges de botanique et de voyages* ... Paris 1811, *Plantes des îles de l'Afrique australe* ... Paris [1804], *Genera nova madagascariensia*. [Paris 1806], *Histoire particulière des plantes orchidées* ... Paris 1822 and *Histoire des végétaux recueillis dans les îles australes d'Afrique* ... Paris 1806 [-1808]; see Mariella Azzarello Di Misa, a cura di, *Il Fondo Antico della Biblioteca dell'Orto Botanico di Palermo*. 98. Palermo 1988; T.W. Bossert, *Biographical dictionary of botanists represented in the Hunt Institute portrait collection*. 109. 1972; Ida Kaplan Langman, *A Selected Guide to the Literature on the Flowering Plants of Mexico*. Philadelphia 1964)

East Africa. Annual, herbaceous, tufted to loosely tufted, racemes subdigitate, pedicel without a corona of hairs, upper glume and lower lemma hairy, upper floret dark brown to black, grows in marshy places, disturbed sites and seasonally inundated areas, bushland, clearings, see *Graminum Monographiae* ... Pars I. *Paspalum*. *Reimaria* 1: 148. 1810 and *Flora of Tropical Africa* 9: 453. 1901, *Österreichische Botanische Zeitschrift* 51: 332. 1901, *Bulletin de la Société Botanique de France* 75: 914. 1928, *Mémoires de l'Institut Royal des Sciences Naturelles de Belgique* 1: 31. 1931, *Blumea* 1(1): 101. 1934, *Bulletin du Jardin Botanique de l'État* 22: 148. 1952.

D. thwaitesii (Hack.) Henrard (*Panicum thwaitesii* Hack.) (for the British (b. Bristol) botanist George Henry Kendrick Thwaites, 1812-1882 (d. Kandy, Sri Lanka), plant collector, member of Botanical Society of London, from 1849 to 1880 Superintendent and Director of Royal Botanic Gardens at Peradeniya, 1854 Fellow of the Linnean Society, 1865 Fellow of the Royal Society, with Joseph Dalton Hooker (1817-1911) & William Ferguson (1820-1887) wrote *Enumeratio plantarum zeylanicae: an enumeration of Ceylon plants*. London [1858-] 1864; see Isaac Henry Burkill (1870-1965), *Chapters on the History of Botany in India*. Delhi 1965; Ignatz Urban, *Geschichte des Königlichen Botanischen Museums zu Berlin-Dahlem (1815-1913). Nebst Aufzählung seiner Sammlungen*. 315, 403. Dresden 1916; Hook.f. in Bentham & Hooker, *Gen. Stuttgart 1993)

Tropical East Africa, South Africa, Mozambique, Sudan, Yemen. Annual, mat-forming, tufted to very loosely tufted,

branched, terrestrial, slender, ascending and often bent at nodes, often decumbent and rambling, stoloniferous, rooting from the lower nodes, roots fibrous, leaf sheath keeled, leaves softly hairy to pilose, ligule membranous, lax and delicate racemes diverging from a central axis, loosely imbricate spikelets lanceolate and pointed, lower glume reduced or a scale or absent, upper glume and lower lemma almost glabrous, yellowish to brown grain, whole plant eaten by local people, produces few leaves, palatable, little grazing value, grains eaten by baboons, pioneer plant, native pasture species, frequently invasive, noxious weed of arable land and gardens, weed of coffee and qat, occurs in disturbed places, pathsides, in high rainfall areas, in partial shade, open habitats, farmland, uncultivated lands, fallows, in *Acacia* and *Euphorbia* scrub, along lakeshores, under plantation crops, on sandy soils, wastes and cultivated fields, gardens, old cultivated lands and roadsides, in moist places, shallow sand, often found in damp patches where rainwater collects and in shade, grassland, see *Flora Aegyptiaco-Arabica* 17. 1775, *Essai d'une Nouvelle Agrostographie* 51, 173. 1812, *Florae Africae Australioris Illustrationes Monographicae* 25. 1841, *Tentamen Florae Abyssinicae ... 2*: 360-361. 1850, *Bulletin de l'Herbier Boissier* App. 11: 18. 1894, *Conspectus Florae Africae* 5: 768. 1894, *Catalogue of the African Plants Collected by Dr. F. Welwitsch in 1853-1861* 2: 163. 1899 and *Annuario del Reale Istituto Botanico di Roma* 8: 297. 1908, *Nuovo Giornale Botanico Italiano n.s.* 19: 418. 1912, *Dansk Botanisk Arkiv* 4(3): 12. 1922, *Proceedings of the Biological Society of Washington* 40: 84. 1927, *Blumea* 1(1): 96, 105. 1934, *Notizblatt des Botanischen Gartens und Museums zu Berlin-Dahlem* 15: 709. 1942, *Annalen des Naturhistorischen Museums in Wien* 69: 39. 1966.

in English: flaccid finger grass, long-plumed finger grass, long-plume finger grass, velvet finger grass, velvet crab grass, annual couch grass

in East Africa: epada, eriau

in South Africa: langpluim-vingergras, slapvingergras

Throughout the tropics, Southeast Asia, Sri Lanka, Thailand, Vietnam, Indonesia, Malaysia, Philippines, China, India, Japan. Annual or sometimes perennial, geniculate or more or less erect, low-growing, sometimes decumbent and mat-forming, spreading, tufted, without stolons, leaf blades glabrous or hispid, ligule membranous, leaves linear and acute, sheaths pilose apically, racemes erect and slender, rachis winged, bearing shortly hairy spikelets in triplets to the base, spikelets closely pressed to the branches, glumes appressed-puberulent, lower glume minute or absent, fertile lemma black and shining, propagation by seed, invasive weed species, fairly persistent, naturalized, economic plant very palatable, withstands heavy grazing, occurs in disturbed places, field borders, wastelands, lawns, cultivated areas, old plantations, grassy roadsides, in natural open grasslands, sandy riverbanks, moist and semidry areas, old fields, woodland margins, in small bare patch, see *Descriptio uberior Graminum* 131. 1817, *Hortus Regius Botanicus Berolinensis* 1: 229. 1827, *Révision des Graminées* 1: 33. 1829, *Reliquiae Haenkeanae* 1(4-5): 214. 1830, *The Botany of Captain Beechey's Voyage* 231. 1837, *Florae Africae Australioris Illustrationes Monographicae* 21, 25, 117. 1841, *Plantae Junghuhnianae* 3: 381. 1854, *Linnaea* 26(4): 458. 1854, *Synopsis Plantarum Glumacearum* 1: 17. 1855 [1853], *Prolusio florae japonicae* 2: 274 [162?]. 1867, *Flora Brasiliensis* 2(2): 130. 1877, *Annales du Jardin Botanique de Buitenzorg* 8: 51-52. 1890 [1889], *Minnesota Botanical Studies* 1(10-11): 798, t. 44. 1897, *Annual Report of the Missouri Botanical Garden* 49, t. 11. 1899 and *Proceedings of the Academy of Natural Sciences of Philadelphia* 61(3): 488. 1909, *Exkursionsflora von Java ...* 1: 128. 1911, *Bulletin du Jardin Botanique de Buitenzorg, sér. 2*, 12: 25. 1913, *Bibliotheca Botanica* 85: 296. 1915, *Contributions from the United States National Herbarium* 22(6): 468. 1922, *Notulae Systematicae. in English: smooth crab grass, violet crab grass, finger grass, crab grass

in Thailand: yaa paak khwaai, ya pak khwai

in Hawaii: kukaepua'a uka

D. virens Ridl. (*Digitaria mariannensis* Merr., nom. illeg., non *Digitaria marianensis* Mez)

Pacific. See *Philippine Journal of Science* 9: 54. 1914, *Bulletin of Miscellaneous Information Kew* 1926: 478. 1926, *Mededeelingen van 's Rijks-Herbarium* 61: 19. 1930, *Monograph of the Genus Digitaria* 533. 1950.

D. wallichiana (Nees) Stapf (*Digitaria remota* Henrard; *Digitaria wallichiana* (Henrard) Veldkamp; *Digitaria wallichiana* (Steud.) Stapf; *Panicum multibrachiatum* Hochst. ex Steud.; *Panicum multibracteatum* Hochst. ex Steud.; *Panicum wallichianum* Nees; *Panicum wallichianum* Steud.; *Paspalum perrottetii* Hook.f.)

Tropical Africa, Sri Lanka, southern India. Perennial, often decumbent, slender, knotted at the base, rooting at the lower nodes, sheaths hispid, leaf blades hirsute to hairy, open inflorescences, spreading branches, spikelets appressed, first glume absent or reduced to a minute scale, second glume pubescent and nerved, lower lemma pubescent, used as fodder, growing in the mountains, forest shade, moist open grasslands, along trails and roadsides, see *Synopsis Plantarum Glumacearum* 1: 41, 74. 1853-1854, *The Flora of British India* 7: 20. 1896 and *Flora of Tropical Africa* 9: 436. 1919, *Blumea* 3(3): 474. 1940, *Grasses of Burma ...* 307. 1960, *Blumea* 21(1): 50. 1973.

Digitariella De Winter = *Digitaria* Haller

The diminutive of *Digitaria* Haller.

Panicoideae, Panicodae, Paniceae, or Panicoideae, Paniceae, Digitariinae, see *Bothalia* 7: 467. 1961, *Memoirs of the New York Botanical Garden* 78: 509-540. 1996, *Genera Graminum* 298-300. 1999, *Contributions from the United States National Herbarium* 46: 193-213. 2003.

Digitariopsis C.E. Hubb. = *Digitaria* Haller

Resembling *Digitaria* Haller.

About two species, tropical Africa. Panicoideae, Panicodae, Paniceae, or Panicoideae, Paniceae, Digitariinae, annual or perennial, unbranched, herbaceous, tufted, auricles absent, ligule a fringed membrane, plants bisexual, inflorescence

spicate, solitary or paired spikelets flattened, 1 glume per spikelet, lower glume absent, upper glume spurred, palea present, 2 free and fleshy lodicules, 3 stamens, ovary glabrous, 2 stigmas, often in *Digitaria*, type *Digitariopsis red-headii* C.E. Hubbard, see *Historia Stirpium Indigenarum Helvetiae Inchoata* 2: 244. 1768, *Flora Carniolica, Editio Secunda* 1: 52. 1771 and *Hooker's Icones Plantarum* 35: t. 3420. 1940, *Bothalia* 7: 467. 1961, *Memoirs of the New York Botanical Garden* 78: 509-540. 1996, *Genera Graminum* 298-300. 1999, *Contributions from the United States National Herbarium* 46: 193-213. 2003.

Species

D. monobotrys Van der Veken (*Digitaria monobotrys* (Veken) Clayton)

Africa, Tanzania. Indeterminate species, see *Bulletin du Jardin Botanique de l'État* 27: 729. 1957, *Kew Bulletin* 29(3): 524. 1974.

D. major Van der Veken (*Digitaria major* (Van der Veken) Clayton; *Digitaria poggeana* Mez)

Zaire. See *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 57: 191. 1921, *Bulletin du Jardin Botanique de l'État* 25: 330. 1955, *Kew Bulletin* 29(3): 523. 1974.

Dignathia Stapf

From the Greek *dis* “twice” and *gnathos*, *gnathmos* “jaw, cheek,” referring to the hardened glumes.

About 5 species, tropical East Africa to northeast India, Arabia. Chloridoideae, Cynodonteae, annual or perennial, herbaceous, unarmed, caespitose, auricles absent, ligule a fringed membrane, plants bisexual, inflorescence a false spike or a cylindrical false raceme, spikelets separated by short internodes, terminal spikelet sterile and reduced, 2 subequal or very unequal glumes hard and longer than the floret, lemma keeled and shortly awned, palea present, 2 free and fleshy lodicules, 3 stamens, ovary glabrous, 2 stigmas, open habitats, dry areas, bushland, type *Dignathia gracilis* Stapf, see *Hooker's Icones Plantarum* 30: t. 2950. 1911, *Flora of Ethiopia and Eritrea* 7: 180. 1995.

Species

D. aristata Cope

Kenya. See *Kew Bulletin* 46(4): 710. 1991.

D. ciliata C.E. Hubb. (*Dignathia pilosa* (C.E. Hubb.) C.E. Hubb.)

Ethiopia. Perennial, subshrubby, woody, tufted, erect, wiry, much-branched, leaf sheath slightly inflated, inflorescence usually more or less exserted, dense narrowly oblong silky hairy head, spikelets ovate, glumes lanceolate and silky-ciliate with finely acuminate tips, lemma acute and awned,

growing in sand dunes, dry sandy open bushland, see *Kew Bulletin* 1934: 114. 1934, *The Families of Flowering Plants. II. Monocotyledons* 2: 216. 1934.

in Somalia: fodarder

D. gracilis Stapf

Africa, Mozambique, Kenya. Annual, spikelet with rostrate tip, prickly glumes, sand dunes, low shrubland.

D. hirtella Stapf

India, southern Arabia, Ethiopia. Annual, loosely tufted, erect or decumbent, wiry, leaves flat and narrow, ligule a ciliate rim, inflorescence exserted from the leaf sheath, terminal spike-like raceme, spikelets with rostrate tip, glumes shortly pubescent to ciliate, lower glume s-shaped, upper glume gibbous or swollen below, among rocks, on sandy soils, heavy grazed areas, deciduous bushland, stony slopes, disturbed sites, cultivated fields, open scrub.

in Somalia: halfa, sakbir

D. villosa C.E. Hubb.

Somalia. Perennial, subshrubby, erect, tussocky, short, low, woody, tough, branched, imbricate leaf sheaths, inflated uppermost sheath surrounding or embracing the inflorescence, short woody rhizome, spikelets ovate, ciliate to villos glumes subequal, lemma acuminate with an awn point, on red sand, limestone, stony soil, bushland, see *Bulletin of Miscellaneous Information Kew* 1936(5): 293. 1936.

in Somalia: yeris

Digraphis Trin. = *Baldingera* P. Gaertn., B. Mey. & Scherb., *Phalaris* L., *Phalaroides* Wolf

From the Greek *dis* “twice” and *graphis* “brush, pencil.”

Pooideae, Poeae, Phalaridinae, see *Species Plantarum* 1: 54-55. 1753, *Genera Plantarum* 11. 1776, *Methodus Plantas Horti Botanici ...* 201. 1794, *Flora der Wetterau* 1: 43, 96. 1799, *Fundamenta Agrostographiae* 127. 1820, *Bulletin Botanique [Genève]* 1: 220. 1830, *The Grasses of Britain* 188, t. 82. 1845, *Synopsis Plantarum Glumacearum* 1: 11. 1853, and *Iowa State College Journal of Science* 36(1): 1-96. 1961, *Taxon* 40(3): 475-485. 1991, *Taxon* 41: 567. 1992, *Flora Mesoamericana* 6: 236-237. 1994, *Webbia* 49(2): 265-329. 1995, *Taxon* 44: 611-612. 1995, *Contributions from the United States National Herbarium* 48: 140, 270-271, 479-488. 2003.

Diheteropogon (Hackel) Stapf

From the Greek *di* “two,” *heteros* “different” and *pogon* “a beard.”

About 5 species, tropical and South Africa. Panicoideae, Andropogonodae, Andropogoneae, Andropogoninae, annual or perennial, herbaceous, caespitose, slender,

branched or unbranched, erect, sometimes woody at the base, ligule an unfringed membrane, leaf blades linear, plants bisexual, inflorescence spicate or paniculate, paired racemes, compound panicle, sessile spikelet subterete, callus pungent, pedicelled spikelets awnless, 2 glumes more or less equal, 2-keeled lower glume coriaceous and deeply grooved, upper lemma bilobed, lower lemma sterile, awns more or less pungent, palea present, 2 lodicules free, 3 stamens, ovary glabrous, 2 stigmas, more or less palatable, species of open habitats, savannah, poor stony soils, rocky hills, impoverished soil, ruderal, closely related to *Andropogon*, see *Monographiae Phanerogamarum* 6: 647, 649. 1889 and *Bulletin agricole du Congo Belge* 9: 240. 1918, *Bulletin du Jardin Botanique de l'État* 6: 33, t. 31, f. 17-26. 1919, *Hooker's Icones Plantarum* 31: t. 3093. 1922, *Flore Agrostologique du Congo Belge* 152. 1929, *Bulletin agricole du Congo Belge* 25: 409. 1934, *Kew Bulletin* 1936(5): 296. 1936, *Kew Bulletin* 20: 73-76. 1966, *Kew Bulletin* 21: 485. 1968, *Annals of the Missouri Botanical Garden* 75: 866-873. 1988, *Flora of Ethiopia and Eritrea* 7: 317. 1995, David C. Hartnett, Andre F. Potgieter and Gail W.T. Wilson, "Fire effects on mycorrhizal symbiosis and root system architecture in southern African savannah grasses." *African Journal of Ecology* 42(4): 328-337. Dec 2004.

Species

D. amplectens (Nees) W.D. Clayton (*Andropogon amplectens* Nees; *Cymbachne amplectens* (Nees) Roberty)

South Africa. Perennial, tufted, not aromatic, young growth waxy, short scaly rhizomes, leaf sheath rounded, ligule a short membrane, two terminal racemes, spikelets sessile and awned, spikelets pedicellate and awnless, lacking swollen raceme bases, used for thatching, relatively palatable, good forage when young, hay, common in sour grassland, in bushveld, stony slopes, compacted ground, poor shallow soils, woodland, see *Species Plantarum* 2: 1045. 1753, *Florae Africae Australioris Illustrationes Monographicae* 102, 104. 1841 and *Bulletin de l'Institut Française d'Afrique Noire* 22: 105. 1960, *Kew Bulletin* 20: 75. 1966.

in English: broad-leaved bluestem

in Mali: keru goy

in Senegal: bu garabali, cicca, garabali, ndang, nianga, sèl, wâ

in South Africa: breeblaarandropogon

in Upper Volta: garraabal, garraabe

D. amplectens (Nees) W.D. Clayton var. ***catangensis*** (Chiov.) Clayton (*Andropogon amplectens* var. *catangensis* Chiov.)

South Africa, Sudan, Zaire, Tanzania. Leaf blades broadly cordate at base, see *Annali di Botanica* 13: 38. 1914.

D. filifolius (Nees) Clayton (*Andropogon filifolius* (Nees) Steud.; *Cymbachne filifolia* (Nees) Roberty; *Heteropogon filifolius* Nees)

South Africa. Perennial, tufted, unbranched, rhizomatous, bluish green, leaf blade thread-like or wiry, ligule an inconspicuous ring of hairs, inflorescence spatheate with two terminal racemes, spikelets paired, hard and unpalatable, very low grazing value, only grazed when young, common in open mountain sourveld, in bushveld areas, in coastal regions, on slopes, on sandy and loamy soils, see *Synopsis Plantarum Glumacearum* 1: 374. 1854 and *Boissiera. Mémoires du Conservatoire de Botanique et de l'Institut de Botanique Systématique de l'Université de Genève* 9: 243. 1960.

in English: wire bluestem, thread-leaved bluestem, thread-leaved andropogon

in South Africa: draadbloustamgras, draadbloustam, smalblaarblougras, hloko

D. grandiflorus (Hack.) Stapf (*Andropogon grandiflorus* Hack.; *Heteropogon grandiflorus* (Hack.) Rendle; *Heteropogon grandiflorus* (Hack.) Roberty)

South Africa. See *Flora* 68(7): 127. 1885, *Caribbean Affairs* 2(1): 153. 1899 and *Boissiera*. 9: 137. 1960.

D. hagerupii Hitchc. (*Heteropogon hagerupii* (Hitchc.) Roberty) (for the Danish botanist Olaf Hagerup, 1889-1961, traveler, botanical collector in West Africa, see F.N. Hepper & F. Neate, *Plant Collectors in West Africa*. 35. 1971; J.H. Barnhart, *Biographical notes upon botanists*. 2: 100. Boston 1965; T.W. Bossert, *Biographical dictionary of botanists represented in the Hunt Institute portrait collection*. 158. 1972; Ida Kaplan Langman, *A Selected Guide to the Literature on the Flowering Plants of Mexico*. Philadelphia 1964; S. Lenley et al., *Catalog of the manuscript and archival collections and index to the correspondence of John Torrey*. Library of the New York Botanical Garden. 191. 1973; Carl Frederik Albert Christensen (1872-1942), *Den danske Botaniks Historie med tilhørende Bibliografi*. Copenhagen 1924-1926 and *Den danske botaniske litteratur 1880-1911*. Kopenhagen 1913; R. Zander, F. Encke, G. Buchheim and S. Seybold, *Handwörterbuch der Pflanzennamen*. 14. Aufl. Stuttgart 1993)

Tropical Africa. Annual, fodder, on dry sites, sandy places, see *Proceedings of the Biological Society of Washington* 43: 89. 1930, *Boissiera*. 9: 137. 1960.

in Niger: araerichrich, ararhas-rarhasbôlinka, garlabal, haramdam, kara, lallâ, serméy, shamréy

in Nigeria: dakwumbei, galla bar, galla bari, karairayau, kararayau, kararayau, shabrai, shamrai, tokari

in Upper Volta: garraabal, garraabe

Dilepyrum Michx. = *Muhlenbergia* Schreb.

Greek *di, dis* “two, twice” and *lepyron* “a rind, husk, shell,” referring to the scaly involucre.

Chloridoideae, Cynodonteae, Muhlenbergiinae, see *Genera Plantarum* 44. 1789, *Systema Naturae ... editio decima tertia, aucta, reformata* 2: 171. 1791, *Flora oder allgemeine Botanische Zeitung*. 11: 301. 1828 and *Flora Mesoamericana* 6: 276-286. 1994, *American Journal of Botany* 81: 622-629. 1994, *Madroño* 42(4): 427-449. 1995, *Sida* 17: 349-365. 1996, *Brittonia* 50(1): 23-50. 1998, P.M. Peterson, “Systematics of the Muhlenbergiinae (Chloridoideae: Eragrostideae).” *Grasses: Systematics and Evolution* 195-212. 2000, *Contributions from the United States National Herbarium* 41: 67, 143-173. 2001.

Dilepyrum Raf. = *Oryzopsis* Michx.

Greek *di, dis* and *lepyron* “a rind, husk, shell.”

Stipoideae, Stipeae or Poodeae, Stipeae, Stipinae or Arundinoideae, Stipeae, see *Flora Boreali-Americana* 1: 51, t. 9. 1803, *Medical Repository*, ser. 2, 5: 353. 1808, *Essai d'une nouvelle Agrostographie* 17, 18, 173. 1812, *Fundamenta Agrostographiae* 109, 110. 1820, *Species Graminum Stipaceorum* 9, 16, 19. 1842, *Synopsis Plantarum Glumacearum* 1: 419-420. 1854, *Proceedings of the California Academy of Sciences* 4: 168. 1872, *Contributions from the United States National Herbarium* 1(8): 267. 1893, *Anales del Museo Nacional de Buenos Aires* 4: 179, f. 2. 1895 and *Anales del Museo Nacional de Montevideo* 4(2): 4-6, 10-12, f. 2a-c, 4. 1901, *Journal of the Linnean Society, Botany* 36(254): 382. 1904, *Contributions from the United States National Herbarium* 11: 109. 1906, *Bulletin of the Torrey Botanical Club* 39(3): 102. 1912, *U.S. Dept. Agric. Bull.* 772: 156, 158. 1920, *Bot. Gaz.* 107: 1-32. 1945, E.D. Merrill, *Index rafinesquianus*. 75. 1949, *Claves Generum et Specierum Graminearum Primarum Sinicarum Appendice Nomenclatione Systematica* 211. 1957, *Notes Roy. Bot. Gard. Edinburgh* 33: 341-408. 1975, *Flora Tsinlingensis* 1(1): 145. 1976, *Acta Phytotaxonomica Sinica* 19(4): 354, 435. 1981, *Grasses: Systematics and Evolution* 75-82. 2000, *Contributions from the United States National Herbarium* 48: 271, 469-473. 2003.

Dileucaden (Raf.) Steud. = *Panicum* L.

Greek *di, dis, leukos* “white” and *aden* “gland.”

Panicoideae, Panicodae, Paniceae, Panicinae, see *Species Plantarum* 1: 55, 58. 1753, *A Sketch of the Botany of South-Carolina and Georgia* 1(2): 117. 1816, *Révision des Graminées* 1: 219. 1829, *Bulletin Botanique [Genève]* 1: 220. 1830 and *Flora of the Southeastern United States ...* 104, 1327. 1903, *Contr. U.S. Natl. Herb.* 15: 13-15. 1910,

North American Flora 3(2): 200, 210. 1915, *Notizblatt des Botanischen Gartens und Museums zu Berlin-Dahlem* 11(104): 242. 1931, E.D. Merrill, *Index rafinesquianus*. 75. 1949, *Taxon* 33: 126-134. 1984, *Flora Mesoamericana* 6: 302-318. 1994, *Blumea* 41: 181-216, 416. 1996, *Taxon* 45: 319-320. 1996, *Taxon* 47: 869. 1998, *Taxon* 48: 376. 1999, *Contributions from the United States National Herbarium* 46: 306-441. 2003.

Dilophotriche (C.E. Hubb.) Jacq.-Fél. = *Dilophotriche* Jacq.-Fél., *Loudetiopsis* Conert

Greek *dilophos* “double-crested” and *thrix, trichos* “hair.”

