Australia, South Australia, Western Australia, Queensland, New South Wales, Victoria, Northern Territory. Annual, erect, yellowish green, tufted, sheaths usually glabrous, ligule membranous and ciliate, panicle branches spreading at maturity, spikelets acuminate and glabrous, more or less nerveless lower glume truncate or pointed, upper glume nerved, lower lemma sterile, upper lemma broad-elliptic and smooth, on good soils, inland floodplains, may cause photosensitization in sheep, see *Three Expeditions into the Interior of Eastern Australia* 1: 325. 1938.

in English: pepper grass, pigeon grass

P. lagascae (Roem. & Schult.) Kuntze (*Paspalum lagascae* Roem. & Schult.; *Paspalum tenellum* Willd.) (named after the Spanish botanist Mariano Lagasca (La Gasca) y Segura, 1776-1839 (d. Barcelona), botanical collector, professor of botany, 1822 to England, 1831-1834 Jersey, 1834-1839 Spain, Director Madrid Botanical Garden, 1831 Fellow of the Linnean Society, among his writings are *Elenchus plantarum*, quae in horto regio botanico matritensi colebantur anno mdcccxv. Matriti [Madrid] 1816 and *Genera et species plantarum*, quae aut novae sunt aut nondum recte cognoscuntur. Madrid 1816, with J. Rodriguez wrote "Descripción de algunas plantas del Real Jardín Botánico de Madrid." *Anales Ci. Nat.* 4: 256-263. 1801. See Eduardo Reyes Prosper, *Dos noticias historicas del ... d. Antonio José Cavanilles y d. Mariano La Gasca y Segura*. Madrid 1912; J.H. Barnhart, *Biographical notes upon botanists*. 2: 334. 1965; Ida Kaplan Langman, *A Selected Guide to the Literature on the Flowering Plants of Mexico*. Philadelphia 1964; R. Zander, F. Encke, G. London 1994; Gordon Douglas Rowley, *A History of Succulent Plants*. Strawberry Press, Mill Valley, California 1997; Stafleu and Cowan, *Taxonomic literature*. 2: 188. 1979)

Tropical and southern Africa, Madagascar, Arabia. Perennial bunchgrass or annual, densely to loosely tufted, variable to extremely variable, vigorous, bearded at the nodes, erect and geniculate or geniculately ascending, stout, robust, culms rather coarse and somewhat glaucous, rooting at the nodes, deep and fibrous root system, rhizomatous with short stout rhizome, stems with urticating bristles, leaf sheaths hairy to glabrous, lower leaf sheaths bristly pubescent to long pilose, ligule membranous and sometimes with a fringe of hairs, leaves very acute and linear-lanceolate, open panicle inflorescence usually much branched with ascending to spreading branches, panicles erect or nodding, lower panicle branches whorled, pale green or tinged purple spikelets oblong to acute, lower floret staminate, glumes very dissimilar and hyaline, lower glume obtuse, lower lemma not grooved, upper lemma oblong to elliptic and rugulose or transversely wrinkled, palea present, 2 lodicules, 3 stamens, stigmas purplish, white-greenish grains dispersed by the wind, facultative apomict, introduced and widely naturalized in many tropical and subtropical areas of the world, stands up well under heavy grazing, agriculturally important species used primarily for pasture, especially palatable in the younger stages, nutritive value high when leafy and green, cultivated fodder, native pasture grass, horse fodder, seeds eaten by local people in time of scarcity, grains eaten by chimpanzees and baboons, medicinal, used for sweeping outside the houses and thatching, some drought-tolerant, it does not tolerate waterlogging, weed species forming dense monotypic stands, found along roadsides and disturbed areas, in coarse black volcanic soil, lawn in coarse sand, damp places, waste places near water tap, swampy ground, bushland, damp sand, under trees, in forest understory, open forests, in dry woodland forest, along rivers and riverbanks, in seasonally flooded meadows, rocky slopes, eroded slopes, grassland and open woodland and shady places,

- cultivated areas and margins of, in or near pastures, abandoned agricultural land, clearings, clearings in forest, see *Icones Plantarum Rariorum* 1: 2, t. 13. 1781, *Collectanea* 1: 76. 1786, *Nova Genera et Species Plantarum seu Prodromus* 24. 1788, *Tableau Encyclopédique et Méthodique ... Philadelphia 1964; A. Lasègue, *Musée botanique de Benjamin Delessert*. Paris 1845; Günther Schmid, *Chamisso als Naturforscher*. Eine Bibliographie. Leipzig 1942)

Mexico to Paraguay. Perennial, aquatic, emergent, herbaceous, erect, robust, leaf blades linear lanceolate acuminate, large inflorescence openly paniculate, lax panicle oblong with branches whorled, spikelets elliptic to ellipsoid, awnless, lower glume ovate 3-nerved obtuse or acute, upper glume 7- to 9-nerved, upper lemma smooth shining, medicinal value, abortifacient, forage, found in swampy places,

inundated areas, in standing water, along flooded riverbank, may be confused with *Lasiacis procerrima* (Hack.) Hitchc., see *Supplementum Plantarum* 107. 1781, *Enumeratio Plantarum Omnium Hucusque Cognitarum* 91. 1809, *Systema Vegetabilium* 2: 458. 1817, *Primitiae Florae Essequeboensis ...* 63. 1818, *Mantissa* 2: 248. 1824, *Révision des Graminées* 1: 38. 1829, *Bulletin de l'Académie Royale des Sciences et Belles-lettres de Bruxelles* 9(2): 240. 1842, *Synopsis Plantarum Glumacearum* 1: 64. 1853, *Flora Brasiliensis* 2(2): 206. 1877 and *Plantae pilcomayenses a ... China, Asia, Eurasia. Annual, grown as grain crop since prehistoric times, hairy, stout and robust, erect or decumbent at the base, tufted, caespitose, branching from the base, leaf sheaths open and densely covered with stiff hairs, collar lacks auricles, leaves very acute and linear to linear-lanceolate, ligule a fringe of dense hairs, leaf blades more or less pilose or densely hairy on both surfaces, internodes hollow and cylindrical, nodes hispid or puberulent, panicles open to contracted usually nodding or drooping, white or yellow to dark brown spikelets stipitate and ovate, upper floret bisexual, lower glume acuminate to acute and often

inflated, upper glume and lower lemma long-acute, lower floret sterile, reddish fertile lemma smooth and shining, smooth shiny oval seeds pointed at each end, noxious weed species, wild and cultivated, used as a demulcent in diarrhea, leaves might cause photosensitization in sheep, hay is coarse, a vigorous competitor with many row crops, commonly and widely cultivated fodder for cattle and horses, used for brewing, as feed grain in birdseed mixtures, food source for stock and aviary birds, used as food crop for game birds, pig food, in China and India used as a grain, husked grain boiled and cooked like rice, in China also used in pulp stock for papermaking, occasionally or usually escaped from cultivation, recorded instance of broom corn millet poisoning in New Zealand, found on disturbed sites and road verges, roadsides and waste places, gardens and railroads, see *Species Plantarum* 1: 58. 1753, *Flora Caroliniana, secundum ...* 72. 1788, *Methodus Plantas Horti Botanici ...* 203. 1794, *Syn. P. napaliense Davidse

South America.

in English: Napali panic grass

P. natalense Hochst. (*Panicum fulgens* auctt. non Stapf)

South Africa, Angola, Zimbabwe. Perennial, knotty base, densely tufted, simple or unbranched, generally shortly rhizomatous, leaves mostly basal, leaf sheath small, ligule inconspicuous, leaves glabrous and narrow to thread-like, hard wiry leaves, open to slightly contracted panicle, spikelets glabrous and rounded, lower floret sterile or male, lower floret palea membranous, weed species, useful for soil erosion control, low grazing value, unpalatable and seldom grazed by livestock and game, grows on open grassland, sandy loam, shallow soil in rocky areas, in open mountainous grassland in cool regions with a high rainfall, in well-drained sandy soils, on stony slopes, burned veld, in open sour grassland, see *Flora* 29: 113. 1846.

in English: Natal buffalo grass, Natal panic, Natal panicum

in South Africa: Natalbuffelsgras, suurbuffelsgras

Mexico, U.S., Texas, New Mexico, Arizona. Perennial sodgrass, light bluish green, nodes of runners swollen and densely hairy, stems and leaves coarse, leaves flat to somewhat inrolled at the edges, inflorescence with branches closely appressed to the main stem, large and blunt seeds, useful grass, medicinal, livestock graze the foliage and inflorescence, provides fair forage for all grazing animals while green, stems and leaves lose much of their palatability on drying, coarse and unpalatable after maturity, excellent as an erosion control plant, medicinal value, usually grows

in swales and mudflats, along banks of streams or ditches, bottomland and highly productive soils, lowlands with fine-textured soils and along drainages that are irrigated at times by flood waters, see *Nova Genera et Species Plantarum* 1: 98-99. 1815 [1816], *Botanische Zeitung. Berlin* 19(44): 323. 1861, *A Preliminary Report on the Geological and Agricultural Survey of Texas* App. 3. 1866, *Transactions of the Kansas Academy of Science* 16: 164. 1899 and *Manual of the Flora of the Northern States and Canada* 77. 1901, Laura F. Tropical and subtropical Asia, China, India, Indonesia, Sri Lanka, Thailand, Malaysia, Australia, Queensland, New South Wales, Northern Territory. Perennial, stoloniferous, usually aquatic, more or less erect, tufted, stout, not rhizomatous, decumbent at the base and rooting at the lower nodes, thick spongy culms often floating on water, sheath inflated, ligule membranous and cilia much longer than the membrane, bright green leaves acute and linear-lanceolate, filiform panicles branches ascending to widely divergent to spreading, green glabrous spikelets narrow and acute, lower glume truncate or pointed, fruiting glume smooth, lower floret sterile, upper floret dark brown at maturity, upper lemma striolate, aquatic or semiaquatic, forming floating clumps and colonies, may obstruct irrigation flows, succulent fodder for cattle and buffaloes, grains used for making

a cakelike preparation, sometimes considered a synonym for *Panicum repens* L., aquatic habitats, poor soils, wet places, swamps, damp mud, dams, ponds, in still water, in slowly flowing water, streams and sluggish streams, marshes, see *Tableau Encyclopédique et Méthodique ... Botanique* 4: 747. 1798, *Hortus Bengalensis, or a catalogue ...* 8. 1814, *Flora Indica; or Descriptions ...* 1: 310. 1820, *Tentamen Florae Abyssinicae ...* 2: 373. 1850, *A Systematic Catalogue of the Flowering Plants and Ferns in Ceylon* 105. 1885, *Revisio Generum Plantarum* 3(3): 363. 1898, *Flora Capensis* 7: 407. 1899 and *Handb. P. pseudisachne Mez

Brazil. Perennial, erect to ascending, rooting at the nodes, slender knotty rhizome, cordate leaf blades lanceolate to narrowly lanceolate, leaves acute or acuminate, panicle ovate much branched with spreading branches, ovate-oblong or orbicular spikelets pubescent, awnless, lower glume ovate 3-nerved acute, upper glume ovate 5-nerved, lower lemma 5-nerved, found in grassland, deep sandy loam, resembles *Panicum cyanescens*, see *Notizblatt des Botanischen Gartens und Museums zu Berlin-Dahlem* 7: 71. 1917.

P. psilanthum Steud. (*Panicum hylaeicum* Mez; *Panicum laxum* Sw.; *Panicum laxum* var. *laxum*; *Steinchisma laxa* (Sw.) Zuloaga)

Uruguay. See *Nova Genera et Species Plantarum seu Prodrromus* 23. 1788, *Synopsis Plantarum Glumacearum* 1: 66. 1853 and *Notizblatt des Botanischen Gartens und Museums zu Berlin-Dahlem* 7: 75. 1917, *American Journal of Botany* 90: 817. 2003.

P. psilocaulon Steud. (*Setaria parviflora* (Poir.) Kerguelén)

South America. See *Encyclopédie Méthodique, Botanique* 6: 52. 1804, *Synopsis Plantarum Glumacearum* 1: 50. 1853 and *Lejeunia*; *Revue de Botanique. Nouvelle série* 120: 161. 1987.

P. psilopodium Trin. (*Panicum flexuosum* Retz.; *Panicum sumatrense* Roth ex Roem. & Schult.; *Panicum sumatrense* subsp. *psilopodium* (Trin.) de Wet)

Tropical Asia, Taiwan, China, Indonesia, India, Nepal, Thailand, Sri Lanka, Southeast Asia. Annual, erect, simple or branched from the lower and middle nodes, usually leafy, often tufted, rarely rooting at the lower nodes, nodes and internodes glabrous, sheaths slipping from the culms, ligule a lacerate membranous ring or a ciliate membrane, leaf blades linear and tapering to a very sharp point, inflorescence not nodding, a panicle effuse with spreading branches, small deciduous spikelets readily disarticulating at maturity, lower floret sterile, upper floret elliptic and acute, purple stigmas, cultivated, grazed, a poor fodder, a rice-associated weed, open habitats, grasslands, in very poor soils, marshy areas, wet places, forest, sunny places, see *Observationes Botanicae* 3: 9. 1783, *Systema Vegetabilium* 2: 434. 1817, *De Graminibus Paniceis* 217. 1826, *Enum. Pl. Zeyl.* 360. 1864, *The Flora of British India* 7: 47. 1896 and *Handb. Fl. Ceylon* 6: 321. 1931, *Grasses of*

The Caribbean, Brazil, Mexico, Bolivia. Annual or short-lived perennial, decumbent, herbaceous, creeping, delicate, rooting at the lower nodes, leaf blades lanceolate or ovate acute or acuminate, lax oblong panicle, spikelets lanceolate pubescent acuminate, lower glume ovate 1-3-nerved, upper glume 3-5-nerved, lower lemma 5-nerved glandular, upper lemma elliptic smooth, weed in roadside vegetation, open

areas, along river and stream, roadsides, riverbanks, see *Agrostografia Brasiliensis* 42. 1823, *Révision des Graminées* 1: 30. 1829, *Reliquiae Haenkeanae* 1(4-5): 311. 1830, *Linnaea* 26(2): 135. 1854, *Synopsis Plantarum Glumacearum* 1: 417. 1855, *Mexicanas Plantas* 2: 36. 1886.

P. pusillum Hook.f. (*Panicum tyllanthum* Hack. ex Engl.)

Ethiopia. Annual, decumbent, delicate, pilose, branched, leaf blades lanceolate and narrowed at base, panicle ovate few-spiculate with branches and pedicels divaricate, spikelets narrowly elliptic, lower glume lanceolate 3-nerved, upper glume narrowly ovate 7-nerved, lower floret sterile with a reduced palea, upper floret deciduous, forming loose mats, open or shade, grassland, among rocks, see *Journal of the Linnean Society, Botany* 7: 227. 1864, *Abhandlungen der Königlich Akademie der Wissenschaften in Berlin* 2: 118. 1891 and *Flora of Tropical East Africa* 451-898. 1982, *Opera Botanica* 121: 159-172. 1993.

P. pycnanthum Steud. (*Hymenachne grumosa* (Nees) Zuloaga; *Panicum grumosum* Nees; *Panicum rivulare* var. *grumosum* (Nees) Hack.)

P. pygmaeum R. Br.

Queensland, New South Wales. Perennial, rather weak, slender and branched, decumbent, forming spreading patches, ligule a row of cilia, leaf blades soft, leaves dark green and linear-lanceolate to lanceolate, panicle branched, spikelets green solitary or paired, nerveless lower glume obtuse or truncate, upper glume nerved, lower lemma sterile and epaleate, upper lemma smooth and shining, seeds striate and shiny, shade species, fodder plants, foliage browsed by marsupials, moist areas, rainforest and margins, eucalypt forest, see *Prodromus Florae Novae Hollandiae* 191. 1810.

in English: dwarf panic, pigmy panic

P. pygmaeum R. Br. var. *glabrescens* Hack.

Australia. See *Prodromus Florae Novae Hollandiae* 191. 1810 and *Repertorium Specierum Novarum Regni Vegetabilis* 11: 18. 1912.

P. pyrularium Hitchc. & Chase (*Panicum quetameense* Mez)

Panama, Colombia. Annual, small, stoloniferous, found in moist places, riverbanks, shade to partial shade, see *Species Plantarum* 1: 58. 1753 and *Contr. U.S. Natl. Herb.* 15: 13-15. 1910, *Contributions from the United States National Herbarium* 17(6): 508, f. 95. 1915, *Notizblatt des Botanischen Gartens und Museums zu Berlin-Dahlem* 7: 75. 1917.

Argentina, Peru, Bolivia, Brazil, Paraguay. Perennial, caespitose, pilose, erect, leaf blades linear finely acute or acuminate, terminal panicle oblong-ovate with delicate branches, spikelets ovate glabrous, three-flowered spikelets, the upper flower is always perfect, the lower flower may be staminate or neutral, the medium one perfect, staminate or neutral, growing in grassland, see *Tableau Encyclopédique et Méthodique ... Botanique* 1: 173. 1791, *Flora Brasiliensis* 2(2): 220. 1877 and *Mededeelingen van's Rijks-Herbarium* 40: 52. 1921, *Contributions from the United States National Herbarium* 24(8): 460. 1927, *Revista del Jardín Botánico y Museo de Historia Natural del Paraguay* 2: 164. 1930.

P. queenslandicum Domin

Indonesia, Australia, Queensland, New South Wales. Perennial, erect, densely caespitose, forming dense tussocks, culms fibrous and smooth, sheaths usually glabrous, ligule a dense row of cilia, compound panicle much branched and stiffly spreading, branchlets in whorl, green-to-purplish spikelets paired and lanceolate, lower floret sterile, upper lemma smooth and shining, seeds dark and shiny, clay soils, in floodways, fruits and seeds blow in the wind, seeds a food source for seed-eating birds and small rodents, foliage eaten by stock and native animals, may cause photosensitization in sheep, see *Repertorium Specierum Novarum Regni Vegetabilis* 10: 58. 1911.

in Australia: Yadbila grass, Yabila grass, Coolibah grass, Coolabah grass

P. queenslandicum Domin var. *acuminatum* Vickery

Tropics, subtropics. Perennial sod-forming grass, long-lived, aquatic or subaquatic, submerged or partly submerged or floating in water, grayish green, rigid and upright stems, creeping and rooting freely, strongly long rhizomatous, robust and scaly rhizomes torpedo shaped, occasionally stoloniferous, dark nodes, leaf sheaths smooth but fringed with long hairs along the margin, ligule short and fringed with hairs, leaf blades narrow and linear, leaves distichous and usually pungent, blade surfaces often with a whitish waxy coating, inflorescence with branches open and stiffly ascending, spikelets stalked ovate-oblong to acuminate and white with yellow flower parts, upper floret stramineous at maturity, upper glume ovate, lower glume truncate and clasping, lower floret staminate, upper lemma elliptic and smooth to shiny, palea hyaline and well developed, anthers yellowish orange, stigmas purple, seeds smooth and mostly white to straw-colored, invasive grass, very aggressive, plant variable in size according to the habitat, noxious weed of deepwater rice in Asia and West Africa, often a troublesome weed in ditches and drains, potential seed contaminant, palatable pasture grass, high nutritive value, hay, good-to-poor forage grass, good fodder for all stock, tolerates flooding and drought, can stand partial shade, resistant to grazing and trampling, very useful for erosion control and as a sand binder, useful binder for canal banks, good grass for turfs and lawns, noxious weed species forming dense colonies dominant along a shoreline, widespread in marshy areas near fresh or salt water and on sandy soils, seasonal and permanent swamps, on saline sands, along shore of lakes, disturbed ground and wet soils, in moist to wet sandy or organic soils, ditches, in or near shallow waters, alluvial soils, in a poorly drained wet area, on moist coastal sandy soils and on heavy upland soils, in roadsides and wastelands, see *Species Plantarum, Editio Secunda* 1: 87. 1762, *Observationes Botanicae* 4: 17-18. 1786, *Flora Lusitanica* 1: 82. 1804, *Flora Taurico-Caucasica* 1: 52. 1808, *Flora Indica; or Descriptions ...* 1: 310. 1820, *Systema Vegetabilium, editio decima sexta* 1: 319. 1825, *Description de l'Égypte, ... P. restingae Renvoize & Zuloaga

Brazil. Perennial, erect, base densely pilose, leaf sheaths densely pilose, ligule ciliate, leaf blades linear-lanceolate pungent, panicle spike-like, spikelets broadly oblong glabrous, lower glume 3-nerved, upper glume 5-nerved, lower lemma 5-nerved, upper lemma rostrate, see *Kew Bull.* 39(1): 191, f. 3C-D, 4B. 1984.

P. reverchonii Vasey (*Chaetochloa reverchonii* (Vasey) Smyth; *Setaria reverchonii* (Vasey) Pilg.)

U.S. See *Transactions of the Kansas Academy of Science* 25: 88. 1913 and *Department of Agriculture. Botanical Division. Bulletin* 8: 25. 1889 and *Die natürlichen Pflanzenfamilien, Zweite Auflage* 14e: 72. 1940.

P. rhabdinum Steud. (*Isachne pangerangensis* var. *rhabdina* (Steud.) Henrard; *Isachne rhabdina* (Steud.) Henrard; *Isachne rhabdina* (Steud.) Ohwi, nom. illeg., non *Isachne rhabdina* (Steud.) Henrard; *Isachne rhabdina* var. *rhabdina* (Steud.) Henrard) (from the Greek *rhabdos* "a rod, stick, a magic wand")

Asia, Indonesia. See *Synopsis Plantarum Glumacearum* 1: 96. 1854 and *Blumea* 4(3): 530. 1941, *Bulletin of the Tokyo Science Museum* 18: 1. 1947.

P. rhigiophyllum Steud. (*Panicum rudgei* Roem. & Schult.) (Greek *rhigoo* "to be rigid, to be cold," *rhigos* "cold, frost" and *phyllon* "leaf")

Brazil. See *Systema Vegetabilium, editio decima sexta* 2: 444. 1817, *Synopsis Plantarum Glumacearum* 1: 76. 1853.

P. rhizogonum Hack.

Brazil to Argentina. Panicle branches spreading, spikelets obtuse and puberulous, common in forest shade, see *Verhandlungen der kaiserlich-königlichen zoologisch-botanischen Gesellschaft in Wien* 65(1-2): 73. 1915.

P. richardi Asch. (*Panicum richardi* C. Cordem., nom. illeg., non *Panicum richardi* Asch.)

Africa, Ethiopia. See *Beitrag zur Flora Aethiopiens* ... 310 [or 306]. 1867, *Flore de l'Île de la Réunion* 118. 1895.

P. rigens Sw. (*Isachne rigens* (Sw.) Trin.; *Panicum rigens* Mez, nom. illeg., non *Panicum rigens* Sw.; *Panicum rigens* Salzm. ex Steud., nom. inval., non Swartz)

The Caribbean, Jamaica. See *Nova Genera et Species Plantarum seu Prodrromus* 23. 1788, *De Graminibus Paniceis* 252. 1826, *Synopsis Plantarum Glumacearum* 1: 76. 1854 and *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 34(1): 141. 1904.

P. rigidifolium (Poir.) Kunth (*Agrostis rigidifolia* Poir.; *Isachne rigidifolia* (Poir.) Urb.; *Panicum rigidifolium* Trin., nom. illeg., non *Panicum rigidifolium* (Poir.) Kunth)

South America, Brazil. See *Encyclopédie Méthodique, Botanique Suppl.* 1: 257. 1810 *Révision des Graminées* 1: 37. 1829, *Species Graminum* 2(18): t. 214. 1829 and *Symbolae Antillarum* 4: 85. 1903.

P. rigidulum Bosc ex Nees (*Panicum agrostoides* Spreng.; *Panicum agrostoides* Salzm. ex Steud., nom. illeg., non *Panicum agrostoides* Spreng.; *Panicum agrostoides* var. *condensum* (Nash) Fernald; *Panicum agrostoides* var. *ramosius* (C. Mohr) Fernald; *Panicum anceps* Michx.; *Panicum condensum* Nash; *Panicum rigidulum* Bosc ex Spreng.; *Panicum rigidulum* var. *condensum* (Nash) Mohlenbr.; *Panicum stipitatum* Nash)

U.S., Florida, Guatemala, Mexico. Perennial, tufted, erect and robust stems, smooth, leaf blades strongly ribbed and folded at base, sheaths loose, ligule minute or tiny, rigid and dark reddish inflorescence spike-like or open and ascending-spreading, very tiny straight spikelets lance shaped and stalked, growing in wet ditches, wet meadows, wet prairies, damp woods, in roadside ditches, along streams and around ponds and lakes, see *Transactions of the American Philosophical Society* 4: 236. 1799, *Flora Boreali-Americana* 1: 48. 1803, *Plantarum Minus Cognitarum Pugillus* 2: 4. 1815, *Systema Vegetabilium, editio decima sexta* 1: 320. 1825, *Flora Brasiliensis seu Enumeratio Plantarum* 2: 163. 1829, *Synopsis Plantarum Glumacearum* 1: 93. 1854 and *Contributions from the United States National Herbarium* 6: 357. 1901, *Bulletin, Division of Agrostology United States Department of Agriculture* 17(edition 2): 56. 1901, *Flora of the Southeastern United States* ... 93: 1327. 1903, *Contr. U.S. Natl. Herb.* 15: 100.

1910, *Rhodora* 36(423): 74. 1934, *Rhodora* 38(455): 390. 1936, *Illustrations of Indian Botany* 71. 1973.

in English: red-top panic grass, redtop panicum

P. rigidulum Bosc ex Nees subsp. ***abscissum*** (Swallen) Freckmann & Lelong (*Panicum abscissum* Swallen)

America. Sandy places, see *Flora Brasiliensis seu Enumeratio Plantarum* 2: 163. 1829 and *Journal of the Washington Academy of Sciences* 30(5): 215, f. 4. 1940, *Sida* 20(1): 172. 2002.

Presl) Scribn. & Merr.)

Mexico, Brazil, Venezuela, U.S., Arizona, New Mexico, Argentina, Paraguay, Bolivia. Rare species, annual, herbaceous, erect or ascending, tufted, leaves hispid, leaf blades linear-lanceolate attenuate, panicles terminal or axillary ovate, spikelets ovate glabrous finely acute, lower glume ovate 5- to 7-nerved, upper glume 9- to 13-nerved, upper lemma elliptic smooth, found in moist areas, along

roadsides, see *Species Plantarum* 1: 58. 1753, *Reliquiae Haenkeanae* 1(4-5): 308, 324, t. 44. 1830 and *Bulletin, Division of Agrostology United States Department of Agriculture* 24: 23. 1901, *Contributions from the United States National Herbarium* 15: 67, f. 50. 1910, *Madroño* 10(3): 94. 1949, *Phytologia* 47(5): 383. 1981, *Kew Bulletin* 37(2): 325, f. 5. 1982, *Sida* 20(1): 172. 2002.

P. strictissimum Afzelius ex Sw. (*Panicum strictissimum* Afzelius)

Tropical Africa. Perennial, erect or ascending, found in swamps, see *Adnotationes Botanicae* 4. 1829.

in Sierra Leone: potengu, yuwe

P. subalbidum Kunth (*Panicum antidotale* Retz.; *Panicum glabrescens* Steud.; *Panicum ingens* Peter; *Panicum kermesinum* Mez; *Panicum longijubatum* (Stapf) Stapf; *Panicum longiramum* Peter; *Panicum proliferum* var. *longijubatum* Stapf; *Panicum subalbidum* Hochst. ex T. Durand & Schinz, nom. illeg., non *Panicum subalbidum* Kunth)

Tropical Africa. Annual or short-lived perennial, variable, aquatic, spongy and succulent, hollow, slender to robust, stout, creeping, erect to decumbent, ascending, mat-forming, often stoloniferous, often rooting and branching at the lower nodes, leaf blades linear acute to acuminate, leaf sheaths loose, hairy ligule, leaves prickly and papillate, inflorescence an open panicle ovate or oblong moderately branched with ascending branches, spikelets lanceolate nerved acuminate to cuspidate and appressed to the branches, lower glume ovate to broadly ovate and clasping, upper glume narrowly ovate 7- to 11-nerved, lower floret sterile, upper lemma shiny, lower palea absent or reduced, noxious weed of cultivation, useful grass, highly palatable, grains eaten by humans, invasive, found on clay soil, wet locations, open water, disturbed areas, along rivers, swamps, riverbanks, see *Observationes Botanicae* 4: 17. 1786, *Révision des Graminées* 2: 397, t. 112. 1831, *Synopsis Plantarum Glumacearum* 1: 71. 1854, *Conspectus Florae Africae* 5: 740. 1894, *Flora Capensis* 7: 406. 1899 and *Annuario del Reale Istituto Botanico di Roma* 8(3): 307. 1908, *Flora of Tropical Africa* 9: 718. 1920, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 57: 189. 1921, *Repertorium Specierum Novarum Regni Vegetabilis* 40: 192, 197 & Anhang, 40, 44, t. 24, f. 2, t. 29, f. 1. 1930.

P. subxerophilum Domin (*Whalleya subxerophila* (Domin) Wills & J. Bruhl) (dry-loving, from the Greek *xeros* "dry" and *philos* "lover, loving")

Queensland, New South Wales. Perennial, rigid, wiry, caespitose, forming erect clumps, bright green leaves, sheath more or less scabrous, ligule asymmetric, panicles branched and spreading, green to dark purple spikelets, lower glume obtuse, lower lemma sterile sometimes 2-toothed at the apex, shining upper lemma elliptic and acute, floodways,

clay soils, dry country, hardy to dryness, foliage palatable to stock, seeds a food source for seed-eating birds and small rodents, see *Bibliotheca Botanica* 85: 316. 1915, *Australian Systematic Botany* 13: 465, f. 2d. 2000.

in Australia: Gilgai grass, cane panic grass

P. sumatrense Roth (*Panicum albidulum* Steud.; *Panicum attenuatum* Willd., nom. illeg., non *Panicum attenuatum* (Moench) Moench; *Panicum crispum* Llanos; *Panicum miliaceum* var. *attenuatum* (Moench) Willd.; *Panicum miliare* auct.; *Panicum psilopodium* Trin.; *Panicum psilopodium* var. *coloratum* Hook.f.; *Panicum psilopodium* var. *psilopodium*; *Panicum simplex* Rottler ex Trin.; *Panicum sumatrense* Roth ex Roem. and Schult.; *Panicum sumatrense* subsp. *psilopodium* (Trin.) de Wet)

Tropical Asia, Southeast Asia. Annual, very variable, erect or geniculate, strongly branched, internodes and nodes glabrous, decumbent and rooting at the lower nodes, ligule a ciliate membrane, leaf blades linear to linear-lanceolate, sheaths sometimes hairy and keeled, erect branched flowering culms, inflorescence often nodding, oblong open to contracted panicles, spikelets more or less persistent or disarticulating, lower floret sterile, lower glume orbicular and apiculate, seed brown and minute, occurs wild and as a weed, cultivated as a cereal, grain crop species, contains high amounts of iron and zinc, quick growing fodder, husked grain cooked and eaten like rice, grain sometimes ground into flour and made into bread, tolerates both drought and waterlogging, can be grown on very poor soils, semiarid tropics, dry zone, on light red soils, red sandy loam, mostly grown in marginal areas, related to *Panicum psilopodium* Trin., see *Tableau Encyclopédique et Méthodique ... Botanique* 1: 173. 1791, *Methodus Plantas Horti Botanici ...* 204. 1794, *Syst. Veg.* 1: 348. 1798, *Enumeratio Plantarum Horti Botanici Berolinensis, ...* 1033. 1809, *Systema Vegetabilium* 2: 434. 1817, *De Graminibus Paniceis* 216-217. 1826, *Fragmentos de Algunas Plantas Filipinas* 41. 1851, *Synopsis Plantarum Glumacearum* 1: 69. 1853, *The Flora of British India* 7: 47. 1896 and *Handb. in English: thicket panic grass

in Brazil: capim mimoso, andacaá, capim andacaá, capim vindecaá

P. trichidiachne Döll (*Panicum schaffneri* Hack.; *Panicum schiffneri* Hack.; *Panicum schmitzii* Hack.)

Brazil, Mexico, Colombia, Venezuela, Ecuador, Paraguay, Argentina. Perennial, herbaceous, caespitose, decumbent, main stems long and trailing, see *Flora Brasiliensis* 2(2): 339, pl. 49. 1877 and *Annalen des K. K. Naturhistorischen Hofmuseums* 17: 254. 1902, *Ergebnisse der Botanischen Expedition nach Südbrasilien* 1: 11. 1906.

in English: Schiffner's panic grass

P. trichocladum Hackel ex K. Schum. (*Panicum protractum* Peter, nom. illeg., non *Panicum protractum* Mez; *Panicum simbense* Mez; *Panicum trichocladum* Hack. ex Engl.; *Panicum trichocladum* var. *parviflorum* Peter)

Tropical Africa, Malawi, Sudan, Uganda, Tanzania, Ethiopia. Perennial, herbaceous, creeping, rambling, decumbent, scrambling, slender, straggling, much-branched, leafy, short leaf blades narrowly lanceolate acuminate, stoloniferous, panicle ovate with very slender branches divaricate, spikelets spaced oblong hairy, lower glume ovate obtuse 0- to 1-nerved, upper glume 5-nerved apiculate, lower lemma 5- to 7-nerved with a well-developed palea, palatable to cattle and goats, young leaves suitable for calves, aggressive grass, forming colonies, a common weed of arable crops and wasteland, invasive, infesting coffee and sisal crops in East Africa, grows in bush and at forest edges, clearings,

edges of bush forest, on deep red loam soils, forest undergrowth and uncultivated land, see *Abhandlungen der Königlichen Akademie der Wissenschaften in Berlin* 2: 119. 1891, *Die Pflanzenwelt Ost-Afrikas* 5c: 103. 1895 and *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 57: 186. 1921, *Repertorium Specierum Novarum Regni Vegetabilis* 40: 191, 196 & Anhang, 38, 42, t. 26, f. 1. 1930, T. Nishida & S. Uehara, "Kitongwe name of plants: a preliminary listing." *African Study Monographs*. 1: 109-131. 1981.

in English: donkey grass

in Tanzania: ikoka, lukoka

P. trichoides Sw. (*Panicum acutifolium* Willd. ex Spreng.; *Panicum capillaceum* Lam.; *Panicum capillaceum* var. *strictius* Döll; *Panicum micranthum* Kunth; *Panicum micranthum* Salzm. ex Döll, nom. illeg., non *Panicum micranthum* Kunth)

Bolivia, Peru, Mexico, Argentina, Paraguay, Guatemala, Belize. Terrestrial small weed species growing in rosettes, annual, branched, ascending or erect, prostrate, more or less decumbent at base, delicate, diffuse, very slender, leaf sheaths hairy and ciliate, ligule a short and ciliate membrane, leaves lanceolate to narrowly ovate and cordate at base, inflorescence openly paniculate and finely branched, primary branches in whorls, panicle pyramidal and erect, spikelets long-pedicellate and slightly hirsute, lower glume ovate 1-nerved, upper glume 3- to 5-nerved, lower lemma 3- to 5-nerved, upper lemma finely granulose, clumps on dry rocky road banks, moist places, along paths, in shade, open riverbanks, forest edge, beach, along streams, widely naturalized elsewhere in tropics, see *Nova Genera et Species Plantarum seu Prodrromus* 24. 1788, *Tableau Encyclopédique et Méthodique ... Botanique* 1: 173. 1791, *Nova Genera et Species Plantarum* 1: 105. 1815 [1816], *Systema Vegetabilium, editio decima sexta* 1: 320. 1825, *Flora Brasiliensis* 2(2): 249. 1877 and *Contr. U.S. Natl. Herb.* 12: 140. 1908.

in English: tickle grass, masher grass, tropical panic grass, panic grass, rice grass

P. turgidum Forssk. (*Panicum turgidum* Hochst. ex Steud., nom. illeg., non *Panicum turgidum* Forssk.)

Northern and northeastern Africa, Sahara, Chad, Pakistan. Perennial desert grass, erect or ascending, hard, coarse, woody, shrubby, suffrutescent, solid, many-noded, rooting and branching at the nodes, rootstock stout, stems bamboo-like and smooth, stiff pungent leaf blades linear-lanceolate, panicle terminal and subpyramidal with ascending and branches not whorled, ovoid spikelets solitary and erect often gaping at anthesis, glumes concave, upper lemma smooth, seed with convex and flat sides, the grain looks like millet, roots with a feltlike appearance, root fibers strong and woody, tanning agent, fodder plant, young leaves and shoots very palatable, eaten by camels and donkeys, grain eaten by the Tuareg people, ground into a flour and made into porridge, grain made into flour/meal or boiled, the stems used for thatch and mats, plants used as a vulnerary agent, powder from ground stems used for healing wounds, can withstand long periods of drought, resistant to saline soils, useful for erosion control and for binding sand, a valuable species for rehabilitation of desert ranges and for sand dune stabilization, usually found in depressions and river beds, deep sand dunes and sandy plains, seashores, in the arid sandy and rocky waste places, on the edges of wadis and in oases, along wadi systems, irrigated plains, coastal lowland and coastal sand dunes, see *Flora Aegyptiaco-Ara-*

Belize, Costa Rica, Guatemala, Central and North America, Canada, Mexico, U.S., Cape Cod National Seashore. Perennial or annual, spreading, caespitose, clumped, sod-forming, many cultivars, erect, tall, leafy, vigorous, medium to coarse stemmed, purple to glaucous green stems flimsy to robust, creeping rhizomes, sheaths often reddish or purplish at the base, green to bluish green and yellow leaves linear and flat, ligule a dense ring of hairs, panicles open with spreading and stiff branches, spikelets elliptic-ovate and swollen, the uppermost floret fertile and the lower floret sterile or staminate, upper glume longer than lower lemma, heavy seeder, vigorous root system, economic plant, medicinal value, leaves might cause photosensitization, native pasture species, forage, palatable to livestock, useful as hay or pasture, palatability declines rapidly at maturity, used for revegetation of disturbed areas and stabilization, potential seed contaminant, weed species, may naturalize but is not invasive, ornamental grass, can tolerate short periods of flooding, useful for erosion control and soil conservation in poorly drained or frequently flooded sites, wildlife food and cover, spring nesting cover for ground nesting birds and escape cover for wildlife, habitat for upland game birds and waterfowl, found in moist areas of good fertility, open sandy alluvium, moist seepage areas on cliffs, swamp, clay soil, sea coast, sandy or gravelly shores, along roadsides, stream banks and dams, dry soils and fields, open dry areas, old fields, low savannah, sand prairies and open woods, hill prairies, culms and seeds provide food for song birds, pheasants, ducks, geese and wild turkey, see *Species Plantarum* 1: 59. 1753, *Mantissa Plantarum* 30. 1767, *Flora Caroliniana, secundum* ... 73. 1788, *Journal de Physique, de Chimie, d'Histoire Naturelle et des Arts* 89: 104. 1819, *De Graminibus Paniceis* 191. 1826, *Nomenclator Botanicus*.

in Brazil: capim arroz

in Colombia: nudillo

P. zollingeri Steud.

Asia, Indonesia. See *Synopsis Plantarum Glumacearum* 1: 96. 1854.

Pantathera Philippi = *Megalachne* Steud.

From the Greek *pas*, *pantos* “all, the whole” and *ather* “stalk, barb, awn.”

Pooideae, Stipeae, Duthieinae, type *Pantathera fernandeziana* Phil., see *Botanische Zeitung. Berlin* 14(37): 649. 1856, *Report on the Scientific Results of the Voyage of H.M.S. Challenger* 1(3): 61. 1884 and *Contributions from the United States National Herbarium* 48: 432, 476. 2003.

Pappagrostis Roshev. = *Stephanachne* Keng

Greek *pappos* “fluff, pappus, the woolly and hairy seed of certain plants” plus *agrostis*, *agrostidos* “grass, weed, couch grass.”

Pooideae, Poodae, Aveneae, type *Pappagrostis pappophorea* (Hack.) Roshev., see *Annuaire du Conservatoire et Jardin Botaniques de Genève* 7: 325. 1904, *Flora URSS* 2: 230, 749. 1934, *Contributions from the Biological Laboratory of the Science Society of China: Botanical Series* 9: 134. 1934.

Pappophorum Schreber = *Polyraphis* (Trin.) Lindley

From the Greek *pappos* “fluff, pappus, down, beard” and *phoros* “bearing, carrying,” *phero*, *phoreo* “to bear,” referring to the awns on the flowering glume or to the lemmas

with a pappus-like crown; see Johann Christian Daniel von Schreber (1739-1810), *Genera Plantarum*. 2: 787. 1791.

About 8-10 species, northern and southern America, U.S., Argentina. Chloridoideae, Pappophoreae, or Chloridoideae, Cynodonteae, perennial, herbaceous, caespitose, auricles absent, glabrous, hidden cleistogenes when present in the leaf sheaths, ligule a fringe of hairs, plants bisexual, cleistogamous or chasmogamous, inflorescence paniculate open or contracted, spikelets several-flowered sometimes with only one fertile floret, uppermost florets reduced, two glumes 1-nerved lanceolate more or less equal, lemmas coriaceous with several scaberulous awns, palea present, 2 free and glabrous lodicules, 3 stamens, ovary glabrous, 2 stigmas, open areas, alluvial soils, grassland, bushland, species not all readily distinguishable, type *Pappophorum alopecuroideum* Vahl, see *Genera Plantarum* 2: 787. 1791, *Symbolae Botanicae, ...* 3: 10, t. 51. 1794, *Essai d'une Nouvelle Agrostographie* 81, 161. 1812, *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques, Physiques et Naturelles* 1(1): 91, 92. 1830, *Flora* 21: 25. 1838, *Nomenclator Botanicus. Editio secunda* 1: 213. 1840, *The Vegetable Kingdom* 115. 1846, *Die Natürlichen Pflanzenfamilien* 2(2): 64. 1887, *Revisio Generum Plantarum* 776. 1891 and *Kew Bulletin* 40: 737-744. 1985, *Darwiniana* 27: 65-87. 1986, J.R. Reeder et L.J. Toolin, “Notes on *Pappophorum* (Gramineae: Pappophoreae).” *Systematic Botany* 14(3): 349-358. 1989, *Flora Mesoamericana* 6: 257. 1994, N.B. de La Barra, *Reconstrucción y Evolución del Paisaje Vegetal Autóctono de la Zona Urbana y Peri-Urbana de la Ciudad de Cochabamba* 1997, *Functional Ecology* 12(4): 640-645. Species

P. abyssinicum Hochst. (*Enneapogon abyssinicus* (Hochst.) Rendle; *Enneapogon cenchroides* (Licht.) C.E. Hubb.)

Africa. See *Systema Vegetabilium* 2: 616. 1817, *Flora* 38: 202. 1855, *Catalogue of the African Plants Collected by Dr. F. Welwitsch in 1853-61* 2(1): 229. 1899 and *Bulletin of Miscellaneous Information Kew* 1934: 119. 1934.

P. bicolor E. Fourn. (*Pappophorum bicolor* E. Fourn. ex Hemsl.)

Northern America, U.S. Forage, along roadsides, see *Mexic. Pl.* 2: 133. 1886, *Biol. Cent.-Amer. Bot.* 3: 568. 1886 [1885].

in English: pink pappusgrass

in Mexico: barbón bicolor

P. caespitosum R. E. Fries

Argentina, Bolivia, Paraguay. Perennial bunchgrass, caespitose, glabrous, erect, leaf blades linear acuminate and rigid, compact inflorescence paniculate, panicle cylindrical, spikelets 2- to 4-flowered, lower lemma ciliate, see *Genera Plantarum* 2: 787. 1791, *Symbolae Botanicae*, ... 3: 10, t. 51. 1794 and *Nova Acta Regiae Societatis Scientiarum Upsaliensis*, ser. 4, 1: 177, t. 9, f. 5-6. 1905.

P. commune F. Muell.

Australia. See *Fragm.* 8: 200. 1874.

P. hassleri Hack. (for the Swiss botanist Émile (Emilio) Hassler, 1861-1937, physician, botanical collector, traveler (Paraguay), plant collector with the Paraguayan botanist Teodor (Teodoro) Rojas, 1877-1954; see J.H. Barnhart, *Biographical notes upon botanists*. 2: 137. Boston 1965)

Paraguay. See *Bull. Herb. Boissier*, sér. 2, 4(3): 280. 1904.

P. krapovickasii Roseng. (*Pappophorum pappiferum* (Lam.) Kuntze; *Pappophorum philippianum* Parodi) (dedicated to the botanist Antonio Krapovickas, born 1921, Instituto de Botánica del Nordeste, Corrientes, among his writings are "Las especies de *Sphaeralcea* de Argentina y Uruguay." *Lilloa*. 17: 179-222. 1949, "Notas sobre Malváceas." *Bol. Soc. Argent. Bot.* 4(3): 187-191. 1952, "Thomas H. Kearney (1874-1956)." *Bol. Soc. Argent. Bot.* 7(1): 50-52. 1957, "Notas sobre Malvaceae III." *Kurtziana*. 2: 113-126. 1965, "Malváceas nuevas sudamericanas." *Bonplandia* (Corrientes). 3(6): 63-72. 1970, "Notas sobre Malváceas, IV." *Bonplandia* (Corrientes). 5(27): 257-273. 1983 and "Malvaceae" in Correa, *Flora Patagónica*. 5: 126-153. 1988, with Paul Arnold Fryxell wrote "The Malvaceae published by Turczaninow." *Contr. Univ. Michigan Herbarium* 17: 173-182. 1990)

Paraguay, Argentina, Venezuela, Bolivia. Perennial, caespitose, leaf blades linear, panicle with branches short and appressed, spikelets 4- to 6-flowered, glumes lanceolate, lower lemma pubescent, savannahs, see *Genera Plantarum* 2: 787. 1791, *Tableau Encyclopédique et Méthodique ... Botanique* 1: 155. 1791, *Symbolae Botanicae*, ... 3: 10, t. 51. 1794, *Revisio Generum Plantarum* 3(3): 365. 1898 and *Notas del Museo de la Plata, Botánica* 8(40): 79. 1943, *Comunicaciones Botánicas del Museo de Historia Natural de Montevideo* 5(58): 1-5. 1975.

P. mucronulatum Nees (*Pappophorum apertum* Munro ex Scribn.; *Pappophorum apertum* var. *vaginatatum* (Buckley) Scribn. ex L.H. Dewey; *Pappophorum pappiferum* (Lam.) Kuntze; *Pappophorum pappiferum* var. *mucronulatum* (Nees) Kuntze; *Pappophorum philippianum* Parodi;

Pappophorum subbulbosum Arechav.; *Pappophorum vaginatatum* Buckley)

South America. Erect, caespitose, herbaceous or subherbaceous, drooping, leaf blades flat or inrolled acuminate, panicle elongate with ascending or appressed primary branches, spikelets 3- to 4-flowered, lowest floret hermaphrodite, glumes lanceolate, lowest lemma 5-nerved ciliate on the keels, forage, along roadsides, open areas, see *Tableau Encyclopédique et Méthodique ... Botanique* 1: 155. 1791, *Flora Brasiliensis seu Enumeratio Plantarum* 2(1): 412. 1829, *A Preliminary Report on the Geological and Agricultural Survey of Texas* App. 1. 1866, *Anales de la Universidad de Chile* 36: 206. 1870, *Bulletin of the Torrey Botanical Club* 9: 148. 1882, *Contributions from the United States National Herbarium* 2(3): 535. 1894, *Anales del Museo Nacional de Montevideo* 1: 405, t. 48. 1896, *Revisio Generum Plantarum* 3(3): 365. 1898 and *Anales del Museo Nacional de Buenos Aires* 11: 123. 1904, *Anales del Museo Nacional de Buenos Aires* 13: 495. 1906, *Anales del Museo Nacional de Buenos Aires* 21: 123. 1911, *Notas del Museo de la Plata, Botánica* 8(40): 79. 1943.

in Ecuador: pajilla

P. pappiferum (Lam.) Kuntze (*Pappophorum alopecuroideum* Vahl; *Pappophorum alopecuroideum* var. *glabrum* Döll; *Pappophorum alopecuroideum* var. *pilosiusculum* Döll; *Pappophorum elongatum* Spreng.; *Pappophorum laguroideum* Schrad. ex Schult.; *Pappophorum macrostachyum* Schrad. ex Schult.; *Pappophorum mucronulatum* Nees; *Pappophorum pappiferum* var. *alopecuroides* (Vahl) Kuntze; *Pappophorum pappiferum* var. *laguroideum* (Schrad. ex Schult.) Kuntze; *Pappophorum polystachyum* Kunth; *Pappophorum saccharoides* Griseb.; *Saccharum alopecuroides* (L.) Nutt.; *Saccharum pappiferum* Lam.; *Thrasya trinitensis* Mez)

West Indies, Argentina, Ecuador, Mexico. Perennial bunchgrass, robust, erect, densely caespitose, leaf blades acuminate long-attenuate, inflorescence a narrow elongate oblong panicle with ascending or appressed primary branches, spikelets 3-flowered, lower floret fertile, upper florets rudimental, lanceolate glumes, lowest lemma 5-nerved and shortly ciliate, palea scabrid on keels, 2 bilobed lodicules, 3 stamens, usually growing in large clumps, herbaceous to subherbaceous, fodder, along roadsides, open slopes, dry grassland, disturbed ground, stony soils, see *Species Plantarum* 2: 1045. 1753, *Genera Plantarum* 2: 787. 1791, *Tableau Encyclopédique et Méthodique ... Botanique* 1: 155. 1791, *Symbolae Botanicae*, ... 3: 10, t. 51. 1794, *The Genera of North American Plants* 1: 60. 1818, *Mantissa* 2: 342. 1824, *Systema Vegetabilium, editio decima sexta* 4(2): 34. 1827, *Flora Brasiliensis seu Enumeratio Plantarum* 2: 412. 1829, *Révision des Graminées* 2: 435, t. 131. 1831, *Flora Brasiliensis* 2(3): 59. 1878, *Abhandlungen der Königlichen Gesellschaft der Wissenschaften zu Göttingen* 24: 301. 1879, *Revisio Generum Plantarum* 3(3): 365-366.

Northern and southern America, U.S., Mexico. Perennial, erect, geniculate, ligule pilose, panicle spike-like, 5-flowered spikelets, good forage for cattle and horses, see *Flora Brasiliensis seu Enumeratio Plantarum* 2: 412. 1829, *A Preliminary Report on the Geological and Agricultural Survey of Texas* App. 1. 1866, *Anales de la Universidad de Chile* 36: 206. 1870, *Bulletin of the Torrey Botanical Club* 9: 148. 1882, *Contributions from the United States National Herbarium* 2(3): 535. 1894, *Anales del Museo Nacional de Montevideo* 1: 405, t. 48. 1896, *Revisio Generum Plantarum* 3(3): 365. 1898 and *Anales del Museo Nacional de Buenos Aires* 11: 123. 1904, *Nova Acta Regiae Societatis Scientiarum Upsaliensis*, ser. 4, 1: 177, t. 9, f. 5-6. 1905, *Anales del Museo Nacional de Buenos Aires* 21: 123. 1911, *Contributions from the United States National Herbarium* 24(8): 291-556. 1927.

in English: whiplash pappusgrass

in Mexico: cola de zorra, papo punteagudo

Parabambusa Widjaja

Similar to *Bambusa*.

One species, New Guinea. Sympodial bamboo, erect, loosely tufted, 6 stamens, 3 stigmas, type *Parabambusa kaini* Widjaja, see *Reinwardtia* 11(2): 121-122. 1997.

Species

P. kaini Widjaja

New Guinea.

Paracolpodium (Tzvelev) Tzvelev = *Colpodium* Trinius

From the Greek *para* "near, similar to, like, alongside" plus *Colpodium* Trin.

Poeae, type *Paracolpodium altaicum* (Trin.) Tzvelev, taxonomic confusion, often referred to *Colpodium*, see *Fundamenta Agrostographiae* 119, t. 7. 1820, *Neue Entdeckungen im ganzen Umfang der Pflanzenkunde* 2: 37, 58. 1821 and *Flora URSS* 2: 436. 1934, *Bulletin de la Société Impériale des Naturalistes de Moscou* 43: 224. 1934, *Novosti Sistematiki Vysshchikh Rastenii* 1: 9. 1964, *Bot. Zhurn. (Moscow & Leningrad)* 50: 1320. 1965, *Not. Syst. Georg. Inst. Bot. Tbilissi* 40: 68-72. 1984, *Bot. Zhurn. Species

P. altaicum (Trin.) Tzvelev (*Catabrosa altaica* (Trin.) Boiss., nom. illeg., non *Catabrosa altaica* (Trin.) Fries; *Colpodium altaicum* Trin.; *Paracolpodium altaicum* f. *viviparum* Krasnob.)

Eurasia. See *Flora Altaica* 1: 100-101. 1829, *Flora Orientalis* 579. 1884.

P. altaicum (Trin.) Tzvelev subsp. ***leucolepis*** (Nevski) Tzvelev (*Colpodium leucolepis* Nevski; *Colpodium villosum* Bor; *Paracolpodium leucolepis* (Nevski) Tzvelev)

Eurasia, Pamir. See *Bulletin de la Société Impériale des Naturalistes de Moscou* 43: 224. 1934, *Flora Iranica: Flora des Iranischen Hochlandes und der Umrahmenden Gebirge: Persien, Afghanistan, Teile von West-Pakistan, Nord-Iraq* 70: 57. 1970.

P. colchicum (Albov) Tzvelev (*Catabrosa caucasica* Albov; *Catabrosa colchica* Albov; *Colpodium caucasicum* (Albov) Woronow ex Grossh.; *Colpodium caucasicum* (Albov) Woronow; *Colpodium colchicum* (Albov) Woronow ex Grossh.)

Eurasia, Russia, Caucasus. See *Flora Kavkaza* 1: 111. 1928, *Not. Syst. Georg. Inst. Bot. Tbilissi* 40: 68-72. 1984.

P. tibeticum (Bor) E.B. Alexeev (*Colpodium tibeticum* Bor) Asia, China. See *Kew Bulletin* 8(2): 270. 1953.

P. wallichii (Hook.f. ex Stapf) E.B. Alexeev (*Catabrosa wallichii* Hook.f. ex Stapf; *Colpodium wallichii* (Hook.f. ex Stapf) Bor)

Asia, Sikkim, Nepal. See *The Flora of British India* 7: 312. 1896 and *Kew Bulletin* 8(2): 270. 1953.

Paractaenum P. Beauv. (also Paractenium)

= *Paractenium* P. Beauv., *Paractenium* Stapf, *Plagiosetum* Benth.

From the Greek *para* “near, similar to, like, alongside” and *ktenion* “a little comb,” probably referring to the bristly spikes, to the comblike racemes; see Ambroise Marie François Joseph Palisot de Beauvois (1752-1820), *Essai d'une nouvelle Agrostographie, ou nouveaux genres des Graminées*. Paris 1812.

About 1-2 species, northern and central Australia. Panicoideae, Panicoideae, Paniceae, annual, caespitose, tufted, sprawling, glabrous, herbaceous, branched, nodes glabrous, internodes solid, ligule short and densely ciliate, leaf blades flat and narrow, plants bisexual, several short racemes finally deflexing, spikelets solitary and shortly pedicellate, the lowest spikelet subtended by solitary bristles deciduous with the spikelets, 2 florets, lower floret sterile, upper floret bisexual, glumes very unequal, lower glume few-nerved, the second glume as long as the spikelet and many-nerved, lemmas unequal and yellow in fruit, upper lemma fertile and leathery, palea one, 2 fleshy lodicules, fruit small and dorsally compressed, grows on sandy soil, open habitats, sandy and maritime places, sometimes referred to *Plagiosetum* Benth., type *Paractaenum novae-hollandiae* P. Beauv., see *Essai d'une Nouvelle Agrostographie* 47, t. 10, f. 6. 1812, *Fragmenta Phytographiae Australiae* 3: 147. 1862, *Fragmenta Phytographiae Australiae* 8: 109, 147, 152. 1872-1874 and *Kew Bulletin Misc. Inf.* 1923: 287, f. 1-6. 1923, *The Australian Paniceae (Poaceae)* 147-148. 1987.

Species

P. novae-hollandiae P. Beauv. (*Panicum novae-hollandiae* (P. Beauv.) Desv.; *Panicum paractaenum* Kunth; *Panicum reversum* F. Muell.)

Queensland, Northern Territory, New South Wales, South Australia, Western Australia. Annual or short-lived perennial, tufted, glabrous, ligule membranous and with a ciliate rim, racemes finally reflexed, spikes more or less erect with rigid bristles, spikelets solitary and secund, the lowest spikelet subtended by a bristle, 2 florets, lower floret sterile, upper floret bisexual, lower glume obtuse, upper glume acute, sterile lemma similar to upper glume, second lemma membranous and acuminate, lacking bulk, low fodder value, not grazed, on sandy soils, see *Essai d'une Nouvelle Agrostographie* 47, t. 10, f. 6. 1812, *Révision des Graminées*

1: 41. 1829, *Mémoires de la Société d'Agriculture, Sciences et Arts d'Angers* 1: 187. 1831.

in English: barbed-wire grass, reverse grass, reflexed panic, reflexed panic grass, Wandie grass

P. novae-hollandiae P. Beauv. subsp. *reversum* (F. Muell.) R.D. Webster (*Panicum reversum* F. Muell.)

Australia.

P. novae-hollandiae P. Beauv. var. *novae-hollandiae*

Australia.

P. refractum (F. Muell.) R.D. Webster (*Panicum refractum* (F. Muell.) F. Muell.; *Pennisetum refractum* (F. Muell.) F. Muell.; *Setaria refracta* F. Muell.)

Australia. Short-lived, forage, low fodder value, an Aboriginal food plant, see *The Australian Paniceae (Poaceae)* 148. 1987.

Parafestuca Alexeev = Koeleria Pers.

From the Greek *para* “near” and the genus *Festuca* L.

One species, Madeira. Pooideae, Pooideae, Poaceae, Aveninae, perennial, herbaceous, densely tufted, usually unbranched, auricles absent, ligule membranous and unfringed, when old sheaths fibrous, leaf blades linear, plants bisexual, open or contracted inflorescence paniculate, spikelets pedicellate and flattened, two glumes unequal, coriaceous lemmas 3-nerved and boat-shaped, palea present, 2 free and membranous lodicules, 3 stamens, ovary glabrous, 2 stigmas, similar to *Austrofestuca* (Tzvelev) Alexeev, type *Parafestuca albida* (Lowe) E.B. Alexeev, see *Syn. Pl.* 1: 97. 1805 and *Contributions from the United States National Herbarium* 48: 409-419, 476-477. 2003.

Species

P. albida (Lowe) Alexeev (*Festuca albida* Lowe)

Madeira Islands. See *Transactions of the Cambridge Philological Society* 4: 10. 1831.

Parahyparrhenia A. Camus

From the Greek *para* “near, beside” and the genus *Hyparrhenia* Andersson ex Fourn.

About 5 species, Thailand, tropical Africa, Sudan, Central African Republic. Panicoideae, Andropogonodae, Andropogoneae, Andropogoninae, annual or perennial, herbaceous, ligule a membrane-like unfringed, plants bisexual, inflorescence spicate or paniculate, single raceme or paired, raceme-base without appendage, sessile spikelet subtended with callus acute to pungent, two glumes subequal or unequal, lower glume 2-keeled and often keeled, upper lemma, palea absent or present, 2 free lodicules, 3 stamens, ovary glabrous, 2 stigmas, open areas, savannah, grasslands,

rocky places, close to *Diheteropogon* and *Elymandra*, type *Parahyparrhenia jaegeriana* A. Camus, see *Bulletin du Muséum d'Histoire Naturelle, sér. 2* 22: 404. 1950, *Kew Bulletin* 20: 436. 1966, W.D. Clayton, "A revision of the genus *Hyparrhenia*." *Kew Bulletin, Additional Series* 2: 1-196. 1969, *Dansk Botanisk Arkiv* 27(1): 69. 1969, *Kew Bulletin* 35(4): 816-817. 1981, *Blumea* 48(3): 499. 2003.

Species

P. annua (Hack.) W.D. Clayton (*Andropogon annuus* Hack.; *Hyparrhenia djalonica* Jacq.-Fél.; *Hyparrhenia jaegeriana* (A. Camus) Roberty; *Hyparrhenia sulcata* Jacq.-Fél.)

Tropical Africa. Annual, loosely tufted, slender, reddish to scarlet anthers, in pools, grassland, rice fields, shallow water, see *Flora* 68(8): 137. 1885 and *Bulletin du Muséum d'Histoire Naturelle, sér. 2* 22: 404. 1950, *Journal d'Agriculture Tropicale* 1(1-4): 51, 54, t. 8, 9. 1954, *Boissiera. Mémoires du Conservatoire de Botanique et de l'Institut de Botanique Systématique de l'Université de Genève* 9: 109. 1960, *Kew Bulletin* 22: 434. 1966.

P. bellariensis (Hack.) W.D. Clayton (*Andropogon bellariensis* Hack.; *Heteropogon bellariensis* (Hack.) C.E.C. Fisch.)

Tropical Africa. See *Flora* 68(7): 123. 1885 and *Flora of the Presidency of Madras* 10: 1744. 1934, *Kew Bulletin* 27(3): 448. 1972, *Bulletin of the Botanical Survey of India* 20(1-4): 149-150. 1978.

P. laegaardii Veldkamp

Thailand.

P. siamensis W.D. Clayton

Thailand.

P. tridentata W.D. Clayton

Thailand.

Paraneurachne S. T. Blake

From the Greek *para* "near, near to" and the related genus *Neurachne* R. Br.

One species, Australia. Panicoideae, Panicodae, Neurachneae, perennial, often stoloniferous, tufted or caespitose, sometimes decumbent, branched, ligule a fringe of hairs, auricles absent, narrow leaf blades linear to ovate, plants bisexual, inflorescence a single raceme spike-like, spikelets solitary and bearded at the base, callus hairs white, two glumes very dissimilar and longer than the florets, lower glume membranous and not bearded, coriaceous upper glume convex and densely bearded, lower lemma gibbous, upper lemma coriaceous with a membranous tip, palea present, 2 free and fleshy lodicules, 3 stamens, ovary glabrous, 2 stigmas, sandy plains, dry grassland, open areas,

type *Paraneurachne muelleri* (Hack.) S.T. Blake, see Stanley Thatcher Blake (1910-1973), in *Contributions from the Queensland Herbarium*. 13: 20. 1972, *Australian Journal of Botany* 33: 317-336. 1985.

Species

P. muelleri (Hackel) S.T. Blake (*Neurachne clementii* Domin; *Neurachne muelleri* Hackel) (dedicated to Sir Ferdinand Jacob Heinrich von Mueller, 1825-1896, pharmacist, botanical explorer, plant collector, in 1847 to Australia, first Government botanist of Victoria, from 1857 to 1873 Director of the Melbourne Botanical Garden, in 1859 Fellow of the Linnean Society and in 1861 of the Royal Society of London, among his very numerous publications are *The Plants Indigenous to the Colony of Victoria*. Melbourne 1860-1865, *Fragmenta Phytographiae Australiae*. Melbourne 1858 to 1882, and *Key to the System of Victorian Plants*. Melbourne 1885-1888, contributed to George Bentham (1800-1884), *Flora Australiensis*. London 1863-1878. See J.H. Barnhart, *Biographical notes upon botanists*. 2: 524. 1965; M. Willis, *By Their Fruits: A Life of Ferdinand von Mueller, Botanist and Explorer*. Sydney 1949; I.H. Venter, *Index Herbariorum*. Part II (7), *Collectors T-Z*. Regnum Vegetabile vol. 117. 1988)

South Australia, Western Australia, Northern Territory, Queensland. Tufted perennial, erect or stoloniferous, hairy base, leaves linear to ovate-linear, hairy racemes, purplish spikelets, lower floret male-only, upper floret hermaphrodite, fleshy lodicules, low fodder value, palatable when young, sandy plains, dry grassland, stony slopes, see *Contributions from the Queensland Herbarium* 13: 21. 1972.

in English: northern mulga-grass

Parapholis C.E. Hubbard = *Lepidurus* Janchen, *Lepturus* R. Br.

From the Greek *para* "near, beside, near to" and the closely related grass genus *Pholiurus* Trinius, *pholis*, *pholidos* "scale, horny scale," or referring to the two side-by-side glumes, to the collateral glumes; see Charles Edward Hubbard (1900-1980), in *Blumea*. Suppl. 3: 14. 1946.

About 4-6 species, Mediterranean to eastern Asia, India, western Europe. Pooideae, Poodae, Poeae, or Hainardieae, or Pooideae, Poeae, Ammochloinae, annual, tufted, slender, herbaceous, erect to more or less prostrate to decumbent, sometimes branched above the base, auricles present or absent, leaf sheath open, ligule an unfringed membrane, leaves linear flat to convolute, plants bisexual, inflorescence a terminal single cylindrical spike more or less curved and rigid, solitary spikelets compressed laterally and sessile, one floret, spikelets deeply embedded within racemes, spikelets falling off entire and disarticulating at the joints, two glumes side-by-side stiff and subequal, lemma hyaline shorter than

the glumes and awnless, palea 2-nerved, lodicules 2 free and membranous, 3 stamens, ovary glabrous, 2 stigmas, salt-tolerant, found in disturbed habitats near saline water, open habitats, sandy maritime soils, coastal salt marshes and areas of high salinity, resembles *Hainardia* Greuter, sometimes included in *Pholiurus* Trinius, type *Parapholis incurva* (L.) C.E. Hubb., see *Prodromus Florae Novae Hollandiae* 207. 1810 and *Wiener Botanische Zeitschrift* 93: 85. 1944, *Blumea*, Supplement 3: 14. 1946, *Grasses of Burma, Ceylon, India and Pakistan* 595. 1960, H. Rune-mark, "A revision of *Parapholis* and *Monerma* (Gramineae) in the Mediterranean." in *Bot. Not.* 115: 1-17. 1962, *Notes from the Royal Botanic Garden, Edinburgh* 25: 63. 1963, *Flora Illustrada de Entre Ríos (Argentina)* 6(2): 1-551. 1969, *Phytologia* 37(4): 317-407. 1977, *Kew Bulletin, Additional Series* 13: 111. 1986 [*Genera Graminum*], *Anales del Jardín Botánico de Madrid* 51(2): 280. 1994, *Las Gramíneas de México* 5: 1-466. 1999, *Contributions from the United States National Herbarium* 48: 421-422, 477. 2003, *Journal of Ecology* 93, issue 2: 279-290. Apr 2005.

Species

P. filiformis (Roth) C.E. Hubb. (*Lepiurus filiformis* (Roth) Dumort.; *Lepturus filiformis* (Roth) Trin.; *Pholiurus incurvus* subsp. *filiformis* (Roth) A. Camus; *Rottboellia filiformis* Roth)

Portugal. See *Fundamenta Agrostographiae* 123. 1820, *Observations sur les Graminées de la Flore Belgique* 140, 146. 1823 and *Vierteljahrsschrift der Naturforschenden Gesellschaft in Zürich* 66: 265. 1921, *Annales de la Société Linnéenne de Lyon, sér. 2*, 69: 89. 1923, *Blumea* 3: 14. 1946.

P. gracilis Bor

India. See *Notes from the Royal Botanic Garden, Edinburgh* 25: 63. 1963.

P. incurva (L.) C.E. Hubb. (*Aegilops incurva* L.; *Aegilops incurvata* L.; *Agrostis incurvata* (L.) Scop.; *Lepidurus incurvus* (L.) Janch.; *Lepturus filiformis* var. *incurvatus* (L.) P. Beauv.; *Pholiurus incurvatus* Hitchc.; *Pholiurus incurvatus* (L.) Hitchc.; *Pholiurus incurvus* (L.) Schinz & Thell.; *Pholiurus incurvus* (L.) Hitchc.; *Rottboellia incurva* (L.) Roem. & Schult.; *Rottboellia incurvata* (L.) L.f.)