About three species, West Africa, Senegal to Ivory Coast. Panicoideae, Panicodae, Arundinelleae, annual or perennial, unbranched, herbaceous, erect, cylindrical, slender, caespitose, auricles absent, ligule fringed, plants bisexual, open inflorescence paniculate, spikelets in triads, 2 glumes unequal, lemmas bilobed, upper lemma with 2 hair tufts, palea keels wingless, 2 free and fleshy lodicules, 3 stamens, ovary glabrous, 2 stigmas, in moist ground, damp places, rainforest, related to *Trichopteryx* and *Loudetiopsis*, often in *Loudetiopsis*, see *Bulletin of Miscellaneous Information Kew* 1897: 294. 1897 and *Bulletin of Miscellaneous Information Kew* 1936(5): 322. 1936, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 77(2-3): 277, 281. 1957, *Journal d'Agriculture Tropicale et de Botanique Appliquée* 7: 407-408. 1960, *Kirkia* 5: 235-258. 1966, *Contributions from the United States National Herbarium* 46: 285. 2003.

Species

D. occidentalis Jacq.-Fél. (*Loudetiopsis occidentalis* (Jacq.-Fél.) Clayton)

Tropical Africa. See *Journal d'Agriculture Tropicale et de Botanique Appliquée* 7: 408. 1960, *Kew Bulletin* 21(1): 123. 1967.

D. pobeguini Jacq.-Fél. (*Loudetiopsis pobeguini* (Jacq.-Fél.) W.D. Clayton)

Tropical Africa. Annual, tufted, growing in moist places, see *Journal d'Agriculture Tropicale et de Botanique Appliquée* 7: 408. 1960, *Kew Bulletin* 21(1): 123. 1967, *Kew Bulletin* 26(1): 111-123. 1971.

in Guinea-Bissau: udubunoro

D. tristachyoides (Trin.) Jacq.-Fél. (*Arundinella tristachyoides* (Trin.) Roberty; *Danthoniopsis tristachyoides* (Trin.) Jacq.-Fél.; *Danthoniopsis tuberculata* (Stapf) Jacq.-Fél.; *Loudetiopsis tristachyoides* (Trin.) Conert; *Panicum tristachyoides* Trin.; *Tristachya microstachya* Nees ex Steud.; *Tristachya tristachyoides* (Trin.) C.E. Hubb.; *Tristachya tuberculata* Stapf)

Tropical Africa. Perennial, tufted, low grazing value, see *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques, Physiques et Naturelles. Seconde Partie: Sciences Naturelles* 4,2(1): 106. 1836, *Synopsis Plantarum Glumacearum* 1: 238. 1854, *Bulletin of Miscellaneous Information Kew* 1897: 294. 1897 and *Contr. U.S. Natl. Herb.* 24 (8): 423. 1927, *Bull. Misc. Inform. Kew* 1935: 309. 1935, *Revue internationale de botanique appliquée et d'agriculture tropicale* 30: 423, 424. 1950, *Petite Flore de l'Ouest-Africain* 392. 1954, *Bulletin de l'Institut Française d'Afrique Noire* 17: 56. 1955, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 77(2-3): 291. 1957, *Journal d'Agriculture Tropicale et de Botanique Appliquée* 7: 408. 1960.

in Guinea: alafasyen, wodion

in Guinea-Bissau: udu-bunoro, udubunoro

in Sierra Leone: fainyinyogi, foni, keep, kulebinyi

Dimeiostemon Raf. = *Andropogon* L.

Perhaps from the Greek *dis* "twice," *meion* "less, smaller" and *stemon* "stamen."

Panicoideae, Andropogoneae, Andropogoninae, type *Dimeiostemon vaginatus* Raf. ex B.D. Jacks., see *Species Plantarum* 2: 1045-1046. 1753, C.S. Rafinesque, *Neogenyton*. 4. 1825, *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques, Physiques et Naturelles* 2(3): 268. 1832, *Index Kewensis* 1: 760. 1893 and *Bolletino della Società Botanica Italiana* 1917: 57. 1917, *Fl. Trop. E. Afr. Gramineae* 770. 1982, *Taxon* 41: 556. 1992, *Taxon* 44: 611-612. 1995, *Contributions from the United States National Herbarium* 46: 20-64, 213. 2003.

Dimeria R. Br. = *Didactylon* Zoll. & Mor., *Haplachne* Presl, *Psilostachys* Steud., *Psilostachys* Turcz. (Euphorbiaceae), *Pterygostachyum* Steud.; *Pterygostachyum* Nees ex Steud., *Woodrowia* Stapf

From the Greek *di* "two" and *meros* "part," referring to the racemes.

About 35-40 species, Madagascar, Southeast Asia, India, China, Indonesia, Australia. Panicoideae, Andropogonodeae, Andropogoneae, Andropogoninae, annual or perennial, herbaceous, straggling, weak to delicate, caespitose, auricles present or absent, ligule an unfringed membrane, leaves acute to acuminate, plants bisexual, spicate or racemose inflorescence terminal, single or digitate racemes, spikelets usually imbricate or distant, spikelets more or less deciduous falling entire at maturity, spikelets borne singly and

shortly pedicelled, raceme rachis flattened or not, at maturity the pair of racemes coil inwards forming a ball, truncate callus, 2 glumes more or less equal, glumes usually keeled often winged, lower floret reduced to a barren lemma, upper floret perfect, upper lemma oblong and bilobed with a glabrous awn, palea absent or minute, lodicules absent, 2 stamens, ovary glabrous, 2 stigmas, open places, in open swampy places, glades, in or near forest, lowlands, lower montane forest, forest margins, type *Dimeria acinaciformis* R. Br., see *Prodromus florae Novae Hollandiae* 204. 1810, *Fund. Agrost.* 167, t. 14. 1820, *Reliquiae Haenkeanae* 1(4-5): 234, 235, t. 38. 1830, *Bulletin de la Société Impériale des Naturalistes de Moscou* 16: 58. 1843, *Systematisches Verzeichniss der von H. Zollinger in den Jahren 1842-1844* 99. 1845-1846, *Synopsis Plantarum Glumacearum* 1: 413. 1854, *Nat. Pfl.-Fam.* 2, 2: 22. 1887, *Hooker's Icones Plantarum* 25: t. 2447. 1896 and *Die Flora der deutschen Schutzgebiete in der Südsee ...*: 165. Leipzig 1901, *Kew Bulletin* 7: 553-592. 1953, *Boissiera* 397-402. 1960, Houyuan Lu and Kam-Biu Liu, "Morphological variations of lobate phytoliths from grasses in China and the southeastern United States." *Diversity & Distributions* 9(1): 73-87. Jan 2003.

Species

D. acinaciformis R. Br. (*Saccharum acinaciforme* (R. Br.) Spreng.)

Australia. See *Species Plantarum* 1: 54. 1753, *Prodromus Florae Novae Hollandiae* 204. 1810, *Systema Vegetabilium, editio decima sexta* 1: 282. 1825.

D. aristata (Hack.) Senaratna (*Dimeria lehmannii* Hook.f., non (Nees ex Steud.) Hack.; *Dimeria lehmannii* var. *aristata* Hackel)

India, Sri Lanka. Perennial, erect or ascending, rachis margins ciliate, spikelets narrowly oblong, winged upper glume more or less obtuse or acute, upper lemma awned, similar to *Dimeria fuscescens* Trin., see *Monographiae Phanerogamarum* 6: 83. 1889 and *Handb. Fl. Ceylon* 5: 196. 1900, *Grasses of Ceylon* 163. 1956 [or *Peradeniya Manual* 163. 1956], *Grasses of Burma ...* 142. 1960.

D. avenacea (Retz.) C.E.C. Fischer (*Anthoxanthum avenaceum* Retzius; *Dimeria acinaciformis* R. Br.; *Dimeria acutipes* Bor; *Dimeria avenacea* var. *elatior* (Hook.f.) Bor; *Dimeria elatior* (Hook.f.) Senaratna; *Dimeria pusilla* Thwaites; *Dimeria pusilla* var. *elatior* Hook.f.)

Southern India, Chennai, Sri Lanka. Annual, erect, weak, slender, delicate, solitary racemes, spikelets narrowly oblong, glumes glabrous to pubescent, upper glume awned, lower glume acuminate and wingless, callus cuneate, upper lemma awned, seasonally inundated areas, open sandy places, flooded plains, see *Observationes Botanicae* 3: 8. 1783, *Enumeratio Plantarum Zeylaniae* 369. 1864, *The Flora of British India* 7(21): 103. 1897 [1896] and *Handb.*

Fl. Ceylon 5: 195. 1900, *Kew Bulletin* 1932: 72. 1932, *Kew Bulletin* 7: 560, 562. 1953, *Grasses of Ceylon* 161-162. 1956, *Grasses of Burma* ... 138-139. 1960, *Boissiera* 399-402. 1960.

D. ballardii Bor (*Dimeria fuscescens* Hook.f., non Trin.; *Dimeria fuscescens* var. *robusta* Hook.f.; *Dimeria fuscescens* var. *zeylanica* Hack.)

Sri Lanka. Perennial, montane, leaves basal, forming a sod, racemes divergent, spikelets narrowly elliptic oblong, callus rounded, glumes scabrid, lower glume winged, upper glume acuminate and winged, upper lemma awned, see *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques, Physiques et Naturelles* 2(3): 335. 1832, *Monographiae Phanerogamarum* 6: 85. 1889 and *Handb. Fl. Ceylon* 5: 198. 1900, *Kew Bulletin* 1952: 584. 1952, *Grasses of Ceylon* 162-163. 1956, *Grasses of Burma* ... 139. 1960.

D. blatteri Bor

India, Western Ghats, Maharashtra. Annual, leaf blades linear and acuminate, racemes subdigitate, spikelets awned, upper lemma bilobed and awned, awn geniculate, rare, growing in open areas, see *Kew Bulletin* 1949: 70. 1949, *Grasses of Burma* ... 140. 1960.

D. chloridiformis (Gaud.) K. Schumann & Lauterbach (*Andropogon chloridiformis* Gaudich.; *Dimeria ciliata* Merr.)

Southeast Asia. Robust, allied to *Dimeria aristata* (Hack.) Senaratna, see *Voyage autour du Monde, entrepris par Ordre du Roi, ... exécuté sur les Corvettes de S. M. l'Uranie et la Physicienne ... Botanique* 412. 1826 and *Die Flora der deutschen Schutzgebiete in der Südsee* 165. 1901, *Philippine Journal of Science* 9: 262. 1914.

D. ciliata Merr. (*Dimeria chloridiformis* (Gaudich.) K. Schum. & Lauterb.)

Philippines. See *Philippine Journal of Science* 9: 262. 1914, *Journal of the Arnold Arboretum* 29(4): 325-326. 1948, *Technical Bulletin, Botany Branch, Queensland Department of Primary Industries* 3: 11. 1978.

D. dipteros Reeder

New Guinea. Lower glume more or less winged, allied to *Dimeria aristata* (Hack.) Senaratna, see *Journal of the Arnold Arboretum* 29(4): 324-325, pl. 6. 1948.

D. fuscescens Trinius

Sri Lanka, Nepal, Thailand, India. Perennial, robust, erect, decumbent, geniculately ascending, rooting at the nodes, racemes divergent, wavy rachis, spikelets narrowly oblong, callus rounded to blunt to subtruncate, glumes keeled and ciliate, upper glume acute and winged, lower glume wingless, upper lemma awned, damp places, grassy areas, see *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques,*

Physiques et Naturelles 2: 335. 1832 and *Grasses of Burma* ... 140. 1960.

D. gracilis Steud. (*Dimeria gracilis* Nees ex Steud.; *Dimeria laxiuscula* Trimen; *Dimeria leptorhachis* subsp. *genuina* Hack.; *Dimeria pilosissima* Thw., non Trin.)

India, Chennai, Sri Lanka. Perennial, slender, erect, leaf blades stiffly erect and pilose, rachis and pedicels filiform, spikelets linear-oblong, callus truncate, glumes keeled and ciliate, upper glume acuminate and wingless, lower glume wingless, upper lemma awned, wet places, see *Synopsis Plantarum Glumacearum* 1: 413. 1855, *Enum. Pl. Zeyl.* 369. 1864, *Journal of Botany, British and Foreign* 23: 272. 1885, *Monographiae Phanerogamarum* 6: 89. 1889 and *Handb. Fl. Ceylon* 5: 199. 1900, *Grasses of Ceylon* 164. 1956, *Grasses of Burma* ... 140. 1960.

D. lehmannii (Nees ex Steud.) Hack. (*Dimeria alata* Hook.f.; *Dimeria lehmannii* var. *mutica* Hack.; *Pterygostachyum lehmannii* Steud.; *Pterygostachyum lehmannii* Nees ex Steud.)

India, Chennai, Sri Lanka. Perennial, erect, ascending, leaf blades more or less villous to pilose or glabrous, spikelets narrowly oblong awnless or bristly, callus truncate, glumes keeled and ciliate, lower glume sometimes glabrous, upper glume winged, lower glume winged on the keel, in grassy places, see *Syn. Pl. Glumac.* 1: 413. 1855, *Monographiae Phanerogamarum* 6: 82-83. 1889, *Fl. Br. Ind.* 7: 105. 1896 and *Handb. Fl. Ceylon* 5: 197. 1900, *Grasses of Ceylon* 164. 1956, *Grasses of Burma* ... 139. 1960.

D. leptorhachis Hack. (also spelled *leptorachis*) (*Dimeria leptorhachis* subsp. *velutina* Hack.; *Dimeria pilosissima* Trin. var. *glabra* Trimen; *Dimeria velutina* (Hack.) Bor)

India, Chennai, Sri Lanka. Perennial, tufted, erect, leaf blades more or less pilose or pubescent, distant spikelets, pedicels cuneate, slender rachis, callus truncate, glumes keeled, lower glume wingless, upper glume acuminate and wingless, upper lemma awned, see *Monographiae Phanerogamarum* 6: 89-90. 1889, *J. Bot.* 23: 272. 1889 and *Grasses of Burma* ... 144. 1960.

D. ornithopoda Trin. (*Andropogon filiformis* Roxb., nom. illeg., non *Andropogon filiformis* Pers.; *Andropogon roxburghianus* Schult.; *Chrysopogon filiformis* Voigt; *Dimeria filiformis* (Roxb.) Hochst.; *Dimeria filiformis* (Roxb.) Hochst. ex Miq.; *Dimeria ornithopoda* var. *tenera* (Trin.) Hackel; *Dimeria stipaeformis* Miq.; *Dimeria stipiformis* Miq.; *Dimeria tenera* Trin.; *Psilostachys filiformis* Dalz. & Gibs.)

Asia, India. Annual, narrow-leaved, found in disturbed areas, see *Synopsis Plantarum* 1: 103. 1805, *Fundamenta Agrostographiae* 167, t. 14. 1820, *Mantissa* 2: 451. 1824, *Flora Indica; or Descriptions* ... 1: 260. 1820, *Hort. Calcutt.* 704. 1845, *Acta Societatis Regiae Scientiarum Indo-Neerlandicae* III. 4: 35. 1851, *The Bombay Flora* ... 305. 1861.

in Japan: karimata-gaya

D. ornithopoda Trin. subsp. *ornithopoda* (*Andropogon filiformis* Roxb., nom. illeg., non *Andropogon filiformis* Pers.; *Andropogon roxburghianus* Schult.; *Chrysopogon filiformis* Voigt; *Dimeria filiformis* (Roxb.) Hochst.; *Dimeria filiformis* (Roxb.) Hochst. ex Miq.; *Dimeria ornithopoda* var. *tenera* (Trin.) Hackel; *Dimeria stipaeformis* Miq.; *Dimeria stipiformis* Miq.; *Dimeria tenera* Trin.; *Psilostachys filiformis* Dalz. & Gibs.)

Asia, India.

D. pubescens Hack. (*Dimeria ceylanica* Bor; *Dimeria kurumthotticalana* K.C. Jacob; *Dimeria trimenii* Hook.f.)

Southern India, Sri Lanka. Perennial, tufted, carpet forming, erect, leaves basal, leaf blades hirsute or pilose, spikelets narrowly oblong-elliptic, rachis flat, callus rounded, lower glume more or less winged, winged upper glume finely pointed to acuminate, upper lemma awned, rocky places, damp areas, see *Monographiae Phanerogamarum* 6: 83. 1889 and *Handb. Fl. Ceylon* 5: 196, 198. 1900, *J. Bombay Nat. Hist. Soc.* 47: 49. 1947, *Kew Bulletin* 1952: 562, 580. 1952, *Grasses of Ceylon* 161, 163. 1956, *Grasses of Burma* ... 140, 144. 1960.

D. tenera Trin. (*Dimeria ornithopoda* subsp. *ornithopoda*; *Dimeria ornithopoda* var. *tenera* (Trin.) Hack.)

Asia. See *Fundamenta Agrostographiae* 167, t. 14. 1820, *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques, Physiques et Naturelles. Seconde Partie: Sciences Naturelles* 3,1(2-3): 335. 1834, *Monographiae Phanerogamarum* 6: 81. 1889.

D. thwaitesii Hack. (*Dimeria pusilla* Thw. var. *pallida* Hook.f.; *Dimeria pusilla* var. *pallida* Thwaites ex Hook.f.)

Southern India, Chennai, Sri Lanka. Annual, erect, racemes solitary, rachis flat, spikelets oblong to narrowly oblong, callus rounded, glumes ciliate, lower glume wingless, upper glume winged and awned, upper lemma awned, rocky places, damp areas, see *Enumeratio Plantarum Zeylanicae* 369. 1864, *Monographiae Phanerogamarum* 6: 78. 1889, *Fl. Br. Ind.* 7: 103. 1896 and *Handb. Fl. Ceylon* 5: 197. 1900, *Grasses of Ceylon* 162. 1956, *Grasses of Burma* ... 144. 1960.

D. woodrowii Stapf

India, Maharashtra, Karnataka, Goa. Rare, annual, leafy, leaf blades linear and finely acuminate, racemes erect and then incurved, spikelets sublinear, each racemes rachis coiled into a loop, upper lemma awned, in open rocky places, plains, coastal areas, hills, see *Icones Plantarum* pl. 24. sub. t. 2312. 1894, *Fl. Brit. India* 7: 104. 1896 and *Grasses of Burma* ... 144. 1960.

Dimesia Raf. = *Anthoxanthum* L., *Hierochloe* R. Br.

Pooideae, Poeae, Phalaridinae, type *Dimesia fragrans* Raf., see *Species Plantarum* 1: 28. 1753, *Flora Peruviana, et Chilensis Prodrum* 125. 1794, *Systema Vegetabilium Florae Peruviana, et Chilensis* 1: 251. 1798, *Prodromus Florae Novae Hollandiae* 208. 1810, *Essai d'une Nouvelle Agrostographie* 62, 164, t. 12, f. 5. 1812 and *Darwiniana* 19(2-4): 422-457. 1975, *Flora Patagónica* 3: 276-285. 1978, *Gayana, Botánica* 42: 1-157. 1985, *Regnum Veg.* 127: 19. 1993, *Contributions from the United States National Herbarium* 48: 111-115, 271, 384-386. 2003.

Dimorphochloa S.T. Blake = *Cleistochloa* C.E. Hubb.

From the Greek *dis* "twice" (*di* "two"), *morphe* "a form, shape" and *chloe*, *chloa* "grass," referring to the inflorescence, some spikelets are cleistogamous and the others chasmogamous.

One species, Australia. Panicoideae, Panicodae, Paniceae, perennial, tufted, wiry, branched, bushy, auricles absent, ligule a fringe of hairs, plants bisexual, cleistogamous and chasmogamous, terminal and axillary inflorescence, glumes 1 or 2 per spikelets, lemmas mucronate, palea present, 2 free and fleshy lodicules, 3 stamens, ovary glabrous, 2 red stigmas, often in *Cleistochloa*, type *Dimorphochloa rigida* S.T. Blake, see *Species Plantarum* 1: 55. 1753, *Plantae Javanicae Rariores* 15, 18, 20. 1838 and *Flora of Tropical Africa* 9: 739. 1920, *Hooker's Icones Plantarum* 33: t. 3209. 1933, *Blumea* 3(3): 161. 1938, *University of Queensland: Department of Biology, Papers* 1(19): 1. 1941, *Gramineae. Flora of New South Wales* 19(1): 66-67. 1961, *The Australian Paniceae (Poaceae)*: 30-33. 1987, Jannink and Veldkamp, "Revision of Chionachninae (Gramineae: Andropogoneae)." *Blumea* 47(3): 545-580. 2002, *Flora of Australia* 43: 275, 354. 2002.

Species

D. rigida S.T. Blake (*Cleistochloa rigida* (S.T. Blake) R.D. Webster; *Cleistochloa rigida* (S.T. Blake) Clayton, nom. illeg., non *Cleistochloa rigida* (S.T. Blake) R.D. Webster)

Australia, Queensland and New South Wales. Perennial, shrubby, fertile floret mucronate, dry scrub, sandstone, see *University of Queensland: Department of Biology* 1(19): 2, t. 1. 1941, *Kew Bulletin* 42(2): 401-403. 1987.

in English: wire grass

Dimorphostachys Fourn. = *Paspalum* L.

From the Greek *dimorphos* "of twin form, two formed" and *stachys* "spike."

Panicoideae, Paniceae, Paspalinae, type *Dimorphostachys monostachya* (Kunth) E. Fourn., see *Systema Naturae, Editio Decima* 846, 855, 1359. 1759, *Transactions of the Linnean Society of London* 2: 83, t. 16. 1794, *Mémoires de la Société d'Agriculture, Sciences et Arts d'Angers* 1: 163. 1831, *Comptes Rendus Hebdomadaires des Séances de l'Académie des Sciences* 80: 441. 1875, *Mexicanas Plantas* 2: 14. 1886 and *Contr. U.S. Natl. Herb.* 12: 116. 1908, *U.S.D.A. Bull.* 772: 227. 1920, *Contributions from the United States National Herbarium* 46: 213-214, 443-527. 2003.

Dinaeba Delile = *Dinebra* Jacq.

Orth. var., see *Fragmentos de Algunas Plantas Filipinas* 77, pl. 121, f. 1. 1809, *Essai d'une Nouvelle Agrostographie* 98. 1812, *Description de l'Égypte, ... Histoire Naturelle, Tom. Second* 26. 1813 [1812], *Nova Genera et Species Plantarum* 1: 172, t. 51. 1815 [1816], *Reliquiae Haenkeanae* 1(4-5): 291-292. 1830, *Enumeratio Plantarum Omnium Hucusque Cognitarum* 1: 280. 1833.

Dineba Delile ex P. Beauv. = *Dinebra* Jacq.

Orth. var., see *Fragmentos de Algunas Plantas Filipinas* 77, pl. 121, f. 1. 1809, *Essai d'une Nouvelle Agrostographie* 98. 1812, *Nova Genera et Species Plantarum* 1: 172, t. 51. 1815 [1816], *Reliquiae Haenkeanae* 1(4-5): 291-292. 1830, *Enumeratio Plantarum Omnium Hucusque Cognitarum* 1: 280. 1833.

Dinebra Jacq.

Probably derived from the Arabic *dineiba*, diminutive of *danab* "tail," possibly alluding to the inflorescence, to the acuminate glumes; see Nikolaus Joseph Baron von Jacquin (1727-1817), *Fragmenta botanica*. 77, t. 121, f. 1. Viennae Austriae [1800-] 1809.

About 3 species, tropical Africa, India, Madagascar. Chloridoideae, Eragrostideae, or Chloridoideae, Cynodonteae, annual, tufted, herbaceous, decumbent, unbranched, auricles absent, leaf blades linear, ligule a very narrow fringed membrane, plants bisexual, inflorescence spicate or paniculate along a central axis, racemes elongated or cuneate, spikes deciduous or persistent, spikelets closely imbricate and sessile, 1- to several-flowered, 2 elongate glumes subequal exceeding and enclosing the florets, lemmas keeled with or without a mucro, palea present, 2 lodicules free and fleshy, 3 stamens, ovary glabrous, 2 red stigmas, weed, shade species or species of open habitats, amongst bushes, wet clays, savannah, in seasonally inundated areas, wet places, in open grassland, streamsides, waterlogged soils, disturbed areas, cultivated fields, related to *Leptochloa*, type

Dinebra arabica Jacq., see *Species Plantarum* 1: 71-73. 1753, *De Fructibus et Seminibus Plantarum ...* 1: 7. 1788, *Fragmenta Botanica* 77, 98, t. 121, f. 1. 1809, *Essai d'une Nouvelle Agrostographie* 71. 1812, *Systema Vegetabilium* 2: 34, 600. 1817, *Hortus Regius Botanicus Berolinensis* 1: 44, 280. 1827, *Proceedings of the Linnean Society of London* 1: 95. 1841, *Ann. Mag. Nat. Hist.* 7: 221. 1841, *Synopsis Plantarum Glumacearum* 1: 301. 1854, *Hooker's Icones Plantarum* 14: t. 1377. 1882, *A List of the Grasses of N.W. India, Indigenous and Cultivated* 33. 1883 and *Kew Bulletin* 28(3): 411-418. 1973 [The genus *Dinebra* Jacq. (Gramineae).], *Journal of Cytology and Genetics* 21: 152-154. 1986, *Annals of the Missouri Botanical Garden* 81(4): 784-791. 1994, *Flora of Ethiopia and Eritrea* 7: 105-107. 1995, *Contributions from the United States National Herbarium* 41: 20-33, 67-68. 2001, R.O. Karar et al., "Factors influencing the weed flora in the Gezira Scheme, Sudan." *Weed Research* 45(2): 121-129. May 2005.