Mediterranean. Annual, halophytic, usually coastal, maritime-arenicolous, loosely to densely tufted, sometimes solitary, slender, herbaceous, prostrate, erect to decumbent, curved and ascending, glabrous, usually branching at any node, leaf sheath glabrous submembranous, auricles absent, ligule an unfringed membrane, upper sheath strongly inflated, leaves subulate, inflorescence generally curved and twisted, green or purplish spikes more or less strongly curved to sickle-shaped, 1 floret, spikelets embedded in

cavities, cleistogamous spikelets, glumes equal to subequal, side by side glumes lanceolate and acuminate, lemma keeled, palea acute and nerved, ovary glabrous, glabrous fruit grooved, weed, salt-tolerant fodder, cover plant, survives partial inundation, naturalized elsewhere, open habitats, saline estuaries, saline soils subject to flooding, above the high tide mark, mudflats, salt marshes and areas of high salinity, coastal sandy and rocky places, drained soils and dry stream bed, in wetlands and swamps, moist places, moist river bed, disturbed areas, along roadsides, reclamation areas, see *Species Plantarum* 2: 1051. 1753, *Species Plantarum* 2: 1490. 1763, *Flora Carniolica, Editio Secunda* 1: 62. 1772, *Supplementum Plantarum* 114. 1781, *Essai d'une Nouvelle Agrostographie* 116, 168, 176. 1812, *Systema Vegetabilium* 2: 799. 1817, *Fundamenta Agrostographiae* 123, t. 8. 1820, *The Student's Flora of the British Islands* 455. 1870 and *List of British Plants* 85. 1908, *Prodrome de la Flore Corse* 1: 183. 1910, *United States Department of Agriculture: Bulletin* 772: 106, f. 54. 1920, *Vierteljahrsschrift der Naturforschenden Gesellschaft in Zürich* 66: 265. 1921, *Wiener Botanische Zeitschrift* 93: 85. 1944, *Blumea* Suppl. 3: 14. 1946, *Zlaki SSSR* 529. 1976, *Flora Patagónica* 3: 404-405. 1978, *Boletim da Sociedade Broteriana, ser. 2* 63: 153-205. 1990, *New Zealand Journal of Botany* 29: 101-116. 1991, *Anales del Jardín Botánico de Madrid, Bothalia* 27: 75-82. 1997, Gregory B. Noe and Joy B. Zedler, "Differential effects of four abiotic factors on the germination of salt marsh annuals." *Am. J. Bot.* 87: 1679-1692. 2000.

in English: coast barb grass, curly ryegrass, sickle grass, sicklegrass, curved sickle grass, curved sicklegrass, curved sea hard grass

in French: pholiurus incurvé

in Morocco: bousibouss

P. marginata Runemark

Europe. See *Botaniska Notiser* 115: 8, 14. 1962.

P. strigosa (Dumort.) C.E. Hubb. (*Lepiurus strigosus* Dumort.; *Lepturus strigosus* Dumort.; *Parapholis strigosa* (Dumort.) Hyl., nom. illeg., non *Parapholis strigosa* (Dumort.) C.E. Hubb.) (Latin *strigosus* "covered with strigae, with stiff bristles")

Mediterranean region, Eurasia. Annual, coastal, tufted or solitary, slender, stiff, rigid, herbaceous, erect to ascending to decumbent, usually loosely branching at the lower nodes, auricles absent, ligule membranous and toothed, leaf blade flat to inrolled, basal leaf sheaths inflated, upper sheath not inflated, green single spike straight and not twisted with spikelets embedded in cavities on the rachis, 1 floret, spikelets generally cleistogamous, glumes equal to subequal, side by side glumes lanceolate and acuminate, lemma membranous, palea hyaline, ovary glabrous, fruit narrowly ovoid, weed, grows in disturbed areas and in saline areas, salt meadows, open habitats, mudflats, plants of moist soils and

wetlands, salt marshes, below the high-tide mark, see *Observations sur les Graminées de la Flore Belgique* 146. 1823 [1824] and *Blumea* 3: 14. 1946, *Watsonia* 20: 63-66. 1994, *Opera Botanica* 137: 1-42. 1999.

in English: hard grass, hairy sickle grass, strigose sickle grass, slender barb grass

in Danish: spidshale

Paratheria Griseb. = *Beckera* Fresen.,
Snowdenia C.E. Hubb.

From the Greek *para* “near, similar to” and *ather* “stalk, barb, awn.”

Two species, Africa, Madagascar, South America, Brazil. Panicoideae, Panicodae, Paniceae, Cenchrinae, perennial, herbaceous, aquatic, erect, ascending, geniculate, rooting at the nodes, forming mats, branched, auricles absent, ligule a very narrow fringed membrane, plants bisexual, inflorescence paniculate and contracted with bristle-less cleistogamous spikelets, lowermost spikelets enclosed within the uppermost leaf sheaths are cleistogamous, hidden cleistogenes in the upper sheaths, solitary spikelets subtended by solitary bristles, 2 tiny glumes subequal, palea present, 2 fleshy and free lodicules, 3 stamens, ovary glabrous, 2 white stigmas, open areas, in water along rivers and streams, on sandy riverbanks, lakes, swamps, type *Paratheria prostrata* Griseb., see *Species Plantarum* 1: 55. 1753, *Museum Senckenbergianum* 2: 132. 1837, *Catalogus plantarum cubensium* ... 236. 1866, *Flora Brasiliensis* 2(2): 150, t. 25. 1877 and *Bulletin of Miscellaneous Information Kew* 1929(1): 30-31. 1929, *Flora Mesoamericana* 6: 376. 1994, *Contributions from the United States National Herbarium* 46: 144, 441. 2003.

Species

P. glaberrima C.E. Hubbard

Tropical Africa, Sierra Leone. Perennial, prostrate, aquatic, mat-forming, useful for erosion control, see *Kew Bulletin* 4: 365. 1949.

P. prostrata Griseb. (*Chamaeraphis parvigluma* Munro ex C. Wright; *Ischaemum secundatum* Walter; *Panicum leptachyrium* Döll; *Stenotaphrum dimidiatum* var. *secundatum* (Walter) Domin; *Stenotaphrum secundatum* (Walter) Kuntze; *Stenotaphrum secundum* (Walter) Kuntze)

Tropical West Africa, Madagascar, Cuba. Perennial, loosely tufted, more or less erect, prostrate to decumbent, slender, trailing, culm nodes bearded, leaf blades glabrous or villous, inflorescence usually enclosed within the uppermost leaf sheath, spikelets hairy at base, glumes ovate obtuse, lemmas 7- to 9-nerved, found in and near water, wet soils, marshy areas, savannah, see *Flora Caroliniana, secundum* ... 249. 1788, *Voyage autour du Monde* 2(2): 127. 1829 [1833],

Catalogus plantarum cubensium ... 236. 1866, *Anales de la Academia de Ciencias Medicas* ... Habana 8: 208. 1871, *Revisio Generum Plantarum* 2: 794. 1891 and *Boletim da Sociedade Broteriana, ser. 2* 64: 35-74. 1991.

Paractenium P. Beauv. = *Paractenium* P.
Beauv., *Paractenium* Stapf, *Plagiosetum* Benth.

From the Greek *para* “near, similar to, like, alongside” and *ktenion* “a little comb,” probably referring to the bristly spikes, to the comblike racemes; see Ambroise Marie François Joseph Palisot de Beauvois (1752-1820), *Essai d'une nouvelle Agrostographie, ou nouveaux genres des Graminées*. Paris 1812.

Panicoideae, Panicodae, Paniceae, type *Paractaenium novae-hollandiae* P. Beauv., see *Essai d'une Nouvelle Agrostographie* 47, t. 10, f. 6. 1812, *Révision des Graminées* 1: 41. 1829, *Mémoires de la Société d'Agriculture, Sciences et Arts d'Angers* 1: 187. 1831, *Fragmenta Phytographiae Australiae* 3: 147. 1862, *Fragmenta Phytographiae Australiae* 8: 152. 1874, *Hooker's Icones Plantarum* 13: 33, t. 1242. 1877 and *Kew Bulletin Misc. Inf.* 1923: 287, f. 1-6. 1923, *The Australian Paniceae (Poaceae)* 147-148. 1987.

Pariana Aublet = *Eremitis* Döll

A genus of about 30-39 species, Amazon, Costa Rica, tropical South America. Bambusoideae, Olyreae, Parianeae, Parianinae, or Bambusoideae, Oryzodae, Olyreae, perennial, unarmed, erect, herbaceous to woody, persistent, usually unbranched, decumbent floriferous culms, forming colonies, leaf sheaths auriculate, broad leaves with poorly developed pseudopetioles, auricles present, ligule membranous, plants monoecious, inflorescence spicate exerted from uppermost sheath, all the fertile spikelets unisexual, female spikelet sessile, floret covered by glumes of male spikelet, male florets 6-40 staminate, two glumes more or less equal, palea present, 3 free lodicules, 0 stamens, ovary glabrous, 2 stigmas, inflorescence coming from the ground, flowering shoot separate from leaves, found in shade of forest, disturbed areas, forest floor and understory, montane rainforests, edge of forest, slopes, stony areas, forest borders, in dense forest, damp shady places, in high open forest, moist lowland woods, along rivers, in open sandy forest, moist woodland trail, a difficult variable genus, type *Pariana campestris* Aubl., see J.B.C.F. Aublet, *Histoire des Plantes de la Guiane Française*. 876, t. 337. Paris 1775, *Flora Brasiliensis* 2(2): 338, pl. 48. 1877, *Die Natürlichen Pflanzenfamilien* 2(2): 88. 1887 and *The Families of Flowering Plants* II. Monocotyledons... 2: 219. London 1934, *Journal of the Linnean Society, Botany* 50: 337-362. 1936, *Contributions from the Gray Herbarium of Harvard University* 184: 1-223. 1958, *Biotropica* 3: 1-16. 1971, *AAU*

Reports 24: 1-241. 1990, *Flora of the Guianas. Series A, Phanerogams* 440-446. 1990, *Novon* 2(2): 81-110. 1992, *Ruizia* 13: 1-480. 1993, *Flora Mesoamericana* 6: 216-218. 1994, Victoria C. Hollowell, "Systematic relationships of *Pariana* and associated neotropical taxa." *The Bamboos* 4: 45-60. 1997, *American Bamboos* 294-299. 1999, *Contributions from the United States National Herbarium* 39: 93-97. 2000, Flora de Nicaragua in *Monographs in Systematic Botany from the Missouri Botanical Garden* 2001, Shoko Sakai, "Aristolochia spp. (Aristolochiaceae) pollinated by flies breeding on decomposing flowers in Panama." *Am. J. Bot.* 89: 527-534. 2002, John J. Skvarla, John R. Rowley, Victoria C. Hollowell and William F. Chissoe, "Annulus-pore relationship in Gramineae (Poaceae) pollen: the pore margin of *Pariana*." *Am. J. Bot.* 90: 924-930. 2003.

Species

P. argentea Hollowell & Davidse (*Pariana gracilis* Döll)

Panama. Perennial, clumped, see *Histoire des plantes de la Guiane Française* 2: 876, t. 337. 1775, *Flora Brasiliensis* 2(2): 337. 1877 and *J. Linn. Bot., Bot.* 50(334): 359. 1936, *Novon* 2(2): 98. 1992.

P. aurita Swallen (*Pariana maynensis* Huber; *Pariana radiceflora* Sagot ex Döll)

Peru. Perennial, erect, forming large clumps, in forest, see *Flora Brasiliensis* 2(2): 336. 1877 and *Boletim do Museu Paraense de Historia Natural e Ethnographia* 4: 526. 1906 [1900-1949, *Boletim do Museu Goeldi de Historia Natural e Ethnographia*; 1949-1956, *Boletim do Museu Paraense Emilio Goeldi*], *J. Linn. Soc., Bot.* 50(334): 352. 1936, *Journal of the Washington Academy of Sciences* 30(2): 73, f. 3. 1940, *Fl. Mesoamer.* 6: 217. 1994.

in Panama: kamu burwi

P. bicolor Tutin

Peru, Bolivia. Perennial, stoloniferous, open, tufted, nodes prominent, leaf blades oblong-lanceolate, spikelets staminate with glumes triangular acuminate and lemmas elliptic, medicinal, in forest, forest floor, see *Histoire des plantes de la Guiane Française* 2: 876, t. 337. 1775 and *Journal of the Linnean Society, Botany* 50(334): 355, t. 9, f. 19. 1936, *Revista de Ciencias (San Marcos)* 74: 48-57. 1986.

P. campestris Aublet (*Pariana glauca* Nees; *Pariana glauca* var. *glauca*; *Pariana glauca* var. *scabra* (Nees) Döll; *Pariana inaequalis* Miq.; *Pariana lunata* Nees; *Pariana mollis* Nees; *Pariana scabra* Nees; *Pariana silvestris* Nees; *Pariana sylvestris* Nees)

Brazil, Suriname, Guyana, French Guiana. Sandy areas, forest floor, see J.B.C.F. Aublet, *Histoire des Plantes de la Guiane Française*. 876, t. 337. 1775 and *Flora Brasiliensis seu Enumeratio Plantarum* 2: 294-296. 1829, *Linnaea* 19(1): 127. 1847, *Fl. Bras.* 2(2): 333-334. 1877.

P. concinna Tutin

Amazonas, Brazil. Forest, see *Histoire des plantes de la Guiane Française* 2: 876, t. 337. 1775 and *Journal of the Linnean Society, Botany* 50(334): 358, f. 23. 1936.

P. debilis Tutin (*Pariana radiceflora* Sagot ex Döll)

French Guiana, British Guiana. See *Flora Brasiliensis* 2(2): 336. 1877 and *Journal of the Linnean Society, Botany* 50(334): 352, 361, f. 27. 1936.

P. distans Swallen

Peru, Brazil. See *Journal of the Washington Academy of Sciences* 30(2): 73, f. 4. 1940.

P. ecuadorensis Pilg. (*Pariana radiceflora* Sagot ex Döll)

Ecuador. Forming colonies or clumps, forest floor, see *Histoire des plantes de la Guiane Française* 2: 876, t. 337. 1775, *Flora Brasiliensis* 2(2): 336. 1877 and *Notizblatt des Botanischen Gartens und Museums zu Berlin-Dahlem* 14(124): 323. 1939.

P. gleasonii Hitchc. (*Pariana pulcherrima* Tutin; *Pariana radiceflora* Sagot ex Döll) (for the American botanist Henry Allan Gleason, 1882-1975, contributed to *The New Britton and Brown Illustrated Flora of the Northeastern United States and Adjacent Canada*. 1968, with Arthur Cronquist (1919-1992) wrote *Manual of Vascular Plants of Northeastern United States and Adjacent Canada*. Princeton 1963 and *The Natural Geography of Plants*. New York 1964. See J. Ewan, editor, *A Short History of Botany in the United States*. New York and London 1969; J.H. Barnhart, *Biographical notes upon botanists*. 2: 54. 1965; S. Lenley et al., *Catalog of the manuscript and archival collections and index to the correspondence of John Torrey*. Library of the New York Botanical Garden. 181-182. 1973; August Adriaan Pulle (1878-1955), *Flora of Suriname* (vol. 3, pt. 1. Melastomataceae. by H.A. Gleason.). Amsterdam 1932; T.W. Bossert, *Biographical dictionary of botanists represented in the Hunt Institute portrait collection*. 146. 1972)

British Guiana. Shade or partial shade, damp areas, along riverbanks, see *Flora Brasiliensis* 2(2): 336. 1877 and *Contributions from the U.S. National Herbarium* 22(6): 513. 1922, *Journal of the Linnean Society, Botany* 50(334): 359, t. 10, f. 25. 1936.

P. gracilis Döll

Peru, Brazil, Bolivia. Geniculate at the base, leaf blades lanceolate acuminate, delicate inflorescence spicate, staminate spikelets oblong with pubescent pedicels, glumes triangular coriaceous acuminate, acute or acuminate lemmas glabrous or sparsely pubescent, forming colonies or clumps, forest floor, see *Histoire des plantes de la Guiane Française* 2: 876, t. 337. 1775, *Flora Brasiliensis* 2(2): 337. 1877 and *Journal of the Linnean Society, Botany* 50(334): 359. 1936.

P. imberbis Nees

Brazil. See *Flora Brasiliensis seu Enumeratio Plantarum* 2: 297. 1829.

P. intermedia Döll

Brazil. See *Flora Brasiliensis* 2(2): 337, t. 47. 1877 and *Journal of the Linnean Society, Botany* 50(334): 337-362. 1936.

P. interrupta Tutin (*Pariana nivea* Huber ex Tutin)

Brazil, Colombia. See *Journal of the Linnean Society, Botany* 50(334): 348, f. 11. 1936.

P. lanceolata Trin.

Brazil. Erect, semierect, decumbent, robust, caespitose, leaf blades linear-lanceolate acuminate, inflorescence cylindrical, pedicels of male spikelets coriaceous forming a tubular structure, male spikelets in whorls of 5, glumes ovate coriaceous, 3 stamens, forest, forest floor, shade or partial shade, moist areas, see *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques, Physiques et Naturelles. Seconde Partie: Sciences Naturelles* 3,1(2-3): 107. 1834 and *Darwiniana* 29: 41-45. 1989.

P. ligulata Swallen

Brazil. See *Journal of the Washington Academy of Sciences* 30(2): 74, f. 5. 1940.

P. longiflora Tutin (*Pariana radiceflora* Sagot ex Döll)

British Guiana, Suriname. See *Flora Brasiliensis* 2(2): 336. 1877 and *Journal of the Linnean Society, Botany* 50(334): 354, f. 18. 1936.

Common names: asumatu pempe mã, tamakusi, kleine bambu

P. lunata Nees (*Pariana campestris* Aubl.; *Pariana lunata* Nees ex Trin.; *Pariana mollis* Nees)

Brazil, French Guiana. See *Histoire des plantes de la Guiane Française* 2: 876, t. 337. 1775, *De Graminibus Paniceis* 76. 1826, *Flora Brasiliensis seu Enumeratio Plantarum* 2: 295-296. 1829.

P. maynensis Huber (*Pariana acuminatissima* Huber; *Pariana aurita* Swallen; *Pariana radiceflora* Sagot ex Döll; *Pariana zingiberina* Rich. ex Döll)

Peru, Venezuela, Colombia, Brazil. Perennial, erect, forming large clumps, in forest, see *Histoire des plantes de la Guiane Française* 2: 876, t. 337. 1775, *Flora Brasiliensis* 2(2): 336-337. 1877 and *Boletim do Museu Paraense de Historia Natural e Ethnographia* 4: 526. 1906, *Journal of the Washington Academy of Sciences* 30(2): 73, f. 3. 1940, *Flora Mesoamericana* 6: 217. 1994.

P. modesta Swallen

Brazil. Open areas, forest, see *Journal of the Washington Academy of Sciences* 30(2): 77, f. 7. 1940.

P. nervata Swallen

Brazil. Forest, edge of forest, see *Journal of the Washington Academy of Sciences* 30(2): 71, f. 1. 1940.

P. obtusa Swallen (*Pariana radiceflora* Sagot ex Döll)

Amazonas, Venezuela. Leaf blades ovate-lanceolate, staminate spikelets with triangular glumes acuminate, lemmas glabrous acute, forest shade, see *Flora Brasiliensis* 2(2): 336. 1877 and *Memoirs of the New York Botanical Garden* 9(3): 237-278. 1957.

P. ovalifolia Swallen

Brazil. Forest, edge of forest, see *Journal of the Washington Academy of Sciences* 30(2): 72, f. 2. 1940.

P. pallida Swallen (*Pariana campestris* Aubl.; *Pariana radiceflora* Sagot ex Döll)

Amazonas, Venezuela. Perennial, rhizomatous, forest, evergreen forest, along riverbanks, moist areas, forest edge, see *Histoire des plantes de la Guiane Française* 2: 876, t. 337. 1775, *Flora Brasiliensis* 2(2): 336. 1877 and *Memoirs of the New York Botanical Garden* 9(3): 268. 1957.

P. parvispica R.W. Pohl

Costa Rica. Perennial, growing in clumps, forest, primary forest, edge of forest, shade or partial shade, rain forest, swamps, see *Iowa State Journal of Research* 47(1): 73, f. 2. 1972.

P. pulcherrima Tutin (*Pariana gleasonii* Hitchc.; *Pariana radiceflora* Sagot ex Döll)

British Guiana. See Shade or partial shade, damp areas, along riverbanks, see *Flora Brasiliensis* 2(2): 336. 1877 and *Contributions from the U.S. National Herbarium* 22(6): 513. 1922, *Journal of the Linnean Society, Botany* 50(334): 359, t. 10, f. 25. 1936.

P. radiceflora Sagot ex Döll (*Pariana aurita* Swallen; *Pariana debilis* Tutin; *Pariana ecuadorensis* Pilg.; *Pariana gleasonii* Hitchc.; *Pariana longiflora* Tutin; *Pariana obtusa* Swallen; *Pariana pallida* Swallen; *Pariana pulcherrima* Tutin; *Pariana setosa* Swallen; *Pariana violascens* Swallen; *Pariana vulgaris* Tutin; *Pariana zingiberina* Rich. ex Döll)

Peru, Brazil, Bolivia, Venezuela, Colombia. Perennial, rhizomatous, medicinal, forest, moist lowland, dense forest, evergreen forest, shade or partial shade, along riverbanks, see *Histoire des plantes de la Guiane Française* 2: 876, t. 337. 1775, *Flora Brasiliensis* 2(2): 336-337. 1877 and *Boletim do Museu Paraense de Historia Natural e Ethnographia* 4: 526. 1906, *Contributions from the United States National Herbarium* 22(6): 513. 1922, *Journal of the Linnean Society, Botany* 50(334): 352-354, 359, 361, f. 17, 18, 25, 27. 1936, *Notizblatt des Botanischen Gartens und Museums zu Berlin-Dahlem* 14(124): 323. 1939, *Journal of the Washington Academy of Sciences* 30(2): 73, f. 3. 1940, *Contributions from the United States National Herbarium*

29(6): 273. 1948 [1949], *Memoirs of the New York Botanical Garden* 9(3): 267-268. 1957, *Fl. Mesoamer.* 6: 217. 1994.

Common names: sanganga'si, ilupanga, 'ilu panga', shishi

P. setosa Swallen (*Pariana radiceflora* Sagot ex Döll)

Peru, Colombia, Ecuador. Perennial, medicinal, dense forest, evergreen forest, edge of forest, shade or partial shade, along riverbanks, see *Histoire des plantes de la Guiane Française* 2: 876, t. 337. 1775, *Flora Brasiliensis* 2(2): 336. 1877 and *Contributions from the U.S. National Herbarium* 29(6): 273. 1949.

P. simulans Tutin (*Pariana violascens* Swallen)

Amazonas, Peru, Brazil, Ecuador, Venezuela, Colombia. Perennial, forming dense colonies, understory, forest, shade or partial shade, moist woodland, see *Histoire des plantes de la Guiane Française* 2: 876, t. 337. 1775, *Flora Brasiliensis* 2(2): 336. 1877 and *Journal of the Linnean Society, Botany* 50(334): 357, t. 10, f. 22. 1936, *Memoirs of the New York Botanical Garden* 9(3): 267. 1957.

P. sociata Swallen

Brazil. Open areas, forest, secondary forest, see *Journal of the Washington Academy of Sciences* 30(2): 76, f. 6. 1940.

P. stenolemma Tutin

Peru, Brazil, Panama, Venezuela, Colombia. Erect, forest, shade or partial shade, see *Histoire des plantes de la Guiane Française* 2: 876, t. 337. 1775 and *Journal of the Linnean Society, Botany* 50(334): 350, f. 14. 1936.

P. strigosa Swallen (*Pariana aurita* Swallen; *Pariana maynensis* Huber)

Panama. Perennial, low, forest, edge of forest, shade or partial shade, along riverbanks, see *Boletim do Museu Paraense de Historia Natural e Ethnographia* 4: 526. 1906, *Journal of the Washington Academy of Sciences* 30(2): 73, f. 3. 1940, *Annals of the Missouri Botanical Garden* 30(2): 257. 1943, *Fl. Mesoamer.* 6: 217. 1994.

Common names: achu gai, achugai

P. swallenii R.C. Foster (*Pariana stenolemma* Tutin)

Bolivia, Colombia. Leaf blades ovate or ovate-lanceolate cuneate acuminate glabrous, pedicels of staminate spikelets ciliate at the base, staminate spikelets with triangular glumes acuminate, lemmas elliptic acute, forming clumps, shady moist places, forest, forest floor, see *Histoire des plantes de la Guiane Française* 2: 876, t. 337. 1775 and *Journal of the Linnean Society, Botany* 50(334): 350, f. 14. 1936, *Rhodora* 68(774): 239. 1966.

P. tenuis Tutin

Peru, Panama, Amazonas, Brazil, Colombia. Moist places, rocky sites, see *Journal of the Linnean Society, Botany* 50(334): 348, f. 12. 1936.

P. trichosticha Tutin (*Pariana maynensis* Huber)

Peru, Brazil, Panama, Colombia. Shrubby, clustered, clumped, medicinal, forest, along riverbanks and streams, edge of forest, shade or partial shade, see *Histoire des plantes de la Guiane Française* 2: 876, t. 337. 1775 and *Boletim do Museu Paraense de Historia Natural e Ethnographia* 4: 526. 1906, *Journal of the Linnean Society, Botany* 50(334): 356, t. 9, f. 20. 1936, *Fl. Mesoamer.* 6: 217. 1994.

Local name: suru panga

P. ulei Pilger (*Pariana maynensis* Huber; *Pariana stenolemma* Tutin; *Pariana strigosa* Swallen) (for the German botanist Ernst Heinrich Georg Ule, 1854-1915, plant collector, bryophytes, fungi and lichens, spermatophytes, botanical explorer in Brazilian highlands and in Venezuela, from 1913 to 1914 assistant at the Botanical Museum Berlin; see J.H. Barnhart, *Biographical notes upon botanists.* 3: 414. 1965; Stafleu and Cowan, *Taxonomic literature.* 6: 578-583. 1986; R. Zander, F. Encke, G. Buchheim and S. Seybold, *Handwörterbuch der Pflanzennamen.* 14. Aufl. 792. 1993; T.W. Bossert, compil., *Biographical dictionary of botanists represented in the Hunt Institute portrait collection.* 410. Boston, Mass. 1972; H.N. Clokie, *Account of the Herbaria of the Department of Botany in the University of Oxford.* 258. Oxford 1964; G. Sayre, *Mem. New York Bot. Gard.* 19: 175-276. 1971; D.H. Pfister, *Mycotaxon* 23: 1-139. 1985)

Amazonas, Colombia, Brazil. Perennial, tufted, leaf blades lanceolate glabrous glaucous, pedicels of staminate spikelets bearded at the base, staminate spikelets with narrow triangular glumes acuminate or subulate, lemmas elliptic to narrow elliptic glabrous acuminate, in forest, see *Histoire des plantes de la Guiane Française* 2: 876, t. 337. 1775 and *Boletim do Museu Paraense de Historia Natural e Ethnographia* 4: 526. 1906, *Notizblatt des Botanischen Gartens und Museums zu Berlin-Dahlem* 6(54): 112. 1914, *Journal of the Linnean Society, Botany* 50(334): 350, f. 14. 1936, *Annals of the Missouri Botanical Garden* 30(2): 257. 1943, *Fl. Mesoamer.* 6: 217. 1994.

P. velutina Swallen

Peru. See *Histoire des plantes de la Guiane Française* 2: 876, t. 337. 1775 and *Journal of the Washington Academy of Sciences* 30(2): 78, f. 8. 1940.

Vernacular name: cariso

P. violascens Swallen (*Pariana radiceflora* Sagot ex Döll; *Pariana simulans* Tutin)

Amazonas, Venezuela, Colombia. Perennial, moist places, forest, woodland, along riverbanks and streams, see *Histoire des plantes de la Guiane Française* 2: 876, t. 337. 1775, *Flora Brasiliensis* 2(2): 336. 1877 and *Journal of the Linnean Society, Botany* 50(334): 357, t. 10, f. 22. 1936, *Memoirs of the New York Botanical Garden* 9(3): 267. 1957.

P. vulgaris Tutin (*Pariana paraensis* Huber ex Tutin; *Pariana radiceflora* Sagot ex Döll)

Peru, Brazil, British Guiana. See *Flora Brasiliensis* 2(2): 336. 1877 and *Journal of the Linnean Society, Botany* 50(334): 353, f. 17. 1936.

P. zingiberina Rich. ex Döll (*Pariana amomizans* Rich.; *Pariana angustifolia* Rich.; *Pariana maynensis* Huber; *Pariana radiceflora* Sagot ex Döll)

Peru, Brazil, Bolivia, Venezuela, French Guiana. Perennial, moist places, forest, shade or partial shade, see *Flora Brasiliensis* 2(2): 337. 1877 and *Boletim do Museu Paraense de Historia Natural e Ethnographia* 4: 526. 1906, *Fl. Mesoamer.* 6: 217. 1994.

Parodiella J.R. Reeder and C.G. Reeder = *Lorenzochloa* Reeder & C. Reeder, *Ortachne* Nees ex Steud., *Parodiella* Speg. (Fungi)

After the Argentine botanist Lorenzo Raimundo Parodi, 1895-1966.

Pooideae, Stipeae, Stipinae, type *Parodiella erectifolia* (Swallen) Reeder & C. Reeder, see *Synopsis Plantarum Glumacearum* 1: 121. 1854, *Anales de Sociedad Científica Argentina* 9: 178. 1880 and *Journal of the Washington Academy of Sciences* 21(1): 15. 1931, *Boletín de la Sociedad Argentina de Botánica* 12: 279-280, f. 1A-B, D-F, 3. 1968, *Boletín de la Sociedad Argentina de Botánica* 11(4): 239. 1969, *Flora Mesoamericana* 6: 244-245. 1994, *Contributions from the United States National Herbarium* 48: 431, 468-469, 477. 2003.

Parodiochloa C.E. Hubb. = *Poa* L.

After the Argentine botanist Lorenzo Raimundo Parodi, 1895-1966.

Pooideae, Poodae, Poeae, or Pooideae, Poeae, Poinae, type *Parodiochloa flabellata* (Lam.) C.E. Hubb., see *Species Plantarum* 1: 67-68. 1753, *Encyclopédie Méthodique, Botanique* 2: 462. 1788 and *Bulletin of the British Museum (Natural History), Botany* 8: 395-396. 1981, *Contributions from the United States National Herbarium* 48: 477, 505-580. 2003.

Parodiochloa A.M. Molina = *Koeleria* Pers., *Raimundochloa* A.M. Molina, *Rostraria* Trin.

After the Argentine botanist Lorenzo Raimundo Parodi, 1895-1966.

Pooideae, Poeae, Aveninae, type *Parodiochloa trachyantha* (Phil.) A.M. Molina, see *Fundamenta Agrostographiae* 149, t. 13. 1820, *Mémoires de l'Académie Impériale des Sciences*

de Saint Pétersbourg. Sixième Série. Sciences Mathématiques, Physiques et Naturelles 1(1): 65. 1830, *Florula Atacamensis seu Enumeratio ...* 55. 1860 and *Zlaki SSSR*, 267. 1976, *Parodiana* 4(1): 110-120, f. 1-2. 1986, *Parodiana* 4(2): 402. 1986, *Contributions from the United States National Herbarium* 48: 409-419, 477, 601, 604. 2003.

Parodiolyra Soderstr. & Zuloaga

After the Argentine botanist Lorenzo Raimundo Parodi, 1895-1966, agrostologist, professor of botany in Argentina, 1934-1962 editor and director of the *Revista Argentina de Agronomía*, his writings include "Nota sobre las especies de *Briza* de la flora argentina." *Revista Fac. Agron. Veterin.* 3: 113-138. 1920, "Los arrocés de la flora argentina." *Physis* (Buenos Aires). 11: 238-252. 1933, "Resumen bibliográfico. Looser, Gualterio. Las Proteáceas chilenas." *Revista Argent. Agron.* 1(2): 151-153. 1934, "Albert Spear Hitchcock." *Revista Argent. Agron.* 3(2): 113-119. 1936, "El origen geográfico de algunas gramíneas coleccionadas por don Luis Néé en su viaje alrededor del mundo." *Revista Argent. Agron.* 14(1): 61-69. 1947, "Robert Pilger." *Revista Argent. Agron.* 20(2): 107-114. 1953 and "Thaddeus Peregrinus Haenke a dos siglos de su nacimiento." *Anales Acad. Nac. Ci. Exact. Buenos Aires.* 17: 9-28. 1964, with J. Camara wrote "El mango, cereal extinguido en cultivo, sobrevive en estado salvaje." *Ci. & Invest.* 20(12): 543-549. 1964. See Arturo E. Burkart (1906-1975), "Bibliografía del botánico argentino Lorenzo R. Parodi (1895-1966)." *Bol. Soc. Argent. Bot.* 12: 7-16. 1968; H. Augustín Garaventa (1911-1981), "El botánico argentino Lorenzo R. Parodi." *Revista Univ. (Santiago)* 52: 167-175. 1967 [1968]; J.H. Barnhart, *Biographical notes upon botanists.* 3: 51. 1965; T.W. Bossert, *Biographical dictionary of botanists represented in the Hunt Institute portrait collection.* 301. 1972; S. Lenley et al., *Catalog of the manuscript and archival collections and index to the correspondence of John Torrey.* Library of the New York Botanical Garden. 321. 1973; Ida Kaplan Langman, *A Selected Guide to the Literature on the Flowering Plants of Mexico.* Philadelphia 1964; R. Zander, F. Encke, G. Buchheim and S. Seybold, *Handwörterbuch der Pflanzennamen.* 14. Aufl. 760. Stuttgart 1993; Stafleu and Cowan, *Taxonomic literature.* 4: 76-77. 1983.

About 3-5 species, Costa Rica, Bolivia, Brazil. Bambusoideae, Olyreae, Olyrinae, perennial, more or less herbaceous to woody, bushy, tufted, erect, elongated, arching, scandent, decumbent, trailing, climbing to sub-climbing, clambering, scrambling, sprawling, lianoid, branched, nodes hairy to villous, shortly rhizomatous, auricles absent, flowering culms leafy, leaves membranous, leaf blades ovate to lanceolate, ligule a membrane-like more or less fringed to ciliate, plants monoecious, open panicle inflorescence, spikelets solitary and pedicellate, all the fertile spikelets unisexual, pistillate spikelets above and staminate spikelets

below, two glumes more or less equal to unequal, male florets 3-staminate, male spikelets glumeless, palea present, 3 free lodicules, stamens absent, ovary glabrous, 2 stigmas, forming colonies or extensive stands, ground cover, in secondary forest, on riverbanks, edge of forest, wet depressions, disturbed areas, open areas, savannah, sandy slopes, wet savannah, on white sand, ridges, shade or partial shade, type *Parodiolyra ramosissima* (Trin.) Soderstr. & Zuloaga, see *Systema Naturae, Editio Decima* 1253, 1261, 1379. 1759 and T.R. Soderstrom and F.O. Zuloaga, "A revision of the genus *Olyra* and the new segregate genus *Parodiolyra* (Poaceae: Bambusoideae: Olyreae)." *Smithsonian Contributions to Botany* 69: 1-79. 1989, *Annals of the Missouri Botanical Garden* 78: 928-941. 1991, *Monographs in Systematic Botany from the Missouri Botanical Garden* 45: i-xi, 1-1286. 1993, *Systematic Botany* 18(1): 80-99. 1993, *Ruizia* 13: 1-480. 1993, *Flora Mesoamericana* 6: 212. 1994, *American Bamboos* 299-301. 1999, *Hickenia* 3(16): 55-56. 2000, *Contributions from the United States National Herbarium* 39: 97. 2000.

Species

P. colombiensis Davidse & Zuloaga

Colombia. See *Novon* 9(4): 587, f. 1-2. 1999.

P. lateralis (J. Presl ex Nees) Soderstr. & Zuloaga (*Chusquea simpliciflora* Munro; *Ichnanthus nemorosus* (Sw.) Döll; *Olyra lateralis* (J. Presl ex Nees) Chase; *Olyra sarmentosa* Döll; *Panicum laterale* J. Presl, nom. illeg., non *Panicum laterale* J. Presl ex Nees; *Panicum laterale* J. Presl ex Nees; *Raddiella truncata* Swallen)

Amazonas. Brazil, Bolivia, Colombia, Venezuela. Perennial, erect or suberect, scandent, decumbent, trailing, climbing, much branched above, more or less woody to herbaceous, shrubby, leaf blades ovate-lanceolate apiculate, lax panicles pyramidal exserted, in dense woods, moist ground, see *Species Plantarum* 1: 67. 1753, *Systema Naturae, Editio Decima* 1253, 1261, 1379. 1759, *Nova Genera et Species Plantarum seu Prodrum* 22. 1788, *Flora Brasiliensis seu Enumeratio Plantarum* 2: 213. 1829, *Reliquiae Haenkeanae* 1(4-5): 305. 1830, *Flora of the British West Indian Islands* 551. 1864, *Transactions of the Linnean Society of London* 26(1): 54, t. 2. 1868, *Flora Brasiliensis* 2(2): 289, 319. 1877, *Atti della Reale Accademia dei Lincei, Memorie della Classe di Scienze, Fische, Matematiche e Naturali* (ser. 3) 10: 187, 191, 247. 1881 and *Proceedings of the Biological Society of Washington* 21: 179. 1908, *Contributions from the United States National Herbarium* 15: 16. 1910, *Bulletin of the Torrey Botanical Club* 75(1): 89. 1948, *Brittonia* 23(3): 293-324. 1971, *Syst. Bot. Monogr.* 27: 89. 1989, *Smithsonian Contributions to Botany* 69: 66. 1989.

in Peru: carricito

P. luetzelburgii (Pilg.) Soderstr. & Zuloaga (*Ichnanthus panicoides* P. Beauv.; *Olyra luetzelburgii* Pilg.; *Olyra sarmentosa* Döll) (after the German botanist Philipp von Luetzelburg, 1880-1948, plant collector in northeastern Brazil and Amazonia, among his writings are *Mappas botanicos do Nordeste do Brasil* organizados por Philipp von Luetzelburg. Rio de Janeiro 1925, (his thesis) in *Flora* 100: 145-212. 1910 and *Estudo botânico do Nordeste*. Rio de Janeiro 1925-1926; see J.H. Barnhart, *Biographical notes upon botanists*. 2: 410. 1965; Stafleu and Cowan, *Taxonomic literature*. 3: 190-191. Utrecht 1981)

Brazil, French Guiana, Venezuela. Perennial, erect, clambering, branched, forest, shade, savannah, along riverbanks, see *Systema Naturae, Editio Decima* 1253, 1261, 1379. 1759, *Essai d'une Nouvelle Agrostographie* 56, 57, t. 12, f. 1. 1812, *Flora Brasiliensis* 2(2): 319. 1877 and *Notizblatt des Botanischen Gartens und Museums zu Berlin-Dahlem* 10(100): 1049. 1930, *Syst. Bot.* 7(1): 103. 1982, *Smithsonian Contributions to Botany* 69: 70. 1989.

P. micrantha (Kunth) Davidse & Zuloaga (*Olyra d'urvillei* Döll; *Olyra hirsuta* Trin.; *Olyra micrantha* Kunth; *Olyra micrantha* var. *decalvata* Döll; *Olyra micrantha* var. *dioeca* Döll, also spelled *dioica*; *Olyra micrantha* var. *micrantha*; *Olyra micrantha* var. *subvelutina* Döll; *Olyra scorbiculata* Schrad. ex Nees; *Olyra urvillei* Steud.; *Olyra ventricosa* Nees)

Venezuela. Perennial, robust, woody, erect, arching, prostrate, rooting at the nodes, sprawling, stout, hollow stem, branched with ascending branches, shortly rhizomatous, more or less shrubby, weedy, eaten by animals, forming colonies, growing in clumps, medicinal, forest, disturbed areas, forest edge, understory, moist shady places, along roadsides, full shade of forest, riverbanks, woodland, slopes, marshes, see *Nova Genera et Species Plantarum* 1: 199. 1815 [1816], *De Graminibus Paniceis* 250. 1826, *Flora Brasiliensis seu Enumeratio Plantarum* 2: 303. 1829, *Synopsis Plantarum Glumacearum* 1: 36. 1855 [1853], *Flora Brasiliensis* 2(2): 323-324. 1877 and *Novon* 9(4): 590. 1999.

in Bolivia: bistó

in Spanish: carrizo, pitillo

P. ramosissima (Trin.) Soderstr. & Zuloaga (*Olyra blanchetii* Mez; *Olyra ramosissima* Trin.) (after the Swiss botanist Jacques Samuel Blanchet, 1807-1875, plant collector in Brazil; see H.N. Clokie, *Account of the Herbaria of the Department of Botany in the University of Oxford*. 133. Oxford 1964; J.H. Barnhart, *Biographical notes upon botanists*. 1: 198. 1965; T.W. Bossert, *Biographical dictionary of botanists represented in the Hunt Institute portrait collection*. 41. 1972)

Brazil. Perennial, erect, climbing, leaning, caespitose, branched, thick-rooted, rooting at the nodes, forest, open areas, full shade or partial shade, forest floor, woods, sandy

soil, along streams, edge of forest, see *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques, Physiques et Naturelles. Seconde Partie: Sciences Naturelles* 3,1(2-3): 116. 1834 and *Notizblatt des Botanischen Gartens und Museums zu Berlin-Dahlem* 7(63): 46. 1917, *Smithsonian Contributions to Botany* 69: 73. 1989.

Parvotrisetum Chrtek = *Trisetaria* Forssk.

From the Latin *parvus* “small” plus the genus *Trisetum* Pers.

Aveneae, type *Parvotrisetum myrianthum* (Bertol.) Chrtek, see *Flora Aegyptiaco-Arabica* 60. 1775 and *Preslia* 37: 201. 1965, *Contributions from the United States National Herbarium* 48: 659. 2003.

Pascopyrum Á. Löve = *Elymus* L.

Pasture wheat, Latin *pasco, pavi, pastum* “to feed, pasture” and Greek *pyros* “grain, wheat.”

One species, U.S., Canada, Mexico. Pooideae, Triticoideae, Triticeae, or Pooideae, Triticeae, Hordeinae, perennial, herbaceous, glaucous, unbranched, rhizomatous, auricle present, ligule an unfringed membrane, plants bisexual, inflorescence spicate, incomplete florets distal to the female-fertile florets, spikelets sessile, 2 glumes more or less equal or subequal, palea present, 3 stamens, ovary without the apical appendage, 2 stigmas, heavy ground, saline-alkaline soils, type *Pascopyrum smithii* (Rydb.) Á. Löve, see *Taxon* 29(1, 4): 168, 547. 1980, *Feddes Repert.* 95: 425-521. 1984, *Am. J. Bot.* 85: 1266-1272. 1998, *Contributions from the United States National Herbarium* 48: 279-307, 477-478. 2003, *Am. J. Bot.* 91: 1789-1801. 2004.

Species

P. smithii (Rydb.) Barkworth & D.R. Dewey (*Agropyron glaucum* var. *occidentale* Scribn.; *Agropyron molle* (Scribn. & J.G. Sm.) Rydb.; *Agropyron occidentale* (Scribn.) Scribn.; *Agropyron occidentale* var. *molle* (Scribn. & J.G. Sm.) Scribn.; *Agropyron occidentale* var. *occidentale*; *Agropyron occidentale* var. *palmeri* (Scribn. & J.G. Sm.) Nevski; *Elytrigia smithii* var. *molle* (Scribn. & J.G. Sm.) Beetle; *Pascopyrum*

smithii (Rydb.) Á. Löve; *Zeia mollis* (Scribn. & J.G. Sm.) Lunell; *Zeia occidentalis* (Scribn.) Lunell; *Zeia smithii* Lunell)

Northern America, Mexico. Cultivated, useful for erosion control, good forage, fodder, see *Systema Vegetabilium* 2: 752. 1817, *Transactions of the Kansas Academy of Science* 9: 119. 1885, *Bulletin, Division of Agrostol. U.S.D.A.* 4: 33. 1897 and *Circular, Division of Agrostology, United States Department of Agriculture* 27: 9. 1900, *Catalogue of North American Plants North of Mexico (edition 2)* 3. 1900, *Memoirs of the New York Botanical Garden* 1: 64-65. 1900, *Bulletin Colorado State University Experiment Station* 100: 55. 1906, *Contributions to Western Botany* 14: 18. 1912, *American Midland Naturalist* 4: 226-227. 1915, *Report of the Michigan Academy of Science, Arts and Letters* 21: 356. 1920, *Madroño* 9: 125, 127. 1947, *Rhodora* 51(602): 21. 1949, *Botaniska Notiser* 1950: 31. 1950, *Canadian Journal of Botany* 38: 750. 1960, *Taxon* 29: 168, 547. 1980, *Great Basin Naturalist* 43: 569. 1983, *Brittonia* 35: 31. 1983, *Crop Sci. (Madison)* 23: 640-641. 1983, *Phytologia* 55(3): 211. 1984, *Feddes Repert.* 95: 484. 1984, *American Journal of Botany* 72(5): 769, 772. 1985, Polley, H.W., and J.K. Detling, “Herbivory tolerance of *Agropyron smithii* populations with different grazing histories.” *Oecologia* 77: 261-267. 1988, S.R. Larson, A.J. Palazzo and K.B. Jensen, “Identification of western wheatgrass cultivars and accessions by DNA fingerprinting and geographic provenance.” *Crop Science* 43: 394-401. 2003.

in English: western wheatgrass

Paspalanthium Desv. = *Paspalum* L.

The genus *Paspalum* L. and *anthos* “flower.”

Panicoideae, Paniceae, Paspalinae, type *Paspalanthium stoloniferum* (Bosc) Desv., see *Systema Naturae, Editio Decima* 846, 855, 1359. 1759, *Transactions of the Linnean Society of London* 2: 83, t. 16. 1794, *Mémoires de la Société d'Agriculture, Sciences et Arts d'Angers* 1: 163. 1831 and *Contr. U.S. Natl. Herb.* 12: 116. 1908, *Contributions from the United States National Herbarium* 46: 441, 443-527. 2003.

Paspalidium Stapf = *Setaria* P. Beauv.

Possibly a diminutive of the generic name *Paspalum* L.; see Sir David Prain (1857-1944), in *Flora of Tropical Africa*. 9: 15, 582-583. 1920.

About (20-)27/40 species, warm and tropical regions. Panicoideae, Panicoideae, Paniceae, or Panicoideae, Paniceae, Setariinae, annual or perennial, habitat varied, tufted, thick, spongy, rhizomatous or caespitose, decumbent at base, sometimes adventitious roots at nodes, herbaceous, often

with branching stems, glabrous nodes and hollow internodes, ligule a line of hairs, blade folded in bud, leaves oblong and usually flat, plants bisexual, inflorescence of short spike-like racemes overlapping or distant along a central axis, racemes with imbricate spikelets, spikelets solitary or paired and deciduous at maturity, spikelets awnless plano-convex elliptic or lanceolate or ovate, 2 florets, terminal spikelet subtended by a bristle or a point, lower floret sterile or male, upper floret perfect, 2 glumes very unequal membranous to herbaceous, lower glume much shorter than the spikelet, upper fertile lemma acute or pointed but not mucronate, upper lemma covered with wrinkles, palea present or absent, 2 lodicules free and fleshy, 3 stamens, ovary glabrous, 2 stigmas, ornamental, weed species, native pasture species, fodder plants, grazed, birdseed grass, shade species, moist or marshy habitats, often aquatic, swamps, edges of waterways, forests, dry slopes, clay and clay loam soils, rainforest, species very close and difficult to distinguish, sometimes or usually referred to *Setaria* P. Beauv., the genus can be confused with *Urochloa* or *Panicum*, type *Paspalidium geminatum* (Forssk.) Stapf, see *Species Plantarum* 1: 55. 1753, *Flora Aegyptiaco-Arabica* 18. 1775, *Essai d'une Nouvelle Agrostographie* 51, 178. 1812, *Flora Brasiliensis seu Enumeratio Plantarum* 2: 237. 1829, *Synopsis Plantarum Glumacearum* 1: 49. 1855 [1853] and *Contributions from the United States National Herbarium* 15: 28, 30. 1910, *North American Flora* 3(2): 200, 202. 1915, *Flora of Tropical Africa* 9: 15, 582-583. 1920, *Contr. U.S. Natl. Herb.* 22(3): 156. 1920, *Bulletin of Miscellaneous Information Kew* 1923(9): 318. 1923, *Bulletin de la Société Botanique de France* 72: 706. 1925, *Journal of the Faculty of Science: University of Tokyo, Botany* 3(2): 244-245. 1930, *Contributions from the New South Wales National Herbarium* 1(6): 331-332. 1950 [1951], *Acta Botanica Cubana* 4: 1-11. 1980, *Micronesica* 18(2): 45-102. 1982, *Wageningen Agricultural University Papers* 92-1(2): 1-557. 1992, *Flora Mesoamericana* 6: 363. 1994, J.F. Veldkamp, "Miscellaneous notes on southeast Asian Gramineae: 9. *Setaria* and *Paspalidium*." *Blumea* 39: 373-384. 1994, R.D. Webster, "Nomenclatural changes in *Setaria* and *Paspalidium* (Poaceae: Paniceae)." *Sida* 16: 439-446. 1995, *Austral. Ecology* 25(1): 48-57. Feb 2000, *Am. J. Bot.* 88: 1988-1992, 1993-2012. 2001, *Contributions from the United States National Herbarium* 46: 441-442, 569-593. 2003, *Ecological Research* 18(1): 73-80. Jan 2003, *Austral. Apr 2005.

Species

P. albovillosum S.T. Blake (*Paspalidium radiatum* Vickery var. *hirsutum* Vickery; *Setaria albovillosa* (S.T. Blake) R.D. Webster)

Australia, Queensland, New South Wales. Tufting perennial grass, more or less straight, yellowish green, forming erect tussocks, sheath more or less hirsute, ligule ciliate, hairy and slightly rough to hirsute leaves, purplish and broadly acute spikelets, lower glume obtuse to subacute, lemmas ovate to elliptic, lower lemma sterile, upper lemma acute and minutely apiculate, on poor soils, sandy loam, gravelly soils, forage, useful for soil conservation, see *Proceedings of the Royal Society of Queensland* 62: 96. 1952, *Sida* 16(3): 441. 1995.

in English: panic grass

P. aversum Vickery (*Setaria aversa* (Vickery) R.D. Webster) (bent back, from the Latin *aversum*, *i* "the hinder, the back part," *aversus*, *a*, *um* "turned off")

Australia, Queensland, New South Wales. Tufting perennial grass, dense rootstock, extravaginal shoots, culms weak, branched, more or less straight to decumbent and sometimes rooting at nodes, sheath glabrous, ligule ciliate, panicles very narrow, spikelets bent backwards, lower glume shortly acute and inflated at the base, lemmas acute, lower lemma sterile, upper lemma apiculate and striolate, in drainage ways, on moist loam, good soil, forage, useful for soil conservation and regeneration, see *Contributions from the New South Wales National Herbarium* 1(6): 331-332. 1950 [1951], *Sida* 16(3): 441. 1995.

in English: panic grass

P. basicladum Hughes (*Paspalidium gracile* sensu J. Black, partly, non (R. Br.) Hughes; *Setaria basiclada* (Hughes) R.D. Webster)

South Australia, Queensland, Western Australia, Northern Territory. Tufted annual grass, more or less scabrous, erect or ascending, panicle spike-like, spikelets glabrous and irregularly arranged on the raceme axes, second glume as long as the spikelets, see *Bulletin of Miscellaneous Information Kew* 1923(9): 318. 1923, *Sida* 6(3): 441. 1995.

P. breviflorum Vickery

Australia, Queensland, New South Wales. Perennial, slender, weak culms, sheath glabrous, ligule ciliate, spikelets more or less obtuse, lower glume subacute and inflated at the base, upper glume obtuse, lower lemma sterile, upper lemma gibbous and striolate, in woodland on good soil, see *Telopea* 1(1): 40. 1975.

P. caespitosum C.E. Hubb. (*Setaria brigalow* R.D. Webster)

Australia, Queensland. See *Bulletin of Miscellaneous Information Kew* 1934: 446. 1934, *Sida* 16(3): 441. 1995.

P. chapmanii (Vasey) R.W. Pohl (*Panicum chapmanii* Vasey; *Setaria chapmanii* (Vasey) Pilg.) (for Alvin Wentworth Chapman, 1809-1899)

Northern America, U.S., Mexico. Perennial bunchgrass, tufted, in marshy areas, along roadsides, open areas, sandy places, see *Bulletin of the Torrey Botanical Club* 11(6): 61.

1884 and *Contr. U.S. Natl. Herb.* 15: 24. 1910, *Die natürlichen Pflanzenfamilien, Zweite Auflage* 14e: 72. 1940, *Novon* 2(2): 106. 1992.

P. clementii (Domin) C.E. Hubb. (*Panicum clementii* Domin; *Paspalidium gracile* sensu J. Black, partly, non (R. Br.) Hughes; *Setaria clementii* (Domin) R.D. Webster) (dedicated to E. Clement)

South Australia, Queensland, New South Wales, Western Australia, Northern Territory. Tufted annual or short-lived perennial, rare, slender, smooth, erect or ascending, sheath glabrous, ligule ciliate, panicle spike-like and exserted, spikelets irregularly arranged and sometimes subtended by a bristle, lower glume acute, upper glume usually acute, lower lemma sterile and epaleate, second lemma more or less shiny and convex on the back, palatable, grows in arid and semiarid places, see *Journal of the Linnean Society, Botany* 41: 272. 1912, *Bulletin of Miscellaneous Information Kew* 1934: 447. 1934, *Sida* 16(3): 442. 1995.

in English: Clement's paspalidium

P. constrictum (Domin) C.E. Hubb. (*Panicum constrictum* Domin; *Paspalidium gracile* (R. Br.) Hughes var. *rugosum* Hughes; *Setaria constricta* (Domin) R.D. Webster)

South Australia, Queensland, New South Wales, Victoria, Western Australia, Northern Territory. Tufting or tussock-forming perennial grass, slender, canelike and much branched, knotted rootstock, extravaginal shoots, culms and nodes hairy or pubescent, sheath more or less scabrous, ligule ciliate, leaves linear and rough, panicles spike-like much-branched and scabrous-pubescent, spikelets glabrous, lower glume shortly acuminate, upper glume very obtuse, lemmas acute and elliptic, lower lemma sterile, second lemma more or less rugulose and about as long as the spikelet, fertile lemma constricted above the base, grasslands and woodlands, alluvial soils, clay loams, red soils, sandy soils, arid regions and dry areas, *Eucalyptus camaldulensis* Dehnh. (River Red gum) and *Eucalyptus largiflorens* F. Muell. (River box) open forest, drought-tolerant and resistant, highly palatable, susceptible to preferential grazing, useful for soil erosion control, regenerates rapidly, see *Bibliotheca Botanica* 85: 302. 1915, *Bulletin of Miscellaneous Information Kew* 1934: 447. 1934, *Sida* 16(3): 442. 1995.

in English: knotty-butt paspalidium, box grass, slender grass, knotty-butt grass, slender panic

P. criniforme S.T. Blake (*Paspalidium gracile* (R. Br.) Hughes var. *debile* Vickery; *Setaria criniformis* (S.T. Blake) R.D. Webster) (Latin *crinis* "hair")

Queensland, New South Wales. Perennial, densely tufted, ascending to erect, forming erect and dense tussocks, culms slender and glabrous, ligule ciliate, leaves hairy and green, glabrous nodes, green spikelets lanceolate and constricted near the base, lower glume acute, upper glume elliptic and subacute, lemmas acute, lower lemma sterile and palea

minute or absent, upper lemma elliptic and apiculate, ornamental, growing in woodland, hardy to most frosts, open forest, hillsides, dry areas, see *Proceedings of the Royal Society of Queensland* 62: 98. 1952, *Sida* 16(3): 442. 1995.

P. desertorum (A. Rich.) Stapf (*Echinochloa colona* var. *arabica* (Nees ex Steud.) Chev.; *Panicum arabicum* Nees ex Steud.; *Panicum desertorum* A. Rich.)

Ethiopia, Kenya, Sudan, Arabian Peninsula. Perennial, tufted, knotty base, erect or geniculately ascending, sometimes decumbent, sometimes stoloniferous, spreading by rhizomes and hard stiff stolons, narrow flat leaves finely acuminate, racemes solitary rarely paired, spikelets elliptic ovate and contiguous, raceme rhachis triquetrous, lower glume obtuse, upper glume obtuse, upper lemma lanceolate, pasture grass, well grazed by cattle, excellent drought tolerance, prefers loams and alluvial silts, grows in the dry areas, dry open bushland, sandy fields, alluvial plains, seasonally floodplain, dry river beds, margins and banks around cultivation, seasonally flooded grassland, grassland plains, cultivated fields, see *Hortus Regius Botanicus Berlinensis* 2: 209. 1833, *Tentamen Florae Abyssinicae ...* 2: 365. 1850, *Synopsis Plantarum Glumacearum* 1: 63. 1855 [1853] and *Flora of Tropical Africa* 9: 585. 1920.

in Somalia: gargharo, gargaro

P. disjunctum S.T. Blake (*Panicum distans* Trin.; *Setaria distans* (Trin.) Veldkamp)

Australia, Queensland, New South Wales, Northern Territory. Tufted perennial grass, branched, sometimes rooting at the lower nodes, leaves green, green spikelets, lemmas elliptic and finally pointed, ornamental, useful for soil conservation and stabilization, sometimes confused with *Paspalidium breviflorum* Vickery, see *Species Graminum* 2: t. 172. 1829 and *Proceedings of the Royal Society of Queensland* 84(5): 65-66, t. 7, f. 5. 1973, *Blumea* 39(1-2): 376. 1994.

P. distans (Trin.) Hughes (*Panicum distans* Trin.; *Paspalidium radiatum* Vickery; *Setaria distans* (Trin.) Veldkamp)

New South Wales, Queensland. See *Species Graminum* 2: t. 172. 1829 and *Flora of Tropical Africa* 9: 582-583. 1920, *Bulletin of Miscellaneous Information Kew* 1923(9): 317. 1923, *Contributions from the New South Wales National Herbarium* 1(6): 332-334. 1950 [1951], *Journal of the Royal Society of Western Australia* 44(3): 77-83. 1961, *Proc. Royal Soc. Queensland* 84: 66-67. 1973, *Blumea* 39(1-2): 376. 1994.

P. flavidum (Retz.) A. Camus (*Panicum flavidum* Retz.; *Panicum floridum* Royle; *Panicum granulare* Lam.; *Setaria flavida* (Retz.) Veldkamp)

Tropical Asia, India. Perennial or annual, tufted, erect, ascending, rigid, slender, freely branching from the decumbent base, glaucous, leaves loosely or strongly distichous, sheaths usually glabrous, ligule minute fringed with hairs

or absent, leaf blades linear lanceolate acute, culm nodes glabrous, panicle of several erect distant branches, short racemes widely spaced and much shorter than the internodes, peduncle and rachis strongly grooved, widely spaced spikelets broadly ovate and swollen, outer glume very short and blunt, grain eaten in times of scarcity, excellent fodder grass, found in swampy places, on alluvial flats, moist situations, open wet areas, see *Observationes Botanicae* 4: 15. 1786, *Tableau Encyclopédique et Méthodique ... Botanique* 1: 170. 1791, *Species Graminum* 2: t. 172. 1829, *Illustrations of the Botany ... of the Himalayan Mountains ...* 420. 1840, *Bulletin of Miscellaneous Information*, Kew, no. 12. 1887, *The Flora of British India* 7: 29. 1896 and *Handb. Fl. Ceylon* 5: 133. 1900, *Flore Générale de l'Indo-Chine* 7: 419. 1922, *Grasses of Ceylon* 130. 1956, *Grasses of Burma ...* 333. 1960, *Journal of Cytology and Genetics* 18: 58-59. 1983, *Journal of Cytology and Genetics* 25: 140-143, 147-148. 1990, *Blumea* 39(1-2): 376. 1994, *Annals of the Missouri Botanical Garden* 81(4): 775-783. 1994.

in India: akki hullu, arisi pullu, arisipillu, baunri, bharti, bilainangi, chapri, chichwi, dhanera, homa, jhinko samo, kangna, kura-tuka gadi, matamar, neetichama, oda, oodagaddi, paddatunga gadi, palon, sama jodi, sankha, sathiya, sitiya, udagaddi, woodoo gaddi

in Sri Lanka: arisi pul, ha tana

in Thailand: yaa nok seechom phuu

P. gausum S.T. Blake (*Setaria gausa* (S.T. Blake) R.D. Webster) (with a woolly nap)

Australia, Queensland, New South Wales. Perennial, culms wiry and rigid, knotted rhizomes, sheath glabrous, ligule ciliate, spikelets widely gaping, lower glume inflated at the base, lower lemma sterile, upper lemma broad-ovate and with a short beak, coastal, grows in woodland, sandy soils, see *Proceedings of the Royal Society of Queensland* 84(5): 68-69, t. 7, f. 6. 1973, *Sida* 16(3): 443. 1995.

Pantropical. Perennial, aquatic, emergent, robust, coarse, tufted, clumped, prostrate and erect, rooting at the nodes in moist habitats, creeping, rhizomatous or stoloniferous, soft, spongy and inflated, rhizomes spongy and floating, sheaths smooth, ligule a finely ciliate rim, leaf blades acuminate, erect slender inflorescence, spikelets ovate slightly imbricate, axis of the inflorescence narrowly winged, racemes sessile 2-rowed, upper glume almost long as upper lemma, lower glume truncate, upper lemma granulose apiculate, usually not rooting at nodes in dry habitats, good forage, usually forming large stands, growing in water, irrigation canals, pans, wet soils, sandy soils, marshy soils and marshes, edge of rivers and lakes, stream sides, vleis, active dunes, places of temporary inundation, muddy soils, ditches, often floating in shallow water, see *Flora Aegyptiaco-Arabica* 18. 1775, *Observationes Botanicae* 3: 8. 1783, *Tableau Encyclopédique et Méthodique ... Botanique* 1: 176. 1791, *Syn. From the Greek name *paspalos* for “a kind of millet”; see Carl Linnaeus, *Systema Naturae*. Edition 10. 846, 855, 1359. 1759.

About 250/320-330 species, tropical and warm regions, New World. Panicoideae, Panicodae, Paniceae, or Panicoideae, Paniceae, Paspalinae, rarely annual or mostly perennial, glabrous to pubescent, herbaceous, simple or branched, variable habit, clumping nature, flimsy to robust, tufted or spreading, caespitose or decumbent, rhizomes or stolons, internodes solid or hollow, nodes hairy or glabrous, stems flattened at base, ligule membranous, auricles absent, flat to folded leaves narrow-linear to lanceolate or ovate, plants bisexual, hidden cleistogenes present or absent, racemose inflorescence solitary, branched spikes, spikelets awnless and solitary or paired, plano-convex abaxial spikelets, spikelets being borne on one side of the finger-like branches of the seed head, florets arranged symmetrically along the raceme, 2 florets, lower flower sterile, upper flower bisexual, very unequal glumes present or absent, lower glume usually lacking or minute and inconspicuous, lower lemma flat or concave, upper lemma stiff to hardened, palea present, 2 lodicules free and fleshy, 3 stamens, ovary glabrous and without the apical appendage, stigmas red, small fruit compressed, weedy ground, ornamental, grazing and stacking high value, fodders, grains, lawn grasses, native pasture species, sand binders, erosion control, stabilizing salt marsh, livestock feed, *Paspalum* species are eaten by ducks, swans and other water birds, found in open habitats, wet places, forest margins, pampas, rainforest, grasslands, damp habitats, savannah, coastal sands, coastal and inland salt marshes, type *Paspalum dimidiatum* L., see *Systema Naturae Ed. Decima*. 2: 846, 855, 1359. 1759, *Enumeratio Methodica Plantarum* 207. 1759, *Familles des Plantes* 2: 31, 599. 1763, *Acta Literaria Universitatis Hafniensis* 1: 285. 1778, *Synopsis Plantarum* 1: 85. 1805, *Graminum Monographiae ... P. spp.

in Mexico: guixi yaci, quique piquiñi, quixi yaci, yaci, yaza
 in Niger: kachia

P. abbreviatum Trin. ex E. Fourn. (*Dimorphostachys langei* E. Fourn.; *Paspalum abbreviatum* Schldtl.; *Paspalum abbreviatum* Trin. ex Steud.; *Paspalum langei* (E. Fourn.) Nash)

Mexico. See *Nomenclator Botanicus. Editio secunda* 2: 270. 1841, *Linnaea* 26(3): 383. 1854, *Mexicanas Plantas* 2: 10, 14-15. 1886 and *North American Flora* 17(2): 179. 1912.

P. acuminatum Raddi (*Paspalum serratum* Hitchc. & Chase)

Brazil, Bolivia, Costa Rica, Mexico, Paraguay. Creeping, rachis winged, grows in wetland, seasonally flooded savannah, see *Agrostografia Brasiliensis* 25. 1823 and *Contributions from the United States National Herbarium* 18(7): 306. 1917.

in English: brook crown grass, brook paspalum

P. acutifolium León

Cuba. Indeterminate species, savannah, see *Memoirs of the Torrey Botanical Club* 16: 58. 1920.

P. acutum Chase

Panama. Stoloniferous, spreading, more or less succulent, found in dry fields, see *Journal of the Washington Academy of Sciences* 17: 146, f. 4. 1927.

P. adoperiens (E. Fourn.) Chase (*Dimorphostachys adoperiens* E. Fourn.; *Paspalum guatemalense* Bartlett; *Paspalum squamulatum* E. Fourn.)

Mexico, Nicaragua. Erect, decumbent, swampy areas, along roadsides, see *Systema Naturae, Editio Decima* 2: 846, 855, 1359. 1759, *Mexicanas Plantas* 2: 11, 15. 1886 and *Proceedings of the American Academy of Arts and Sciences* 43(2): 49. 1907, *Contr. U.S. Natl. Herb.* 12: 116. 1908, *Contributions from the United States National Herbarium* 28(1): 102, 118, f. 55. 1929.

P. affine Steud. (*Paspalum affine* Bello, nom. illeg., non *Paspalum affine* Steud.)

Mexico. Erect, leaf sheath pungent, see *Synopsis Plantarum Glumacearum* 1: 24. 1855 [1853], *Anales de la Sociedad Española de Historia Natural* 12: 125. 1883.

P. alaini León

Cuba. See *Flora de Cuba* 1: 141. 1946.

P. albidulum Henrard

Suriname, Brazil. Perennial, caespitose, slender, leaves mostly basal, leaf blades linear, inflorescence cylindrical, loosely ascending racemes, solitary spikelets oblanceolate to narrowly elliptic in two rows, upper glume 5- to 7-nerved, lower lemma 3- to 5-nerved, upper floret elliptic, savannahs, related to *Paspalum ligulare*, see *Recueil Trav. Bot. Néerl.* 39: 143. 1942.

P. alcalinum Mez (*Panicum buckleyanum* Vasey; *Paspalum buckleyanum* Vasey; *Paspalum hartwegianum* E. Fourn.)

Mexico. Meadows, alkaline soils, see *Mexic. Pl.* 2: 12. 1886, *Bull. Torrey Bot. Club* 13: 167. 1886, *Contr. U.S. Natl. Herb.* 2(3): 499. 1894 and *Repertorium Specierum Novarum Regni Vegetabilis* 15: 75. 1917, *Journal of Cytology and Genetics* 18: 26-33. 1983.

P. alnum Chase (*Paspalum hexastachyum* Parodi; *Paspalum ovale* Nees ex Steud. var. *apiculatum* Hack.)

Argentina, South America. Caespitose, prostrate, found on fine sandy and silty clay loam, see *Systema Naturae, Editio Decima* 2: 846, 855, 1359. 1759, *Synopsis Plantarum Glumacearum* 1: 22. 1853 and *Repertorium Specierum Novarum Regni Vegetabilis* 6(21-26): 341. 1909, *Journal of the Washington Academy of Sciences* 23(3): 137, f. 1. 1933, *Notas del Museo de la Plata, Botánica* 3: 25, f. 2. 1938, *Journal of Cytology and Genetics* 18: 26-33. 1983, *Ciencia e Cultura (São Paulo)* 39: 776. 1987, *Darwiniana* 30(1-4): 87-94. 1990, *Australian Journal of Botany* 42: 449-456. 1994, *Darwiniana* 35(1-4): 29-36. 1998.

in English: comb paspalum, comb's paspalum, comb's crown grass

P. alterniflorum A. Rich. (*Paspalum dolichophyllum* Hack.)

Cuba. See *Historia Fisica Politica y Natural de la Isla de Cuba, Botanica* 11: 299. 1850 and *Informe Anual de la Estación Central Agronomica de Cuba* 1: 409. 1906.

P. altsonii Chase (*Paspalum lucidulum* Swallen) (for Ralph Abbey Altson, botanical collector in Guyana)

British Guiana, Venezuela. Perennial or annual, variable, tufted, erect, rooting at the lower nodes, leaf sheaths glabrous, ligule membranous, leaf blades linear to linear-lanceolate, inflorescence terminal and axillary, solitary racemes arching, spikelets elliptic paired in two rows, wet sites, moist places, riverbeds, crevices, sandy soils, along riverbanks, related to *Paspalum nutans* and *Paspalum pilosum*, see *Systema Naturae, Editio Decima* 2: 846, 855, 1359. 1759 and *Journal of the Washington Academy of Sciences* 27(4): 144. 1937, *Bulletin of the Torrey Botanical Club* 75: 84. 1948.

P. amazonicum Trin. (*Paspalum boscianum* Fluegge; *Paspalum melanospermum* Desv. ex Poir.; *Paspalum scrobiculatum* L.)

Brazil. See *Mantissa Plantarum* 29. 1767, *Graminum Monographiae ... Pars I. Paspalum. Reimaria* 170. 1810, *Encyclopédie Méthodique. Botanique ... Supplément* 4: 315. 1816, *Linnaea* 10(3): 294. 1836.