Species

D. perrieri (A. Camus) Bosser (*Craspedorhachis perrieri* A. Camus)

Africa. See *Notulae Systematicae. Herbarium du Museum de Paris* 15(2): 134. 1956, *Adansonia*, sér. 2, 8: 515. 1968.

D. polycarpha S.M. Phillips

Uganda. Annual, erect or ascending, loosely tufted, slender, leaf blades acute, ligule ciliate, open inflorescence, distant spreading linear spikes, spikelets wedge-shaped and closely imbricate, glumes linear-lanceolate acuminate-aristate, lemmas 2-lobed, open places, bushland.

D. retroflexa (Vahl) Panz. (*Cynosurus retroflexus* Vahl; *Dinebra aegyptiaca* Delile; *Dinebra arabica* Jacq.; *Dinebra brevifolia* Steud.; *Dinebra retroflexa* (Forssk.) Panz.; *Dinebra retroflexa* var. *brevifolia* (Steud.) T. Durand & Schinz; *Eleusine calycina* Roxb.; *Leptochloa arabica* (Jacq.) Kunth)

Tropical Africa, Iraq, South Africa. Annual, tufted to loosely tufted, decumbent, creeping and ascending, erect or ascending, straggling, leafy, usually branching from the base, leaf blades flat and flaccid, ligule a short membrane, leaves narrow ending in a fine point, narrow inflorescence of sessile alternate spikes, spikes arranged on the primary axis and more or less erect when young, spikelets 1- to 3-flowered glabrous and loosely imbricate, glumes more or less equal ending in a fine aristate point, lemmas glabrous and awnless or pilose, very ornamental, often a weedy escape in cultivation, weed in ricefields and cotton fields, little grazing value, probably nutritious, fodder and pasture grass, when soft occasionally eaten by cattle and buffaloes, common in disturbed areas moist and wet, in cultivated irrigated

fields, in open grassland, red clay soil, waterlogged soils, dry locations, ricefields and sugarcane fields, see *Symbolae Botanicae*, ... 2: 20. 1791, *Fragmenta Botanica* 77, 98, t. 121, f. 1. 1809, *Ideen zu einer künftigen Revision der Gattungen der Gräser*. 59-60, 20, t. II, f. 1, 2 a-f. 1813-1814, *Description de l'Égypte*, ... *Histoire Naturelle*, Tom. Second 26, t. 11, f. 3. 1813, *Denkschr. kaiserl. Akad. Wiss., Math.-Naturwiss. Kl.* 4: 309-310, pl. 12. 1814, *Flora Indica; or Descriptions* ... 1: 347. 1820, *Révision des Graminées* 1: 91. 1829, *Synopsis Plantarum Glumacearum* 1: 299. 1854, *Conspectus Florae Africae* 5: 865. 1894.

in English: cat's tail grass

in Arabic: am kachena, denab, negil el-nimr

in Nigeria: am kachena, firki, kikiko-masakiya

in South Africa: katstert gras

in India: aalu, bara sarpot, baria, halgyan hullu, huligyan hullu, jaddee, kaali kauli, kharia, lona, lonia, madhvaalu, maljhanji, nari baalada gandu hullu, udullaan hullu, wadata toka gaddee, wadata toka

D. retroflexa (Vahl) Panz. var. ***condensata*** S.M. Phillips

Eastern and southern Africa, Tanzania. Annual, slender, much branched and rooting from the lower nodes, loosely tufted, straggling and ascending, decumbent base, linear and densely crowded inflorescence, spikelets cuneate, glumes coriaceous, lemmas ovate, weed in ricefields, disturbed areas, cultivated fields, waterlogged soils, along roadsides, see *Kew Bulletin* 28(3): 412. 1973.

in English: cat's tail grass

in South Africa: katstert gras, katestertgras

D. retroflexa (Vahl) Panz. var. ***retroflexa*** (*Cynosurus retroflexus* Vahl; *Dactylis paspaloides* Willd.; *Dinebra aegyptiaca* Delile; *Dinebra arabica* Jacq.; *Dinebra brevifolia* Steud.; *Dinebra paspaloides* (Willd.) North Africa, Iraq. Annual, erect, prostrate, foliage basal, open inflorescence, spikes linear oblong, spikelets 1-2-flowered, on dry pasture ground, see *Hortus Berolinensis* 111. 1809, *Essai d'une Nouvelle Agrostographie* 98, 160. 1812, *Révision des Graminées* 1: 91. 1829.

in India: bara sarpot, maljhanji, wadata toka gaddee

Dinochloa Büse

From the Greek *deinos* "terrible, powerful, mighty" and *chloe*, *chloa* "grass," referring to the tall and climbing-scrambling bamboos.

About 20/25(-27) species, south east Asia, Peninsular Malaysia, Thailand, Sumatra. Bambusoideae, Bambusoideae, Bambuseae, Bambusinae, perennial, sympodial, open

tufted, woody, armed or unarmed, thorny or rough, branched, scandent, climbing or vining around other plants, usually solid, persistent, flowering culms leafy, zig-zag internodes, persistent sheaths, basal portion of culm sheaths hard and coarse with rugose girdle, sheath auricles present or absent, young shoots purplish green or green, 3-18 branches at each node, leaf blades more or less large, plants bisexual, pseudospikelets typically small, 1 floret, 2-3 glumes unequal and ventricose, palea rounded on the back, no lodicules, 6 stamens, anthers with apiculate tips, ovary glabrous, 3 stigmas plumose, fruit a berry more or less globose with fleshy pericarp, young culms first erect and straight, a watery sap from freshly cut culms, weed species very difficult to eradicate, culms used for making baskets, growing wild, secondary forest, forest margins, on dry clay soil, hill, along roadsides, undisturbed forest, lowland dipterocarp forest, burnt forest, type *Dinochloa tjankorreh* (Schult.) Büse, see *Plantae Junghuhnianae* 3: 387-388. 1854, *Journal of the Asiatic Society of Bengal* new series, vol. 42, 2(4): 227-254. 1873, *Preliminary Report on the Forest and other Vegetation of Pegu* Calcutta 1875, *Forest Flora of British Burma*, vol. 2. Calcutta 1877, *Annals of the Royal Botanic Garden Calcutta* vol. 7. 1896 and *Indian Trees* London 1906, *The Grasses of Burma* Calcutta (Baptist Mission Press) 1945, *Bambusées* 1913, *An Enumeration of Philippine Flowering Plants* (Bureau of Printing, Dept. of Agriculture and Natural Resources, Bureau of Science, Manila, Publications no. 18) Manila 1925[1923], *Bamboo Research in Asia*: Proceedings of a workshop held in Singapore, 28-30 May 1980 (editors G. Lessard & A. Chouinard) Ottawa 1980, *Kew Bulletin* 36(3): 613-633. 1981, *Flora Indicae Enumeratio: Monocotyledonae, Bambusoideae* Botanical Survey of India, Flora of India, Series 4, Calcutta 1989, S.J. Willott, D.C. Lim, S.G. Compton and S.L. Sutton, "Effects of selective logging on the butterflies of a Bornean rainforest." *Conservation Biology* 14(4): 1055-1065. Aug 2000, Mark G.L. Van Nieuwstadt, Douglas Sheil and Kuswata Kartawinata, "The ecological consequences of logging in the burned forests of East Kalimantan, Indonesia." *Conservation Biology* 15(4): 1183-1186. Species

D. spp.

in English: climbing bamboo

D. alata McClure

Vietnam. See *J. Arnold Arboretum* 23: 100. 1942.

D. albociliata Widjaja

Indonesia. See *Reinwardtia* 11(2): 57-152. 1997.

D. andamanica Kurz (*Dinochloa scandens* R.B. Majumdar, not Kuntze; *Dinochloa tjankorreh* var. *andamanica* (Kurz) Gamble)

India, Andaman and Nicobar Islands. Creeping, solitary or single, evergreen, stout, rooting at the nodes or often climbing over trees, branches geniculate, numerous slender branchlets, nodes swollen, leaves ovate-lanceolate attenuate at the base into a very short petiole, leaf sheaths appressed, ligule ciliate, narrow inflorescence paniculate, spikelets 1-flowered, glumes muticous, stamens included, 2 stigmas, forming impenetrable tangled thickets, very long culms used as ropes, young shoots used as vermifuge, see *Journal of the Asiatic Society of Bengal* n.s. 42, 2(4): 253. 1873, *Preliminary Report on the Forest and other Vegetation of Pegu* App. B, 95. 1875, *Forest Flora of British Burma* 2: 570. 1877, *Annals of the Royal Botanic Garden Calcutta* 7: 415. 1896 and *Bambusées* 169. 1913, *The Grasses of Burma* 23. Calcutta 1945, *Bamboo Research in Asia* 22. 1980, *Florae Indicae Enumeratio: Monocotyledonae, Bambusoideae* 277. Calcutta 1989.

in Andamans: baradahbarat, baradahbarat, bulu akar

D. barbata S. Dransfield

Indonesia. See *Kew Bulletin* 51(1): 115, f. 7. 1996.

D. compactiflora (Kurz) McClure (*Melocalamus compactiflorus* (Kurz) Benth. and Hook.f.; *Melocalamus compactiflorus* (Kurz) Benth.; *Pseudostachyum compactiflorum* Kurz)

India, Assam. Climbing over tall trees, solid, rough, scrambling, scandent, spreading, nodes swollen, culm sheaths hard and brittle, leaves oblong-lanceolate, auricles narrow and fringed with stiff bristles, culms used for basket making, growing in hills and mountains, thickets, clearings, see *Journal of the Asiatic Society of Bengal* n.s. 42, 2(4): 252. 1873 and *Grasses of Burma* 23. 1945, *Florae Indicae Enumeratio: Monocotyledonae, Bambusoideae* 278. 1989.

in Burma: kaleo, nachinwa, nanchinwa, usawi, wa nwe, wa nwe kok

in India: sairil

in Thailand: mai hang chang, mai lai mong, phai hang chang

in Vietnam: ca truc, tre lim

D. cordata S. Dransfield

Indonesia. Disturbed forest, primary forest, see *Kew Bulletin* 51(1): 108, f. 2. 1996.

D. darvelana S. Dransfield (named after Darvel Bay, Sabah)

Malaysia, Sabah, Indonesia. Sheath auricles with long bristles, in forest margins, see *Kew Bull.* 44(3): 435-437, f. 1. 1989.

D. dielsiana Pilger (*Dinochloa diffusa* Merrill; *Schizostachyum dielsianum* (Pilger) Merrill)

Philippines. In forest, see *Fragmenta Florae Philippinae* 1: 148. Leipzig, Paris and London 1904, *Philipp. J. Sci.* 1(Suppl. 5): 391. 1906.

D. elmeri Gamble (probably for the American botanist Adolph Daniel Edward Elmer, 1870-1942, plant collector

in Borneo, California, Washington and in the Philippines. See Elmer Drew Merrill, *Plantae Elmerianae Borneenses*. Berkeley 1929; J. Lanjouw & F.A. Stafleu, *Index Herbariorum*. Part II (2), *Collectors E-H*. Regnum Vegetabile vol. 9. 1957)

Philippines. Disturbed forest, forest shade, primary forest, see *Philipp. J. Sci.* C: 280. 1910.

D. erecta Widjaja

Indonesia. See *Reinwardtia* 11(2): 57-152. 1997.

D. glabrescens Widjaja

Indonesia. See *Reinwardtia* 11(2): 57-152. 1997.

D. gracilis (Majumdar) Bennet and Jain (*Melocalamus gracilis* Majumdar)

India. Terete culms, ciliate auricles nonfalcate and deciduous, acute nodal buds, see *Florae Indicae Enumeratio: Monocotyledonae, Bambusoideae* 278. 1989.

D. hirsuta S. Dransfield

Indonesia. Disturbed forest, primary forest, see *Kew Bulletin* 51(1): 115, f. 6. 1996.

D. indica (Majumdar) Bennet (*Melocalamus indicus* Majumdar)

India. Scandent, evergreen, solid, arching over trees, hanging downward, culm nodes with woody rings, very long culms used for basket making, see *Bull. Bot. Surv. India* 25(1-4): 236. 1983 [1985].

D. kostermansiana S. Dransfield (after the Dutch botanist André Joseph Guillaume Henri Kostermans (born 1907), explorer, taxonomist, plant collector, his writings include *Studies in South American Malpighiaceae, Lauraceae and Hernandiaceae*, especially of Suriname. Amsterdam 1936, "Las Lauráceas chilenas." *Revista Univ.* (Santiago). 24(1): 201-232. 1939, "Notas sobre as Lauraceae-Lauroidae sul americanas." *Bol. Técn. Inst. Agron.* 28: 49-75. 1953, "The genus *Firmiana* Marsili. (Sterculiaceae)." *Reinwardtia*. 4(2): 281-310. 1957, "The New World species of *Cinnamomum* Trew. (Lauraceae)." *Reinwardtia*. 6(1): 17-24. 1961, "New and critical Malaysian Plants. - II, IV, VI, VII." in *Reinwardtia*. 3(1): 1-25. 1954, 4(1): 1-40. 1956, 5(3): 341-369. 1960, 7(1): 19-46. 1965, "A monograph of the genus *Parinari* Aublet. (Rosaceae-Chrysobalanoideae) in Asia and the Pacific region." *Reinwardtia*. 7(2): 147-213. 1965, "A monograph of *Aglaia*, sect. *Lansium* Kosterm (Meliaceae)." *Reinwardtia*. 7(3): 221-282. 1966 and "Notes on Ceylonese ebony trees (Ebenaceae)." *Ceylon J. Sci., Biol. Sci.* 12: 89-108. 1977. See J.H. Barnhart, *Biographical notes upon botanists*. 2: 315. 1965; T.W. Bossert, *Biographical dictionary of botanists represented in the Hunt Institute portrait collection*. 218. 1972; August Adriaan Pulle (1878-1955), edition, *Flora of Suriname*. Amsterdam 1932 etc.; Ida Kaplan Langman, *A Selected Guide to the Literature on the Flow-ering Plants of Mexico*. Philadelphia 1964)

Indonesia. Disturbed montane forest, primary forest, see *Kew Bulletin* 51(1): 108, f. 3. 1996.

D. luconiae (Munro) Merrill (*Arundarbor luconiae* (Munro) Merrill; *Bambusa luconiae* Munro; *Dinochloa aguilarii* Gamble; *Dinochloa ciliata* Kurz; *Dinochloa scandens* var. *angustifolia* Hackel ex Merrill; *Dinochloa tjankorreh* var. *angustifolia* Hackel ex Merrill)

Indonesia, Philippines. See *Trans. Linn. Soc. London* 26: 115. 1868, *Journal of the Asiatic Society of Bengal* n.s. 42, 2(4): 253. 1873, *Rev. Gen. Pl.* 2: 761. 1891 and *Philipp. J. Sci.* 1(Suppl. 5): 392. 1906, *Philipp. J. Sci.* C: 280. 1910, *An Enumeration of Philippine Flowering Plants* 1: 100. 1925[1923].

in the Philippine Islands: bika, bikal, buloau, bulokau, malilit, osiu, timak usiu

D. maclellandii (Munro) Kurz (*Arundarbor maclellandii* (Munro) Kuntze; *Bambusa maclellandii* Munro)

India, Assam, West Bengal. Scandent, evergreen, erect, geniculate, often climbing, straggling, with zig-zag culms, with persistent loose sheaths, leaves acuminate, nodes swollen, culm sheaths cylindrical and leathery, ligule entire or serrate, growing mainly in tropical lowland rain forests, see *Trans. Linn. Soc. London* 26: 114. 1868, *Journal of the Asiatic Society of Bengal* n.s. 42, 2(4): 253. 1873, *Rev. Gen. Pl.* 2: 761. 1891.

in Thailand: phai lueai, phai luei

D. macrocarpa Elmer

Philippines. Scandent, climbing, sprawling, straggling, along streams, riverbanks, see *Leaflets of Philippine Botany* 7(114): 2675. 1915.

D. malayana S. Dransfield (*Dinochloa scandens* not Kuntze)

Malaysia. Forest margins, see *Gard. Bull. Singapore* 16: 84. 1958, *Kew Bulletin* 51(1): 110, f. 4. 1996.

in Thailand: phai khlan

D. matmat S. Dransfield

Java, Indonesia. See *Kew Bulletin* 55(2): 495-497. 2000.

D. nicobariana Majumdar

India, North Nicobar, Katchal Island. Climbing, erect to suberect, slender, hairy, green, numerous branchlets from the nodes, densely hairy leaf sheaths, also in coastal forests, see *Flora Indicae Enumeratio: Monocotyledonae, Bambusoideae* 277. 1989.

D. obclavata S. Dransfield

Malaysia, Sabah. Thin-walled culms, leaf blades hairy, spikelets flattened and ovate-lanceolate, club-shaped fruits, see *Kew Bulletin* 36(3): 620. 1981.

D. oblonga S. Dransfield

Philippines. See *Kew Bulletin* 51(1): 113, f. 5. 1996.

D. orenuda McClure

China. Scandent, see *Lingnan Univ. Sci. Bull.* 9: 18. 1940.

D. palawanensis (Gamble) S. Dransfield (*Schizostachyum palawanense* Gamble)

Philippines. See *Philipp. J. Sci.* C5(4): 274. 1910, *Kew Bulletin* 51(1): 106, f. 1. 1996.

D. prunifera S. Dransfield

Malaysia, Sabah. Thick-walled culms, leaf blades rough, sheath auricles with long bristles, spikelets elongate flattened, young shoots waxy, globose fruits, found in disturbed areas, see *Kew Bull.* 36(3): 622, f. 4. 1981.

D. pubiramea Gamble (*Dinochloa scandens* var. *pubiramea* Merrill)

Philippines, Malaysia. See *Philipp. J. Sci.* C: 279. 1910, *J. Bamb. Res.* 7(3): 26-28. 1988.

in the Philippine Islands: bukao

D. robusta S. Dransfield (*Dinochloa scandens* not Kuntze)

Malaysia, Sabah, Philippines. Climbing, robust, tough, thick walls, small leaf blades, on alluvial soil, forest shade, secondary forest, see *Kew Bulletin* 36(3): 630-632, f. 8. 1981, *Kew Bull.* 47(3): 402. 1992.

D. scabrida S. Dransfield

Malaysia, Sabah, Indonesia. Solid, weed species, found along roadsides, lowland forest, see *Kew Bull.* 36(3): 628, f. 7. 1981.

D. scandens (Blume) O. Kuntze (*Bambusa scandens* Blume; *Chusquea amplopaniculata* Steud.; *Dinochloa scandens* var. *normalis* Kuntze; *Dinochloa tjankorreh* (J.H. Schultes) Büse; *Nastus tjankorreh* J.H. Schultes; *Schizostachyum parviflorum* Munro)

Indonesia, West Java. Sympodial, open, scrambling, numerous slender branches somewhat drooping, inflorescence on leafless branchlets, fruits hard, culms used for making baskets, young shoots edible, growing in primary forests, see *Flora* 7: 291. 1824, *Syst. Veg.* 7, 2: 1358. 1830, *Plantae Junghuhnianae* 3: 388. 1854, *Syn. Pl. Glumac.* 1: 337. 1854, *Trans. Linn. Soc. London* 26: 153. 1868, *Revis. Gen. Pl.* 1: 773. 1891 and *Kew Bulletin* 36(3): 630. 1981, *Kew Bulletin* 51(1): 104. 1996.

in English: zigzag bamboo

in Indonesia: cankoreh

in the Philippine Islands: baka, bakau, balikao, balikau, balilit, bayokau, bia, bika, bukau, bukau, bulukau, burukau, imak, timak, usiu

in Thailand: phai khlan, phai lueai

D. sipitangensis S. Dransf. (named after Sipitang, Sabah)

Malaysia, Sabah, Brunei. Solid, found along roadsides, sandy soils, forest margins, see *Kew Bulletin* 36(3): 620, f. 3. 1981.

D. sublaevigata S. Dransf.

Malaysia, Sabah. Solid, climbing, sympodial, stiffly hairy, broad leaf blades, huge inflorescence, leaf blades used for wrapping a glutinous rice (*hokkien bak chang*), young shoots edible, found along roadsides, lowlands, forest, see *Kew Bull.* 36(3): 626, f. 6. 1981.

in Malaysia: buloh wadan

D. trichogona S. Dransfield

Malaysia, Sabah, Borneo. Sympodial, climbing, solid culms, broad leaf blades smooth, culm sheath hairy at the base, culm sheath ligule lacinate, weed, young shoots edible, leaf blades used for wrapping a glutinous rice (*hokkien bak chang*), found along roadsides, forest margins, see *Kew Bull.* 36(3): 624, f. 5. 1981.

in Malaysia: buloh wadan

D. truncata Widjaja

Indonesia. See *Reinwardtia* 11(2): 57-152. 1997.

D. utilis McClure

China. Used for making paper, see *Lingnan Univ. Sci. Bull.* 9: 20. 1940.

Diperium Desv. = *Mnesithea* Kunth

Possibly from the Greek *dis* “twice, double” and *pera* “a pouch, sac.”

Panicoideae, Andropogonodae, Andropogoneae, Rottboelliinae, type *Diperium cylindricum* Desv., see *Révision des Graminées* 1: 153-154. 1829, *Mémoires de la Société d'Agriculture, Sciences et Arts d'Angers* 1: 180, t. 9, f. 3. 1831 and *Flora of the Guianas. Series A, Phanerogams* 8: 143-146. 1990, *Annals of the Missouri Botanical Garden* 81(4): 775-783. 1994, *Journal of Cytology and Genetics* 29(2): 125-131. 1994, *Flora Mesoamericana* 6: 396-397. 1994, *Contributions from the United States National Herbarium* 46: 214, 295-296. 2003.

***Diplachne* P. Beauv. = *Cleistogenes* Keng,
Leptochloa P. Beauv.**

From the Greek *diploos* “double” and *achne* “chaff, glume,” referring to the bilobed lemma.

About (4-)15/18 species, tropical and subtropical. Chloridoideae, Cynodonteae, perennial or rarely annual, herbaceous, aquatic or semiaquatic, stoloniferous or caespitose, fibrous roots, erect or geniculate, glabrous nodes, hollow internodes, ligule membranous, glabrous or hairy leaves, blade flat or inrolled or involute, plants bisexual, cleistogamous or chasmogamous, inflorescence a contracted panicle of spike-like racemes, spikelets solitary dorsally compressed, florets bisexual and numerous, 2 rather large glumes subequal to very unequal, lemmas membranous and closely imbricate, paleas 2-keeled, 2 free and fleshy

lodicules, 3 stamens, ovary glabrous, 2 plumose stigmas, hidden cleistogenes when present in the leaf sheaths, ornamental, weed species, shade species, forage grass, pampas, rainforest, woodland, savannah, growing in or near water, dry and swampy soils, wet conditions, sometimes referred to and included in *Leptochloa* P. Beauv., serious taxonomic problems, type *Diplachne fascicularis* (Lam.) P. Beauv., see A.M.F.J. Palisot de Beauvois, *Essai d'une nouvelle Agrostographie* 71, 80-81, 161, pl. 15, 16, f. 1, 9. 1812, *Gen. N. Amer. Pl.* 1: 76. 1818, *Trans. Amer. Phil. Soc.* ser. 2, 5: 147. 1835, *A Manual of the Botany of the Northern United States* 588. 1848, *Synopsis Plantarum Glumacearum* 1: 210. 1854, *Anales de la Universidad de Chile* 36: 211. 1870 and *Synopsis der mitteleuropäischen Flora* 2: 339. 1900, *Contr. (Latin *fuscus*, *a*, *um* “dark, brown, black, dusky;” Latin *repto*, *avi*, *atum* “to creep, crawl”)

Africa, America, and Australia. Perennial or rarely annual or biennial, erect or geniculate, glabrous, smooth, soft, caespitose, forming dense and leafy well-rooted tussocks, usually branched, white membranous ligule, leaf sheaths loose and chartaceous, leaves green to purplish, blade flat or slightly inrolled or folded or convolute, inflorescence with branches erect or slightly spreading, rather dense and bristly panicles green to purplish, usually dark spikelets crowded and linear to narrow-elliptic, florets loosely imbricate, glumes unequal, upper glume mucronate or mucronulate, lemmas narrow-oblong and bifid, palea concave, 3 stamens, weed species very variable in growth form, sometimes stoloniferous, palatable, grazed by stock, decorative tussocks, excellent tolerance to salinity, good tolerance to flooding, found in or near wet places or water, aquatic, heavy soils, salt flats and margins of salt pans, mudflats, clay loams, clays, dams or ponds, vleis, floodplains and depressions, lagoons, near swamp or permanent water, rice fields, inundated saline soils, inundated heavy soils, brackish soils, canal banks, brackish swamps, confused with *Diplachne muelleri* Benth., see also *Leptochloa fusca* (L.) Kunth subsp. *fusca*, see *Species Plantarum* 69. 1753, *Systema Naturae*, *Editio Decima* 2: 876. 1759, *Species Plantarum* edition 2. 109. 1762, *Observationes Botanicae* 3: 11. 1783, *Prodromus Florae Novae Hollandiae* 183. 1810, *A Sketch of the Botany of South-Carolina and Georgia* 1: 165. 1816, *Systema Vegetabilium*, *editio decima sexta* 2: 615. 1817, *Flora Indica*, or *Descriptions ...* 1: 334. 1820, *Révision des Graminées* 1: 91. 1829, *Synopsis Plantarum Glumacearum* 1: 247, 266. 1854, *Enum. D. muelleri Benth. (*Leptochloa fusca* (L.) Kunth subsp. *muelleri* (Benth.) N. Snow; *Leptochloa muelleri* (Benth.) Stace)

South Australia, New South Wales, Queensland, Western Australia, Northern Territory. Perennial or annual, erect, tufted, sheath loose, ligule lacerated, blade flat or incurved, panicle narrow with branches erect, spikelets pale at maturity linear and almost sessile, 8-13 florets, lower glume acute to mucronate, lemmas shortly mucronate, lemmas and paleas almost flat, in or near wet places or water, in depressions, often confused with *Diplachne fusca* (L.) P. Beauv., see *Révision des Graminées* 1: 91. 1829, *Flora Australiensis: A Description ...* 7: 619. 1878 and *Watsonia* 18(4): 413. 1991, *Novon* 8(1): 78. 1998.

D. pallida Hack.

South Africa. See *Bulletin de l'Herbier Boissier* 3(8): 387. 1895.

D. parviflora (R. Br.) Benth. (*Triodia parviflora* R. Br.)

South Australia, Victoria, New South Wales, Queensland, Western Australia, Northern Territory. Perennial, smooth and shiny, forming dense and tall tussocks, erect and glabrous, loose sheaths, ligule lacinate, green and scabrous leaves, blade flat or slightly inrolled or folded, green and dense panicles much branched, numerous solitary spikelets shortly stalked and narrowly elliptic, glumes acute or obtuse, lower glume narrow-ovate, upper glume narrowly oblong, lemma mucronate or shortly awned, palea glabrous, ornamental, usually in or near the water, floodplains and depressions, seasonal flooding and moist places, palatable, forage grass, grazed by stock, see *Prodromus Florae Novae Hollandiae* 182. 1810, *Flora Australiensis: A Description* ... 7: 620. 1878.

in English: small-flowered beetle grass

D. uninervia (J. Presl) Parodi (*Atropis carinata* Griseb.; *Diplachne carinata* (Griseb.) Hack.; *Diplachne fusca* (L.) P. Beauv. ex Roem. & Schult.; *Diplachne fusca* var. *macrotricha* Hack.; *Diplachne procumbens* Arechav.; *Diplachne uninervia* f. *abbreviata* Parodi; *Diplachne uninervia* var. *procumbens* (Arechav.) Parodi; *Eragrostis uninervia* (J. Presl) Steud.; *Festuca fusca* L.; *Leptochloa fusca* (L.) Kunth; *Leptochloa fusca* (L.) Kunth subsp. *uninervia* (J. Presl) N. Snow; *Leptochloa uninervia* (J. Presl) Hitchc.; *Leptochloa uninervia* (J. Presl) Hitchc. & Chase; *Megastachya uninervia* J. Presl; *Puccinellia carinata* (Griseb.) Ponert)

America. Annual or short-lived perennial, tufted, smooth, branching from the lower nodes, ligule membranous, blade inrolled or flat, inflorescence spreading with branches spreading, spikelets pedicellate, florets 4-6 with the uppermost often reduced, glumes unequal, lemmas apiculate, palea 2-keeled, grows in ditches and drains, salt-tolerant, see *Systema Naturae, Editio Decima* 2: 876. 1759, *Systema Vegetabilium, editio decima sexta* 2: 615. 1817, *Révision des Graminées* 1: 91. 1829, *Reliquiae Haenkeanae* 1(4-5): 283. 1830, *Synopsis Plantarum Glumacearum* 1: 278. 1854, *Abhandlungen der Königlichen Gesellschaft der Wissenschaften zu Göttingen* 24: 291. 1879, *Anales del Museo Nacional de Montevideo* 1: 414. 1894 and *Boletín de Academia de Ciencias, Bellas Letras y Nobles Artes. Córdoba, Spain* 16: 253. 1900, *Anales del Museo Nacional de Buenos Aires* 21: 130. 1911, *Contributions from the United States National Herbarium* 18(7): 383. 1917, *Revista del Centro de Estudiantes de Agronomía y Veterinaria. Buenos Aires* 18: 147. 1925, *Revista de la facultad de agronomía; universidad nacional de La Plata* 6: 36. 1927, *Revista de la*

Facultad de Agronomía y Veterinaria 6: 37. 1927, *Feddes Repertorium* 84(9-10): 739. 1974, *Novon* 8(1): 79. 1998.

Diplachyrium Nees = *Muhlenbergia* Schreb.

Greek *diploos* "double" and *achyron* "chaff, husk."

Chloridoideae, Cynodonteae, Muhlenbergiinae, type *Diplachyrium rarum* Nees, see *Genera Plantarum* 44. 1789, *Systema Naturae ... editio decima tertia, aucta, reformata* 2: 171. 1791, *Flora oder allgemeine Botanische Zeitung*. 11: 301. 1828 and *Flora Mesoamericana* 6: 276-286. 1994, *American Journal of Botany* 81: 622-629. 1994, *Madroño* 42(4): 427-449. 1995, *Sida* 17: 349-365. 1996, *Brittonia* 50(1): 23-50. 1998, *Genera Graminum* 376. 1999, P.M. Peterson, "Systematics of the Muhlenbergiinae (Chloridoideae: Eragrostideae)." *Grasses: Systematics and Evolution* 195-212. 2000, *Contributions from the United States National Herbarium* 41: 143-173. 2001.

Diplasanthum Desv. = *Dichanthium* Willemet

From the Greek *diplosios* "double" and *anthos* "flower."

Panicoideae, Andropogoneae, Sorghinae, type *Diplasanthum lanosum* Desv., see *Annalen der Botanick. editor Usteri* 18: 11. 1796, *Mémoires de la Société d'Agriculture, Sciences et Arts d'Angers* 1: 170, t. 8, f. 1. 1831 and *Contributions from the United States National Herbarium* 46: 192-193, 214. 2003.

Diplax Solander ex J.J. Bennett = *Diplax* J.J. Bennett, *Ehrharta* Thunb.

From the Greek *diplex*, *diplos* "in double folds, twofold, double."

Ehrhartoideae, Ehrharteae, type *Diplax avenacea* Raoul, see *Kongl. Vetenskaps Akademiens Handlingar* 40: 217, pl. 8. 1779, John Joseph Bennett (1801-1876) & Robert Brown, *Plantae Javanicae rariores*. 11. London 1838, *Annales des Sciences Naturelles; Botanique, sér. 3* 2: 116. 1844 and *Contributions from the United States National Herbarium* 39: 56. 2000.

Diplocea Raf. = *Triplasis* P. Beauv.

Chloridoideae, Cynodonteae, see *Essai d'une Nouvelle Agrostographie* 81, pl. 16, f. 10. 1812, *American Journal of Science* 1: 252. 1818 and *Contributions from the United States National Herbarium* 41: 70, 230-231. 2001.

Diplogon Poir. = *Diplogon* Raf. (Asteraceae),
Diplogon R. Br.

From the Greek *diploos* “double” and *pogon* “beard,” orthographic variant of *Diplopogon* R. Br., see *American Monthly Magazine and Critical Review* 4: 195. 1819.

Diplopogon R. Br. = *Dipogonia* P. Beauv.

From the Greek *diploos* “double” and *pogon* “a beard,” referring to the lobes of the lemma.

One species, Australia. Arundineae, perennial, tufted, herbaceous, auricles absent, ligule fringed, leaf blades pungent, plants bisexual, panicle capitate, central awn of lemma twisted, palea and lodicules present, 3 stamens, ovary glabrous, 2 stigmas, wet places, similar to *Amphipogon*, see Robert Brown (1773-1858), *Prodromus florae Novae Hollandiae* 176. 1810 and *Taxon* 29: 645-666. 1980, Nigel P. Barker, “The relationships of *Amphipogon*, *Elytrophorus* and *Cyperochloa* (Poaceae) as suggested by rbcL sequence data.” *Telopea* 7(3): 205-213. 1997, *Flora of Australia* 43: 374. 2002.

Species

D. setaceus R. Br. (*Amphipogon setaceus* (R. Br.) T.D. Macfarl.; *Dipogonia setacea* (R. Br.) P. Beauv.)

Australia.

in English: bristle grass, bristly diplopogon

Dipogon Steudel = *Dipogon* Liebm.
(Fabaceae), *Sorghastrum* Nash

Greek *di* “two” and *pogon* “a beard.”

Panicoideae, Andropogonodae, Andropogoneae, Andropogoninae, or Panicoideae, Andropogoneae, Sorghinae, see *Methodus Plantas Horti Botanici ...* 207. 1794, *Transactions of the Linnean Society of London* 10: 302. 1811, *A Sketch of the Botany of South-Carolina and Georgia* 1: 144. 1816, C.S. Rafinesque, *Seringe Bull. Bot.* 1: 221. 1830, *Nomenclator Botanicus. Editio secunda* 1: 518. 1840, *Annales des Sciences Naturelles; Botanique, série 4* 2: 374. 1854, *Index Kewensis* 2: 606. 1894 and *Manual of the Flora of the Northern States and Canada* 71. 1901, *Flora of Tropical Africa* 9: 111. 1917, E.D. Merrill, *Index rafinesquianus*. 76. 1949, *University of California Publications in Botany* 23(6): 324. 1950, *Contributions from the United States National Herbarium* 46: 214, 594-598. 2003.

Dipogonia P. Beauv. = *Diplopogon* R. Br.

From the Greek *di* “two” and *pogon* “a beard;” see *Prodromus Florae Novae Hollandiae* 176. 1810, A.M.F.J. Palisot

de Beauvois, *Essai d'une nouvelle Agrostographie*, ou nouveaux genres des Graminées. 125, 160. Paris 1812 and *Flora of Australia* 43: 374. 2002.

Diptychum Dulac = *Sesleria* Scop.

Greek *diptychos* “double-folded, a pair of, doubled,” Latin and Greek *diptycha* for the double shell of the oyster.

Pooideae, Poodae, Seslerieae, see *Species Plantarum* 1: 59, 63, 72-73. 1753, Petri Arduini ... *Animadversionum botanicarum* specimen. Patavii 1759, *Flora Carniolica* 189. 1760, *Animadversionum Botanicarum Specimen Alterum* 18. 1764, *Flore de Département des Hautes-Pyrénées* 81. 1867 and *Opera Botanica Cech.* 3: 104, 176, 230. 1946, *Ind. Nom. Genericorum* 3: 1607. 1979, *Fitologija* 39: 72-77. 1991, *Caryologia* 51: 123-132. 1998, *Opera Botanica* 137: 1-42. 1999, *Botanika Chronika* 13: 133-140. 2000, *Contributions from the United States National Herbarium* 48: 611. 2003.

Disakisperma Steud. = *Leptochloa* P. Beauv.

Perhaps from the Greek *dis* “twice” and *sakkos* “bag, pouch, sack;” *disakkion* “saddle-bag, panniers” and *sperma* “seed;” or from the Greek *ake*, *akis* “tip, thorn, a sharp point.”

Chloridoideae, Eragrostideae, or Chloridoideae, Cynodonteae, type *Disakisperma mexicana* Steud., see *Essai d'une Nouvelle Agrostographie* 71, 161. 1812, *Synopsis Plantarum Glumacearum* 1: 287. 1854[1855] and *Lexikon Generum Phanerogamarum* 169. 1903, *Contr. U.S. Natl.* 24(6): 180. 1925, N. Snow, “Nomenclatural changes in *Leptochloa* P. Beauv. sensu lato (Poaceae, Chloridoideae).” *Novon* 8: 78. 1998, *Contributions from the United States National Herbarium* 41: 70, 130-137. 2001.

Disarrenum Labill. = *Hierochloe* R. Br.

Greek *dis* “twice” and *arrhen* “male;” referring to the flowers.

Pooideae, Poeae, Phalaridinae, type *Disarrenum antarcticum* Labill., see *Species Plantarum* 1: 28. 1753, *Flora Peruviana, et Chilensis Prodromus* 125. 1794, *Systema Vegetabilium Florae Peruviana et Chilensis* 1: 251. 1798, Jacques Julien Houtton de Labillardière (1755-1834), *Novae Hollandiae plantarum specimen.* 2: 82-83, t. 232. 1807, *Prodromus Florae Novae Hollandiae* 208. 1810, *Essai d'une Nouvelle Agrostographie* 62, 164, t. 12, f. 5. 1812 and *Darwiniana* 19(2-4): 422-457. 1975, *Flora Patagónica* 3: 276-285. 1978, *Gayana, Botánica* 42: 1-157. 1985, *Regnum Veg.* 127: 19. 1993, *Contributions from the United States National Herbarium* 48: 111-115, 271. 2003.

Dissanthelium Trin. = *Graminastrum* E.H.L. Krause, *Phalaridium* Nees & Meyen, *Stenochloa* Nutt.

Greek *dissos* “of two kinds, double” and *anthelion*, *anthylion*, a diminutive of *anthos* “flower, blossom,” referring to the small florets.

About 16-17 species, Andes, Mexico, California, Peru and Bolivia. Pooideae, Poodae, Poeae, or Pooideae, Poeae, Poinae, perennial bunchgrass or annual, tufted, herbaceous, stoloniferous, rhizomatous, dwarf, auricles absent, narrow leaf blades, ligule a fringed membrane, plants bisexual, open or contracted inflorescence paniculate, small few-flowered panicles, very short rachilla, 2 glumes equal to subequal, glumes longer than the awnless 2-flowered spikelets or as long as spikelet, lemmas membranous and keeled, 3 stamens, ovary glabrous, 2 stigmas, high-Andean punas and páramos, open habitats, related to *Relchela*, type *Dissanthelium supinum* Trin., see *Linnaea* 10(3): 305. 1836, *Gramineae* 29. 1841, *Nova Acta Phys.-Med. Acad. Caes. Leop.-Carol. Nat. Cur.* 19(Suppl. 1): 161. 1843, *Proceedings of the Academy of Natural Sciences of Philadelphia* 4: 25. 1848, *J. Acad. Nat. Sci. Philadelphia*, ser. 2, 1: 189. 1848 and *Beihefte zum Botanischen Centralblatt* 32(2): 348. 1914, *Phytologia* 11(6): 361-376. 1965, *Kurtziana* 25: 157-163. 1997, S.A. Renvoize, *Gramíneas de Bolivia* 158-162. 1998, *Contributions from the United States National Herbarium* 48: 271-273, 380, 479, 617. 2003.

Species

D. aequale Swallen & Tovar (*Dissanthelium laxifolium* Swallen & Tovar)

Bolivia. Perennial, erect, caespitose, glumes equal linear-lanceolate, lower lemma scabrous, see *Phytologia* 11: 368, 370. 1965.

D. amplivaginatum Tovar

Peru. See *Publicaciones del Museo de Historia Natural “Javier Prado.” Serie B. Botánica* 33: 7. 1985.

D. breve Swallen & Tovar (*Dissanthelium calycinum* (J. Presl) Hitchc.; *Dissanthelium densum* Swallen & Tovar; *Dissanthelium expansum* Swallen & Tovar)

Peru. See *Journal of the Washington Academy of Sciences* 13(11): 224. 1923, *Phytologia* 11: 371, 374. 1965.

D. brevifolium Swallen & Tovar

Peru. See *Phytologia* 11: 375. 1965.

D. californicum (Nutt.) Hook. (*Stenochloa californica* Nutt.)

North America. See *Proceedings of the Academy of Natural Sciences of Philadelphia* 4: 25. 1848, *Hooker’s Icones Plantarum* 4: 56, t. 1375. 1881.

in English: California dissanthelium

D. calycinum (J. Presl) Hitchc. (*Brizopyrum calycinum* J. Presl; *Deschampsia mathewsii* Ball; *Dissanthelium breve* Swallen & Tovar; *Dissanthelium sclerochloides* Steud. ex E. Fourn.; *Dissanthelium supinum* Trin.; *Poa calycina* (J. Presl) Kunth)

South America, Peru, Bolivia. Annual or short-lived perennial, tufted, leaf blades linear, contracted panicle more or less exserted, lemmas scaberulous, see *Reliquiae Haenkeanae* 1(4-5): 281. 1830, *Enumeratio Plantarum Omnium Hucusque Cognitarum* 1: 326. 1833, *Linnaea* 10(3): 305. 1836, *Journal of the Linnean Society, Botany* 22: 60. 1885, *Mexicanas Plantas* 2: 112. 1886 and *Journal of the Washington Academy of Sciences* 13(11): 224. 1923, *Novon* 8(2): 201. 1998.

D. calycinum (J. Presl) Hitchc. subsp. *calycinum*

South America.

D. calycinum (J. Presl) Hitchc. subsp. *mathewsii* (Ball) Soreng (*Deschampsia mathewsii* Ball; *Dissanthelium mathewsii* (Ball) R.C. Foster & L.B. Sm.; *Dissanthelium sclerochloides* Steud. ex E. Fourn.)

South America. See *Journal of the Linnean Society, Botany* 22: 60. 1885 and *Phytologia* 12(5): 249. 1965, *Novon* 8(2): 201. 1998.

D. giganteum Tovar

South America, Peru. See *Publicaciones del Museo de Historia Natural “Javier Prado.” Serie B. Botánica* 33: 8. 1985.

D. laxifolium Swallen & Tovar (*Dissanthelium aequale* Swallen & Tovar)

South America. See *Phytologia* 11: 368, 370. 1965.

D. longifolium Tovar

Peru. See *Publicaciones del Museo de Historia Natural “Javier Prado.” Serie B. Botánica* 33: 9. 1985.

D. longiligulatum Swallen & Tovar

Bolivia. Perennial, ascending, rhizomatous, leaf blades linear and acute, dense panicles spiciform, glumes equal oblong-lanceolate, lower lemma scabrous, see *Phytologia* 11: 369. 1965.

D. macusaniense (E.H.L. Krause) R.C. Foster & L.B. Sm. (*Dissanthelium minimum* Pilg.; *Graminastrum macusaniense* E.H.L. Krause; *Vilfa macusaniensis* Steud. ex Lechler)

Peru. Annual, leaf blades linear and acute, contracted inflorescence, panicle long and exserted, glumes lanceolate, lemmas scabrous bidentate, see *Berberides Americae Australis* 56. 1857 and *Beihefte zum Botanischen Centralblatt* 32(2): 348. 1914, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 56(Beibl. 123): 28. 1920, *Phytologia* 12(5): 249. 1965.

D. peruvianum (Nees & Meyen) Pilg. (*Airopsis peruviana* Meyen; *Phalaridium peruvianum* Nees & Meyen)

Peru. Annual, leaf blades linear and acute, contracted panicle oblong, glumes ovate, lemmas acute and glabrous, see *Reise um die Erde* 1: 484. 1834, Gramineae 29. 1841, *Nova Acta Phys.-Med. Acad. Caes. Leop.-Carol. Nat. Cur.* 19(Suppl. 1): 161-162. 1843 and *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 37: 378. 1906.

D. pygmaeum Swallen & Tovar

Peru. See *Phytologia* 11: 367. 1965.

D. rauhii Swallen & Tovar

Peru. See *Phytologia* 11: 376. 1965.

D. semitectum Swallen & Tovar

Peru. See *Phytologia* 11: 370. 1965.

D. trollii Pilger

Bolivia. Perennial, rhizomatous, leaf blades linear and acute, contracted panicle, lemmas glabrous, see *Notizblatt des Botanischen Gartens und Museums zu Berlin-Dahlem* 11: 778. 1933.

Dissochondrus (W.F. Hillebrand) Kuntze

From the Greek *dissos* "of two kinds, double, in pairs" and *chondros* "cartilage, gristle," referring to the fertile florets.

One species, Hawaii. Panicoideae, Panicodae, Paniceae, perennial, caespitose, auricles present, leaf blades pseudopetiolate, plants bisexual, contracted inflorescence paniculate, a spiciform panicle, both florets similar and bisexual, each spikelet subtended by 1 to several bristles, 2 glumes unequal, palea present, 2 free and fleshy lodicules, 3 stamens, ovary glabrous, 2 stigmas, shade species, slopes, allied to *Setaria*, type *Dissochondrus bifidus* Kuntze, see *Flora of the Hawaiian Islands* 503. 1888, *Revisio Generum Plantarum* 2: 770. 1891.

Species

D. biflorus Kuntze ex Hack.

Hawaii. Lower floret resembling the upper, lower glume 5-nerved, upper glume 7-9-nerved.

Distichlis Raf. = *Trisiola* Raf.

From the Greek *distichos* "in two rows, in two ranks," *dis* "twice" and *stichos* "rank," referring to the leaves, to the conspicuous phyllotaxy; see Constantine Samuel Rafinesque, in *Journal de Physique, de Chimie, d'Histoire Naturelle et des Arts*. 89: 104. Aug 1819.

About 5/6(-12) species, New World, America, Canada to Argentina, Australia. Chloridoideae, Cynodonteae, Monanthochloinae, perennial, polymorphic, short, halophytic, herbaceous, coarse and prickly, erect, rarely stoloniferous, rhizomatous with long creeping rhizomes, usually strongly

or conspicuously distichous leaves, auricles absent, sheaths ciliate or not, ligule a ciliate rim or a very short membrane fringed with hairs, leaf blade narrow and almost pungent-pointed, solid internodes, plants dioecious or rarely monoecious, inflorescence exerted usually contracted racemose or spicate or paniculate, spikelets solitary and several-flowered, male spikelets thin, glumes very unequal or more or less equal, second glume awnless, lemmas hairless and awnless, palea keels narrowly winged, hairy callus absent, 2 truncate lodicules free and fleshy, 3 stamens, 2 stigmas, fruit ellipsoid, weed species, forage, not very palatable, mat-forming, salinity indicator, alkali and salt grass, grows in coastal saline habitats, open habitats, seashores and deserts, gypsum flats of deserts, inland alkaline and saline habitats, sandy flats, dunes and coasts above salt marshes, type *Distichlis maritima* Raf., see *Fl. Ludov.* 144. 1817, *Journal de Physique, de Chimie, d'Histoire Naturelle et des Arts* 89: 104. 1819, *Neogenyton* 4. 1825 and *Rhodora* 27: 67-72. 1925, *Fl. Victoria* 145. 1931, *Bulletin of the Torrey Botanical Club* 70(6): 638-650. 1943 [The North American variations of *Distichlis spicata*.], *Gram. Bonar.* edition 4: 28. 1946, *Fieldiana, Botany* 24(2): 38-331. 1955, *Rev. Arg. Agron.* 22: 86-94. 1955 [The grass genus *Distichlis*.], *Madroño* 18: 33-39. 1965, *Willdenowia* 5: 472. 1969, *Grasses Tasmania* 132. 1991, P.J. Clarke & P. Adam, "*Distichlis distichophylla* (Labill.) Fassett, a new coastal record for a salt marsh grass in New South Wales." *Wetlands (Australia)*. 12(2): 13-15. 1993, *Flora Mesoamericana* 6: 258. 1994, *Fontqueria* 46: [i-ii], 1-259. 1997, S.A. Renvoize, *Gramíneas de Bolivia* 291-292. 1998, Geraldine L. Dodd & Lisa A. Donovan, "Water potential and ionic effects on germination and seedling growth of two cold desert shrubs." *Am. J. Bot.* 86: 1146-1153. 1999, Ewald Weber & Carla M. D'Antonio, "Germination and growth responses of hybridizing *Carpobrotus* species (Aizoaceae) from coastal California to soil salinity." *Am. J. Bot.* 86: 1257-1263. 1999, *Contributions from the United States National Herbarium* 41: 70-73, 232. 2001, *Flora of Australia* 43: 111, 163, 230. 2002, *Am. J. Bot.* 89: 472-478, 592-601, 659-666, 1847-1851. 2002, *Flora Fanerogámica Argentina*, Poaceae, parte 5. Tribu Eragrostidae. 86: 1-68. 2003, Hester L. Bell & James W. O'Leary, "Effects of salinity on growth and cation accumulation of *Sporobolus virginicus* (Poaceae)." *Am. J. Bot.* 90: 1416-1424. 2003, *Am. J. Bot.* 91: 1-9. 2004, *Journal of Ecology* 92(1): 72-85. Feb 2004, *Restoration Ecology* 12(3): 368-375, Sep 2004, *Conservation Biology* 18(6): 1525-1532, Dec 2004, *Ecology Letters* 7(12): 1155-1162. Dec 2004, *Restoration Ecology* 12(4): 533-545. Dec 2004, Jinglan Wu, Denise M. Seliskar and John L. Gallagher, "The response of plasma membrane lipid composition in callus of the halophyte *Spartina patens* (Poaceae) to salinity stress." *Am. J. Bot.* 92: 852-858. 2005, J.J. James et al., "Multiple resources limit plant growth and function in a saline-alkaline desert community." *Journal of Ecology* 93(1): 113-126. Feb 2005, *Global Change Biology* 11(3):

369-377. Mar 2005, *Journal of Ecology* 93(2): 279-290. Proffitt, "Spartina alterniflora genotype influences facilitation and suppression of high marsh species colonizing an early successional salt marsh." *Journal of Ecology* 93(2): 404-416. Apr 2005, *Biological Journal of the Linnean Society* 85(2): 157-166. June 2005.