P. ammodes Trin. (*Paspalum canum* Sohns; *Paspalum diamantinum* Swallen; *Paspalum sordidum* Hack.) (from the Greek *ammodes* "sandy, gravelly")

Brazil, Paraguay, Guyana. Perennial, herbaceous, caespitose, erect, nodes bearded, basal sheaths pubescent, leaves mostly basal, leaf blades linear pilose acute, hairy solitary spikelets ovate-elliptic to broadly lanceolate, upper glume and lower lemma pilose membranous, savannahs, dry savannahs, on white sand, gravelly, cerrado, closely related to *Paspalum guttatum* Trin. and *Paspalum sanguinolentum* Trin., similar to *Paspalum proximum*, see *De Graminibus Paniceis* 120. 1826 and *Österreichische Botanische Zeitschrift* 51: 197. 1901, *Memoirs of the New York Botanical Garden* 9(3): 256, f. 6. 1957, *Phytologia* 14(6): 368. 1967.

P. amphicarpum Ekman

Cuba, West Indies. Rhizanthogenes on short subterranean branches, very rare or presumably extinct species, growing near streams, in or near water, edge of pool, see *Contributions from the United States National Herbarium* 28(1): 161, f. 104. 1929.

P. anderssonii Mez (dedicated to the Swedish botanist Nils Johann Andersson (Anderson), 1821-1880, traveler, naturalist, author of *Om Galapagos-öarnes Vegetation*. Lund 1854, *Salices boreali-Americanae: A Synopsis of North American Willows*. Cambridge, New York 1858, *En Verldsomsegling Skildrad I Bref*. [First edition, the first account of the first Swedish circumnavigation in the *Eugenie*, 1851-

1852] Stockholm 1854 and *Monographia Salicium hucusque cognitarum*. Pars I. Stockholm 1867; see J.H. Barnhart, *Biographical notes upon botanists*. 1: 58. 1965; Stafleu and Cowan, *Taxonomic literature*. 1: 45-48. Utrecht 1976; F.A. Stafleu and E.A. Mennega, *Taxonomic literature. Supplement I: A-Ba*. 115-118. Königstein 1992; E.M. Tucker, *Catalogue of the library of the Arnold Arboretum of Harvard University*. Cambridge, Mass. 1917-1933; T.W. Bossert, *Biographical dictionary of botanists represented in the Hunt Institute portrait collection*. 11. 1972; Ida Kaplan Langman, *A Selected Guide to the Literature on the Flowering Plants of Mexico*. 88. 1964)

Peru. See *Repertorium Specierum Novarum Regni Vegetabilis* 15: 71. 1917.

P. apiculatum Döll

Amazonas, Brazil, Venezuela. Forest, along roadsides, edge of forest, see *Flora Brasiliensis* 2(2): 48. 1877.

P. approximatum Döll (*Paspalum angustifolium* Nees ex Trin., nom. illeg., non *Paspalum angustifolium* J. Le Conte; *Paspalum approximatum* var. *approximatum*; *Paspalum approximatum* var. *coarctum* Döll; *Paspalum filiforme* Sw.; *Paspalum filiforme* (L.) Fluegge, nom. illeg., non *Paspalum filiforme* Sw.; *Paspalum neesii* var. *undulatum* Döll; *Paspalum parinervium* Mez)

Brazil, Paraguay. Used to make halter, see *Species Plantarum* 1: 57. 1753, *Nova Genera et Species Plantarum seu Prodrromus* 22. 1788, *Graminum Monographiae ... Pars I. Paspalum*. Reimaria 139. 1810, *De Graminibus Paniceis* 99. 1826, *Flora Brasiliensis* 2(2): 82, 84. 1877 and *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 56(Beibl. 125): 11. 1921.

P. arcuatum Mez (*Axonopus arcuatus* (Mez) Dedecca; *Axonopus arcuatus* (Mez) G.A. Black)

Brazil. See *Repertorium Specierum Novarum Regni Vegetabilis* 15: 60. 1917, *Bragantia* 15: 288, 289. 1956, *Advancing Frontiers of Plant Sciences* 5: 1-186. 1963.

P. archavaletae Hack. ex Arechav. (*Paspalum exaltatum* J. Presl) (for the Spanish botanist José Arechavaleta y Balpardo, 1838-1912, pharmacist, in 1852 to Uruguay; see J.H. Barnhart, *Biographical notes upon botanists*. 1: 72. 1965; T.W. Bossert, *Biographical dictionary of botanists represented in the Hunt Institute portrait collection*. 14. 1972; E.M. Tucker, *Catalogue of the library of the Arnold Arboretum of Harvard University*. Cambridge, Mass. 1917-1933)

Uruguay, South America. Riverbanks, see *Reliquiae Haenkeanae* 1(4-5): 219. 1830, *Anales del Museo Nacional de Montevideo* 1: 75. 1894 and *Flora de la Provincia de Buenos Aires* 4(2): 1-624. 1970.

P. arenarium Schrad. (*Paspalum simpsonii* Nash) (for Joseph Herman Simpson, 1841-1918, botanical collector in Florida 1889-1911)

Guyana, French Guiana, Brazil. Perennial, loosely tufted or shortly rhizomatous, geniculately ascending, foliage mostly basal, acute leaf blades lanceolate to filiform to linear-lanceolate, inflorescence terminal and axillary, racemes solitary arching, hairy spikelets paired obovate or circular, rachis not winged, upper glume obovate membranous, lower glume absent, lower lemma membranous, upper lemma and palea coriaceous, forest margins and clearings, open disturbed places, sandy places, dry sandy coastal savannahs, see *Mantissa* 2: 172. 1824, *Bulletin of the Torrey Botanical Club* 24(1): 39-40. 1897.

in English: tilly grass

P. arsenei Chase (for Brother G. Arsène, 1867-1938)

Mexico. See *Contributions from the United States National Herbarium* 28(1): 63, f. 31. 1929.

P. arundinaceum Poir. (*Paspalum arundinellum* Mez; *Paspalum elatum* Rich. ex Döll; *Paspalum longebrachiatum* Steud.; *Paspalum secans* Hitchc. & Chase)

South America, French Guiana. Perennial, caespitose, densely clumped, often geniculate, leaf sheaths glabrous, ligules stiff, leaf blades coarsely scabrid, ascending racemes loosely flowered, spikelets obovate paired in two rows in fascicles of four, lower glume absent or present, upper glume apiculate 3-nerved, lower lemma obtuse 3-nerved, upper floret narrowly obovate acute striate, see *Encyclopédie Méthodique. Botanique ... Supplément* 4: 310. 1816, *Synopsis Plantarum Glumacearum* 1: 60. 1853, *Flora Brasiliensis* 2(2): 78. 1877 and *Contributions from the United States National Herbarium* 18(7): 319. 1917, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 56(Beibl. 125): 11. 1921, *Contr. U.S. Natl. Herb.* 28: 206. 1929.

in English: thick ditch crown grass

P. arundinellum Mez (*Paspalum arundinaceum* Poir.)

Brazil. See *Encyclopédie Méthodique. Botanique ... Supplément* 4: 310. 1816 and *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 56(Beibl. 125): 11. 1921, *Contr. U.S. Natl. Herb.* 28: 206. 1929, *Darwiniana* 30(1-4): 87-94. 1990.

P. aspidiotes Trin. (*Paspalum erectifolium* Swallen; *Paspalum setiglume* Chase)

Brazil. Perennial, herbaceous, savannah, forest, shrubs, see *Species Graminum* 3: t. 269. 1829-1830 and *Brittonia* 3(2): 150, f. 1. 1939, *Fieldiana, Botany* 28(1): 22. 1951.

P. atabapense Davidse & Zuloaga

Amazonas, Venezuela,. Savannah, white sandy areas, see *Novon* 2(3): 193, f. 1. 1992.

P. atratum Swallen (*Panicum plicatulum* (Michx.) Kuntze; *Paspalum plicatulum* Michx.; *Paspalum plicatulum* var. *robustum* Hack.) (Latin *atratus*, a, um "blackened")

Brazil, Bolivia. Perennial, rhizomatous, erect or ascending, robust, very dense fibrous root system, linear leaf blades glabrous or pubescent, spikelets elliptic-oblong, upper glume and lower lemma membranous 5-nerved, good seed production, seeds drop easily upon maturation, suitable for seasonally waterlogged or wet soils, savannahs, riverbanks, see *Flora Boreali-Americana* 1: 45. 1803, *Revisio Generum Plantarum* 3(3): 363. 1898 and *Bulletin de l'Herbier Boissier*, sér. 2, 4(3): 269. 1904, *Phytologia* 14: 378. 1966, *Annals of the Missouri Botanical Garden* 77(1): 125-201. 1990.

in English: atra paspalum

in Spanish: pantanero

P. aureolatum Swallen (*Paspalum lanciflorum* Trin.)

Venezuela. See *Fieldiana, Botany* 28(1): 22, f. 1. 1951.

P. auriculatum Presl (*Paspalum lamprocaryon* K. Schum.; *Paspalum scrobiculatum* var. *auriculatum* (J. Presl) Merr.)

Tropical Africa, Southeast Asia, the Philippines, Indonesia. Perennial, tufted, stout, large, geniculate and rooting at lower nodes, good green forage, growing in marshy areas, damp sites, see *Reliquiae Haenkeanae* 1: 217. 1830, *Die Pflanzenwelt Ost-Afrikas* C: 100. 1895 and *Philippine Journal of Science* 1: Suppl. 345. 1906, *Flora of Tropical East Africa* 451-898. 1982, *Blumea* 30: 304. 1985.

in Cameroon: fafabo fafroko

in Sierra Leone: alekore, bingodi, kapie, nacawange, yani

P. azuayense Sohns

Ecuador, Azuay. See *Memoirs of the New York Botanical Garden* 9(2): 140, f. 1. 1955.

P. bakeri Hack. (*Paspalum glabrum* Poir.; *Paspalum glabrum* Cassidy, nom. illeg., non *Paspalum glabrum* Poir.; *Paspalum glabrum* Alph. Wood, nom. illeg., non *Paspalum glabrum* Poir.) (for Charles Fuller Baker, 1872-1927, collected in Brazil, Colombia, Malaysia, Nicaragua, Philippines, United States of America; see *Bull. Torrey Bot. Club* 26: 577. 1899; D.H. Pfister, *Mycotaxon* 23: 1-139. 1985; G. Sayre, *Mem. New York Bot. Gard.* 19: 175-276. 1971)

Cuba, the Caribbean. See *Encyclopédie Méthodique, Botanique* 5: 30. 1804, *The American Botanist and Florist* 2: 390. 1871, *Bulletin Colorado Agricultural College, Colorado Experiment Station* 12: 91. 1890 and *Informe Anual de la Estación Central Agronomica de Cuba* 1: 410. 1906.

in English: Baker's crown grass

P. barbinode Hack.

Brazil. See *Österreichische Botanische Zeitschrift* 51: 235. 1901.

P. barclayi Chase (for G.W. Barclay, 1835-1879 collected in Bolivia, Colombia, Costa Rica, Panama, Paraguay, U.S.; the British naval surgeon Richard Brinsley Hinds, ca. 1812-1847, from 1836 to 1842 attached as surgeon and naturalist

to HMS *Sulphur*. See George Bentham, 1800-1884, *The Botany of the Voyage of H.M.S. Sulphur, under the Command of Captain Sir Edward Belcher ... during the Years 1836-1842*. [Edited by R.B. Hinds] [The illustrations are lithographs of drawings by Miss S.A. Drake.] London 1844[-1846]; George Bentham, *The Zoology of the Voyage of H.M.S. Sulphur, under the Command of Captain Sir Edward Belcher ... during the Years 1836-1842*. (Shells, by R.B. Hinds.) [edited by R.B. Hinds] London 1843[-1845]; Edward Belcher (1799-1877), *Narrative of a Voyage Round the World Performed in HMS Ship "Sulphur" during the years 1836-1842*. London 1843; *Mem. New York Bot. Gard.* 74(3): 42. 1998)

Peru. See *Contributions from the United States National Herbarium* 24(8): 452. 1927.

P. batianoffii B.K. Simon

Australia. See *Austrobaileya* 3(4): 598, f. 7. 1992.

P. berterianum Balb. ex Colla (*Paspalum glaucifolium* Bertero ex Colla) (after the Italian botanist Carlo Giuseppe Bertero, 1789-1831, physician, traveler, botanical collector, plant collector in Chile)

South America. See *Herbarium Pedemontanum* 6: 129. 1836.

P. bertonii Hack. (*Paspalum niederleinii* Mez; *Paspalum potamophilum* Renvoize) (for the Italian-Swiss botanist Moisés de Santiago Bertoni [also Mosé Giacomo Bertoni], 1857-1929, scientist, 1884 emigrated to Argentina and 1887 to Paraguay, botanical collector in Argentina and Paraguay, he founded the Colonia Guillermo Tell on a 10,000 hectares big area of virgin forest inhabited by the Mbyá-Guaraní Indians, see *Plantae Bertonianae*. Asunción, Paraguay 1916; J.H. Barnhart, *Biographical notes upon botanists*. 1: 176. 1965; R. Zander, F. Encke, G. Buchheim and S. Seybold, *Handwörterbuch der Pflanzennamen*. 14. Aufl. 704. Stuttgart 1993; L. Ramella, Y. Ramella-Miquel. Serie especial n°2 *Bibliografía de Moisés Santiago Bertoni*. Conservatoire et Jardin botaniques de Genève, Missouri Botanical Garden. 1985)

Brazil, South America, Argentina, Paraguay. See *Repertorium Specierum Novarum Regni Vegetabilis* 10(243-247): 165. 1911, *Repertorium Specierum Novarum Regni Vegetabilis* 15: 65. 1917, *Kew Bulletin* 42: 922. 1987, *Cytologia* 56: 223-228. 1991, *Darwiniana* 35(1-4): 29-36. 1998.

P. biaristatum Filgueiras & Davidse

Brazil. Awned, see *Novon* 4(1): 18-22. 1994.

P. bifarium Edgew. (*Digitaria longiflora* (Retz.) Pers.; *Paspalum longiflorum* Retz.)

Asia, India. See *Observationes Botanicae* 4: 15. 1786, *Syn. Pl.* 85. 1805, *Journal of the Asiatic Society of Bengal* 21: 157. 1852 and *Blumea* 21(1): 1-80. 1973.

P. bifidifolium Soderstr.

Central America, British Guiana. Perennial, tufted, rhizomatous, leaf blades linear-oblongate, two divergent racemes, spikelets elliptic-obovate solitary in two rows, upper glume and lower lemma 5-nerved, upper floret finely striate granular, on wet rocky places, related to *Paspalum pumilum* and *Paspalum minus*, see *Memoirs of the New York Botanical Garden* 12(3): 3. 1965.

P. bifidum (Bertol.) Nash (*Panicum alabamense* Trin. ex Steud.; *Panicum bifidum* Bertol.; *Panicum floridanum* Trin.; *Paspalum bifidum* var. *bifidum*; *Paspalum bifidum* var. *projectum* Fern.; *Paspalum interruptum* Alph. Wood; *Paspalum racemosum* Nutt.)

Northern America. See *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques, Physiques et Naturelles. Pantropical. Perennial or annual, erect or ascending flowering stems, vigorous, extensively creeping and rooting, ground cover, spreading by flattened runners, strongly stoloniferous with leafy stolons, nodes pubescent or pilose, ligule membranous, leaf sheaths hairy on the margins, sheaths keeled and strongly flattened, leaves very acute and oblong-lanceolate, long drooping spikes, inflorescence forked or T-shaped, sessile or subsessile racemes usually paired and divergent, hairy yellow green spikelets solitary and pedicellate, spikelets silky-hairy on the edges, upper glume ovate with hairy margins, lower glume absent, lower palea absent, 3 stamens, yellow anthers, stigmas white and feathery, fruit compressed, seeds tend to stick in the throats of livestock, grains eaten by baboons, of little forage value, economic plant, medicinal value, grass tea for fever and flu, not very palatable when mature, a common garden weed invasive species widely naturalized in tropics, aggressive and persistent, used as a lawn grass in some high-rainfall areas, potential seed contaminant, a weed in cultivated and disturbed ground, irrigation channels, in and around plantations, orchards and vineyards, common in fields, forest

clearings, old plantations sites, in natural pastures on moist heavy soils, rocky wasteland, grows on wet places and wet habitats, along rivers, clumps on bare roadside, gravel and rock, shade or partial shade, poor acid soils, forested areas, see *Systema Naturae, Editio Decima* 855. 1759, *Acta Helvetica, Physico-Mathematico-Anatomico-Botanico-Medica* 7: 129, t. 8. 1762 [1772], *De Fructibus et Seminibus Plantarum...* 2: 2, t. 80. 1791, *Tableau Encyclopédique et Méthodique ... South America, Brazil to Argentina. Perennial bunchgrass, leafy, tall and vigorous, erect or ascending or widely spreading, often decumbent at base, rather coarse and deep rooted, strongly clumped or caespitose, forms thick clumps, densely and shortly knotted base, basal sheaths hairy or glabrous, ligule papery and asymmetric, leaves flat and linear, also rhizomatous, racemes on a central axis, nodding panicles, spikelets paired, green-yellowish spikelets elliptic to ovate with villous margins, upper glume pubescent and silky hairy, lower glume absent, upper glume and sterile lemma fringed, fertile floret papillose, lower palea absent, anthers purple, elliptic fruits reddish brown, seed covered with fine silky hairs, excellent pasture and hay, very palatable and nutritious in the preflowering stage, high grazing value, cultivated fodder, good grazing for livestock, an important food source in dairy pastures, shade species, widely introduced as a forage species and now naturalized in the wild, requires moist soil, hardy, economic plant, tolerates both waterlogging and drought, little tolerance to salinity, withstands heavy grazing and trampling, the seed heads parasitized by the ergot filamentous fungus *Claviceps paspali* Stevens & Hall can be toxic or poisonous to live-

stock, useful for erosion control, used to stabilize mine dumps in South Africa, a difficult plant to eradicate, may become a troublesome weed of lawns and disturbed places and habitats, South African traditional healers use this grass for gambling luck, grows most abundantly in bottomland pastures, vineyards, wasteland, consolidated sand dunes, in damp places, periodically flooded land, moist grasslands, disturbed areas, ditch banks, orchards, riverbanks, sandy loam, moist meadows and fields, marshes, in heavy moist fertile soils, vleis, along roadsides, irrigated lands, irrigation channels, orchards, perennial crops, gardens, cultivated lands, sugarcane, similar to *Paspalum urvillei* and *Paspalum pauciciliatum*, see *Encyclopédie Méthodique, Botanique* 5: 35. 1804, *Systema Vegetabilium, editio decima sexta* 1: 247. 1825, *De Graminibus Paniceis* 113. 1826, *Systema Vegetabilium, editio decima sexta* 4: Cur. Cosmopolitan, tropics and subtropics. Perennial, water-loving, wiry, spreading by rhizomes and stolons, ascending, glabrous or sometimes pubescent, creeping stems rooting at the nodes, forming dense mats, leaves linear and flat, leaf sheaths pilose on the margins, ligule membranous and unfringed, spikes terminal, racemes shortly pedunculated, spikelets arranged in two rows, spikelets usually solitary and pedicellate, hairy spikelets ovate-oblong with glabrous margins, rachis not winged, lower glume wanting or minute and usually developed into a small triangular scale, upper glume 3-nerved minutely appressed-pubescent, lower lemma herbaceous 3-nerved, upper lemma and palea coriaceous apiculate, anthers oblong and purple, economic

plant, now widely distributed and naturalized in warm temperate regions and throughout the tropics, a common weed of wet places and cultivated land, a serious weed in irrigation channels, very difficult to eradicate, crop diseases and pest, harmful organism host, potential seed contaminant, useful for erosion control and stabilizing salt marsh, beach protection and coastal sand binder, a soil binder along streams, a very good lawn grass where only salty water is available, quite palatable, a good and important forage grass and a valuable duck food, good fodder grass, relished by water buffaloes, readily grazed by sheep, tolerant of waterlogged conditions and periodic flooding in salt swamps and by tidal waters, withstands heavy grazing, a littoral species growing in and near fresh water, found along fresh and brackish marshes, in saline soils and swamps, in wetlands and freshwater wetlands, vleis, salt seepage areas, wet grasslands, warm coasts and coastal salt marshes, wet places at low altitudes, freshwater-marsh habitats, paddy-fields and marshy meadows, ponds, canals and ditches, shorelines, beaches and dunes, in sand and mud near the seashore, along pan edges in muddy soil, closely resembling *Paspalum vaginatum* Sw., see *Systema Naturae, Editio Decima* 855. 1759, *Spicilegium Florae Lipsicae* 148. 1771, *Natuurlijke Historie* 13: 167, t. 89, f. 4. 1782, *Nova Genera et Species Plantarum seu Prodromus* 21. 1788, *Flora Boreali-Americana* 1: 46. 1803, *Prodromus Florae Novae Hollandiae* 1: 188. 1810, *Genera et species plantarum* 4. 1816, *A Sketch of the Botany of South-Carolina and Georgia* 1: 104. 1816, *Encyclopédie Méthodique, Botanique Suppl.* 4: 316. 1816, *Descriptio uberior Graminum* 78. 1817, *Journal de Physique, de Chimie, d'Histoire Naturelle et des Arts* 91: 285. 1820, *Mantissa* 2: 261. 1824, *Révision des Graminées* 1: 25. 1829, *Flora Brasiliensis seu Enumeratio Plantarum* 2: 62. 1829, *Reliquiae Haenkeanae* 1(4-5): 209, 296. 1830, *Enumeratio Plantarum Omnium Hucusque Cognitarum* 1: 53. 1833, *Memorie della Reale Accademia delle Scienze di Torino* 39: 27, t.59. 1836, *Historia Fisica Politica y Natural de la Isla de Cuba, Botanica* 11: 298. 1850, *Flora Chilena* 6: 240. 1854, *Videnskabelige Meddelelser fra Dansk Naturhistorisk Forening i Kjøbenhavn* 1854: 44. 1854, *Synopsis Plantarum Glumacearum* 1: 20, 21. 1855 [1853 or 1854], *Botanische Zeitung, Berlin* 19(44): 324. 1861, *A Class-book of Botany* 783. 1861, *Flora of the British West Indian Islands* 541. 1864, *Flora Brasiliensis* 2(2): 75. 1877, *Flora of the Southern United States* 665. 1883, *Biologia Centrali-Americana; ... Heller & E.G. Heller)

Southern and northern America, U.S., Florida. Perennial, caespitose, glabrous, dark purplish, tangled, coarse, in large clumps, fruiting culms erect, ligules membranous, leaf blades inrolled when dry, inflorescence short-peduncled of ascending racemes, spikelets paired in two rows, upper glume and lower lemma 3- to 5-nerved, upper floret

glabrous, medicinal value, growing in fields and waste places, see *Tableau Encyclopédique et Méthodique ... Botanique* 1: 176. 1791, *Encyclopédie Méthodique, Botanique* 5: 30. 1804, *Encyclopédie Méthodique, Botanique Suppl.* 4: 315. 1816, *Systema Vegetabilium, editio decima sexta* 1: 247. 1825, *Species Graminum* 2: t. 126. 1829, *Mémoires de la Société d'Agriculture, Sciences et Arts d'Angers* 1: 161-162. 1831, *Synopsis Plantarum Glumacearum* 1: 17-18. 1853 [1854 or 1855], *The American Botanist and Florist* 2: 390. 1871, *Flora Brasiliensis* 2(2): 86. 1877, *Bulletin Colorado Agricultural College, Colorado Experiment Station* 12: 91. 1890 and *Bulletin of the Torrey Botanical Club* 30(7): 376. 1903, *Informe Anual de la Estación Central Agronomica de Cuba* 1: 410. 1906, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 56(Beibl. 125): 11. 1921.

in English: coconut crown grass, coconut paspalum

in West Indies: chien-dent

P. nicorae Parodi (*Paspalum arenicolum* (Arechav.) Herter, nom. illeg., non *Paspalum arenicolum* Müll. Hal.; *Paspalum plicatulum* var. *arenarium* Arechav.)

Brazil, Argentina, Uruguay, Paraguay. Perennial, erect, rhizomatous with deep and vigorous rhizomes, prostrate sod forming, sheath usually glabrous, leaves erect blue-green, inflorescence gray-green, curving racemes erect or ascending, spikelets solitary oval to elliptical, lower glume absent, upper glume hairy on the back, sterile lemma glabrous and wrinkled, fertile floret punctulate-striolate, anthers yellow-white, stigmas white to purple, seed dark and glossy, eco-

onomic plant, pasture species, useful for erosion control, excellent for the stabilization of waterways, apparently drought-resistant, shade-tolerant, forage, not eaten readily by stock, grows in moist sandy soils of the littoral, see *Anales del Museo Nacional de Montevideo* 1: 58. 1894 and *Revista Sudamericana de Botánica* 6(5-6): 138. 1940, *Notas del Museo de la Plata, Botánica* 8(40): 82. 1943, *Journal of Cytology and Genetics* 18: 26-33. 1983.

Central and southern America. Perennial bunchgrass, polymorphic, vigorous, coarse, erect, often decumbent, low-growing, creeping, forming dense turfs, rhizomatous, short and stout rhizomes and stolons, root system deep and extensive, persistent base of old sheaths, leaves pubescent, sheath glabrous or ciliate, ligule an inconspicuous membrane, inflorescence of 2 conjugate racemes ascending, ovate spikelets solitary smooth and glossy, lower floret reduced to an empty lemma, lower glume absent or minute, upper glume glabrous and wrinkled, fertile floret papillose-striate, multitude of tall fast-growing seed stalks, seeds yellowish green and oval, usually a prolific seed producer, propagation by seeds and woody runners, ornamental weed species highly invasive, does not grow well in shade, naturalized in the wild, potential seed contaminant, rapidly growing when established, quickly colonizes large areas, native pasture species, fair grazing for livestock, rather unpalatable to cattle, poor grazing for wildlife, economic plant, cultivated as lawn grass and fodder grass, once established can be grazed heavily, ground cover useful for erosion control, recommended for protection against erosion on sloping ground, often used to stabilize terraces, sometimes susceptible to paspalum ergot, excellent drought resistance, tolerant of flooding and salinity, best in poor conditions and in sandy soil, a weed of roadsides and lawns, found on coastal sands and other sandy soils, in areas with moderate to high rainfall and a short dry season, disturbed places, damp grassland, see *Systema Naturae, Editio Decima* 2: 846, 855, 1359. 1759, *Graminum Monographiae ... P. oligostachyum Salzm. ex Steud. (*Paspalum montanum* Henard; *Paspalum oligostachyum* var. *molle* Salzm. ex Döll; *Paspalum salzmannii* Döll)

Brazil, Venezuela, French Guiana, Trinidad. Perennial, erect, loosely tufted, slender, pilose or pubescent, caespitose, knotty base, leaf sheaths papillate, ligules membranous, softly pilose leaf blades narrowly lanceolate acute, open inflorescence, slender racemes loosely flowered and scattered on an axis, spikelets broadly obovate appressed paired, upper glume membranous 3- to 7-nerved, lower lemma 5- to 7-nerved, upper lemma and palea shiny, savannahs, forest, disturbed damp places, shade or partial shade, deciduous forest, see *Synopsis Plantarum Glumacearum* 1: 23. 1855 [1853], *Flora Brasiliensis* 2(2): 49, 76. 1877 and *Recueil des Travaux Botaniques Néerlandais* 39: 141. 1942.

P. orbiculare Forst.f. (*Paspalum longifolium* var. *pseudo-orbiculare* Jansen; *Paspalum scrobiculatum* L.; *Paspalum scrobiculatum* var. *orbiculare* (G. Forst.) Hack.)

Australia, Polynesia, New Guinea. Perennial, caespitose, bunchy, coarse, stout, very tough, glabrous, erect, knotted rootstock, tough root system, purplish cataphylls, leaves abruptly tapering to a sharp stiff point, leaf sheaths glabrous and compressed, leaf blades flat and smooth, ligule very short and with a few hairs, flowering stems naked below, inflorescence long exserted with spreading racemes, one-sided spikes, spikelets mostly solitary, lower glume absent, upper glume boat-shaped, fertile floret finely punctulate,

lower lemma oval, upper lemma brown, palea hard with a clasping margin, fruit compressed, used as fodder of little value, noxious weed, persistent, common in coastal districts, in woodland in higher rainfall areas, cultivated areas, in or near taro plantations, wet regions, in irrigation and drainage ditches, rocky slopes, in clearings and in fields, rangelands, along roadsides, heavy clay soil, in pastures, ditches and wasteland, see *Mantissa Plantarum* 29: 1767, *Florulae Insularum Australium Prodrromus* 7. Goettingen 1786, *Reliquiae Haenkeanae* 1(4-5): 216. 1830, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 6: 233. 1885 and *Bulletin of Miscellaneous Information Kew* 1930: 257. 1930, *Reinwardtia* 2(2): 321. 1953, *Contrib. Tropical America, tropical Africa, Polynesia, Australia, New Guinea. Perennial, robust, caespitose, coarsely clumped, erect to geniculately ascending, sometimes rooting from the lower nodes, dark nodes densely villous or more or less hairy, rhizomatous with rhizomes hirsute, leaf sheaths striate and hairy to very hispid, ligule membranous and ciliate, leaf blades linear-lanceolate hairy with scabrous margins, inflorescence terminal pyramidal, very slender

racemes erect and then spreading to drooping, spikelets paired ovate or obovate, winged rachis, flower bracts greenish brown, lower glume absent, upper glume and sterile lemma hairy membranous 1- to 3-nerved, upper lemma and palea crustaceous, economic plant, naturalized, native pasture species, weed, used as ground cover, common in moist disturbed areas, swamps, sandy soils, cultivated soils, along roadsides, waste places, forest shade, grasslands, dry fields, similar to *Paspalum umbrosum*, see *Systema Naturae, Editio Decima* 2: 846, 855, 1359. 1759, *Encyclopédie Méthodique, Botanique* 5: 31. 1804, *Syn. Bossert, *Biographical dictionary of botanists represented in the Hunt Institute portrait collection*. 304. 1972; Lincoln Constance (1909-2001), "Morton Eaton Peck (1871-1959)." *Taxon* 9: 165-167. 1960)

Belize. See *Proceedings of the American Academy of Arts and Sciences* 49(8): 495. 1913.

P. pectinatum Nees ex Trin. (*Anastrophus pectinatus* (Nees ex Trin.) Schltld. ex B.D. Jacks.; *Paspalum pectinatum* Nees, nom. illeg., non *Paspalum pectinatum* Nees ex Trin.)

Mexico, Bolivia, southern Brazil, Colombia, Venezuela. Perennial, erect, tufted, forming clumps, basal sheaths papery, rigid ligules membranous, leaf blades linear densely pubescent acute or attenuate, 2-3 racemes appressed to ascending, flattened and lanceolate spikelets solitary and strongly imbricate, upper glume present and winged, lower lemma 3-nerved obtuse, rocky places, dry savannahs, related to *Paspalum setiglume*, similar to *Paspalum cordatum*, see *Systema Naturae, Editio Decima* 2: 846, 855, 1359.

1759, *Species Graminum* 1: t. 117. 1828, *Flora Brasiliensis seu Enumeratio Plantarum* 2: 34. 1829, *Index Kewensis* 1: 118. 1893 and *Contr. U.S. Natl. Herb.* 12: 116. 1908, *Annals of the Missouri Botanical Garden* 89(3): 337-399. 2002.

P. penicillatum Hook.f.

Ecuador, Peru, Colombia, Bolivia. Annual, erect, pro-cumbent, geniculate, ascending, branched, leaf blades lanceolate acute, several racemes lax or dense, spikelets elliptic-oblong glabrous solitary, upper glume membranous 3-nerved, lower lemma membranous 3-nerved, medicinal, forage, along roadsides, similar to *Paspalum prostratum*, see *Transactions of the Linnean Society of London* 20: 171. 1847 and *Bot. J. Linn. Soc.* 81: 96. 1980.

in Ecuador: grama, saraqihua

P. peregrinum A.G. Burm. & Filg. (*Dimorphostachys pilosa* (Lam.) E. Fourn.; *Paspalum pilosum* Lam.; *Thrasya villosa* Hitchc.)

Venezuela. Savannah, see *Tableau Encyclopédique et Méthodique ... Botanique* 1: 175. 1791, *Mexicanas Plantas* 2: 14. 1886 and *Proceedings of the Biological Society of Washington* 40: 84. 1927, *Acta Botanica Venezuelica* 14(4): 91. 1985[1987], *Flora Mesoamericana* 6: 335-352. 1994.

P. perspinervium Renvoize (also spelled *perspicinervium*) (*Paspalum jesuiticum* Parodi)

Brazil. Spikelets paired ovate-elliptic, found in marshy ground, see *Darwiniana* 15: 104. 1969, *Kew Bulletin* 42: 922. 1987, S.A. Renvoize, *Hatschbach's Paraná Grasses* 46. 1988.

P. petilum Chase (*Orthoclada laxa* (Rich.) P. Beauv.; *Paspalum dispar* var. *marahuacense* H. Rodr.) (Latin *petilus, a, um* "thin, slender," *petilum tenue et exile...*)

British Guiana, Venezuela, Brazil. Perennial or annual, tufted, sprawling, rooting at the nodes, leaf sheaths fringed, ligules membranous acute, leaf blades linear to linear-lanceolate, solitary slightly arching raceme, spikelets elliptic to narrowly obovate, bearded lower glume, upper glume elliptic acute 3- to 5-nerved, lower lemma 3-nerved, related to *Paspalum decumbens*, rocky moist places, wet rocks, riverbanks, riverbeds, sandy soil, see *Actes de la Société d'Histoire Naturelle de Paris* 1: 106. 1792, *Essai d'une Nouvelle Agrostographie* 70, 149, 168. 1812 and *Contributions from the United States National Herbarium* 28(1): 96, f. 50. 1929, *Journal of the Washington Academy of Sciences* 27(4): 145. 1937, *Brittonia* 23(3): 293-324. 1971, *Ernstia* 52: 1. 1989.

P. petrense A.G. Burman

Brazil. Culms erect, racemes 3 to 5, spikelets obliquely set on the pedicels, upper lemma hairy at the tip, see *Kew Bulletin* 35(2): 297-298. 1980.

P. petrosum Swallen

Colombia. See *Phytologia* 14(6): 362. 1967.

P. phyllorhachis Hack.

Central Brazil. Rare species, bambusiform, leaning, woody, glabrous spikelets, see *Österreichische Botanische Zeitschrift* 51: 240. 1901.

P. pictum Ekman (*Paspalum delicatum* Swallen; *Paspalum maculatum* Nash)

Amazonas, Brazil, Venezuela, Costa Rica, Bolivia. Annual, branched, erect, delicate, tufted, glabrous, lower nodes rooting, ligule membranous acute, leaf blades linear or filiform acuminate, inflorescence exserted terminal and axillary, 1-5 racemes straight or arching, spikelets obovate glabrous paired crowded, lower glume absent, upper glume and lower lemma 3- to 5-nerved, upper lemma stramineous, along riverbanks, savannah, in or near water, in shallow water, closely related to *Paspalum delicatum*, see *Systema Naturae, Editio Decima* 2: 846, 855, 1359. 1759 and *Contr. U.S. Natl. Herb.* 12: 116. 1908, *Arkiv för Botanik utgivet av K. Svenska Vetenskapsakademien* 10(17): 11, t. 6, f. 7. 1911, *North American Flora* 17(2): 186. 1912, *Contributions from the United States National Herbarium* 29(6): 268-269. 1948 [1949].

P. pilgerianum Chase (*Cynodon dactylon* (L.) Pers.; *Paspalum bonplandianum* Fluegge var. *glabrescens* Pilg.)

South America, Ecuador. Soft leaves, compact inflorescence, medicinal, sandy areas, see *Species Plantarum* 1: 58. 1753, *Systema Naturae, Editio Decima* 2: 846, 855, 1359. 1759, *Syn. Pl.* 1: 85. 1805, *Graminum Monographiae ... Pars I. Paspalum. Reimaria* 71. 1810, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 27(1-2): 17-18. 1899 and *Contr. Southern U.S. to Argentina, Mexico, Brazil, Uruguay, Paraguay. Perennial tussocky grass, glabrous or hairy, caespitose or loosely tufted, erect, decumbent, ascending at base, shortly rhizomatous, compressed culms and sheaths, coarse stems and leaves, weed species very leafy, leaf blades linear acuminate, ligule membranous acute, leaf sheaths glabrous and keeled, leaves folded at the base, inflorescence narrowly ovate of arcuate ascending to spreading racemes distichously disposed, spikelets paired and shining when ripe, lower glumes absent, upper glume membranous 5-nerved, sterile lemma 5-nerved coriaceous wrinkled, upper lemma and palea dark brown shiny, shining seeds dark brown, economic plant with a good drought tolerance, free from or very resistant to ergot, fair grazing for wildlife and livestock, fodder, a good forage grass, best grazed when leafy, mature growth unpalatable, potential seed contaminant, highly tolerant of waterlogging and flooding for short periods, adapted to marshy or aquatic habitats, grows in savannahs in moist sandy or clay soil, on poorly drained clay loams, wet ground, in bare gravelly soil at roadside, on soils of low fertility, campo, in coconut plantations, grassland, cerrado, open pastures, on deep sandy soils and infertile coastal soils which are flooded in the wet season and then dry out rapidly, disturbed ground, intergrades with *Paspalum glaucescens*, *Paspalum convexum* and *Paspalum guenoarum*, see *Flora Boreali-Americana* 1: 45. 1803, *Encyclopédie Méthodique, Botanique* 5: 29. 1804, *Nova Genera et Species Plantarum* 1: 92. 1815 [1816], *Journal de Physique, de Chimie, d'Histoire Naturelle et des Arts* 91: 285. 1820, *Mantissa* 2: 173. 1824, *Systema Vegetabilium, editio decima sexta* 1: 246. 1825, *Révision des Graminées* 1: 26. 1829, *Reliquiae Haenkeanae* 1(4-5): 219. 1830, *Mémoires de la Société d'Agriculture, Sciences et Arts d'Angers* 1: 162. 1831, *Enumeratio Plantarum Omnium Hucusque Cognitarum* 1: 57. 1833, *Nomenclator Botanicus. in English: grand crown grass

P. pumilum Nees (*Panicum bicurulum* Salzm. ex Steud.; *Paspalum bicurulum* Salzm. ex Steud.; *Paspalum campestris* Trin.; *Paspalum nitidum* Swallen)

Argentina, West Indies, Chile, Bolivia, Brazil, Uruguay, Paraguay. Perennial or annual, small plant, low growing to semi-prostrate, erect or ascending, tufted or shortly rhizomatous, leaves mostly basal, ligule membranous, linear or linear-lanceolate leaf blades acute, inflorescence of conjugate racemes divergent and recurved, solitary spikelets arranged alternately on a narrow rachis, spikelets glabrous broadly ovate or ovate-elliptic, upper glume herbaceous, upper lemma and palea minutely papillose, anthers yellow and stigmas purple, useful for erosion control, grazed, grows in native pasture often with carpet grass, on poor sandy soil, savannahs, along streams and margins of marshes, forest margins, wet sand, damp sandy soil, along roadsides, on poorly drained site, grassland, disturbed places, related to *Paspalum bifidifolium*, *Paspalum subciliatum* and *Paspalum notatum*, see *Flora Brasiliensis seu Enumeratio Plantarum* 2: 52. 1829, *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques, Physiques et Naturelles. Seconde Partie: Sciences Naturelles* 3,1(2-3): 144. 1834, *Nomenclator Botanicus. Old World tropics and subtropics. Annual or short-lived perennial, very variable, pale green, erect or shortly decumbent at the base, vigorous, loosely to weakly tufted, leafy and shallow rooted, rhizomatous and/or vigorous stoloniferous habit, sheaths more or less glabrous, basal leaf sheaths flattened, no auricles, ligule membranous ciliolate, succulent leaves oblong and hairless, inflorescence composed of 1-14 to 20 racemes flattened and ascending, racemes alternate or subopposite, spikelets solitary and pedicellate arranged in two rows, lower glume usually absent, sterile lemma wrinkled, fertile floret papillose-striate, stigmas usually purple, highly polymorphic species, grain as famine food, grains boiled and eaten in the same way as rice, economic grass widely cultivated by Gonds and Korkus and other jungle tribes of India, noxious weed species, invasive, native pasture species, fodder, forage, livestock feed, very palatable and highly digestible up to flowering, grazed by cattle and buffaloes, human food, cereal, grains ground into meal and used for puddings, grain crop species, can be attacked by the paspalum ergot, new grains said to be narcotic or poisonous, very tolerant of flooding, not very drought resistant, useful for erosion control, plant used to treat scorpion stings, grows in poor veld, open grassy areas, in moist areas, patanas, from fertile clay loams to sandy loams, fallow fields, streams, drain banks, sandy soils and loam, irrigation ditches, uncultivated lands, abandoned lands, wet soils, wadis, in semiswamp forest, disturbed soils, along roadsides, damp grassland and swamp, closely related to *Paspalum vaginatum* Swartz and *Paspalum plicatum*, see *Systema Naturae, Editio Decima* 2: 846, 855, 1359. 1759, *Species Plantarum, Editio Secunda* 1: 81. 1762, *Mantissa Plantarum* 29. 1767, *Florulae Insularum Australium Prodrumus* 7. 1786, *Flora Caroliniana, secundum ...* 75. 1788, *Tableau Encyclopédique et Méthodique ... Herb.* 28: 67, 116, 118. 1929, *Brittonia* 23(3): 293-324. 1971, *Taxon* 33: 126-134. 1984, *Darwiniana* 30(1-4): 87-94. 1990, *Annals of the Missouri Botanical Garden* 81(4): 768-774. 1994.

in Mexico: amatsi, tigrillo

P. standleyi Chase (for the American botanist Paul Carpenter Standley, 1884-1963, plant collector and botanical explorer (Central and Western North America, Costa Rica, Guatemala), lichenologist, with the American botanist Albert Spear Hitchcock (né Jennings), 1865-1935, wrote

Flora of the District of Columbia and Vicinity. Washington [D.C.] 1919, with Julian Alfred Steyermark, 1909-1988, curator of the *Flora of Guatemala*. [Fieldiana, Botany. vol. 24, etc.] Published by Chicago Natural History Museum; see J.H. Barnhart, *Biographical notes upon botanists*. 3: 315. 1965; Ida Kaplan Langman, *A Selected Guide to the Literature on the Flowering Plants of Mexico*. Philadelphia 1964; S. Lenley et al., *Catalog of the manuscript and archival collections and index to the correspondence of John Torrey*. Library of the New York Botanical Garden. 382. 1973; T.W. Bossert, compil., *Biographical dictionary of botanists represented in the Hunt Institute portrait collection*. 380. 1972; Joseph Ewan, *Rocky Mountain Naturalists*. The University of Denver Press 1950; R. Zander, F. Encke, G. Buchheim and S. Seybold, *Handwörterbuch der Pflanzennamen*. 14. Aufl. 1993; E.M. Tucker, *Catalogue of the library of the Arnold Arboretum of Harvard University*. 1917-1933; J. Ewan, editor, *A Short History of Botany in the United States*. 1969; Stafleu and Cowan, *Taxonomic literature*. 5: 831-837. 1985; Irving William Knobloch, compil., "A preliminary verified list of plant collectors in Mexico." *Phytologia Memoirs*. VI. 1983)

Panama, Ecuador. Rhizomatous, growing in colonies, marshy places, sandy soil, riverbeds, swamps, see *Systema Naturae, Editio Decima* 2: 846, 855, 1359. 1759 and *Contr. U.S. Natl. Herb.* 12(3): 116. 1908, *Journal of the Washington Academy of Sciences* 17: 146. 1927, *Brittonia* 23(3): 293-324. 1971.

P. stellatum Humb. & Bonpl. ex Fluegge (*Paspalum cujabense* Trin.; *Paspalum cuyabense* Trin.; *Paspalum marginatum* Remy, nom. illeg., non *Paspalum marginatum* Trin.; *Paspalum remyi* Steud.; *Paspalum splendens* var. *sphacelatum* Hack.; *Paspalum stellatum* Humb. & Bonpl.; *Paspalum stellatum* f. *hirsuta* Hack.; *Paspalum stellatum* var. *distachyum* Nees; *Paspalum stellatum* var. *monostachyum* Nees; *Paspalum stellatum* var. *monostachyus* Nees; *Paspalum wagenarianum* Schldtl.; *Paspalus stellatus* var. *distachyus* Nees)

Argentina, Mexico and West Indies. Perennial bunchgrass, tufted, slender, erect, pubescent, leaf blades linear acuminate attenuate, ligule ciliate, terminal inflorescence, erect racemes, spikelets imbricate solitary hairy in two rows, winged rachis, lower glume absent, upper glume and lower lemma hairy, upper floret narrowly obovate, growing in clumps, ground cover, open areas, campos, savannahs, grassland, woods, see *Systema Naturae, Editio Decima* 2: 846, 855, 1359. 1759, *Graminum Monographiae ... Pars I. Paspalum*. Reimaria 62. 1810, *Flora Brasiliensis seu Enumeratio Plantarum* 2: 78. 1829, *Annales des Sciences Naturelles; Botanique, sér. 3* 6: 348. 1846, *Linnaea* 26(2): 133, 803. 1854, *Synopsis Plantarum Glumacearum* 1: 28. 1855 [1853] and *Österreichische Botanische Zeitschrift* 51: 238-239. 1901, *Anales del Museo Nacional de Buenos Aires*

21: 28. 1911, *Darwiniana* 30(1-4): 87-94. 1990, *Gramíneas de Bolivia* 449-451. 1998.

in Bolivia: pasto

P. strigosum Döll ex Chase (*Paspalum bicrurulum* Salzm. ex Döll, nom. illeg., non *Paspalum bicrurulum* Salzm. ex Steud.) (from the Latin *crus, cruris* “the leg, shank, shin, foot, the lower part of the stalk”)

Brazil. Perennial, loosely tufted, hairy, leaf blades linear tapering to a point, inflorescence of 2 conjugate racemes, pointed pilose spikelets broadly elliptic solitary arranged in two rows on the rachis, upper lemma and palea strigulose, moist areas, damp places, resembles *Paspalum pumilum*, see *Systema Naturae, Editio Decima* 2: 846, 855, 1359. 1759, *Flora Brasiliensis* 2(2): 57. 1877 and *Contributions from the United States National Herbarium* 28: 68. 1929.

P. stuckertii Hack. (*Panicum humboldtianum* (Fluegge) Kuntze; *Paspalum humboldtianum* Fluegge; *Paspalum humboldtianum* var. *stuckertii* (Hack.) Hack.) (for the Swiss (b. Basel) botanist Theodor (Teodoro) Juan Vicente Stuckert, 1852-1932, pharmacist, in Argentina (Córdoba); see J.H. Barnhart, *Biographical notes upon botanists*. 3: 342. 1965; T.W. Bossert, *Biographical dictionary of botanists represented in the Hunt Institute portrait collection*. 387. 1972; E.M. Tucker, *Catalogue of the library of the Arnold Arboretum of Harvard University*. Cambridge, Mass. 1917-1933; Stafleu and Cowan, *Taxonomic literature*. 6: 55-56. Utrecht 1986)

Argentina. See *Systema Naturae, Editio Decima* 2: 846, 855, 1359. 1759, *Graminum Monographiae ... Pars I. Paspalum. Reimaria* 63, 67. 1810, *Revisio Generum Plantarum* 3: 361. 1898 and *Anales del Museo Nacional de Buenos Aires* 11: 63. 1904, *Allgemeine Botanische Zeitschrift für Systematik, Floristik, Pflanzengeographie* 12: 97. 1906.

P. subciliatum Chase

Panama, Venezuela, Brazil. Perennial or annual, erect, rhizomatous, densely tufted, ligule membranous fringed ciliate, leaf blades linear, inflorescence of 2 spreading conjugate racemes, spikelets elliptic, upper glume and lower lemma 3-nerved, upper floret glabrous, forage, lowland savannah, sandy soil, seasonally inundated areas, floodplains, see *Systema Naturae, Editio Decima* 2: 846, 855, 1359. 1759 and *Journal of the Washington Academy of Sciences* 17: 144, f. 1. 1927, *Darwiniana* 30(1-4): 87-94. 1990.

in Venezuela: corocillo

P. subfalcatum (Döll) Tutin (*Panicum subfalcatum* Döll)

Amazonas, Brazil, Venezuela. Erect, creeping, riverbanks, open areas, sandy soil, forest, see *Species Plantarum* 1: 55. 1753, *Systema Naturae, Editio Decima* 2: 846, 855, 1359. 1759, *Flora Brasiliensis* 2(2): 181. 1877 and *Contr. U.S.*

Natl. Herb. 12: 116. 1908, *Journal of Botany, British and Foreign* 72: 338. 1934.

P. subsesquiglume Döll (*Paspalum pictum* Ekman)

Brazil. Annual, loosely tufted, sparsely to densely hairy, erect, leaf blades linear-lanceolate acuminate, spikelets obovate-oblong paired, upper glume reduced to a membranous nerveless scale, lower lemma membranous 5-nerved pilose, upper lemma and palea minutely papillose, open rocky places, dry stony soils, see *Systema Naturae, Editio Decima* 2: 846, 855, 1359. 1759, *Flora Brasiliensis* 2(2): 43. 1877 and *Contr. U.S. Natl. Herb.* 12: 116. 1908, *Arkiv för Botanik utgivet av K. Svenska Vetenskapsakademien* 10(17): 11, t. 6, f. 7. 1911.

P. taphrophyllum Steud. (*Paspalum notatum* Fluegge) (Greek *taphros* “a trench, ditch” and *phyllon* “a leaf”)

Martinique. See *Systema Naturae, Editio Decima* 2: 846, 855, 1359. 1759, *Graminum Monographiae ... Pars I. Paspalum. Reimaria* 63, 67. 1810, *Synopsis Plantarum Glumacearum* 1: 19. 1855 [1853] and *Blumea* 30: 313. 1985.

P. tectum Steud. (*Paspalum dissectum* (L.) L.)

U.S., Florida. See *Species Plantarum* 57. 1753, *Systema Naturae, Editio Decima* 2: 846, 855, 1359. 1759, *Species Plantarum, Editio Secunda* 1: 81. 1762, *Synopsis Plantarum Glumacearum* 1: 29. 1855 [1853].

P. telmatum Swallen (Greek *telma, telmatos* “marsh”)

Brazil. Wet places, riverbanks, margin of lake, see *Systema Naturae, Editio Decima* 2: 846, 855, 1359. 1759 and *Contr. U.S. Natl. Herb.* 12: 116. 1908, *Phytologia* 14(6): 388. 1967.

P. tenacissimum Mez (*Paspalum laxum* Lam.; *Paspalum laxum* A. Rich. ex Steud.)

Central America, the Caribbean, Puerto Rico. See *Tableau Encyclopédique et Méthodique ... Botanique* 1: 176. 1791, *Synopsis Plantarum Glumacearum* 1: 17. 1853 and *Contr. U.S. Natl. Herb.* 12: 116. 1908, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 56(Beibl. 125): 11. 1921.

P. tenellum Willd. (*Panicum lagascae* (Roem. & Schult.) Kuntze; *Panicum pubescens* hort. ex Kunth; *Paspalum elegans* Fluegge; *Paspalum lagascae* Roem. & Schult.; *Paspalum liebmannii* E. Fourn.; *Paspalum pubescens* Lag., nom. illeg., non *Paspalum pubescens* Muhl. ex Willd.; *Paspalum robustum* Link ex Steud.; *Paspalum tenellum* var. *bourgeaei* E. Fourn.) (named for the French traveler Eugène Bourgeau, 1813-1877, botanical collector in Europe and Mexico, North America and Algeria. See *Bonplandia* 6: 341. 1858; Ignatz Urban, *Geschichte des Königlichen Botanischen Museums zu Berlin-Dahlem (1815-1913). Tropics, South America, Brazil to Argentina. Perennial, erect, vigorous, smooth, robust, stout, very coarse, tussocky, basally thickened, glabrous, densely tufted, woody rhizome very stout, sheaths hairy and purplish to bluish in color, sheaths of basal leaves densely hairy, ligule membranous and pointed or dentate, blades linear and erect with smooth margins, several mostly erect racemes arranged along the primary axis, velvety ovate spikelets paired and pedicellate, spikelets with silky hairs along the edges, lower glume absent, upper glume and sterile lemma fringed with silky hairs, fertile floret nearly smooth, lower palea absent, heavy seed production, economic plant, growing in large bunches, widely introduced in tropical countries and naturalized in the wild, potential seed contaminant, fodder, pasture species, fair-quality hay, killed by heavy grazing, coarse and unpalatable as it matures, does not grow well in shade, can withstand severe drought, generally resistant to paspalum ergot, a weed of wet disturbed areas and poor soils, vleis, thrives best on heavy soils, cultivated fields, well on moist sandy places and very wet lands, riverbanks, waterways, meadows, grassland, open disturbed sites, often in swampy places, see *Systema Naturae, Editio Decima* 2: 846, 855, 1359. 1759, *Flora Brasiliensis seu Enumeratio Plantarum* 2: 43. 1829, *Synopsis Plantarum Glumacearum* 1: 24. 1855 [1854 or 1853], *Flora Brasiliensis* 2(2): 64, 89. 1877, *Bulletin of the Torrey Botanical Club* 13: 167. 1886, *Anales del Museo Nacional de Montevideo* 1: 60, t. 2. 1894, *Commissão Geographica e Geologica Estado de São Paulo: Boletim* 10: 37. 1895, *Bulletin, Division of Agrostology United States Department of Agriculture* 17: 32, f. 328. 1899 and *Flora Brazil* 128. 1909, *Contr. Tropics and subtropics. Perennial, glabrous, more or less erect, trailing, spreading, branching, strongly rhizomatous and stoloniferous, with long creeping rhizomes and stolons and ascending stems, rooting at the nodes below the water level, leaf sheaths generally overlapping and covering the internodes, distinct ligule membranous and hairy, coarse leaf blades folded or flat, flowers in paired terminal spike-like racemes, ascending-to-spreading racemes shortly pedunculated, spikelets usually solitary and pedicellate, spikelets glabrous flattened oblong or ovate lanceolate, first glume usually absent or reduced to a rim, upper glume and sterile lemma glabrous, upper lemma and palea smooth, anthers oblong and purple, rounded seeds white and flat, usually found in a sterile condition, weed species rarely found far from the shore, very difficult to eradicate, ornamental, turf, economic plant, eaten by geese and other wild-life, forming very dense turf in pasture, useful for erosion control, stabilizing salt marsh, grows in dense colonies on salty shores, over tidal flats, along estuaries, on sandy and rocky shores, in warm and wet areas, desert oasis, near saline water, littoral mudflats, lagoons, coastal salt marshes and inland marshes, on the edges of mangrove swamps, rocky cliffs, saline soils, salty or brackish areas along the warm coasts, in area flooded frequently, at water edges on sandy soils, fresh or brackish pools, closely related to and confused with *Paspalum distichum*, see *Systema Naturae, Editio Decima* 2: 846, 855, 1359. 1759, *Nova Genera et Species Plantarum seu Prodromus* 21. 1788, *Flora Indiae Occidentalis* 1: 203. 1797, *Encyclopédie Méthodique, Botanique* 5: 34. 1804, *Flore d'Oware* 2: 46, t. 85, f. 2. 1807, *Prodromus Florae Novae Hollandiae* 1: 188. 1810, *Essai d'une Nouvelle Agrostographie* 84, 158. 1812, *Genera et species plantarum* 4. 1816, *A Sketch of the Botany of South-Carolina and Georgia* 1: 109. 1816, *Journal de Physique*,

Southern U.S. to Brazil, West Indies, Argentina. Perennial, upright, densely caespitose, stout, coarse, robust, herbaceous, nodes dark, ligule membranous, sheaths pilose on the margins, lower sheaths papery and shining, leaf blades linear acuminate with rather cutting margins, inflorescence ovate to pyramidal, panicles at the top of slender axis, lax racemes or arching-drooping spikes, ascending to spreading racemes densely flowered, densely packed spikelets broadly obovate paired, upper glume and lower lemma membranous 3-5-nerved, upper lemma and palea granular, economic plant forming large clumps, forage, troublesome weed species in hay and pasture, useful for erosion control, grows in bare gravelly soil at roadside, campos, disturbed places, deep soil, inundated fields, lowlands, weedy roadsides, stream banks, along the edge of rivers, floodplains, see *Systema Naturae, Editio Decima* 2: 846, 855, 1359. 1759, *Flora Caroliniana, secundum ...* 75. 1788, *Flora Boreali-Americana* 1: 45. 1803, *Graminum Monographiae ... P. wettsteinii Hack. (*Paspalum conspersum* Schrad.; *Paspalum virgatum* L.) (for the Austrian botanist Richard Wettstein von Westersheim, 1863-1931, traveler, plant collector, phylogenist, father of the Austrian botanist and plant physiologist Fritz (Friedrich) Wettstein von Westersheim (1895-1945); see T.W. Bossert, *Biographical dictionary of botanists represented in the Hunt Institute portrait collection.* 433. 1972; Ida Kaplan Langman, *A Selected Guide to the Literature on the Flowering Plants of Mexico.* Philadelphia 1964; E.M. Tucker, *Catalogue of the library of the Arnold Arboretum of Harvard University.* Cambridge, Mass. 1917-1933; R. Zander, F. Encke, G. Buchheim and

S. Seybold, *Handwörterbuch der Pflanzennamen.* 14. Aufl. 1993; Stafleu and Cowan, *Taxonomic literature.* 7: 219-235. 1988)

South America, Argentina, southern Brazil, Uruguay, Paraguay. Perennial, stoloniferous, tufted, erect to semiprostrate to prostrate, glabrous, unbranched, spreading stems, often rooted from the nodes, sheath hairy, ligule membranous and hairy, leaves hairy with wavy margins, spikelets paired ovate or obovate, first glume usually absent or minute, upper glume and sterile lemma similar, fertile floret shining, pasture species, very palatable, very drought and ergot resistant, survives moderate flooding and poor drainage, withstands grazing well, useful for erosion control, shade tolerant, very tolerant of poor soils, best on coastal soils, humid subtropical areas, common in disturbed places, see *Systema Naturae, Editio Decima* 2: 846, 855, 1359. 1759, *Mantissa* 2: 174. 1824 and *Ergebnisse der Botanischen Expedition nach Südbrasilien* 1: 5. 1906, *Contr. Cuba, Venezuela, Bolivia. Endangered species, perennial or annual, aquatic or subaquatic, weak, spongy, erect or decumbent, rooting at the lower nodes, leaf blades coarse linear acuminate, ligule membranous, inflorescence narrowly pyramidal, spikelets elliptic or elliptic-obovate, upper glume and lower lemma membranous 3- to 5-nerved with a wrinkled appearance, upper floret elliptic, a weed in rice fields, grassland, riverbanks, campos, swampy areas, floodplains, wet savannah, seasonally inundated fields, see *Systema Naturae, Editio Decima* 2: 846, 855, 1359. 1759, *Flora Brasiliensis* 2(2): 89. 1877 and *Repertorium Specierum Novarum Regni Vegetabilis* 6(21-26): 342. 1909, *Contributions from the United States National Herbarium* 18(7): 310. 1917, *Repertorium Specierum Novarum Regni Vegetabilis* 15:

Mexico. See *Systema Naturae, Editio Decima* 2: 846, 855, 1359. 1759, *Flora of the Southern United States* 571. 1860 and *Contributions from the United States National Herbarium* 28(1): 121, f. 71. 1929.

P. zollingeri Steud. (*Paspalum scrobiculatum* var. *auriculatum* (J. Presl) Merr.)

Java, Indonesia. See *Systema Naturae, Editio Decima* 2: 846, 855, 1359. 1759, *Reliquiae Haenkeanae* 1: 217. 1830, *Synopsis Plantarum Glumacearum* 1: 28. 1855 [1853] and *Philippine Journal of Science* 1: Suppl. 345. 1906, *Blumea* 30(2): 279-318. 1985.

P. zuloagae Davidse & Filg.

South America, Brazil. See *Systema Naturae, Editio Decima* 2: 846, 855, 1359. 1759 and *Novon* 5(2): 148, f. 2. 1995.

Paspalus Fluegge

An orthographic variant of *Paspalum* L.

Panicoideae, Paniceae, Paspalinae, see *Systema Naturae, Editio Decima* 846, 855, 1359. 1759, *Transactions of the Linnean Society of London* 2: 83, t. 16. 1794, *Graminum Monographiae ... Pars I. Paspalum. Reimaria* 53. 1810, *Mémoires de la Société d'Agriculture, Sciences et Arts d'Angers* 1: 163. 1831, *Atti della Reale Accademia dei Lincei, Memorie di Classe di Scienze Fisiche, Matematiche e Naturali* (ser. 3) 10: 187, 191, 247. 1881 and *Contr. U.S. Natl. Herb.* 12: 116. 1908, *Contributions from the United States National Herbarium* 46: 443-527. 2003.

Patellocalamus W.T. Lin = Ampelocalamus S.L. Chen, T.H. Wen & G.Y. Sheng, Dendrocalamus Nees

Latin *patella, ae*, "a small dish, a plate" plus *Calamus*.

Bambusoideae, Bambusodae, Bambuseae, or Bambusoideae, Bambuseae, Bambusinae, type *Patellocalamus patellaris* (Gamble) W.T. Lin, see *Linnaea* 9(4): 476-477. 1835, *Atti della Reale Accademia dei Lincei, Memorie di Classe di Scienze Fisiche, Matematiche e Naturali* (ser. 3) 10: 187, 191, 247. 1881, *Annals of the Royal Botanic Garden: Calcutta*. 7: 86-87, t. 75. 1896 and *Indian Forester* 58: 7. 1932, *Lingnan University Science Bulletin* 9: 66-67. 1940, *Acta Phytotaxonomica Sinica* 18: 211-216. 1980, *Acta Phytotaxonomica Sinica* 19(3): 332-334, pl. 1. 1981, *Journal of Bamboo Research* 2: 12, 148. 1983, *J. SouthWestern Forestry College* 1984(1): 134, f. 1. 1984, *Kew Bulletin, Additional Series* 13: 41, 54. 1986, *Journal of Bamboo Research* 7(4): 9, 13. 1988, *Journal of South China Agricultural University* 10(2): 43, 45-46. 1989, *Journal of Bamboo Research* 12(2): 49-52, 54, f. 1. 1993, Z.-L. Li, The *Flora of China* Bambusoideae project, problems and current understanding of bamboo taxonomy in China. *The Bamboos* 5: 61-81. 1997, *Contributions from the United States National Herbarium* 39: 54-55. 2000.

Patis Ohwi

An anagram of the generic name *Stipa* L.

Pooideae, Stipeae, Stipinae, type *Patis coreana* (Honda ex Nakai) Ohwi, see *Species Plantarum* 1: 78. 1753, *Essai d'une Nouvelle Agrostographie* 19, 146, pl. 6, f. 7. 1812, *Proceedings of the Linnean Society of London* 1: 94. 1841, *Atti della Reale Accademia dei Lincei, Memorie di Classe di Scienze Fisiche, Matematiche e Naturali* (ser. 3) 10: 187, 191, 247. 1881 and *Contr. U.S. Natl. Herb.* 24(7): 216. 1925, *Journal of Japanese Botany* 17: 404. 1941, *Acta Phytotaxonomica et Geobotanica* 11: 181. 1942, *Flora of Japan* 101. 1953, *Contributions from the United States National Herbarium* 48: 617-650. 2003.

Patropyrum Á. Löve = *Aegilops* L.

Poideae, Triticeae, Triticinae, *Aegilops* subsect. *Oligomorpha* Eig, see J.C. Buxbaum, *Plantarum minus cognitarum centuria, complectens plantas circa Byzantium et in Oriente observatas* Centuria I. Petropoli 1728-1740, *Species Plantarum* 1: 85. 1753, *Species Plantarum* 2: 1050-1051. 1753, *Familles des Plantes* 2: 36, 513. 1763, *Enumeratio Methodica Plantarum* 371. 1763, *Systema Vegetabilium* 2: 769. 1817, *Notes sur Quelques Plantes Critiques, Rares, ou Nouvelles, ...* 2: 69. 1849, *Illustrationes Plantarum Orientalium* 4: 12, 21, 23. 1851, *Flora Dalmatica* 3: 345. 1852, *Synopsis Plantarum Glumacearum* 1: 354. 1854, *Flore de France* 3: 601. 1856, *Plantae Europaeae* 1: 128. 1890 and *Repertorium Specierum Novarum Regni Vegetabilis* Beih. 55: 84, 90, 117. 1929, *Blumea, Supplement* 3: 15, 17. 1946, *Feddes Repert.* 91: 225-228, 233-234, 236. 1980, *Biologisches Zentralblatt* 101(2): 206-208. 1982, *Feddes Repert.* 95: 493, 495. 1984, *Taxon* 41: 552-583. 1992, *Taxon* 44: 611-612. 1995, *Flora de Veracruz* 114: 1-16. 2000, *Contributions from the United States National Herbarium* 48: 20-23, 478. 2003.

Pechea Lapeyr. = *Crypsis* Aiton, *Pechea* Arráb. ex Steud. (Myrsinaceae)

Chloridoideae, Cynodonteae, Sporobolinae, or Chloridoideae, Zoysieae, Sporobolinae, in syn. sub *Crypsis schoenoides* (L.) Lam., see William Townsend Aiton (1766-1849), *Hortus Kewensis*. 1: 48. 1789, *Prodromus Florae Novae Hollandiae* 532. 1810, *Suppl. Pl. Pyr.* 8. 1818, *Ionios Anthologia* 2: 448. 1834, *Nom. Bot.* edition 2, 1: 449. 1840, *Nomenclator Botanicus. Editio secunda* 2: 280. 1841, *J. Linn. Soc. Bot.* 6: 54. 1862, *Atti della Reale Accademia dei Lincei, Memorie di Classe di Scienze Fisiche, Matematiche e Naturali* (ser. 3) 10: 187, 191, 247. 1881 and *Hooker's Icones Plantarum* 35(3): 1-11, plate 3457. 1947, *Fl. Afr. Nord* 2: 89. 1953, *Bull. Research Council of Israel* 11D: 91-126. 1962, *Systematic Botany* 4: 267-280. 1979, *Contributions from the United States National Herbarium* 41: 56-57, 181. 2001.

Pectinaria (Benth.) Hack. = *Eremochloa* Büse, *Pectinaria* Haw. (Asclepiadaceae), *Pectinaria* Bernh. (Apiaceae, alt. Umbelliferae), *Pectinaria* Cordemoy (Orchidaceae)

Latin *pecten*, *pectinis* “a comb,” *pectinarius*, *a*, *um* “belonging to combs.”

Panicoideae, Andropogoneae, Rottboelliinae, *Ischaemum* sect. *Pectinaria* Benth., see *Familles des Plantes* 2: 68. 1763, *Botanisches Wörterbuch* 1: 31. 1797, *Systematisches*

Verzeichnis 113, 221. 1800, *Supplementum Plantarum Succulentarum ...* 14. 1819, *Mém. Acad. Imp. Sci. Saint Pétersbourg, Sér. 6, Sci. Math.* 2(4): 296. 1832, *An Introduction to the Natural System of Botany* 21. 1836, *Plantae Jung-huhniana* 3: 357. 1854, *Journal of the Linnean Society, Botany* 19: 71. 1881, *Atti della Reale Accademia dei Lincei, Memorie di Classe di Scienze Fisiche Matematiche e Naturali* (ser. 3) 10: 187, 191, 247. 1881, *Die Natürlichen Pflanzenfamilien* 2(2): 26. 1887, *Revue Générale de Botanique* 11: 412. 1899 and *Contributions from the United States National Herbarium* 46: 230, 527. 2003.

Peltophorus Desv. = *Manisuris* L., *Mnesithea* Kunth

Greek *pelte* “a shield” and *phoros* “bearing,” alluding to the shape of the flowers.

Panicoideae, Andropogoneae, Rottboelliinae, see *Mantissa Plantarum* 2: 164, 300. 1767 et 1771, *Supplementum Plantarum* 13, 114. 1781 [1782], *Nouveau Bulletin des Sciences, publié par la Société Philomatique de Paris* 2: 188. 1810, *Essai d'une Nouvelle Agrostographie* 119, 167, t. 21, f. 11. 1812, *Révision des Graminées* 1: 153-154. 1829, *Die Natürlichen Pflanzenfamilien* 2(2): 25. 1887, *Monographiae Phanerogamarum* 6: 291. 1889, *The Flora of British India* 7: 155. 1896 and *Flora of Tropical Africa* 9: 59. 1917, *Bulletin du Muséum d'Histoire Naturelle* 27: 371. 1921, *Contributions from the United States National Herbarium* 46: 295-296, 527. 2003.

Penicillaria Willd. = *Pennisetum* Rich.

Latin *penicillum*, *i* “a pencil, a painter's brush.”

Panicoideae, Paniceae, Cenchrinae, type *Penicillaria spicata* (L.) Willd., see *Syn. Pl.* 1: 72. 1805, *Enumeratio Plantarum Horti Botanici Berolinensis, ...* 1036-1037. 1809, *Gen. Pl.* 3(2): 1106. 1833 and *Contr. U.S. Natl. Herb.* 22: 210-211. 1921, *Contributions from the United States National Herbarium* 46: 527-536. 2003.

Peniculus Swallen = *Mesosetum* Steud.

Latin *peniculus*, *i* “a little tail, brush, pencil.”