Species

D. ammobia Phil. (*Brizopyrum douglasii* (Nees) Hook. & Arn.; *Poa curva* Nees ex Steud.; *Poa douglasii* Nees) (Greek *ammos* "sand" and *bio* "to live," referring to the native or preferred habitat)

Chile. See *Annals of Natural History* 1: 284. 1838, *The Botany of Captain Beechey's Voyage* 404. 1840, *Synopsis Plantarum Glumacearum* 1: 259. 1854, *Anales de la Universidad de Chile* 43: 569. 1873.

D. australis (Speg.) Villamil (*Monanthochloe australis* Speg.)

South America, Argentina. Arid areas, see *Anales Museo Nacional de Historia Natural de Buenos Aires* 7: 196. 1902, *Kurtziana* 5: 388. 1969.

D. dentata Rydb. (*Distichlis spicata* subsp. *stricta* (Torr.) Thorne; *Distichlis spicata* var. *stricta* (Torr.) Scribn.; *Distichlis stricta* (Torr.) Rydb.; *Distichlis stricta* var. *dentata* (Rydb.) C.L. Hitchc.)

U.S. See *Annals of the Lyceum of Natural History of New York* 1(1): 155-156. 1824, *Bulletin of the California Academy of Sciences* 2: 415. 1887, *Memoirs of the Torrey Botanical Club* 5(4): 51. 1894 and *Bulletin of the Torrey Botanical Club* 32(11): 602. 1905, *Bulletin of the Torrey Botanical Club* 36: 536. 1909, *Vascular Plants of the Pacific Northwest* 1: 553. 1969, *Aliso* 9(2): 195. 1978.

D. distichophylla (Labill.) Fassett (*Distichlis maritima* sensu Benth., non Raf.; *Distichlis maritima* Raf.; *Distichlis spicata* sensu J. Black; *Distichlis spicata* subsp. *stricta* (Torr.) Thorne; *Distichlis spicata* var. *stricta* (Torr.) Scribn.; *Festuca distichophylla* (Labill.) Hook.f., nom. illeg., non *Festuca distichophylla* Michx.; *Poa distichophylla* (Labill.) R. Br., nom. illeg., non *Poa distichophylla* Gaudin; *Poa paradoxa* Roem. & Schult.; *Uniola distichophylla* Labill.)

South Australia, New South Wales, Victoria, Tasmania. Perennial, dioecious, unisexual, stoloniferous, endangered, halophytic, low growing, coarse and prickly, rigid, long creeping rhizomes, ascending or decumbent culms, often has closely bunched stems and leaves, leaf sheath glabrous, distichous leaves rigid and almost pungent-pointed, ligule a ciliate rim, leaf blade rolled or flat, spikelets in a short terminal spike or raceme, glumes keeled and nerved, lemmas nerved, stigma conspicuous on female plants, anthers conspicuous on male plants, fodder grass, low forage value,

salinity indicator plant, tolerant of periodically flooded or very wet soils, useful for stabilising saline soils, sand binder in coastal areas, suitable for revegetation in salt marsh and tidal or freshwater wetlands, grows in saline soils, moist surfaces, dunes, coast and salt marshes, from sandy to loams and clays, dune and coast above salt marsh, areas of high salinity, in or around shallow pools, near-shore areas, see *Novae Hollandiae Plantarum Specimen* 1: 21, t. 24. 1804, *Prodromus Florae Novae Hollandiae* 182. 1810, *Systema Vegetabilium* 2: 569. 1817, *Annals of the Lyceum of Natural History of New York* 1(1): 155-156. 1824, *Flora Tasmaniae* 2: 127. 1858, *Bulletin of the California Academy of Sciences* 2: 415. 1887, *Memoirs of the Torrey Botanical Club* 5(4): 51. 1894 and *Rhodora* 27: 71. 1925, *Aliso* 9(2): 195. 1978.

in English: emu grass, salt grass, Australian salt grass, Australian salt, salt marsh grass, river couch

D. hirsuta Phil. (*Distichlis mendocina* Phil.; *Distichlis spicata* var. *mendocina* (Phil.) Hack.)

Chile. See *Anales de la Universidad de Chile* 36: 209. 1870, *Bulletin of the California Academy of Sciences* 2: 415. 1887 and *Anales del Museo Nacional de Buenos Aires* 11: 513. 1906.

D. humilis Phil. (*Distichlis misera* Phil.; *Distichlis spicata* var. *humilis* (Phil.) Kuntze)

South America, Argentina, Chile. Perennial, halophyte, low, prostrate, leaf blades pointed, forage, salt and flood-tolerant, common in moist areas, floodplains, depressions occasionally flooded, marshes, see *Bulletin of the California Academy of Sciences* 2: 415. 1887, *Verzeichniss der von Friedrich Philippi auf der Hochebene der Provinzen Antofagasta und Tarapacá gesammelten Pflanzen* 86. Leipzig 1891, *Revisio Generum Plantarum* 3(3): 350. 1898.

in Peru: chiji

D. laxiflora Hack. (*Distichlis scoparia* f. *laxiflora* (Hack.) Beetle)

South America, Argentina. See *Anales del Museo Nacional de Buenos Aires* 21: 141. 1911, *Revista Argentina de Agronomía* 22(2): 86-94. 1955, *Flora de la Provincia de Buenos Aires* 4(2): 47-50, 53-60, 128-136, 198-211, 320-323, 433-460, 585-588, 594-602. 1970.

D. palmeri (Vasey) Fassett ex I.M. Johnst. (*Distichlis palmeri* (Vasey) Fassett; *Uniola palmeri* Vasey) (for the American botanist Edward Palmer, 1831-1911, ethnologist, to U.S. 1849, botanical and zoological collector, traveler, naturalist, physician, 1853-1855 La Plata Expedition, botanical explorer, described the ethnobotany and aboriginal medical practice of the American Southwest)

North America, Mexico, Sonora Desert. Short, wiry, halophytic, salt-tolerant, nutritious and delicious grains were harvested and eaten by native peoples (Cocopa/Cucapá Indians, the Colorado River delta), useful for erosion control, common in coastal habitats, wetlands, tidal and intertidal

salt marshes, freshwater salt marshes and mangrove forests, floodplains, see *Garden & Forest* 2: 401, f. 124. 1889 and *Proceedings of the California Academy of Sciences, Series 4*, 12: 984. 1924, F.B. Kniffen, "The primitive cultural landscape of the Colorado delta." *Univ. of California Publ. in Geol.* 5: 43-66. 1931, *Memoir San Diego Society of Natural History* 12: 1-140. 1981, Yensen, S.B. & C.W. Weber, "Composition of *Distichlis palmeri* grain, a saltgrass." *J. Food Sci.*, 51: 1089-1090. 1986.

in English: salt grass, Palmer's grass, Palmer's saltgrass

in Mexico: trigo gentil, pasto salado, zacate salado, trigo salado

D. scoparia (Kunth) Arechav. (*Distichlis scoparia* (Nees ex Kunth) Arechav.; *Poa scoparia* Kunth; *Uniola scoparia* (Nees ex Kunth) Steud.)

South America, Argentina, Uruguay, Chile. Halophyte, rigid leaves, common in moist areas, floodplains, depressions occasionally flooded, marshes, see *Révision des Graminées* 2: 535, t. 182. 1829 [1832], *Synopsis Plantarum Glumacearum* 1: 281. 1854, *Anales del Museo Nacional de Montevideo* 1: 457, t. 58. 1897 and *Anales del Museo Nacional de Buenos Aires* 21: 141. 1911, *Revista Argentina de Agronomía* 22(2): 90. 1955, *Flora Patagónica* 3: 498. 1978.

in Mexico: pelo de chanco, pasto salado

in Argentina: yuyos salados

D. scoparia (Kunth) Arechav. var. ***erinacea*** (Beetle) Nicora (*Distichlis scoparia* f. *erinacea* Beetle)

Argentina. See *Anales del Museo Nacional de Montevideo* 1: 457, t. 58. 1897 and *Revista Argentina de Agronomía* 22(2): 90. 1955, *Flora Patagónica* 3: 498. 1978.

D. scoparia (Kunth) Arechav. var. ***scoparia***

Argentina.

North and South America, U.S., California. Perennial sodgrass, halophytic, dioecious, short and wiry, low and spreading, widely creeping, harsh, erect, rigid, extensively rhizomatous with sharp-pointed rhizomes, tough and scaly rootstocks, shallow root system, overlapping sheaths glabrous or sparsely hairy, ligule inconspicuous, distichous leaf arrangement, leaves thin and narrow on a slender stem, stiff harsh and somewhat spiny leaves, salt glands on the leaves excreting excess salt, broad spike-like inflorescence, spikelets linear, 6-12 florets, male and female flowers on separate plants, glumes subequal, 2 cuneate lodicules, 3 stamens in male plants, invasive weed species, a pioneer species, reproduction mainly vegetative, large and dense monocultures, fair to good forage, low nutritive value, food source for geese and other birds, seeds eaten by numerous species of waterfowl and small mammals, provides cover for small wildlife species, moderate to high drought tolerance, used for binding sandy soils, useful for wind and erosion control, very flood-tolerant, found in moist saline areas, above the normal high tide line on the shore, along streams, salt flats, wet grasslands, disturbed riparian sites, on alkaline soil near springs or stream beds, around springs, wetland, along salt marshes, upper margins of marshes, in the higher elevations of a salt marsh, lakeshores, on subirrigated alkali flats and soils, in salt and brackish coastal marshes, seeps, roadside ditches, see *Species Plantarum* 71. 1753, *Encyclopédie Méthodique, Botanique* 1: 465. 1785, *Flora Caroliniana, secundum ...* 81. 1788, *Tableau Encyclopédique et Méthodique ... North and South America, Mexico, U.S., California, Arizona, Canada, Peru, Uruguay, Argentina, Bolivia. Perennial grass, halophyte, dioecious, male and female plants, erect, coarse, low, stiff, harsh, short, rhizomatous, forming large dense colonies, extensively creeping scaly rootstocks, leaf blades rigid and pointed, overlapping sheaths, small yellowish inflorescence, invasive, colonizer, good nesting cover, poor forage value, grazed by cattle, can tolerate flooding, useful for erosion control, important food source for the birds, seeds sometimes eaten by wildlife, salt-tolerant, adapted to saline environments, a pioneer species on salt flats and shorelines, common in high salinity wetlands, along railroad and salty waste areas, disturbed areas, wet or moist meadows, saline seep areas, ditches, around the margins of the salt flats, in alkaline soils and sites, in salt marshes and alkaline habitats, open flats, saline parts of desert meadows, marshes, floodplains, low-lying saline areas, muds, from sand and gravel to clay, see *Flora Boreali-Americana* 1: 67. 1803, *Novae Hollandiae Plantarum Specimen* 1: 21, t. 24. 1804, *Prodromus Florae Novae Hollandiae* 182. 1810, *Nova Genera et Species Plantarum* 1: 157. 1815 [1816], *Systema Vegetabilium* 2: 569, 590. 1817, *The Genera of North American Plants* 1: 72. 1818, *Journal de Physique, de Chimie, d'Histoire Naturelle et des Arts* 89: 104. 1819, *Annals of the Lyceum of Natural History of New York* 1(1): 155-156. 1824, *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques, Physiques et Naturelles. in English: salt grass, marsh spikegrass, inland saltgrass, desert saltgrass, seashore saltgrass, interior salt grass

in Mexico: pequeña grama, salado desierto, zacate salado

Distomomischus Dulac = *Vulpia* C.C. Gmel.

From the Greek *distomos* "double-mouthed, with two entrances" and *mischos* "stalk."

Pooideae, Poaceae, Loliinae, type *Distomomischus myuros* (L.) Dulac, see *Species Plantarum* 1: 73. 1753, *Flora Badensis Alsatica* 1: 8. 1805, *Genera Plantarum* 101. 1836, *Flore du Département des Hautes-Pyrénées* 91. 1867, *Die Natürlichen Pflanzenfamilien* 2(2): 75. 1887 and *Botaniska Notiser* 130: 173-187. 1977, *Nordic Journal of Botany* 1(1): 17-26. 1981, *Flora Mesoamericana* 6: 228. 1994, *Bothalia* 27: 75-82. 1997, *Flora Mediterranea* 8: 307-313. 1998, *Bothalia* 29(2): 335-341. 1999, *Systematic Botany* 27(2): 241-251. 2002, *Contributions from the United States National Herbarium* 48: 274, 690-694. 2003.

Doellochloa Kuntze = *Gymnopogon* P. Beauv., *Monochaete* Döll

After the German botanist Johann Christoph Döll, 1808-1885, librarian; see J.H. Barnhart, *Biographical notes upon botanists*. 1: 461. 1965; T.W. Bossert, compil., *Biographical dictionary of botanists represented in the Hunt Institute portrait collection*. 104. Boston, Mass. 1972; Stafleu & Cowan, *Taxonomic literature*. 1: 665-666. Utrecht 1976.

Chloridoideae, Cynodonteae, type *Doellochloa fastigiata* (Nees) Kuntze, see *Essai d'une Nouvelle Agrostographie* 41, 164. 1812, *Flora Brasiliensis seu Enumeratio Plantarum* 2: 430. 1829, *Fl. Bras.* 2(3): 78. 1878, *Preliminary Catalogue of Anthophyta and Pteridophyta Reported as Growing Spontaneously within One Hundred Miles of New York* 69. 1888, *Revisio Generum Plantarum* 2: 773. 1891 and *Nat. Pflanzenfam.* (edition 2) 14d: 94. 1956, *Brittonia* 23(3): 293-324. 1971, *Contributions from the United States National Herbarium* 41: 73, 124-127, 142. 2001.

Dolichochoete (C.E. Hubb.) J.B. Phipps = *Tristachya* Nees

From the Greek *dolichos* "long" and *chaite* "bristle, mane, long hair."

Panicoideae, Arundinelleae, type *Dolichochoete rehmannii* (Hack.) J.B. Phipps, see *Bull. Herb. Boissier* 3(8): 384. 1895, *Bulletin of Miscellaneous Information Kew* 1897: 295. 1897, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 24(3): 334. 1897 and *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 49: 458. 1913, *Bulletin du Jardin Botanique de l'État* 6: 45, t. 34. 1919, *Bulletin of Miscellaneous Information Kew* 1934: 263. 1934, *Bull. Misc. Inform. Kew* 1936(5): 322. 1936, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 77(2-3): 226-354. 1957, *Kirkia* 4: 109-112.

1964, *Kirkia* 5: 235-258. 1966, *Kew Bulletin* 21(1): 119-124. 1967, *Kew Bulletin* 26(1): 111-123. 1971, *Flora Mesoamericana* 6: 378. 1994.

Donacium Fr. = *Arundo* L., *Eudonax* E.M. Fries

Greek *donax* and Latin *donax*, *donacis* for “a kind of reed.”

Arundinoideae, Arundineae, see *Species Plantarum* 1: 81. 1753, *Botaniska Notiser* 1843: 132. 1843 and *Contributions from the United States National Herbarium* 46: 113-115, 214. 2003.

Donax P. Beauv. = *Arundo* L., *Donax* Lour. (Marantaceae)

Latin *donax* and Greek *donax*, *donakos* for “a kind of reed or cane.”

Arundinoideae, Arundineae, type *Donax arundinaceus* P. Beauv., see *Species Plantarum* 1: 81. 1753, *Flora Cochinchinensis* 1: 1, 11-12. 1790, *Essai d'une Nouvelle Agrostographie* 77-78, 152, 161. 1812 and *Contr. U.S. Natl. Herb.* 24: 184. 1925, *Contributions from the United States National Herbarium* 46: 113-115, 214. 2003.

Drake-Brockmania Stapf = *Heterocarpha* Stapf & C.E. Hubb.

Named for the British naturalist Ralph Evelyn Drake-Brockman, b. 1875, physician, plant collector in Somaliland and Ethiopia, from 1904 to 1915 Army medical officer in Abyssinia and Somaliland, author of *British Somaliland*. London 1912 and *The Mammals of Somaliland*. London 1910; see Alain Campbell White & Boyd Lincoln Sloane, *The Stapelieae*. Pasadena 1937; J.H. Barnhart (1871-1949), *Biographical notes upon botanists*. 1: 470. Boston 1965; Ray Desmond, *Dictionary of British & Irish Botanists and Horticulturists*. 216. London 1994; Alexander Bryson, *Report on the Climate and Principal Diseases of the African Station*. London 1847; Frans A. Stafleu & Erik A. Mennega, *Taxonomic literature. Supplement VI: Do-E*. 88-89. Königstein 2000.

One to two species, eastern tropical Africa, Arabia, Tanzania, Sudan to Somalia. Chloridoideae, Eragrostideae, annual or perennial, herbaceous, unarmed, tufted, decumbent, auricles absent, glandular, ligule an unfringed membrane, plants bisexual, inflorescence spicate and contracted, short compact deciduous racemes, spikelets densely imbricate and strongly laterally compressed, glumes lanceolate, upper glume oblong-lanceolate 7- to 17-nerved, lower glume 1- to 5-nerved and exceeding the lowest lemma, palea present, 2 glabrous lodicules, 3 stamens, ovary glabrous, 2 stigmas,

open habitats, saline sites, damp places, savannah, sandy soils, related to *Leptochloa*, see *Mémoires de l'Herbier Boissier* 20: 6. 1900, *Bulletin of Miscellaneous Information Kew* 1912: 197. 1912, *Bulletin of Miscellaneous Information Kew* 1929: 263. 1929, *Kew Bulletin* 29(2): 267-270. 1974, *Flora of Ethiopia and Eritrea* 7: 108-110. 1995.

Species

D. haareri (Stapf & C.E. Hubb.) S.M. Phillips (*Eleusine conglomerata* Peter; *Eleusine conglomerata* f. *littoralis* Peter; *Eleusine conglomerata* var. *littoralis* (Peter) Peter; *Heterocarpha haareri* Stapf & C.E. Hubb.)

Africa, Tanzania. See *Bulletin of Miscellaneous Information Kew* 1929: 263. 1929, *Repertorium Specierum Novarum Regni Vegetabilis, Beihefte* 40(Anhang): 78-79, t. 42a-b. 1930, *Repertorium Specierum Novarum Regni Vegetabilis, Beihefte* 40(Anhang): 270. 1931, *Kew Bulletin* 29(2): 268. 1974.

D. somalensis Stapf (*Eleusine somalensis* Hack.)

Kenya, Ethiopia, Somalia. Annual, prostrate, sometimes rooting from the nodes, flowering stem erect or ascending, spikelets densely imbricate and not disarticulating, glumes unequal and papery, lower glume narrowly lanceolate and mucronate, lemmas villous and keeled, see *Mémoires de l'Herbier Boissier* 20: 6. 1900, *Bulletin of Miscellaneous Information Kew* 1912: 197. 1912.

Dregeochloa Conert

For the German plant collector and botanist Jean François (Johann Franz) Drège, 1794-1881 (Altona), botanical explorer, traveler, arrived at the Cape in 1826, his writings include *Zwei pflanzengeografische Dokumente*. Leipzig [1843-1844], *Catalogus plantarum exsiccatarum Africae australioris, quas emturis offert*. 1837-1840 and also *Linnaea*. 19: 583-680. 1847 and 20: 183-258. 1847, with the Prussian botanist Ernst Heinrich Friedrich Meyer (1791-1858) wrote *Commentariorum de plantis Africae australioris*. Leipzig & Königsberg 1835 [1836, 1838], he was the brother of Carl Friedrich Drège (1791-1867). See George Arnott Walker Arnott (1799-1868), “Notes on some South African plants.” *Hook., J.Bot.* 3: 147-156. 1841; J.H. Barnhart, *Biographical notes upon botanists*. 1: 471. 1965; Peter MacOwan, “Personalalia of botanical collectors at the Cape.” *Trans. S. Afr. Philos. Soc.* 4(1): xlix-l. 1884-1886; J.H. Verduyn den Boer, *Botanists at the Cape*. 55-58. Cape Town and Stellenbosch 1929; Gilbert Westacott Reynolds, *The Aloes of South Africa*. 58, 60. Rotterdam 1982; John Hutchinson (1884-1972), *A Botanist in Southern Africa*. 642. London 1946; R. Zander, F. Encke, G. Buchheim and S. Seybold, *Handwörterbuch der Pflanzennamen*. 14. Aufl. 704. Stuttgart 1993; T.W. Bossert, *Biographical dictionary of botanists represented in the Hunt Institute portrait collection*. 107. 1972; A. White & B.L. Sloane, *The Stapelieae*.

Pasadena 1937; Georg Christian Wittstein, *Etymologisch-botanisches Handwörterbuch*. 704. Ansbach 1852; Gordon Douglas Rowley, *A History of Succulent Plants*. California 1997; Mary Gunn & Leslie E. Codd, *Botanical Exploration of Southern Africa*. 145, 317, 382, 386, 389. Cape Town 1981.

About 2 species, Cape Province, drier parts of southern Africa, South and southwest Africa, Namibia. Arundinoideae, Danthoneiae, perennial, unarmed, herbaceous, low, more or less unbranched, stoloniferous, tufted, stiff acicular leaves, auricles absent, ligule a fringe of hairs, with branched creeping rhizomes, plants bisexual, inflorescence racemose or paniculate, 2 subequal glumes 5- to 7-nerved, palea hairy, 2 glabrous lodicules free and fleshy, 3 stamens, ovary hairy, 2 stigmas, fruit with free thick pericarp, open habitats, dry rocky places, over rocks, sandy soils, sometimes referred to *Danthonia* sensu lato, resembling *Rytidosperma*, see *Senckenbergiana Biologica* 47: 335. 1966.

Species

D. calviniensis Conert (Calvinia district, South Africa)

South Africa. Perennial, shortly rhizomatous, swollen at the base, old leaf sheaths persistent, pungent leaves, panicle contracted, lemma lobes acuminate, central awn geniculate, see *Senckenbergiana Biologica* 47: 340. 1966.

D. pumila (Nees) Conert (*Danthonia pumila* Nees)

South Africa. Perennial, shortly rhizomatous, basal scales, pungent and spiny leaves, inflorescence a raceme, lemma densely pubescent, desert rocky areas, loose sand, see *Florae Africae Australioris Illustrationes Monographicae* 323. 1841 and *Senckenbergiana Biologica* 47: 338. 1966.

Drepanostachyum Keng f. =

Himalayacalamus Keng f., *Sinarundinaria* Nakai

From the Greek *drepane*, *drepanon* “a sickle” and *stachys* “a spike,” the flowering branchlets are sickle-shaped.

About 11-16 species, subtropical. Bambusoideae, Bambuseae, sympodial, treelike or shrubby, unicaspitose, culms erect below and pendulous above, thin-walled, joint swollen, culm sheaths scabrous or pubescent, sheath ligule developed, sheath blade awl-shaped, leaves slender and long lanceolate, rhizomes pachymorph, flowering semelautant, inflorescence a large panicle, 2 glumes, 3 stamens, 2 stigmas, used for weaving, fodder, the plants browsed by livestock, deciduous forests, along roadsides, evergreen forests, subtropical forests, type *Drepanostachyum falcatum* (Nees) Keng f., see *Journal of Japanese Botany* 11(1): 1. 1935, *Journal of Bamboo Research* 2(1): 15-16, 23-24. 1983, *Kew Bulletin* 44(2): 349-367. 1989.

Species

D. annulatum Stapleton

Bhutan. Internodes dark green, culm sheaths more or less glabrous, leaf sheaths glabrous, auricles usually absent, forest, see *Edinburgh Journal of Botany* 51(3): 305-307, f. 1. 1994.

Local names: him, ban nigalo

D. breviligulatum Yi

China. See *Journal of Bamboo Research* 12(4): 42-45, f. 1. 1993.

D. breviligulatum Yi f. ***discrepans*** Yi

China. See *Journal of Bamboo Research* 12(4): 45. 1993.

D. exauritum W.T. Lin

China. See *Journal of Bamboo Research* 11(1): 30. 1992.

D. falcatum (Nees) Keng f. (*Arundinaria falcata* Nees; *Chimonobambusa falcata* (Nees) Nakai; *Fargesia falcata* (Nees) T.P. Yi; *Pleioblastus falcatus* (Nees) T.Q. Nguyen; *Sinarundinaria falcata* (Nees) C.S. Chao & Renvoize)

India, Asia. Annual, shrubby, gregarious, smooth, cylindrical, covered with a whitish bloom when young, nodes swollen, culm branches densely fasciculate, culm sheaths papery, ligule elongate and dentate, inflorescence on separate leafless culms, racemes subtended by short bracts, spikelets bearing 2 empty glumes, 1-2 fertile florets, terminal rudimentary floret, ovary glabrous, 2 stigmas plumose, used for making fishing rods and *hookah* tubes, decoration, baskets and grain vats, common in forest undergrowth, high terraces, moist situation, hill slopes, evergreen forests, rich sandy loam, see *Linnaea* 9(4): 478. 1834, *Annals of the Royal Botanic Garden, Calcutta*. 7: 13. 1896 and *Journal of the Arnold Arboretum* 6(3): 151. 1925, *Journal of Bamboo Research* 2(1): 16. 1983, *Flora Xizangica* 5: 33. 1987, *Kew Bulletin* 44: 357-358. 1989, *Bot. Zhurn. (Moscow & Leningrad)* 75(2): 225. 1990, *Monogr. Bamboo* 84. 1993.

in English: Himalayan bamboo

in India: gadh ringal, garo, gero, ghar ringal, go ringal, godra ringal, gol ringal, gola ringal, lombang, nagre, namlang, nargual, narri, nigal, nirgal, nurkat, pisto, ringal, spiag, spikso, u-kadui-namang

D. hirsutissimum W.D. Li & Y.C. Zhong

China. See *Journal of Bamboo Research* 16(1): 52, f. 1-5. 1997.

D. intermedium (Munro) Keng f. (*Arundinaria intermedia* Munro; *Chimonobambusa intermedia* (Munro) Nakai; *Sinarundinaria intermedia* (Munro) Chao & Renvoize)

Bhutan, India, Sikkim, Darjeeling. Slender, thin, caespitose, smooth, internodes dark green, nodes swollen with a prominent ring, culm sheaths papery and more or less glabrous, leaves linear-lanceolate to oblong-lanceolate, leaf sheaths glabrous, auricles usually absent, inflorescence on leafless

branches, 3 stamens, culms used for making fishing-rods and hookah-tubes, hedge, arrows, also used as fuel, leaves used for fodder, thatching, roofing and making baskets, see *Transactions of the Linnean Society of London* 26(1): 28. 1868 and *Journal of the Arnold Arboretum* 6: 151. 1925, *Journal of Bamboo Research* 2(1): 18. 1983, *Kew Bulletin* 44(2): 357. 1989.

Local names: nigala, nigalo, ningalo, parmiok, permiok, permyok, prongnok, purmak, purmia, purmiak, purmiok, titay, tite nigalo

D. khasianum (Munro) Keng f. (*Arundinaria khasiana* Munro; *Chimonobambusa khasiana* (Munro) Nakai; *Drepanostachyum khasianum* (Munro) Majumdar, nom. illeg., non *Drepanostachyum khasianum* (Munro) Keng f.; *Drepanostachyum suberectum* (Munro) R.B. Majumdar; *Sinarundinaria falcata* (Nees) C.S. Chao & Renvoize)

Bhutan, India, Sikkim, Darjeeling. Slender, bushy, smooth, internodes dark green, nodes prominent, culm sheaths glabrous and papery, leaves very short-petiolate, leaf sheaths glabrous, auricles absent, axillary panicle, spikelets on separate leafless branches, 2 glumes mucronate, lemmas mucronate and minutely scabrous, paleas 2-keeled, 3 lodicules fimbriate, 3 stamens, ovary glabrous, 2 stigmas plumose, flowering gregarious and periodical, culms used for construction of houses and thatching, fishing rods, as fuel, mostly in warm temperate to subtropical zone, see *Linnaea* 9(4): 478. 1834, *Transactions of the Linnean Society of London* 26(1): 28. 1868 and *Journal of the Arnold Arboretum* 6: 151. 1925, *Journal of Bamboo Research* 2(1): 18. 1983, *Kew Bulletin* 44(2): 357. 1989, *Fl. Ind. Enumerat.-Monocot.* 277. 1989, *Edinb. J. Bot.* 51: 308. 1994.

in India: namlang, namlong, udait-namlang, titi-ningalo

Local names: daphe, ban nigalo

D. kurzii (Gamble) Ohrenb. (*Arundinaria kurzii* Gamble; *Drepanostachyum kurzii* Majumdar; *Drepanostachyum kurzii* (Gamble) Pandey ex D.N. Tewari)

Myanmar. Low bushy bamboo, thin, smooth, striate internodes, nodes prominent with a thick ring formed by the bases of fallen culm-sheath, branchlets many and fascicled with swollen joints, very thin leaves linear-lanceolate short petiolate, slender leaf sheaths striate ending into a callus, short ligule ciliate, see *Annals of the Royal Botanic Garden. Calcutta.* 7: 25, t. 25. 1896 and *A Monograph on Bamboo* 90. Dehra Dun 1993.

D. luodianense (Yi & R.S. Wang) Keng f. (*Ampelocalamus luodianensis* Yi & R.S. Wang)

China, Luodian, Guizhou. Erect, drooping, liana-like, smooth, glabrous, many slender branches, culms slightly swollen, young culm with white powder, basal internodes solid, internodes of twigs swollen, sheath caducous, sheath blade lanceolate and erect, sheath ligule truncate and pubescent, see *Acta Phytotaxonomica Sinica* 19(3): 332-334, pl.

1. 1981, *Journal of Bamboo Research* 4(2): 3-5, f. 1. 1985, *Journal of Bamboo Research* 5(2): 35. 1986.

D. melicodum P.C. Keng

China. See *Journal of Bamboo Research* 5(2): 35, f. 6. 1986.

D. microphyllum (Hsueh & Yi) P.C. Keng (*Ampelocalamus microphyllum* (J.R. Xue & T.P. Yi) J.R. Xue & T.P. Yi; *Neomicrocalamus microphyllum* (J.R. Xue & T.P. Yi) Keng f. & T.P. Yi; *Neosinocalamus microphyllum* (J.R. Xue & T.P. Yi) Keng f. & T.P. Yi; *Sinocalamus microphyllum* Hsueh & Yi)

China. Erect or slanting, smooth, cylindrical, green or yellowish green, slightly pruinose when young, many branches clustered on each node, sheath blade linear-lanceolate, no sheath auricles or cilia, sheath ligule truncate or concave, leaves narrow-lanceolate and papery, culm used for weaving, rope making, papermaking, see *Lingnan University Science Bulletin* 9: 66. 1940, *J. Yunnan. For. Coll.* 1: 71-73, f. 2. 1982, *Journal of Bamboo Research* 2(2): 10, 12, 14. 1983, *Journal of Bamboo Research* 4(2): 7-8. 1985, *Journal of Bamboo Research* 12(4): 46. 1993.

D. naibunense (Hayata) P.C. Keng (*Ampelocalamus naibunensis* (Hayata) T.H. Wen; *Arthrostylidium naibunensis* (Hayata) W.C. Lin; *Arundinaria naibunensis* Hayata; *Bambusa naibunensis* (Hayata) Nakai; *Chimonobambusa naibunensis* (Hayata) McClure; *Leleba naibunensis* (Hayata) Nakai; *Pleioblastus naibunensis* (Hayata) Kanehira & Sasaki; *Pseudosasa naibunensis* (Hayata) Makino)

Taiwan. Erect culm top drooping, slanting, scandent, manifold branching, sheath deciduous and papery, sheath blade linear, sheath auricles tiny shortly ciliate, sheath ligule truncate, leaves narrow lanceolate, see *Journal of the College of Science, Imperial University of Tokyo* 30(1): 408-409. 1911, *Journal of Bamboo Research* 5(2): 32, f. 4. 1986, *Journal of Bamboo Research* 6(3): 34. 1987.

in English: Naibun bamboo

in China: Nei men zhu

in Japan: Naibun medake

D. polystachyum (Kurz ex Gamble) R.B. Majumdar (*Arundinaria polystachya* Kurz ex Gamble; *Chimonobambusa polystachya* (Kurz ex Gamble) Nakai; *Drepanostachyum polystachyum* (Kurz ex Gamble) Pandey ex Tewari)

India. Shrubby, branchlets many and fasciculate, leaves rounded and short petiolate, an axillary panicle on leafy branches, spikelets pedicellate, 2 glumes acuminate, lemmas ciliate, paleas 2-keeled, 3 lodicules, 3 stamens, ovary glabrous, 2 plumose stigmas, mostly in warm temperate to subtropical zone, on dry hills, rocky slopes, ridges, near streams, see *Flora of Bhutan [The Grasses of Bhutan]* 3(2): 508. 2000.

D. saxatile (Hsueh & Yi) P.C. Keng (*Ampelocalamus saxatile* (Hsueh & Yi) Hsueh & Yi; *Sinocalamus saxatilis* Hsueh & Yi)

China, Sichuan, Yunnan. Erect culm top drooping, arcuate, slanting, scandent, scabrous, manifold branching or many branches clustered at each node, sheath shedding late and papery, sheath blade linear-lanceolate, no sheath auricles, sheath ligule truncate, leaves narrow lanceolate to long lanceolate, for weaving and making threads, see *J. Yunnan For. Coll.* 1: 69, f. 1. 1982, *Journal of Bamboo Research* 2(2): 14. 1983, *Journal of Bamboo Research* 4(2): 5. 1985, *Journal of Bamboo Research* 12(4): 46. 1993.

D. scandens (Hsueh & W.D. Li) Keng f. (*Ampelocalamus scandens* Hsueh & W.D. Li)

China, Guizhou. Liana-like, culm hairy to tomentose, manifold branching, sheath shorter than internode shedding late or persistent, sheath blade lanceolate, sheath auricles small shortly ciliate, sheath ligule with long cilia, leaves lanceolate, see *Journal of Bamboo Research* 4(2): 5-7, f. 2. 1985, *Journal of Bamboo Research* 12(4): 46. 1993.

D. suberectum (Munro) R.B. Majumdar (*Arundinaria suberecta* Munro)

India, Arunachal Pradesh, Meghalaya, Sikkim. Erect, wiry, shrubby, smooth, graceful, clumped, in thick clumps, nodes swollen, internodes with very small cavities, branchlets in fascicles, culm sheaths papery, leaves linear-lanceolate very short petiolate, culms used for making huts, mostly in warm temperate to subtropical zone, hill forest, along banks of rivers and streams, see *Transactions of the Linnean Society of London* 26(1): 32. 1868 and *Bull. Bot. Survey India* 25: 236. 1985.

in India: lambnang, namlang, udadai namlang, ukadai-namlang

Drymochloa Holub = *Festuca* L.

From the Greek *drymos* “a wood, forest, thicket” and *chloa* “grass.”

Pooideae, Poodae, Poeae, or Pooideae, Poeae, Loliinae, type *Drymochloa drymeja* (Mert. & W.D.J. Koch) Holub, see *Species Plantarum* 1: 73-74. 1753 and *Folia Geobotanica et Phytotaxonomica* 19(1): 96, 99. 1984, *Watsonia* 16: 300. 1987, *American Journal of Botany* 80(1): 76-82. 1993, *Flora Mesoamericana* 6: 223-227. 1994, *American Journal of Botany* 82(10): 1287-1299. 1995, *Phytologia* 83: 85-88. 1997 [1998], *Preslia* 70: 111-113. 1998, *New Zealand Journal of Botany* 36: 329-367. 1998, *Systematic Botany* 27(2): 241-251. 2002, *Contributions from the United States National Herbarium* 48: 312-368. 2003.

Drymonaetes Fourr. = *Festuca* L., *Schedonorus* P. Beauv.

From the Greek *drymos* “a wood, forest, thicket” and *etes* “a fellow, neighbour, mate, associate.”

Pooideae, Poodae, Poeae, or Pooideae, Poeae, Loliinae, see *Species Plantarum* 1: 73-74. 1753, *Essai d'une Nouvelle Agrostographie* 99, 162, 177, pl. 19, f. 2. 1812, *Annales de la Société Linnéenne de Lyon, sér. 2*, 17: 187. 1869, *Nomencl. Bot.* 2: 1071. 1874 and *Contr. U.S. Natl. Herb.* 24(6): 193. 1925, *Watsonia* 16: 300. 1987, *Novosti Sist. Vyss. Rast.* 23: 14. 1988, *American Journal of Botany* 80(1): 76-82. 1993, *Flora Mesoamericana* 6: 223-227. 1994, *American Journal of Botany* 82(10): 1287-1299. 1995, *Phytologia* 83: 85-88. 1997 [1998], *Preslia* 70: 111-113. 1998, *New Zealand Journal of Botany* 36: 329-367. 1998, *Systematic Botany* 27(2): 241-251. 2002, *Contributions from the United States National Herbarium* 48: 274, 312-368, 605-607. 2003.

Dryopoa Vickery

From the Greek *dryos* “oak, tree” and *poa* “grass, pasture grass,” see Joyce Winifred Vickery (1908-1979), in *Contributions from the New South Wales National Herbarium*. 3: 195. 1963.

One species, southeast Australia, Victoria, Tasmania, New South Wales, Tasmania. Pooideae, Poodae, Poeae, perennial, robust, tall, caespitose, reedlike, herbaceous, unbranched, hollow internodes, auricles absent, leaf sheaths not keeled, ligule lacinate, leaves linear-lanceolate, plants bisexual, inflorescence panicate and open, spikelets elliptic, hermaphrodite florets protandrous, vestigial foliar structure subtending the inflorescence rarely present or absent, 2 glumes more or less equal, lemma nerves raised, palea keels wingless, 2 lodicules free and membranous, 3 stamens, ovary hairy and oblong, 2 stigmas, grows in wet sclerophyll forest, eucalypt woodland, similar to *Scolochloa* Link, see *Flora of Australia* 43: 267. 2002.

Species

D. dives (F. Muell.) Vickery (*Festuca dives* F. Muell.; *Glyceria dives* (F. Muell.) Benth.; *Glyceria dives* (F. Muell.) F. Muell. ex Benth.; *Panicularia dives* (F. Muell.) Kuntze; *Poa dives* (F. Muell.) F. Muell.)

Perennial, erect, coarse, robust, smooth, hollow, sheaths open to the base, ligule membranous to stiff, green or purple panicle erect and open, glumes with scabrous keels, lemmas bilobed, sometimes awned, palea narrowly elliptic or elliptic, anthers yellow or purple, ovary apex hairy to hispid, fruit compressed, rare species in Tasmania, see *Fragmenta Phytographiae Australiae* 3: 147. 1863, *Flora Australiensis: A Description ...* 7: 659. 1878, *Systematic Census of Australian Plants ...* 134. 1882 and *Contributions from the New South Wales National Herbarium* 3: 196. 1963.

in English: giant mountain grass

Dupontia R. Br.

One to two species, Arctic, Melville Island, Asia, northern America. Pooideae, Poodae, Poeae, or Pooideae, Poeae, Poinae, perennial, herbaceous, rhizomatous or stoloniferous, auricles absent, leaf blades linear, ligule an unfringed membrane, plants bisexual, inflorescence paniculate open or contracted, spikelets 1- to 4-flowered, 2 glumes 1- to 3-nerved, lemmas 3- to 5-nerved, palea present, 2 lodicules free and membranous, 3 stamens, ovary glabrous, 2 stigmas, wet places, open habitats, similar to *Arctophila*, type *Dupontia fisheri* R. Br., see *Chloris Melvilliana* 32-33. 1823, *Gen. Pl.* 3(2): 1197. 1883 and *Nordic Journal of Botany* 13(6): 615-629. 1993, M.A. Shirazi et al., "The role of thermal regime in tundra plant community restoration." *Restoration Ecology* 6(1): 111-117. Duthiea Hackel = *Thrixgyne* Keng,
Triavenopsis Candargy

For the British botanist John Firminger Duthie, 1845-1922 (Sussex), 1875 Fellow of the Linnean Society, professor of natural history, plant collector in India, wrote *The Orchids of the North-Western Himalaya*. Calcutta 1906; see J.H. Barnhart, *Biographical notes upon botanists*. 1: 486. 1965; T.W. Bossert, *Biographical dictionary of botanists represented in the Hunt Institute portrait collection*. 110. 1972; Isaac Henry Burkill (1870-1965), *Chapters on the History of Botany in India*. Delhi 1965; R. Desmond, *The European Discovery of the Indian Flora*. Oxford 1992.

Some three species, Afghanistan, China, Himalayas. Pooideae, Aveneae, perennials, tufted, rhizomatous or caespitose, culms erect and leafy, herbaceous, unbranched above, auricles absent, ligule an unfringed membrane, leaf blades linear and narrow, plants bisexual, inflorescence paniculate and narrowly cylindrical, few spikeleted or many spikeleted, 2- to 3-flowered, 2 glumes subequal rounded on the back, lower glume 5- to 9-nerved, upper glume 7- to 13-nerved, lemmas membranous to coriaceous, palea 2-keeled, lodicules absent, 3 stamens, ovary hairy, long pubescent persistent style, 2 stigmas, caryopsis beaked, open habitats, grassy slopes, related to *Metcalfia*, type *Duthiea bromoides* Hack., see *Verhandlungen der kaiserlich-königlichen zoologisch-botanischen Gesellschaft in Wien* 45: 200. 1896 and *Archives de Biologie Végétale Pure et Appliquée* 1: 64-65. 1901, *Sunyatsenia* 6: 80, 82-85, t. 13. 1941, *Claves Generum et Specierum Graminearum Primarum Sinicarum Appendice Nomenclatione Systematica* 201. 1957.

Species

D. brachypodia (P. Candargy) Keng & Keng f. (*Duthiea brachypodium* (P. Candargy) Keng & Keng f.; *Duthiea nepalensis* Bor; *Triavenopsis brachypodium* P. Candargy)

Asia, Nepal, Bhutan. Perennial, erect, alpine, terete, 2- to 3-noded, leaf blade linear, erect inflorescence, raceme cylindrical, spikelets cylindrical and awnless, 1 floret, lower glumes lanceolate-acuminate, lowest lemma elliptic-oblong 2-lobed, see *Archives de Biologie Végétale Pure et Appliquée* 1: 64-65. 1901, *Kew Bulletin* 1953: 550. 1954, *Acta Phytotaxonomica Sinica* 10(2): 182. 1965.

D. bromoides Hack.

Asia. See *Verhandlungen der kaiserlich-königlichen zoologisch-botanischen Gesellschaft in Wien* 45: 200. 1895.

D. oligostachya (Munro) Stapf (*Arrhenatherum oligostachyum* (Munro) Potzta; *Avena oligostachya* Munro; *Helictotrichon oligostachyum* (Munro) Holub)

Asia. Spikelets 1-flowered, see *Journal of the Linnean Society, Botany* 18: 108. 1880, *Hooker's Icones Plantarum* 25: 2474. 1896 and *Willdenowia* 4: 400. 1968.

Dybowskia Stapf = *Hyparrhenia* Andersson
ex Fourn.

For the French Jean Dybowski, plant collector in Senegal, Ivory Coast and Mali, see *Flora of Tropical Africa* 9: 382. 1919; F.N. Hepper & Fiona Neate, *Plant Collectors in West Africa*. 27. 1971.

One species, tropical Africa. Panicoideae, Andropogonodae, Andropogoneae, Andropogoninae, or Panicoideae, Andropogoneae, Anthistiriinae, annual, herbaceous, leafy, unbranched, auricles absent, ligule an unfringed membrane, plants bisexual, inflorescence spatheate, glumes 2 more or less equal, lower glume 11- to 13-nerved, upper glume 3-nerved, palea present, 2 free lodicules fleshy and ciliate or glabrous, 3 stamens, ovary glabrous, 2 stigmas, rainforest, type *Dybowskia seretii* (De Wild.) Stapf, see *Mexicanas Plantas* 2: 51, 67. 1886 and *Flora of Tropical Africa* 9: 382-383. 1919, *Boissiera. Mémoires du Conservatoire de Botanique et de l'Institut de Botanique Systématique de l'Université de Genève* 8: 107. 1960, W.D. Clayton, "A revision of the genus *Hyparrhenia*." *Kew Bulletin, Additional Series* 2: 1-196. 1969, *Anais do XXXII Congresso Nacional de Botanica* 44-57. 1981, *Contributions from the United States National Herbarium* 46: 254-257. 2003.

Species

D. dybowskii (Franch.) Dandy (*Andropogon dybowskii* Franch.; *Andropogon seretii* De Wild.; *Dybowskia seretii* (De Wild.) Stapf; *Hyparrhenia dybowskii* (Franch.) Robertson)

Africa. See *Bulletin de la Société d'Histoire Naturelle d'Autun* 8: 334. 1895 and É.A.J. De Wildeman (1866-1947), "Études de systématique et de géographie botaniques sur la flore du Bas- et du Moyen-Congo" in *Annales du Musée du Congo (Belge). Botanique. Sér. 5 Congo-Kasai*. 152, t. 40 (1). 1910, *Flora of Tropical Africa* 9: 383. 1919, *Journal of Botany, British and Foreign* 69(2): 54. 1931, *Boissiera*. 9: 107. 1960.

E

Eatonia Raf. = *Panicum L.*

After the American botanist Amos Eaton, 1776-1842 (New York), geologist, a prolific writer, among his numerous writings are *A Manual of Botany for the Northern States*. Albany 1817, *Chemical Instructor*. Albany 1826, *Geological Text-Book*. Albany 1830 and *An Index to the Geology of the Northern States*. Troy 1820. See J.H. Barnhart, *Biographical notes upon botanists*. 1: 491. 1965; T.W. Bossert, *Biographical dictionary of botanists represented in the Hunt Institute portrait collection*. 112. 1972; J. Ewan, editor, *A Short History of Botany in the United States*. 164. New York and London 1969; E.M. Tucker, *Catalogue of the library of the Arnold Arboretum of Harvard University*. 1917-1933; William Jay Youmans, editor, *Pioneers of Science in America*. 111-118. New York 1896; Jeannette E. Graustein, *Thomas Nuttall, Naturalist. Explorations in America, 1808-1841*. Harvard University Press 1967; Ethel M. MacAllister, *Amos Eaton, Scientist and Educator*. Philadelphia 1941; Ida Kaplan Langman, *A Selected Guide to the Literature on the Flowering Plants of Mexico*. 1964; Samuel Reznick, in *D.S.B.* 4: 273-275. 1981.

Panicoideae, Panicoideae, Paniceae, Panicinae, see *Species Plantarum* 1: 55, 58. 1753, *A Sketch of the Botany of South-Carolina and Georgia* 1(2): 117. 1816, *Révision des Graminées* 1: 219. 1829, *Bulletin Botanique [Genève]* 1: 220. 1830 and *Flora of the Southeastern United States* ... 104, 1327. 1903, *Contr. U.S. Natl. Herb.* 15: 13-15. 1910, *North American Flora* 3(2): 200, 210. 1915, *Notizblatt des Botanischen Gartens und Museums zu Berlin-Dahlem* 11(104): 242. 1931, *Taxon* 33: 126-134. 1984, *Flora Mesoamericana* 6: 302-318. 1994, *Blumea* 41: 181-216, 416. 1996, *Taxon* 45: 319-320. 1996, *Taxon* 47: 869. 1998, *Taxon* 48: 376. 1999, *Contributions from the United States National Herbarium* 46: 306-441, 537. 2003.

Eccoilopus Steudel = *Spodiopogon Trin.*

Greek *ek* "from, out of" and *koilos* "hollow," *ekkoilos* "sunken" and *pous, podos* "a foot," referring to the rachilla or to the nature of culms.

About 4 species, Asia. Panicoideae, Andropogoneae, Saccharinae, or Panicoideae, Andropogonodae, Andropogoneae, Andropogoninae, perennial, tufted, ligule membranous,

leaf blades falsely petiolate, inflorescence an open or contracted panicle, tough rachis, 2 glumes subequal, palea present, ovary glabrous, 2 stigmas, closely related to and often placed in *Spodiopogon*, see *Fundamenta Agrostographiae* 192, t. 17. 1820, *Synopsis Plantarum Glumacearum* 1: 123. 1854 and *Contributions from the United States National Herbarium* 46: 607. 2003, Houyuan Lu & Kam-Biu Liu, "Morphological variations of lobate phytoliths from grasses in China and the southeastern United States." *Diversity & Distributions* 9(1): 73-87. Jan 2003.

Species

E. bambusoides Keng f. (*Eccoilopus bambusoides* (Keng) L. Liou; *Spodiopogon bambusoides* Keng)

China. See *Guihaia* 13(3): 320-321. 1993.

E. cotulifer (Thunb.) A. Camus (*Andropogon cotulifer* Thunb.; *Eccoilopus andropogonoides* Steud.; *Eulalia cotulifera* (Thunb.) Munro; *Miscanthus cotulifer* (Thunb.) Benth.; *Saccharum cotuliferum* (Thunb.) Roberty; *Spodiopogon cotulifer* (Thunb.) Hack.)

Asia, China, India. See *Flora Japonica*, ... 41. 1784, *Synopsis Plantarum Glumacearum* 1: 124. 1854, *Annales Museum Botanicum Lugduno-Batavi* 2: 289. 1866, *Journal of the Linnean Society, Botany* 19(115-116): 65. 1881, *Monographiae Phanerogamarum* 6: 187. 1889 and *Annales de la société linneenne de Lyon, sér. 2* 70: 1, 92. 1923, *Boissiera. Mémoires du Conservatoire de Botanique et de l'Institut de Botanique Systématique de l'Université de Genève* 36. 1960.

E. hookeri (Hack.) Grassl (*Erianthus hookeri* Hack.; *Erianthus longisetosus* var. *hookeri* (Hack.) Bor; *Saccharum hookeri* (Hack.) V. Naray. ex Bor; *Saccharum longisetosum* var. *hookeri* (Hack.) Bor; *Saccharum longisetosum* (Andersson) V. Naray. ex Bor var. *hookeri* (Hack.) U. Shukla)

Asia tropical, Bhutan, India. See *Monographiae Phanerogamarum* 6: 142. 1889 and *Flora of Assam* 5(1): 461. 1940, *Grasses of Burma* ... 151. 1960, *Proc. 14th Congr. Int. Soc. Sugar Cane Technologists* 1972: 243. 1972.

E. longisetosus (Andersson) Grassl (*Erianthus longisetosus* Andersson; *Saccharum longisetosum* var. *longisetosum*)

India, Asia tropical, Nepal. See *Journal of the Linnean Society, Botany* 25: 82, 85, t. 34. 1889 and *14th Congr. Int. Soc. Sugar Cane Technologists* 1972: 243. 1972.

Eccoptocarpha Launert

Greek *ekkopteon* “one must excise, one must cut to pieces,” *ekkopto* “cut, extirpate” and *karphos* “a scale, stalk, chip of straw,” referring to the upper glume and lower lemma resembling woven fabric.