Panicoideae, Paniceae, Paspalinae, type *Peniculus angustifolius* Swallen, see *Synopsis Plantarum Glumacearum* 1: 118. 1855 [1854], *Österreichische Botanische Zeitschrift* 47: 75. 1897, *Revisio Generum Plantarum* 3[3]: 359. 1898 and *Proceedings of the Biological Society of Washington* 24: 121, 123. 1911, *American Journal of Botany* 19: 581. 1932, *Brittonia* 2(4): 363-392. 1937, *Die natürlichen Pflanzenfamilien, Zweite Auflage* 14e: 70. 1940, *Acta Amazonica* 19: 47-114. 1989[1990], *Flora Mesoamericana* 6: 355.

1994, *Contributions from the United States National Herbarium* 46: 288-292, 527. 2003.

Pennisetum Rich. = *Amphochaeta*
Andersson, *Beckeropsis* Fig. & De Not.,
Catatherophora Steud., *Eriochaeta* Figari &
De Not., *Gymnothrix* K. Sprengel, *Gymnothrix*
P. Beauv., *Loydia* Delile, *Macrochaeta* Steud.,
Penicillaria Kunth, *Penicillaria* Willd.,
Pentastachya Steud., *Sericura* Hassk.

From the Latin *penna*, *ae* “a feather, plume” and *saeta* (*seta*), *ae* “a bristle, hair,” referring to the inflorescence, to the bristly spikes; see Christiaan Hendrik Persoon (1761/1762-1836), *Synopsis plantarum*. 1: 72. Paris et Tubingae 1805.

About 80-130 species, tropics, subtropics and warm temperate regions. Panicoideae, Panicoideae, Paniceae, or Panicoideae, Paniceae, Cenchrinae, annual or perennial, variable, prostrate or erect, caespitose, decumbent, straggling, stoloniferous or rhizomatous, herbaceous, flimsy to robust, often branched, auricles present or absent, ligule a rim of short hairs, leaves flat linear to lanceolate, plants bisexual, hidden cleistogenes when present in the leaf sheaths, inflorescence a crowded spike-like panicle cylindrical to globose sometimes reduced and enclosed by the sheaths, spikelets clustered and sessile or pedicellate, spikelets enclosed by an involucre of bristles, the involucre falling off with the spikelets at maturity, 2 florets, upper floret perfect, lower floret sterile or male, reduction or suppression of the lower scales, 2 glumes very unequal and translucent, first glume small or minute, lemmas often mucronate, smooth and papery upper lemma obtuse to acute, palea present, lodicules present and very tiny or absent, 3 stamens, ovary glabrous, stigmas white, small fruit compressed, cultivated fodders, native pasture species, weed species, lawn grasses, grain crop species, playing fields, decorative inflorescences, some species used as tonic in China, several species rugged tussock grasses avoided by cattle, shady places or open habitats, savannah, woodland, pampas, rainforest, weedy ground, middle-altitude, some of the species close to *Cenchrus* L. and *Setaria*, type *Pennisetum typhoideum* Rich., complicated taxonomy, see *Synopsis Plantarum* 1: 72. 1805, *Enumeratio Plantarum Horti Botanici Berolinensis*, ... 1036-1037. 1809, *Essai d'une Nouvelle Agrostographie* 59. 1812, *Bulletin Mensuel de la Société Linnéenne et des Sociétés Botanique de Lyon, d'Anthropologie et de Biologie de Lyon réunies* 2: 71. 1815, *Anleitung zur Kenntniss der Gewächse* 2(1): 154. 1817, *Flora* 12: 465. 1829, *Genera Plantarum* 3(2): 1106. 1833, *Nomenclator Botanicus. Editio secunda* 2: 299. 1841, *Flora* 25 Beibl. 2: 2. 1842, *Ind. Sem. Hort. Monsp.* 1844, *Flora Rossica* 4(14): 472. 1853, *Agrostographiae Aegyptiacae*

Br.) Kunth) (resembling the genus *Alopecurus* L., Greek *alopekourous*, grass like a fox's tail, *alopex* "a fox" and *oura* "a tail")

China, Southeast Asia, India, Australia. Perennial, semi-aquatic, densely tufted or clumped, basal growth, upright, slender culms stout and compressed, pale green basal leaves, leaf sheaths shiny and flattened, ligule a ring of hairs, the inflorescence is a yellow to dark purple cylindrical to narrow-oblong panicle, dark purple bristles subtending the lanceolate spikelets, bristly-involucrate glomerules, glumes unequal, lower glume minute and nerveless, lower floret sterile, upper floret bisexual, palea hyaline, seeds food for the red-browed firetails, grain eaten in times of scarcity, grains ground into a powder and used as a flour, ornamental and very attractive, used as a tonic, excellent ground cover, weed species of disturbed areas and waste fields, grassy places and waste ground, grows in boggy areas, on banks and along roadsides, coastal sand, on rather poor soils, poorly drained areas, sandy and loamy soils, near swamps, best in full sun, often confused with *Pennisetum setaceum* (Forsskål) Chiov., see *Species Plantarum* 1: 55-56, 60. 1753, *Species Plantarum*, *Editio Secunda* 82. 1762, *Nova Genera et Species Plantarum seu Prodromus* 26. 1788, *Syn. Tropical and subtropical Africa. Annual, polymorphic, caespitose, solitary or loosely clumped, stout, robust, stiff, erect, branched at the base, ligule a dense fringe of hairs, leaves linear and flat, dense spike-like inflorescence of bristly-involucrate spikelet clusters, persistent stipitate involucral bristles usually subtending two spikelets, spikelets all fertile, glumes hyaline, lower glume nerveless, lower lemma male or sterile, upper lemma bisexual, 3 stamens, caryopsis readily deciduous, grain used in hot climates where cereals are found to be too heating, planted in irrigated fields and areas with good rainfall, young plants highly nutritious and very palatable, sometimes a weed species, grown primarily for very nutritious grain, staple food grain, used for pasture and silage, nutritious, suitable for making malt, green fodder, useful for thatching and as fuel, lawn grass, windbreak, plant tonic, useful in diseases of heart, grains utilized as food and also for making alcoholic beverage, used in Africa for making native beer, grain can be used like rice or can be ground into a powder and used as a flour for making bread, cattle which eat this grass can develop stomatitis, requires dry or moist soil, drought-resistant and well-adapted in coastal plain, grows on poor sandy soils, along roadsides in disturbed ground, in semi-arid tropics, disturbed land, in drier areas on sandy soils, in dry infertile soils, marginal lands, riverbanks in sandy soils, irrigation canals, see *Species Plantarum* 1: 56. 1753, *Systema Naturae, Editio Decima* 2: 1305. 1759, *Flora Indica ... nec non Prodromus Florae Capensis* 27. 1768,

Benin, Tanzania, Mauritania, Nigeria, Sudan, Guinea, Ghana, Mali, Ethiopia, India. Annual bunchgrass, rarely perennial, leafy, usually herbaceous, well branched from the base, leaves flat, cottony whitish inflorescences, spiciform panicle cylindrical, glabrous rachis with prominent wings, involucre 1- to 5-spiculate, inner bristles of the involucre densely villous to fluffy, spikelets usually solitary and at least one spikelet pedicelled, lower glume ciliate, upper glume obtuse apiculate, lower lemma 3-lobed male or sterile, upper floret smooth and shiny, shade species, a valuable soil stabilizer, invasive, often dominant on disturbed land, can become a noxious weed of cultivation, used for thatching and woven into mats, fodder, silage and hay, good forage before flowering, very palatable to cattle and sheep, low grazing value, used for grazing in times of scarcity, ornamental, feathery and decorative inflorescences, good drought tolerance, little frost tolerance, growing in sandy soils, dry savannah, acidic and alkaline soils, dry forest vegetation, disturbed sites, road edges and fallows,

fertile loamy soils, see *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques, Physiques et Naturelles. Tropical Africa. Annual or perennial bunchgrass, polymorphic, very variable, much branched, tall, usually terrestrial, large, tough, vigorous, many culms from one rootstock, tufted to densely tufted, sometimes rooting at the lower nodes, forming a dense tussock grassland, culms fairly erect and slender to moderately stout, often branched at the nodes, leaf sheath loose and smooth, leaf blade flat and drooping, ligule bristly, inflorescence a cylindrical panicle, curved purplish brown spikes, spikelets in groups subtended by elongate bristles, involucre 1-spiculate, some bristles ciliate, rachis glabrous, spikelets 2-flowered, upper floret fertile, 2 glumes, lower glume very tiny or absent, lower glume wide and clasping, upper glume with two lateral apical teeth, 3 stamens, stigmas feathery, upper floret readily deciduous, prolific seeder, fodder and hay, good browsing for all stock before flowering, grain used for stock feeding, young grass fairly palatable, invasive ground cover, bad weed species widely naturalized in tropics, ornamental, feathery and decorative inflorescences, culms used for thatching and to make matting, useful for erosion control, tolerates flooding well, drought-resistant, suitable for cultivation in semiarid areas, usually found on sandy soils, wet meadows, lowlands, tropical savannahs, forest edge, dis-

turbed degraded and waste areas, disturbed places beside rivers, seepage, wooded savannah, bushland, thickets, open areas, in shady areas under trees, disturbed areas along roadsides, fallow fields, nonpastoral lands, grassland on sandy soils, dry forests and woodlands of the wet-dry tropics, old cultivated lands, resembling *Pennisetum pedicellatum* Trin. and *Pennisetum purpureum* Schumach., see *Systema Naturae, Editio Decima* 2: 870. 1759, *Nova Genera et Species Plantarum seu Prodromus* 26. 1788, *Actes de la Société d'Histoire Naturelle de Paris* 1: 106. 1792, *Tableau Encyclopédique et Méthodique ... Maire & Weiller) (for the botanist John Gossweiler, 1873-1952, plant collector, author of *Carta fitogeografica de Angola*. [Luanda] 1939, *Flora exotica de Angola*. Luanda 1950)

Tropical Africa, Ghana. Perennial bunchgrass, semiaquatic, bamboo-like or canelike, tall to giant, robust, erect or decumbent, branching from the upper and middle nodes, stoloniferous or shortly rhizomatous, large and deep fibrous root system, forming large clumps and impenetrable colonies by extensive tillering, culms densely covered with soft hairs below the inflorescence, internodes glaucous, leaf sheaths shiny and loose, ligule a tuft of white stiff bristles, leaf blade with rough edges, very long and broad leaves, yellow-green cylindrical panicle spike-like and erect, involucre with one bristle longer than the others, spikelets surrounded by a fringe of hairs, some bristles ciliate, rachis pubescent, lower glume absent or minute and nerveless, upper glume usually nerveless, lower floret staminate or sterile, upper lemma bisexual or male, lemmas and paleas lanceolate and membranous, young leaves eaten by local people, invasive weed species, crowds out all other vegetation, suitable for silage and as paper-making material, commonly grown for green fodder and forage, a source of a

medicinal salt, very palatable and nutritious, young herbage eaten by cattle and buffaloes, grains eaten by seed-eating birds, grains and pith eaten by chimpanzees, culms cut for walking sticks, stems reedlike used for fences and as wind-breaks, planted for bean stakes, useful for erosion control, ornamental, fair to high drought resistance, cannot withstand flooding or waterlogging, causes difficulties for flood control and reduces water flow, grows mainly on deep loam or scrub soils in high-rainfall coastal districts or on tablelands, moist-to-dry areas, pastures, in disturbed areas and fields, freshwater wetlands, on moist heavy soil under high-rainfall conditions, on rocky soils, grassy savannahs, in rich and well-drained soils, roadsides, riverine sites, margins of rivers and floodplains, in scrub, along dikes and ditches, canal banks, lakeshores and swamps, see *Beskrivelse af Guineiske Planter som ere fundne af Danske Botanikere isaer af Etatsraad Thonning*. 44. [Copenhagen 1828-29], *Kongel. Danske Vidensk. Selsk. Naturvidensk. Math. Afh.* 3: 64. 1828, *Niger Flora* 563. 1849, *Synopsis Plantarum Glumacearum* 1: 105. 1855 [1854], *Naturwissenschaftliche Reise nach Mossambique ...* 552. 1864, *Boletim da Sociedade Broteriana* 6: 142. 1888, *Die Pflanzenwelt Ost-Afrikas* 5(C): 105. 1895 and *Denkschriften der Kaiserlichen Akademie der Wissenschaften. Northeastern Africa. Perennial bunchgrass, sparsely branching or unbranched, erect, glaucous to bright green, stiff, slender, clumped or densely tufted, forming moderately large clumps, ligule a ciliate rim, long narrow leaf blades harsh and rigid, very scabrous leaves erect and narrow-elongate, inflorescence a plumose dense false spike, axis scabrous, spikelets shortly pedicellate subtended by numerous softly ciliate unequal bristles, involucre 2- to 4-spiculate, first glume shorter than the spikelet or suppressed or reduced to a hyaline scale, second glume lanceolate, first lemma sterile or rarely male, upper lemma bisexual or male, a prolific seed producer, a poor pasture grass, because of the hard fibrous leaves is not very palatable, little grazed, invasive and highly aggressive crowds out other herbs and seedlings, planted as an ornamental grass in parks and gardens, withstands long periods of drought, prefers well-drained ordinary garden soil, noxious weed species growing in disturbed sites and along highways, riparian canyons, damp habitats, wet ground, in dry bush and dry forest, dry open places, open stony hillsides, stony plains, eroded places, open scrubby habitats, pastures, waste places, cultivated areas, chaparrals, along roadsides, on rocky slopes and lava fields, grasslands, rocky hillsides, rocky shallow soil, see *Flora Aegyptiaco-Arabica* 17. 1775, *Mantissa* 2: 147. 1824, *Museum Senckenbergianum* 2: 135. 1837, *Memorie della Reale Accademia delle Scienze di Torino* II 12: 248. 1852, *Synopsis Plantarum Glumacearum* 1: 107. 1854, *Annuario del Reale Istituto Botanico di Roma* 7: 66. 1897 and *Annuario del Reale Istituto Botanico di Roma* 8(1): 38-40, t. 3, 4. 1903, *Bollettino della Società Botanica Italiana* 1923: 113. 1923, *Pakistan J. Tropical Africa, Angola, Sudan. Annual, weedy grass highly variable, vigorous, inflorescence dense, rachis tomentose, deciduous stipitate involucre bristles, spikelets lanceolate to obovate, upper lemma lanceolate to ovate, a weed, cultivated, can be used as cane for building and thatch for roofs, material for shelter construction and fences, food for domestic animals, used grilled for food and forage, mostly dark seed heads drooping and usually resistant to shattering, grows on dry cultivated and uncultivated areas, recently abandoned fields, ponds and channels, irrigated gardens and wadi, along highways and roadsides, sandy soils and clay sand, semidesert grassland, hybridizes with *Pennisetum glaucum* and *Pennisetum violaceum*, see *Syn. Pl.* 1: 72. 1805, *Prodromus Florae Novae Hollandiae* 1: 195. 1810, *Linnaea* 25(5): 565. 1853, *Index Seminum [Berlin]* app. 25. 1855 and *Zeitschrift für Naturwissenschaften* 79: 52. 1907, *Bulletin of Miscellaneous Information Kew* 1933: 270, 290. 1933, *American Journal of Botany* 64(2): 173. 1977.

East Africa to South Africa. Perennial, frequently submerged, wiry, coarse, densely tufted, densely tussocky, forming large clumps, shortly rhizomatous, culms usually hairy below the inflorescence or villous, ligule a ring of hairs, leaves filiform to linear becoming wiry with age, dense inflorescence spike-like, spikelets surrounded by numerous glabrous bristles, spikelets bristles fall with the grain, lower glume a nerveless scale, upper glume 1-nerved, lower lemma sterile 5-nerved, high leaf production, generally avoided by grazing animals, usually of low palatability or unpalatable, rather drought resistant, useful in the stabilization of water courses, found in wet places and drainage areas, upland grassland, in running water, along roadsides, overgrazed pastures, hard or compacted soil, stream beds and riverbanks, rocky places, rocky seepages, around vleis, moist soils, marshy soils, on deep heavy soils, hillsides, between rocks, along stream banks, see *De Graminibus Paniceis* 64. 1826, *Beskrivelse af Guineiske planter* 58-59. 1827, *Flora Africae Australioris Illustrationes Monographicae* 68. 1841, *Tentamen Florae Abyssinicae ... 2*: 381. 1850, *Annales Botanicae Systematicae* 3: 722. 1852-1853, *Conspectus Florae Africae* 5: 784. 1894, *Bulletin de l'Herbier Boissier* 3(8): 380. 1895, *Flora Capensis* 7: 436. 1899 and *Mémoires de l'Herbier Boissier* 20: 8. 1900, *Zeitschrift für Naturwissenschaften* 79: 27. 1907, *Flora of Tropical Africa* 9(5): 795-798. 1930, *International Organization of Plant Biosystematists Newsletter* 13: 20-21. 1989, *Flora of Ethiopia and Eritrea* vol. 7, p. 272. 1995.

Trop. East Africa, Gramineae* 3: 687. 1982.

in English: Thunberg's pennisetum

P. trachyphyllum Pilger

Tropical Africa, Uganda, Tanzania, Sudan. Perennial, leafy, decumbent, loosely ascending, scrambling, densely matting, tall, rooting at lower nodes, rather thick stems, often forming dense stands, black nodes glabrous, ligule a ciliate rim, leaf blades broadly linear, slender inflorescences terminal and also axillary, 1-2 subsessile spikelets surrounded by many scaberulous bristles, spikelets lanceolate-acuminate, upper glume 1- to 5-nerved acute to mucronate, lower lemma sterile 5- to 7-nerved acuminate to cuspidate, upper lemma tough and smooth, good fodder and grazing when young, large leaves readily eaten by cattle, grows in woodlands and moist locations, path sides, along stream banks, damp spaces, semishaded sites, evergreen forest glades, see *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 30(1): 122. 1901.

P. triflorum Nees ex Steud. (*Pennisetum orientale* var. *triflorum* (Nees) Stapf; *Pennisetum orientale* var. *triflorum* (Nees ex Steud.) Stapf)

India, Himalaya. See *Synopsis Plantarum Glumacearum* 1: 107. 1854, *The Flora of British India* 7: 86. 1896.

P. trisetum Leeke (*Pennisetum schliebenii* Pilg.)

East Africa, Zimbabwe, Ethiopia. Perennial, stout, woody, smooth, lower leaf sheaths glabrous, leaf blades acuminate, ligule membranous ciliate, slender inflorescence axillary, one sessile spikelet subtended by one stout bristle, spikelets narrowly lanceolate, lower glume nerveless, lower lemma male or sterile, longest bristle exceeding spikelet, along roadsides, savannah, clearings, forest, disturbed areas, see *Zeitschrift für Naturwissenschaften* 79: 30. 1907, *Notizblatt des Botanischen Gartens und Museums zu Berlin-Dahlem* 11: 804. 1933.

in Ecuador: tundillo, tondillo

P. uliginosum Hack.

Ethiopia. Perennial, loosely tufted, slender, decumbent, rooting at the base, shortly stoloniferous, leaf blades linear smooth, loose slender inflorescences, membranous spikelets narrowly lanceolate, one sessile spikelet subtended by 1-2 bristles scabrid, glumes and lower lemma reduced to small scales, upper lemma scabrid mucronate, lower lemma 1-nerved mucronate, upper palea scabrid, grasslands, wet places, similar to *Pennisetum thunbergii*, see *Abhandlungen der Königl. Akademie der Wissenschaften in Berlin* 2: 123. 1891.

P. yemensis Deflers (*Pennisetum pappianum* Chiov.)

Yemen. Perennial, ascending, short woody rhizome, dense oblong purplish inflorescence, spikelets lanceolate, many slender bristles enclosing 1-2 spikelets, lower glume a nerveless scale, upper glume lanceolate 1-nerved acuminate, lower lemma male or sterile 7- to 9-nerved acuminate, upper lemma 5- to 7-nerved, stigma bifid, stream banks, similar to *Pennisetum orientale*, related to *Pennisetum villosum*, see *Voyage au Yemen* 217. 1889 and *Annali di Botanica* 2: 305. 1905.

P. weberbaueri Mez

Peru, Ecuador, Bolivia. Perennial, robust, branched, leaf blades linear acuminate, lax inflorescence much branched, loose panicles cylindrical, spikelets solitary lanceolate scabrous acute, lower glume ovate membranous, upper glume ovate membranous acute, lower lemma acute, upper lemma perfect, rocky places, moist areas, see *Notizblatt des Botanischen Gartens und Museums zu Berlin-Dahlem* 7: 50. 1917.

Pentacraspedon Steudel = Amphipogon R.

Br.

Greek *pente* "five" and *kraspedon* "a fringe, border, hem."

Arundineae, see *Prodromus Florae Novae Hollandiae* 175. 1810, *London J. Bot.* 2: 415. 1843, Ernst Gottlieb von Steudel (1783-1856), *Synopsis plantarum glumacearum*. 1: 151. 1854 [1855] and *Contributions from the New South Wales National Herbarium* 1(5): 281-295. 1950.

Pentameris P. Beauv. = Pentamerista
Maguire (Theaceae), *Poagrostis* Stapf

From the Greek *pente* "five" and *meris* "part," referring to the five-awned lemma.

About 5-7 species, South Africa. Arundinoideae, Danthoniae, perennial, unarmed, woody or herbaceous, tufted, auricles present or absent, ligule a fringe of hairs, filiform leaves, plants bisexual, open or contracted inflorescence paniculate, spikelets solitary and pedicellate, median and lateral awns, 2 subequal glumes 1- to 3-nerved, lemma membranous with lobes well developed, palea hairy, 2 lodicules joined or free, 3 stamens, ovary hairy, 2 stigmas, fruit an achene, in open habitats, mountain grassland, species of *Pentameris* morphologically and anatomically very similar

to *Pentastichis* (Nees) Spach, type *Pentameris thuarii* P. Beauv., see *Flore Française. Troisième Édition* 3: 32. 1805, *Essai d'une Nouvelle Agrostographie* 92, t. 18, f. 8. 1812, *Botanical Register; consisting of coloured ...* sub. t. 112. 1816 and *Flora Capensis* 7: 760-761. 1900, *Memoirs of the New York Botanical Garden* 23: 187. 1972, N.P. Barker, "A biosystematic study of *Pentameris* (Arundineae, Poaceae)." *Bothalia* 23(1): 25-47. 1993, *Diversity & Distributions* 5(5): 213-222. Sep 1999, *New Phytologist* vol. 162, issue 1: 25-44. Apr 2004.

Species

P. distichophylla (Lehm.) Nees (*Danthonia distichophylla* Lehm.; *Pentameris dregeana* Stapf)

South Africa. Perennial, variable, decumbent, tufted, leaf sheaths pubescent, auricles absent, inflorescence a lanceolate panicle loosely contracted, spikelets 2-flowered, lemma lobes acute to acuminate, growing in sandy soils, along roadsides, see *Novarum et Minus Cognitarum Stirpium Pugillus* 3: 41. 1831, *Linnaea* 7(3): 314. 1832, *Flora Capensis* 7: 515. 1899 and *Bothalia* 23: 42. 1993.

P. longiglumis (Nees) Stapf (*Danthonia longiglumis* Nees)

South Africa. Perennial, rare, branched, erect, tufted, auricles absent, leaves rigid, lax inflorescence, spikelets 2-flowered, lemma lobes acuminate, lodicules glabrous, growing in moist places, rocky slopes, stony areas, see *Florae Africae Australioris Illustrationes Monographicae* I. Gramineae. 306. 1841, *Flora Capensis* 7: 514. 1899.

P. longiglumis (Nees) Stapf subsp. *gymnocolea* N.P. Barker (from the Greek *gymnos* "naked, unclad" and *koleos* "a sheath")

South Africa. Perennial, erect, coarse, loosely tufted, see *Bothalia* 23(1): 39, f. 2C, 8, 9. 1993.

P. longiglumis (Nees) Stapf subsp. *longiglumis*

South Africa. Perennial, erect, see *Flora Capensis* 7: 514. 1899.

P. macrocalycina (Steud.) Schweick. (*Avena macrocalycina* Steud.; *Danthonia speciosa* Lehm. ex Nees; *Pentameris speciosa* (Lehm. ex Nees) Stapf)

South Africa. Perennial, erect, variable, tufted, branched, leaf sheaths appressed to the culm, auricles absent, leaves rigid and sometimes pungent, panicle contracted and lanceolate, spikelets 2-flowered, lemma lobes acuminate, lodicules glabrous, found in stony soils, sandy places, see *Species Plantarum* 1: 79. 1753, *Flora* 12(2): 482. 1829, *Florae Africae Australioris Illustrationes Monographicae* 307. 1841, *Flora Capensis* 7: 514-515. 1899 and *Repertorium Specierum Novarum Regni Vegetabilis* 43: 91. 1938, *Bothalia* 23: 41. 1993.

P. obtusifolia (Hochst.) Schweick. (*Danthonia obtusifolia* Hochst.; *Pentameris squarrosa* Stapf)

South Africa. Perennial, branched, scrambler, decumbent, woody base, old leaf sheaths overlapping, auricles absent, leaves rigid and short, panicle contracted and lanceolate, spikelets 2-flowered, lodicules ciliate, growing in mountainous areas, see *Flora* 29: 120. 1846, *Flora Capensis* 7: 515-516. 1899 and *Repertorium Specierum Novarum Regni Vegetabilis* 43: 91. 1938.

P. thuarii P. Beauv. (*Danthonia thouarsii* Nees; *Danthonia thuarii* (P. Beauv.) Desv.; *Pentameris thuarii* var. *burchellii* Stapf)

South Africa. Perennial, erect, tufted, single or branched, decumbent at base, auricles present usually dark to black, lax panicle, spikelets 2-flowered, lemma lobes truncate, lodicules glabrous, found along riverbanks, in damp habitats, see *Essai d'une Nouvelle Agrostographie* 92, t. 18, f. 8. 1812, *Mémoires de la Société d'Agriculture, Sciences et Arts d'Angers* 1: 203. 1831, *Florae Africae Australioris Illustrationes Monographicae* 337. 1841 and *Bothalia* 23(1): 36. 1993.

P. thuarii var. *burchellii* Stapf (dedicated to the British (b. Fulham, London) naturalist William John Burchell, 1781-1863 (d. Fulham, London), traveler (in South Africa 1811-1815, and Brazil 1825-1829), botanical collector, explorer, painter, writer, plants hunter, gardener, entomologist, ecologist, 1808 Fellow of the Linnean Society (1803, in Staffleu and Mennega, *Suppl. III*), author of *Travels in the Interior of Southern Africa*. London 1822-1824; see Samuel El. Bridel-Brideri, *Bryologia universa*. Lipsiae 1826-1827; Helen M. McKay, *Journal of South Africa Botany*. 1941 and *The Index to the Aboriginal, African and Dutch Names of the Plants of Southern Africa*, with reference to the *Plantarum Africae et extratropicae* by W.J. Burchell, compiled in the years from 1810 till 1815. Cape Town [1938]; Helen M. McKay, editor, *The South African Drawings of William J. Burchell*. Johannesburg 1952; Gilbert Westacott Reynolds, *The Aloes of South Africa*. Balkema, Rotterdam 1982; John Lindley, *The Genera and Species of Orchidaceous Plants*. London 1830-1840; J.H. Karsten, *The Old Company's Garden at the Cape and Its Superintendents: Involving an Historical Account of Early Cape Botany*. Cape Town 1951;

Gordon Douglas Rowley, *A History of Succulent Plants*. 1997)

South Africa. Perennial, erect, caespitose, see *Flora Capensis* 7: 513. 1899.

P. thuarii var. *thuarii*

South Africa. See *Essai d'une Nouvelle Agrostographie* 92, t. 18, f. 8. 1812.

Pentapogon R. Br.

From the Greek *pente* "five" and *pogon* "a beard," referring to the lemmas, to five-awned lemmas; see Robert Brown (1773-1858), *Prodromus florae Novae Hollandiae et Insulae van-Diemen*. 173. London (Mar.) 1810.

A monotypic genus, southeastern Australia, Tasmania. Pooidae, Poodae, Aveneae, annual or short-lived perennial, variable, slender, erect, tufted, herbaceous, auricles present or absent, ligule membranous, leaf sheath rounded and membranous, leaves narrow and inrolled, plants bisexual, inflorescence an open dense panicle, spikelets narrow, 1 floret, 2 unequal to subequal glumes persistent and pointed, glumes membranous 1-nerved acuminate shortly awned, callus short and hairy to bearded, lemmas coriaceous rounded 5-awned, central awn with twisted column, palea 2-keeled, 2 free and membranous lodicules not toothed, 3 stamens, ovary glabrous, 2 stigmas, fruit small, ornamental, useful for soil erosion control, withstand grazing, moist soils, open woodland and lowland heaths, in grassland, see *Familles des Plantes* 2: 31, 530. 1763, *Prodromus Florae Novae Hollandiae* 173. 1810, *Synopsis Plantarum Glumacearum* 1: 193. 1854 and *Fl. Victoria* 2: 491. 1994, *World Checklist of Seed Plants* 3(1): 10. 1999.

Species

P. quadrifidus (Labill.) Baillon (*Agrostis quadrifida* Labill.; *Pentapogon billardieri* R. Br.; *Pentapogon billardieri* R. Br.)

Australia. Annual or short-lived perennial, loosely tufted, erect or bent, auricles absent, ligule not lobed, basal leaf sheaths keeled, leaf blade involute and stiff, leaves hairy to pilose, inflorescence a green and purple to brownish compact and narrow panicle, narrow spikelets 1-flowered, glumes keeled with margins membranous, incised lemma with twisted central awn, callus bearded, palea hyaline to membranous, anthers yellow or purple, fruit laterally compressed and longitudinally grooved, low forage value, shade species, in open habitats, moist places, in woodland, described as a segregate from *Calamagrostis* Adans. by Clayton & Renvoize, see *Species Plantarum* 1: 61, 78. 1753, *Novae Hollandiae Plantarum Specimen* 1: 20, t. 22. 1805, *Prodromus Florae Novae Hollandiae* 173. 1810, *Fragmenta Phytographiae Australiae* 8: 106. 1873, *Histoire des Plantes* 12: 280. 1893.

in English: five-awned spear-grass, five-awn spear grass

P. quadrifidus (Labill.) Baillon var. *parviflorus* (Benth.) D.I. Morris (*Pentapogon billardieri* R. Br. var. *parviflorus* Benth.)

Tasmania. Small flower heads, found in stream banks, see *Flora Australiensis: A Description ...* 7: 573. 1877 and *Muelleria* 72(2): 167. 1989.

P. quadrifidus (Labill.) Baillon var. *quadrifidus*

New South Wales, Victoria, Tasmania. Tufted grass, glumes subequal, growing in open woodland, dry sclerophyll forest, moist and shady situations, see *Histoire des Plantes* 12: 280. 1893.

Pentarrhaphis Kunth = *Bouteloua* Lag., *Polyschistis* J. Presl, *Strombodurus* Steud.

From the Greek *pente* “five” and *raphis* “a needle,” referring to the flowers, to a bunch of five bristles at the base of a single spikelet.

About 3 species, Mexico, Colombia. Chloridoideae, Cynodonteae, Boutelouinae, annual or perennial, herbaceous, unarmed, unbranched, caespitose, leaves mostly basal, auricles absent, ligule a fringe of hairs, plants bisexual, inflorescence a false spike, raceme rhachis a forked bristle with 2 spikelets, 1 spikelet reduced to 2 hirsute awnlike glumes, spikelets dorsally compressed 2-flowered, upper floret sterile or male, 2 glumes awned and dissimilar, lower glume hirsute bristle, upper glume lanceolate, lemmas 3-awned membranous or cartilaginous, central awn with 2 teeth, palea present, 2 free and fleshy lodicules, stamens 3, ovary glabrous, 2 white stigmas, open habitats, dry areas, savannah, gravelly soil, rocky outcrops, scrubland, type *Pentarrhaphis scabra* Kunth, see *Varietades de Ciencias, Literatura y Artes* 2(4,21): 134, 141. 1805, *Nova Genera et Species Plantarum* 1: 177-178, t. 60. 1815 [1816], *Reliquiae Haenkeanae* 1(4-5): 294, t. 41, f. 12. 1830, *Nomenclator Botanicus. Editio secunda* 2: 299. 1841, *Bulletin of the Torrey Botanical Club* 17: 229-230, 233, t. 107-108. 1890 and *Fieldiana, Botany, New Series* 4: 1-608. 1980, *Flora Novo-Galiciana* 14: 1-436. 1983, *Genera Graminum* 247-248. 1986, *Flora Mesoamericana* 6: 295. 1994, *Aliso [El Aliso]* 17: 99-130. 1998, *Las Gramíneas de México* 5: 1-466. 1999, *Aliso* 18: 61-65. Claremont, California 1999, *Contributions from the United States National Herbarium* 41: 20-33, 181, 191, 220. 2001.

Species

P. annua Swallen (*Bouteloua swallenii* Columbus)

Central America, Costa Rica, Guanacaste Region. Rare species, rocky places, bare soil, see *Ceiba* 4(5): 285-288. 1955, *Ceiba* 19(1): 1-118. 1975, *Cuscatlania* 1(6): 1-29. 1991, *Flora Mesoamericana* 6: 295. 1994, *Aliso* 18(1): 63. 1999.

P. polymorpha (E. Fourn.) Griffiths (*Atheropogon polymorphus* E. Fourn.; *Bouteloua erecta* (Vasey & Hack.) Columbus; *Bouteloua polymorpha* (E. Fourn.) Columbus; *Cathestecum erectum* Vasey & Hack.; *Pentarrhaphis fourneriana* Hack. & Scribn.)

Mexico. Both spikelets well developed, tussock forming, forage, rocky places, bare soil, see *Reliquiae Haenkeanae* 1(4-5): 294, t. 42. 1830, *Bulletin of the Torrey Botanical Club* 11: 37, pl. 45. 1884, *Mexicanas Plantas* 2: 141. 1886, *Bulletin of the Torrey Botanical Club* 17: 229, t. 107-108. 1890 and *Contributions from the United States National Herbarium* 14(3): 357, f. 21. 1912, *Phytologia* 37(4): 317-407. 1977, *Aliso* 18(1): 63. 1999.

P. scabra Kunth (*Bouteloua diversispicula* Columbus; *Bouteloua scabra* (Kunth) Columbus; *Cathestecum brevifolium* Swallen; *Pentarrhaphis paupercula* (J. Presl) Hack. & Scribn.; *Polyschistis paupercula* J. Presl)

Mexico. Perennial, erect, open areas, dry places, rocky sites, see *Varietades de Ciencias, Literatura y Artes* 2(4,21): 134. 1805, *Nova Genera et Species Plantarum* 1: 178, t. 60. 1815 [1816], *Reliquiae Haenkeanae* 1(4-5): 294, t. 41, f. 12. 1830, *Bulletin of the Torrey Botanical Club* 17: 233. 1890 and *Journal of the Washington Academy of Sciences* 27(12): 500. 1937, *Taxon* 33: 126-134. 1984, *Aliso* 18(1): 63-64. 1999.

Pentaschistis (Nees) Spach = *Achneria* Benth., *Achneria* Munro ex Benth., *Afrachneria* Sprague, *Poagrostis* Stapf

From the Greek *pente* “five” and *schistos* “cut,” *schizo*, *schizein* “to divide,” referring to the cleft lemmas, the lemma has five divisions; Édouard Spach (1801-1879), *Histoire naturelle des Végétaux*. 13: 164. Paris (June) 1841.

About 65-70 species, Africa and Madagascar, South Africa, Mediterranean region. Arundinoideae, Arundineae, or Danthonioideae, Danthonieae, perennial or annual, herbaceous, unarmed, slender, caespitose, xerophytic or mesophytic, branched or not, usually with unusual multicellular glands on the leaves and inflorescence branches, shoots more or less aromatic, no auricles, ligule a fringe of hairs, leaves narrow harsh, leaf blades linear to lanceolate or filiform, plants bisexual, inflorescence loosely paniculate and the branches often with glands, open panicle contracted or spiciform, spikelets with 2 or rarely 3 fertile sessile flowers, 2 glumes more or less hyaline and acute 1- to 5-nerved, lemmas membranous 5- to 11-nerved and 2-lobed with a slender bent and twisted awn, palea 2-keeled, callus short and bearded, 2 lodicules free and fleshy, 3 stamens, ovary glabrous, 2 stigmas white, small caryopsis longitudinally grooved, weed species, native pasture, common in open habitats, rainforests, mountainous areas, taxonomically a difficult genus, species variable and intergrading, some

awnless species sometimes in *Afrachneria*, type *Pentaschistis curvifolia* (Schr.) Stapf, see *Species Plantarum* 1: 63, 79. 1753, *Species Plantarum* 2: 1045, 1047. 1753, *Flore Française. Troisième Édition* 3: 32. 1805, *Prodromus Florae Novae Hollandiae* 185. 1810, *Essai d'une Nouvelle Agrostographie* 72, 146. 1812, *Histoire naturelle des Végétaux* 13: 164. Paris 1841, C.G.D. Nees von Esenbeck (1776-1858), *Florae Africae Australioris Illustrationes Monographicae ... I. Gramineae. Glogaviae* 1841, *Genera Plantarum* 3(2): 1158, 1163. 1883 and *Journal of Botany, British and Foreign* 60: 138. 1922, H.P. Linder et R.P. Ellis, "A revision of *Pentaschistis* (Arundinoideae: Poaceae)." *Contributions from the Bolus Herbarium* 12: 1-124. 1990, *Wageningen Agricultural University Papers* 92-1(2): 1-557. 1992, H. Du Plessis and J.J. Spies, "Chromosome numbers in the genus *Pentaschistis* (Poaceae, Danthonieae)." *Taxon* 41: 709-720. 1992, M. Lazarides, "The genus *Eriachne* (Eriachneae, Poaceae)." *Australian Systematic Botany* 8(3): 355-452. 1995, *Flora of Ethiopia and Eritrea* 7: 70-73. 1995, K.C. Klopper, J.J. Spies & B. Visser, "Cytogenetic studies in the genus *Pentaschistis* (Poaceae: Arundinoideae)." *Bothalia* 28(2): 231-238. 1998, J.H.J. Vlok and R.I. Yeaton, "The effect of overstorey proteas on plant species richness in South African mountain fynbos." *Diversity & Distributions* 5(5): 213-222. Sep 1999.

Species

P. acinosa Stapf

South Africa. Perennial, erect, tufted to loosely tufted, without glands, leaves spreading, lemmas awned, see *Florae Africae Australioris Illustrationes Monographicae* 310. 1841, *Flora Capensis* 7: 495-496. 1899.

P. airoides (Nees) Stapf (*Danthonia airoides* (Nees) Nees; *Pentameris airoides* (Nees) (resembles *Aira* L.)

South Africa, Mediterranean. Annual, slender, tufted, delicate, small or dwarf, leaves narrow and villous or pilose, inflorescence an open panicle of pedicellate spikelets, glumes acute and awnless, lemma glabrous, central awn, callus hairy, widespread weed of granite rocks, veld and heavily grazed veld, woodlands, shrublands and disturbed sites, along roadsides, pasture, this plant is often confused with *Aira* sp., see *Sem. Hort. Bot. Vratisl.* 1834, *Florae Africae Australioris Illustrationes Monographicae* 284. 1841, *Flora Capensis* 7: 511-512. 1899 and *Bothalia* 18: 111-114. 1988, *Contributions from the Bolus Herbarium* 12: 47-48. 1990, *Bothalia* 28(2): 231-238. 1998.

in English: false hair-grass

P. airoides (Nees) Stapf subsp. *airoides* (*Pentaschistis patula* (Nees) Stapf var. *glabrata* Stapf)

South Africa. Annual, sometimes or rarely with glands, lemmas awned, see *Flora Capensis* 7: 511-512. 1899.

P. airoides (Nees) Stapf subsp. *jugorum* (Stapf) Linder (*Pentaschistis jugorum* Stapf)

South Africa. Annual or biennial, tufted, with glands, lemmas awned, grows on shallow soils, alpine, high mountains, see *Flora Capensis* 7: 504-505. 1899 and *Contributions from the Bolus Herbarium* 12: 47-48. 1990.

P. alticola Linder

South Africa. Biennial, delicate, weak, without glands, lemmas awned, on rocky slopes, mountains, see *Contributions from the Bolus Herbarium* 12: 79, f. 10. 1990.

P. ampla (Nees) McClean (*Achneria ampla* (Nees) T. Durand & Schinz; *Afrachneria ampla* (Nees) Adamson; *Eriachne ampla* Nees; *Eriachne pallida* Nees)

South Africa. Perennial, woody base, tufted, weak, without glands, lemmas blunt, see *Prodromus Florae Novae Hollandiae* 183. 1810, *Florae Africae Australioris Illustrationes Monographicae* 275, 277. 1841, *Conspectus Florae Africae* 5: 836. 1894 and *South African Journal of Science* 23: 282. 1926, *Journal of South African Botany* 5: 53. 1939.

P. angustifolia (Nees) Stapf (*Danthonia angustifolia* Nees)

South Africa. Perennial, erect, decumbent, caespitose, open inflorescences, along roadsides, see *Florae Africae Australioris Illustrationes Monographicae* 302, 309. 1841, *Flora Capensis* 7: 502-503. 1899 and *Bothalia* 18: 119-122. 1988.

in South Africa: spinnekopgras

P. argentea Stapf

South Africa. Perennial, without stalked glands, tufted, underground swollen base, sometimes stoloniferous, lemmas awned, on dry sites, mountain slopes, see *Flora Capensis* 7: 487-488. 1899 and *Contr. Bolus Herb.* 12: 68. 1990, *Taxon* 41: 709-720. 1992.

P. aristidoides Stapf (*Avena aristidoides* Thunb.)

South Africa. Perennial, rhizomatous with stout and creeping rhizomes, lemmas awned, found on rocky slopes, see *Prodromus Plantarum Capensium, ...* 22. 1794, *Flora Capensis* 7: 485-486. 1899 and *Bothalia* 28(2): 231-238. 1998.

P. aristifolia Schweick.

South Africa. Annual, without glands, lemmas awned, see *Repertorium Specierum Novarum Regni Vegetabilis* 43: 89-90. 1938, *Bothalia* 18: 111-114, 119-122. 1988.

P. aspera (Thunb.) Stapf (*Andropogon asper* (Thunb.) Kunth; *Avena muricata* Spreng.; *Holcus asper* Thunb.; *Sorghum asper* (Thunb.) Roem. & Schult.)

South Africa. Perennial, erect, branched, decumbent, leaves glandular and sticky, lemmas awned, stinking, found on stony slopes, see *Species Plantarum* 2: 1045, 1047. 1753, *Methodus Plantas Horti Botanici ...* 207. 1794, *Prodromus Plantarum Capensium, ...* 20. 1794, *Systema Vegetabilium* 2: 839. 1817, *Neue Entdeckungen im ganzen Umfang der Pflanzenkunde* 1: 247. 1820, *Révision des Graminées* 1: 166. 1829, *Flora Capensis* 7: 500-501. 1899.

P. aurea (Steud.) McClean (*Achneria aurea* (Steud.) T. Durand & Schinz; *Afrachneria aurea* (Steud.) Adamson; *Aira aurea* Steud.; *Airopsis aurea* (Steud.) Nees; *Eriachne aurea* (Steud.) Nees)

South Africa. Perennial, tufted, see *J. Bot. (Desvaux)* 1: 200. 1809, *Flora* 12: 470. 1829, *Linnaea* 7(3): 317. 1832, *Florae Africae Australioris Illustrationes Monographicae* 1: 276. 1841, *Conspectus Florae Africae* 5: 836. 1894 and *South African Journal of Science* 23: 282. 1926, *Journal of South African Botany* 5: 53. 1939.

P. aurea (Steud.) McClean subsp. *aurea*

South Africa. Perennial, tufted, compact, glabrous, with glands, lemmas blunt, found in marshy areas, see *Taxon* 41: 709-720. 1992.

P. aurea (Steud.) McClean subsp. *pilosogluma* (McClellan) Linder (*Pentaschistis pilosogluma* McClellan)

South Africa. Perennial, tufted, villous, with glands, ligule a fringe of hairs, inflorescence an open panicle, lemmas muticous, forming tussocks, ornamental, grazing value unknown, growing along streams and rivers, slopes, mountainous areas, see *South African Journal of Science* 23: 282. 1926, *Contributions from the Bolus Herbarium* 12: 76. 1990.

P. barbata (Nees) H.P. Linder (*Danthonia barbata* Nees; *Danthonia barbata* Petrie ex J.C. Sm., nom. illeg., non *Danthonia barbata* Nees; *Danthonia scabra* var. *glomerata* Nees; *Pentaschistis leucopogon* Stapf)

South Africa. Perennial, loosely tufted, sandy places, see *Florae Africae Australioris Illustrationes Monographicae* 287, 301. 1841, *Flora Capensis* 7: 500. 1899 and *Transactions and Proceedings of the New Zealand Institute* 43: 250, 253. 1911, *Contributions from the Bolus Herbarium* 12: 30. 1990.

P. barbata (Nees) H.P. Linder subsp. *barbata* (*Pentaschistis leucopogon* Stapf)

South Africa. Perennial, loosely tufted, with glands, basal sheaths white, lemmas awned, growing in disturbed areas, coastal sands.

P. barbata (Nees) H.P. Linder subsp. *orientalis* H.P. Linder

South Africa, Cape Province. Indeterminate species, perennial, tufted, with glands, lemmas awned, on coastal dunes, see *Contributions from the Bolus Herbarium* 12: 31. 1990.

P. basutorum Stapf (see E. Casalis, *Les Bassoutos*. Paris 1859; Hugh Ashton, *The Basuto*. London 1952 and [Second edition, with a supplementary bibliography] 1957; Sir Godfrey Yeatman Lagden, *The Basutos: The Mountaineers and Their Country*. London 1909)

South Africa, Lesotho. Perennial, tufted, without glands, hard leaves, lemmas awned, see *Bulletin of Miscellaneous Information Kew* 1: 20. 1914.

P. borussica (K. Schum.) Pilg. (*Danthonia borussica* K. Schum.)

South Africa, Tanzania. Perennial, erect, decumbent at the bases, caespitose, shortly rhizomatous, leaf blades narrowly linear pilose and scabrid, basal leaf sheaths papery, inflorescence loose and open of large long-awned spikelets gray, panicle elliptic to ovate, branches of panicle glandular, glumes glandular lanceolate-oblong acute, lemma 9-nerved bifid bristly, long anthers, native pasture species, along stream banks, shade or partial shade, upland grassland, open habitats, see *Die Pflanzenwelt Ost-Afrikas* 5(C): 109. 1895 and *Notizblatt des Botanischen Gartens und Museums zu Berlin-Dahlem* 9(87): 517. 1926, *Bulletin of Miscellaneous Information Kew* 1930: 121. 1930, *Feddes Repertorium* 45: 7. 1938.

P. calcicola H.P. Linder

South Africa, Cape Province. Perennial, tufted, tussocks, without glands, see *Contributions from the Bolus Herbarium* 12: 81, f. 12. 1990.

P. calcicola H.P. Linder var. *calcicola*

South Africa, Cape Province. Perennial, tufted, without glands, lemmas awned, growing in limestone.

P. calcicola H.P. Linder var. *hirsuta* H.P. Linder

South Africa, Cape Province. Indeterminate species, perennial, tufted, without glands, lemmas awned, found in limestone, see *Contributions from the Bolus Herbarium* 12: 83. 1990.

P. capensis (Nees) Stapf (*Triraphis capensis* Nees)

South Africa. Perennial, without glands, lemmas with spreading awns, growing in water, rocky streams, see *Florae Africae Australioris Illustrationes Monographicae* 271. 1841, *Flora Capensis* 7: 494. 1899.

P. capillaris (Thunb.) McClellan (*Achneria capillaris* (Thunb.) Stapf, nom. illeg., non *Achneria capillaris* (R. Br.) P. Beauv.; *Andropogon capillaris* (Thunb.) Kunth; *Holcus capillaris* Thunb.; *Sorghum capillaris* (Thunb.) Roem. & Schult.)

South Africa. Annual, with glands, lemmas blunt or muticous, found in coastal sands, see *Prodromus Plantarum Capensium*, ... 20. 1794, *Systema Vegetabilium* 2: 840. 1817, *Révision des Graminées* 1: 166. 1829, *Hooker's Icones Plantarum* 27(1): t. 2604, 1-2. 1899 and *South African Journal of Science* 23: 281. 1926, *Bothalia* 18: 119-122. 1988, *Taxon* 41: 709-720. 1992, *Bothalia* 28(2): 231-238. 1998.

P. caulescens Linder

South Africa. Perennial, loosely tufted to tangles, no glands, lemmas awned, on dry stony slopes, see *Contributions from the Bolus Herbarium* 12: 99, f. 17. 1990.

P. chippindalliae Linder

South Africa, Transvaal. Perennial, tufted, no glands, open inflorescence, lemmas awned, see *Contributions from the Bolus Herbarium* 12: 92, f. 15. 1990.

P. chrysurus (K. Schum.) Peter (*Danthonia chrysurus* K. Schum.)

Tanzania. Robust, awns with a very short and untwisted column, mountains, see *Die Pflanzenwelt Ost-Afrikas* 5(C): 110. 1895 and *Repertorium Specierum Novarum Regni Vegetabilis, Beihefte* 40(1): 303. 1931.

P. cirrhulosa (Nees) Linder (*Danthonia cirrhulosa* Nees; *Pentaschistis angustifolia* (Nees) Stapf var. *cirrhulosa* (Nees) Stapf; *Pentaschistis burchellii* Stapf; *Pentaschistis patuliflora* Rendle)

South Africa. Perennial, erect, tufted, purplish, glands present, inflorescence compact, lemmas awned, open areas, sandy soils, see *Journal of Botany, British and Foreign* 37(441): 381. 1899 and *Bothalia* 18: 119-122. 1988, *Contributions from the Bolus Herbarium* 12: 42. 1990, *Bothalia* 28(2): 231-238. 1998.

P. colorata (Steud.) Stapf (*Avena colorata* Steud.; *Danthonia colorata* (Steud.) Steud.; *Pentaschistis colorata* var. *polytricha* Stapf)

South Africa. Perennial, erect, tufted, no glands, lemmas awned, on stony slopes, see *Flora* 12: 481. 1829, *Synopsis Plantarum Glumacearum* 1: 241. 1854, *Flora Capensis* 7: 491. 1899 and *Bothalia* 28(2): 231-238. 1998.

P. colorata (Steud.) Stapf var. *polytricha* Stapf

South Africa. See *Flora Capensis* 7: 491. 1899.

P. curvifolia (Schrader) Stapf (*Danthonia curvifolia* Schrad.)

South Africa. Perennial, tufted, erect, culm bases decumbent, glands absent, old leaves curled, dense contracted panicle, geniculate peduncle, glumes ivory or cream, lemmas awned, dark awns, usually on sandy soil, among shrubs, along roadsides, sometimes confused with *Pentaschistis pallida* (Thunb.) Linder, see *Mantissa* 2: 386. 1824, *Flora Capensis* 7: 491-492. 1899 and *Taxon* 41: 709-720. 1992, *Bothalia* 28(2): 231-238. 1998.

in English: tassel grass

in South Africa: kwasgras

P. densifolia (Nees) Stapf (*Danthonia densifolia* Nees; *Pentaschistis densifolia* var. *intricata* Stapf)

South Africa. Perennial, delicate, soft, glands present, lemmas awned, forming clumps, see *Florae Africae Australioris Illustrationes Monographicae* 291. 1841, *Flora Capensis* 7: 506-507. 1899 and *Bothalia* 28(2): 231-238. 1998.

P. dolichochoeta S.M. Phillips

Ethiopia. Perennial, eglandular, robust, erect, leaf blades tough, panicle elliptic loosely contracted much branched

many-spiculate, branches of panicles not glandular, glumes linear-lanceolate acuminate, lemmas 7-nerved 2-toothed, long anthers, forest, upland forest, related to *Pentaschistis chrysurus* (K. Schum.) Peter and similar to *Pentaschistis borussica*, see *Kew Bulletin* 50(3): 615, f. 1. 1995.

P. ecklonii (Nees) McClean (*Achneria ecklonii* (Nees) T. Durand & Schinz; *Afrachneria ecklonii* (Nees) Adamson; *Eriachne assimilis* Steud.; *Eriachne ecklonii* Nees; *Pentaschistis bachmannii* McClean)

South Africa, Cape Province. Indeterminate species, perennial, tufted, glands present, spike-like inflorescence, lemmas blunt, see *Florae Africae Australioris Illustrationes Monographicae* 1: 273. 1841, *Synopsis Plantarum Glumacearum* 1: 236. 1854, *Conspectus Florae Africae* 5: 836. 1894 and *South African Journal of Science* 23: 282. 1926, *Journal of South African Botany* 5: 53. 1939, *Contributions from the Bolus Herbarium* 12: 52. 1990.

P. elegans (Nees) Stapf (*Danthonia elegans* Nees)

South Africa, Cape Province. Rare species, perennial, tufted, glands absent, lemmas villous to pilose, growing in sand, costal sand, coastal flats, see *Florae Africae Australioris Illustrationes Monographicae* 296. 1841, *Flora Capensis* 7: 496. 1899.

P. eriostoma (Nees) Stapf (*Danthonia eriostoma* Nees; *Pentaschistis juncifolia* Stapf)

South Africa. Perennial bunchgrass, erect, tufted to densely tufted, tussocky, without glands, basal leaf sheaths woolly, lemmas awned, see *Florae Africae Australioris Illustrationes Monographicae* 304. 1841, *Flora Capensis* 7: 489-490. 1899 and *Bothalia* 18: 111-114. 1988, *Contributions from the Bolus Herbarium* 12: 106, 107. 1990, *Taxon* 41: 709-720. 1992, *Bothalia* 28(2): 231-238. 1998.

P. exserta Linder

South Africa. Perennial, tufted, no glands, lemmas awned, along streams, in seeps, see *Contributions from the Bolus Herbarium* 12: 92. 1990.

P. galpinii (Stapf) McClean (*Achneria galpinii* Stapf)

South Africa. Tussock grass, perennial, sometimes stoloniferous, mat-forming, leaves basal and very short, glands present, leaf blade wiry and curly, ligule a ring of short hairs, reduced and contracted inflorescence gray-purple, spikelets glumes persistent, lemmas more or less awned, unknown grazing value, montane habitats, shallow soil, open areas, alpine grassland, damp places, see *Bulletin of Miscellaneous Information Kew* 1910: 59. 1910, *South African Journal of Science* 23: 282. 1926.

P. glandulosa (Schrader) Linder (*Danthonia glandulosa* Schrad.; *Pentaschistis angustifolia* var. *micrathera* (Nees) Stapf; *Pentaschistis glandulosa* (Schrader) Drège ex Stapf)

South Africa. Perennial, tufted, glands present, lemmas awned, see *Mantissa* 2: 385. 1824, *Flora Capensis* 7: 502.

1899 and *Contributions from the Bolus Herbarium* 12: 60. 1990.

P. heptamera (Nees) Stapf (*Danthonia heptamera* Nees)

South Africa. Perennial, often single, no glands, lemmas awned, found in costal sands, see *Florae Africae Australioris Illustrationes Monographicae* 309. 1841, *Flora Capensis* 7: 504. 1899.

P. holciformis (Nees) Linder (*Danthonia holciformis* Nees)

South Africa. Perennial, tufted, no glands, lemmas awned, see *Florae Africae Australioris Illustrationes Monographicae* 326. 1841 and *Contributions from the Bolus Herbarium* 12: 91. 1990.

P. juncifolia Stapf

South Africa. See *Flora Capensis* 7: 490. 1899 and *Contributions from the Bolus Herbarium* 12: 107. 1990.

P. lima (Nees) Stapf (*Danthonia lima* Nees)

South Africa, Cape Province. Rare species, perennial, montane, tufted, with glands, lemmas awned, see *Florae Africae Australioris Illustrationes Monographicae* 312. 1841, *Flora Capensis* 7: 496-497. 1899 and *Bothalia* 28(2): 231-238. 1998.

P. longipes Stapf

South Africa. Perennial, glands present, lemmas awned, found in sand, coastal sand, see *Flora Capensis* 7: 509. 1899.

P. malouinensis (Steud.) Clayton (*Achneria capensis* (Steud.) T. Durand & Schinz; *Afrachneria capensis* (Steud.) Adamson; *Airopsis steudelii* Nees; *Eriachne capensis* Steud.; *Eriachne malouinensis* Steud.; *Eriachne steudelii* (Nees) Nees; *Pentaschistis steudelii* (Nees) McClean)

South Africa. Perennial, tufted, glands absent, lemmas muticous, often found in disturbed sites, see *Flora* 12: 470. 1829, *Linnaea* 7(3): 318. 1832, *Florae Africae Australioris Illustrationes Monographicae* 278. 1841, *Synopsis Plantarum Glumacearum* 1: 236. 1854, *Conspectus Florae Africae* 5: 836. 1894 and *South African Journal of Science* 23: 281. 1926, *Journal of South African Botany* 5: 53. 1939, *Kew Bulletin* 23: 294. 1969, *Bothalia* 18: 111-114. 1988.

P. microphylla (Nees) McClean (*Achneria microphylla* (Nees) T. Durand & Schinz; *Eriachne microphylla* Nees)

South Africa. Perennial, glands present, leaves stiff, lemmas muticous, in montane grassland, dry areas, arid sites, see *Florae Africae Australioris Illustrationes Monographicae* 1: 277. 1841, *Conspectus Florae Africae* 5: 836. 1894 and *South African Journal of Science* 23: 282. 1926.

P. montana Linder

South Africa. Perennial, tufted, mat-forming, glands absent, leaves mostly basal, lemmas awned, found in arid areas, mountains, see *Contributions from the Bolus Herbarium* 12: 83, f. 13. 1990.

P. natalensis Stapf (*Pentaschistis perrieri* A. Camus)

Tanzania, Malawi, Madagascar, South Africa. Perennial, glands present, loosely to densely tufted, tussock grass, glume keeled, lemmas awned, on rocky stream bank, riverbanks, in sour grassland, see *Flora Capensis* 7: 493-494. 1899 and *Bulletin de la Société Botanique de France* 70: 691. 1928, *Taxon* 41: 709-720. 1992.

in Tanzania: kishengeve

P. oreodoxa Schweick.

South Africa. Perennial, tufted, cushion-like habit, stalked glands present, ligule a fringe of hairs, inflorescence an open panicle, lemmas awned, unknown grazing value, in sour grassland, slopes, in mountain sourveld, see *Repertorium Specierum Novarum Regni Vegetabilis* 43: 90-91. 1938.

P. pallescens (Schrad.) Stapf (*Danthonia pallescens* Schrad.; *Pentameris pallescens* (Schrad.) Nees)

South Africa. Perennial, erect, tufted, usually without glands, lemmas awned, yellow anthers, see *Mantissa* 2: 386. 1824, *Linnaea* 7(3): 312. 1832, *Flora Capensis* 7: 486-487. 1899.

P. pallida (Thunb.) Linder (*Avena pallida* Thunb.; *Danthonia angustifolia* Nees; *Danthonia pallida* (Thunb.) Roem. & Schult., nom. illeg., non *Danthonia pallida* R. Br.; *Pentaschistis angustifolia* (Nees) Stapf; *Pentaschistis angustifolia* var. *albescens* Stapf; *Pentaschistis filiformis* (Nees) Stapf; *Pentaschistis heterochaeta* Stapf; *Pentaschistis imperfecta* Stapf)

South Africa. Annual or perennial, glandular, strongly aromatic, tufted or loosely caespitose, decumbent to geniculate culm bases, rare, with glands on most parts of the plant, dense panicle with numerous spikelets, lemmas awned, weed, growing in disturbed areas, fynbos [The word *fynbos* comes from the Dutch for fine-leaved plants; *fynbos* is the major vegetation type of the small botanical region known as the Cape Floral Kingdom; *fynbos* plants are readily recognized by the sclerophyllous (hard, tough and leathery leaved) and microphyllous (small-leaved) nature of almost all woody plants and is characterized by having more than 5% cover of Cape reeds], in dry roadside ditch, along roadsides, dunes, on sand, see *Prodromus Plantarum Capensium*, ... 22. 1794, *Systema Vegetabilium* 2: 657. 1817, *Florae Africae Australioris Illustrationes Monographicae* 302. 1841, *Flora Capensis* 7: 502-503. 1899 and *Bothalia* 18: 119-122. 1988, *Contributions from the Bolus Herbarium* 12: 36. 1990, *Taxon* 41: 709-720. 1992, *Bothalia* 28(2): 231-238. 1998.

in English: false hair grass

P. papillosa (Steud.) Linder (*Avena papillosa* Steud.; *Danthonia scabra* Nees; *Pentaschistis subulifolia* Stapf; *Pentaschistis zeyheri* Stapf)

South Africa. Perennial, spreading, glandular, lemmas awned, see *Flora* 12: 434. 1829, *Florae Africae Australioris Illustrationes Monographicae* 287. 1841, *Flora Capensis* 7: 497, 499-500. 1899 and *Contributions from the Bolus Herbarium* 12: 32. 1990, *Taxon* 41: 709-720. 1992.

P. patula (Nees) Stapf (*Danthonia patula* Nees; *Pentaschistis euadenia* Stapf; *Pentaschistis patula* var. *acuta* Stapf)

South Africa. Annual, glands present, lemmas awned, found in sandy soils, see *Florae Africae Australioris Illustrationes Monographicae* 285. 1841, *Flora Capensis* 7: 510. 1899.

P. patula (Nees) Stapf var. ***glabrata*** Stapf

South Africa. See *Flora Capensis* 7: 510. 1899 and *Contr. Bolus Herb.* 12: 47. 1990.

P. patuliflora Rendle

South Africa. See *Journal of Botany, British and Foreign* 37(441): 381. 1899 and *Bothalia* 18: 119-122. 1988, *Contributions from the Bolus Herbarium* 12: 42. 1990, *Bothalia* 28(2): 231-238. 1998.

P. pictigluma (Steud.) Pilger (*Aira pictigluma* Steud.; *Danthonia anthoxanthiformis* Hochst.; *Danthonia anthoxanthiformis* var. *uberior* (Hochst.) Engl.; *Danthonia depressa* Hochst.; *Danthonia nana* Engl.; *Danthonia trisetoides* var. *schimperii* Engl.; *Danthonia uberior* Hochst.; *Pentaschistis borussica* var. *minor* Ballard & C.E. Hubb.; *Pentaschistis gracilis* S.M. Phillips; *Pentaschistis imatongensis* C.E. Hubb.; *Pentaschistis mannii* Stapf ex C.E. Hubb.; *Pentaschistis minor* (Ballard & C.E. Hubb.) Ballard & C.E. Hubb.; *Pentaschistis trisetoides* var. *schimperii* (Engl.) Pilg.)

East Africa, Ethiopia, Yemen. Perennial, usually glandular at the base of the panicle, densely tufted, erect or ascending, basal leaf sheaths papery, leaves narrowly linear, ligule a ring of hairs, inflorescence a linear spike-like to contracted panicle, spikelets narrowly lanceolate 2-flowered, glumes acute to acuminate, lemmas pubescent with 2 bristle-tipped lobes, awn bent about the middle, among rocks, open habitats, montane grassland, damp soil, see *Synopsis Plantarum Glumacearum* 1: 221, 244. 1854, *Flora* 38: 275-276, 279. 1855, *Abhandlungen der Preussischen Akademie der Wissenschaften. Physikalisch-mathematische Klasse* 2: 131. 1891, *Über die Hochgebirgsflora des tropischen Afrika* 130. 1892 and *Notizblatt des Botanischen Gartens und Museums zu Berlin-Dahlem* 9(87): 516-517. 1926, *Bulletin of Miscellaneous Information Kew* 1930: 121. 1930, *Bulletin of Miscellaneous Information Kew* 1936: 501. 1936, *Flora of Tropical Africa* 10: 132. 1937, *Kew Bull.* 1939: 646. 1940, *Kew Bulletin* 26: 41-44. 1971, *Fl. W. Trop. Afr.* 3: 374. 1972, *Kew Bulletin* 41: 1028. 1986, *Opera Botanica* 121: 159-172. 1993.

P. pictigluma (Steud.) Pilger var. ***gracilis*** (S.M. Phillips) S.M. Phillips (*Pentaschistis gracilis* S.M. Phillips)

Ethiopia. Glandular or eglandular, leaf blades flat and pilose, gray or silvery panicles, upland grassland, fields

margins, moist places, light shade, see *Proceedings of the XIIIth Plenary Meeting of AETFAT, Zomba, Malawi, 1-11 April, 1991* 1: 372. 1994.

P. pictigluma (Steud.) Pilger var. ***mannii*** (Stapf ex C.E. Hubb.) S.M. Phillips (*Pentaschistis borussica* var. *minor* Ballard & C.E. Hubb.; *Pentaschistis mannii* Stapf ex C.E. Hubb.; *Pentaschistis pictigluma* var. *minor* (Ballard & C.E. Hubb.) S.M. Phillips)

Ethiopia. See *Notizblatt des Botanischen Gartens und Museums zu Berlin-Dahlem* 9(87): 517. 1926, *Bulletin of Miscellaneous Information Kew* 1930: 121. 1930, *Kew Bulletin* 1936: 501. 1936, *Proceedings of the XIIIth Plenary Meeting of AETFAT, Zomba, Malawi, 1-11 April, 1991* 1: 371. 1994.

P. pictigluma (Steud.) Pilger var. ***minor*** (Ballard & C.E. Hubb.) S.M. Phillips (*Pentaschistis borussica* var. *minor* Ballard & C.E. Hubb.)

Tanzania. Leaf blades inrolled, gray panicles, leaf blades and panicle eglandular, dry stony mountains, see *Bulletin of Miscellaneous Information Kew* 1930: 121. 1930, *Proceedings of the XIIIth Plenary Meeting of AETFAT, Zomba, Malawi, 1-11 April, 1991* 1: 371. 1994.

P. pictigluma (Steud.) Pilger var. ***pictigluma***

Ethiopia. Leaf blades and panicle more or less glandular or not, golden-brown panicles.

P. praecox Linder

South Africa. Perennial, tufted, no glands, glumes acute to acuminate, lemmas awned, see *Contributions from the Bolus Herbarium* 12: 95. 1990.

P. pseudopallescens Linder

South Africa. Perennial, short-lived, weak, tufted, leaves villous, glands present or absent, lemmas awned, along streams, see *Contributions from the Bolus Herbarium* 12: 72, f. 9. 1990.

P. pungens Linder

South Africa. Annual or biennial, no glands, lemmas awned, see *Contributions from the Bolus Herbarium* 12: 97, f. 16. 1990.

P. pusilla (Nees) Linder (*Colpodium pusillum* Nees; *Poa-grostis pusilla* (Nees) Stapf)

South Africa. Perennial, green, delicate, soft, no glands, lemmas blunt or muticous, in moist habitats, along streams, see *Fundamenta Agrostographiae* 119, t. 7. 1820, *Florae Africae Australioris Illustrationes Monographicae* 149. 1841 and *Flora Capensis* 7: 760-761. 1900, *Contributions from the Bolus Herbarium* 12: 89. 1990.

P. pyrophila Linder

South Africa. Perennial, tufted, leaves pointed and pungent, glands absent, lemmas awned, found on stony slopes, see *Contributions from the Bolus Herbarium* 12: 81, f. 11. 1990.

P. reflexa Linder

South Africa. Annual or biennial, tufted, with glands, lemmas unawned, see *Contributions from the Bolus Herbarium* 12: 53, f. 7. 1990.

P. rigidissima Pilger ex H.P. Linder

South Africa. Perennial, leaves pungent and rigid, glands lacking, slender greenish inflorescences, lemmas awned, found in arid habitats, see *Contributions from the Bolus Herbarium* 12: 85, f. 14. 1990, *Bothalia* 28(2): 231-238. 1998.

P. rosea Linder

South Africa. See *Contributions from the Bolus Herbarium* 12: 70. 1990.

P. rosea Linder subsp. ***purpurascens*** Linder

South Africa. Biennial, often geniculate, glands present or absent, purplish inflorescences, lemmas awned, on sandy soils, stony slopes, see *Contributions from the Bolus Herbarium* 12: 72. 1990.

P. rosea Linder subsp. ***rosea***

South Africa. Biennial, tufted, linear leaves, glands usually present, lemmas awned, found on deep sandy soil.

in South Africa: rooigras

P. rupestris (Nees) Stapf (*Danthonia rupestris* Nees)

South Africa. Perennial, tufted, glandular on the pedicels, open inflorescences, lemmas awned, see *Florae Africae Australioris Illustrationes Monographicae* 300. 1841, *Flora Capensis* 7: 498-499. 1899 and *Bothalia* 18: 119-122. 1988, *Bothalia* 28(2): 231-238. 1998.

P. scandens Linder

South Africa. Perennial, spreading, scandent, rhizomatous, no glands, lemmas awned, found in sandy soils, coastal sands, see *Contributions from the Bolus Herbarium* 12: 101, f. 18. 1990.

P. setifolia (Thunb.) McClean (*Achneria setifolia* (Thunb.) Stapf; *Achneria tuberculata* (Nees) T. Durand & Schinz; *Andropogon setifolius* (Thunb.) Kunth; *Eriachne tuberculata* Nees; *Holcus setifolius* Thunb.)

South Africa. Perennial, tufted, glandular, ligule a ring of short and long hairs, leaves curly becoming wiry with age, inflorescence a wide-open panicle, lemmas dark, palatable, growing in sour grasslands, in rock crevices, undisturbed places, see *Flora Capensis* 1: 413. 1813, *Révision des Graminées* 1: 166. 1829, *Florae Africae Australioris Illustrationes Monographicae* 1: 274. 1841, *Conspectus Florae Africae* 5: 836. 1894, *Flora Capensis* 7: 461-462. 1899 and *South African Journal of Science* 23: 282. 1926.

in South Africa: letswiri

P. thunbergii (Kunth) Stapf (*Danthonia thunbergii* Kunth)

South Africa. Perennial, tufted, narrow leaves bearded, golden-brown panicle dense and ovate, spikelets numerous,

lemma hairy or villous on the nerves, central awn, a rare weed species of disturbed areas, along riverbanks, dry hills, see *Révision des Graminées* 1: 107. 1829, *Flora Capensis* 7: 507-508. 1899.

in English: pussy tail, dune grass

in South Africa: duinegras

P. thunbergii (Kunth) Stapf var. ***brevifolia*** Stapf

South Africa. See *Flora Capensis* 7: 508. 1899 and *Contr. Bolus Herb.* 12: 38. 1990.

P. thunbergii (Kunth) Stapf var. ***bulbothrix*** Stapf

South Africa. See *Flora Capensis* 7: 508. 1899 and *Contr. Bolus Herb.* 12: 38. 1990.

P. thunbergii (Kunth) Stapf var. ***ebarbata*** Stapf

South Africa. See *Flora Capensis* 7: 508. 1899 and *Contr. Bolus Herb.* 12: 38. 1990.

P. tomentella Stapf (*Pentaschistis brachyanthera* Stapf)

South Africa. Perennial, tufted, leaves glandular, compact inflorescence, lemmas awned.

P. tortuosa (Trin.) Stapf (*Danthonia tortuosa* Trin.; *Pentameris tortuosa* (Trin.) Nees; *Pentaschistis nutans* (Nees) Stapf)

South Africa, Cape. Perennial, tufted, tussock, glands absent, slender and nodding inflorescences, lemmas awned, common in damp places, foothills, mountains, see *Essai d'une Nouvelle Agrostographie* 92, t. 18, f. 8. 1812, *Species Graminum* 1: t. 68. 1827, *Linnaea* 7(3): 311. 1832, *Flora Capensis* 7: 488. 1899 and *Contr. Bolus Herb.* 12: 78. 1990, *Taxon* 41: 709-720. 1992.

P. trisetata Stapf (*Avena trisetata* Thunb.)

South Africa. Annual, glandular, sticky, lemmas awned, found usually on sandy soils, sand dunes, see *Prodromus Plantarum Capensium*, ... 22. 1794, *Flora Capensis* 7: 495. 1899 and *Taxon* 41: 709-720. 1992, *Bothalia* 28(2): 231-238. 1998.

in English: dune grass

in South Africa: duinegras, haasgras

P. trisetoides (Hochst. ex Steud.) Pilg. (*Danthonia segetalis* Hochst.; *Danthonia trisetoides* Hochst. ex Steud.; *Danthonia trisetoides* var. *tenuis* Engl.; *Pentaschistis segetalis* (Hochst.) Pilg.)

Ethiopia. Annual, ascending, slender, tufted, leaf blades shortly linear, panicle open or loosely contracted, branches and pedicels glandular, spikelets narrowly lanceolate to oblong, glumes lanceolate acuminate, lemmas elliptic-oblong bristly, a weed of cultivation, grassland, upland, damp soils, resembles *Pentaschistis borussica*, see *Synopsis Plantarum Glumacearum* 1: 244. 1854, *Flora* 38: 276. 1855, *Über die Hochgebirgsflora des tropischen Afrika* 131. 1892 and *Notizblatt des Botanischen Gartens und Museums zu Berlin-Dahlem* 9(87): 516, 518. 1926.

P. tysonii Stapf (*Pentastachya fibrosa* Stapf) (the Jamaica-born South African botanist William Tyson, 1851-1920 (Grahamstown, South Africa), c. 1874 to South Africa, plant collector and tutor, a school teacher, in 1896 a Fellow of the Linnean Society, collected marine algae; see E.P. Phillips, "A brief historical sketch of the development of botanical science in South Africa and the contribution of South Africa to botany." *S. Afr. J. Sc.* 27: 53. 1930; A.W. Bayer, *S. Afr. J. Sc.* 67: 407. 1971; I.H. Vegter, *Index Herbariorum*. Part II (7), *Collectors T-Z*. Regnum Vegetabile vol. 117. 1988; Mary Gunn and Leslie E. Codd, *Botanical Exploration of Southern Africa*. A.A. Balkema, Cape Town 1981; *Mem. New York Bot. Gard.* 19: 104. 1969)

South Africa. Perennial, tufted, glands absent, lemmas awned, montane habitats, mountain slopes, rocky places, sour grassland, see *Flora Capensis* 7: 492-493. 1899.

P. velutina Linder

South Africa. Perennial, tufted, villous, swollen at the base, glands usually present, lemmas awned, montane habitat, see *Contributions from the Bolus Herbarium* 12: 66, f. 8. 1990.

P. veneta Linder

South Africa. Perennial, tufted, hairy, with glands, lemmas awned, often confused with *Pentastachya rupestris* (Nees) Stapf, see *Contributions from the Bolus Herbarium* 12: 29. 1990.

P. viscidula (Nees) Stapf (*Danthonia viscidula* Nees)

South Africa. Perennial, compact and swollen at the base, villous, glands usually present, lemmas awned, veld, see *Florae Africae Australioris Illustrationes Monographicae* 303. 1841, *Flora Capensis* 7: 486. 1899 and *Contr. Bolus Herb.* 12: 68. 1990, *Bothalia* 28(2): 231-238. 1998.

Pentastachya Steud. = *Pennisetum* Rich.

From the Greek *pente* "five" and *stachys* "spike."

Panicoideae, Paniceae, Cenchrinae, see *Synopsis Plantarum* 1: 72. 1805, *Enumeratio Plantarum Horti Botanici Bero-linensis*, ... 1036-1037. 1809, *Essai d'une Nouvelle Agrostographie* 59. 1812, *Nomenclator Botanicus. Editio secunda* 2: 299. 1841, *Flora* 25(Beibl. 2): 2. 1842, *Tentamen Florae Abyssinicae* ... 2: 387. 1850, *Memorie della Reale Accademia delle Scienze di Torino, ser. 2* 14: 374-375. 1854, *Flora Brasiliensis* 2(2): 305, 308. 1877 and *Contr. U.S. Natl. Herb.* 22: 210-211. 1921, *Flora of Tropical Africa* 9: 956-957, 962, 966. 1934, *Amer. J. Bot.* 64: 161-176. 1977, *Econ. Bot.* 31: 163-174. 1977, *Flora Mesoamericana* 6: 371-374. 1994, *Contributions from the United States National Herbarium* 46: 527-536. 2003.

Pentatherum Náb. = *Agrostis* L.

From the Greek *pente* "five" and *ather* "stalk, barb, awn."

Pooideae, Poeae, Agrostidinae, type *Pentatherum olympicum* (Boiss.) Náb., see *Species Plantarum* 1: 61-63. 1753 and *Fl. Fenn.* 5: 29. 1971, *Novosti Sist. Vyss. Rast.* 8: 59. 1971, *Taxon* 41: 556. 1992, *Taxon* 44: 611-612. 1995, *Contributions from the United States National Herbarium* 48: 42-89, 478. 2003.

Pereilema J. Presl = *Lycurus* Kunth

From the Greek *eilema* "a veil, covering, involucre," *eilo* "to be shut, to assemble."

About 3-4 species, tropical and subtropical America, Mexico to Brazil. Chloridoideae, Cynodonteae, Muhlenbergiinae, annual, erect or decumbent, slender, mainly branched at base, often rooting at the lower nodes, sheaths ciliate, ligule membranous, blade auricles ciliate and falcate, leaf blades linear, inflorescence a spiciform or contracted panicle exerted or partially included in upper sheath, clusters of fertile spikelets and several bristles, fertile spikelets subtended by sterile bristle-like spikelets, sterile florets reduced to bristles, glumes ovate subequal or unequal, second glume 1-awned, lemma lanceolate nerved and awned, long apical awn, palea hairy, lodicules truncate, 2-3 stamens, stigmas 2, savannah, disturbed slopes, weedy places, moist sites, seasonally wet areas, hillsides, type *Pereilema crinitum* J. Presl, see *Genera Plantarum* 44. 1789, *Nova Genera et Species Plantarum* 1: 141-142, pl. 45. 1815 [1816], *Reliquiae Haenkeanae* 1: 207-356. 1830, *Enumeratio Plantarum* 1833 and *U.S.D.A. Bull.* 772: 139. 1920, *Contr. U.S. Natl. Herb.* 22: 210. 1921, *Contributions from the United States National Herbarium* 24: 291-556. 1927, *Nat. Pflanz.* 2 ed, 14: 1-168. 1956, *Novon* 2: 81-110. 1992, *Flora Mesoamericana* 6: 286-287. 1994, *American Journal of Botany* 81: 622-629. 1994, *Grasses: Systematics and Evolution* 195-212. 2000, *Flora of Ecuador* 68: 90-92. 2001, *Contributions from the United States National Herbarium* 41: 138-139, 181-182. 2001.

Species

P. beyrichianum (Kunth) Hitchc. (*Muhlenbergia beyrichianum* Kunth; *Pereilema brasilianum* Trin.)

Colombia to Brazil. Annual, slender, stilt-roots from the lower nodes, sheaths scabrid, ligule erose, auricles ciliate, leaf blades linear attenuate, narrow panicle, dense clusters of 2-4 spikelets and 10-15 bristles, glumes equal 2-dentate and membranous, lemma lanceolate membranous, lemma awns straight and rigid, two stamens, rocky slopes, road-banks, see *Syn. Pl.* 1: 72. 1805, *Enumeratio Plantarum Omnium Hucusque Cognitarum* 1: 200. 1833, *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques, Physiques et Naturelles. Seconde Partie: Sciences Naturelles* 6,4(3-4): 382. 1841 and *Contributions from the United States*

National Herbarium 24(8): 385. 1927, *Brittonia* 23(3): 293-324. 1971.

P. ciliatum Fourn. ex Hemsl. (*Pereilema ciliatum* E. Fourn. ex Hemsl.; *Pereilema ciliatum* var. *violaceum* E. Fourn.; *Pereilema setarioides* E. Fourn.)

Mexico. Bristles plumose, see *Biologia Centrali-Americana*; ... *Botany* ... 3: 543. 1885, *Mexicanas Plantas* 2: 93. 1886.

P. crinitum J. Presl (*Pereilema crinitum* var. *cirratum* E. Fourn.; *Pereilema crinitum* var. *crinitum*; *Pereilema setarioides* E. Fourn.)

Mexico to Brazil. Annual, erect, slender, glabrous, mainly branched from the base, stilt-roots from the lower nodes, sheaths slightly furrowed and inflated, falcate auricles not ciliate, ligule membranous, leaf blades linear acuminate, panicle narrow and compact, glumes equal, lemma lanceolate membranous, lemma awns flexuous and soft, 3 stamens, stony places, rocky slopes, lava, along roadsides, see *Reliquiae Haenkeanae* 1(4-5): 233, t. 37, f. a-f. 1830, *Mexicanas Plantas* 2: 93. 1886 and *Brittonia* 23(3): 293-324. 1971, *Taxon* 33: 126-134. 1984.

P. diandrum R.W. Pohl

Costa Rica. Riverbanks, along roadsides, rocky sites, see *Novon* 2(2): 102. 1992.

Periballia Trin. = *Molineria* Colla
(Amaryllidaceae), *Molineria* Parl.,
Molineriella Rouy

From the Greek *periballo* "throw round, put on, put round," possibly in reference to the dispersion of the seeds; see Carl Bernhard von Trinius (1778-1844), *Fundamenta Agrostographiae*. 133. Viennae 1820.

Possibly monotypic or about 2-4 species, Mediterranean. Pooideae, Poodae, Aveneae, annual, solitary or tufted, glabrous, herbaceous, slender, nodes glabrous, auricles present or absent, ligule membranous and fringed or unfringed, leaves flat and linear, plants bisexual, open inflorescence paniculate, spikelets ovoid, 2 florets, 2 keeled glumes persistent and membranous usually shorter than floret, lemmas awnless truncate, 3- to 7-nerved membranous, callus very short and bearded, palea nerved and membranous, 2 lodicules free and membranous, 3 stamens, ovary glabrous, two stigmas, fruit small and longitudinally grooved, each species with different chromosome numbers, sometimes included in and referred to *Deschampsia* P. Beauv., growing in dry sandy places and open habitats, see *Exposition des Familles Naturelles* 1: 134. 1805, *Fundamenta Agrostographiae* 133-134. 1820, *Memorie della Reale Accademia delle Scienze di Torino* 31(Hortus Ripul. App. 2): 331. 1826, *Flora italiana, ossia descrizione delle piante* ... 1: 236.

1850 and *Flore de France* 14: 102. 1913, *Fitologija* 39: 72-77. 1991.

Species

P. involucrata (Cav.) Jonka

Europe, Spain. Panicle lower branches sterile, see *Boletim da Sociedade Broteriana, ser. 2* 63: 29-66. 1990.

P. laevis (Brot.) Asch. & Graebn.

Europe.

P. minuta (L.) Asch. & Graebner (*Aira minuta* L.; *Airopsis minuta* (L.) E. Desv.; *Molineria minuta* (L.) Parl.; *Molineriella minuta* (L.) Rouy)

Mediterranean. Annual, small, loosely tufted, green, erect, slender, ribbed, unbranched, internodes hollow, vestigial auricles, sheath tightly encircling culm, ligule membranous and acute, short linear leaves, pale gray to purple panicles loose and small with spreading branches, chasmogamous spikelets ovoid and shining, florets separated by a short internode, glumes acute and shorter than the lemmas, lemmas lanceolate and denticulate, callus hairy, palea toothed and not keeled, ovary glabrous and oblong, fruit longitudinally grooved or deeply furrowed, weed of disturbed woodland or pasture, moist shallow soils, dry habitats, open habitats, woodland, sometimes placed in the genera *Molineriella* Rouy or *Molineria* Parl., see *Species Plantarum* 1: 64. 1753, *Journal de Botanique, rédigé par une société de botanistes* (Desvaux) 1: 200-201. 1808, *Flora italiana, ossia descrizione delle piante* ... 1: 236-237. 1850, *Synopsis der mitteleuropäischen Flora* 2: 298. 1899 and *Flore de France* 14: 102. 1913.

in English: hairgrass, small hairgrass

in French: petite molinie des sable

in Morocco: sibouss

P. minuta (L.) Asch. & Graebner var. *lanata* Maire

Mediterranean, Morocco. See *Bulletin de la Société d'Histoire Naturelle de l'Afrique du Nord* 33(4): 94. 1942.

Peridictyon Seberg, Frederiksen & Baden

Greek *peri* "around" and *diktyon* "a net."

One species, Balkan Peninsula, Greece, Bulgaria. Pooideae, Triticodae, Triticeae, perennial, densely or loosely tufted, unbranched, auricles present, old basal sheaths fibrous, ligule an unfringed membrane, plants bisexual, inflorescence a single spike, spikelets solitary and sessile, 2 glumes subequal and awned, palea present, 2 ciliate lodicules, 3 stamens, ovary hairy, stony ground, slopes, rocky areas, type *Peridictyon sanctum* (Janka) Seberg, Fred. & Baden, see *Species Plantarum* 1: 73. 1753, *Novi Commentarii Academiae Scientiarum Imperialis Petropolitanae* 14(1): 539. 1770, *Essai d'une Nouvelle Agrostographie* 100, 15, pl. 19,

f. 35. 1812 and O. Seberg, S. Frederiksen, C. Baden and I. Linde-Laursen, “*Peridictyon*, a new genus from the Balkan Peninsula, and its relationship with *Festucopsis* (Poaceae).” *Willdenowia* 21(1-2): 87-104. 1991.

Species

P. sanctum (Janka) Seberg, Fred. & Baden (*Agropyron sanctum* (Janka) Hack. ex Formánek; *Brachypodium sanctum* (Janka) Janka; *Festuca sancta* Janka; *Festucopsis sancta* (Janka) Melderis; *Triticum sanctum* (Janka) F. Herm.)

Balkan Peninsula. Perennial, caespitose, see *Österreichische Botanische Zeitschrift* 21: 250. 1871, *Österreichische Botanische Zeitschrift* 22: 181. 1872, *Verhandlungen des Naturforschenden Vereins in Brünn* 35: 157. 1897 and *Verhandlungen des Botanischen Vereins für die Provinz Brandenburg und die angrenzenden Länder* 76: 42. 1936, *Journal of the Linnean Society, Botany* 76: 319. 1978, *Willdenowia* 19: 99. 1990, *Willdenowia* 21(1-2): 96. 1991, *Systematic Botany* 21(2): 3-15. 1996.

Perlaria Fabr. = *Aegilops* L., *Perlaria* Heist. ex Fabr.

From the Italian *perla* “a pearl.”

Pooideae, Triticeae, Triticinae, see *Species Plantarum* 1: 85. 1753, *Species Plantarum* 2: 1050-1051. 1753, *Enumeratio Methodica Plantarum* (edition 2) 371. 1763, *Flore de France* 3: 601. 1856 and *Feddes Repert.* 91: 225-228. 1980, *Taxon* 41: 555-556. 1992, *Taxon* 44: 611-612. 1995, *Contributions from the United States National Herbarium* 48: 20-23, 478. 2003.

Perobachne J. Presl = *Themeda* Forssk.

Panicoideae, Andropogoneae, Anthistiriinae, type *Perobachne secunda* J. Presl, see *Flora Aegyptiaco-Arabica* 178. 1775, *Reliquiae Haenkeanae* 1(4-5): 348, t. 48. 1830 and *Contributions from the United States National Herbarium* 46: 536, 613. 2003.

Perotis Aiton = *Xystidium* Trin.

From the Greek *peroo* “to mutilate,” *peros* “deficient,” *perosis* “disabling,” in reference to the nature of the small spikelets (often dangerous for the eyes), the glumes are awned and the palea minute; see William Aiton (1731-1793), *Hortus Kewensis*; or, a Catalogue of the Plants cultivated in the Royal Botanic Garden at Kew. 1: 85 and 3: 506. London 1789.

A genus of about 10-13 species, Africa, India, Sri Lanka, Australia, eastern Asia, tropics and subtropics. Chloridoideae, Cynodonteae, annual or sometimes short-lived

perennial, herbaceous, caespitose, leafy, glabrous nodes, solid internodes, auricles absent, ligule a short membrane more or less fringed, leaves lanceolate and narrow, leaf blades with margins often fringed with bristle-like hairs, plants bisexual, inflorescence a terminal single spike-like raceme bearded by the long glume awns, solitary spikelets subsessile to pedicellate and compressed laterally, spikelets bisexual and 1-flowered, one floret perfect, 2 glumes membranous 1-nerved more or less equal and long-awned, lemma acute, minute palea, 2 fleshy and glabrous lodicules, stamens 3, ovary glabrous, 2 stigmas, fruit longitudinally grooved, palatable, the ripe fruits can be harmful to stock, species often ruderal, savannah, sandy soil, open habitats, grassland, rainforest, type *Perotis latifolia* Aiton (*Perotis indica* (L.) Kuntze), see *Hortus Kewensis* 1: 85 and 3: 506. London 1789, *Species Plantarum. Editio quarta* 1: 324. 1797, *Fundamenta Agrostographiae* 102, t. 2. 1820, *De Graminibus unifloris et sesquifloris* 172. Petropoli 1824, *Anales de la Academia de Ciencias Medicas ...* 8: 288. 1871 and *Bulletin de la Société Botanique de France* 66(7): 301. 1919 [1920], *Repertorium Specierum Novarum Regni Vegetabilis* 17: 145. 1921, *Botanical Magazine* 41: 638. 1927, *Bulletin de la Société Botanique de France* 107: 206. 1960, *Austrobaileya* 3(4): 609-614. 1992, *Kew Bulletin* 50(3): 613, f. 1F-G. 1995, *Journal of Biogeography* 27(6): 1385-1401. Nov 2000, Sian Sullivan and Rick Rohde, “On non-equilibrium in arid and semi-arid grazing systems.” *Journal of Biogeography* 29(12): 1595-1618. Dec 2002, *Botanical Journal of the Linnean Society* 148(1): 57-72. May 2005.

Species

P. acanthoneuron Cope

Somalia. Annual, erect or geniculate and ascending, tufted, leaves lanceolate, spikelets ascending, glumes scabrid, awns slender and flexuous, fruit flattened, a weed of cultivation, on sandy soil, see *Kew Bulletin* 50(3): 611, f. 1A-C. 1995.

P. chinensis Gand.

China. See *Bulletin de la Société Botanique de France* 66(7): 301. 1919 [1920].

P. clarksonii Veldkamp

Australia. Annual, on sandy soils, see *Austrobaileya* 3: 609-610. 1992.

P. flavinodula Mez

Africa. See *Repertorium Specierum Novarum Regni Vegetabilis* 17(8-12): 145. 1921.

P. hildebrandtii Mez (*Perotis indica* f. *glabra* Chiov.; *Perotis indica* f. *hirta* Chiov.)

Tropical East Africa. Annual, wiry, slender, geniculate and ascending, tufted to loosely tufted, leaf blades lanceolate to broadly linear, inflorescence spike-like, spikelets horizontal, pedicelled awned spikelets, glumes dissimilar, lower glumes hispid to scabrid, upper glumes smooth, slender

flexuous awns, flattened fruit, little grazing value, a weed of cultivation, along roadsides, bushland, degraded areas, on red sand, dry sandy soils, shrubland, lawns, waste places, see *Repertorium Specierum Novarum Regni Vegetabilis* 17(8-12): 145. 1921.

in East Africa: anyuka

in Nigeria: kkyoi

P. holstii Mez (for the German gardener and plant collector Carl Hugo Ehrenfried Wilhelm Holst, 1865-1894, traveler in East Africa, Tanzania. See P. Hiepko, "The collections of the Botanical Museum Berlin Dahlem (B) and their history." *Englera* 7: 219-252. 1987; A.J.M. Leeuwenberg, "Iso-types of which holotypes were destroyed in Berlin." *Webbia* 19: 861-863. 1965)

East tropical Africa. See *Repertorium Specierum Novarum Regni Vegetabilis* 17(8-12): 145. 1921.

in Thailand: haang maa baa, hang ma ba

P. indica (L.) Kuntze (*Anthoxanthum indicum* L.; *Perotis hordeiformis* Nees ex Hooker & Arnott; *Perotis hordeiformis* Nees ex Trin., nom. illeg., non *Perotis hordeiformis* Nees; *Perotis latifolia* Aiton; *Perotis patula* Nees; *Perotis perottetii* Gand.; *Perotis spicata* (L.) T. Durand & H. Durand; *Saccharum spicatum* L.)

Throughout Southeast Asia, Indonesia, China, Taiwan, Nepal, Sri Lanka, Thailand, India. Annual or short-lived perennial, tufted to loosely tufted, decumbent but not rooting, semierect, stoloniferous, sheaths rolled, short ligule membranous, leaves glabrous, inflorescence a spike-like panicle, feathery flowered, spikelets borne singly on short stalks, 1-flowered, 2 glumes strongly keeled, 3 stamens, stigmas orange, fodder grass grazed by stock at all stages, low grazing value, naturalized in tropical Africa, grows near brackish water, waste places, dry sandy roadsides, see *Species Plantarum* 1: 28, 54. 1753, *Hortus Kewensis* 1: 85. 1789, *The Botany of Captain Beechey's Voyage* 247-248. 1838, *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques, Physiques et Naturelles. Seconde Partie: Sciences Naturel-*

P. leptopus Pilg.

Africa, Tanzania. Annual, soft, delicate, awns green, growing in open places, savannah woodland, see *Notizblatt des Botanischen Gartens und Museums zu Berlin-Dahlem* 11: 804. 1933.

P. patens Gand. (*Perotis patens* var. *parvispicula* Robyns & Tournay; *Perotis scabra* var. *parvispicula* (Robyns & Tournay) Cufod.)

Tropical and southern Africa, Madagascar. Annual or short-lived perennial, variable, light green to glaucous to purplish to reddish brown, loosely tufted to weak, branched or unbranched, open, tough and wiry, erect or geniculate, ascending, decumbent at base, small auricle, leaf sheath glabrous and rounded, ligule short and membranous, leaf blades lanceolate-oblong with a sharp tip, leaves glabrous, inflorescence linear lacking a callus at the base of the spikelet, soft straight spike or raceme, spikelets packed tightly along the rachis, awned, narrowly oblong glumes hispid with purple flexuous awns, ornamental and attractive, weedy grass, used with *Tridax procumbens* L. in stomach troubles, browsed by cattle, very low grazing value, pioneer and poor forage grass, a weed in disturbed areas, waste places, woodland, fallows, along roadsides, open areas, seepages, old cultivated areas, sandy to dry sandy soils, lawns, poor soils, bushveld, see *De Graminibus unifloris et sesquifloris* 172. 1824 and *Bulletin de la Société Botanique de France* 66(7): 301. 1919 [1920], *Bulletin du Jardin Botanique de l'État* 25: 241. 1955.

in South Africa: katstertgras, per-aar-perotis, schwanzgras
in Yoruba: ero yewa, iru egbara

P. rara R. Br. (*Saccharum rarum* (R. Br.) Poir.)

Tropical Asia, Southeast Asia, Australia. Annual or rarely perennial or biennial, purplish, slender, culms geniculate or erect, branched at the base, tufted, small, leaves lanceolate and flat, inflorescence a slender feathery raceme, spikelets subulate and finally reflexed, unequal glumes narrow-linear and scabrous, lower glume with a fine scabrous awn, lemma soft and 1-nerved, very small anthers, spear-like seeds, nutritious fodder, palatable when young, useful for erosion control, the ripe fruits can be harmful to stock and horses, decorative in flower, grows on red sandy soils, see *Species Plantarum* 1: 54. 1753, *Prodromus Florae Novae Hollandiae* 172. 1810, *Encyclopédie Méthodique. Botanique ... Supplément* 2: 70. 1811.

in English: Comet grass, Comet River grass (Comet River, a tributary of Mackenzie River, Queensland, Australia)

P. somalensis Chiov.

Somalia. Annual, erect, stout, leaves linear, large pilose spikelets ascending, glumes pilose to hispid, very long flexuous awns, fruit flattened.

P. vaginata Hack.

Namibia, Zaire, Tanzania, Zambia, Burundi. Annual, robust, creamy white, loosely tufted or single-stemmed, light green sheath at the node, dark green leaves smooth, inflorescence white, awns green, grows in open habitats, savannah, sandy soils, see *Genera Plantarum* 23. 1776, *Icones et Descriptiones Graminum Austriacorum* 4: 15. 1809 and *Bulletin de l'Herbier Boissier, sér. 2*, 6(9): 704. 1906, *Acta Bot. Neerl.* 15: 157. 1966.

Perrierbambus A. Camus

After the French botanist Joseph Marie Henri Alfred Perrier de la Bâthie, 1873-1958 (Paris), from 1896 to 1933 in Madagascar, among his works are *La végétation malgache*. Marseille and Paris 1921, *Les plantes introduites à Madagascar*. Toulouse 1933, *Catalogue des plantes de Madagascar*. Tananarive 1930-1940, *Biogéographie des plantes de Madagascar*. Paris 1936, *Le Tsaratanana, l'Ankaratra et l'Andringitra*. Tananarive 1927 and *Les Mélastomacées de Madagascar*. Toulouse 1932, contributed to Henri Humbert (1887-1967), *Flore de Madagascar et des Comores*. 1936-1967. See Alfred Lacroix, *Notice historique sur quatre botanistes*, etc. [On P.H. Lecomte, H. Perrier de la Bâthie, E.M. Heckel and H. Jumelle 1938; J.H. Barnhart, *Biographical notes upon botanists*. 3: 70. 1965; Pierre Boiteau, *Dictionnaire des noms malgaches de végétaux*. Micro-édition no. 85 04 10, Archives et Documents. Muséum National

d'Histoire Naturelle. 1985 and *Index des noms scientifiques avec leur équivalents malgaches*. Micro-édition no. SN 80 115 411, Archives et Documents. Muséum National d'Histoire Naturelle. 1985; E.M. Tucker, *Catalogue of the library of the Arnold Arboretum of Harvard University*. Cambridge, Mass. 1917-1933; Laurence Dorr, *Plant Collectors in Madagascar and the Comoro Islands*. 1997; Gordon Douglas Rowley, *A History of Succulent Plants*. 1997.

Two species, Madagascar. Bambusoideae, Bambusodae, Bambuseae, Hickeliinae, perennial, monopodial, shrubby or bushy, drooping, woody, persistent, branched, rhizomes leptomorph, leaves deciduous, involucre leaf blades protecting the inflorescence, plants bisexual, inflorescence racemose with 1-3 spikelets, spikelets one-flowered, glumes 1-2 very unequal, lemma rounded, palea present, 3 free and membranous lodicules, 5-6 stamens, ovary hairy and beaked, 2-3 stigmas, in dry woodland, type *Perrierbambus madagascariensis* A. Camus, see *Genera Plantarum* 1: 236. 1789, *Flora Boreali-Americana* 1: 73. 1803, *Reliquiae Haenkeanae* 1(4-5): 256. 1830, *Journal of the Linnean Society, Botany* 19: 31. 1881 and *Bulletin de la Société Botanique de France* 71: 697-701. 1924, *Bulletin de la Société Botanique de France* 72: 541-542. 1925, *Archives du Muséum d'Histoire Naturelle*, sér. 6, 12: 603. 1935, W.C. Lin, "The species and distribution of bamboos in the Republic of Malagasy (Madagascar), East Africa." *Special Bulletin of Taiwan Forestry Research Institute* no. 4. 1967.

Species

P. madagascariensis A. Camus

Madagascar. See *Bulletin de la Société Botanique de France* 71: 699, f. 1-13. 1924.

P. tsarasatrensis A. Camus

Madagascar. See *Bulletin de la Société Botanique de France* 71: 699, f. 1-13. 1924, *Bulletin de la Société Botanique de France* 71: 700-701, f. 14-22. 1925.

Perulifera A. Camus = *Pseudechinolaena* Stapf

From the Latin *perula* "a little wallet, pocket" and *fero, fers, tuli, latum, ferre* "to bear, carry."

One species, Madagascar. Panicoideae, Panicoideae, Paniceae, Panicinae, annual, herbaceous, unarmed, branched, leaf sheath inflated, auricles absent, ligule unfringed and membranous, plants bisexual, inflorescence spicate, sterile spikelets very reduced, 2 glumes unequal, palea present, 2 fleshy lodicules, 3 stamens, ovary glabrous, 2 reddish stigmas, type *Perulifera madagascariensis* A. Camus, see *Fl. Brit. India* 7: 28, 58. 1896 and *Flora of Tropical Africa* 9: 494-495. 1919, *Bulletin de la Société Botanique de France* 74: 889. 1928, *Flora Mesoamericana* 6: 298-299. 1994,

Contributions from the United States National Herbarium 46: 542-543. 2003.

Species

P. madagascariensis A. Camus (*Pseudechinolaena madagascariensis* (A. Camus) Bosser)

Madagascar. See *Bulletin de la Société Botanique de France* 74: 889. 1928, *Adansonia* 15(1): 127. 1975.

Petriella Zotov = *Ehrharta* Thunb., *Petriella* Curzi (Fungi), *Zotovia* Edgar & Connor

For the Scottish (b. Morayshire) botanist Donald Petrie, 1846-1925, went to Australia in 1868, in New Zealand 1874-1925, in 1894 chief inspector of schools, Auckland, New Zealand, wrote "List of the flowering plants indigenous to Otago." *Trans. Proc. New Zealand Inst.* 1896, "The Gramina of the Subantarctic Islands of New Zealand." *The Subantarctic Islands of New Zealand* 2: 472-481. 1909 and "Some additions to the Flora of the Subantarctic Islands of New Zealand." *T.N.Z.I.* 47: 59-60. 1915. See J.H. Barnhart, *Biographical notes upon botanists*. 3: 76. 1965; Thomas Frederick Cheeseman, *Manual of the New Zealand Flora*. xxvii. Wellington 1906; I.H. Vegter, *Index Herbariorum*. Part II (5), *Collectors N-R*. Regnum Vegetabile vol. 109. 1983; I.C. Hedge and J.M. Lamond, *Index of Collectors in the Edinburgh Herbarium*. Edinburgh 1970.

Two species, New Zealand, Antarctic. Bambusoideae, Oryzodae, Ehrharteae, perennial, woody or herbaceous, persistent, rhizomatous, compact, unarmed, branching intravaginal, auricles present or absent, ligule a fringed membrane, plants bisexual, contracted inflorescence racemose or paniculate, spikelets solitary and pedicellate, spikelets flattened and imbricate, two glumes subequal or unequal, palea present, 2 lodicules free and membranous, two stamens, ovary glabrous, 2 white stigmas, species of open habitats, mountains, open areas, wet places, alpine, usually referred to *Zotovia* Edgar & Connor, *Ehrharta* Thunb. or *Tetrarrhena* R. Br., type *Petriella colensoi* (Hook.f.) Zotov, see *Kongl. Vetenskaps Academiens Handlingar* 40: 217, pl. 8. 1779, *Flora Novae-Zelandiae* 1: 288, t. 65a. 1853, *Transactions and Proceedings of the New Zealand Institute* 12: 356, t. 10. 1880 and *The Subantarctic Islands of New Zealand* 2: 472. 1909, *Transactions and Proceedings of the New Zealand Institute* 43: 253. 1911, *Transactions and Proceedings of the Royal Society of New Zealand* 73: 235-236. 1943, *New Zealand Journal of Botany* 36: 568-586. 1998, *Contributions from the United States National Herbarium* 39: 56. 2000.

Species

P. colensoi (Hook.f.) Zotov (*Ehrharta colensoi* Hook.f.; *Microlaena colensoi* (Hook.f.) J.C. Sm.; *Microlaena colensoi*

(Hook.f.) Mez, nom. illeg., non *Microlaena colensoi* (Hook.f.) Mez; *Zotovia colensoi* (Hook.f.) Edgar & Connor)

New Zealand. See *Flora Novae-Zelandiae* 1: 288, t. 65a. 1853 and *Trans. & Proc. New Zealand Inst.* 43: 253. 1911, *Repertorium Specierum Novarum Regni Vegetabilis* 17(19-30): 292. 1921, *Transactions and Proceedings of the Royal Society of New Zealand* 73: 236. 1943, *New Zealand Journal of Botany* 36: 569, 571-573, f. 4. 1998.

P. thomsonii (Petrie) Zotov (*Ehrharta thomsonii* Petrie; *Microlaena thomsonii* (Petrie) Petrie; *Zotovia thomsonii* (Petrie) Edgar & Connor)

New Zealand. See *Prodromus Florae Novae Hollandiae* 210. 1810, *Transactions and Proceedings of the New Zealand Institute* 12: 356, t. 10. 1880 and *The Subantarctic Islands of New Zealand* 2: 472. 1909, *Transactions and Proceedings of the Royal Society of New Zealand* 73: 235. 1943, *New Zealand Journal of Botany* 36: 569, 573-575, f. 3. 1998.

Petrina J.B. Phipps = *Danthoniopsis* Stapf

Arundinelleae, type *Petrina pruinosa* (C.E. Hubb.) J.B. Phipps, see *Hooker's Icones Plantarum* 31: t. 3075. 1916, *Bulletin of Miscellaneous Information Kew* 1934: 436. 1934, *Kew Bulletin* 1949: 351. 1949, *Kirkia* 4: 117-118. 1964, *Kirkia* 5: 235-258. 1966, *Kew Bulletin* 21(1): 123. 1967, *Annals of the Missouri Botanical Garden* 75: 866-873. 1988.

Peyritschia Fournier

Named for the Austrian botanist Johann (Joannes) Joseph Peyritsch, 1835-1889, physician, M.D. Wien 1864, professor of botany; see J.H. Barnhart, *Biographical notes upon botanists*. 3: 77. 1965; T.W. Bossert, *Biographical dictionary of botanists represented in the Hunt Institute portrait collection*. 308. 1972; Ida Kaplan Langman, *A Selected Guide to the Literature on the Flowering Plants of Mexico*. 581. Philadelphia 1964; Ethelyn Maria Tucker, *Catalogue of the library of the Arnold Arboretum of Harvard University*. Cambridge, Mass. 1917-1933.

About 2-5 species, Mexico, Colombia, Venezuela, Costa Rica. Pooideae, Poeae, Aveninae, or Poodae, Aveneae, perennial, herbaceous, auricles absent, ligule an unfringed membrane, plants bisexual, inflorescence loosely paniculate, slender panicle contracted, spikelets flattened 2-flowered, two glumes more or less equal or subequal, lemma bilobed, palea present, 2 free and membranous lodicules, 2 stamens, 2 stigmas, wet places, similar to *Graphephorum*, sometimes referred to *Trisetum*, type *Peyritschia koelerioides* (Peyr.) E. Fourn., see *Species Plantarum* 1: 63, 79, 81. 1753, *Syn. Pl.* 1: 97. 1805, *Essai d'une Nouvelle Agrostographie* 43, 91. 1812, *Mexicanas Plantas* 2: 106, 109-

Mexico. See *Nouveau Bulletin des Sciences, publié par la Société Philomatique de Paris* 2: 189. 1810, *Linnaea* 30(1): 5-6. 1859, *Bull. Soc. Bot. France* 24: 181. 1877, *Journal of the Linnean Society, Botany* 19: 96. 1881, *Mexicanas Plantas* 2: 109-111. 1886 and *Rhodora* 8(89): 89. 1906.

P. pringlei (Scribn.) S.D. Koch (*Deschampsia pringlei* Scribn.; *Trisetum kochianum* Hern. Torres)

Mexico. Lemma geniculate awned from lower half, forage, see *Proceedings of the Academy of Natural Sciences of Philadelphia* 43(2): 300-301, t. 13, f. 1, 1a. 1891 and *Brittonia* 23(3): 293-324. 1971, *Taxon* 28(13): 233. 1979, *Phytologia* 61(7): 454. 1987.

Phacellaria Steudel = *Chloris* Sw.,
Phacellaria Benth. (Santalaceae), *Phacellaria*
Willd. ex Steud.

Greek *phakelos* "a faggott, bundle."

Chloridoideae, Cynodonteae, Chloridinae, see *Nova Genera et Species Plantarum seu Prodromus* 25. 1788, *Prodromus Florae Novae Hollandiae* 305. 1810, *Nomenclator Botanicus. Editio secunda* 2: 343. 1841, *Genera Plantarum* 3: 219, 229. 1880 and *Contributions from the United States National Herbarium* 41: 39-52, 182. 2001.

Phacelurus Griseb. = *Jardinea* Steud.,
Pseudophacelurus (Steud.) A. Camus,
Pseudovossia A. Camus, *Thyrasia* Stapf

From the Greek *phakelos* "a cluster, bundle" and *oura* "tail."

About 7-9 species, Africa, Southeast Asia, Japan, Mediterranean. Panicoideae, Andropogonodae, Andropogoneae, Rottboelliinae, perennial, variable, robust, stout, herbaceous, canelike, coarse, more or less branched, ligule an unfringed membrane, leaves linear and narrow, plants bisexual, inflorescence terminal, more or less flattened digitate racemes bearing pairs of sessile and pedicellate spikelets, bisexual spikelets, the lower glume of the pedicellate spikelet awnless, lower floret male or barren, 2 glumes subequal, lower glume membranous to coriaceous, 2 free and fleshy lodicules, 3 stamens, ovary glabrous, 2 stigmas, shade species or open habitats, sandy riverbanks, moist places, swampy areas, grassland, woodland, related and similar to *Ischaemum*, type *Phacelurus digitatus* (Sibth. & Sm.) Griseb., see *Species Plantarum* 2: 1049. 1753, *Supplementum Plantarum* 13, 114. 1781 [1782], *Prodromus Plantarum Indiae Occidentalis* xiv, 11. 1825, *Voyage autour du Monde* 2: 64, f. 14. 1829 [1831], *Journal of the Asiatic Society of*

Phaenanthoecium C.E. Hubb.

From the Greek *phaino*, *phaeino* "bring to light, reveal" and *anthos* "flower," *anthoecium*, referring to the lemmas.

One species, Yemen, Ethiopia. Arundinoideae, Danthonieae, perennial, tufted, branched, decumbent, herbaceous, slender, trailing, sometimes rooting at the nodes and weakly ascending, leaves stiff and spreading, ligule fringed, plants bisexual, inflorescence a single short raceme on a slender axis, spikelets pedicellate to shortly pedicellate, uppermost floret reduced, two short oblong glumes membranous and long hilum, upper glumes 3-4-nerved, lemmas membranous 9-nerved and bilobed with long-awned lobes, palea present, 2 lodicules ciliate, 3 stamens, ovary glabrous, 2 stigmas, type *Phaenanthoecium koestlinii* (Hochst. ex A. Rich.) C.E. Hubb., see *Flore Française. Troisième Édition* 3: 32. 1805 and *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 37: (Beibl. 85) 61. 1906, *Bulletin of Miscellaneous Information Kew* 1936(5): 329-330. 1936, *Flora of Ethiopia and Eritrea* 7: 73-74. 1995.

Species

P. koestlinii (Hochst. ex A. Rich.) C.E. Hubbard (also ***kostlini***, ***kostlinii***, ***koestlini***) (*Danthonia koestlini* Hochst. ex A. Rich.; *Phaenanthoecium koestlinii* (A. Rich.) C.E. Hubb.; *Streblochaete koestlinii* Hochst. ex A. Rich.)

Northeast tropical Africa. Perennial, slender, trailing, tufted, leaves very narrow, imbricate sheaths, spikelets 5-6-flowered, two glumes more or less equal, lemmas with a ciliate callus and a bent and twisted awn, fleshy lodicules, see *Tentamen Florae Abyssinicae ...* 2: 421. 1850 and *Bulletin of Miscellaneous Information Kew* 1936(5): 330. 1936.

Phaenosperma Munro ex Benth. = Phaenosperma Benth.

From the Greek *phaino* "to shine, to appear" and *sperma* "seed."

One species, Asia, India, China, Korea, Assam to Japan. Bambusoideae, Oryzodae, Phaenospermateae, perennial, herbaceous, robust, rhizomatous, leaf blades obliquely nerved, auricles absent, ligule membranous and unfringed, plants bisexual, inflorescence an open panicle, spikelet 1-flowered and pedicellate, 2 glumes unequal or subequal, lemma entire and membranous, palea 2-nerved, 3 free and membranous lodicules, stamens 3, ovary glabrous, 2 plumose stigmas, shade or partial shade, type *Phaenosperma globosa* Munro ex Benth., see *Journal of the Linnean Society, Botany* 19(115-116): 59-60. 1881, *Bulletin of the Torrey*

Botanical Club 22: 7. 1895 and *Acta Phytotaxonomica et Geobotanica* 11: 183. 1942, *Botanical Magazine* (Tokyo) 69: 311-315. 1956, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 78: 195-207. 1959, *Kew Bulletin* 40(3): 478. 1985, *Kew Bulletin* 42(3): 707-709. 1987.

Species

P. globosa Munro ex Benth. (*Garnotia japonica* Hack.; *Phaenosperma globosa* Benth.)

East Asia. Perennial, glumes membranous, lemma 3-7-nerved, grain with apical knob, see *Voyage autour du Monde* 2: 132. 1832 [1829] and *Österreichische Botanische Zeitschrift* 52(2): 55. 1902, *Kew Bulletin* 27: 515-562. 1972 [A systematic treatment of *Garnotia* (Gramineae)].

Phalarella Boiss. = *Phleum* L.,
Pseudophleum Dogan

The diminutive of *Phalaris* L.

Pooideae, Poeae, Alopecurinae, see *Species Plantarum* 1: 59. 1753, *Familles des Plantes* 2: 31, 607. 1763, *Essai d'une Nouvelle Agrostographie* 24, 25, 37, 146, 158, 173, t. 7, f. 5. 1812, *Observations sur les Graminées de la Flore Belgique* 131. 1823 [1824], *Hortus Regius Botanicus Berolinensis* 1: 65. 1827, *Diagnoses plantarum orientalium novarum* 1(5): 70. 1844, *Flora Rossica* 4(13): 455. 1852, *Synopsis der mitteleuropäischen Flora* 2: 154. 1899 and *Contr. U.S. Nat. Herb.* 24: 161, 167. 1925, *Acta agriculturae scandinavica* 1(1): 1-138. 1975, *Acta Botanica Academiae Scientiarum Hungaricae* 23(12): 135. 1977, *Journal of the Linnean Society, Botany* 76(4): 337-340. 1978, *Notes from the Royal Botanic Garden, Edinburgh* 40(1): 75. 1982, *Flora Mesoamericana* 6: 242. 1994, *Plant Systematics and Evolution* 203: 11-25. 1996, *Willdenowia* 29(11-12): 45-49. 1999, *Contributions from the United States National Herbarium* 48: 478, 491-494. 2003.

Phalaridantha St.-Lag. = *Baldingera* P.
Gaertn., B. Mey. & Scherb., *Digraphis* Trin.,
Phalaris L., *Phalaroides* Wolf

From the genus *Phalaris* and *anthos* "flower."

Pooideae, Poeae, Phalaridinae, see *Species Plantarum* 1: 54-55. 1753, *Genera Plantarum* 11. 1776, *Methodus Plantas Horti Botanici ...* 201. 1794, *Flora der Wetterau* 1: 43, 96. 1799, *Fundamenta Agrostographiae* 127. 1820, *Bulletin Botanique [Genève]* 1: 220. 1830, *The Grasses of Britain* 188, t. 82. 1845, *Synopsis Plantarum Glumacearum* 1: 11. 1853, *Étude des Fleurs*, éd. 8, 2: 900. 1889 and *Iowa State College Journal of Science* 36(1): 1-96. 1961, *Taxon* 40(3): 475-485. 1991, *Taxon* 41: 567. 1992, *Flora Mesoamericana*

Phalaridium Nees & Meyen =
Dissanthelium Trin.

Referring to the genus *Phalaris* L.

Pooideae, Poeae, Poinae, type *Phalaridium peruvianum* Nees & Meyen, see *Linnaea* 10(3): 305. 1836, *Gramineae* 29. 1841, *Nova Acta Phys.-Med. Acad. Caes. Leop.-Carol. Nat. Cur.* 19(Suppl. 1): 161. 1843 and *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 37: 378. 1906, *Kurtziana* 25: 157-163. 1997, *Contributions from the United States National Herbarium* 48: 271-273, 478. 2003.

Phalaris L. = *Baldingera* Gaertner, Meyer & Scherb., *Digraphis* Trin., *Endallex* Raf.,
Phalaridantha St-Lager, *Phalaroides* Wolf,
Typhoides Moench

From the Greek *phalaris*, *phaleris*, used by Dioscorides for a kind of grass, ribbon grass, canary grass; *phalaros* "having a patch of white, crested," *phalos* "shining, bright, white, a part of the helmet"; Latin *phalaris* or *phaleris*, *idis* for the plant canary-grass; see Carl Linnaeus, *Species Plantarum*. 54. 1753 and *Genera Plantarum*. Edition 5. 29. 1754.

About 15-22 species, warm temperate areas. Pooideae, Poodae, Aveneae, or Pooideae, Poeae, Phalaridinae, annual or perennial, erect and leafy, rhizomatous or tufted, erect or decumbent, stems flimsy to robust, herbaceous, unbranched above, internodes hollow, auricles absent, sheaths rounded, ligule an unfringed membrane-like, leaf blades linear or oblong to linear-lanceolate, plants bisexual, a false spike or a compact panicle, spikelets ovate and compressed laterally, vestigial foliar structure subtending the inflorescence present or absent, spikelets 3-flowered, 1 shiny fertile floret, the 2 lower florets sterile reduced to villous scales, 2 glumes more or less equal and keel-winged, upper glume usually enclosing florets, sterile lemmas linear, lower lemmas rudimentary and awnless, shiny fertile lemma keeled and acute, hairy callus absent, palea present, 2 lodicules free and membranous, 3 stamens, ovary glabrous, anthers pale yellow, 2 white stigmas plumose, fruit small and compressed, weed species, fodder, native pasture species, grain crop species, food for bird seed and valuable stock feed, annual species seeds are used in bird seed, attractive seed heads and foliage, some species have caused poisoning to livestock, many species contain Dimethyltryptamine (DMT), the prototype member of the tryptamine subclass of indole derivatives, alkaloid-contents vary

considerably in both *Phalaris arundinacea* and *Phalaris aquatica*, please read “DMT: Dose-response study of N,N-dimethyltryptamine in humans: I Neuroendocrine, autonomic, and cardiovascular effects.” by R.J. Strassman and C.R. Qualls, and “II Subjective effects and preliminary results of the new rating scale” in *Archives of General Psychiatry*. 51(2): 85-97 and 98-108. 1994, can tolerate floods and extreme drought, found in damp soils and swamps, open habitats, grasslands, weedy places, type *Phalaris canariensis* L., see *Species Plantarum* 1: 54-55. 1753, *Gen. Pl.* edition 5. 29. 1754, *Genera Plantarum* 11. 1776, *Methodus Plantas Horti Botanici ...* 201. 1794, *Flora der Wetterau* 1: 43, 96. 1799, *Fundamenta Agrostographiae* 127. 1820 [Jan], *Bulletin Botanique [Genève]* 1: 220. 1830, *Étude des Fleurs*, éd. 8, 2: 900. 1889 and *Iowa State College Journal of Science* 36(1): 1-96. 1961, *Taxon* 40(3): 475-485. 1991, *Taxon* 41: 567. 1992, *Flora Mesoamericana* 6: 236-237. 1994, *Webbia* 49(2): 265-329. 1995, *Taxon* 44: 611-612. 1995, *Am. North America and southern South America. Annual, tufted, slender or robust, erect, smooth, unbranched, without rhizomes, fibrous roots, ligule membranous, leaf blade flat and scabrid, no auricles, sheaths not keeled, uppermost leaf sheath more or less inflated, dense cylindrical to narrow-oblong purplish panicle, vestigial foliar structure subtending the inflorescence usually present, spikelets imbricate

and chasmogamous, proximal incomplete florets 2 per spikelet, hermaphrodite florets 1 per spikelet, sterile florets subequal, female-fertile floret densely pubescent, glumes with keel narrowly winged, lemmas sparsely hairy to silky hairy, ovary glabrous, fruit compressed, fodder, weed, please read E. Odriozola, C. Campero, T. Lopez, R. Marin, G. Casaro, M. Andrada, "Neuropathological effects and deaths of cattle and sheep in Argentina from *Phalaris angusta*." in *Vet. Human Toxicol.* 33(5): 465-467. 1991, Renato Silva de Sousa and Luiz Francisco Irigoyen, "Experimental poisoning by *Phalaris angusta* (Gramineae) in cattle." *Pesquisa Veterinaria Brasileira*. July Dec 19(3-4): 116-122. 1999, common on floodplains, pasture, lands subject to flooding, disturbed places, occurs under wet conditions, disturbed swamps, on low-lying grounds, wet sites, wet sandy clay, open habitats, brown wet sandy clay, cultivated and fallow lands, see *Encyclopédie Méthodique. Botanique ... Mediterranean. Perennial bunchgrass, strong, slender to robust, slightly spreading, more or less densely to sparsely clumped, erect or geniculate, glabrous, deep-rooted, rhizomatous with short and contracted knotted rhizomes, internodes swollen near base of stem and more or less tuberous, no auricles, leaf sheath smooth and rounded, ligule

membranous and obtuse to rounded, blade flat, leaves narrow-acuminate, numerous elliptic-oblong spikelets in a dense and lobed spike-like inflorescence, panicle cylindrical to ovoid-cylindrical, vestigial foliar structure subtending the inflorescence present or absent, florets not awned, glumes subequal and narrowly winged above, sterile lemmas subequal, fertile lemma ovate and downy or silky, palea 2-nerved or veined, ovoid fruit compressed, invasive weed species widely naturalized elsewhere, palatable, competitive, perennial pasture, cultivated fodder grass, useful forage grass, agricultural crop, used for hay and silage, useful in the control of many serious weeds, useful for soil conservation purposes, may be toxic or poisonous, *Phalaris* staggers sometimes, some varieties tolerant of prolonged heavy grazing, tolerates flooding and waterlogging, drought-tolerant, common along rivers, open areas, heavy soils, sandy loam, creek banks, wet ground by streams and channels, seasonally dry places, drain margins of roadsides, moist meadows, moist fields, deep soil, coastal hillsides, waste ground, subtropical winter rainfall climates, see *Species Plantarum 1*: 55. 1753, *Centuria I. Circumboreal, temperate Eurasia, North America. Perennial or annual, tall, tufted, sod-forming, herbaceous, semi-aquatic, highly variable species often densely colonial, erect or geniculate, very robust and sturdy, smooth, sometimes rooting at the lower nodes, rhizomatous with long creeping rhizomes, sheath smooth and rounded, ligule membranous, no auricles, blade glabrous and flat, dense or loose cylindrical erect or nodding panicle, chasmogamous spikelets oblong and crowded, vestigial foliar structure subtending the inflorescence usually present, 2 sterile florets scale-like and villous, subequal glumes not winged and narrow-lan-

ceolate, fertile lemma narrow-oblong and glossy, sterile lemmas villous, palea 2-nerved, ovary glabrous, grain dark to gray-black, spreads by seeds or by creeping rhizomes, extremely aggressive and very vigorous weed widely naturalized elsewhere, groundcover, ornamental, invasive tendency, hay, cultivated fodder, planted as a forage crop in some areas, native pasture species, useful for grazing when young, a potential source of fiber (for pulping) and fuel, dense stands of this grass have little value for wildlife, have caused poisoning to mammals, a serious weed along irrigation banks and ditches, used for erosion control and to revegetate strip mine spoils, good for stream bank stabilization, excellent for rehabilitating waterways, resistant to flooding and also to temporary droughts, usually found along streams, disturbed habitats, sandy alluvium, in wet situations, poorly drained soils subject to flooding, margins of cultivated fields, in moist to seasonally wet sites, shores, wet meadows, alluvial meadows, wet and boggy soils, wetlands and riparian areas, in shallow marshes or beside water, ponds, in marshy soils, in open seepage sites, wet ditches, brackish tidelands, chaparral, open flat meadow, irrigation banks and ditches, irrigation channels, lakes, see *Species Plantarum* 1: 54-55. 1753, *Hortus Kewensis*; or, a *Catalogue ... in English: short-spike Canary grass

in Danish: kortakset kanariegræs

in Morocco: alpiste, zwân, tigurramîn, ddemiya, fazwât

P. californica Hook. & Arn.

North America, U.S., California. Perennial, in wetlands or nonwetlands, see *The Botany of Captain Beechey's Voyage* comprising an account of the Plants collected by Messrs. Lay and Collie ... during the voyage to the Pacific and Bering's Strait, performed in H.M.S. *Blossom* ... 1825-1828. 1: 161. London [1830-] 1841 and *Webbia* 49(2): 312. 1995.

in English: California Canary grass

P. canariensis L. (*Phalaris avicularis* Salisb.; *Phalaris canariensis* f. *bracteata* Jansen & Wacht.; *Phalaris canariensis* f. *colorata* Jansen & Wacht.; *Phalaris canariensis* f. *vivipara* Junge; *Phalaris canariensis* subsp. *typica* Posp.; *Phalaris canariensis* var. *debilis* Toel & Rohlena; *Phalaris canariensis* var. *nigra* Stokes; *Phalaris canariensis* var. *subcylindrica* Thell.; *Phalaris canariensis* var. *tenuis* Jansen & Wacht.; *Phalaris canariensis* var. *villosula* Jansen & Wacht.; *Phalaris ovata* Moench)

Western Mediterranean. Annual or short-lived perennial, herbaceous, non rhizomatous, glabrous, flimsy to robust, clumped or solitary, culms erect or sometimes geniculate at the base, often branched near the base or unbranched, ligule membranous and entire, sheaths usually smooth and rounded, no auricles, leaves linear and glabrous to scabrous, compact panicle spike-like ovoid or ovoid-oblong, spikelets obovate and compressed, thick pedicels, vestigial foliar structure subtending the inflorescence usually present, chas-

mogamous spikelets, hermaphrodite floret 1 per spikelet, proximal incomplete florets 2 per spikelet, sterile florets thin and papery to foliaceous, glumes more or less equal oblanceolate and with a winged keel, shiny-yellow fertile lemma pubescent or hairy, sterile lemmas equal, palea 2-nerved, glossy grain elliptic and compressed, grown from scattered birdseed, weed species widely naturalized elsewhere, fodder, forage, hay, palatable to stock, cultivated, potential as cereal, grain crop, the canary seed of commerce, grains used in bladder troubles and in placental retention, usually found on disturbed places and sandy soils, irrigation ditches, weedy areas, railroads, cultivated lands, waste places and moist waste places, wet embankments, in open habitats, along roadsides, in dry habitats, pastures, on wet stream banks, gardens, see *Species Plantarum* 1: 54-55. 1753, *Methodus Plantas Horti Botanici* ... 208. 1794, *Prodromus stirpium in horto ad Chapel Allerton vigentium* 17. 1796, *A Botanical Materia Medica* 1: 135. 1812, *Flora des Oesterreichischen Küstenlandes* 1: 59. 1897 and *Sitzungsberichte der Königlichen Böhmisches Gesellschaft der Wissenschaften, Mathematisch-Naturwissenschaftliche Classe* 49: 1. 1902, *Jahrbuch der Hamburgischen Wissenschaftlichen Anstalten* 30: 123. 1912, *Vierteljahrsschrift der Naturforschenden Gesellschaft in Zürich* 56: 271. 1912, *Nederlandsch Kruidkundig Archief. Mediterranean. Annual, quick growing, tufted or clumped or solitary, glabrous, flimsy, very slender to robust, erect or geniculate, articulate and ascending stems, branched or unbranched, sheaths glabrous, no auricles, ligule membranous or hyaline, blade flat, leaves lanceolate and glabrous, spike-like green panicle dense and cylindrical or

oblong-cylindrical, chasmogamous spikelets, terminal seed head not lobed, spikelets imbricate and compressed, vestigial foliar structure subtending the inflorescence usually present, one sterile floret, narrow oblong glumes with a winged keel or a toothed-erose wing margin, fertile lemma downy and oblong to narrow-ovate, ovary glabrous, fruit compressed, impermeable seed coat, a common weed of cultivation widely naturalized elsewhere, weed of wheat, a pasture species, palatable, succulent and nutritive, fodder, forage for livestock or for birdseed, grown for birdseed, when young palatable to stock, suitable for hay, may be toxic or very poisonous in its young stage but is safe when old and dried, usually found in disturbed areas and moist habitats, in wasteland, in poor sandy soils, stony places, roadsides, fields, orchards, poor pasture, damp areas, ballast, damp bare soil, see *Centuria I. Plantarum* ... 4. 1755, *Amoenitates Academicae*... 4: 264. 1759, *Observationes Botanicae* 3: 8. 1783, *Prodromus Plantarum Capensium*, ... 19. 1794, *Methodus Plantas Horti Botanici* ... 208. 1794, *Species Graminum* 1828-1836, *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Mediterranean and southwestern Asia. Annual, tufted, glabrous, herbaceous, robust, erect or geniculate at the base, at first weak and decumbent, leafy, branched at base, sheaths striate and not keeled, ligule membranous to hyaline, no auricles, blade scabrous and flat, dense cylindrical panicle with spikelets of 2 kinds, both fertile and sterile spikelets within the same inflorescence, chasmogamous, sterile spikelets very variable, sessile fertile spikelet surrounded by a cluster of reduced sterile spikelets, fertile spikelet flattened, vestigial foliar structure subtending the inflorescence usually present, glumes hard with a tooth-like wing and a bristle-like apex, fertile lemma glabrous and shining, ovary glabrous, close to *Phalaris coerulescens* Desf., when young palatable to stock, of little value for fodder, a crop weed widely naturalized elsewhere, common in disturbed places and open habitats, in shallow drainage, roadsides, in roadside ditch, ballast, waste ground, deep loamy soils, along edge of cultivated fields, on heavy black cracking soil, rubbish dump, see *Species Plantarum, Editio Secunda* 2: 1665. 1763, *Flore Française* 3: 566. Paris 1778, *Mantissa* 2: 216. 1824, *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques, Physiques et Naturelles. Phalaroides Wolf = *Digraphis* Trin., *Phalaris* L., *Typhoides* Moench

Resembling the genus *Phalaris* L.

Pooideae, Poaceae, Phalaridinae, see *Species Plantarum* 1: 54-55. 1753, *Genera Plantarum* 11. 1776, *Methodus Plantas Horti Botanici ...* 201. 1794, *Flora der Wetterau* 1: 43, 96. 1799, *Fundamenta Agrostographiae* 127. 1820, *Bulletin Botanique [Genève]* 1: 220. 1830 and *Iowa State College Journal of Science* 36(1): 1-96. 1961, *Taxon* 40(3): 475-485. 1991, *Taxon* 41: 567. 1992, *Flora Mesoamericana* 6: 236-237. 1994, *Webbia* 49(2): 265-329. 1995, *Taxon* 44: 611-612. 1995, *Contributions from the United States National Herbarium* 48: 270-271, 479-488, 684. 2003.

Phalona Dumort. = *Cynosurus* L., *Falona* Adans.

From the Greek *phalos*, *phalon* "shining, bright, white."

Pooideae, Poodae, Poaceae, or Pooideae, Poaceae, Cynosurinae, see *Species Plantarum* 1: 72-73. 1753, *Fam. Pl.* 2: 496. 1763, *Observations sur les Graminées de la Flore Belgique* 114. 1823 [1824], *Gen. Pl.* 3(2): 1183. 1883 and *Boletim da Sociedade Broteriana, ser. 2* 63: 153-205. 1990, *Berichte des Geobotanischen Instituts der Eidg. Techn. Hochschule Stiftung Rübel* 57: 182-192. 1991, *Regnum Veg.* 127: 41. 1993, *Flora Mesoamericana* 6: 228-229. 1994, *Newslett. Int. Organ. Pl. Biosyst. (Oslo)* 26/27: 13-14. 1997, *Taxon* 49(2): 249. 2000, *Contributions from the United States National Herbarium* 48: 242, 312, 488-489. 2003.

Phanopyrum (Raf.) Nash = *Panicum* L.

Greek *phaeinos*, *phanos* “bright, light” and *pyros* “grain, wheat.”

A monotypic genus, southeastern United States. Panicoideae, Paniceae, Paspalinae, or Panicoideae, Panicodae, Paniceae, Panicinae, *Panicum* sect. *Phanopyrum*, stout perennial, erect, creeping stoloniferous bases, ligules membranous, leaf blades lanceolate, and cordate, inflorescences with spikelets arranged in unilateral branches, spikelets with lower and upper glume subequal, lower palea present, lower flower absent, upper antheridium obovoid, in wet woodlands or forest edges, type *Phanopyrum gymnocarpon* (Elliott) Nash, see *Species Plantarum* 1: 55, 58. 1753, *A Sketch of the Botany of South-Carolina and Georgia* 1(2): 117. 1816, *Bulletin Botanique [Genève]* 1: 220. 1830 and *Flora of the Southeastern United States ...* 104, 1327. 1903, *Contr. Herb.* 15: 13-15. 1910, *North American Flora* 3(2): 200, 210. 1915, *Notizblatt des Botanischen Gartens und Museums zu Berlin-Dahlem* 11(104): 242. 1931, *Taxon* 33: 126-134. 1984, Zuloaga F.O. and T. Sendulsky, “A revision of *Panicum* subg. *Phanopyrum* sect. *Stolonifera* (Poaceae: Paniceae).” *Annals of the Missouri Botanical Garden* 75: 420. 1988, Zuloaga F.O., R.P. Ellis and O. Morrone, “A revision of *Panicum* subgenus *Phanopyrum* section *Laxa* (Poaceae: Panicoideae: Paniceae).” *Annals of the Missouri Botanical Garden* 79: 770. 1992, *Flora Mesoamericana* 6: 302-318. 1994, *Blumea* 41: 181-216, 416. 1996, *Taxon* 45: 319-320. 1996, *Taxon* 47: 869. 1998, *Taxon* 48: 376. 1999, Sandra S. Aliscioni, Liliana M. Giussani, Fernando O. Zuloaga and Elizabeth A. Kellogg, “A molecular phylogeny of *Panicum* (Poaceae: Paniceae): tests of monophyly and phylogenetic placement within the Panicoideae.” *Am. J. Bot.* 90: 796-821. 2003, *Contributions from the United States National Herbarium* 46: 306-441, 537. 2003.

Species

P. gymnocarpon (Elliott) Nash (*Panicum gymnocarpon* Elliott; *Panicum drummondii* Nees ex Steud.; *Panicum monachnoides* Desv.)

U.S. See *A Sketch of the Botany of South-Carolina and Georgia* 1: 117. 1816, *Mémoires de la Société d'Agriculture, Sciences et Arts d'Angers* 1: 190. 1831, *Synopsis Plantarum Glumacearum* 1: 63. 1854 and *Flora of the Southeastern United States ...* 104. 1903.

Pharus P. Browne

From the Greek *pharos* “mantle, web, a piece of cloth, a wide cloak.”

About 5-7 species, New World tropics, the Caribbean, Venezuela, French Guiana, Brazil, Paraguay. Pharoideae, Pharaeae, perennial, herbaceous, unarmed, more or less sticky,

rhizomatous, leafy, unbranched, broad-leaved, rhizomes leptomorph, leaf blades not sagittate, leaves tapering at the base to a false petiole which is twisted, inflorescence paniculate, female spikelet 1-flowered, 2 glumes entire, lemma open and minutely hairy, sticky awnless lemmas, cylindrical female lemma involute and clasping palea keels, palea 2-nerved, lodicules absent, male spikelets soon deciduous, 6 stamens, 3 stigmas, forest shade, edge of forest, sandy soil, forest floor, in shady woods, vegetatively resembling *Streptochaeta*, type *Pharus latifolius* L., see *The Civil and Natural History of Jamaica in Three Parts* 344, t. 38, f. 3. 1756, *Systema Naturae, Editio Decima* 2: 1269. 1759, *Fl. Cap.* 7: 319. 1898 and *Bot. Skillman and Robert W. Pearcy, "Convergence in light capture efficiencies among tropical forest understory plants with contrasting

crown architectures: a case of morphological compensation." *Am. J. Bot.* 89: 1275-1284. 2002.

in Nicaragua: barba de tigre

P. mezii Prod. (*Pharus latifolius* L.; *Pharus longifolius* Swallen)

Mexico, Guatemala, Venezuela, Colombia. Erect, clumped, caespitose, forest, disturbed sites, shade, forest edge, along riverbanks and streams, see *The Civil and Natural History of Jamaica in Three Parts* 344, pl. 38, f. 3. 1756, *Systema Naturae, Editio Decima* 2: 1269. 1759 and *Contributions from the U.S. National Herbarium* 12: 125. 1908, *Botanisches Archiv* 1: 250. 1922, *Annals of the Missouri Botanical Garden* 30(2): 163. 1943, *Brittonia* 23(3): 293-324. 1971.

P. parvifolius Nash (*Pharus brasiliensis* var. *angustifolius* Nees; *Pharus latifolius* var. *angustifolius* (Nees) Prod.; *Pharus latifolius* var. *parvifolius* Prod.; *Pharus parvifolius* subsp. *elongatus* Judz.; *Pharus parvifolius* subsp. *parvifolius*)

The Caribbean, Mexico, Brazil, Bolivia. Erect, ascending, more or less decumbent, creeping, trailing, rooting at the lower nodes, rhizomatous, leaf blades glabrous broadly to narrowly lanceolate, panicle branches spreading at maturity, female spikelets glumes brown and glabrous, female spikelets lemmas brown and pubescent to the base, shade or deep shade, forest floor, see *Systema Naturae, Editio Decima* 2: 1269. 1759, *Flora Brasiliensis seu Enumeratio Plantarum* 2: 302. 1829 and *Bulletin of the Torrey Botanical Club* 35(6): 301-302. 1908, *Botanisches Archiv* 1: 250. 1922, *Brittonia* 23(3): 293-324. 1971, *Annals of the Missouri Botanical Garden* 72(4): 874-875. 1985.

P. parvifolius Nash subsp. *elongatus* Judz. (*Pharus parvifolius* Nash)

The Caribbean, Mexico, Brazil, Bolivia. Shade or deep shade, see *Bulletin of the Torrey Botanical Club* 35(6): 301-302. 1908, *Annals of the Missouri Botanical Garden* 72(4): 874-875. 1985.

P. parvifolius Nash subsp. *parvifolius* (*Pharus parvifolius* Nash)

The Caribbean, Brazil, Belize, Venezuela. Erect, decumbent, see *Bulletin of the Torrey Botanical Club* 35(6): 301-302. 1908.