One species, Tanzania, Zambia. Panicoideae, Panicoideae, Paniceae, annual, herbaceous, ligule fringed, plants bisexual, inflorescence racemose, spikelets single obovate, 2 subequal glumes 5-nerved, palea awnless 2-nerved, lodicules present, 3 stigmas, ovary glabrous, 2 stigmas, type *Eccoptocarpha obconiciventrifera* Launert, resembling *Brachiaria humidicola* (Rendle) Schweick., see *Senckenbergiana Biologica* 46(2): 124, 126, f. 1-22. 1965.

Species

E. obconiciventrifera Launert

Tropical Africa. Savannah, open habitats.

Echinalysium Trin. = Elytrophorus P. Beauv.

From the Greek *echinos* “a hedgehog” and *halysis* “a chain, bondage.”

Arundinoideae, Arundineae, see *Essai d'une nouvelle Agrostographie* 67, pl. XIV, f. II. Paris 1812, *Fundamenta Agrostographiae* 142. 1820 and *Telopea* 7(3): 205-213. 1997.

Echinanthus Cerv. = Tragus Haller

From the Greek *echinos* “a hedgehog” and *anthos* “a flower.”

Chloridoideae, Cynodonteae, Zoysiinae, or Chloridoideae, Cynodonteae, Traginae, see *Fam. Pl.* 2: 31, 581. 1763, *Historia Stirpium Indigenarum Helvetiae Inchoata* 2: 203. 1768, *Flora Pedemontana* 2: 241. 1785, *Gen. Pl.* edition 8: 55. 1789, *Naturaleza* 1: 351. 1870, *Revisio Generum Plantarum* 2: 780. 1891 and *Cytologia* 19: 97-103. 1954, *Kew Bulletin* 36(1): 55-61. 1981, *Bothalia* 24(1): 92-96. 1994, *Flora Mesoamericana* 6: 298. 1994, *Memoirs of the New York Botanical Garden* 78: 509-540. 1996, *Flora Mediterranea* 8: 307-313. 1998, *Thaiszia* 9(1): 31-40. 1999, *Flora of Ecuador* 68: 124-125. 2001, *Contributions from the United States National Herbarium* 41: 73, 220-221. 2001.

Echinaria Desf. = Panicastrella Moench

Greek *echinos* “a hedgehog,” referring to the flowers, to the prickly inflorescence.

One species, Mediterranean, Asia. Pooideae, Pooideae, Seslerieae, annual, herbaceous, erect or ascending, ligule an unfringed membrane, auricles absent, leaf blades linear, plants bisexual, panicle capitate and exserted, sterile and

bract-like spikelets at the base of the inflorescence, spikelets 1- to 4-flowered, 2 membranous and very unequal glumes mucronate, lower glume 2-nerved, lemmas coriaceous and rounded, spinous awns, palea 2-awned, lodicules present or absent, 3 stamens, ovary hairy, 2 stigmas, dry open places, type *Echinaria capitata* (L.) Desf., see *Species Plantarum* 2: 1049-1050. 1753, *Enumeratio Methodica Plantarum* 206. 1759, *Familles des Plantes* 2: 35, 597. 1763, *Methodus Plantas Horti Botanici ...* 205. 1794, *Flora Atlantica* 2: 385. 1799, *Botanische Zeitung. Berlin* 6: 415. 1848, *Prodromus Florae Hispanicae* 1: 42. 1861, *Compendio della Flora Italiana* 41. 1867 and *Flora of the Southeastern United States ...* 109, 1327. 1903, *American Midland Naturalist* 4: 214. 1915, *Flore de l'Afrique du Nord* 3: 15. 1955, *Bulletin de la Société des Sciences Naturelles du Maroc* 37: 145. 1957, *Iowa State College Journal of Science* 37: 259-351. 1963, *Anales del Jardín Botánico de Madrid* 44: 509-512. 1987, *Fl. Libya* 145: 58. 1988, *Boletim da Sociedade Broteriana, ser. 2* 63: 29-66. 1990, *Bocconea, Monographiae Herbarii Mediterranei Panormitani* 1: 303-364. 1991.

Species

E. capitata (L.) Desf. (*Cenchrus capitatus* L.)

Morocco. Annual, roots fibrous, species of open habitats.

in French: echinaria en petite tête

in Morocco: rass-diel-knafed

Echinaria Fabr. = Cenchrus L.

Greek *echinos* “a hedgehog,” referring to the flowers.

Panicoideae, Panicoideae, Paniceae, or Panicoideae, Paniceae, Cenchrinae, see *Species Plantarum* 2: 1049-1050. 1753, *Enumeratio Methodica Plantarum* 206. 1759 and *Contributions from the United States National Herbarium* 22: 45-77. 1929, *Journal of the Washington Academy of Sciences* 45(5): 135-143. 1955, *Iowa State College Journal of Science* 37(3): 259-351. 1963 [Taxonomy and distribution of the genus *Cenchrus*], *Kurtziana* 4: 95-129. 1967, *Taxon* 33: 126-134. 1984, *Acta Amazonica* 14(1-2): 95-127. 1984, *Flora Mesoamericana* 6: 374-375. 1994, *Flora of Ethiopia and Eritrea* 7: 275-279. 1995, *Sida* 19(3): 523-530. 2001 [Nomenclatural changes in *Pennisetum* (Poaceae: Paniceae)], *Contributions from the United States National Herbarium* 46: 144-150, 215. 2003.

Echinochlaena Spreng. = Echinolaena Desv.

From the Greek *echinos* “a hedgehog” and *chlaena, chlaenion* “cloak, blanket.”

Panicoideae, Panicoideae, Paniceae, or Panicoideae, Paniceae, Paspalinae, see *Genera plantarum* 65. 1830 and *Flora*

Mesoamericana 6: 302. 1994, *Contributions from the United States National Herbarium* 46: 224-225. 2003.

Echinochloa P. Beauv. = *Ornithospermum*
Dumoulin, *Tema* Adans.

From the Greek *echinos* “a hedgehog, sea-urchin” and *chloe, chloa* “grass” (Latin *herba, ae*, Akkadian *harbu, harpu* “early harvest,” *qallum, qa-a-lu* “lowly, small,” *aru, eru, harum* “blossom, sprout, germ”), referring to the bristly spikelets, to the inflorescence branches; see Ambroise Marie François Joseph Palisot de Beauvois, *Essai d'une nouvelle Agrostographie, ou nouveaux genres des Graminées*. 53, pl. XI, f. 2. Paris 1812.

About 30-40 species, cosmopolitan, tropical to warm temperate areas. Panicoideae, Panicoideae, Paniceae, or Panicoideae, Paniceae, Panicinae, annual or perennial, herbaceous, prostrate, erect or decumbent, sometimes rooting at the lower nodes, floating, stout and sometimes succulent, caespitose, with or without rhizomes, glabrous nodes, internodes solid or hollow, auricles absent, sheaths open and compressed, ligule present or often absent, leaves linear to narrow-lanceolate to linear-lanceolate, plants bisexual, inflorescence terminal and dense of racemes arranged along a central axis, hispidulous cuspidate or awned spikelets in 4 rows, short-stipitate and hispid spikelets plano-convex, florets 2, lower floret sterile or male, upper floret hermaphrodite, 2 glumes very unequal, glumes and/or sterile lemmas usually awned or sometimes mucronate or mucronulate, back of fertile lemma adaxial, palea present, 2 lodicules joined or free and fleshy, stamens 3, ovary glabrous without the apical appendage, 2 stigmas red, fruit small and compressed, common weed species, weeds of cultivated ground and arable land (including rice paddies), cultivate fodder, native pasture species, ornamental and decorative when in flower, more or less palatable to livestock, grain crop species, usually associated with wet or damp places, damp and ruderal habitats, open habitats, pampas, grasslands, swamps, disturbed ground, rainforest, in water, ditches, marshes and marshy places, moist ground, water courses, weedy places, a difficult genus many of the species are difficult to distinguish because there is so much variation within species, similar to *Brachiaria*, type *Echinochloa crusgalli* (L.) P. Beauv., see *Species Plantarum* 1: 55. 1753, *Familles des Plantes* 2: 496. 1763, *Fl. Bourg.* 1: 495. 1782, *Essai d'une Nouvelle Agrostographie* 53, 161, 169, t. 11, f. 2. 1812, *Observations sur les Graminées de la Flore Belgique* 137-138. 1823 [1824] *Flora Brasiliensis seu Enumeratio Plantarum* 2: 255. 1829, *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. June 2005.

Species

E. sp.

in English: barnyard millet

in Mongolia: osun honug

in Thailand: ya plong

in Vietnam: loofng vuwjc, l[oof]ng v[uwj]c

E. callopus (Pilg.) Clayton (*Brachiaria callopus* (Pilg.) Stapf; *Brachiaria stipitata* C.E. Hubb.; *Brachiaria verdickii* Robyns; *Panicum callopus* Pilg.)

Tropical Africa, Central African Republic. Annual, tufted, spongy culms, relished by cattle, swampy places, shallow pools, seasonal ponds, see *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 33: 46. 1902, *Flora of Tropical Africa* 9: 533. 1919, *Bulletin du Jardin Botanique de l'État* 9(3): 179. 1932, *Bulletin of Miscellaneous Information Kew* 1933: 498. 1933, *Kew Bulletin* 34(3): 560. 1980.

E. chacoensis P.W. Michael ex Renvoize

Bolivia. Annual or short-lived perennial, robust, ligule ciliate, leaf blades glabrous, lax inflorescence racemose, spikelets ovate and mucicous, lower glume acute, upper glume acuminate, palea absent, upper lemma suborbicular and apiculate, weed of cultivation, in disturbed places, see *Kurtziana* 24: 161. 1995.

E. colona (L.) Link (specific epithet commonly misspelled *colonium*) (*Brachiaria longifolia* Gilli; *Chamaeraphis brachiariaeformis* (Steud.) Kuntze; *Echinochloa colona* f. *vivipara* Beetle; *Echinochloa colona* f. *zonalis* (Guss.) Wiegand; *Echinochloa colona* var. *equitans* (Hochst. ex A. Rich.) Cufod.; *Echinochloa colona* var. *zonalis* (Guss.) Wooton & Standl.; *Echinochloa colonum* (L.) Link; *Echinochloa colonum* var. *zonalis* (Guss.) Tropics and subtropics. Always annual or rarely perennial, leafy, robust, simple or much branched in the lower part, erect or geniculately ascending, semiprostrate, weak, creeping

and ascending, emergent, trailing or floating, tufted, often rooting at the nodes, rhizomes absent, sometimes shortly stoloniferous, leaves linear-lanceolate and very acute, ligule absent, sheaths glabrous, leaf blades folded in the bud, inflorescence paniculate linear and erect, 4-rowed racemes, unbranched and widely spaced panicle branches, inflorescence contracted and lacking bristles, spikelets crowded and never awned, spikelets ovate-elliptic to subglobose arranged in 4 rows, lower floret male or barren, lower glume membranous acute to mucronate, upper glume acute or cuspidate, yellowish to whitish fertile lemma elliptic to ovate, lower lemmas unawned, grains whitish eaten in times of scarcity, economic plant, young plants and shoots eaten raw with rice, seed used as a millet, also cultivated, a valuable grazing grass during the growth period, used for forage, very to extremely palatable succulent fodder and hay, heavily grazed in wet areas, food for waterfowl and baboons, grain crop species, seed can be cooked whole or ground into a flour and used as a mush or porridge, can be a serious weed species especially in rice and in irrigated areas, potential seed contaminant, usually occurs in wetlands and moist soils, in or near water, rich soils, pans, vleis, open meadows, margins of pools and streams, in swampy places and seasonally flooded grassland, floodplains, along the banks of lakes and rivers, grassland plains, edge of saline waterholes, on heavy soils, roadside ditches and railroads, in ponds and swamps, marshes, seepage zone, lowlands in open and wet situations, damp or shady depressions, gardens, in overgrazed or trampled sites, disturbed places and habitats, waste places and cultivated fields, irrigated fields, irrigated ditches, on sandy loam to clayey soils, coastal dunes, see *Systema Naturae, Editio Decima* 2: 870. 1759, *Methodus Plantas Horti Botanici ...* 202. 1794, *Nova Genera et Species Plantarum* 1: 108. 1815 [1816], *Flora Indica; or Descriptions ...* 1: 307. 1820, *Observations sur les Graminées de la Flore Belgique* 138. 1823, *Florae Siculae Prodromus* 1: 62. Tropical and warm temperate regions. Annual bunchgrass, very variable, tufted, erect and stout, vigorous, with a somewhat decumbent base, rhizomes absent, fibrous root system, leaf sheaths smooth, basal sheaths commonly purplish or reddish, ligules and auricles absent, more or less glabrous leaves elongate and very acute, youngest leaf rolled, seed heads dense and drooping, bristly inflorescence erect or nodding, panicle rather compact, lanceolate to ovate racemes spreading and purplish, acute and awned spikelets on scabrous bristly rachis, lower floret sterile, glumes pubescent, lower glume obtuse to acute, upper glume sometimes shortly awned, lower lemma acute and sometimes awned, female-fertile lemma smooth and shining on the back, grain ovate and water dispersed, edible seeds, very polymorphic and pioneer grass, there are several botanical varieties and forms, medicinal plant used in diseases of spleen, the plant is an important habitat for waterfowl and pheasant, seldom grazed by any animal, poor grazing for wildlife and livestock, harsh and unpalatable at maturity, fair to poor forage value for livestock, suitable for ensilage, can be cultivated for hay and as a cereal, seed used as a millet, roasted seed a coffee substitute, young shoots eaten raw or cooked, seeds eaten by songbirds and waterfowl, seeds furnish some food for ground birds, noxious weed species of fields and rice, a vigorous competitor for soil nitrogen in rice crops, invasive, useful for erosion control and habitat rehabilitation, suitable for reclamation of saline and alkaline areas, potential seed contaminant, toxic levels of nitrate have been reported in barnyard grass, tolerates poor drainage and flooding, intolerant of dense shade and severe drought, usually occurs in wetlands and wet places, rich soils, in swampy ground, brackish marsh, in sown pasture, in freshwater swamps, in moist disturbed sites, in temporarily flooded palustrine wetlands and seasonally wet habitats, in moist poorly drained areas, in shallow water or

after drawdown, on silts and clays in ponds and depressions, in shallow water around the periphery of rice fields, in wet meadows and prairie communities, channels, waste areas and agricultural land, in fields and ditches, river bottoms, marshes, floodplains and along lakeshores and stream banks, see *Species Plantarum* 1: 56. 1753, *Systema Naturae, Editio Decima* 2: 870. 1759, *Methodus Plantas Horti Botanici ...* 202. 1794, *Prodromus stirpium in horto ad Chapel Allerton vigentium*. 18. Tropical Africa, tropical America, South Africa. Annual or short-lived perennial, stout, robust, erect to decumbent and rooting from the lower nodes, tufted, rhizomes absent, nodes glabrous, ligules absent or inconspicuous, sheaths glabrous often purplish, blades glabrous, inflorescence erect or drooping with spreading racemes on slender and wavy branches, racemes compound often with short branches, hispid spikelets elliptic and more or less clustered, lower floret sterile or male, lower glume acute to acuminate, awnless upper glume acuminate to cuspidate, lower lemmas usually awned, upper lemma ovate and dark, lower paleas absent or present, grain dark and ovate, naturalized, economic plant, palatable, grazing for stock, edible grain, weed species of cultivation and rice fields, occurs almost always in wetlands, shallow water, wet places, creeks, streamsides, along stream banks, swamps, moist places, irrigated fields, disturbed areas, borders of ponds, see *Icon. Descr. Gram. Austriac.* 3: 35. 1805, *Essai d'une Nouvelle Agrostographie* 1: 53, 161, 169, t. 11, f. 2. 1812, *Nova Genera et Species Plantarum* 1: 108. 1815 [1816], *Primitiae Florae Essequiboensis* ... 53. 1818, *Mantissa* 2: 269. 1824, *Species Graminum* 1828-1836, *Flora Brasiliensis seu Enumeratio Plantarum* 2: 258-259. 1829, *Botanical Miscellany* 2: 115. 1831, *Enumeratio Plantarum Omnium Hucusque Cognitarum* 1: 145, 147. 1833, *Nomenclator Botanicus. E. elliptica P.W. Michael & Vickery

Australia. Perennial, tufted, erect, weed in rice, economic plant, aquatic, soil banks, see *Telopea* 2(1): 28. 1980.

E. esculenta (A. Braun) H. Scholz (*Echinochloa crus-galli* subsp. *utilis* (Ohwi & Yabuno) T. Koyama; *Echinochloa crusgalli* subsp. *utilis* (Ohwi & Yabuno) T. Koyama; *Echinochloa crusgalli* var. *utilis* (Ohwi & Yabuno) Kitam.; *Echinochloa utilis* Ohwi & Yabuno; *Panicum esculentum* A. Braun) (Latin *esculentus, a, um* "edible, suitable for human food, good to eat")

Eastern Asia, Japan. Annual, fast growing, tufted, vigorous, rhizomes absent, erect and stout, leaf sheaths glabrous and chartaceous, ligules absent, dense inflorescence with erect or spreading branches, panicle very compact, spikelets crowded in irregular rows along the rachis of the erect-spreading racemes, spikelets purplish and shortly acute on scabrous pedicels, lower florets sterile, glumes unequal, lower glume mucronate, upper glume acute, lower lemmas shortly acuminate, fertile lemma shortly apiculate and smooth, lower palea 2-lobed, grain brownish to dark to white, heavy seeder, economic plant, sometimes a weedy escape from cultivation excellent palatability, makes good hay and silage, grown for grazing and fodder, cultivated for forage and grain, fairly drought-tolerant, used as a soil stabilizer and for quick cover on newly cultivated land, seeds eaten by seed-eating birds, prefers sandy loams to clay loams, coastal sands, stony wastelands, often confused with *Echinochloa frumentacea* Link, see *Index Seminum [Berlin]* 1861(App.): 3. 1861 and *Acta Phytotaxonomica et Geobotanica* 20: 50-51. 1962, *Acta Phytotaxonomica et Geobotanica* 36(1-3): 93. 1985, *Grasses of Japan and its Neighboring Regions* 503. 1987, *Taxon* 41(3): 522-523. 1992.

India. Annual, more or less erect, semiprostrate habit, tufted, rhizomes absent, robust, stout, vigorous early grower, leafy, herbaceous, inflated, glabrous, leaf sheaths glabrous or chartaceous, ligules absent, inflorescences incurves or slightly drooping at maturity, panicle compact and continuous, spikelets awnless, always pale spikelets acute to obtuse on scabrous pedicels, florets 2 or 3, lower florets sterile, lower glume shortly acute, upper glume shortly acute, lower lemmas usually unawned, shining fertile lemma ovate to elliptic and with a short tip, lower paleas subequal to the lower lemmas, turgid and whitish grain dorsally compressed, economic plant extremely palatable, largely cultivated as a cereal for its edible seeds, fodder and widely used forage, requires rich moist and well-drained soil, used as a soil stabilizer and for temporary control of erosion in newly cleared and ploughed sandy soils, a rapid grower, cropping 6 weeks after sowing, sometimes a weedy escape from cultivation, seed cooked and used as a millet, seed can be cooked whole or can be ground into a flour, the plant is useful in constipation, probably derived from *Echinochloa colona* (L.) Link, often confused with *Echinochloa esculenta* (A. Braun) H. Scholz, occurs in wet grasslands and waste ground, roadsides and fields, see *Species Plantarum* 1: 56. 1753, *Hortus Bengalensis, or a Catalogue ...* 7. 1814, *Flora Indica; or Descriptions ...* 1: 307. 1820, *Hortus Regius Botanicus Berolinensis* 1: 204. 1827, *Révision des Graminées* 1: 45. 1829, *A Systematic Catalogue of the Flowering Plants and Ferns in Ceylon* 104. 1885 and *Bulletin agricole du Congo Belge* 10: 244. 1919, *The Flora of the Malay Peninsula* 5: 223. 1925, *Trop. E. glabrescens Munro ex Hook.f.

India, Afghanistan. Annual, tufted, glabrous, smooth, compressed, erect or ascending, usually simple, sometimes rooting from the lower nodes, leaf blades pointed, leaf sheaths loose, panicle compact and shortly exserted, spiciform racemes, spikelets awnless, lower lemma convex on the back and smooth, a weed in paddy fields, see *Fl. Br. Ind.* 7(21): 31. 1896 and *Grasses of Burma ...* 311. 1960.

E. haploclada (Stapf) Stapf (*Echinochloa aristifera* (Peter) Robyns & Tournay; *Echinochloa haploclada* var. *stenostachya* Chiov.; *Panicum aristiferum* Peter; *Panicum haplocladum* Stapf) (from the Greek *haplos* "simple, single" and *klados* "a branch")

Ethiopia, Tanzania, Mozambique, Sudan, Kenya, South Africa, Uganda, Zimbabwe. Perennial, aquatic, often wiry, very variable, tufted, rhizomatous, ligule absent or fringe of hairs but usually without ligules, inflorescence reddish and lanceolate, racemes densely crowded, spikelets appressed and more or less hispid, lower floret male, lower lemma acute or awned, a good seed producer, useful for erosion control, low grazing value, well grazed only when young, grains eaten by people, occurs on stream banks and in swamps, edge of pond, dry river beds, marshy swamps, moist grassland, marshes, floodplain grasslands, open areas of the coasts, from sandy loams to alluvial silts, in heavy black clays and areas with open water, paddy fields, in wet areas and on seasonally waterlogged ground, in low wet areas, in seasonally flooded lowlands and ditches, see *Bulletin of Miscellaneous Information Kew* 1908: 59. 1908, *Flora of Tropical Africa* 9: 613. 1920, *Repertorium Specierum Novarum Regni Vegetabilis, Beihefte* 40: 179, 181, t. 22, f. 3. 1930, *Flora Somalia* 2: 445. 1932, *Flore des Spermatophytes du Parc National Albert* 3: 93. 1955.

in Somalia: sabul, sabool

in East Africa: aselele

Tropical Africa, South Africa, Madagascar. Perennial bunchgrass with solid stems densely tangled and floating, erect, emergent, creeping, geniculately ascending and rooting at the lower nodes, firm, stout, robust, tall, coarse, reedlike, rhizomatous with scaly rhizomes, stoloniferous, forming floating mats, ligule a fringe of hairs or absent, sheaths mostly glabrous, inflorescences more or less erect with short pedicels, racemes simple or compound, spikelets acute and shortly pointed, lower floret male, lower glume hairy, upper glume hairy to glabrous, lower lemma depressed on back and cuspidate, fertile lemma elliptic and shining, heavy seed producer, grains used for flour, thatching grass, vegetable salt, a bad weed of cultivation, economic plant, naturalized, grain crop species, excellent fodder grass for all stock, useful hay and silage, young growth very palatable, useful for erosion control or conservation purposes, drought resistant, occurs in grasslands and floodplain grasslands, heavy clay mud, riversides, in wet clay soils, alongside water and in floating meadows, lakeshores, seasonally flooded alluvial clay, in swampy areas or areas subjected to periodical inundations, see *Species Plantarum* 1: 56. 1753, *Tableau Encyclopédique et Méthodique ... Botanique* 1: 171. 1791, *De Graminibus Paniceis* 138. 1826, *Tentamen Florae Abyssinicae ...* 2: 367-368. 1850, *Synopsis Plantarum Glumacearum* 1: 74. 1853, *Notizblatt des Botanischen Gartens und Museums zu Berlin-Dahlem* 1: 328. 1897, *Flora Capensis* 7: 394, 396. 1899 and *The Flora of the Presidency of Bombay* 2: 919. 1908, *Annuario del Reale Istituto Botanico di Roma* 8(3): 298. 1908, *Contributions from the United States National Herbarium* 18(7): 345. 1917, *Notizblatt des Botanischen Gartens und Museums zu Berlin-Dahlem* 7: 56. 1917, *Bulletin agricole du Congo Belge* 10: 244. 1919, *Flora of Tropical Africa* 9: 606. 1920, *Rhodora* 23: 63. 1921, *Bulletin agricole du Congo Belge* 16: 670. 1925, *Abhandlungen der Königlich-Gesellschaft der Wissenschaften, Göttingen*.