P. virescens Döll (*Pharus latifolius* L.)

Central America, the Caribbean, Venezuela, Brazil, Guatemala. Bunchgrass, clumped, erect, robust, decumbent base, rooting at the lower nodes, shrubby, rhizomatous, leaf blades lanceolate-oblong acuminate, panicle branches long and spreading at maturity, female spikelets glumes green herbaceous, forest, forest shade, edge of forest, clearings, dense primary forest, seasonally inundated areas, muddy waters, see *The Civil and Natural History of Jamaica in Three Parts* 344, pl. 38, f. 3. 1756, *Flora Brasiliensis* 2(2): 21. 1871.

in Ecuador: gatoba, kuruntzam, kooruntzan

P. vittatus Lem. (*Pharus cornutus* Hack.)

Belize, Nicaragua, Colombia, Guatemala. Erect, ascending, decumbent, solitary or forming small colonies, female lemma almost thorn-like, forest floor, understory, shade or partial shade, forest, disturbed sites, primary forest, see *The Civil and Natural History of Jamaica in Three Parts* 344, pl. 38, f. 3. 1756, *Flore des serres et jardins de l'Europe* 3: t. 265, misc. 50. 1847 and 4: t. 316. 1848, *Gardener's chronicle, ser. 3* 26: 183-184. 1899 and *Österreichische Botanische Zeitschrift* 52: 9. 1902.

Pheidochloa S.T. Blake

From the Greek *pheidōs* “thrifty, sparing” and *chloe, chloa* “grass,” referring to the inflorescence.

Two species, Australia and New Guinea. Arundinoideae (alt. Panicoideae), Eriachneae, annual, herbaceous, unbranched or sometimes branched above, unarmed, very slender, tufted, auricles absent, ligule a line of hairs, plants bisexual, inflorescence paniculate with 2-flowered spikelets without a rachilla extension, spikelets usually cleistogamous, 2 glumes unequal separated by an internode, upper glume twice length of lower glume, lemma awned pubescent, callus pungent, palea 2-keeled 2-nerved, free lodicules very fine and thin, 2 stamens, ovary glabrous, 2 stigmas, in damp sandy areas, type *Pheidochloa gracilis* S.T. Blake, see *Blumea* 26: 128. 1980, *Acta Phytotaxonomica et Geobotanica* 11: 183. 1942, Stanley Thatcher Blake (1910-1973), in *Proceedings of the Royal Society of Queensland* 56: 20. 1944, *Bulletin of the Torrey Botanical Club* 88: 11-20. 1961, *Blumea* 19: 60. 1971, Prendergast H.V.D., P.W. Hattersley & N.E. Stone, “New structural/biochemical associations in leaf blades of C4 grasses (Poaceae).” *Australian Journal of Plant Physiology* 14: 403. 1987, *Am. J. Bot.* 88: 1993-2012. 2001.

Species

P. gracilis S.T. Blake

Australia, Northern Territory, Queensland. Slender, filiform, erect or spreading, spikelets cleistogamous, glumes acute membranous, see *Proceedings of the Royal Society of Queensland* 56: 20. 1944.

P. vulpioides Veldkamp

New Guinea. See *Blumea* 19: 61. 1971.

Phippsia (Trinius) R. Br.

Named after the British Captain Constantine John Phipps, 2nd Baron Mulgrave, 1744-1792, explorer (Arctic), a friend of J. Banks, 1773 Mulgrave's Arctic Expedition (with Israel Lyons, 1739-1775), wrote *A Voyage to the North Pole.*

London 1774; see J.H. Barnhart, *Biographical notes upon botanists*. 3: 82. 1965; Blanche Henrey, *British Botanical and Horticultural Literature before 1800*. Oxford 1975; A. Lasègue, *Musée botanique de Benjamin Delessert*. Paris 1845; Ray Desmond, *Dictionary of British & Irish Botanists and Horticulturists*. 552. London 1994.

About 2 or 3 species, Arctic, mountains, Argentina, Andes. Pooideae, Poeae, Puccinelliinae, *Vilfa* subg. *Phippsia* Trin., perennial, herbaceous, dwarf, caespitose, decumbent, auricles absent, ligule an unfringed membrane, hidden cleistogenes in the leaf sheaths, plants bisexual, open or contracted panicle, spikelets pedicellate, one or two inconspicuous glumes deciduous and ovate, lemma membranous and keeled, palea keels smooth or hispid, 2 free and membranous lodicules, stamens 1-3, ovary glabrous, 2 stigmas, protruding grains, cleistogamous or chasmogamous, hidden cleistogenes more or less present or absent, in open places, damp sites, very wet soils, similar to *Sporobolus* and *Catabrosa*, hybridizes with *Puccinellia* Parl., type *Phippsia algida* (Sol.) R. Br., see *Flora Anglica* 35. 1762, *Familles des Plantes* 2: 495. 1763, *Observationum Botanicarum* 1: 42. 1764, *Utkast til en Svensk Flora* 48. 1798, *Neue Entdeckungen im ganzen Umfang der Pflanzenkunde* 2: 37. 1820 [1821], *Chloris Melvilliana* 27. 1823, *A Flora of the Northern and Middle Sections of the United States* 1: 107. 1823, *Gram. Tucker, *Catalogue of the library of the Arnold Arboretum of Harvard University*. 1: 745. 1917-1933)

Argentina. See *Repertorium Specierum Novarum Regni Vegetabilis* 7: 321. 1909.

Phleum L. = *Achnodon* Link, *Achnodonton* P. Beauv., *Chilochloa* P. Beauv., *Heleochoa* P. Beauv., *Maillea* Parl., *Phalarella* Boiss., *Plantinia* Bubani, *Pseudophleum* Dogan, *Stelephuros* Adans.

From the Greek *phleos*, *phlous*, *phloun*, *phleon*, ancient name for a kind of grass growing in the swamps like reeds, *Arundo ampelodesmon*, or wool-tufted reed, applied by Theophrastus (*HP.* 4.8.1, 4.10.1, 4.10.4) to a species of *Erianthus*; *Phleos* was an epithet of Dionysus; Latin *pheos*, *phleos* applied by Plinius to a prickly plant, also called *stoebe* or *stoibe*; see Carl Linnaeus, *Species Plantarum*. 59. 1753 and *Genera Plantarum*. Edition 5. 29. 1754; Giovanni Semerano, *Le origini della cultura europea*. Dizionario della lingua Greca. 2(1): 304-305, 307. Leo S. Olschki Editore, Firenze 1994; Georg Christian Wittstein, *Etymologisch-botanisches Handwörterbuch*. 682. Ansbach 1852; H. Genaust, *Etymologisches Wörterbuch der botanischen Pflanzennamen*. 478-479. 1996.

Some 15 species, temperate regions, Eurasia, America. Pooideae, Poodae, Aveneae, or Pooideae, Poeae, Alopecurinae, annual or perennial, erect, forming large clumps, leafy, herbaceous, shortly rhizomatous or stoloniferous, caespitose or decumbent, often with a swollen or bulbous base, glabrous nodes, hollow internodes, auricles absent, leaf sheath open or close near the base, ligule an unfringed membrane, leaves linear and usually flat, plants bisexual, dense contracted pedunculated inflorescence paniculate and spicate, crowded and laterally flattened spikelets, 1 floret, 2 keeled

and membranous glumes subequal and mucronate to shortly awned, lemma nerved and scabrous, callus short, narrow palea awnless and nerved, 2 membranous and toothed lodicules or lacking, 2-3 stamens, ovary with glabrous apex, 2 stigmas, fruit small, soft and densely flowered, cultivated fodder, pasture, forage, ornamental, lawns and/or playing fields, turf grass, grows in meadows, coastal sand, open habitats, dry places, wasteland, along roadsides, track margins, type *Phleum pratense* L., see *Species Plantarum* 1: 59. 1753, *Familles des Plantes* 2: 31, 607. 1763, *Essai d'une Nouvelle Agrostographie* 24, 25, 37, 146, 158, 173, t. 7, f. 5. 1812, *Observations sur les Graminées de la Flore Belgique* 131. 1823 [1824], *Hortus Regius Botanicus Berolinensis* 1: 65. 1827, *Diagnoses plantarum orientalium novarum* 1(5): 70. 1844, *Deutschl. Mountain areas of Europe, Asia, Northern and Southern America. Perennial, herbaceous, small, strongly tufted, culms ascending, creeping, stems without a bulbous base, open sheaths, leaf blade rolled when young, leaves linear-lanceolate and acute, blunt ligules, spike-like panicle broadly cylindrical, spikelets 1-flowered, glumes hairy, lemma very short-haired, ornamental grass, forage, grazed, usually found in alpine or subalpine regions, in mountain and boreal areas, from the montane to alpine zones, high altitudes, along stream banks, on cool soils, in moist meadows, see *Species Plantarum* 1: 59. 1753, *Beschreibung der Gräser* 103. 1769, *Histoire des Plantes de Dauphiné* 2: 62. 1787, *Alpina* 3: 4. 1808, *Species Graminum* 1: 22. 1824, *Reliquiae Haenkeanae* 1(4-5): 245. 1830, *Prodromus der Flora von Böhmen* 38. 1867, *Conspectus Florae Groenlandicae* 1: 155. 1880, *Mexicanas Plantas* 2: 90. 1886, *Proceedings of the Davenport Academy of Natural Sciences* 7: 238. 1899 and *Flora Pyrenaea ...* 4: 272. 1901, *Svensk Botanisk Tidskrift* 43(2-3): 389. 1949, Callaghan T.V., "Intraspecific variation in *Phleum alpinum* L. with specific reference to polar populations." *Arctic and Alpine Research* 6: 361-401. 1974, *J. P. subulatum (Savi) Asch. & Graebn. subsp. *subulatum*

Europe. See *Synopsis der mitteleuropäischen Flora* 2: 154. 1899.

Pholiurus Trinius = *Pholiurus* Host ex Trin.

From the Greek *pholis*, *pholidos* "scale, horny scale" and *oura* "tail," referring to the overlapping glumes and to the scaly inflorescences; see Carl Bernhard von Trinius, *Fundamenta Agrostographiae*. 131. Viennae 1820.

Monotypic genus, Southeast Europe, Central Asia. Pooideae, Poodae, Poeae, or Hainardieae, annual, caespitose, herbaceous, glabrous, auricles absent, ligule an unfringed membrane, leaves linear and flat, plants bisexual, inflorescence a single spike nonarticulated, spikelets sunken in hollows along the axis, bisexual spikelets solitary and sessile, spikelets 2-flowered and compressed laterally, each spikelet falling off entire, 2 stiff glumes more or less equal and awnless, lemmas shorter than the glumes and awnless,

palea present, 2 free and membranous lodicules, 3 stamens, ovary glabrous, 2 stigmas, open areas, coastal, coastal sandy and saline soils, type *Pholiurus pannonicus* (Host) Trin., see *Fundamenta Agrostographiae* 131. 1820, *Nat. Pflanzenfam.* 2(2): 78. 1887 and *Acta Facultatis Rerum Naturalium Universitatis Comenianae, Botanica* 39: 45-51. 1992.

Species

P. pannonicus (Host) Trin. (*Lepturus pannonicus* (Host) Kunt; *Rottboellia pannonica* Host)

Southeastern Europe. Annual, glabrous, leaves very narrow and flat, spike more or less straight, first floret sessile, raceme bilateral, spikelets distichous, membranous lemmas 3-nerved, see *Supplementum Plantarum* 13, 114. 1781 [1782], *Icones et Descriptiones Graminum Austriacorum* 1: 19, t. 24. 1801, *Fundamenta Agrostographiae* 132. 1820.

Phragmites Adanson = *Czernya* Presl, *Miphragtes* Nieuwland, *Oxyanthe* Steud., *Trichoon* Roth, *Xenochloa* Roem. & Schult., *Xenochloa* Lichtenstein ex J.J. Roemer & J.A. Schultes

Referring to the hedge-like growth habit, growing like a fence along streams, from the Greek *phragma* "a hedge, a fence, screen," *phragmites* "of fences," *kalamos phragmites* "reed of hedges," Latin *phragmites*, for a kind of reed growing in hedges (Plinius); see M. Adanson, *Familles des Plantes*. 2: 34. 1763.

Some 3-4 species, cosmopolitan. Arundinoideae, Arundineae, perennial, aquatic, erect, tall, vigorous, large, robust, coarse, woody and persistent to herbaceous to subwoody, often persistent, culms reedlike and hollow, much-branched above or unbranched above, rhizomatous and stoloniferous, creeping rhizomes, culm nodes glabrous, culm internodes hollow, auricles present or absent, ligule a fringe of hairs or a very short membrane with a long ciliate margin, flat cauline leaves linear to oblong-lanceolate or linear-lanceolate to lanceolate, blades flat and deciduous, plants bisexual, inflorescence a large plumed panicle, silky beards at the bases of the lowest panicle branches, bisexual and stipitate spikelets with several florets, the lowest floret male or sterile or empty, 2 glumes lanceolate and unequal, florets articulate above glumes, callus plumed or silky-hairy, ribbed lemma membranous and glabrous, female-fertile lemmas hairless, lemmas awned or slender-pointed or awnless, palea 2-keeled, 2 obovate lodicules ciliate or glabrous, 2 or 3 stamens, ovary glabrous, 2 stigmas brown, small fruit compressed, aggressive root system and stolons, weed species growing in large colonies, invasive, rapid growth, could become a noxious weed, form floating fens, once established very difficult to completely eradicate, soil binder and shoreline stabilization, prevent wave and current erosion in

channels, tolerate slight salinity, used for mats and thatching, pulp used for paper and fuel, young shoots edible, cover and reed beds for wildlife, occurring in marshes and riversides, standing-water swamps, rainforest, in wet ground or shallow water, lowlands, fresh or brackish waters, fresh to saline marshes, floodplains, wetlands, shores, streams, ditches and seepage areas, sometimes confused with *Neyraudia* Hook.f., type *Arundo phragmites* L. (*Phragmites communis* Trin.), see *Species Plantarum* 1: 81. 1753, *Familles des Plantes* 2: 34, 559. 1763, *Archiv für die Botanik* 1(3): 37. 1798, *Systema Vegetabilium* 2: 29, 501. 1817, *Cyperaceae et Gramineae Siculae...* Pragae 1820, *Synopsis Plantarum Glumacearum* 1: 197. 1855 [1854], *Journal of the Linnean Society Bot.* 19: 112. 1881 and *American Midland Naturalist* 3: 332. 1914, E. Rendle; *Zizania effusa* Munro)

Cosmopolitan. Perennial, very large to huge, aquatic, vigorous, thick, erect, leafy, robust and stiff, hollow culms, much-branched, long rhizomatous, vertical and horizontal creeping rhizomes, often also with stolons, leaf sheaths smooth and open, ligule hairy and thin, leaves narrowly lanceolate with long tapering ligule, leaves flexuous and scabrous or smooth, purplish or tawny large terminal

panicles erect to pendent, sericeous inflorescence oblong to ovoid, 4-8 florets, the lowest 1 or 2 florets male, rachilla silky, callus with long silky hairs, glumes aristate or mucronate, lemma smooth and lanceolate, palea 2-keeled with hairy margins, lodicules nerved, adaptable and hardy species, forms floating fens, invasive and noxious weed, elegant, strong-growing, tolerates moderate salinity, dominates other species, rapid growth, a soil binder, stabilizes banks and drains against erosion, strip mine reclamation, young shoots edible, rhizomes eaten raw by local people as famine food, high-quality forage, wildlife food, stem eaten by baboons, eaten by cattle and horses, tough and unpalatable after maturity, may be cut for hay, cannot withstand prolonged heavy grazing, leaves used for mats, useful for temporary roofing, arrow shafts, paper and arrows, sandals are made from its stems, used medicinally as a diuretic and a diaphoretic, may be used singly as fresh juice or combined with other herbs, requires high moisture conditions, found on marshy ground, at the edge of cultivated fields, wet places, saline marshes, along irrigation channels, shallow water, coastal marshes, swamps, marsh edge, wet wastelands, banks of lakes and streams, fine sandy loam soils, shallow and gravelly soils, in tidal waters, around springs, marshes, fresh or brackish waters, sloughs, shores and ditches, along the banks of rivers and ponds, amongst rocks and sand of riverbank, see *Species Plantarum* 1: 81. 1753, *Flora Aegyptiaco-Arabica* 24. 1775, *Flore de France* 3: 615. 1778, *Prodromus stirpium in horto ad Chapel Allerton vigentium*. 24. Africa, Ethiopia. Perennial, reed, hollow jointed culms, creeping rhizome, tough roots, leaves flat and smooth, lowest node few-branched, plumose feathery panicle, spikelets silky, lower glume ovate, upper glume elliptic-oblong, decorative and ornamental, used for thatching and matting, useful for erosion control, invasive, may become a troublesome weed, low grazing value, a rattle made from the culms, rootstock edible, found along irrigation channels, in or near water, shallow water of rivers, at the edges of cultivated fields, on banks, lakes, swampy areas, see *Species Plantarum* 1: 81. 1753, *Fundamenta Agrostographiae* 134. 1820 [1822], *Catalogue des Plantes Indigènes des Pyrénées et du Bas-Languedoc* 62. 1826, *Nomenclator Botanicus. Veldkamp; *Sericura japonica* Steud.; *Trichoon karka* (Retz.) Roth)

Tropica Africa, tropical Asia, northern Australia. Perennial, stout, erect, leafy, reed, hollow culms, with long well-developed creeping rhizomes, ligule very shallow and hairy when young, leaf sheath smooth and often longitudinally striped,

stiff-pointed leaf blades narrowly lanceolate and attenuate, leaves distichous and with a rough undersurface, large terminal panicle sometimes plume-like with capillary branches, silky hairs at the base of the panicle, small and slender spikelets with 2-4 fertile florets, glumes boat-shaped and hairy on the back, lemma linear-lanceolate and glabrous, callus with long silky hairs, palea narrow with infolded margins, weed species, grazed when young, tolerant of heavy flood, stabilizer of riverbanks, useful for erosion control, used for fertilizer, thatching and matting grass, used for making arrow shafts, culms used for *hookah*-pipes and flutes, panicles for brooms, roots used for fractures, grows in streams and lakes, river floodplains, fertile soil, moist situations, damp places, in or near water, near running fresh water, in standing water and marshy ground, in wet grassland and in swamps, along creeks, alluvial deposits, near river, along riverbanks, see *Herbarium Amboinense* 15. 1754, *Observationes Botanicae* 4: 21. 1786, *Archiv für die Botanik* 1(3): 37. 1798, *Anales de Historia Natural* 1: 100. 1799, *Révision des Graminées* 1: 79. 1829, *Nomenclator Botanicus. Africa. Perennial water grass, culms erect and many noded, long rhizomatous, robust, ligule with fringed hairs, leaf sheaths overlapping, leaves pungent with somewhat spiny leaf tips, inflorescence an open fluffy panicle, lemmas glabrous, shoots edible, used for many building purposes, roofing, fish traps, walls of huts, fences, split to make mats, roots used as medicine, provide browsing for many of the herbivores that utilize the riparian zone, shoots and pith eaten by baboons and chimpanzees, important because of its stabilizing effect on alluvium, a role player in sediment dynamics, widespread near water, in saline reed swamps, wetlands, in water of medium depth, flooded grasslands, riverside swamps, riverbeds, margins of lakes and rivers, see *Species Plantarum* 1: 81. 1753, *Flora Aegyptiaco-Arabica* 24. 1775, *Flore de France* 3: 615. 1778, *Anales de Historia Natural* 1: 100. 1799, *Description de l'Égypte, ... Phyllorachis Trimen

From the Greek *phyllon* “leaf” and *rhachis* “rachis, axis, midrib of a leaf.”

One species, southern tropical Africa, Angola, Tanzania to Zimbabwe. Bambusoideae, Oryzodae, Phyllorachideae, perennial, canelike, suffrutescent, slender, branched, unarmed, scrambling, rhizomatous, auricles absent, ligule a very short membrane with ciliate fringe, plants monoecious, inflorescence bisexual terminal exserted, 1-4 unisexual spikelets, female spikelet 2-flowered without rachilla extension, one female spikelet below and 2-3 male above, male spikelets with two glumes, lower floret reduced to a lemma, lower lemma of female spikelet grooved, upper lemma awnless, palea keeled and nerved, lodicules 2 free and membranous, male florets 6-staminate, stamens absent, ovary glabrous, 2 stigmas, in forest, riverine forest, shade, type *Phyllorachis sagittata* Trimen, see *Journal of Botany, British and Foreign* 17: 353. 1879 and *Hooker's Ic. Pl.* 34: t. 3386. 1939, *Bot. Mag.* (Tokyo) 69: 83-86. 1956.

Species

P. sagittata Trimen

Africa. See *Journal of Botany, British and Foreign* 17: 355, t. 205. 1879.

Phyllostachys Siebold & Zucc. = *Sinoarundinaria* Ohwi

From the Greek *phyllon* and *stachys* “a spike,” referring to the pseudospikelet.

About 23-41/55-76 species, eastern Asia, China, Himalayas to Japan, Assam. Bambusoideae, Bambusodae, Bambuseae, Shibataeinae, perennial, erect, tall to very tall, spreading, often diffuse, hollow internodes, with widely spaced culms flattened on one side, internodes D-shaped in cross section, evergreen, tree or bamboo-like shrubs, unarmed, rhizomatous with leptomorph persistent rhizomes, monopodial branching, culms woody and leafy, shoots from lateral buds, auricles present or absent, leaf sheaths developed, culm sheath deciduous, primary branches usually 2-3 per node, one side of branch with grooves, blade short-petioled, plants bisexual and seldom flowering, reproductive structures not produced every year, inflorescence a panicle terminal and leafy, spikelets subtended by large foliaceous bracts, glumes 0-3 or one per spikelet or two, lemma acuminate and ovate, palea 2-keeled and shortly pointed, 2 or 3 membranous lodicules, 3 stamens, ovary glabrous with an apical appendage, stigmas 3, graceful and willowy foliage, hardy bamboos forming thickets by rhizomatous spread, mostly aggressive spreaders, used for fishing rods and timber, walking sticks, the ripened stems used for making furniture and building purposes, edible shoots, the shoots of some species

develop an acrid flavor when exposed to light, many species resistant to honey fungus, tend to be intolerant of heavy shade, growing well only in cool climates, need to be grown in moist soils, abandoned gardens, woodland, near stream and riversides and in wetlands, type *Phyllostachys bambusoides* Siebold & Zucc., see *Genera Plantarum* 1: 236. 1789, Philipp Franz (Balthasar) von Siebold (1796-1866) and Joseph Gerhard Zuccarini (1797-1848), in *Abhandlungen der Mathematisch-Physikalischen Classe der Königlich Bayerischen Akademie der Wissenschaften* 3(3): 745-746, t. 5, f. 3. 1843 and Kanjiro Mayebara, *Florula austro-higoensis* sive enumeratio plantarum in provincia Higo australe sponte nascentium ... P. acuta C.D. Chu & C.S. Chao (*Phyllostachys vivax* McClure)

China, Zhejiang, Fujian, Jiangsu. Dark green, rarely pruinose or never, shoots tapering, green sheath with dark purple spots, sheath blade flat, no sheath auricles, sheath ligule with a wavy tip, see *Acta Phytotaxonomica Sinica* 18(2): 172-173, f. 2. 1980, *Acta Phytotaxonomica Sinica* 29(5): 452-455. 1991.

P. altiligulata G.G. Tang & Y.L. Xu (*Phyllostachys viridiglaucescens* Rivière & C. Rivière)

China. See *Bulletin de la Société Nationale d'Acclimatation de France* ser. 3 5: 700, 773, f. 28. 1878 and *J. Nanjing Inst. Forest.* 1985(4): 18, f. 2. 1985, *Acta Phytotaxonomica Sinica* 29(5): 452-455. 1991.

P. angusta McClure

Anhui, Jiangsu, China, Zhejiang. Timber bamboo, young culm slightly pruinose, evergreen bamboo with shallow root systems that do not compete with deep tree roots, hard texture of the culms, sheath creamy and glabrous, sheath blade lanceolate or narrowly lanceolate, no sheath auricles, sheath ligule ciliate, very high content of silica, resistant to honey fungus, aggressive spreader, cultivated, edible shoots free from bitterness, canes very hard and strong, used to make fine bamboo furniture, for weaving, for making fishing rods, useful for erosion control, closely related to *Phyllostachys flexuosa* M.A. Rivière & C. Rivière, requires moist soil and dappled shade, grows well in a woodland, see *Journal of the Washington Academy of Sciences* 35(9): 278, f. 1. 1945, *Acta Phytotaxonomica Sinica* 29(5): 452-455. 1991.

in English: stone bamboo

P. arcana McClure

China, Sichuan, Anhui, Shaanxi. Evergreen, gray to yellowish green, shallow-rooted, heavy foliage, culms mostly quite straight and upright, thin-walled and not particularly strong, black areas form at the base of pruinose young culms, sheath blade long lanceolate, sheath thickly pruinose yellowish green with purplish stripes, no sheath auricles, sheath ligule drooping and pubescent, cultivated and wild, resistant to honey fungus, plants only flower at intervals of many years and sometimes die after flowering, a slow-to-moderate spreader, young shoots edible and cooked, canes used in basketry and weaving, as handle of farm implement, hedges, in China its split culms are woven into mats, can grow in semishade or no shade, requires moist soil, prefers a rich damp soil with shelter from cold harsh winds and prolonged frosts, see *Journal of the Washington Academy of Sciences* 35(9): 280, f. 1. 1945.

in English: half black, half black bamboo

in China: lao zhu, shi lu zhu

P. arcana McClure f. *luteosulcata* C.D. Chu & C.S. Chao

China, Zhejiang, Jiangsu. Culm with yellow longitudinal grooves, ornamental, see *Journal of the Washington Academy of Sciences* 35(9): 280, f. 1. 1945, *Acta Phytotaxonomica Sinica* 18(2): 174. 1980.

P. aristata W.T. Lin

China, Guangdong. See *Acta Phytotaxonomica Sinica* 26(3): 230-231, pl. 9. 1988, *J. South China Agr. Univ.* 15(2): 78. 1994.

Southeastern and southwestern China, Japan. Perennial, variable, evergreen, erect, open, cylindrical or grooved, creeping, glaucous when young yellowish green at maturity, midculm branching, shallow-rooted, running leptomorph rhizomes, nodes of lower part of culm shortened and irregularly swollen, basal internodes cylindrical and often asymmetric or deformed, nodes with a swollen ring beneath, deciduous culm sheaths oblong-lanceolate and chartaceous, very short sheath ligule long ciliate, sheath auricles lacking,

dark green leaves lanceolate, spikes lanceolate, spikelets narrowly lanceolate with 1-2 fertile florets, glumes one and sometimes lacking, lemmas lanceolate and acuminate, palea present, usually 2 lodicules rarely 1 or 3, stamens very long, ovary cylindrical, 3 feathery stigmas, fast-growing, slow to establish, dense-thicket-forming, very-tight-spreading habit, invasive species with running rootstock forming impenetrable solid stands, resistant to honey fungus, flowering is rare or plants only flower at intervals of many years, usually propagated by clump division, ornamental bamboo widely cultivated especially in temperate and subtropical regions, in some countries naturalized, short and swollen internodes resembling the hand grip of a walking cane, young shoots eaten as vegetables, shoots are boiled and dried, seeds eaten raw or cooked, a fiber from the stems is used for making paper, canes very hard but superflexible, culms used as interior decoration, used to manufacture cane fishing poles, pipe stems, hedge, walking sticks, fan handles, plant supports, umbrella handles, furniture, handicrafts, established plants are drought resistant, dislikes prolonged exposure to hard frosts, can grow in semishade, requires rich and moist soil, deep and well-drained sandy soil, along roadsides, see *Bulletin de la Société Nationale d'Acclimatation de France* sér. 3, 5: 716, f. 36, 37. 1878, *Botanical Magazine* (Tokyo) 11(122): 158. 1897 and *Botanical Magazine* (Tokyo) 26: 22. 1912, *Journal of Japanese Botany* 3: 12. 1912, *Actes du III^{me} Congrès international de botanique, Bruxelles 1910* 2: 222. P. aureosulcata McClure (*Phyllostachys aureosulcata* cv. *spectabilis*; *Phyllostachys aureosulcata* f. *spectabilis* C.D. Chu & C.S. Chao)

China, Zhejiang. Perennial, young culm densely ciliate and pruinose, strongly upright, culms straight and sturdy, sometimes with a distinct crook near the base, young culms green with yellow grooves, erect sheath blade long triangular, sheath scar dark wine-red, sheath auricles broadly falciform with long cilia, sheath ligule arcuate and ciliate, older culms red-brown to reddish, dense foliage, leaves green, flowers on older culms, plants only flower at intervals of many years and sometimes die after flowering, forming dense clumps, cold-hardy, shallow-rooted, woody-stemmed, resistant to honey fungus, cultivated ornamental, wood is not of high quality, one of the best species for edible shoot production, shoots notably free of acrid flavor even when raw, an aggressive spreader, good for hedges or screens and plant supports, small fishing rods, see *Abhandlungen der Mathematisch-Physikalischen Classe der Königlich Bayerischen Akademie der Wissenschaften* 3(3): 745-746, pl. 5, f. 3. 1843 and *Journal of the Washington Academy of Sciences* 35(9): 282, f. 3. 1945, *Acta Phytotaxonomica Sinica* 18(2): 180-181. 1980, *Journal of Bamboo Research* 2(1): 72. 1983, *Acta Phytotaxonomica Sinica* 37(6): 541-544. 1999.

in English: yellow-grooved bamboo, yellow-groove bamboo, stake and forage bamboo

China, Japan. Perennial, tall, evergreen, monopodial, young culm green and not pruinose, caespitose, very hard, thick-walled, long-lived, erect and slightly curving towards apex, nodes with one prominent ridge and sheath scar, each node with two branches, culm sheaths glabrous spotted with brown, sheath blade flat, sheath auricles double and more or less falciform, sheath ligule and auricles greenish yellow, branches dense, leaf-sheath with auricles, inflorescence narrowly paniculate, 1-3 florets and the uppermost one usually male, spikelets subtended by sheath-like bracts, glumes 1-2 sometimes lacking, lemma ovate and acuminate, palea ciliate on the keels, 3 lodicules unequal, stamens long exerted, ovary ovoid and stipitate, 3 stigmas plumose, produces a grove with widely spaced culms, rootstock running, shallow rooted, extensive root system, rhizomes running extensively, dense-thicket-forming, plants only flower at intervals of many years and sometimes die after flowering, young shoots eaten as vegetables, shoots slightly acrid when raw, young shoots used in the treatment of haematuria, leaves antipyretic, culms used for walking sticks and in weaving, umbrella-handles, house construction, fishing rods, bridges, furniture, handicrafts, hairless sheath utilized for wrapping, cultivated ornamental garden plant, used for erosion control, can grow in semishade, requires moist soil, resistant to honey fungus, see *Abhandlungen der Mathematisch-Physikalischen Classe der Königlich Bayerischen Akademie der Wissenschaften* 3(3): 745-746, pl. 5, f. 3. 1843, *Prolusio Florae Japonicae* 172. 1866, *Dendrologie* 2(2): 356. 1873, *Bulletin de la Société Nationale d'Acclimatation de France*, sér. 3, 5: 716, 773, f. 36, 37. 1878, *Revue Horticole* 58: 513, f. 122. 1886, *Journal de Botanique (Morot)* 4: 29. 1890, *The Bamboo Garden* 47: 3. 1895, *The Bamboo Garden* 158. 1896, *Botanical Magazine (Tokyo)* 11(122): 158. 1897 and *Botanical Magazine (Tokyo)* 14: 63. 1900, *Bulletin of Miscellaneous Information Kew* 1907: 232. 1907, *Journal of Japanese Botany* 3: 12. 1912, *Botanical Magazine (Tokyo)* 26: 21, 24. 1912, *Actes du III^{me} Congrès International de Botanique, Bruxelles 1910* 2: 228. P. glauca McClure

China. Perennial, evergreen, rhizomes dark in color, sheath blade green with yellow margin, sheath light brownish red with purplish dark spots, no sheath auricles, sheath ligule purple and ciliate, deep woodland or light woodland, named for the bluish white powder or waxy bloom that completely covers the young culms, used for the sweet edible shoots and as an ornamental, culms used for weaving baskets, see *Journal of the Arnold Arboretum* 37(2): 185-186, f. 4. 1956, *Acta Phytotaxonomica Sinica* 29(5): 452-455. 1991.

in English: light bamboo

P. glauca McClure f. ***youzhu*** J.L. Lu (*Phyllostachys glauca* cv. *yunzhu*; *Phyllostachys glauca* McClure f. *yunzhu* J.L. Lu)

China, Shanxi. Brownish purple spots on the culm, edible shoot, used for weaving and making handicrafts, see *Acta Phytotaxonomica Sinica* 14(2): 32-33. 1976.

P. glauca McClure var. ***variabilis*** J.L. Lu

China, Qinyang. Tall, thick, young culm usually not pruinose, a pruinose ring below joint, edible shoot, used for weaving and making handicrafts, see *J. Henan Agr. Coll.* 1981(2): 71, f. 3. 1981.

in English: variable bamboo

P. guizhouensis C.S. Chao & J.Q. Zhang

China, Guizhou. Tall, thick, young culm green and sparsely hairy, coarse, greenish gray, a pruinose ring below the joint, culm sheath yellowish purple, sheath blade narrowly lanceolate, sheath auricles purple and falciform, sheath ligule arcuate or truncate, two leaves on each twig, leaf blade

lanceolate, stems used as building material and for furniture, see *Bamboo Research in Asia* 1982(1): 3, f. 4. 1982.

in English: Guizhou bamboo, Guizhou firm bamboo

P. helva Wen (*Phyllostachys mannii* Gamble)

China. See *Annals of the Royal Botanic Garden, Calcutta*. 7: 28, t. 28. 1896 and *Bulletin of Botanical Research* 2(1): 64-65, pl. 3. 1982, *Acta Phytotaxonomica Sinica* 37(6): 541-544. 1999

P. henryi Rendle (*Phyllostachys nigra* var. *henonis* (Mitford) Stapf ex Rendle) (for the Irish botanist Augustine Henry, 1857-1930 (d. Dublin), graduated M.A. in 1878, medical officer, in 1881 the Chinese Imperial Customs Service employed him as an Assistant Medical Officer, dendrologist and plant collector in China, 1888 Fellow of the Linnean Society; see Emil Bretschneider, *History of European Botanical Discoveries in China*. 756, 774, 1092. [Reprint of the original edition 1898] Leipzig 1981; Ernest Nelmes and William Cuthbertson, *Curtis's Botanical Magazine Dedications, 1827-1927*. 1932; M. Hadfield et al., *British Gardeners: A Biographical Dictionary*. London 1980; M. Hadfield, *Pioneers in Gardening*. 169-171, 172. London 1996; Ray Desmond, *Dictionary of British & Irish Botanists and Horticulturists*. 335. London 1994)

Asia, China. See *Transactions of the Linnean Society of London* 26(1): 38, 123. 1868, *The Bamboo Garden* 47: 149-151. 1895 and *Journal of the Linnean Society, Botany* 36(254): 440-443. 1904, *Acta Phytotaxonomica Sinica* 29(5): 452-455. 1991.

P. heteroclada Oliv. (*Phyllostachys cerata* McClure; *Phyllostachys congesta* Rendle; *Phyllostachys dubia* Keng, also spelled *dubius*; *Phyllostachys heteroclada* f. *heteroclada*; *Phyllostachys purpurata* McClure; *Phyllostachys purpurata* cv. *straightstem* McClure)

China. Perennial, young culm with white wax powder, sheath green, sheath blade narrow triangular and erect, sheath auricles tiny, cultivated, edible shoots, used for weaving, as construction material, found along stream banks and riverbanks, see *Hooker's Icon. Pl.* 23(4): t. 2288. 1894 and *Journal of the Linnean Society, Botany* 36(254): 438-439. 1904, *Sinensia* 11(5&6): 407. 1940, *Lingnan University Science Bulletin* 9: 41. 1940, *Agriculture Handbook* 114: 56. 1957, *Journal of Bamboo Research* 3(2): 36. 1984. in English: water bamboo, fishscale bamboo

P. heteroclada Oliv. f. *denigrata* (Yi & H.R. Qi) Yi & H.R. Qi (*Phyllostachys bissetii* f. *denigrata* T.P. Yi & H.R. Qi)

China. Ornamental, see *Hooker's Icones Plantarum* 23(4): pl. 2288. 1894 and *Journal of the Arnold Arboretum* 37(2): 180, f. 1. 1956, *Journal of Bamboo Research* 10(1): 32. 1991, *Journal of Bamboo Research* 12(4): 47. 1993.

P. heteroclada Oliv. f. *purpurata* (McClure) T.H. Wen (*Phyllostachys purpurata* McClure)

China. Culm slender, curved, sheath blade purplish red, see *Lingnan University Science Bulletin* 9: 43. 1940, *Bulletin of Botanical Research* 2(1): 78. 1982, *Acta Phytotaxonomica Sinica* 37(6): 541-544. 1999.

P. heteroclada Oliv. f. *solida* (S.L. Chen) C.P. Wang and Z.H. Yu (*Phyllostachys heteroclada* f. *decurtata* (S.L. Chen) T.H. Wen; *Phyllostachys parvifolia* f. *lignosa* T.H. McClint.; *Phyllostachys heterocycla* var. *heterocycla*; *Phyllostachys heterocycla* var. *pubescens* (Mazel ex J. Houz.) Ohwi; *Phyllostachys mitis* var. *heterocycla* (Carrière) Makino ex Shiras., nom. illeg., non *Phyllostachys mitis* var. *heterocycla* (Carrière) Makino; *Phyllostachys mitis* var. *heterocycla* (Carrière) Makino; *Phyllostachys pubescens* (Carr.) Mazel ex J. Houz., nom. illeg., non *Phyllostachys pubescens* Mazel ex J. Houz.; *Phyllostachys pubescens* var. *heterocycla* (Carr.) J. Houz.)

China, Japan. Hardy bamboo, covered with white powder, the young culms are hairy to the touch, the culm looks zigzag with continuous irregular contraction and swellings, ornamental, shoots delicious, culm very useful for construction materials and others, aggressive spreading, very difficult to establish and young plants develop slowly, usually enclosed in *Phyllostachys edulis* (Carrière) J. Houz., see *Revue Horticole* 48: 22. 1876, *Revue Horticole* 49: 354, f. 80. 1878, *Bulletin de la Société Nationale d'Acclimatation de France*, sér. 3, 5: 689. 1878, *Enumeration of Selected Scientific Names of Both Native and Foreign Plants ...* 213. Tokyo 1895, *The Bamboo Garden* 160. 1896 and *Botanical Magazine (Tokyo)*, Special Issue 13: 267-270, 295-298, 319-322, 334-337, 365-368. 1900 [1899], *Le Bambou, son étude, sa culture, son emploi* 1: 7, 39-40, 97. 1906, *Le Bambou ...* 2: 290. 1908, *Botanical Magazine (Tokyo)* 26: 22. 1912, *Icones of the Bamboos of Japan* 17-18, t. 3, f. 12-13. 1912, *Icones of the Bamboos of Japan* 17-18, t. 3,

f. 12-13. 1912, *Flora of Japan* 77. 1953, *J. Arnold Arbor.* 37: 189. 1956, *Kew Bulletin* 38(3): 485. 1983, *Forest Research (China)* 1: 109-111. 1988, *Acta Phytotaxonomica Sinica* 29(5): 452-455. 1991, *Acta Phytotaxonomica Sinica* 37(6): 541-544. 1999.

in English: moso bamboo (in Japanese *moso* means the name of person who was in China)

in Japan: butsumen-chiku (deformed variety), kikkou-chiku, kikkochiku, kikko-chiku (*kikko* means tortoise-shell), gimmei-mousou (with yellow-green stripes on the bud canal of the culms), kimmei-mousou (with yellow culms and green stripes on the bud canal), moso-chiku, mousou chiku, okina-mousou (culms and branches yellow-green, nodes green), ougon-mousou, tatejima-mousou

P. heterocyclus (Carrière) S. Matsum. var. ***pubescens*** (Mazel ex J. Houz.) Ohwi (*Bambusa edulis* Carrière; *Bambusa mosoo* Siebold; *Phyllostachys edulis* (Carr.) M.A. Rivière & C. Rivière; *Phyllostachys edulis* (Carr.) Rivière; *Phyllostachys heterocyclus* cv. *pubescens*; *Phyllostachys heterocyclus* f. *pubescens* (Mazel) Ohwi; *Phyllostachys heterocyclus* var. *pubescens* (Mazel) Ohwi; *Phyllostachys mitis* M.A. Rivière & C. Rivière; *Phyllostachys pubescens* Mazel ex J. Houz.)

China. Culm wall thick, short internodes, young culm thickly pruinose and pubescent, sheath blade long triangular or lanceolate, sheath auricles hairy, sheath ligule bowlike, leaves narrow, delicious shoots edible, culm very useful for construction materials and others, see *Enumeration of Selected Scientific Names of Both Native and Foreign Plants* ... 213. Tokyo 1895 and *Le Bambou, son étude, sa culture, son emploi* 1: 7, 39-40, 97. 1906, *Flora of Japan* 77. 1953, *Forest Research (China)* 1: 109-111. 1988, *Bamboo Research* no. 38, p. 57. 1989 [vol. 8(1)], *Acta Phytotaxonomica Sinica* 29(5): 452-455. 1991.

P. hispida S.C. Li, S.H. Wu & S.Y. Chen (*Phyllostachys varioauriculata* S.C. Li & S.H. Wu)

China. See *Journal of the Anhui Agricultural College* 1981(2): 49-52, 2 figs. 1981, *Acta Phytotaxonomica Sinica* 20(4): 492-493, pl. 1. 1982.

in English: hairy shell bamboo

P. humilis Muroi

China, Asia. Ornamental, cultivated as a miniature potted plant.

in Japan: hime-hachiku

P. incarnata Wen (*Phyllostachys primotina* T.H. Wen)

China, Fujian, Zhejiang. Culm pruinose, sheath pinkish with brown spots, sheath blade flat and long triangular, sheath auricles brownish purple more or less sickle-shaped to ovate, sheath ligule nearly truncate and ciliate, culm used as timber, see *Bulletin of Botanical Research* 2(1): 65-66, f. 4. 1982, *Journal of Bamboo Research* 3(2): 34, f. 10. 1984, *Acta Phytotaxonomica Sinica* 29(5): 452-455. 1991.

in English: red shell thunder bamboo

P. iridescens C.Y. Yao & S.Y. Chen

China, Zhejiang, Shanghai, Jiangsu. Basal internodes often covered with yellowish stripes longitudinal, sheath reddish to red-purple, no sheath auricles and cilia, sheath ligule dark purple, cultivated, delicious shoots sweet, used for construction materials, handle of farm implements, sunning poles, see *Acta Phytotaxonomica Sinica* 18(2): 170-171, pl. 1. 1980, *Journal of Zhejiang Forestry College* 8(1): 127-130. 1991, *Acta Phytotaxonomica Sinica* 29(5): 452-455. 1991.

in English: cock bamboo

P. iridescens C.Y. Yao & S.Y. Chen f. ***luteosulcata*** C.H. Zhao & K.J. Mao

China. See *Journal of Bamboo Research* 12(3): 23. 1993.

P. iridescens C.Y. Yao & S.Y. Chen f. ***striata*** Wen

China. See *Bulletin of Botanical Research* 2(1): 74. 1982.

in English: Kanling red bamboo

P. kwangsiensis W.Y. Hsiung, Q.H. Dai & J.K. Liu

China. Culm hard and tough, young culm green and pubescent, a pruinose ring above and below sheath annulus, sheath blade long lanceolate, sheath longer than internode, sheath auricles indistinct and ciliate, sheath ligule arcuate and ciliate, acrid edible shoot, compact culm used as building material and for furniture, strips used for weaving, see *Acta Phytotaxonomica Sinica* 18(1): 34-35, pl. 7. 1980, *Bamboo Research in Asia* 1: 22. 1981, *Acta Phytotaxonomica Sinica* 29(5): 452-455. 1991.

in English: false hairy bamboo

P. lithophila Hayata (*Sinoarundinaria lithophila* (Hayata) Ohwi ex Mayeb.)

Taiwan. Bluish green to dark green, coriaceous and deciduous sheath with yellowish to dark brown spots, sheath blade linear-lanceolate, sheath auricles small and ciliate, sheath ligule convex and yellow pubescent, 2-3 leaves on each twig, leaves narrow lanceolate, hard culm used as construction materials, poles, rods, see *Icones plantarum formosandarum nec non et contributiones ad floram formosanam*. 6: 141-142, f. 51. 1916, *Florula austro-higoensis sive enumeratio plantarum in provincia Higo australe sponte nascentium* ... 86. Japan 1931.

in English: Taiwan stone bamboo, thill bamboo

P. lofushanensis Z.P. Wang, C.H. Hu & G.H. Ye

China, Guangdong, Luofushan Mountain. Young culm with pruinose ring below joint, sheath blade long and narrow band-shaped, sheath auricles oblong and sparsely hairy, sheath ligule wider than the base of sheath, usually two leaves on each twig, leaves lanceolate or narrow lanceolate, in forests, mountains, see *Journal Nanjing University. Natural Sciences Edition* 1981(2): 258, f. 2. 1981.

in English: big node firm bamboo, big node bamboo

P. makinoi Hayata (*Phyllostachys bambusoides* Matsumura & Hayata, non Sieb. & Zucc.)

China, Fujian, Taiwan. Perennial, stiffly erect, hard, nodes with two prominent ridges, whitish green culms, white powder covering when young, first internode of the branch not caved, culm sheaths blackly spotted, sheath ligule purple with reddish cilia, leaves ovate-lanceolate, ligule of the leaves long, shallow rooted, inflorescence lanceolate, spikelets 1-2-flowered, 0-1 glumes, lemmas broadly lanceolate and acuminate, palea present, 3 lodicules ovate-lanceolate acuminate, long stamens, ovary glabrous, 3 feathery stigmas, young shoots cooked and eaten, quality of culm good and compact in texture, tough culms used for dense scaffolds and construction, basketry, furniture, papermaking and for weaving, useful for erosion control, see *Icones plantarum formosandarum nec non et contributiones ad floram formosanam*. Taihoku [= Taipei, Taiwan] 5: 250-252. 1915.

in English: Taiwan madake, Makino bamboo

in Japan: kei-chiku, keichiku, Taiwan-madake, Taiwan-madake

P. mannii Gamble (*Phyllostachys assamica* Gamble ex Brandis; *Phyllostachys bawa* Brandis ex E.G. Camus; *Phyllostachys bawa* E.G. Camus; *Phyllostachys decora* McClure; *Phyllostachys helva* T.H. Wen) (after G. Mann)

China, India, Kashia Hills, Naga Hills. Perennial, caespitose, shrubby, hard, nodes prominent, young internodes covered with very short tomentum, sheaths brownish purple with dark spots, twisted and wrinkled sheath blade triangular to lanceolate, sheath auricles purplish red, sheath ligule purplish red and ciliate, cultivated, acrid shoots edible, useful for erosion control, tough and durable culms used for making walking sticks, farm implements, for weaving sleeping mats, see *Annals of the Royal Botanic Garden, Calcutta*. 7: 28, t. 28. 1896 and *Indian Trees* 607, 719. 1906, *Les Bambusées* 66. 1913, *Journal of the Arnold Arboretum* 37(2): 182, f. 2. 1956, *Bulletin of Botanical Research* 2(1): 64-65, pl. 3. 1982, *Acta Phytotaxonomica Sinica* 37(6): 541-544. 1999.

in English: imported bamboo, south-west China bamboo, south-west China firm bamboo

in Thailand: mep we, pang puk, paang puk, se daan, se dan

P. meyeri McClure (*Phyllostachys viridis* f. *laqueata* T.H. Wen) (for the Dutch botanist Frans Nicholaas Meijer [after 1908 Frank Nicholas Meyer], 1875-1918, traveler, botanical explorer and collector in China and Japan, with USDA to East Asia searching plants of economic value, drowned in Chang Jiang, Yangtze, under mysterious circumstances, author of *Chinese Plant Names ...* New York, N.Y. [1911]. See J.H. Barnhart (1871-1949), *Biographical notes upon*

botanists. 2: 483. Boston 1965; Alice Margaret Coats, *The Quest for Plants: A History of the Horticultural Explorers*. London 1969; Charles Lyte, *The Plant Hunters*. London 1983)

China, Zhejiang, Anhui. Perennial, evergreen, upright and shiny culms, young culm pruinose and sheath of young culm ciliate, culm sheaths spotted, sheath blade long lanceolate or ribbon-like, no sheath auricles and cilia, sheath ligule weak and shortly hairy, colonial, fast-growing, running, spreading, develops a very dense grove, wood considered of the highest quality and exceptionally strong, used for making walking sticks, farm implements, for weaving sleeping mats, shoots delicious or simply edible, requires moist soil, see *Journal of the Washington Academy of Sciences* 35(10): 286, f. 1. 1945, *Journal of the Arnold Arboretum* 37(2): 192. 1956, *Bulletin of Botanical Research* 2(1): 77. 1982, *Acta Phytotaxonomica Sinica* 29(5): 452-455. 1991.

in English: Meyer bamboo, hair-ring bamboo, lightly sweet bamboo, light bamboo

P. meyeri McClure f. *sphaeroidea* Wen (*Phyllostachys sulphurea* f. *viridis* (Rob. A. Young) D. Ohrnberger)

China. See *Journal of the Washington Academy of Sciences* 27: 345. 1937, *Bulletin of Botanical Research* 2(1): 74. 1982.

P. nana Rendle (*Phyllostachys nigra* var. *nigra*; *Phyllostachys puberula* (Miq.) Munro var. *nana* (Rendle) J. Houz.)

Asia. See *Transactions of the Linnean Society of London* 26(1): 38, 123. 1868 and *Journal of the Linnean Society, Botany* 36(254): 441-442. 1904.

P. nevinii Hance (*Phyllostachys nevinii* Hance var. *hupehensis* Rendle; *Phyllostachys nigra* var. *henonis* (Mitford) Stapf ex Rendle) (named for Rev. J.C. Nevin, traveler, explorer, arrived in China in 1860, collected plants for the British botanist Henry Fletcher Hance (1827-1886), see Emil Bretschneider (1833-1901), *History of European Botanical Discoveries in China*. 632-652, 706-707. P. nidularia Munro

China. Perennial, monopodial, thin-walled, evergreen with an aggressively growing rhizome system, small culms strong and fragile, prominent culm nodes, branching internodes somewhat compressed, culm-sheath straw colored with hairs on the margins, usually one leaf per twig, leaf blade lanceolate with a bright green upper surface, culms do not split well, sometimes cultivated as a potted ornamental, fast-growing and very aggressive, edible shoots free of acrid taste even in the raw state, culms used for papermaking and fencing, plants used for dense hedges and erosion control, useful for soil and water stabilization on hills, requires moist soil, in Guatemala considered endangered species, see *Gardener's Chronicle, new series* 9: 773-774. 1876 and *Journal of the Linnean Society, Botany* 36(254): 442. 1904, *Agriculture Handbook* 114: 44. 1957, *Acta Phytotaxonomica Sinica* 29(5): 452-455. 1991, Shuang-Quan Huang et al. "Honeybee-assisted wind pollination in bamboo *Phyllostachys nidularia* (Bambusoideae: Poaceae)?" *Botanical Journal of the Linnean Society* 138(1): 1-7. Jan 2002.

in English: big-node bamboo, dwarf bamboo, flower bamboo, spear and sword bamboo, writing brush bamboo, broom bamboo

P. nidularia Munro f. *farcta* H.R. Zhao & A.T. Liu

China. Middle and lower part of culm solid or nearly solid, edible shoots, plants used for dense hedges and erosion control, culms used for papermaking and fencing, see *Acta Phytotaxonomica Sinica* 18(2): 186. 1980, *Acta Phytotaxonomica Sinica* 37(6): 541-544. 1999.

in English: solid bamboo, solid broom bamboo

P. rubromarginata McClure (*Phyllostachys rubromarginata* f. *castigata* T.H. Wen; *Phyllostachys shuchengensis* S.C. Li & S.H. Wu)

China, Zhejiang. Perennial, monopodial, evergreen, aggressive spreader, shallow-rooted, long and slender internodes, joint flat, sheath light green with a light reddish purple hue, sheath blade long lanceolate, no sheath auricles, sheath ligule reddish purple and slightly concave, good-quality

wood easy to split, edible young shoots with a small degree of acidity when raw, used for basket making, pipes, plant supports and for weaving, stakes and construction, useful for erosion control, very hardy, tolerates cold and dry winds, requires a rich damp soil, found along roadsides and riverbanks, see *Lingnan University Science Bulletin* 9: 44. 1940, *Journal of the Anhui Agricultural College* 1981(2): 49-52, 2 figs. 1981, *Bulletin of Botanical Research* 2(1): 76-77. 1982.

in English: red margined bamboo, red marginated sheath bamboo, girl's bamboo

P. rubromarginata McClure f. *castigata* Wen

China. See *Bulletin of Botanical Research* 2(1): 76-77. 1982.

in English: daughter bamboo

P. rutila Wen

China. Young culm green, sheath bright red with brown spots, sheath narrow lanceolate, sheath auricles more or less ovate to elliptic, sheath ligule purple with an arching tip, edible shoots, see *Bulletin of Botanical Research* 2(1): 70-71, f. 8. 1982.

in English: Quxian red shell bamboo

P. sapida Yi

China. Shoots edible, see *Journal of Bamboo Research* 10(4): 21-22, f. 1. 1991.

in English: Pengxian bamboo, sweet bamboo

P. sedan Brandis ex Camus

Myanmar. See *Les Bambusées* 66. 1913, *Grasses of Burma* 11. 1945.

China. Strong, hard, culms green to blue-green, culm internode surface rough, culm sheaths blotched and minutely hairy, see *Flora Cochinchinensis, denuo in Germania edita* 1: 57. 1790, *Revue Horticole* 45: 379. 1873, *Bulletin de la Société Nationale d'Acclimatation de France*, sér. 3 5: 689, 773. 1878 and *Journal of the Washington Academy of Sciences* 27: 345. 1937, *Journal of the Arnold Arboretum* 37(2): 192-193, 195. 1956, *Agriculture Handbook* 114: 65. 1957, *Acta Phytotaxonomica Sinica* 18(2): 169. 1980, *Bulletin of Botanical Research* 2(1): 77. 1982, *Journal of Bamboo Research* 3(2): 35. 1984, *Journal of Bamboo Research* 8(4): 40. 1989, *Journal of Bamboo Research* 9(4): 39. 1990, *Acta Phytotaxonomica Sinica* 29(5): 452-455. 1991, *Bambusbrief* 1993(2): 10. 1993, *Acta Phytotaxonomica Sinica* 37(6): 541-544. 1999.

in Japan: kou-chiku, ougon-kou-chiku, robert-ougon-chiku (culms yellow-green and later golden), gimmei-kou-chiku, uzo-gimmei-chiku

P. vivax McClure (*Phyllostachys vivax* cv. *vivax*)

China. Evergreen, thin-walled and fragile, young culms green, a pruinose ring below joint, culms gray-green when mature, internodes with longitudinal ridges, sheath blade long and slender, no sheath auricles and no cilia, sheath ligule short, drooping leaves broad and long, a giant running bamboo, shallow rooted, aggressive once established, excellent timber bamboo for ornamental use, strips used for weaving, the best timber bamboo for colder climates, young shoots usually free of acidity even when raw, closely related to *Phyllostachys bambusoides* Siebold & Zucc., see *Journal of the Washington Academy of Sciences* 35(10): 292, f. 3. 1945, *Acta Phytotaxonomica Sinica* 14(2): 32.

1976, *Journal of Bamboo Research* 2(1): 72. 1983, *Journal of Bamboo Research* 4(1): 56. 1985, *Acta Phytotaxonomica Sinica* 29(5): 452-455. 1991, *Acta Phytotaxonomica Sinica* 37(6): 541-544. 1999.

in English: giant timber bamboo, vigorous bamboo, elegant bamboo, smooth-sheath bamboo

P. vivax McClure f. *aureocaulis* N.X. Ma (*Phyllostachys vivax* cv. *aureocaulis*)

China. Golden yellow culm with green longitudinal stripes, ornamental, see *Journal of Bamboo Research* 4(1): 56. 1985.

P. vivax McClure f. *huangwenzhu* J.L. Lu (*Phyllostachys vivax* f. *huanwenzhu* J.L. Yu)

China. Yellow grooves on its internodes, shoot edible, hardy and cold-resistant, see *Acta Phytotaxonomica Sinica* 14(2): 32. 1976.

in English: yellow groove bamboo

P. vivax McClure f. *vittata* Wen

China. See *Journal of Bamboo Research* 2(1): 72. 1983.

P. yunhoensis S.Y. Chen & C.Y. Yao

China, Zhejiang. Young culm pruinose with narrow pruinose ring under each joint, young shoot purplish green, sheath smooth dark green or yellowish, sheath blade ribbon-like orange yellow, sheath auricles sickle-shaped or ovate, sheath ligule slightly arcuate, culm used as poles, delicious edible shoots, see *Acta Phytotaxonomica Sinica* 18(2): 183-184, pl. 7. 1980.

in English: black tortoise bamboo, Yunhe sheath bamboo

Pilgerochloa Eig = *Ventenata* Koeler

Dedicated to the German botanist Robert Knuds Friedrich Pilger, 1876-1953, traveler, botanical explorer, plant collector in Brazil (Matto Grosso), Director at Botanical Garden Berlin-Dahlem, his works include "Gramineae novae, a cl. K. Skottsberg in Patagonia australi et in Fuegia collectae." *Repert. Spec. Nov. Regni Veg.* 12: 304-308. 1913 and "Sobra algunas gramíneas de América del Sur." *Revista Argent. Agron.* 11(4): 257-264. 1944. See L.R. Parodi, "Robert Pilger." *Revista Argent. Agron.* 20(2): 107-114. 1953; H. Melchior, "Zum Gedächtnis von Robert Pilger." *Bot. Jahrb. Syst.* 76(3): 385-409. 1954; Ida Kaplan Langman, *A Selected Guide to the Literature on the Flowering Plants of Mexico*. University of Pennsylvania Press, Philadelphia 1964; E.D. Merrill, in *Bernice P. Bishop Mus. Bull.* 144: 151. 1937; R. Zander, F. Encke, G. Buchheim and S. Seybold, *Handwörterbuch der Pflanzennamen*. 14. Aufl. Stuttgart 1993; T.W. Bossert, *Biographical dictionary of botanists represented in the Hunt Institute portrait collection*. 310. 1972; S. Lenley et al., *Catalog of the manuscript and archival collections and index to the correspondence of John Torrey*. Library of the New York Botanical Garden.

One species, Iran, Asia Minor. Pooideae, Poodae, Aveneae, or Pooideae, Poeae, Agrostidinae, annual, herbaceous, auricles absent, ligule an unfringed membrane, plants bisexual, open inflorescence paniculate, spikelets pedicellate and flattened, 2 glumes unequal to very unequal, lemmas hairy awned, geniculate awn, palea present, 2 free and membranous lodicules, 3 stamens, ovary glabrous, 2 stigmas, often referred to *Ventenata*, see *Descriptio Graminum in Gallia et Germania* 272. 1802, *Atti della Reale Accademia dei Lincei, Memorie di Classe di Scienze Fisiche, Matematiche e Naturali* (ser. 3) 10: 187, 191, 247. 1881, *Flora Orientalis* 5: 539. 1884 and *Repertorium Specierum Novarum Regni Vegetabilis* 26: 71. 1929, *Contributions from the United States National Herbarium* 48: 688. 2003.

Species

P. eigiana H. Scholz & Raus

Asia Minor. See *Willdenowia* 12(1): 56. 1982.

Pinga Widjaja

A vernacular name.

One species, New Guinea. Sympodial bamboo, scrambling, 6 stamens, ovary glabrous, 3 stigmas, similar to *Neololeba*, see *Reinwardtia* 11(2): 121-124. 1997.

Species

P. marginata Widjaja

New Guinea.

Piptatherum P. Beauv. = *Oryzopsis* Michaux, *Urachne* Trin.

From the Greek *pipto* "to fall" and *ather* "stalk, barb, awn," falling awn, referring to the deciduous awn on the lemma; see A. Palisot de Beauvois, *Essai d'une nouvelle Agrostographie*. 17, 173. Paris (Dec.) 1812.

About 24-26 species, Old World subtropics, southwestern Asia, eastern Mediterranean. Stipoideae, Stipeae, Stipinae, or Pooideae, Stipeae, Stipinae, perennial, herbaceous, more or less densely or loosely tufted, branched or unbranched, culm nodes glabrous, ligule membranous, no auricles, leaf blade flat or involute, plants bisexual, open or contracted panicles, bisexual and solitary pedicellate spikelets, spikelets with female-fertile florets only, spikelets with 1 bisexual flower, floret dorsally compressed, glumes subequal, lemma hardened and cylindrical-ovoid, lemma smooth with a caducous terminal awn, awns weakly to strongly bent, blunt to

sharp callus very small, 2 or 3 lodicules free and hyaline to membranous, 3 stamens, ovary glabrous, 2 stigmas, weed species, cultivated fodder, sometimes referred to and included in *Oryzopsis* Michaux, hybridizes with *Achnatherum hymenoides* (Roemer & Schultes) Barkworth (*Stipa* sensu lato), type *Piptatherum caerulescens* (Desf.) P. Beauv., see *Species Plantarum* 1: 55, 61, 78. 1753, *Flora Boreali-Americana* 1: 51, t. 9. 1803, *Essai d'une Nouvelle Agrostographie* 17, 18, 173. 1812, *Fundamenta Agrostographiae* 109-110. 1820, *Species Graminum Stipaceorum* 9, 19. 1842, Charles Wilkes, 1798-1877, *Narrative of the United States Exploring Expedition*. caerulescens auct.; *Stipa caerulescens* (Desf.) Raspail; *Urachne caerulescens* (Desf.) Trin.)

Europe, Italy, Morocco, Algeria, Spain. Good for mine spoil bank reclamation, useful for erosion control, see *Flora Atlantica* 1: 66, t. 12. 1798, *Encyclopédie Méthodique, Botanique* Suppl. 1: 258. 1810, *Essai d'une Nouvelle Agrostographie* 18. 1812, *Flore de France* 6: 250. 1815, *Fundamenta Agrostographiae* 110. 1820, *Beitraege zur Erhaltung und Erforschung Heimische Orchideen* 5: 449. 1825, *Akademie der Wissenschaften in Wien, Mathematisch-Naturwissenschaftliche Klasse, Denkschriften* 1: 75. 1885.

P. canadense (Poir.) Dorn (also spelled *canadensis*) (*Oryzopsis canadensis* (Poir.) Torr.; *Oryzopsis juncea* Britton, Sterns & Poggenb.; *Oryzopsis macounii* (Scribn.) Beal; *Piptatherum canadensis* (Poir.) Barkworth; *Stipa canadensis* Poir.; *Stipa juncea* Michx., nom. illeg., non *Stipa juncea* L.; *Stipa macounii* Scribn.; *Urachne canadensis* (Poir.) Torr.)

Northern America, Canada. See *Flora Boreali-Americana* 1: 54. 1803, *Encyclopédie Méthodique, Botanique* 7: 452. 1806, *North American Gramineae and Cyperaceae* 2: 114. 1835, *Species Graminum Stipaceorum* 19. 1842, *Fl. New York* 2: 433. 1843, *Preliminary Catalogue of Anthophyta and Pteridophyta Reported as Growing Spontaneously within One Hundred Miles of New York* 67. 1888, *Catalogue of Canadian Plants* 2(5): 390. 1890, *Grasses of North America for Farmers and Students* 2: 229. 1896 and *Contr. U.S. Natl. Herb.* 12: 150. 1908, *Vascular Plants of Wyoming* (edition 3) 377. 2001.

P. exiguum (Thurb.) Dorn (*Oryzopsis exigua* Thurb.; *Oryzopsis exigua* var. *exigua*; *Piptatherum exiguum* (Thurb.) Barkworth)

North America, Canada, Columbia Basin region. Perennial, strongly tufted, smooth to slightly rough sheath, ligule pointed, no auricles, inrolled leaves, spike-like flower head with short upward-pointing branches pressed close to the stem, glumes broad, hardened lemma, short and twisted awns, see *United States Exploring Expedition* 17: 481. 1874 and *Annals of the Missouri Botanical Garden* 81(4): 784-791. 1994, *Vascular Plants of Wyoming* (edition 3) 377. 2001.

in English: little rice grass

P. gracile Mez (*Oryzopsis gracilis* (Mez) Pilger; *Oryzopsis lateralis* Stapf; *Piptatherum laterale* auct. non (Munro ex Regel) Roshev.)

Asia, Karakorum Mountains, China, Himalayan Region, Nepal. Solitary, usually no rhizomes, see *Repertorium Specierum Novarum Regni Vegetabilis* 17(486-491): 211. 1921, *Notizblatt des Botanischen Gartens und Museums zu Berlin-Dahlem* 14: 347. 1939, *Annals of the Missouri Botanical Garden* 81(4): 784-791. 1994.

P. hilariae Pazij (*Oryzopsis hilariae* (Pazij) Uniyal; *Oryzopsis humilis* Bor; *Oryzopsis wendelboi* Bor; *Piptatherum binabium* Pazij; *Piptatherum schugnanicum* Roshev.; *Piptatherum tremuloides* Ovcz. & Czukav.)

Asia, Karakorum Mountains. See *Not. Syst. Herb. Inst. Bot. & Zool. Acad. Sci. Uzbekistan* 10: 20. 1948, *Novosti Sist. Vyss. Rast.* 11: 12. 1974, *Grasses of Uttar Pradesh* 64. 1994.

P. holciforme (M. Bieb.) Roem. & Schult. (*Agrostis holciformis* M. Bieb.; *Oryzopsis holciformis* (M. Bieb.) Hack.; *Oryzopsis holciformis* (M. Bieb.) Richter; *Oryzopsis kopetdagensis* Roshev.; *Piptatherum karataviense* Roshev.)

Iran, Israel, Egypt, Syria, Europe. Erect plant, coarse, tall, blue flat basal leaves, dark seeds, animal food, forage, endangered species (in Jordan), found in loamy soils, rocky slopes, dry hillside, disturbed habitats, forested slopes, see *Flora Taurico-Caucasica* 1: 54. 1808, *Systema Vegetabilium* 2: 328. 1817, *Systema Vegetabilium, editio decima sexta* 1: 251. 1825, *Species Graminum Stipaceorum* 15. 1842, *Akademie der Wissenschaften in Wien, Mathematisch-Naturwissenschaftliche Klasse, Denkschriften* 50(2): 8. 1885, *Mittheilungen der Thüringischen Botanischen Vereins* N.F. 13 & 14: 42. 1899 and *Videnskabelige Meddelelser fra Dansk Naturhistorisk Forening i Kjøbenhavn* 55: 164. 1903, *Conspectus Florae Graecae* 3: 354. 1904, *Flora URSS* 2: 117, 743, t. 5, f. 17. 1934, *Notes from the Royal Botanic Garden, Edinburgh* 33(3): 372. 1975, *Plant Taxonomy, Phytogeography and Related Subjects: The Davis & Hedge Festschrift* by P.H. Davis, Ian Charleson Hedge, Kit Tan (editor), R.R. Mill (editor), Thomas S. Elias (editor). 117. China, Turkey, Nepal. See *Journal of the Linnean Society, Botany* 18: 106. 1880, *The Flora of British India* 7: 234. 1896 and *Notes from the Royal Botanic Garden, Edinburgh* 33(3): 394. 1975.

P. micranthum (Trin. & Rupr.) Barkworth (*Oryzopsis micrantha* (Trin. & Rupr.) Thurb.; *Urachne micrantha* Trin. & Rupr.)

North America, U.S., Canada, Columbia Basin. Perennial or annual, strongly tufted, open sheath smooth to slightly hairy, ligule blunt and finely hairy along the edge, flat or slightly inrolled leaf blades, open spike-like flower head with branches that spread out from the stem axis, glumes papery and sharply pointed, lemma hairless, awn straight and stiff, very rare species, grows on dry rocky slopes, see *Species Graminum Stipaceorum* 16, 19. 1842, *Proceedings of the Academy of Natural Sciences of Philadelphia* 15: 78. 1864 and *Phytologia* 74(1): 19. 1993.

in English: small-flowered rice grass, little seed rice grass, littleseed ricegrass, little ricegrass

P. microcarpum (Pilg.) Tzvelev (*Oryzopsis microcarpa* Pilg.)

Asia, India, Pakistan. Useful for erosion control, see *Notizblatt des Botanischen Gartens und Museums zu Berlin-Dahlem* 14: 346. 1939, *Grasses of Burma, Ceylon, India and Pakistan* 640. 1960, *Novosti Sist. Vyss. Rast.* 11: 12. 1974.

P. miliaceum (L.) Cosson (*Achnatherum miliaceum* (L.) P. Beauv.; *Agrostis miliacea* L.; *Milium multiflorum* Cav.; *Milium multiflorum* var. *multiflorum*; *Milium multiflorum* var. *thomasi* (Duby) Goiran; *Milium thomasi* Duby; *Nassella multiflora* (Cav.) Piptochaetium Presl = *Caryochloa* Spreng.,
Caryochloa Trin., *Podopogon* Raf.

Greek *pipto* "to fall" and *chaite* "bristle, long hair, foliage," referring to the deciduous awns.

About 35 species, U.S. to Argentina, northern and South America. Stipoideae, Stipeae, Stipinae, perennial, caespitose, herbaceous, unbranched, leaves mostly basal, auricles absent, ligule an unfringed membrane, plants bisexual, inflorescence paniculate, spikelets pedicellate, female-fertile floret terminal, two more or less equal glumes lanceolate acuminate or aristulate, lemmas often dark-pigmented with margins inrolled along median line, awn deciduous or not, palea grooved, 2 or 3 lodicules free and membranous, ovary glabrous, 2 stigmas, cleistogamous or chasmogamous, native pasture species, species of open habitats, pampas, resembling *Stipa* and *Nasella*, type *Piptochaetium setifolium* J. Presl, see *Species Plantarum* 1: 78-79. 1753, *Genera Plantarum* 33. 1789, *Flora Boreali-Americana* 1: 51. 1803, *Fundamenta Agrostographiae* 109. 1820, *Neogenyton, or Indication of Sixty-Six New Genera of Plants of North America*. 4. 1825, *De Graminibus Paniceis* 54, 248. 1826, *Systema Vegetabilium, editio decima sexta* 4(2): 22, 30. 1827, *Reliquiae Haenkeanae* 1: 222. 1830, *Species Graminum Stipaceorum* 22. 1842, *Die Natürlichen Pflanzenfamilien* 2(2): 40. 1887 and *Revista del Museo de La Plata (Nueva Serie), Sección Botánica* 6(25): 213-310. 1944, *Fieldiana, Botany* 24(2): 38-331. 1955, *Boletín de la Sociedad Argentina de Botánica* 12: 167-179. 1968, *Flora de la Provincia de Buenos Aires* 4(2): 39. 1970, *Flora Patagónica* 8(3): 333-340. 1978, *Iselya* 1(4): 161-165. 1980, *Taxon* 32: 649. 1983, *Brenesia* 25-26: 169-178. 1986, *Systematic Botany* 13(2): 196-201. 1988, *Arnaldoa* 1(1): 11-34. 1991, *Phytologia* 74(1): 1-25. 1993, *Candollea* 48(1): 1-13, 15-18. 1993, *Flora Mesoamericana* 6: 244. 1994, *Gayana, Botánica* 53(2): 277-284. 1996, *Darwiniana* 36(1-4): 107-157. 1998 [Revisión de las especies Sudamericanas del género *Piptochaetium* (Poaceae, Pooideae, Stipeae)], *Grasses: Systematics and Evolution* 75-82. 2000,

Piptophyllum C.E. Hubb. = *Crinipes* Hochst., *Triraphis* R. Br.

From the Greek *pipto* "to fall" and *phyllon* "leaf," referring to the leaf blades disarticulating from the sheaths.

One species, south tropical Africa, Angola. Arundinoideae or Chloridoideae, perennial, herbaceous, erect, slender, fibrous base, leaf blades deciduous, auricles absent, ligule

a fringe of hairs, delicate open inflorescence paniculate, panicle with capillary branches, spikelets pedicellate and flattened, 2-flowered, two unequal or subequal glumes 1-nerved, lemmas membranous with a long flexuous central awn slightly twisted at base, awn much longer than lemma, palea present, 2 fleshy glabrous lodicules, 3 stamens, ovary glabrous, 2 stigmas, rocky and stony places, related to *Zenkeria*, resembling *Nematopoa* and *Pentaschistis*, type *Piptophyllum welwitschii* (Rendle) C.E. Hubb., see *Prodromus Florae Novae Hollandiae* 185. 1810, *Histoire Naturelle des Végétaux* 13: 164. 1841, *Flora* 38: 279-280. 1855 and *Fl. Afrique Nord* 2: 191. 1953, *Kew Bulletin* 12: 53. 1957, *Contributions from the United States National Herbarium* 41: 231-232. 2001, *Contributions from the United States National Herbarium* 46: 166, 627. 2003.

Species

P. welwitschii (Rendle) C.E. Hubb. (*Pentaschistis welwitschii* Rendle)

Angola. Glumes shorter than lemma and shortly awned, lemmas 5-9-nerved and 2-lobed, damp places.

Piptostachya (C.E. Hubb.) J.B. Phipps = Zonotriche (C.E. Hubb.) J.B. Phipps

Greek *pipto* "to fall" and *stachys* "a spike."

Arundinelleae, *Tristachya* sect. *Piptostachya* C.E. Hubb., type *Piptostachya inamoena* (K. Schum.) J.B. Phipps (*Tristachya inamoena* K. Schum.; *Zonotriche inamoena* (K. Schum.) Clayton), see *Die Pflanzenwelt Ost-Afrikas* C: 109. 1895 and *Bulletin of Miscellaneous Information Kew* 1936(5): 322. 1936, *Kirkia* 4: 107-109, 113. 1964, *Kirkia* 5: 235-258. 1966, *Kew Bulletin* 21(1): 119-124. 1967, *Boletim da Sociedade Broteriana, ser. 2* 41: 199-200. 1967, *Kew Bulletin* 26(1): 111-123. 1971.

Piresia Swallen

Dedicated to the Brazilian botanist João Murça Pires, 1916-1994, Center for Tropical Research, Brazilian Institute for Agricultural Research, Belém, collected extensively in Amazonas and Paras, Brazil, 1941-1947 Colombia and Peru, 1965-1966 New York Botanical Garden's Third Serra da Neblina Expedition [the highest point in Brazil is the Serra da Neblina on the border with Venezuela], with Ghillean T. Prance wrote "The vegetation types of the Brazilian Amazon." in G.T. Prance and Thomas E. Lovejoy, editors. *Key Environments: Amazonia*. Pergamon Press, Oxford 1985, with Ricardo de S. Seco e Joaquim Ivanir Gomes wrote *Taxonomia e Fitogeografia das Espécies de Seringueira*. Embrapa Amazônia Oriental 2002. See *Mem. New York Bot. Gard.* 17: 90. 1967; *Mem. New York Bot. Gard.* 23: 345. 1972; *Ann. Missouri Bot. Gard.* 63: 57. 1976

[1977]; *Mem. New York Bot. Gard.* 30: 109, 120. 1977; *Phytologia* 41: 10. 1978; *Mem. New York Bot. Gard.* 29: 141. 1978; *Brittonia* 33: 397. 1981; *Mem. New York Bot. Gard.* 32: 188. 1981; *Syst. Bot.* 6: 88. 1981; *Phytologia* 51: 244. 1982; *Phytologia* 54: 460-461. 1983; *Mem. New York Bot. Gard.* 38: 72. 1984; *Bradea* 5: 301. 1989; *Fl. Neotrop. Monogr.* 52: 371. 1990; *Mem. About 4-7 species, Venezuela, Brazil, Trinidad, tropical America, Amazon. Bambusoideae, Olyreae, Olyrinae, or Bambusoideae, Oryzodae, Olyreae, perennial, fernlike, delicate, small, low to dwarf, dimorphic, caespitose, unarmed, herbaceous, erect to weakly ascending, decumbent, unbranched, low-growing, thin roots, fertile culms horizontal decumbent with axillary flowering spikes prostrate to ascending, plants monoecious, inflorescence terminal and axillary of mixed male and female spikelets, often inflorescences from base of culms, raceme-like panicle, spikelets in triplets or paired, fertile spikelets unisexual ovate to lanceolate, glumes herbaceous and acute, lemma pubescent and coriaceous, palea present, 0-3 female spikelet staminodes, 3 male spikelet stamens, 2 stigmas, sterile ovary with 1 stigma sometimes present, primary forest, wet lowland forest, in sandy places, forest shade, forest floor, type *Piresia goeldii* Swallen, see *Phytologia* 11(3): 152-153. 1964, *Brittonia* 34(2): 199-209. 1982 [New species of *Cryptochloa* and *Piresia* (Poaceae: Bambusoideae)], *Flora of the Guianas. Series A, Phanerogams* 529-534. 1990, *Ruizia* 13: 1-480. 1993, *Systematic Botany* 18(1): 80-99. 1993, *American Bamboos* 302-304. 1999, *Contributions from the United States National Herbarium* 39: 105. 2000.

Species

P. goeldii Swallen (named for the Swiss zoologist Emil or Emílio August Goeldi, 1859-1917, entomologist, director of the Museum of Natural History and Ethnography of Pará, in Belém, wrote a number of papers on mosquitoes in the Amazon. See Nelson Sanjad, "On 'the abominable profession of being a vampire': Emílio Goeldi and Mosquitos in Pará (1905)." *História, Ciências, Saúde — Manguinhos*, vol. 10(1): 85-111, Jan.-Apr. 2003; *Gen. Inga, Bot.* 317. 1997)

Brazil, Venezuela, Peru, Colombia. Perennial, caespitose, subherbaceous, fernlike leaves 2-ranked, leaf blades lanceolate to ovate and acuminate at the apex, inflorescences from decumbent culms, shade-loving, seasonally inundated soil, forest, shade, see *Phytologia* 11(3): 153. 1964.

P. leptophylla Soderstr.

Ecuador, Brazil. Perennial, tufted, erect, ascending, delicate, wiry culms of 2 types, fertile culm decumbent and bearing several small racemes at the end, sterile culm with

prominent nodes and leafy in the upper part, leaf blades linear-lanceolate glabrous acute shortly pseudopetiolate, lower part of raceme enclosed in a leaf sheath, female spikelets ovate glabrous with prominent nerves, male spikelets linear-lanceolate, forming small clumps, forest floor, light shade to deep shade, seasonally inundated soil, resting forest, under shrubs and trees, on sandy soil, see *Brittonia* 34(2): 206, f. 4. 1982.

P. macrophylla Soderstr.

French Guiana, Peru, Brazil. Perennial, caespitose, fan-shaped leaves appearing palmate, leaf blades oblong acuminate glabrous, inflorescences both decumbent and terminal, forest shade, see *Brittonia* 34(2): 203, f. 3. 1982.

P. sympodica (Döll) Swallen (*Olyra sympodica* Döll; *Raddia bififormis* Hitchc. & Chase; *Raddia sympodica* (Döll) Hitchc.)

West Indies, the Caribbean, Trinidad, Venezuela, Brazil, French Guiana. Perennial, erect, low to dwarf, caespitose, decumbent floriferous culms leafless, fan-shaped leaves appearing palmate, leaf blades lanceolate to narrowly oblong and acuminate, inflorescences spicate horizontal, forming small clumps, ground cover, medicinal, in sandy soil, forest, under trees or shrubs, shade or partial shade, see *Systema Naturae, Editio Decima* 1253, 1261, 1379. 1759, *Opuscoli Scientifici* 3: 410. 1819, *Flora Brasiliensis* 2(2): 322. 1877 and *Contributions from the U.S. National Herbarium* 18(7): 358. 1917, *Manual of the Grasses of the West Indies* 372. 1936, *Annals of the Missouri Botanical Garden* 29(4): 317-318. 1942, *Phytologia* 11(3): 152-153. 1964.

in Peru: shúnkushun

Piresiella Judz., Zuloaga & Morrone

A diminutive of *Piresia*.

One species, the Caribbean, Cuba. Bambusoideae, Oryzodae, Olyreae, or Bambusoideae, Olyreae, Olyrinae, perennial, herbaceous, unarmed, caespitose, delicate, erect, small, unbranched, tuberous, dimorphic, stoloniferous, flowering culms leafless, auricles absent, sheaths glabrous and ciliate, leaves ovate, ligule an unfringed membrane, rhizomes pachymorph, plants monoecious, inflorescence spicate, fertile spikelets unisexual, 2 ascending and unisexual racemes, spikelets solitary and shortly pedicellate, 2 glumes subequal, palea present, 3 free lodicules, no stamens, male florets 2-staminate, ovary glabrous, savannah, stream banks, shade, river margins, segregated from *Mniochloa*, type *Piresiella strephioides* (Griseb.) Judz., Zuloaga & Morrone, see *Proceedings of the Biological Society of Washington* 21: 185. 1908, *Annals of the Missouri Botanical Garden* 80(4): 846-871. 1993, *American Bamboos* 304-306. 1999, *Contributions from the United States National Herbarium* 39: 105. 2000.

Species

P. strephioides (Griseb.) Judz., Zuloaga & Morrone (*Mniochloa strephioides* (Griseb.) Chase; *Olyra strephioides* Griseb.)

The Caribbean. See *Catalogus Plantarum Cubensium*. 229. Lipsiae 1866 and *Proceedings of the Biological Society of Washington* 21: 186. 1908, *Annals of the Missouri Botanical Garden* 80(4): 857. 1993.

Pithecurus Kunth = Schizachyrium Nees

Greek *pithekos* “an ape, monkey” and *oura* “tail.”

Panicoideae, Andropogoneae, Andropogoninae, see *Species Plantarum* 2: 1045. 1753, *Flora Brasiliensis seu Enumeratio Plantarum* 2: 331. 1829, *Révision des Graminées* 2: 571. 1832, *Plantae Junghuhnianae* 3: 359. 1854, *Flora Australiensis: A Description ...* 7: 535. 1878, *Flora Brasiliensis* 2(4): 296. 1883 and *Contributions from the United States National Herbarium* 46: 539, 560-569. 2003.

Plagiantha S.A. Renvoize

From the Greek *plagios* “oblique” and *anthos* “flower.”

One species, Brazil, Bahia. Panicoideae, Paniceae, Paspalinae, annual or perennial, erect or ascending, loosely tufted, branched, often rooting from the lower nodes, slender, leaf blades lanceolate to narrowly lanceolate, plants bisexual, inflorescence paniculate, panicle branches spreading, small spikelets gibbous, two glumes blunt, lower lemma membranous 2-nerved, palea thickened, related to *Steinchisma* and *Panicum*, type *Plagiantha tenella* Renvoize, sandy places, damp ground, in cerrado, see *Kew Bulletin* 37(2): 323-333. 1982, S.A. Renvoize, *The Grasses of Bahia* 178. Kew 1994, *Darwiniana* 3(1-4): 53-60. 1995, *Am. J. Bot.* 88: 1988-1992, 1993-2012. 2001, *Contributions from the United States National Herbarium* 46: 539. 2003, *Am. J. Bot.* 90: 796-821. 2003.

Species

P. tenella Renvoize

Brazil. Annual or short-lived perennial, herbaceous, wiry, loosely caespitose, erect, geniculately ascending, panicle ovate, spikelets oblong glabrous, lower glume broadly ovate 3- to 5-nerved, upper glume ovate 5-nerved, upper lemma and palea apiculate, shade or partial shade, in woodland, see *Kew Bulletin* 37(2): 323, f. 1. 1982.

Plagiarthron P.A. DuVign. = Loxodera Launert

From the Greek *plagios* “oblique, placed sideways” and *arthron* “a joint.”

Andropogoneae, see *Bulletin de la Société Botanique de Belgique* 90: 187. 1958, *Boletim da Sociedade Broteriana, ser. 2* 37: 80-81. 1963, *Kew Bulletin* 32(4): 767-771. 1978.

Plagiochloa Adamson & Sprague =
Brizopyrum Link, *Brizopyrum* Stapf, *Tribolium*
Desv.

Greek *plagios* “oblique, placed sideways” and *chloe*, *chloa* “grass,” in reference to the spikelets on the rachis; see Robert Stephen Adamson (1855-1965) and Thomas Archibald Sprague (1877-1958), in *Journal of South African Botany* 7: 89. (Apr.) 1941.

About 5-11 species, South Africa. Danthonioideae, Danthoniae, perennial, variable, straggling, leaves rolled, inflorescence a spike or spike-like panicle or raceme, spikelets placed obliquely to the rachis, glabrous or hairy glumes shortly awned or awnless, hairy lemmas awnless or shortly awned, wet areas, sandy soils, disturbed areas, often in *Tribolium* Desv., type *Plagiochloa uniolae* (L.f.) Adamson & Sprague (*Tribolium uniolae* (L.f.) Renvoize), see *Supplementum Plantarum* 110. 1781 [1782], *Hort. Berol.* 1: 159. 1827, *Mémoires de la Société d'Agriculture, Sciences et Arts d'Angers* 1: 168, t. 7, f. 2. 1831, *Fl. Cap.* 7: 318. 1898 and *Journal of South African Botany* 7(2): 89-90. 1941, *Nord. J. Bot.* 1: 20. 1981, *Kew Bulletin* 40(4): 797. 1985, *American Journal of Botany* 79: 689-700. 1992, *South African Journal of Botany* 60(1): 22-26 and 60(5): 279-284. 1994, H.P. Linder and G. Davidse, “The systematics of *Tribolium* Desv. (Danthoniae: Poaceae).” *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 119(4): 445-507. 1997, *Systematic Entomology* 27(4): 469-517. Oct 2002, *Contributions from the United States National Herbarium* 46: 143, 539, 622. 2003.

Plagiolytrum Nees = *Dinebra* Jacq.,
Tripogon Roem. & Schult.

From the Greek *plagios* “oblique, placed sideways” and *elytron* “sheath, cover, scale, husk.”

Chloridoideae, Cynodonteae, see *Fragmenta Botanica* 77, 98, t. 121, f. 1. 1809, *Systema Vegetabilium* 2: 34, 600. 1817, *Hortus Regius Botanicus Berolinensis* 1: 44, 280. 1827, *Proceedings of the Linnean Society of London* 1: 95. 1841, *Ann. Mag. Nat. Hist.* 7: 221. May 1841, *Synopsis Plantarum Glumacearum* 1: 301. 1854, *Bull. Soc. Bot. Fr.* 14: 89. 1867, *A List of the Grasses of N.W. India, Indigenous and Cultivated* 33. 1883, *Rev. Gen. Pl.* 2: 759. 1891, *Fl. Alg. Monocot.* 245. 1895 and *Kew Bulletin* 25: 301-322. 1971, *Candollea* 46: 533-535. 1991, *Contributions from the United States National Herbarium* 41: 67-68, 182, 231. 2001.

Plagiosetum Benth.

From the Greek *plagios* “oblique, placed sideways” and Latin *seta*, *ae* “bristle,” unilateral bristles.

One species, Australia. Panicoideae, Panicodae, Paniceae, annual, herbaceous, leafy, caespitose, erect, decumbent, branched, nodes glabrous and hollow internodes, ligule a rim of silky hairs, leaf blades narrow and flat, plants bisexual, inflorescence a false spike with branches reflexed at maturity and falling off with the spikelets, spikelets with involucre of slender and not spiny bristles deciduous with the spikelets, florets 2, lower floret male or sterile, upper floret bisexual, two glumes very unequal, upper lemma hard and shining, palea present, 2 fleshy lodicules, 3 stamens, ovary glabrous, 2 stigmas, fruit flattened, dry sandy areas, open places, similar to *Paractaenum* and *Setaria*, type *Plagiosetum refractum* (F. Mueller) Benth., see *Hooker's Icones Plantarum* 13: 33, t. 1242. 1877.

Species

P. refractum (F. Mueller) Benth. (*Panicum refractum* (F. Muell.) F. Muell.; *Paractaenum refractum* (F. Muell.) R.D. Webster; *Pennisetum refractum* (F. Muell.) F. Muell.; *Plagiosetum refractum* Benth.; *Setaria refracta* F. Muell.)

Queensland, Northern Territory, New South Wales, South Australia, Western Australia. Annual or short-lived perennial, tufted, leafy, geniculate stems, stiff, glabrous, inflorescence racemose and erect, cuneate deciduous racemes, primary branches reflexed, flattened peduncle, spikelets solitary and ovate-oblong and obtuse, florets 2, lower floret sterile, upper floret bisexual, sterile lemma many-nerved and epaleate, bisexual lemma acute, not grazed, grows on deep sandy soils, sand hills, see *Species Plantarum* 1: 55. 1753, *Syn. Pl.* 1: 72. 1805, *Essai d'une Nouvelle Agrostographie* 47, 51, 178. 1812, *Fragmenta Phytographiae Australiae* 3: 147. 1862, *Fragmenta Phytographiae Australiae* 8: 109, 152. 1872-1874, *Hooker's Icones Plantarum* 13: 33, t. 1242. 1877 and *The Australian Paniceae (Poaceae)* 148. 1987.

in English: bristle brush grass

Planichloa B.K. Simon = *Ectrosia* R. Br.

Latin *planus* “flat” and Greek *chloe*, *chloa* “grass,” or from the Greek *planos* “roaming, deceiving,” referring to the strongly flattened spikelets.

One species, Australia, northern Queensland. Chloridoideae, annual, hispid, herbaceous, erect, more or less unbranched, auricles absent, leaf sheaths hispid to scabrous, ligule fringed and membranous, linear leaves, plants bisexual, open to contracted inflorescence paniculate, spikelets pedicellate and flattened, two glumes unequal to very unequal, lemmas with lateral nerves grouped together, palea

present, 2 free and fleshy lodicules, 3 stamens, ovary glabrous, 2 feathery stigmas, with little pockets in the seed head, food for Golden-shouldered parrots (*Psephotus chrysopterygius* Gould), type *Planichloa nervilemma* B.K. Simon, open areas, sandy soils, see *Austrobaileya* 2(3): 212. 1986, BirdLife International. *Threatened Birds of the World*. Lynx Edicions and BirdLife International, Barcelona, Spain and Cambridge, U.K. 2000.

Species

P. nervilemma B.K. Simon

Queensland. Lemmas keeled, see *Austrobaileya* 2(3): 212. 1986.

in English: glimmer grass

Planotia Munro = *Chusquea* Kunth,
Neurolepis Meissn.

Possibly an anagram of *Platonia*.

Bambusoideae, Bambuseae, Chusqueinae, type *Planotia elata* (Kunth) Munro, see *Révision des Graminées* 1: 327, t. 76. 1830, *Linnaea* 9(4): 486. 1835, *Plantarum vascularium genera secundum ordines ...* 1: 426. 1843, *Flora of the British West Indian Islands* 530. 1864, *Transactions of the Linnean Society of London* 26(1): 70-73. 1868, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 25(5): 720-721. 1898 and *Die Natürlichen Pflanzenfamilien* Nachtrag (zum 2-4 Teil)1: 21. 1906, *Contributions from the United States National Herbarium* 39: 79-81, 105. 2000, *Bamboo Sci. Cult.* 17(1): 60. 2003.

Plantinia Bubani = *Phleum* L.

Pooideae, Poeae, Alopecurinae, see *Species Plantarum* 1: 59. 1753, *Collectanea* 1: 110. 1786, *Nuovo Giornale Botanico Italiano* 5: 317. 1873 and *Flora Pyrenaea ...* 4: 268, 270, 272. 1901, *Contributions from the United States National Herbarium* 48: 491-494, 504. 2003.

Platonia Kunth = *Chusquea* Kunth,
Neurolepis Meissn., *Platonia* Mart.
(Clusiaceae), *Platonia* Raf. (Cistaceae)

Possibly dedicated to Plato or Platon, a Greek philosopher, the disciple of Socrates.

Bambusoideae, Bambuseae, Chusqueinae, type *Platonia elata* Kunth, see *Familles des Plantes* 2: 434. 1763, *Medical Repository* 5: 352. 1808, *Caratteri di Alcuni Nuovi Generi e Nuove Specie di Animali e Piante della Sicilia* 73. Palermo 1810, *Travels in Brazil* 2: 490. 1816, *Journal de Physique, de Chimie, d'Histoire Naturelle et des Arts* 95: 151. 1822, *Révision des Graminées* 1: 139, 327, t. 76. 1829-1830, *Nova*

Genera et Species Plantarum ... 3: 168, 169, t. 288-II, 289. 1829 [1832], *Linnaea* 9(4): 486. 1835, *An Introduction to the Natural System of Botany* 74. July 1836, *Allgemeine Naturgeschichte* 3: 1431. 1841, *Plantarum vascularium genera secundum ordines ...* 1: 426. 1843, *Annales des Sciences Naturelles; Botanique, série 4* 14: 299. 1860, *Flora of the British West Indian Islands* 530. 1864, *Transactions of the Linnean Society of London* 26(1): 71. 1868 and *Die Natürlichen Pflanzenfamilien* Nachtrag (zum 3 Teil)1: 21. 1906, *Botanical Museum Leaflets* 17: 18, t. 9. 1955, *Taxon* 8: 313. 1959, D.J. Allan, in *D.S.B.* 11: 22-31. 1981, R. Zander, F. Encke, G. Buchheim and S. Seybold, *Handwörterbuch der Pflanzennamen*. 14. Aufl. 701. Stuttgart 1993, *Contributions from the United States National Herbarium* 39: 79-81, 106. 2000, *Taxon* 51(3): 813. 2002.

Plazerium Kunth = *Eriochrysis* P. Beauv.

Panicoideae, Andropogoneae, Saccharinae, see *Species Plantarum* 1: 54. 1753, *Essai d'une Nouvelle Agrostographie* 8, t. 4, f. 11. 1812, *Enumeratio Plantarum Omnium Hucusque Cognitarum* 1: 474. 1833, *Flora Brasiliensis* 2(4): 253. 1883, *Die Natürlichen Pflanzenfamilien* 2(2): 24. 1887, *Monographiae Phanerogamarum* 6: 29. 1889 and *Bulletin de la Société Botanique de France* 70: 736. 1923, A.S. Hitchcock, *Manual of the Grasses of the West Indies* 1-439. 1936, *Bulletin of the Botanical Society of Bengal* 8: 143-148. 1954, *Flora Mesoamericana* 6: 379. 1994, L. Catusas Guerra, "Las gramíneas (Poaceae) de Cuba, I." *Fontqueria* 46: [i-ii], 1-259. 1997, *Contributions from the United States National Herbarium* 46: 239-240, 539. 2003.

Plectrachne Henrard

Greek *plektron* "a spur, cock's spur" and *achne* "chaff, glume," referring to the sharp callus or to the lemma, stiff and awned.

About 11-16 species, Australia. Chloridoideae, Triodieae, perennial, aromatic, resinous or nonresinous, caespitose, leaves mainly basal, tussock-forming, branched from the lower nodes or simple, leaf sheaths shorter than culm internodes, pungent and needle-like leaves, auricles absent, long erect leaf blades subulate and rigid, ligule-fringed or ciliate, plants bisexual, inflorescence paniculate open or contracted, spikelets pedicellate, bisexual spikelets, lower 1-4 florets hermaphrodite, 2 glumes stiff and nerved, glumes persistent and more or less equal to subequal, coriaceous lemmas 3-lobed with lobes aristulate, hairy callus, palea 2-keeled, 2 free and fleshy lodicules, 3 stamens, ovary glabrous, 2 plumose stigmas, in dry open sandy thickets, sandy or stony and arid soils, open areas, sandstone ridges, resembles and often in *Triodia*, type *Plectrachne schinzii* Henrard, see *Prodromus Florae Novae Hollandiae* 182, 185. 1810 and

Jan Theodor Henrard (1881-1974), *Vierteljahrsschrift der Naturforschenden Gesellschaft in Zürich* 74: 132. (June) 1929, *Kew Bulletin* 26-30. 1941, *Journal of the Royal Society of Western Australia* 44(3): 77-83. 1961, M. Lazarides, "New taxa of tropical Australian grasses (Poaceae)." *Nuytsia* 5(2): 273-303. 1984.

Species

P. aristiglumis Lazarides (*Triodia aristiglumis* (Lazarides) Lazarides)

Northern Territory, Arnhem Land. Perennial, tufted, tussocky, nonresinous, leaf sheath hirsute to pilose, loose and sparse panicles, florets closely imbricate and exerted, 2-lobed glumes and lemmas, glumes membranous to cartilaginous and unequally 3-awned, see *Nuytsia* 5(2): 278. 1984, *Australian Systematic Botany* 10(3): 405. 1997.

P. bromoides (F. Muell.) C.E. Hubb. (*Triodia bromoides* (F. Muell.) Lazarides; *Triraphis bromoides* F. Muell.)

Western Australia. See *Fragmenta Phytographiae Australiae* 8: 108. 1873 and *Hooker's Icones Plantarum* t. 3385. 1939, *Australian Systematic Botany* 10(3): 417. 1997.

P. bunglensis S.W.L. Jacobs (*Triodia bunglensis* (S.W.L. Jacobs) Lazarides) (Bungle Bungle Range, Purnululu National Park)

Western Australia, Northern Province. See *Nuytsia* 8(2): 222. 1992, *Australian Systematic Botany* 10(3): 418. 1997.

P. bynoei C.E. Hubb. (*Triodia bynoei* (C.E. Hubb.) Lazarides) (for Benjamin Bynoe, b. about 1803-1865, assistant surgeon and surgeon in the Royal Navy 1825-63, plant collector, 1837-1843 Beagle voyages, with Darwin on the Galápagos, described Australian biota on the third voyage, later accompanied several voyages to Australia as the surgeon on convict ships, he is credited by Gould with the discovery of Spinifex (or Plumed) Pigeon, he wrote the first description of the birth of the marsupials. See Robert Fitzroy, R.N., 1805-1865 and Phillip Parker King (1791-1856), *Narrative of the Surveying Voyages of His Majesty's Ships Adventure and Beagle*, between the Years 1826 and 1836, describing their examination of the Southern Shores of South America, and the Beagle's circumnavigation of the Globe. [Three volumes in four (appendix), vol. 3 written by Charles Darwin] [First edition, first issue recording the historic voyage of the *Beagle*, including Darwin's *Journal* which forms the third volume of the *Narrative*] London, Henry Colburn 1839; Charles Darwin, *The Voyage of the Beagle*. London 1845; John Dunmore, *Who's Who in Pacific Navigation*. Honolulu 1991; Ida Lee (afterwards Marriott), *Early Explorers in Australia*. London 1925; A.E. Orchard, *A History of Systematic Botany in Australia*, in *Flora of Australia* vol. 1, edition 2, ABRIS. 1999; J.J. Keevil, "Benjamin Bynoe (1804-1865) Surgeon of H.M.S. Beagle." *Journal of the Royal Naval Medical Service* 35: 251-268. 1949; C. Bateson, *The Convict Ships 1787-1868*. Reed,

Sydney, London 1974; D.L. Serventy and H.M. Whittell, *Birds of Western Australia*. Paterson Brokensha, Perth 1962; D. Watts, *Kangaroos and Wallabies*. New Holland Publ. 1998)

Western Australia, Northern Territory. Perennial, aromatic, viscid, branched near the base, forming clumps, spreading, leaf sheaths ciliate, leaves resinous and curling, panicle loose to rather dense, spikelets biseriate, spikelets loosely flowered, the lower 2 florets hermaphrodite, glumes entire or notched, basal lemma without lateral awns, lodicules membranous, see *Bulletin of Miscellaneous Information Kew* 1941: 30. 1941, *Fl. W. Aust.* 1(1): 83. 1952, *Journal of the Royal Society of Western Australia* 44(3): 81. 1961, *Australian Systematic Botany* 10(3): 422. 1997.

P. caroliniana S.W.L. Jacobs

Western Australia. See *Nuytsia* 8(2): 221. 1992.

P. contorta Lazarides (*Triodia contorta* (Lazarides) Lazarides)

Northern Territory, Arnhem Land. Perennial, tussocky, non resinous, leaf blades straight and pilose, leaf sheaths glabrous or hairy and ciliate on margins, loose panicles, spikelets 6- to 7-flowered and 1-awned, exerted florets, glumes membranous and acuminate, 2-lobed lemma and glumes, strongly curved awns of the lemma, see *Nuytsia* 5(2): 278-279. 1984, *Australian Systematic Botany* 20(3): 426. 1997.

P. danthonioides (F. Muell.) C.E. Hubb. (*Triodia danthonioides* (F. Muell.) Lazarides; *Triraphis danthonioides* F. Muell.)

Western Australia. See *Fragmenta Phytographiae Australiae* 8: 125. 1873 and *Hooker's Icones Plantarum* 34: t. 3385. 1939, *Australian Systematic Botany* 10(3): 427. 1997.

P. desertorum C.E. Hubb. (*Triodia desertorum* (C.E. Hubb.) Lazarides)

Western Australia, Victoria Desert. See *Bulletin of Miscellaneous Information Kew* 1941: 28. 1941, *Australian Systematic Botany* 10(3): 429. 1997.

P. dielsii C.E. Hubb. (*Triodia dielsii* (C.E. Hubb.) Lazarides)

Western Australia. See *Bulletin of Miscellaneous Information Kew* 1941: 27. 1941, *Australian Systematic Botany* 10(3): 431. 1997.

P. drummondii C.E. Hubb.

Western Australia. See *Bulletin of Miscellaneous Information Kew* 1941: 26. 1941.

P. helmsii C.E. Hubb. (*Triodia helmsii* (C.E. Hubb.) Lazarides; *Triraphis bromoides* sensu J. Black) (for Richard Helms, born in Altona, Germany, on 12 December 1842, died in Sydney, New South Wales, on 17 July 1914, collector, naturalist and botanist, dentist, entomologist and bacteriologist, naturalist on the Elder Exploring Expedition to central Australia, May 1891-June 1892 [equipped and

financed by Sir Thomas Elder, 1818-1897], expedition to Mt. Kosciuszko in 1888, 1893 and 1901. See David Lindsay (1856-1922), *Journal of the Elder Scientific Exploring Expedition...* Adelaide, C.E. Bristow, 1893; Ralph Tate, *Scientific Results of the Elder Scientific Exploring Expedition, 1891* / edited by Professor Ralph Tate Adelaide: Royal Society of South Australia, 1892. *Transactions of the Royal Society of South Australia*; v. 16, pt. 1; *Trans. & Proc. R. Soc. SA* 16(3): 333-383. 1896; *Handbook of Instructions for the Guidance of the Officers of the Elder Scientific Exploration Expedition to the Unknown Portions of Australia*. Adelaide, Issued by the Council of the Royal Geographical Society of Australasia, South Australian Branch, Adelaide 1891. First Edition; J.A. Thomson, "On the rock specimens from Central and Western Australia. Collected by the Elder Scientific Exploring Expedition of 1891-1892." *Journ. and Proc. Roy. Soc. New South Wales* 1911, 45, pt. 3, 292-317. 1912)

South Australia, Western Australia, Queensland. Perennial, caespitose, slender glabrous culms, rigid stems, at the base a tuft of rigid leaves, leaf sheaths bearded, leaf blades very pungent, nodes glabrous, panicle loose, spikelets narrow-oblong, fertile florets 3-4, purplish glumes narrow and acute, awns 3-nerved, rachilla between glumes with tooth-like projection, palea narrow oblong and membranous, see *Bulletin of Miscellaneous Information Kew* 1941: 29. 1941, *Australian Systematic Botany* 10(3): 434. 1997.

in English: porcupine grass

P. melvillei (R. Br.) C.E. Hubb. (*Triodia melvillei* (C.E. Hubb.) Lazarides)

Western Australia. Perennial, tussock, dense, glabrous, leaf blades rigid and pubescent, viscid leaves, leaf sheaths bearded and resinous, dense panicle, spikelets narrow oblong, fertile florets 4-8, glumes acute, lemmas continuous with awns, palea membranous, on dunes, rocky places, hills, see *Bulletin of Miscellaneous Information Kew* 1941: 28. 1941, *Australian Systematic Botany* 10(3): 451. 1997.

P. mollis Lazarides

Western Australia, Northern Province. Perennial, glabrous, compact, smooth, nonresinous, slender, soft, leafy, tussocky, branched at the lower nodes, leaf blades thickened, leaf sheaths loose, leaves filiform and pungent, panicle contracted and dense, spikelet with one hermaphrodite floret and neuter florets above, glumes lanceolate and acuminate, lemma coriaceous 3-lobed and 3-awned, palea notched or entire, damp ground, see *Nuytsia* 5(2): 279-280. 1984.

P. pungens (R. Br.) C.E. Hubb. (*Pappophorum pungens* (R. Br.) Trin.; *Triraphis pungens* R. Br.)

Western Australia, Queensland. Perennial, tussocky, straggling, viscid, resinous, sometimes stoloniferous, leaf sheaths sometimes ciliate and bearded, leaf blades curling when old, panicle rather loose, lower 2-4 florets fertile, other florets often reduced to the awns, glumes mucronate

and keeled, palea coriaceous, see *Genera Plantarum* 2: 787. 1791, *Prodromus Florae Novae Hollandiae* 1: 185. 1810, *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques, Physiques et Naturelles* 1(1): 92. 1830 and *Hooker's Icones Plantarum* 34: t. 3385. 1939.

in English: curly spinifex

P. pungens (R. Br.) C.E. Hubb. var. ***callosum*** C.E. Hubb. Queensland.

P. pungens (R. Br.) C.E. Hubb. var. ***pungens***

Queensland. See *Hooker's Icones Plantarum* 34: t. 3385. 1939.

P. rigidissima (Pilg.) C.E. Hubb. (*Triodia rigidissima* (Pilg.) Lazarides; *Triraphis rigidissima* Pilg.)

Western Australia. See *Hooker's Icones Plantarum* 34: t. 3385. 1939, *Australian Systematic Botany* 10(3): 468. 1997.

P. schinzii Henrard

Northern Territory, Western Australia. Tussocky, dense, compact, resinous, rigid, basal internodes woolly, leaf sheaths silky, dense panicles, spikelets lanceolate, florets closely imbricate, lower 2-4 florets fertile, subequal glumes lanceolate and acuminate, palea coriaceous to membranous, see *Vierteljahrsschrift der Naturforschenden Gesellschaft in Zürich* 74: 134. 1929.

in English: silvery spinifex, feathertop spinifex

P. uniaristata Lazarides (*Triodia uniaristata* (Lazarides) Lazarides)

Northern Territory. Perennial, nonresinous, tussocky, erect, branched near the base, leaf sheaths with rounded auricles ciliate or ciliolate, leaf blades filiform and pungent, loose panicle, spikelets 4-flowered, florets enclosed by glumes, glumes membranous to cartilaginous with two apical lobes acuminate, 1-awned lemmas, palea membranous, see *Nuytsia* 5(2): 280-281. 1984, *Australian Systematic Botany* 10(3): 482. 1997.

Pleiadelphia Stapf = *Elymandra* Stapf

Greek *pleios* "many, more than one" and *adelphos* "brother."

About 1-2 species, west tropical Africa. Panicoideae, Andropogonodae, Andropogoneae, Andropogoninae or Panicoideae, Andropogoneae, Anthistirinae, annual, herbaceous, unarmed, branched, ligule an unfringed membrane, plants bisexual, open inflorescence paniculate, spikelets in triplets or paired, sterile spikelets awnless, 2 glumes more or less equal, palea absent, 2 free and fleshy lodicules, 3 stamens, ovary glabrous, 2 stigmas, sandy soil, type *Pleiadelphia gossweileri* Stapf, see *Mexicanas Plantas* 2: 51, 67. 1886 and *Flora of Tropical Africa* 9: 320-321, 407-408. 1919, *Hooker's Icones Plantarum* 30: t. 3121. 1927, *Journal*

d'Agriculture Tropicale 1: 48. 1954, *Kew Bulletin* 20(2): 287-293. 1966, W.D. Clayton, "A revision of the genus *Hyparrhenia*" in *Kew Bulletin, Additional Series* 2: 1-196. 1969, *Contributions from the United States National Herbarium* 46: 229, 539. 2003.

Species

P. gossweileri Stapf (*Elymandra gossweileri* (Stapf) Clayton; *Themeda gossweileri* (Stapf) Roberly)

Angola. Single raceme, see *Flora Aegyptiaco-Arabica* 178. 1775 and *Hooker's Icones Plantarum* 30: t. 3121. 1927, *Boissiera. Mémoires du Conservatoire de Botanique et de l'Institut de Botanique Systématique de l'Université de Genève* 9: 103. 1960, *Kew Bulletin* 20(2): 288-289. 1966.

Pleioblastus Nakai = *Arundinaria* Michx.,
Arundinaria auct.

From the Greek *pleios* "many, more than one" and *blastos* "bud, sprout, germ, ovary, sucker," shoots with many branches.

About 20 or more (ca. 42) species, temperate areas of eastern Asia, Japan and China. Bambusoideae, Bambusoideae, Bambuseae, Arundinariinae, erect, caespitose, spreading, monopodial, culms hollow, reedlike, 3-7 branches at each node, bud canal shallow, two type of rhizomes, thick and long creeping rhizome, culm sheaths persistent or caducous, leaves papery or coriaceous, from the apices of branchlets bearing leaf blades inflorescence spicate or racemose, spikelet linear, 5-13 flowers, two glumes or rarely none, lemmas ovate and acuminate, palea present, 3 ovate lodicules, 3 stamens, ovary cylindrical, 3 feathery stigmas, growing in a cluster, sunny places, species difficult to identify, formerly included in and probable synonym of *Arundinaria* Michx., closely related to *Arundinaria*, type *Pleioblastus communis* (Makino) Nakai, see *Genera Plantarum* 1: 236. 1789, *Flora Boreali-Americana* 1: 73-74. 1803, *The Bamboo Garden* 46: 547. 1894 and *Botanical Magazine* 15(168): 18. 1901, *Journal of the Arnold Arboretum* 6(3): 145-146. 1925, *Taxon* 6(7): 207. 1957, *Agriculture Handbook* 114: 1-69. 1957, *Zlaki SSSR* 88. 1976, *Acta Phytotax. Geobot.* 30(4-6): 145. 1979, *Ann. Bot.* 48: 407-410. 1981, W.D. Clayton & S.A. Renvoize, "Genera graminum." *Kew Bulletin, Additional Series* 13: 45. 1986, *Grass Systematics and Evolution* 225-238. 1987 [The position of bamboo genera and allies in a system of grass classification], *Smithsonian Contr. Species

P. acutiligulatus W.T. Lin

China. See *Journal of Bamboo Research* 12(3): 4, f. 4. 1993.

P. akebono (Makino) Nakai (*Arundinaria variegata* var. *akebono* Makino)

Japan, origin unknown. Glabrous, branched, 1-2 branches per node, internodes glabrous, nodes glabrous, leaves distichous and glabrous, leaf blades narrowly lanceolate to linear lanceolate, rarely cultivated, see *Botanical Magazine* 26(300): 15, 17. 1912, *Flora of Japan (edition 2)* Rev. & enl. 1380. 1931, *Science Education [Rika Kyô-iku]* 15(6): 69. 1932, *J. Jap. Bot.* 9: 236. 1933, *Journal of Japanese Botany* 10: 204, pl. 35. 1934.

in Japan: akebono-zasa

P. altiligulatus S.L. Chen & S.Y. Chen

China. Young culm glabrous, sheath persistent glabrous, no sheath auricle or cilia, sheath ligule pruinose, sheath blade lanceolate, 2-3 leaves on each twig, no leaf auricles, leaf blade lanceolate densely tomentose beneath, used for weaving baskets or other containers, for bamboo furniture, for handle of umbrella or other handicrafts, shoots bitter not edible, see *Acta Phytotaxonomica Sinica* 21(4): 407, pl. 3. 1983, *Journal of the Henan Science and Technology University* 1(1): 113. 1985.

P. amarus (Keng) Keng f. (*Arundinaria amara* Keng; *Pleioblastus amarus* S.Y. Chen)

China, Yunnan, Guizhou. Young culm pruinose, 3-5 branches on each node, sheath thick papery to coriaceous, sheath auricles tiny, sheath ligule truncate, sheath blade thin and long lanceolate, leaves lanceolate pubescent beneath, bitter shoot not edible, culm used for handicrafts, umbrella stalk, flagpole, see *Sinensia* 6: 148, f. 2. 1935, *Technical Bulletin of the National Forestry Research Bureau* 8: 14. 1948, *Acta Phytotaxonomica Sinica* 21(4): 413. 1983.

P. amarus (Keng) P.C. Keng f. *huangshanensis* C.L. Huang
China. See *Journal of Bamboo Research* 15(3): 14, f. 1. 1996.

P. amarus (Keng) P.C. Keng var. *hangzhouensis* S.L. Chen & S.Y. Chen

China, Hangzhou, Zhejiang. Culm smooth, sheath green to green purple, no sheath auricle, sheath blade linear-lanceolate, see *Acta Phytotaxonomica Sinica* 21(4): 408, pl. 4. 1983, *Acta Phytotaxonomica Sinica* 37(6): 541-544. 1999.

P. amarus (Keng) P.C. Keng var. *pendulifolius* S.Y. Chen

China. Leafy twigs drooping, sheath not pruinose, ligule truncate concave, see *Acta Phytotaxonomica Sinica* 21(4): 413. 1983, *Acta Phytotaxonomica Sinica* 29(5): 452-455. 1991.

P. amarus (Keng) P.C. Keng var. *subglabratus* S.Y. Chen (*Arundinaria hsienchuensis* var. *subglabrata* (S.Y. Chen) C.S. Chao & G.Y. Yang)

China, Zhejiang. Sheath glabrous and caducous, see *Acta Phytotaxonomica Sinica* 21(4): 413. 1983, *Acta Phytotaxonomica Sinica* 29(5): 452-455. 1991, *Journal of Bamboo Research* 13(1): 17. 1994, *Acta Phytotaxonomica Sinica* 37(6): 541-544. 1999.

P. amarus (Keng) P.C. Keng var. ***tubatus*** Wen

China, Zhejiang. Culm sheath hard, see *Bulletin of Botanical Research* 3(1): 93-94, f. 2. 1983.

P. angustatus W.T. Lin (*Arundinaria angustifolia* (Mitford) J. Houz.; *Bambusa angustifolia* Mitford)

China. See *The Bamboo Garden* 46: 547. 1894 and *Le Bambou, son étude, sa culture, son emploi* 2: 272. 1908, *Journal of Bamboo Research* 13(2): 18-19, f. 3. 1994.

P. angustifolius (Mitford) Nakai (*Arundinaria angustifolia* (Mitford) Nakai; *Arundinaria angustifolia* (Mitford) J. Houz.; *Bambusa angustifolia* Mitford; *Pleioblastus angustifolius* Nakai)

Asia. White stripes on the leaves, see *The Bamboo Garden* 46: 547. 1894 and *Le Bambou, son étude, sa culture, son emploi* 2: 272. 1908, *Journal of Japanese Botany* 10(5): 294. 1934.

in Japan: azuma-nezasa, himeshima-dake

P. argenteostriatus Nakai (*Arundinaria argenteostriata* (Regel) Kuntze; *Arundinaria argenteostriata* (Regel) Ohwi; *Arundinaria argenteostriata* (Regel) Vilm.; *Bambusa argenteo-striata* Regel; *Bambusa argenteostriata* Regel; *Nipponocalamus argenteostriatus* (Regel) Nakai; *Pleioblastus argenteo-striatus* (Regel) Nakai; *Pleioblastus argenteostriatus* (Regel) Nakai; *Sasa argenteo-striata* (Regel) E.G. Camus)

Japan. Culm sheaths glabrous, nodes puberulous to pubescent, leaf sheaths glabrous, leaf blades lanceolate and glabrous, rarely cultivated, see *Gartenflora* 14: 363, pl. 490, f. 5. 1865, *Revisio Generum Plantarum* 2: 761. 1891 and *Bulletin de la Société Dendrologique de France* 12: 82. 1909, *Les Bambusées* 23. 1913, *Journal of Japanese Botany* 9(4): 236. 1933, *Journal of Japanese Botany* 18: 350. 1942, *Fl. Japan* 80. 1953.

in Japan: okina-dake, akebono-zasa, shiroshima-iyosudare (white stripes)

P. argenteostriatus Nakai f. ***argenteostriatus***

Japan. See *Journal of Japanese Botany* 10: 204. 1934.

P. variegatus (Siebold ex Miquel) Makino f. ***variegatus***

Japan.

P. viridistriatus (Siebold ex André) Makino (*Arundinaria auricomma* Mitford; *Arundinaria variegata* var. *viridi-striata* (Siebold ex André) Makino; *Arundinaria variegata* var. *viridistriata* (Siebold ex André) Makino; *Arundinaria viridistriata* Makino ex Nakai; *Arundinaria viridistriata* (Siebold ex André) Makino ex Nakai; *Bambusa viridi-striata* Siebold ex André; *Bambusa viridistriata* Siebold ex André; *Pleioblastus auricomus* (Mitford) D.C. McClint.; *Pleioblastus viridi-striatus* (Siebold ex André) Makino; *Pleioblastus viridistriatus* (Regel) Makino; *Sasaella viridistriata* (Siebold ex André) Nakai)

Japan, origin unknown. Weak, simple or branched, delicate, densely velvety, soft and hairy, nodes and internodes velvety to minutely hairy, culm sheaths velutinous, leaf blades lanceolate, leaves densely pubescent, widely cultivated, decorative, potted plant, see *L'illustration horticole* 19: 319, pl.108. 1872, *The Bamboo Garden* 101. 1896 and *Botanical Magazine* 26(300): 15-17. 1912, *Journal of Japanese Botany* 3(3): 11. 1926, *Journal of Japanese Botany* 3(6): 23. 1926, *Journal of Japanese Botany* 5(2): 10. 1928, *Journal of Japanese Botany* 6: 15. 1929, *Science Education [Rika Kyô-iku]* 15(6): 70. 1932, *Journal of Japanese Botany* 10(9): 568. 1934, *Fl. Japan Suppl.* 9: 862. 1936, *Plantsman* 4(3): 191. 1982, *Bamboo Society Newsletter* 12: 11. 1991, *Taxon* 50: 911-912. 2001.

in Japan: kamuro-zasa

P. wuyishanensis Q.F. Zheng & K.F. Huang

China, Fujian. Young culm pruinose, sheath coriaceous and persistent as long as internode or slightly shorter, sheath ligule truncate purple, sheath blade lanceolate, 3-4 leaves on each branch, leaves lanceolate with white pubescence beneath, see *Wuyi Science Journal* 2: 17-20, f. 2. 1982.

P. yixingensis S.L. Chen & S.Y. Chen (*Arundinaria yixingensis* (S.L. Chen & S.Y. Chen) C.S. Chao & G.Y. Yang)

China, Fujian, Zhejiang. Young culm pruinose, greenish yellow, sheath greenish, sheath auricles strongly falciform, sheath ligule slightly concave or strongly arcuate, sheath blade lanceolate, leaves lanceolate, used for making umbrella stalk, see *Acta Phytotaxonomica Sinica* 21(4): 411-412, f. 9. 1983, *Acta Phytotaxonomica Sinica* 29(5): 452-455. 1991, *Journal of Zhejiang Forestry College* 8(1): 127-130. 1991, *Journal of Bamboo Research* 13(1): 19. 1994, *Acta Phytotaxonomica Sinica* 37(6): 541-544. 1999.

Pleiodon Rchb. = *Bouteloua* Lag., *Polyodon* Kunth

From the Greek *pleios* “more than one” and *odontos*, *odontos* “a tooth.”

Chloridoideae, Cynodonteae, Boutelouinae, see *Varietades de Ciencias, Literatura y Artes* 2(4, 21): 134, 141. 1805, *Nova Genera et Species Plantarum* 1: 174, 175, t. 55. 1815

[1816], *Nom. Gen. Pl.* 38. 1841, *Gen. Pl.* 3(2): 1169. 1883 and *Contributions from the United States National Herbarium* 41: 20-33, 182, 190. 2001.

Pleioneura (C.E. Hubb.) J.B. Phipps = *Danthoniopsis* Stapf, *Loudetia* Hochst. ex Steud., *Pleioneura* Rech.f. (Caryophyllaceae), *Ratraya* J.B. Phipps

Greek *pleios* “full of” and *neuron* “nerve.”

Arundinelleae, *Loudetia* sect. *Pleioneura* C.E. Hubb., type *Pleioneura ramosa* (Stapf) J.B. Phipps, see *Genera Plantarum* 299. 4 Aug 1789, *Synopsis Plantarum Glumacearum* 1: 238. 1854, *Bulletin of Miscellaneous Information Kew* 1897: 298. 1897 and *Hooker's Icones Plantarum* 31: t. 3075. 1916, *Bulletin of Miscellaneous Information Kew* 1936(5): 320, 321, 324. 1936, *Kew Bulletin* 1949: 353. 1949, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 75: 357. 1951, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 77(2-3): 226-354, f. 18. 1957, *Kirkia* 4: 100, 101, t. 10, f. 1. 1964, *Kirkia* 5: 235-258. 1966, *Kew Bulletin* 21(1): 119-124. 1967, *Boletim da Sociedade Broteriana, ser. 2* 46: 418-421. 1972 [1973], *Taxon* 27(2-3): 301. 1978.

Pleopogon Nutt. = *Lycurus* Kunth

Greek *pleos* “full, complete, filled” and *pogon* “beard.”

Chloridoideae, Cynodonteae, Muhlenbergiinae, type *Pleopogon setosum* Nutt., see *Nova Genera et Species Plantarum* 1: 141, 142, pl. 45. 1815 [1816], *Proceedings of the Academy of Natural Sciences of Philadelphia* 4: 25. 1848, *J. Acad. Nat. Sci. Philadelphia*, ser. 2, 1: 189. 1848 and *U.S.D.A. Bull.* 772: 139. 1920, *Phytologia* 57: 287. 1985, *Contributions from the United States National Herbarium* 41: 138-139, 182. 2001.

Pleuraphis Torrey = *Hilaria* Kunth

Greek *pleura* “side, lateral” and *raphis* “a needle,” referring to the lateral spikelets and the position of awn on lower glume.

About three species, America. Chloridoideae, Cynodonteae, Hilariinae, perennial, erect, decumbent, branched at the base, bushlike, forming a sod, solid internodes, rhizomatous, shallow root system, dense roots, tough scaly rhizomes, basal leaves, inflorescence spicate, spikelets upright in clusters of 3, development of adventitious buds on rhizomes, understory species, hay readily eaten by cattle, forage, palatable to highly palatable, palatable to livestock only when it is green and succulent, prefers arid and slightly mesic habitats, resistant to heavy grazing and trampling,

drought-tolerant and adapted to alkaline soils, stabilizes blowing sand, colonizes sand dunes, sometimes confused with and referred to *Hilaria* Kunth, type *Pleuraphis jamesii* Torr., on dry sandy to rocky slopes and flats, semidesert grassland, on well-drained gravelly slopes, on heavy alluvial soils, sandy loam, on clay soils, lowland places subject to periodic flooding, arid environments, bajadas, scrublands, woodlands, may become infested with ergot, see *Nova Genera et Species Plantarum* 1: 116-118, pl. 37. 1815 [1816], *Annals of the Lyceum of Natural History of New York* 1(1): 148-150, t. 10. 1824 and E.R. Sohns, "The genus *Hilaria* (Gramineae)." *Journal of the Washington Academy of Sciences* 46(10): 311-321. 1956, *American Journal of Botany* 45: 757-767. 1958, *Memoir San Diego Society of Natural History* 12: 1-140. 1981, *Taxon* 33: 126-134. 1984, *Global Change Biology* 5(6): 659-668. Aug 1999, *Ecological Entomology* 25(4): 403-412. Nov 2000, *Contributions from the United States National Herbarium* 41: 128-129. 182-183. 2001, *New Phytologist* 150(2): 449-458. May 2001, *Global Change Biology* 8(3): 247-264. Mar 2002, *Flora of North America North of Mexico* 25: 1-783. 2003, *Global Change Biology* 9(2): 276-285. Feb 2003, *Oikos* 100(3): 497-506. Mar 2003, *Global Change Biology* 9(5): 718-728, 729-735. May 2003, *Global Change Biology* 9(8): 1223-1233. Aug 2003, *Global Change Biology* 9(11): 1582-1590. Nov 2003, C.A. Moffet, R.E. Zartman, D.B. Wester and R.E. Sosebee, "Effects on infiltration, erosion, and soil organic carbon in Chihuahuan Desert grasslands and shrublands." *J. Environ. Qual.* 34: 299-311. 2005, *Diversity & Distributions* 11(1): 45-55, Jan 2005, *Global Change Biology* 11(5): 749-756. May 2005.

Species

P. jamesii Torrey (*Hilaria jamesii* (Torr.) Benth.; *Hilaria sericea* Benth.; *Pleuraphis sericea* Nutt. ex Benth.)

Northern America, U.S., Mexico, California. Perennial bunchgrass, erect or decumbent, rhizomatous, nodes hairy, leaves recurved when dry, erect spikes, forage, scrub and woodland areas, on well-drained sandy soils, dry flats and foothills, see *Annals of the Lyceum of Natural History of New York* 1(1): 148-150, t. 10. 1824, *Journal of the Linnean Society, Botany* 19: 62. 1881.

in English: galleta grass, James' galleta, curly grass

in Spanish: galleta

P. mutica Buckley (*Hilaria mutica* (Buckl.) Benth.)

Northern America, U.S., Mexico. Perennial, tufted, smooth, erect, decumbent bases, rhizomatous, creeping, coarse and fibrous roots, strong rootstock, sod-forming, woody and scaly rhizomes, leaves harsh and stiff, erect spikes, about 30 fascicles on each spike, withstands grazing, intolerant of shifting sand, fairly resistant to drought, cut for hay,

forage for cattle and horses, unpalatable after maturity, tough dry stems with little nutritional value, heavy soils, on clay soils, on dry mesas, bottomland sites, rocky slopes, see *Proceedings of the Academy of Natural Sciences of Philadelphia* 14: 95. 1862, *Journal of the Linnean Society, Botany* 19: 62. 1881.

in English: tobosa grass

in Spanish: zacate galleta, toboso común, tobosa

P. rigida Thurber (*Hilaria rigida* (Thurb.) Benth. ex Scribn.; *Hilaria rigida* (Thurb.) Scribn.)

Northern America, U.S., Mexico. Perennial bunchgrass, coarse, rigid, clumped, erect or decumbent, shortly rhizomatous, tillering, forage, palatable, desert grass, dry rocky ledges, disturbed sandy areas, sand dunes, see *Nova Genera et Species Plantarum* 1: 116-117, pl. 37. 1815 [1816], *Geological Survey of California, Botany* 2: 293-294. 1880, *Bulletin of the Torrey Botanical Club* 9: 86. 1882 and P.S. Nobel, "Spacing and transpiration of various sized clumps of a desert grass, *Hilaria rigida*." *Journal of Ecology* 69: 735-742. 1981, *Taxon* 33: 126-134. 1984, P.S. Nobel, "Root distribution and seasonal production in the northwestern Sonoran Desert for a C3 subshrub, a C4 bunchgrass, and a CAM leaf succulent." *Am. J. Bot.* 84: 949. 1997, Pierre Martre, Gretchen B. North, Edward G. Bobich & Park S. Nobel, "Root deployment and shoot growth for two desert species in response to soil rockiness." *American Journal of Botany* 89: 1933-1939. 2002.

in English: big galleta

in Mexico: zacate galleta gigante

Pleuroplitis Trin. = *Arthraxon* P. Beauv.,
Lucaea Kunth

Panicoideae, Andropogoneae, Andropogoninae, type *Pleuroplitis langsdorffii* Trin., see A.M.F.J. Palisot de Beauvois, *Essai d'une nouvelle Agrostographie*. 111, t. 11, f. 6. (Dec.) 1812, *Fundamenta Agrostographiae* 174-175, t. 16. 1820, *Révision des Graminées* 2: 489, t. 159. 1831, *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques, Physiques et Naturelles* 2(4): 271, 275. 1832, *Edinburgh New Philosophical Journal* 18: 180-182. 1835, *Flora* 29: 18. 1846, *Tentamen Florae Abyssinicae ...* 2: 447-448, t. 102. 1850, *Beiträge zur Flora der Cap Verdischen Inseln* 152. 1852, *Flora Rossica* 4(14): 477, 478. 1853, *Synopsis Plantarum Glumacearum* 1: 414. 1854, *Flora van Nederlandsch Indië* 3: 481. 1857, *Bulletin de l'Académie Impériale des Sciences de Saint Pétersbourg*, sér. 3, 10: 369-370, 373-377, t. 10, f. 5, 6-10. 1866 and *Blumea* 27: 255-300. 1981, *Contributions from the United States National Herbarium* 46: 104-110, 285, 539-540. 2003.

Pleuropogon R. Br. = *Lepitoma* Steud.,
Lophochlaena Nees

Greek *pleuron* "side, rib, lateral" and *pogon* "beard," referring to the nature of the glumes, to the bristly palea.

About 5-6 species, Canada, Arctic and Subarctic, Northern America, U.S., Greenland. Pooideae, Poodae, Meliceae, annual or perennial, herbaceous, aquatic or nonaquatic, emergent and submerged, sometimes floating, rhizomatous, stoloniferous, tufted, erect, decumbent, auricles absent, leaf blades linear, ligule an unfringed membrane, plants bisexual, inflorescence racemose, a single open raceme with distant and deflexed branches, spikelets solitary and pedicellate, 2 glumes membranous and unequal, upper glume 1- to 3-nerved, lemmas 7-nerved with or without a terminal awn, palea keels narrowly winged and dorsally notched or awned, 2 membranous lodicules, 3 stamens, ovary glabrous, 2 stigmas, dry sandy places, shallow waters, wet meadows, marshes, low-lying areas, poorly drained soils, along streams, type *Pleuropogon sabinei* R. Br., see *Chloris Melvillianiana* 31. 1823, *Annals of Natural History* 1: 283. 1838, *Nomenclator Botanicus. Editio secunda* 2: 29, 355. 1841 and *Novon* 4(1): 16-17. 1994, *Global Change Biology* vol. 6, issue s1: 19-34. Dec 2000, *Contributions from the United States National Herbarium* 48: 421, 431, 504-505. 2003.

Species

P. californicus (Nees) Benth. ex Vasey (*Lepitoma brevifolia* Torr. ex Steud.; *Lophochlaena californica* Nees; *Pleuropogon davyi* L.D. Benson; *Pleuropogon douglasii* Trin. ex Steud.)

North America, U.S. Short-lived perennial, see *Annals of Natural History* 1: 283. 1838, *Nomenclator Botanicus. Editio secunda* 2: 355. 1841, *The Grasses of the United States* 40. 1883 and *American Journal of Botany* 28: 360. 1941, *Novon* 4: 17. 1994.

in English: annual semaphore grass

P. californicus (Nees) Benth. ex Vasey var. ***californicus*** (*Lepitoma brevifolia* Torr. ex Steud.; *Lophochlaena californica* var. *californica*; *Pleuropogon douglasii* Trin. ex Steud.)

North America, U.S. See *Annals of Natural History* 1: 283. 1838, *Nomenclator Botanicus. Editio secunda* 2: 355. 1841, *The Grasses of the United States* 40. 1883 and *American Journal of Botany* 28: 360. 1941, *Novon* 4: 17. 1994.

in English: annual semaphore grass

P. californicus (Nees) Benth. ex Vasey var. ***davyi*** (L.D. Benson) But (*Lophochlaena californica* var. *davyi* (L.D. Benson) Á. Löve & D. Löve; *Pleuropogon davyi* L.D. Benson)

North America, U.S. See *American Journal of Botany* 28: 360. 1941, *Taxon* 27(4): 375. 1978, *Novon* 4(1): 17. 1994.

in English: annual semaphore grass

P. hooverianus (L.D. Benson) J.T. Howell (*Lophochlaena refracta* var. *hooveriana* (L.D. Benson) Á. Löve & D. Löve; *Pleuropogon refractus* var. *hooverianus* L.D. Benson)

North America, U.S. Meadows, freshwater wetlands, see *Proceedings of the American Academy of Arts and Sciences* 8: 409. 1872, *The Grasses of the United States* 40. 1883 and *American Journal of Botany* 28: 360. 1941, *Leaflets of Western Botany* 4(10): 247. 1946, *Taxon* 27(4): 375. 1978.

in English: north coast semaphore grass

P. oregonus Chase (*Lophochlaena oregona* (Chase) But; *Pleuropogon oregonus* (Gray) Benth.)

North America, U.S. Rare, wet meadows, marshlands, stream banks, see *The Grasses of the United States* 40. 1883 and *Journal of the Washington Academy of Sciences* 28(2): 52, f. 1. 1938, *Madroño* 33(2): 146. 1986.

in English: Oregon semaphore grass

P. refractus (A. Gray) Benth. (*Lophochlaena refracta* A. Gray; *Pleuropogon oregonus* (Gray) Benth.; *Pleuropogon refractus* var. *hooverianus* L.D. Benson; *Pleuropogon refractus* var. *refractus*)

West Coast of North America, U.S. Perennial, spikelets angled downward and stalked on a single axis, occurs in seasonally wet places, lakeshores, along creeks, rivers, in alluvial forests, see *Proceedings of the American Academy of Arts and Sciences* 8: 409. 1872, *The Grasses of the United States* 40. 1883 and *American Journal of Botany* 28: 360. 1941, *Leaflets of Western Botany* 4(10): 247. 1946, *Taxon* 27(4): 375. 1978.

in English: nodding semaphore grass, nodding false semaphore grass

P. sabinei R. Br. (also spelled ***sabinii***) (*Melica sabinei* (R. Br.) Raspail; *Pleuropogon sabinei* f. *aquaticus* Simmons; *Pleuropogon sabinei* f. *sabinei*; *Pleuropogon sabinei* f. *terrestris* Simmons; *Pleuropogon sabinei* var. *elatior* Hook.; *Pleuropogon sabinei* var. *humilior* Hook.; *Pleuropogon sabinei* var. *sabinei*) (for the British zoologist and explorer Edward Sabine, 1788-1883, botanical collector, 1817 F.L.S., 1818 F.R.S., astronomer to Arctic expeditions under J. Ross, 1818 and W.E. Parry, 1819-20, 1821-23 and 1824-25, President Royal Society 1861-1871, brother of Joseph Sabine (1770-1837). See Sir William Edward Parry (1790-1855), *Journal of a Voyage for the Discovery of a North-West Passage*. London 1821 and *Journal of a Second Voyage for the Discovery of a North-West Passage*. London 1824; F. Griffiths, editor *Politics of the Northwest Passage*. Kingston 1987; Bern. Keating, *The Northwest Passage*. Murray, *History of the collections contained in the Natural History Departments of the British Museum*. London 1904; Nathan Reingold, in *D.S.B. (or Dictionary of Scientific Biography*. Editor in Chief Charles Coulston Gillispie.) 12: 49-53. New York 1981)

North America, U.S., Canada. Erect, decumbent, glabrous, rooting at the lower nodes, rhizomatous, leaves submerged and emergent, inflorescence racemose, 2-awned, stream borders, damp ground, wet meadows, ponds, shallow waters, see *Species Plantarum* 1: 66. 1753, *Chloris Melviliana* 31. 1823, *Annales des Sciences Naturelles (Paris)* 5: 443. 1825, *Flora Boreali-Americana* 2: 249. 1840 and Herman Georg Simmons (1866-1943), *The Vascular Plants in the Flora of Ellesmereland* 170. Kristiania [Oslo] 1906 [also *Report of the Second Norwegian Arctic Expedition in the "Fram" 1898-1902* 1906], *Novon* 4(1): 16. 1994.

in English: false semaphore grass

Plinthanthesis Steudel = *Blakeochloa* Veldkamp

From the Greek *plinthos*, *plinth* "pedestal of a column" and *anthesis* "flowering," *anthos* "flower," referring to the raceme-like inflorescence; some suggest a derivation from *plinthos* and *antithesis* "the opposite," alluding to the awn.

About 3 species, southeastern Australia. Arundinoideae, or Danthonioideae, Danthonieae, perennial, tufted, herbaceous, unbranched, glabrous nodes, ligule a fringe of short hairs, leaf blade flat or convolute, auricles absent, plants bisexual, inflorescence paniculate, spikelets pedicellate, florets 2-many, 2 glumes 1- to 3-nerved more or less equal, lemmas membranous 7- to 9-nerved mucronate or with a geniculate central awn, lemmas rounded on the back and more or less evenly pubescent in lower half only, palea entire or 2-toothed, 2 lodicules membranous and not toothed, 3 stamens, ovary glabrous, 2 stigmas, upland, sandstone, swamps, open habitats, sometimes referred to *Rytidosperma* Steudel and *Danthonia* DC. sensu lato, type *Plinthanthesis urvillei* Steud., see *Flore Française. Troisième Édition* 3: 32. 1805, *Prodromus Florae Novae Hollandiae* 177, 182. 1810, E.G. von Steudel (1783-1856),

Synopsis plantarum glumacearum. 1: 14, 425. Stuttgartiae (Dec.) 1853 [1855] and S.T. Blake, "*Plinthanthesis* and *Danthonia* and a review of the Australian species of *Lep-tochloa* (Gramineae)." *Contributions from the Queensland Herbarium* 14: 3. 1972, *Senckenbergiana Biologica* 56: 163. 1975, *New Zealand Journal of Botany* 17(3): 324. 1979, *Flora of Macaronesia: Checklist of Vascular Plants (edition 2)* 1: 93. Oslo 1979, *Taxon* 29: 293. 1980, *Taxon* 30: 478, 657. 1981, *Taxon* 31: 737. 1982, A. Hansen & P. Sunding, *Flora of Macaronesia: Checklist of Vascular Plants*. 4th revised edition. *Sommerfeltia*, vol. 17, 294 p., Botanical Garden and Museum, University of Oslo, Oslo, Norway 1993, H.P. Linder & G.A. Verboom, "Generic limits in the *Rytidosperma* (Danthonieae, Poaceae) complex." *Telopea* 6(4): 597-627. 1996, H.P. Linder, "Nomenclatural corrections in the *Rytidosperma* complex (Danthonieae, Poaceae)." *Telopea* 7(3): 269-274. 1997, *Flora of Australia* vol. 44B, Poaceae 3: 30-32. 2005.