Tropical Africa, Madagascar, Southeast Asia, India, Thailand, Indonesia, Sri Lanka, the Philippines. Short-lived perennial and annual, aquatic, robust, glabrous, smooth, sprawling, decumbent and rooting at the lower nodes, trailing leafy stems, upper parts ascending, simple or sparsely branched, herbaceous, thick and spongy, usually somewhat inflated, rhizomatous and stoloniferous, ligule a fringe of hairs or densely long-ciliate, acuminate leaf blades flat or involute, leaf sheaths loose, inflorescence open with flexuous and nodding racemes, spikelets ovate and hairy to hispid, lower floret male or sterile, lower lemma awned, troublesome weed of paddy fields, a vegetable salt from the ashes, cultivated, rich fodder, coarse but palatable hay, economic plant very productive and highly palatable, readily grazed by stock, grain eaten in time of scarcity, sweet culms, useful thatching grass, pith used for caulking boats, in the Niger basin used as sugar, often floating on the water surface, forming dense colonies, grows along rivers and in lakes and lagoons, dry arid and wet zones, sandy soils, in standing water, in stagnant pools and marshes, streamsides, irrigation ditches, swamps, waterways, marshes, rivers, irrigation channels, in cultivated fields, on banks of lakes, see *Species Plantarum* 1: 56. 1753, *Observationes Botanicae* 5: 17. 1789, *Tableau Encyclopédique et Méthodique ... Botanique* 1: 171. 1791, *Essai d'une Nouvelle Agrostographie* 53, 161, 171. 1812, *Systema Vegetabilium* 2: 479. 1817, *Systema Vegetabilium, editio decima sexta* 1: 307. 1825, *Révision des Graminées* 1: 44. 1829, *Journal de Botanique (Morot)* 4: 141. 1890, *Conspectus Florae Africae* 5: 745. 1894, *Bulletin de la Société d'Histoire Naturelle d'Autun* 8: 347-348. 1895, *Fl. in English: burgu grass, hippo grass, long-awned water grass, long-awn water grass, umvuma grass, water grass, sweet reed, honey reed of the Niger

in French: roseau sucré, roseau à miel du Niger

in Arabic: alwa, helew

in Guinea-Bissau: quéo

in Mali: aluala, birbou, birgou, borgan, bourgou, burdi kama-rege, burdi kamareje, burgu lé, burgu ni, ekaywod, gamaraho, gamawa, gambarawo, katu, kundu, kundu hari, nomo ara, nomo ari, nomo hara, nomo hari, perepere ntiokè

in Niger: beargu, burgo, burgu, burgu abbahi, koundou

in Nigeria: alwa, bonekouan, burgu, burugu, helew, sakera, siseri, swandzwin, wuruguhó

in Senegal: burgu

in southern Africa: langnaaldwatergras, watergras; bohomba-liliba (Sotho)

in southwest Africa/Namibia: sumpf

in Upper Volta: burgu, moignima

in the Philippine Islands: bungalon, balili, timsim, timsin, bayakibok, banago, lagtom-na-pula, lagtomna pula, uraroi, kompay

in India: banti, bontha oddu, dul, gandu bhatthada hullu, kaadu dhaabi hullu, kadu dabhai hullu, pedda ooda

in Sri Lanka: wel maratu

in Thailand: yaa plong, ya plong, ya plong yai, yaa plong yai

E. telmatophila Michael & Vickery (Greek *telma*, *telmatos* “marsh” and *philos* “lover, loving”)

Australia, Queensland, New South Wales, Western Australia. Annual, erect to spreading, stout, tufted, sometimes branching below, rhizomes absent, ligule absent, blades glabrous, dense panicles erect or slightly nodding or drooping, glumes unequal, lower glume acute, upper glume pointed or awned, lower lemma awned, yellowish fertile lemma narrow-elliptic and smooth, creamy to yellowish to brownish oblong grain, grows in or near ponds and streams, on damp sand flats, swamps, see *Telopea* 1(1): 44. 1975.

in English: swamp barnyard grass

E. turneriana (Domin) J.M. Black (*Echinochloa turneriana* Domin; *Panicum turnerianum* Domin)

Australia, Queensland, New South Wales. Annual, erect, robust, tufted, fast growing, rhizomes absent, ligules absent, blade often glabrous, panicle narrow, on short pedicels spikelets ovate to elliptic and sometimes shortly awned, lower glume shortly mucronate, upper glume rarely awned, lower lemma sometimes shortly awned, fertile lemma elliptic and smooth, heavy seeder, seed will not germinate unless flooded, economic plant, palatable and nutritious, forage, grain a valuable human food in dry times, tolerates seasonal flooding and will not tolerate drought, grows in heavy cracking clays and silty clays, in or near water courses, floodplains, seasonally flooded heavy clay soils, see *Bibliotheca Botanica* 85: 307. 1915, *Flora South Australia (edition 2)* 1: 72. 1943.

in English: channel millet, native millet, swamp millet, western millet, wild millet, wild sorghum, native sorghum

E. ugandensis Snowden & C.E. Hubb.

Tropical East Africa, South Africa. Annual, stoloniferous, tufted, aquatic, ligule a fringe of hairs, inflorescence linear, spikelets pubescent, lower floret sterile, lower lemma acute or awned, common in swamps, see *Bulletin of Miscellaneous Information Kew* 1936(5): 315. 1936.

E. verticillata Berhaut (*Echinochloa colona* (L.) Link; *Echinochloa pyramidalis* (Lam.) Hitchc. & Chase; *Panicum colonum* L.; *Panicum pyramidale* Lam.)

Tropical Africa. See *Systema Naturae, Editio Decima* 2: 870. 1759, *Tableau Encyclopédique et Méthodique ... Botanique* 1: 171. 1791, *Hortus Regius Botanicus Berolinensis* 2: 209. 1833 and *Contributions from the United States National Herbarium* 18(7): 345. 1917, *Mémoires de la Société Botanique de France* 1953-54: 9. 1954, *Sida* 20(2): 525-548. 2002.

Northern America, U.S., Florida. Perennial or annual, erect, caespitose, thick stems, ligules absent, smooth leaf blades flat and linear, sheaths with stiff hairs, panicles erect to slightly drooping, spikelets elliptic-ovate and bristly, lower glume attenuate, upper glume acuminate or shortly awned, lower lemmas usually awned, grains white to brown, grain used as meal or flour, a food for many kinds of birds, growing in clumps in and beside water or in farmlands, often in shallow water and brackish marshes, floodplains and low ground, seasonally flooded pool, riverbanks, wet places, shores and salt marshes borders, in both disturbed and undisturbed sites although not in rice fields, see *Flora Caroliniana, secundum ...* 72. 1788, *Flora Americae Septentrionalis; or, ...* 1: 66-67. 1814, *A Sketch of the Botany of South-Carolina and Georgia* 1: 114-115. 1816, *Descriptio uberior Graminum* 107-108. 1817, *American Journal of*

Science 4: 58. 1822, *Systema Vegetabilium, editio decima sexta* 1: 307. 1825, *Révision des Graminées* 1: 45. 1829, *A Class-book of Botany* 604. 1847, *The American Botanist and Florist* 2: 393. 1871, *Flora Brasiliensis* 2(2): 142. 1877 and *Catalogue of North American Plants North of Mexico (edition 2)* 21. 1900, *Flora of the Southeastern United States ...* 84. 1903, *Report of the Michigan Academy of Science, Arts and Letters* 6: 202. 1904, *Contributions from the United States National Herbarium* 12(6): 183-258, vii-xi. 1909, *Contr. in English: long-awn cock's-spur grass, Walter's millet, coast cockspur, coast cockspur grass

Echinolaena Desv. = Chasechloa A. Camus

From the Greek *echinos* "a hedgehog" and *chlaena, chlaenion* "cloak."

About 6-8 species, South America. Panicoideae, Panicoideae, Paniceae, or Panicoideae, Paniceae, Paspalinae, annual or perennial, erect, herbaceous, rhizomatous or stoloniferous, auricles absent, leaf blades linear to lanceolate, plants bisexual, inflorescence racemose terminal or axillary, 1 to several racemes on a central axis, paired spikelets lanceolate compressed laterally, 2 glumes subequal 3- to 9-nerved to 7- to 9-nerved, lower glume membranous to coriaceous armed with tubercle-based bristles, upper glume acute or acuminate, palea 2-nerved, 2 free and fleshy lodicules, 3 stamens, ovary glabrous, 2 stigmas, in tropical dry forests, prairies, moist ground, open marshy places, linked to *Ichnanthus*, type *Echinolaena hirta* Desv., see *Journal de Botanique, Appliquée à l'Agriculture, à la Pharmacie, à la Médecine et aux Arts* 1: 75. 1813, *Flora Brasiliensis seu Enumeratio Plantarum* 2(1): 127-128. 1829 and *Bulletin de la Société Botanique de France* 95: 330-331. 1949, *Brittonia* 23(3): 293-324. 1971, *Flora Mesoamericana* 6: 302. 1994, *Darwiniana* 35(1-4): 29-36. 1994, J. Species

***E. ecuadoriana* Filg.**

Ecuador. See *Nordic Journal of Botany* 14(4): 379, f. I-J. 1994.

***E. gracilis* Swallen**

Guatemala, Colombia. Perennial, delicate, branched, decumbent, rooting at the lower nodes, leaf blades hispid narrowly lanceolate, short solitary racemes subtended by a small oblong bract, spikelets lanceolate acuminate, glumes herbaceous, lower lemma membranous, see *Journal of the Washington Academy of Sciences* 23(10): 457. 1933.

***E. inflexa* (Poir.) Chase** (*Cenchrus inflexus* Poir.; *Cenchrus inflexus* R. Br., nom. illeg., non *Cenchrus inflexus* Poir.; *Cenchrus marginalis* Rudge; *Echinolaena hirta* Desv.; *Echinolaena scabra* Kunth; *Panicum echinolaena* Nees; *Panicum echinolaena* var. *ciliatum* Nees; *Panicum echinolaena* var. *glabrum* Nees ex Döll; *Panicum echinolaena* var. *pilosum* Döll; *Panicum echinolaena* var. *tomentellum* Döll; *Panicum echinolaena* var. *velutinum* Döll; *Panicum echinolaena* var. *villosum* Nees; *Panicum jacobinae* Steud.; *Panicum marginale* (Rudge) Hack.; *Pseudechinolaena inflexa* (Poir.) Pittier)

Brazil, Bolivia. Short-lived perennial, loosely tufted, erect, ascending from a decumbent base, sometimes scrambling, glabrous or hispid, stiff, stoloniferous or rhizomatous, leaf blades lanceolate pungent, racemes solitary terminal and 1-sided, a small bract subtending the raceme, spikelets lanceolate and hispid, lower glume coriaceous and acuminate, upper glume acuminate, upper lemma coriaceous, common in rocky areas, hillsides, see *Species Plantarum* 2: 1049. 1753, *Tableau Encyclopédique et Méthodique ... Botanique* 1: 171. 1791, *Encyclopédie Méthodique, Botanique* 6: 50. 1804, *Plantarum Guianae Rariorum Icones et Descriptiones ...* 19, t. 25. 1805, *Prodromus Florae Novae Hollandiae* 1: 195. 1810, *Journal de Botanique, Appliquée à l'Agriculture, à la Pharmacie, à la Médecine et aux Arts* 1: 75. 1813, *Nova Genera et Species Plantarum* 1: 118, t. 38. 1815 [1816], *Flora Brasiliensis seu Enumeratio Plantarum* 2(1): 128. 1829, *Synopsis Plantarum Glumacearum* 1: 55. 1854, *Flora Brasiliensis* 2(2): 180. 1877 and *Ergebnisse der Botanischen Expedition nach Südbrasilien* 1: 9. 1906, *Proceedings of the Biological Society of Washington* 24: 117. 1911, *Flora of Tropical Africa* 9: 494. 1919, *Boletín Técnico. Bot.* 12: 213. 1987.

E. oplismenoides (Munro ex Döll) Stieber (*Ichnanthus oplismenoides* Munro ex Döll)

South America. See *Flora Brasiliensis* 2(2): 288. 1877 and *Systematic Botany* 12: 212. 1987.

E. standleyi (Hitchc.) Stieber (*Ichnanthus standleyi* Hitchc.)

America. See *Contributions from the United States National Herbarium* 24(9): 662. 1930, *Systematic Botany* 12: 214. 1987.

Echinopogon P. Beauv. = *Ancistragrostis*
S.T. Blake, *Hystericina* Steud.

From the Greek *echinos* “a hedgehog” and *pogon* “a beard,” alluding to the stiff awns or to the inflorescence.

About 7 species, Australia, New Zealand, New Guinea. Pooideae, Poodae, Aveneae, perennial or annual, herbaceous, rhizomatous or caespitose, scabrous, nodes glabrous, internodes solid or hollow, leaf sheath rounded, ligule short and membranous, auricles absent, leaves flat and narrow, plants bisexual, panicle spiciform to capitate, oblong to ovate spike-like panicle more or less bristly, spikelets more or less sessile and compressed laterally, spikelets with rachilla extension, 1 bisexual floret, densely crowded florets, 2 membranous glumes acute usually equal or subequal and keeled, almost leathery lemma bilobed or bidentate with stiff terminal or subapical awn, straight untwisted awn, hairy callus, palea minutely apically notched, 2 lodicules free and ciliate, stamens 3, ovary apex hairy or glabrous, stigmas 2, weeds, fodder grass, moderate forage value, growing in grassland, open woodland, related to *Calamagrostis*, type *Echinopogon ovatus* (Forster f.) P. Beauv., see *Essai d'une nouvelle Agrostographie*. 42, 148, 161. 1812, *Synopsis Plantarum Glumacearum* 1: 35, 37. 1855 [1853] and *Hooker's Icones Plantarum* 33: tab 3261. 1935, *Blumea, Supplement* 3: 56, f. 1. 1946, *Flora of Australia* 43: 12, 221, 272. 2002, *Restoration Ecology* 11(4): 489-503. Dec 2003, *Molecular Ecology* 13(6): 1455-1467. June 2004.

Species

E. caespitosus C.E. Hubbard

New South Wales, Queensland, New Guinea. Perennial, erect or rarely geniculate, loosely or densely tufted, leaves mostly basal, auricles absent, ligule obtuse or truncate, basal leaf sheaths keeled, leaves more or less scabrous to pilose, green panicle erect and contracted, chasmogamous spikelets, the flower spike is a short and dense head of bristly flowers, glumes lanceolate equal or subequal, lemma oblong to ovate, median awn, palea hyaline to membranous, anthers yellow, fruit ventrally compressed and longitudinally grooved, can cause “staggers” if grazed when young, often in disturbed areas, common in woodland, on sandstone and clay soils, forest or grassland, see *Hooker's Icones Plantarum* 33: tab 3261. 1935.

in English: tufted hedgehog-grass

E. caespitosus C.E. Hubb. var. ***caespitosus***

New South Wales, Queensland, New Guinea. Tufted, more or less scabrid, erect or nearly so, sometimes with loose small open tussock, spikelets often dark colored, glumes scaberulous, growing on hillsides in *Eucalyptus* forests, in dry sclerophyll forest.

in English: tufted hedgehog-grass

E. caespitosus C.E. Hubb. var. ***cunninghamii*** C.E. Hubb.

New South Wales. Glumes more or less pubescent to puberulous, see *Hooker's Icones Plantarum* 33: (tab 3261) 7. 1935.

E. cheelii C.E. Hubb. (after the Australian (b. England, Kent) botanist Edwin Cheel, 1872-1951 (d. Sydney), one of the contributors to *The Flora of the Northern Territory* by Alfred J. Ewart & Olive B. Davies. Melbourne 1917, with the Australian naturalist Sir John Burton Cleland (1878-1971) wrote Notes on Australian Fungi. no. IV. *Polyporus, Fomes and Hexagona*. 1918 and *Notes on the Early Stages of Development of *Lysurus gardneri*-L. australiensis*, etc. 1918; see Ray Desmond, *Dictionary of British & Irish Botanists and Horticulturists*. 144. London 1994)

New South Wales, Victoria. Perennial, loosely caespitose or tufted, leaves mostly basal, auricles absent, ligule membranous, basal leaf sheaths not keeled, leaves dull pale green, green or whitish green erect or nodding panicle, spikelets densely crowded on short branches, glumes acute to acuminate, lemma with rigid awn, palea narrowly ovate and membranous, yellow anthers, hispid fruit ventrally compressed and longitudinally grooved, growing often in damp places in forest and grasslands, dry sclerophyll forest, open native scrub along water or river, see *Hooker's Icones Plantarum* 33: (t. 3261) 3. 1935.

in English: long-flower hedgehog-grass, long-flowered hedgehog-grass

E. intermedius C.E. Hubb.

New South Wales, Queensland. Perennial, green, solitary or loosely tufted, oblique or decumbent at base, rhizomatous with a slender rhizome, leaves mostly basal, auricles

absent, ligule membranous, basal leaf sheaths keeled, a stiffly erect green panicle fully exerted, spikelets densely crowded on short branches, glumes narrow-lanceolate with keel ciliate, lemma subulate, rigid and hispid to scabrous awn, palea with apical setae or without apical setae, anthers yellow or white, glabrous fruit ventrally compressed and longitudinally grooved, in damp sites, shady places, open habitats, on creek banks, see *Hooker's Icones Plantarum* 33: t. 3261. 1935.

in English: erect hedgehog-grass

E. mckiei C.E. Hubb. (for Ernest Norman McKie, 1882-1948)

New South Wales, northern and southern Tablelands. Perennial, rhizomatous and loosely tufted, slender rhizomes, auricles absent, ligule membranous and truncate, basal leaf sheaths keeled, leaf blade channelled, green panicle erect and dense, spikelets chasmogamous and spreading, glumes pubescent, lemma apically 2-toothed, awn rigid, palea narrowly oblong, anthers yellow, glabrous fruit dorsiventrally compressed and longitudinally grooved, found in soil of granite formation, in sclerophyll forest or grassland, see *Hooker's Icones Plantarum* 33: (t. 3261) 9. 1935.

E. nutans C.E. Hubb.

New South Wales, Queensland. Perennial, rhizomatous and loosely tufted, with a slender rhizome, auricles absent, ligule membranous, basal leaf sheaths keeled, inflorescence a green nodding and dense panicle, spikelets erect and spreading, cleistogamous spikelets, glumes membranous, lemma linear, awn rigid and scabrous, palea 2-keeled with keels wingless, anthers yellow, hispid fruit longitudinally grooved, in partial shade, useful for erosion control, in open habitats, sclerophyll forest or grassland, see *Hooker's Icones Plantarum* 33: (t. 3261) 4. 1935.

E. nutans C.E. Hubb. var. *major* C.E. Hubb.

New South Wales. Ovary glabrous, see *Hooker's Icones Plantarum* 33: (t. 3261) 5. 1935.

E. nutans C.E. Hubb. var. *nutans*

New South Wales, Queensland. Slender grass, weak, inflorescence nodding and pale green, ovary shortly hispid, in open habitats, sclerophyll forest or grassland, along roadsides.

in English: nodding hedgehog-grass.

E. ovatus (Forster f.) P. Beauv. (*Agrostis ovata* Forster f.; *Cinna ovata* (G. Forst.) Kunth; *Echinopogon aspera* Trinius; *Echinopogon novae-zelandiae* Gand.; *Echinopogon ovatus* Sieber; *Echinopogon ovatus* var. *pubiglumis* C.E. Hubb.; *Echinopogon purpurascens* Gand.; *Echinopogon sieberi* Steud.; *Echinopogon virens* Gand.; *Hystericina alopecuroides* Steud.)

Australia. Perennial or annual, solitary culms or tufted, decumbent and sometimes geniculate at base, geniculate-

erect or ascending from rhizome system, slender, loose green tufted grass with erect scabrid culms, slender creeping rhizome, auricles absent, leaf sheath appressed to culms, ligule membranous and not lobed or finely denticulate, basal leaf sheaths not keeled, leaves flat, green panicle ovoid to oblong, flower head like a ball, spikelets linear-oblong and chasmogamous, glumes acute or obtuse and ciliate on the keel, scabrous awns tipped red, awn stout and straight, palea narrowly ovate and hyaline to membranous, palea keels ciliate, anthers yellow, ovary apex hairy, hispid fruit longitudinally grooved, shade tolerant, shady bank of gully under eucalyptus, grassy shrubby areas, among stones, dry banks, hillsides in *Eucalyptus* forest, on clay habitats, waste places, wet sclerophyll woodland and by creeks, rhizomatous perennial in sandy soil, young plants poisonous to stock, can cause "staggers" if grazed when young, this grass similar to *Echinopogon caespitosus* C.E. Hubb., in New Zealand recorded pathogenic association with *Claviceps purpurea* (Fr.) Tulasne, see *Florulae Insularum Australium Prodrum* 40. 1786, *Essai d'une Nouvelle Agrostographie* 42, 148, 161, t. 9, f. 5. 1812, *Révision des Graminées* 1: 67. 1829, *Synopsis Plantarum Glumacearum* 1: 37. 1855 [1853], *Indig. Grasses N.Z.* t. 13B 1878 and *Manual of the New Zealand Flora* 150. 1925, *Hooker's Icones Plantarum* 33: (t. 3261) 7-8. 1935.

in English: rough-bearded grass, forest hedgehog-grass, hedgehog-grass

E. phleoides C.E. Hubb.

Australia. Perennial, slender rhizome, auricles absent, ligule membranous and truncate, basal leaf sheaths scabrous or glabrous, leaves hispid, dense and cylindrical panicle not bristly, spikelets linear-oblong, glumes pubescent, lemma with a mucro, growing on limestone, see *Hooker's Icones Plantarum* 33: (t. 3261) 10. 1935.

Ectosperma Swallen = *Ectosperma* Vaucher (Algae), *Swallenia* Soderstr. & H.F. Decker

From the Greek *ektos* "outside, without, external things" and *sperma* "a seed," referring to the capsules.

Chloridoideae, Cynodonteae, type *Ectosperma alexandrae* Swallen, see Jean Pierre Étienne Vaucher, 1763-1841, *Histoire des conferves d'eau douce ...* Genève 1803, *Journal of the Washington Academy of Sciences* 40(1): 19-21. 1950, *Anatomy of the Monocotyledons, I: Gramineae*. 1960, *Recent Advances in Botany* 1: 133-145. 1961, *Madroño* 17(3): 88. 1963, *Fremontia* 7(2): 3-6. 1979, *Inventory of Rare and Endangered Vascular Plants of California*, 3rd edition. 1984, *Madroño* 48(3): 152-161. 2001, *Contributions from the United States National Herbarium* 41: 73, 220. 2001.

Ectrosia R. Br.

From the Greek *ektrosis* “miscarriage,” possibly referring to the fertile flowers in the spikelets.

About 10-14 species, tropical Australia, Papua New Guinea to the Philippines. Chloridoideae, Eragrostideae, or Cynodonteae, annual or perennial, herbaceous, caespitose, auricles absent, ligule a fringe of hairs, plants bisexual, inflorescence paniculate open to contracted, spikelets slender flattened laterally, 4 or more flowered, long straight rachilla internodes, lower florets bisexual, upper florets sterile and long-awned, 2 glumes usually very unequal, lemmas keeled and some lemmas aristulate or awned, palea not winged, 2 lodicules fleshy and glabrous, stamens 3, ovary glabrous, 2 white stigmas, open habitats, poor soils, depressions, sandy soils, closely related to *Heterachne*, type *Ectrosia leporina* R. Br., see Robert Brown (1773-1858), *Prodromus florae Novae Hollandiae* 185. 1810 and *Hooker's Icones Plantarum* 34: t. 3312. 1936, *University of Queensland Papers: Department of Botany* 1(18): 1-3. 1941 [also “Studies on Queensland Grasses, II” in *Univ. Queensland Dept. Biol. Pap.*], *Proceedings of the Royal Society of Queensland* 81: 20. 1969, *Blumea* 47(1): 157-204. 2002, *Flora of Australia* 44B: 426-439. 2005.

Species

E. agrostoides Benth.

Australia. Annual, inflorescence with capillary branchlets, see *Flora Australiensis: A Description ...* 7: 634. 1878.

E. anomala C.E. Hubb.

Australia. Annual, rachilla zig-zag, lemma 3-nerved, palea keels ciliolate or ciliate, see *Hooker's Icones Plantarum* 34: t. 3312, p. 14. 1936.

E. appressa S.T. Blake

Australia. Annual, see *University of Queensland Papers: Department of Botany* 1(18): 1. 1941.

E. blakei C.E. Hubb. (for S.T. Blake)

Australia. Vulnerable and endangered species, annual, see *Hooker's Icones Plantarum* 34: t. 3312. 1936.

E. confusa C.E. Hubb.

Australia. Annual, see *Hooker's Icones Plantarum* 34: t. 3312. 1936.

E. danesii Domin

Australia. Annual, see *Bibliotheca Botanica* 85: 406, t. 15, f. 3-4, 1915.

E. gulliveri F. Muell. (named for the brothers T.A. & Benjamin Gulliver, on instructions from Baron F. von Mueller, traveled aboard the Eagle and collected plants for him around Sweers Island, the Gilbert, Norman and Flinders Rivers in the Gulf of Carpentaria and at Caledon Bay)

Australia. Lemmas hairy and 5- to 9-nerved, see *Fragmenta Phytographiae Australiae* 8: 201. 1874 and *Bibliotheca Botanica* 85: 407, f. 94. 1915, *Hooker's Icones Plantarum* 34: t. 3312. 1936.

E. gulliveri F. Muell. var. *gulliveri*

Australia.

E. gulliveri F. Muell. var. *squarrulosa* (Domin) C.E. Hubb. (*Ectrosia squarrulosa* Domin; *Ectrosia squarrulosa* f. *minor* Domin; *Ectrosia squarrulosa* f. *normalis* Domin)

Australia. See *Bibliotheca Botanica* 85: 407-408. 1915, *Hooker's Icones Plantarum* 34: t. 3312, p. 16. 1936.

E. lasioclada (Merr.) S.T. Blake (*Ectrosia eragrostoides* Domin; *Eragrostis lasioclada* Merr.)

Australia, Queensland. Perennial or annual, lemma awns short, often in *Eragrostis* and *Ectrosiopsis*, see *Philippine Journal of Science* 1(Suppl.): 382. 1906, *Bibliotheca Botanica* 85: 407. 1915, *Reinwardtia* 2(2): 268. 1953, *Proceedings of the Royal Society of Queensland* 84(5): 65. 1973.

E. laxa S.T. Blake

Australia. Annual, sandy areas, see *University of Queensland Papers: Department of Botany* 1(18): 1. 1941.

E. leporina R. Br.