Species

P. paradoxa (R. Br.) S.T. Blake (*Blakeochloa paradoxa* (R. Br.) Veldkamp; *Danthonia paradoxa* R. Br.; *Triodia littoralis* Spreng.)

New South Wales, Victoria. Perennial, caespitose, hard, woody, leaf blades rolled and scabrous, bisexual florets 3-5, often with 1 reduced sterile floret above, lemma awned and 2-lobed, awn bent, palea 2-keeled and silky, grows in swamps on sandstone, marshy habitats, see *Prodromus Florae Novae Hollandiae* 177, 182. 1810, *Systema Vegetabilium, editio decima sexta* 1: 330. 1825 [1824] and *Contributions from the Queensland Herbarium* 14: 3. 1972, *Taxon* 29: 296. 1980, *Taxon* 30(2): 478. 1981.

in English: wiry wallaby-grass

P. rodwayi (C.E. Hubbard) S.T. Blake (*Blakeochloa rodwayi* (C.E. Hubb.) Veldkamp; *Danthonia rodwayi* C.E. Hubbard) (named for the Australian botanist Frederick A. Rodway, 1880-1956, botanical collector in New South Wales and Western Australia, son of Leonard Rodway; or, according to some author, possibly after the British (b. Devon) botanist Leonard Rodway, 1853-1936 (d. Tasmania), dental surgeon, 1880 to Tasmania, 1896-1932 Honorary Government Botanist, 1928-1932 Director of the Herbarium and Botanic Garden, Hobart, his writings include *The Tasmanian Flora*. Tasmania, Hobart 1903 and *Some Wild Flowers of Tasmania*. Hobart 1910; see J.H. Barnhart, *Biographical notes upon botanists*. 3: 168. 1965; T.W. Bossert, *Biographical dictionary of botanists represented in the Hunt Institute portrait collection*. 335. 1972; E.M. Compiled by the World Conservation Monitoring Centre. IUCN — The World Conservation Union, Gland, Switzerland and Cambridge, U.K. 1998.

in English: wallaby-grass

P. urvillei Steudel (*Blakeochloa urvillei* (Steudel) Veldkamp; *Danthonia urvillei* (Steud.) Conert; *Danthonia vickeryi* or *vickeryae* C.E. Hubbard) (named for the French traveler and explorer Jules Sébastien César Dumont d'Urville, 1790-1842, plant collector, a member of the Linnean Society and the Société de Géographie, he took part in the voyage of the *Coquille* (commanded by L.I. Duperrey), from 1825 commander of the *Astrolabe* (former *Coquille*), his writings include *Enumeratio Plantarum quas in insulis archipelagi aut littoribus Ponti-Euxinii, annis 1819 et 1820, collegit atque detexit J. Dumont D'Urville*. Paris 1822, *Voyage au Pôle Sud and dans l'Océanie sur les corvettes L'Astrolabe et La Zélée*. Paris 1841-1846 and *Voyage de Découvertes autour du Monde ... sur la corvette L'Astrolabe pendant les Années 1826-1829*. Paris 1832-1848; see E.S. Dodge, *Islands and Empire: Western Impact on the Pacific and East Asia*. Minneapolis 1976; Gaston Meissas, *Les grands voyageurs de notre siècle*. Paris 1889; J.H. Barnhart, *Biographical notes upon botanists*. 1: 480. 1965; T.W. Bossert, *Biographical dictionary of botanists represented in the Hunt Institute portrait collection*. 109. Boston, Mass. 1972; R. Glenn, *The Botanical Explorers of New Zealand*. Wellington 1950; John Dunmore, *Who's Who in Pacific Navigation*. University of Hawaii Press, Honolulu 1991)

Australia. Perennial, caespitose, leaf blade rolled, inflorescence open and spreading, bisexual florets 3-4, often one reduced sterile floret, glumes subequal, lemmas silky and 2-lobed, awn reflexed or twisted at the base, awns exerted from the glumes, grows in woodland, see *Synopsis Plantarum Glumacearum* 1: 14. 1855 [1853] and *Hooker's Icones Plantarum* ser. 5, 5, subt. 3439, p. 2. 1943, *Senckenbergiana Biologica* 56: 153-164. 1975, *Taxon* 29: 296. 1980, *Taxon* 30(2): 478. 1981.

in English: wallaby-grass

Plotia Steudel = *Glyceria* R. Br., *Plotia* Adans. (Myrsinaceae), *Plotia* Neck. (Myrsinaceae)

For the English (b. Borden, Kent) naturalist Robert Plot, 1640-1696 (d. Kent), chemist, 1677 a Fellow of the Royal Society, 1683 first Keeper of the Ashmolean Museum at Oxford, his writings include *The Natural History of Oxfordshire*. [Folio, first edition, the classic Baconian natural history] The Theatre: Oxford 1677 and *De origine fontium Oxonii* 1685. See R. Pulteney, *Historical and Biographical Sketches of the Progress of Botany in England*. 1: 350-352. London 1790; James Britten, *The Sloane herbarium ... revised and edited by J.E. Dandy*. 1958; A.G. Keller, in *D.S.B.* 11: 40-41. 1981; R.T. Gunther, *Early Science in Cambridge*. Oxford 1937; Elisabeth Leedham-Green, *A Concise History of the University of Cambridge*. Cambridge, University Press 1996.

Pooideae, Meliceae, see *Familles des Plantes* 2: 226. 1763, Noel [Natalis] Joseph de Necker (1730-1793), *Elementa botanica genera genuina, species naturales omnium vegetabilium detectorum ... secundum systema omologium seu naturale...* 2: 55. Editio secunda* 2: 356. 1841 and *Contributions from the United States National Herbarium* 48: 371-379, 505. 2003.

Poa L. = *Arctopoa* (Griseb.) Probat., *Bellardiochloa* Chiov., *Dasympoa* Pilg., *Neuropoa* Clayton, *Ochlopoa* (Asch. & Graebn.) H. Scholz, *Oreopoa* Grand., *Panion* Lunell, *Panicularia* Heist. ex Fabr., *Parodiochloa* C.E. Hubb., *Poagris* Raf., *Poagrostis* Raf., *Poidium* Nees

From the ancient Greek name *poa, poie, poia* "grass, pasture grass"; see Carl Linnaeus (1707-1778), *Species Plantarum*. 67. 1753 and *Genera Plantarum*. Edition 5. 31. 1754; Giovanni Semerano, *Le origini della cultura europea*. Dizionario Etimologici. Basi semitiche delle lingue indeuropee. Dizionario della lingua Greca. 2(1): 236. Leo S. Olschki Editore, Firenze 1994.

Some 200(-300)/500 species, cosmopolitan, cool temperate and cold regions, tropical mountains. Pooideae, Poodae, Poeae, or Pooideae, Poeae, Poinae, annual or perennial, more or less 15 species annual, some apomixis, variable in foliage texture and color, glabrous, slender to robust, herbaceous, tufted, sometimes rhizomatous or stoloniferous, caespitose or decumbent, some small and delicate, straggling, hollow internodes, unbranched, leaves usually mostly basal, auricles absent, membranous ligules, leaf blades

usually flat and sometimes with 2 visible veins on each side of the central nerve, leaves narrow and usually linear or linear-lanceolate, plants bisexual with bisexual solitary spikelets or sometimes dioecious, inflorescence paniculate open or contracted, spikelets stipitate and often compressed laterally or flattened, with hermaphrodite florets or without, spikelets hermaphrodite or female-only or hermaphrodite and female-only or male-only, uppermost flowers rudimentary or reduced, male spikelets with glumes, nerved glumes acute and persistent, glumes shorter than the florets and shorter than the adjacent lemmas, lemma smooth, keeled and awnless lemmas, palea awnless and 2-keeled with keels wingless, 2 lodicules free and membranous, stamens 3 or rarely 1, ovary glabrous, stigmas white, round hilum, the web or hairy callus present or absent, callus short and blunt, several species reproduce asexually, variable habit and habitat, value in soil conservation and wildlife habitat, most species occur in soils of low fertility, cultivated fodder, weed and pasture species, lawns and playing fields, shade species, growing in grasslands and meadows, in coastal sand, rainforest, pampas, a very difficult genus, type *Poa pratensis* L., see *Species Plantarum* 1: 63, 67-68. 1753, *Systema Naturae, Editio Decima* 2: 874. 1759, *Enumeratio Methodica Plantarum* 207. 1759, *Prodromus Florae Novae Hollandiae* 179. 1810, *Essai d'une Nouvelle Agrostographie* 97. 1812, *Flora Americae Septentrionalis; or, ...* 1: 76. 1814, *Nova Genera et Species Plantarum* 1: 158. 1815 [1816], *Systema Vegetabilium, editio decima sexta* 2: 696. 1817, *Chloris Melvilliana* 29. 1823, *Reliquiae Haenkeanae* 1(4-5): 271. 1830, *An Introduction to the Natural System of Botany* 450. 1836, *Flora Telluriana* 1: 18. 1837, *A Manual of the Botany of the Northern United States* 596. 1848, *Flora Rossica* 4(13): 392. 1852, *Fl. Species

P. abbreviata R. Br. (*Poa abbreviata* Blytt ex Ledeb., nom. illeg., non *Poa abbreviata* R. Br.; *Poa jordalii* A.E. Porsild) (named for Louis Henrik Jordal, 1919-1951, botanical collector in Alaska, killed in a plane crash)

North America, U.S., Canada, Circumpolar. Caespitose, low to very dwarf, erect, leaves dark green and mostly basal, ligules membranous and lanceolate, inflorescence paniculate, minute and soft spikelets, lemma hairy, growing along streams, lakeshores, near the sea, on the beach ridges near the shoreline, on clay substrate, in moist to well-drained areas, imperfectly drained moist areas, dry meadows, see *Chloris Melvilliana* 29. 1823, *Flora Rossica* 4(13): 373. 1852 and *Meddelelser om Grønland* 64: 171, f. 1. 1927, *The Canadian Field-Naturalist* 79: 82, f. 1. 1965, *Botaniska Notiser* 126(4): 468. 1973, *Novosti Sist. Vyss. Rast.* 11: 30. 1974, *Phytologia* 43(1): 106. 1979, *Bot. Zhurn. (Moscow & Leningrad)* 69(2): 259. 1984.

in English: Northern bluegrass

P. abbreviata R. Br. subsp. *abbreviata*

North America. See *Chloris Melvilliana* 29. 1823.

in English: Northern bluegrass

P. abbreviata R. Br. subsp. *marshii* Soreng

North America, California. Perennial, extremely rare, slopes, listed as sensitive by the Nevada Natural Heritage Program, see *Phytologia* 71(5): 390, f. 1a, e. 1991 [1992].

in English: Marsh bluegrass, Marsh's bluegrass

P. abbreviata R. Br. subsp. *pattersonii* (Vasey) Á. & D. Löve & B.M. Kapoor (*Poa abbreviata* subsp. *jordalii*)

(Porsild) Hultén; *Poa abbreviata* subsp. *jordalii* (A.E. Porsild) Tzvelev; *Poa abbreviata* var. *jordalii* (Porsild) Boivin; *Poa abbreviata* var. *jordalii* (A.E. Porsild) Prob., nom. illeg., non *Poa abbreviata* var. *jordalii* (A.E. Porsild) B. Boivin; *Poa jordalii* Porsild; *Poa pattersonii* Vasey)

North America, California. Mountains, sometimes treated as *Poa pattersonii* Vasey, see *Contributions from the United States National Herbarium* 1(8): 275. 1893 and *The Canadian Field-Naturalist* 79: 82, f. 1. 1965, *Arctic and Alpine Research* 3(2): 143. 1971, *Botaniska Notiser* 126(4): 468. 1973, *Novosti Sist. Vyss. Rast.* 11: 30. 1974, *Phytologia* 43(1): 106. 1979, *Bot. Zhurn. (Moscow & Leningrad)* 69(2): 259. 1984.

P. acicularifolia Buchanan

New Zealand. Perennial, low to small, rhizomatous, woody and much-branched rhizome, rooting at the nodes, leaf sheath membranous, ligule entire and tapered, inflorescence an open loose panicle, glumes subequal, lemma obtuse, palea keels scabrous to scabrid, see *Indigenous Grasses of New Zealand*, t. 49A. 1880 and *New Zealand J. Bot.* 24: 442. 1986.

P. acicularifolia subsp. *acicularifolia*

New Zealand. Alpine, mat-forming, low, curved leaves short and stiff, found on limestone, see *Indigenous Grasses of New Zealand*, t. 49A. 1880 and *New Zealand J. Bot.* 24: 425-503. 1986.

P. acicularifolia subsp. *ophitalis* Edgar

New Zealand. Subalpine, tufted, leaves erect, short hairy lemmas, loose mats forming, see *Indigenous Grasses of New Zealand*, t. 49A. 1880 and *New Zealand Journal of Botany* 24(3): 444-446, f. 3. 1986.

P. acinaciphylla E. Desv. (*Poa villaruelii* Phil.)

Chile. See *Flora Chilena* 6: 412. 1854, *Anales de la Universidad de Chile* 94: 169. 1896.

P. acroleuca Steudel (*Poa familiaris* Steud.; *Poa psilocaulis* Steud.)

Asia, Japan. See *Synopsis Plantarum Glumacearum* 1: 256, 426. 1854, *Annales Museum Botanicum Lugduno-Batavi* 2: 280. 1866 and *Botanical Magazine* 27: 116. 1913, *Bot. Mag. Tokyo* 30: 227. 1916, *Botanical Magazine (Tokyo)* 41: 640. 1927, *Journal of Japanese Botany* 32: 306. 1957, *Grasses of Japan and its Neighboring Regions* 523. 1987, *Journal of Japanese Botany* 63: 334-343. 1988, *Botanical Magazine* 101: 311-331. 1988, *Journal of Japanese Botany (Tokyo)* 67(4): 205. 1992.

in Japan: mizoichigotsunagi

P. acroleuca Steudel f. *submoniliformis* (Makino) T. Koyama (*Poa acroleuca* f. *robusta* Hack. ex Honda; *Poa acroleuca* var. *submoniliformis* Makino)

Japan. See *Synopsis Plantarum Glumacearum* 1: 256. 1854 and *Botanical Magazine* 27: 116. 1913, *Grasses of Japan and its Neighboring Regions* 523. 1987.

P. aequatoriensis Hack. (*Poa subspicata* (J. Presl) Kunth)

South America, Peru, Ecuador. Perennial, scabrous, leaves glaucous to blue-green, reddish to green-purplish inflorescence, see *Reliquiae Haenkeanae* 1(4-5): 281. 1830, *Enumeratio Plantarum Omnium Hucusque Cognitarum* 1: 326. 1833 and *Österreichische Botanische Zeitschrift* 52(11): 450. 1902.

P. aequigluma Tovar (*Poa perligulata* Pilg.; *Poa pseudoaequigluma* Tovar)

Peru, Bolivia. Perennial, caespitose, low, coriaceous, tough, upright or arching, clumped, cushion forming, leaves basal and ascending, oblong panicle contracted with 5-20 spikelets oblong glabrous 2-flowered, equal glumes oblong glabrous 3-nerved acute, lower lemma oblong 5-nerved acute or blunt, palatable, moist puna, páramos, see *Notizblatt des Botanischen Gartens und Museums zu Berlin-Dahlem* 11(108): 779. 1933, *Memorias del Museo de Historia Natural "Javier Prado"* 15: 13, t. 2A. 1965, *Boletín de la Sociedad Peruana de Botanica* 7: 8. 1974, *Kurtziana* 28(1): 95-136. 2000.

P. affinis R. Br. (*Poa affinis* Salzm. ex Steud., nom. illeg., non *Poa affinis* R. Br.; *Poa caespitosa* var. *affinis* (R. Br.) Benth.)

Australia, Victoria, New South Wales. Perennial, densely or loosely caespitose, rarely rhizomatous or stoloniferous, often branching at the nodes, auricles present or absent, leaf sheaths keeled, ligule membranous to chartaceous and obtuse to truncate, leaf blade flat and grooved, green or purple panicle erect and much exerted, chasmogamous spikelets, glumes acute, lemmas more or less pubescent, callus glabrous or webbed, palea narrowly elliptic to oblong, anthers yellow or purple, web present or absent, ovary glabrous, grows near the coast, on sandstone, see *Prodromus Florae Novae Hollandiae* 179. 1810, *Nomenclator Botanicus. Editio secunda* 2: 357. 1841, *Flora Novae-Zelandiae* 1: 307. 1853, *Flora Australiensis: A Description ...* 7: 652. 1878 and *Contributions from the New South Wales National Herbarium* 4: 145-243. 1970, *New Zealand J. Bot.* 24: 450-451. 1986.

P. aitchisonii Boiss. (after the British (b. India) botanist James Edward Tierney Aitchison, 1836-1898 (Surrey), physician, M.D. Edinburgh 1858, East India Company (Bengal Medical Service), plant collector in India and Afghanistan and Ireland, 1863 Fellow of the Linnean Society, 1883 Fellow of the Royal Society; see J.H. Barnhart, *Biographical notes upon botanists*. 1: 24. 1965; D.G. Crawford, *A History of the Indian Medical Service, 1600-1913*. London 1914; T.W. Bossert, compil., *Biographical dictionary of botanists represented in the Hunt Institute portrait collection*. 5. Boston, Mass. 1972; E.M. Tucker, *Catalogue of the*

library of the Arnold Arboretum of Harvard University. 1917-1933; G. Murray, *History of the collections contained in the Natural History Departments of the British Museum*. 1: 129. London 1904)

Pakistan, Afghanistan, the Himalayas. See *Flora Orientalis* 5: 602. 1884.

P. aitosensis Kozh. & Stoeva

Bulgaria. Rare species.

P. alopecurus (Gaudich. ex Mirb.) Kunth (*Aira superbiens* Steud.; *Arundo alopecurus* Gaudich. ex Mirb., also spelled *alopecuros*; *Arundo antarctica* d'Urv.; *Festuca alopecurus* (Gaudich. ex Mirb.) Brongn., nom. illeg., non *Festuca alopecurus* Schousboe; *Festuca alopecurus* (Gaudich. ex Mirb.) d'Urv., nom. illeg., non *Festuca alopecurus* Schousboe; *Festuca antarctica* (d'Urv.) P. aucklandica Petrie (*Poa kirkii* var. *aucklandica* (Petrie) Zotov)

New Zealand, Auckland Island. Perennial, slender, tufted, rhizomatous with slender rhizomes, leaf sheath fibrous when old, leaves narrow and usually erect, leaf blades persistent, loose panicle, glumes smooth, on hillsides, see *Indigenous Grasses of New Zealand*, t. 51B. 1880 and *The Subantarctic Islands of New Zealand* 2: 478. 1909, *Transactions of the Royal Society of New Zealand* 73: 236. 1943, *New Zealand J. Bot.* 24(3): 465. 1986.

P. aucklandica Petrie subsp. *aucklandica*

New Zealand. Loosely tufted, leaf sheath glabrous, leaf blade soft, glumes subequal, lemmas acute, see *The Subantarctic Islands of New Zealand* 2: 478. 1909.

P. aucklandica Petrie subsp. *campbellensis* (Petrie) Edgar (*Poa campbellensis* Petrie; *Poa kirkii* var. *campbellensis* (Petrie) Zotov)

New Zealand, Campbell Island. Tufted, small, close-packed, leaf sheath glabrous, stiff inrolled leaf blade, glumes unequal, see *Indigenous Grasses of New Zealand*, t. 51B. 1880 and *The Subantarctic Islands of New Zealand* 2: 478. 1909, *Transactions and Proceedings of the New Zealand Institute* 50: 211. 1917 [1918], *Transactions of the Royal Society of New Zealand* 73: 236. 1943, *New Zealand Journal of Botany* 24(3): 467. 1986.

P. aucklandica Petrie subsp. *rakiura* Edgar

New Zealand. Rare grass, loosely tufted, slender, leaf blade soft, glumes unequal to subequal, lemmas obtuse, found among rocks, grassland, see *New Zealand Journal of Botany* 24(3): 467, f. 7. 1986.

P. australis R. Br. (*Arundo poiformis* Labill.; *Poa australis* (Nees) Sieber ex Trin., nom. illeg., non *Poa australis* R. Br.; *Poa caespitosa* Poir. var. *australis* Benth.; *Poa implexa* Trin.; *Poa poiformis* (Labill.) Druce)

Australia. Useful for erosion control, see *Encyclopédie Méthodique, Botanique* 5: 73. 1804, *Novae Hollandiae Plantarum Specimen* 1: 27. 1804, *Prodromus Florae Novae Hollandiae* 179. 1810, *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. in English: forest bluegrass, broad-leaved meadow grass, broad-leaf bluegrass

P. chamaeclinis Pilg. (*Poa aequigluma* Tovar)

Peru, Bolivia. Perennial, low, tufted and scattered, stoloniferous, forming small colonies, glabrous leaf blades obtuse or subacute, contracted panicle oblong or elliptic, spikelets oblong glabrous 2-flowered, glumes ovate subequal 3-nerved acute, lower lemma ovate 5-nerved acute, moist spot, dry rocky areas, puna, wet places, related to *Poa ovata*, see *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 37: 379. 1906, *Memorias del Museo de Historia Natural "Javier Prado"* 15: 13, t. 2A. 1965, *Willdenowia* 27: 237. 1997.

P. chambersii Soreng (for Kenton Lee Chambers, b. 1929, botanical collector in the U.S., author of "A Biosystematic study of the annual species of *Microseris*." *Contr. Dudley Herb.* 4: 207-312. 1955. See *Contr. Gray Herb.* 207: 54. 1977; Konrad Bachmann, "Genome size and phenotypic evolution in *Microseris* (Asteraceae, Cichorieae)." *Pl. Syst. Evol., Suppl.* 2: 41-66. 1979)

U.S., Oregon. Slopes, see *Novon* 8(2): 195, f. 1. 1998.

P. chapmaniana Scribner

North America, U.S. Annual, found in cultivated fields and weedy places, riparian zones, see *Bulletin of the Torrey Botanical Club* 21(1): 38. 1894.

in English: Chapman's bluegrass, Chapman bluegrass, Chapman poa

P. chathamica Petrie (*Poa anceps* var. *chathamica* (Petrie) Zotov)

New Zealand. Perennial, very variable in habit, drooping, densely tufted, rhizomatous, leaf blades persistent, leaf sheath coriaceous and ribbed, ligule a ciliate rim, leaves coriaceous folded to flat, plants bisexual, panicle loose or contracted, glumes subequal acute to acuminate, lemma scabrid, palea keels stiffly scabrid, coastal, open areas, boggy spots, rocky sites, sphagnum or peat, sandy places, sand dunes, see *Transactions and Proceedings of the New Zealand Institute* 34: 394. 1902, *Transactions and Proceedings of the Royal Society of New Zealand* 73: 236. 1943.

P. cheelii Vickery (after the Australian (b. England, Kent) botanist Edwin Cheel, 1872-1951 (d. Sydney), one of the contributors to *The Flora of the Northern Territory* by Alfred J. Ewart and Olive B. Davies. Melbourne 1917, with the Australian naturalist Sir John Burton Cleland (1878-1971) wrote Notes on Australian Fungi. no. IV. *Polyporus, Fomes and Hexagona*. 1918 and *Notes on the Early Stages of Development of *Lysurus gardneri*-L. australiensis*, etc. 1918; see Ray Desmond, *Dictionary of British & Irish Botanists and Horticulturists*. 144. London 1994)

Australia, Queensland, New South Wales. Perennial, rhizomatous with scaly rhizomes, enveloping scales, leaves nonauriculate, leaf sheath keeled, ligule membranous and truncate, inflorescence a green panicle erect and open or contracted with spikelets strongly compressed, chasmogamous spikelets, glumes acute, lemmas obtuse, web present, anthers yellow, ovary glabrous, dark fruit compressed, on stony sites, poor soils, in open habitats, eucalyptus forest on poor soil, see *Contributions from the New South Wales National Herbarium* 4: 195. 1970.

P. chirripoensis R.W. Pohl (*Poa huancavelicae* Tovar; *Poa pardoana* Pilg.; *Poa pauciflora* Roem. & Schult.; *Poa petrosa* Swallen) (Peru, Huancavelica)

Costa Rica, Cerro Chirripó. Rare species, rhizomatous, leaves flat and short, creamy inflorescence, no awns, forming tufts, among rocks, dry slopes, see *Systema Vegetabilium* 2:

549. 1817 and *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 37: 379. 1906, *Contributions from the United States National Herbarium* 29: 255. 1948, *Memorias del Museo de Historia Natural "Javier Prado"* 15: 52, t.12A. 1965, *Fieldiana, Botany* 38(2): 10, f. 4. 1976, *Willdenowia* 27: 237. 1997.

P. chokensis S.M. Phillips

Ethiopia. Perennial, tussocky, linear leaf blades flat or folded, open panicle with loosely ascending branches, spikelets 3- to 5-flowered, florets tightly imbricate, lemmas chartaceous prominently nerved subacute, see *Kew Bulletin* 41(4): 1027. 1986, *Flora of Ethiopia* 7: 20, 23. 1995.

P. chonotica Phil. (*Deschampsia latifolia* Phil., nom. illeg., non *Deschampsia latifolia* Hochst. ex A. Forst.) Hook. ex Speg., nom. illeg., non *Poa caespitosa* Poir.; *Poa caespitosa* var. *leioclada* Hack.; *Poa caespitosa* var. *planifolia* Petrie; *Poa laevis* R. Br. var. *filiifolia* Hook.f.)

New Zealand. Alpine grass, tussock-forming, variable, leaf sheaths dark cream and shiny, very short ligule hairy or ciliate, leaf blades persistent, leaves leathery and fringed, open and twisted panicle, glumes subequal acute to subacuminate, lemma obtuse and scabrid, awns absent, palea keels densely ciliate, found in moist areas, pastures, woods, open scrub, coastal slopes, coastal cliffs, rocky places, lowland to subalpine, see *Florulae Insularum Australium Prodrumus* 89. 1786, *Commentationes Societatis Regiae Scientiarum Gottingensis* 9: 22. 1787, *Encyclopédie Méthodique, Botanique* 5: 73. 1804, *Pl. Nov. Herb. Spreng.* 7, no. 10. 1807, *Mantissa Prima Florae Halensis* 33. 1807, *Prodrumus Florae Novae Hollandiae* 179. 1810, *Flora Novae-Zelandiae* 1: 307. 1853, *Anales Museo Nacional de*

Historia Natural de Buenos Aires 5: 91. 1896 and *Manual of the New Zealand Flora* 908. 1906, *Transactions and Proceedings of the New Zealand Institute* 47: 58. 1915, *New Zealand Journal of Botany* 24(3): 446-447. 1986, *New Zealand Journal of Botany* 27: 531-563. 1989.

in English: silver tussock

P. clelandii Vickery (after the Australian naturalist Sir John Burton Cleland, 1878-1971, botanist, ethnologist, explorer)

South Australia, Victoria, Tasmania. Perennial, slender, compressed culms, purplish and greenish to glaucous, shortly rhizomatous or tufted, dense tight tussocks, leaves nonauriculate, leaf sheaths keeled, ligule glabrous, leaf blades flat and stiff with pointed apex, green and purple panicle more or less lanceolate with erect or spreading branches, chasmogamous spikelets, upper glume 3-veined, callus glabrous or webbed, palea 2-keeled with wingless keels, anthers yellow or purple, ovary glabrous, fruit compressed and grooved, common in moist sites, sandy swampland, rocky places, open habitats, wet heathlands, see *Contributions from the New South Wales National Herbarium* 4: 193. 1970.

in English: matted tussock-grass

P. clivicola Vickery (Latin *clivus*, *i* "a hill, ascending road, a gently sloping height")

Australia, Victoria, New South Wales, Kosciuszko Plateau. Perennial, erect, slender to very slender, tufted, leaves mostly basal, auricles absent, leaf sheath pale and usually not keeled, ligule membranous and truncate, green or glaucous leaves inrolled and rough, a green and purple panicle open and erect, spikelets strongly compressed, chasmogamous spikelets, glumes more or less equal and nerved, lemmas acute, web absent, palea membranous, anthers yellow or purple, ovary glabrous, fruit elliptic and compressed, moisture-retentive acidic soils, swampy plain, in wet sites, open grassland, eucalypt woodland, in open habitats, in peat swamp, sometimes confused with *Poa meionectes* Vickery, see *Contributions from the New South Wales National Herbarium* 4: 213. 1970.

in English: fine-leaved snowgrass

P. cockayneana Petrie (*Poa cockaynaiana* Petrie)

New Zealand. Perennial, stoloniferous, alpine to subalpine, often decumbent at base, clump forming or sward forming, coriaceous leaf blades persistent, leaf sheath membranous and ribbed, ligule ciliate, loose panicle, clustered spikelets, glumes subequal, palea keels ciliate, growing in shrubland, moist soils, see *Transactions and Proceedings of the New Zealand Institute* 45: 274. 1913, *New Zealand J. Bot.* 24: 448. 1986.

in English: avalanche grass

P. colensoi Hook.f. (*Poa colensoi* var. *breviligulata* Petrie; *Poa colensoi* var. *guthrie-smithiana* (Petrie) Zotov; *Poa colensoi* var. *intermedia* Cheeseman; *Poa guthrie-smithiana*

Petrie; *Poa intermedia* Koeler; *Poa intermedia* Buchanan, nom. illeg., non *Poa intermedia* Koeler; *Poa intermedia* Steud., nom. illeg., non *Poa intermedia* Koeler; *Poa intermedia* Dalla Torre & Sarnth., nom. illeg., non *Poa intermedia* Koeler) (after the British (Cornish) missionary Rev. (John) William Colenso, 1811-1899 (d. Napier, New Zealand), ethnologist and explorer, botanist, printer, plant collector, North Island, New Zealand, friend and companion of Allan Cunningham, friend and correspondent of Sir William Hooker, 1861 elected to the Parliament, 1865 Fellow of the Linnean Society, 1886 a Fellow of the Royal Society, his works include *Fifty Years Ago in New Zealand*. Napier 1888 and *An Account of Visits to, and Crossing Over, the Ruahine Mountain Range*. Napier 1884; see J.H. Barnhart, *Biographical notes upon botanists*. 1: 366. 1965; B. Graham, "Of William Colenso, 1811-1899." *The Cornish Garden*. 1982; Alice Margaret Coats, *The Quest for Plants: A History of the Horticultural Explorers*. 236-239. London 1969; Austin G. Mennega, *Taxonomic literature. Supplement IV: Ce-Cz*. 264-266. Königstein 1997)

New Zealand. Perennial, erect or arching, short, smooth and flimsy, tussock-forming, bright blue-green foliage, leaf blades stiff, long obtuse entire ligule, pale sheaths persistent and membranous, narrow leaves threadlike, panicle lax and open, spikelets blue, glumes subequal oblong-ovate, awns absent, lemma scabrous or smooth, palea keels ciliate, ligule variable short and long, ornamental, common in lowland to high alpine regions, mountains, tussock grassland, see *Descriptio Graminum in Gallia et Germania* 203. 1802, *Synopsis Plantarum Glumacearum* 1: 252. 1854, *Handbook of the New Zealand Flora* 340. 1864, *Manual of the Indigenous Grasses of New Zealand* 131, t. 48A. 1880 and *Manual of the New Zealand Flora* 908. 1906, *Flora der gefürsteten Grafschaft Tirol* 6(1): 244. 1906, *Transactions and Proceedings of the New Zealand Institute* 45: 275. 1913, *Transactions and Proceedings of the New Zealand Institute* 47: 57. 1915, *Transactions and Proceedings of the*

New Zealand Institute 73: 236. 1943, *New Zealand Journal of Botany* 24(3): 440. 1986.

in English: blue tussock

P. compressa L. (*Panicum compressum* (L.) Lunell; *Poa bigelovii* Vasey & Scribn.; *Poa compressa* f. *depauperata* Millsp., nom. illeg., non *Poa compressa* var. *depauperata* Mutel; *Poa compressa* var. *sylvestris* Torr.; *Poa langeana* Rchb.)

Eurasia. Perennial, herbaceous, caespitose, sod-forming, loosely tufted, bluish green, slender, stiff, erect or geniculate, branched or unbranched, stems flattened near the base, rhizomatous with wiry and slender rhizomes, leaves mostly basal, leaf tip curved, auricles absent, leaf sheaths compressed and keeled, ligule membranous and slightly hairy to very minutely ciliate, leaf blades persistent stiff and folded, flowers contain both male and female parts, slender inflorescence, contracted stiff panicle, spikelets densely clustered, vestigial foliar structure subtending the inflorescence present or absent, glumes ovate and nearly equal, lemmas often pointed at the tip, web present or absent, palea keeled and infolded, anthers yellow, ovary glabrous, grain compressed and yellowish, weed species naturalized elsewhere in temperate regions, ornamental, turf, cultivated fodder, good forage, palatable and nutritious, pioneer and colonizer of disturbed soils, useful for erosion control and pasture, suitable for revegetation of mined areas, resistant to grazing, does not withstand heavy grazing, drought-tolerant, found in waste places, gardens, most disturbed habitats, relatively moist disturbed sites, open habitats, open woods, dry soils, moist to dry prairies, dry woods, on rocky-stony hillside, sandy areas, dam sites, along roadsides and horse trails, waste places, disturbed ground, under dry conditions in meadow habitats, shores, stream banks, fields and rock outcrops, wet banks of creek, foothill woodland, meadows, clearings and around edge of woods, chaparral, pastures, see *Species Plantarum* 1: 67-69. 1753, *Systema Vegetabilium* 2: 565. 1817, *A Flora of the Northern and Middle Sections of the United States* 1: 110. 1823, *Flora Germanica Excursoria* 140. 1830, *Bulletin of the Torrey Botanical Club* 10(1): 31. 1883, *A Descriptive Catalogue of the Grasses of the United States* 81. 1885, *Bulletin, West Virginia Agricultural Experiment Station* 24(2): 472. 1892, *Contributions from the United States National Herbarium* 1(8): 270. 1893 and *American Midland Naturalist* 4: 222. 1915, *Illustrated Flora of the Pacific States* 1: 1-557. 1923, *Journal of the Bombay Natural History Society* 51(1): 53-103. 1952, *Contributions from the New South Wales National Herbarium* 4: 145-243. 1970, *Flora de la Provincia de Buenos Aires* 4(2): 39. 1970, *Gramíneas Uruguayas* [i-vii], 1-489. 1970, *Journal of the Indian Botanical Society* 60: 148-153. 1981, *Great Basin Naturalist* 45: 395-422. 1985, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 107: 203-228. 1985, *Phytologia* 61: 119-125. 1986, *Denkschriften der*

Barnhart, *Biographical notes upon botanists*. 1: 376. 1965; T.W. Bossert, *Biographical dictionary of botanists represented in the Hunt Institute portrait collection*. 82. 1972; John Cawte Beaglehole, in *D.S.B.* 3: 396-397. 1981; Thomas Frederick Cheeseman, *Manual of the New Zealand Flora*. Wellington 1906)

New Zealand. Perennial, spreading, simple, erect, densely tufted, leafy, old sheaths fibrous, ligule lacerate, leaf blades persistent, erect oblong contracted panicles, spikelets glabrous, lower flowers bisexual or hermaphrodite, upper flowers female, membranous glumes unequal, near the sea, rocky places, moist soil, peat, among rocks, see *Flora Antarctica* 2: 382. 1847[1846], *Philosophical Transactions of the Royal Society of London* 168: 22. 1879, *Transactions*

and Proceedings of the New Zealand Institute 27: 353. 1895 and Pammenter N.W. & V.R. Smith, "The effect of salinity on leaf water relations and chemical composition in the sub-Antarctic tussock grass *Poa cookii* Hook.f." *New Phytologist* 94: 585-594. 1983, *New Zealand J. Bot.* 24: 433. 1986.

P. costiniana Vickery (dedicated to Dr. Alec B. Costin, b. 1925, Australian alpine ecologist, Australian Institute of Alpine Studies, Bodalla, wrote *A Study of the Ecosystems of the Monaro Region of New South Wales*. N.S.W. Government Printer, Sydney 1954, "The high mountain vegetation of Australia." *Aust. J. Bot.* 5(2): 173-189. 1957, "Sub-alpine and alpine communities." pp. 191-198 in R.M. Moore (editor) *Australian Grasslands*. Australian National University Press Canberra 1975, "Vegetation of high mountains in Australia in relation to land use biogeography and ecology in Australia." *Monographicae Biologicae*, VIII: 427-451. 1959, "The grazing factor and the maintenance of catchment values in the Australian Alps." *Div. of Plant Ind. Tech. Pap.*, No. 10, CSIRO, Australia 1958. See A.B. Costin, M. Gray, C.J. Totterdell & Dane J. Wimbush, *Kosciuszko Alpine Flora*. CSIRO, Melbourne 1979)

Australia, Victoria, New South Wales, Mt. Kosciuszko, Tasmania. Perennial, vigorous, prickly, erect, densely tufted, unbranched, leaves mostly basal, auricles absent, ligule truncate and membranous to chartaceous, green or glaucous leaves closely folded and pungent-pointed, leaf sheath pale or purplish, green and purplish panicles usually open and pyramidal, chasmogamous spikelets, web present or absent, palea 2-keeled with keels wingless, anthers yellow or purple, ovary glabrous, moist to wet soils, alpine or subalpine regions, bogs, stream banks, alpine grassland, see *Contributions from the New South Wales National Herbarium* 4: 214. 1970.

in English: bog snowgrass

P. crassicaudex Vickery

South Australia, Victoria. Perennial, purplish and green, more or less densely tufted from a contracted rootstock, lower or basal internodes often somewhat swollen and yellow, glabrous nodes, leaves mostly basal, auricles absent, basal leaf sheaths keeled, ligule ciliolate and thin, leaf blades flat to inrolled, leaves hairy, a panicle erect and open, chasmogamous spikelets, lemmas nerved, web developed, anthers yellow or purple, ovary glabrous, grows in open habitats, eucalypt woodlands, see *Contributions from the New South Wales National Herbarium* 4: 233. 1970.

in English: thick-stem tussock-grass, tussock-grass

P. cucullata Hack. (*Poa aequatoriensis* Hack.; *Poa cucullata* Hack. ex Sodiro; *Poa depauperata* Kunth, nom. illeg., non *Poa depauperata* Kit. ex Spreng.; *Poa huancavelicae* Tovar; *Poa pauciflora* Roem. & Schult.)

Ecuador. Bunchgrass, tufted or solitary, individual plants, depressions and low-lying ground, boggy spots, páramos, boggy páramos, see *Species Plantarum* 1: 73-74. 1753,

Plantarum Minus Cognitarum Pugillus Halae [Halle] 1813-1815, *Prodromus Systematis Naturalis Regni Vegetabilis* 1: 162. 1815 [1816], *Systema Vegetabilium* 2: 549. 1817, *Anales de la Universidad Central del Ecuador* 3(25): 482. 1889 and *Österreichische Botanische Zeitschrift* 52: 377, 450. 1902, *Memorias del Museo de Historia Natural "Javier Prado"* 15: 52, t.12A. 1965, *Watsonia* 16: 300. 1987.

North America, California. Perennial, coastal habitats, occurs in wetlands or nonwetlands, see *Annals of Natural History* 1: 284. 1838, *The Botany of Capt. Beechey's Voyage*; comprising an account of the Plants collected by Messrs. Lay and Collie ... during the voyage to the Pacific and Bering's Strait, performed in H.M.S. *Blossom* ... 1825-1828. 404. London [1830-] 1841, *Synopsis Plantarum Glumacearum* 1: 261. 1854, *Anales de la Universidad de Chile* 43: 569, 571. 1873, *Bulletin of the Torrey Botanical Club* 15: 11. 1888 and *Leaflets of Western Botany* 10(7): 118. 1964, *Le Naturaliste Canadien* 94(4): 527. 1967.

in English: sand-dune bluegrass, seashore bluegrass, maritime bluegrass, Douglas' bluegrass

P. drummondiana Nees (*Poa brizochloa* F.Muell.; *Poa cognata* Steud.; *Poa nodosa* Nees)

South Australia, Victoria, Western Australia. Perennial, short creeping branching rhizome, culms erect or geniculate, slender, basal internodes often somewhat swollen, leaves mostly basal, auricles present or absent, leaf sheaths keeled, ligule acute or obtuse, stiff leaf blades flat or inrolled or folded, slightly nodding green and purple panicle contracted or spreading, spikelets laterally compressed and broadly oblong-ovate, anthers yellow, ovary glabrous, fruit compressed and grooved, web absent, often on sand on limestone, on sand hills, in eucalyptus woodlands, see *London Journal of Botany* 2: 418. 1843, *Plantae Preissianae* 2: 105. 1846, *Synopsis Plantarum Glumacearum* 1: 262. 1854, *Transactions and Proceedings of the Victorian Institute for the Advancement of Science* 1854-1855: 45. 1855. in English: knotted meadow grass, shaking grass, knotted poa

P. durifolia Giussani, Nicora & F.A. Roig (*Poa ligularis* var. *stricta* Nicora & F.A. Roig)

South America, Argentina. See *Systema Vegetabilium* 2: 565. 1817, *Synopsis Plantarum Glumacearum* 1: 257. 1854 and *Hickenia* 2(58): 275, f. 1 (g-j). 1998, *Darwiniana* 38(1-2): 53-55, f. 3, 5. 2000.

P. duseunii Hack. (*Poa ibarii* Phil.; *Poa rigidifolia* Steud. var. *ibari* (Phil.) Giussani; *Poa spiciformis* var. *ibarii* (Phil.) Giussani) (dedicated to the Swedish botanist Per Karl Hjalmar Dusen, 1855-1926, explorer and botanical collector (West Africa), civil engineer, bryologist, author of *New and Some Little Known Mosses from the West Coast of Africa*. in English: large-flower bluegrass

in Japan: oniichigotsunagi

P. ensiformis Vickery (*Poa caespitosa* G. Forst. var. *latifolia* Benth.)

Australia, New South Wales, Mt. Kosciuszko, Victoria. Perennial, culms green, loosely to densely tufted, erect, rhizomatous with horizontal rhizomes, vigorous root system, leaves mostly basal, auricles vestigial, ligule membranous and truncate, stiff and rigid leaves deep green, sheaths

deep purple, green and purple panicle loosely contracted or spreading, spikelets green or purplish, chasmogamous spikelets, glumes more or less equal, lemmas hairy or pubescent, web copious, anthers yellow or purple, ovary glabrous, can cover large areas, can become somewhat invasive, growing in moist soils, areas with running water, along roadsides, near springs, see *Flora Australiensis: A Description ...* 7: 652. 1878 and *Contributions from the New South Wales National Herbarium* 4: 188. 1970.

in English: purple-sheathed tussock grass, Cabramurra grass

P. epileuca (Stapf) Stapf (*Aniselytron epileuca* (Stapf) Soják; *Aniselytron epileuca* (Stapf) Bennet & Raizada, nom. illeg., non *Aniselytron epileuca* (Stapf) Soják; *Aulacolepis epileuca* (Stapf) Hitchc.; *Calamagrostis epileuca* (Stapf) Govaerts; *Deyeuxia epileuca* Stapf)

Asia, Sulawesi, New Guinea. Perennial, tufted, low, see *Familles des Plantes* 2: 31, 530. 1763, *Tentamen Florae Germanicae* 1: 34. 1788, *Essai d'une Nouvelle Agrostographie* 43. 1812, *Sitzungsberichte der kaiserlichen Akademie der Wissenschaften. Wien. Mathematisch-naturwissenschaftlichen Classe. Asia (Gramineae)." *The Gardens' Bulletin Singapore* 37(2): 213-223. 1984, *World Checklist of Seed Plants* 3(1): 10. 1999.

P. eragrostoides L. Liou

China. See *Flora Reipublicae Popularis Sinicae* 9(2): 392. 2003.

P. erinacea Speg.

South America, Argentina, Rio Chubut. Rare species, useful for erosion control, found in arid areas, see *Anales Museo Nacional de Historia Natural de Buenos Aires* 7: 198. 1902.

P. eyerdamii Hultén (*Poa kamtschatica* Fisch. ex Komarov; *Poa palustris* L.) (for the American explorer Walter Jacob Eyerdam, b. 1892, botanical collector in Kamtchatka, North American West coast, Alaska, Canada and South America, 1938-1939 University of California Second Botanical Garden Expedition to the Andes under the direction of T.H. Goodspeed, author of "Some interesting plants found in the Aleutian Islands." *Little Gardens* 7: 1-3, 21. 1936. See *Ann. Missouri Bot. Gard.* 64: 568. 1977. [1978]; R.P. Adams, T.A. Zanoni and E. Jaime Miller, "Walter Jacob Eyerdam, colector de plantas y animales en Haití en 1927." *Moscsoa* 6: 226-241. 1990; T. Harper Goodspeed, *Plant Hunters in*

The Andes. 16. Robert Hale Limited, [n.d.] [1941] and *Plant Hunters in the Andes*. Second edition, revised and enlarged. 13. University of California Press, Berkeley and Los Angeles 1961)

Alaska. Endangered species, see *Systema Naturae, Editio Decima* 2: 874. 1759, *Bull. Soc. Bot. France* 9: 453. 1862 and *Flora URSS* 2: 397. 1934, *Acta Universitatis Lundensis* 38(1): 206, f. 3e-h. 1942, *Journal of the Indian Botanical Society* 60: 148-153. 1981, *Fitologija* 31: 21-33. 1986, *Bot. Zhurn. (Moscow & Leningrad)* 76: 476-479. 1991, *Taxon* 49(2): 256. 2000.

in English: Eyerdam's bluegrass

P. fauriei Hackel (*Poa tateyamensis* Honda) (named for Urbain Jean Faurie, 1847-1915, plant collector in Japan; see Emil Bretschneider, *History of European Botanical Discoveries in China*. 922, 937, 940. Leipzig 1981)

Asia, Japan. See *Bulletin de l'Herbier Boissier* 7(9): 711. 1899 and *Journal of the Faculty of Science: University of Tokyo, Botany* 3(1): 86. 1930.

in Japan: ainusomosomo

P. fawcettiae Vickery (see Dennis John Carr and Stella Grace Maisie Carr [née Fawcett] (1912-1988), eds., *People and Plants in Australia*. London 1981; S.G.M. Carr & D.J. Carr, "The French contribution to the discovery of Australia and its flora." in *Endeavour*. 124: 21-26. 1976)

New South Wales, Mt. Kosciuszko, Kosciuszko National Park, Victoria. Perennial, densely tufted, smooth, culms erect and often purplish or pinkish at the base, branched, often with short creeping rhizomes or stolons, leaves mostly basal, auricles absent, ligule membranous, leaves pungent-pointed and glaucous to bluish, green and purple panicles pyramidal with spreading branches, spikelets purplish and glossy, chasmogamous spikelets, glumes more or less equal, lemmas obtuse and hairy, web present or absent, anthers yellow or purple, ovary glabrous, ornamental grass, growing in acidic soils, subalpine meadows, alpine and subalpine grassland, eucalypt woodland, open habitats, confused with the closely allied *Poa phillipsiana* Vickery, see *Contributions from the New South Wales National Herbarium* 4: 232, 238. 1970.

in English: smooth blue snowgrass, horny snowgrass

P. fax J.H. Willis & Court (*Poa lepida* Hochst. ex A. Rich.; *Poa lepida* sensu F. Muell., non Nees ex Steudel, nec *Poa lepida* A. Rich., nom. illeg., non *Poa lepida* Hochst. ex A. Rich.; *Neuropoa fax* (J.H. Willis & Court) Clayton) (Latin *fax, facis* "a torch")

South Australia, Western Australia, New South Wales, Victoria. Annual, greenish or purplish, small and slender, erect or decumbent, auricles vestigial or absent, ligule membranous and thin, leaf sheaths keeled, leaf blades thin and flaccid, green to purple panicle narrow and linear, spikelets strongly compressed and ovate to ovate-oblong, glumes

obtuse, lemmas keeled and obtuse, web absent, palea 2-keeled with keels wingless, anthers yellow or purple, palea linear, ovary glabrous, fruit dark and compressed, halophytic species, along the coasts, swamps, sand dunes, open habitats, see *Species Plantarum* 1: 67-68. 1753, *Tentamen Florae Abyssinicae ...* 2: 424. 1850, *Fragmenta Phytographiae Australiae* 8: 170. 1873 and *Ill. Fl. U.S. Canada* edition 2, 1: 252. 1913, *Muelleria* 1: 45. 1955, J.W. Vickery, "A taxonomic study of the genus *Poa* L. in Australia." *Contributions from the New South Wales National Herbarium* 4: 145-243. 1970, W.D. Clayton, *Kew Bulletin* 40(4): 727-729. 1984 [1985], *Las Gramíneas de México* 5: 1-466. 1999.

in English: scaly meadow grass, scaly poa

P. fendleriana (Steudel) Vasey (*Atropis californica* Munro ex A. Gray; *Atropis californica* Munro ex Thurb.; *Atropis fendleriana* (Steud.) Beal; *Eragrostis fendleriana* Steud.; *Panicularia fendleriana* (Steud.) Kuntze; *Poa andina* var. *majora* Vasey; *Poa andina* var. *spicata* Vasey; *Poa brevipaniculata* Scribn. & T.A. in English: Lassen County bluegrass

P. fibrifera Pilger

Peru. Perennial bunchgrass, tufted, coarse, clumped, rhizomatous, loose paniculate inflorescence, see *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 37: 380. 1906, *Willdenowia* 27: 237. 1997.

in Peru: cabanilla

P. flabellata (Lam.) Raspail (*Dactylis caespitosa* G. Forst.; *Festuca antarctica* Spreng.; *Festuca caespitosa* (G. Forst.) Roem. & Schult., nom. illeg., non *Festuca caespitosa* Desf.; *Festuca flabellata* Lam.; *Festuca urvilleana* Steud.; *Parodi-ochloa flabellata* (Lam.) C.E. Hubb.; *Poa andina* Trin.; *Poa caespitosa* (G. Forst.) Hook. ex Speng., nom. illeg., non *Poa caespitosa* Poir.; *Poa controversa* Steud.; *Poa controversa*

var. *minor* Steud.; *Poa flabellata* (Lam.) Hook.f., nom. illeg., non *Poa flabellata* (Lam.) Raspail; *Poa forsteri* Steud.; *Sesleria americana* Nees ex Steud.)

Southern America, Falkland Islands (Malvinas), Argentina, Chile. Forming very dense clumps or tussocks, culms pinkish at the base, useful for erosion control, see *Commentationes Societatis Regiae Scientiarum Gottingensis* 9: 22. 1787, *Encyclopédie Méthodique, Botanique* 2: 462. 1788, *Plantarum Minus Cognitarum Pugillus* 2: 23. 1815, *Systema Vegetabilium* 2: 732. 1817, *Annales des Sciences Naturelles, Botanique* 5: 100. 1825, *Mémoires de la Société Linnéenne de Paris* 4: 602. 1826, *Annales des Sciences d'Observation* 2: 86, t. 4, f. 11. 1829, *Annales des Sciences d'Observation* 2: 87, t. 89, f. 5. 1829, *Linnaea* 10(3): 306. 1836, *Synopsis Plantarum Glumacearum* 1: 260, 296, 312. 1854, *Philosophical Transactions of the Royal Society of London* 168: 22. 1877, *Anales Museo Nacional de Historia Natural de Buenos Aires* 5: 91. 1896 and *Reports of the Princeton University Expeditions to Patagonia 1896-1899, Botany, Volume viii, Supplement* 8(3): 56. 1914 [1915], *Bulletin of the British Museum (Natural History), Botany* 8: 396. 1981.

in English: tussock grass

P. foliosa (Hook.f.) Hook.f. (*Festuca foliosa* Hook.f.)

New Zealand. Dioecious, rarely bisexual, often forming swards, massive tussocks, coastal, tough, shortly stoloniferous, woody narrow stolons, old leaf sheaths fibrous, lower leaf sheaths smooth, coriaceous leaf blades persistent, ligule entire, dense panicle, glumes subequal and membranous, palea keels ciliate, callus hairy, palatable to very palatable, found in rocky places near the sea, slopes, cliffs, see *Flora Antarctica* 1: 99-100, t. 55. 1844 [1845], *Handbook of the New Zealand Flora* 338. 1864 and *The Subantarctic Islands of New Zealand* 2: 476. 1909, *New Zealand J. Bot.* 24: 434. 1986.

P. fordeana F. Muell. (*Glyceria fordeana* (F. Muell.) Benth.; *Panicularia fordeana* (F. Muell.) Kuntze; *Poa caespitosa* var. *flexuosa* F.M. Reader; *Poa hackelii* Reader, nom. illeg., non *Poa hackelii* Post) (for the Australian botanical and entomological artist Mrs. Helena Forde, née Scott, 1832-1910; as a result of their work the Scott sisters, Helena and Harriet, were elected honorary members of the Entomological Society)

South Australia, Queensland, New South Wales, Victoria. Perennial, semiaquatic, greenish or straw colored, slender, rhizomatous with creeping rhizomes, erect or ascending, curved and ascending at the base, culms occasionally branched from the lower nodes, leaves mostly basal, vestigial auricles or absent, sheath keeled and compressed, ligule membranous and hairy, green to light green panicles narrowly or broadly oblong to pyramidal-acute, spikelets compressed and linear to linear-lanceolate, glumes acute to obtuse to ovate, lemmas keeled and woolly, web obsolete,

anthers yellow, ovary glabrous, fruit compressed, common in wet soils, inland swamps, wet situations, sandy-clay banks, on heavy clay soils, in swamps and stagnant water, open habitats, see *Herbarium Pedemontanum* 6: 235. 1836, *Fragmenta Phytographiae Australiae* 8: 130. 1873, *Revisio Generum Plantarum* 1: 782. 1891 and *Victorian Naturalist; Journal and Magazine of the Field Naturalists' Club of Victoria* 23: 89. 1906.

in English: Forde poa, Forde's poa, sweet swamp-grass

P. fuegiana (Hook.f.) Hack. (*Festuca fuegiana* Hook.f.; *Poa alopecurus* (Gaudich. ex Mirb.) Kunth; *Poa alopecurus* subsp. *fuegiana* (Hook.f.) D.M. Moore & Dogg.)

Argentina, Chile. See *Annales des Sciences Naturelles, Botanique* 5: 100. 1825, *Révision des Graminées* 1: 116. 1829, *Flora Antarctica* 2: 380. 1846 and *Svenska Expeditionen till Magellansländer* 3(5): 225. 1900, *Wissenschaftliche Ergebnisse der Schwedischen Südpolar-Expedition 1901-1903* 4(4): 7. 1906, *Bulletin, British Antarctic Survey* 43: 105. 1976.

P. gayana E. Desv. (*Poa patagonica* var. *neuquina* Nicora) (dedicated to the French botanist Claude Gay, 1800-1873, traveled to South America in 1828-1832 and in 1834-1842, his works include *Historia física y política de Chile. Botánica [Flora chilena]*. Paris 1845-1852[-1854] and "Extrait d'une lettre de M.C. Gay, datée de Valparaiso le 13 janvier 1837, contenant quelques détails sur la végétation de Coquimbo au Chili." *Ann. Sci. Nat.*, sér. 2. 7: 380-381. 1837. See J.H. Barnhart, *Biographical notes upon botanists*. 2: 34. 1965; A. Lasègue, *Musée botanique de Benjamin Delessert*. 138-141. Paris 1845; D. Barros Arana, "Don Claudio Gay y su obra." *Anales Univ. Chile*. 48: 5-227. 1876; C. Porter, "Don Claudio Gay. Notas biográficas y bibliográficas." *Revista Chilena Hist. P. hakusanensis Hackel (*Poa yezomontana* Honda)

Asia, Japan. See *Bulletin de l'Herbier Boissier* 7(9): 709. 1899 and *Journal of the Faculty of Agriculture of the Hokkaido University* 26: 164. 1931.

in Japan: hakusan'ichigotsunagi

P. halmaturina J.M. Black

South Australia, Victoria, Tasmania. Perennial, erect, small, rigid and glabrous, tufted, rhizomatous with elongate and scaly rhizomes, leaves mostly basal, auricles absent, leaf sheaths keeled, ligule truncate, green and purple panicle contracted and almost spike-like with short and erect branches, chasmogamous spikelets, lemmas hairy on the keel, web present, anthers yellow, ovary glabrous, rare species, common in open habitats, coastal and maritime-arenicolous, sand dunes, dunes behind beach, considered to be very close to *Poa poiformis* (Labill.) Druce, see *Transact. Royal Soc. S. Australia* 66: 248. 1942, *Flora South Australia (edition 2)* 124. 1943, *Contributions from the New South Wales National Herbarium* 4: 145-243. 1970.

in English: Kangaroo Island poa

P. harae Rajbh.

Eastern Nepal. Perennial, erect, caespitose, shortly stoloniferous, leaf blades linear acuminate, oblong panicle with spreading branches, spikelets 2- to 3-flowered, glumes subequal, lower glumes lanceolate, upper glumes elliptic, alpine regions, moist places, see *Acta Phytotaxonomica et Geobotanica* 39(1-3): 55. 1988.

P. hartzii Gandog. (*Poa abbreviata* f. *arenaria* Rosenv.; *Poa glauca* f. *arenaria* Hartz; *Poa glauca* var. *atroviolacea* Lange f. *prolifera* Simmons; *Poa hartzii* f. *prolifera* (Simmons) Boivin; *Poa hartzii* var. *vivipara* Polunin; *Poa vrangelica* Tzvelev)

North America, Canada. Caespitose, erect, glabrous, low-growing, leaves mostly in a basal tufts, ligules with apices acuminate, colonizer, found on alluvial clay, calcareous soils, slopes, sand, on hillsides, floodplains, see *Meddelelser om Grønland* 9: 350. 1896 and *Bulletin de la Société Botanique de France* 66(7): 302. 1919 [1920], *Meddelelser om Grønland* 101(3): 145. 1933, *Bulletin of the National Museum of Canada Biol. Ser.* 24 92: 72, t. 3. 1940, *Sargentia; Continuation of the Contributions from the Arnold Arboretum of Harvard University* 4: 12. 1943, *Novosti Sist. Vyss. Rast.* 11: 37. 1974, *Phytologia* 71(5): 407, f. 4. 1991 [1992], *Novosti Sist. Vyss. Rast.* 32: 182. 2000.

P. hartzii Gandog. subsp. *alaskana* Soreng (*Poa alaskana* (Soreng) Tzvelev)

North America, U.S., Alaska. Endangered grass, forming tufts, found in sand dunes, see *Bulletin de la Société Botanique de France* 66(7): 302. 1919 [1920], *Phytologia* 71(5): 407, f. 4. 1991 [1992], *Novosti Sist. Vyss. Rast.* 32: 182. 2000.

P. hartzii Gandog. subsp. *hartzii* (*Poa hartzii* var. *vivipara* Polunin)

Eurasia, North America. See *Bulletin de la Société Botanique de France* 66(7): 302. 1919 [1920], *Bulletin of the National Museum of Canada Biol. Ser.* 24 92: 72, t. 3. 1940.

P. hartzii Gandog. subsp. *vrangelica* (Tzvelev) Soreng & L.J. Gillespie (*Poa hartzii* var. *vrangelica* (Tzvelev) Prob.; *Poa pekulnejensis* Jurtzev & Tzvelev; *Poa vrangelica* Tzvelev)

Eurasia, North America. See *Bulletin de la Société Botanique de France* 66(7): 302. 1919 [1920], *Meddelelser om Grønland* 101(3): 145. 1933.

P. hartzii Gandog. var. *vivipara* Polunin (*Poa glauca* f. *prolifera* Simmons; *Poa hartzii* f. *prolifera* (Simmons) B. Boivin)

Canada, Ellesmere Island. See *Flora Danica* 6(17): 3, t. 964. 1790 and *The Vascular Plants in the Flora of Ellesmere Island* 163-164. 1906, *Bulletin of the National Museum of Canada Biol. Ser.* 24 92(1): 70, f. 3. 1940, *Le Naturaliste Canadien* 94(4): 526. 1967.

P. hayachinensis Koidz. (*Poa yezoalpina* Tatew. & Kawano)

Japan. Rare species, alpine, see *Botanical Magazine* 31: 254-255. 1917, *Journal of Japanese Botany* 36: 337, f. 1. 1961.

in Japan: nanbusomosomo

P. hedbergii S.M. Phillips

Ethiopia. Perennial, densely tufted, erect or ascending, leaf blades narrowly linear acute, contracted panicle elliptic to narrowly oblong, spikelets clustered narrowly elliptic 3- to 4-flowered, florets loosely imbricate, glumes 1- to 3-nerved acuminate, upper glume narrowly elliptic-oblong, lower glume narrowly lanceolate, lemmas glabrous scabrid, palea keels scabrid, on mountains, among rocks, closely related to *Poa ruwenzoriensis*, see *Kew Bulletin* 44(1): 134. 1989, *Flora of Ethiopia* 7: 20, 23. 1995.

P. helmsii Vick. (after Richard Helms, 1842-1914, born in Altona, Germany, arrived in Australia in 1858, naturalist and botanist, dentist, museum curator, collector, entomologist and bacteriologist, expedition to Mt. Kosciuszko in 1888, 1893 and 1901, naturalist on the Elder Exploring Expedition to central Australia, May 1891-June 1892)

Victoria, New South Wales, Mt. Kosciuszko. Perennial, green, tufted, vigorous, coarse, leaves mostly basal, auricles absent, sheaths compressed and keeled, ligule truncate, rough leaves not pungent, panicles pyramidal, spikelets green or purplish, chasmogamous spikelets, lemmas hairy, web present and well-developed, palea scabrous, anthers yellow, ovary glabrous, tussock grass, in wet areas, wet soils of creeks and swamps, swampy alpine meadows, moist acidic soils, mountain streams, on granite alluvium, see *Contributions from the New South Wales National Herbarium* 4: 205. 1970.

in English: broad-leaved snowgrass

P. hesperia Edgar

New Zealand. Perennial, alpine to subalpine, turf-forming, erect, slender, rhizomatous, leaf sheath coriaceous, ligule entire, coriaceous leaf blades lax, panicle branches spreading, glumes subequal to equal, lemma silky, palea keels shortly hairy, in stony grassland, rocky places, tussock grassland, see *New Zealand Journal of Botany* 24(3): 442, f. 2. 1986.

P. hiemata Vickery (Latin *hiemalis*, e “belonging to winter”)

Victoria, New South Wales, Mt. Kosciuszko, Tasmania. Perennial, glabrous, branched, more or less erect or ascending, bright green or glaucous, densely caespitose, rhizomatous with vertical rhizomes, leaves mostly basal, auricles absent, compressed sheaths pale green or rarely purplish, ligule membranous and truncate, leaves softly pointed and smooth, green or purplish panicles open or condensed, chasmogamous spikelets, upper glume longest, web usually absent, anthers yellow or purple, ovary glabrous, fruit compressed and grooved, moist soils, open habitats, alpine and subalpine areas and grasslands, moisture-retentive acidic soils, rocky sites, see *Contributions from the New South Wales National Herbarium* 4: 230. 1970.

in English: soft snowgrass

P. hieronymii Hack.

Argentina. Erect and ascending, prostrate, see *Österreichische Botanische Zeitschrift* 52(10): 380. 1902.

P. hisauchii Honda (*Poa acroleuca* var. *spiciformis* Honda)

Asia, Japan. See *Synopsis Plantarum Glumacearum* 1: 256. 1854 and *Botanical Magazine* 41: 640. 1927, *Botanical Magazine* (Tokyo) 42: 132. 1928, *Journal of Japanese Botany* 63: 334-343. 1988, *Botanical Magazine* 101: 311-331. 1988, *Bot. Zhurn. (Moscow & Leningrad)* 76: 1174-1178. 1991.

in Japan: tachimizoichigotsunagi

P. holciformis J. Presl (*Festuca elliotii* Hack.; *Koeleria poaeoides* Nees ex Steud.; *Poa chilensis* Trin., nom. illeg., non *Poa chilensis* Moris; *Poa chilensis* var. *robustior* Phil.) (for the English (b. India, Calcutta) botanist George Francis Scott-Elliot, 1862-1934 (d. Dumfries, Scotland), 1890 Fellow of the Linnean Society, botanist on the Sierra Leone Boundary Commission, plant collector in Sierra Leone (1891-1892) and in East Africa (with the British East Africa Expedition, 1893-1894), President of the Antiquarian Society, among his writings are “The Hedge woundwort—*Stachys sylvatica* L.” Rep. Bot. Exch. Cl., pp. 640-50. 1933, *Report on the District Traversed by the Anglo-French Boundary Commission*. Sierra Leone. Botany. 1893, *The Flora of Dumfriesshire*. Dumfries 1896 and *A Naturalist in Mid-Africa: Being an Account of a Journey to the Mountains of the Moon and Tanganyika*. London 1896. See Samuel P. Oliver, *The Life of Philibert Commerson*. Edited by G.F. Scott-Elliot. London 1909; J.H. Barnhart, *Biographical notes upon botanists*. 1: 504. 1965; Benjamin Daydon Jackson (1846-1927), “A list of the contributors to the herbarium of the Royal Botanic Gardens, Kew, brought down to 31st December 1899.” *Bull. Misc. Inf. Kew*. 1901 and “A list of the collectors whose plants are in the herbarium of the Royal Botanic Gardens, Kew, to 31st December 1899.” in *Kew Bulletin*. 1-80. 1901; Mary Gunn and Leslie E. Codd, *Botanical Exploration of Southern Africa*. 320. Cape Town 1981; [Sotheby’s — Marquess of Bute], *Catalogue of a Portion of the Valuable Library from Dumfries House, Ayrshire*. The Property of the Most Hon. The Marquess of Bute. The First Portion: the important collection of mathematical and scientific books. Sale of 3-4 July 1961. The Second Portion: Americana, early printed books, travel, early Italian literature, bibliography, books on the arts and architecture. Sale of 16-18 Oct. 1961. London; F.N. Hepper and Fiona Neate, *Plant Collectors in West Africa*. 73-74. 1971; G. Murray, *History of the collections contained in the Natural History Departments of the British Museum*. London 1904; E.M. Tucker, *Catalogue of the library of the Arnold Arboretum of Harvard University*. Cambridge, Mass. 1917-1933; Auguste Jean Baptiste Chevalier (1873-

1956), *Flore vivante de l'Afrique Occidentale Française*. 1: xxvii-xxx. Paris 1938)

Chile, Argentina. Perennial, robust, caespitose, stout, vigorous, see *Reliquiae Haenkeanae* 1(4-5): 272. 1830, *Linnaea* 10: 306-307. 1836, *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Gard.* 10: 35-39, pl. 1-54. 1899 and *Repertorium Specierum Novarum Regni Vegetabilis* 2: 70. 1906.

P. homomalla Nees

Western Australia. Perennial, rhizomatous, tall, much-branched, rooting at nodes above the base, nodes more or less swollen, vestigial auricles or absent, leaf sheaths compressed, ligule membranous or chartaceous, inflorescence a green to purple panicle, subtending foliar structure absent, anthers yellow, ovary glabrous, in moist areas, close to *Poa australis* R. Br., see *Prodromus Florae Novae Hollandiae* 179. 1810, *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques, Physiques et Naturelles* 1(4): 388. 1830, Johann Georg Christian Lehmann (1792-1860), *Plantae Preissianae ... Plantarum quas in Australasia occidentali et meridionali-occidentali annis 1838-41 collegit L. Preiss.* 2: 104. Hamburgi 1846 and C.A. Gardner, *Flora of Western Australia*. vol. 1, part 1. Gramineae. (Govt. Printers: Perth.) 1952.

P. hookeri Vickery (*Poa australis* R. Br. var. *capillifolia* Hook.f.)

Victoria, Alpine National Park, Snowy River National Park, Tasmania, New South Wales. Perennial, caespitose, small, slender, erect, leaves mostly basal, auricles absent, leaf sheaths scabrous and compressed, ligule entire and membranous, leaves more or less hispid to scabrous, green and purple panicle loosely contracted, glumes acute, lemmas pubescent, web absent, anthers yellow or purple, ovary glabrous, found in open habitats, disturbed sites, along roadsides, woodland, on dry lowland areas in open woodland, eucalyptus woodland, rare in Victoria, see *Contributions from the New South Wales National Herbarium* 4: 222. 1970.

in English: Hooker's tussock-grass

P. hookeriana (F. Muell. ex Hook.f.) F. Muell. (*Austrofestuca hookeriana* (F. Muell. ex Hook.f.) S.W.L. Jacobs; *Festuca hookeriana* F. Muell. ex Hook.f.; *Hookerchloa hookeriana* (F. Muell. ex Hook.f.) E.B. Alexeev; *Schedonorus hookerianus* (F. Muell. ex Hook.f.) Benth.)

Australia. See *Essai d'une Nouvelle Agrostographie* 99, 162, 177. 1812, *Flora Tasmaniae* 2: 127, t. 165. 1858, *Fragmenta Phytographiae Australiae* 8: 131. 1873, *Flora Australiensis: A Description ...* 7: 656. 1878 and *Telopea* 3(4): 602. 1990.

P. horridula Pilg. (*Melica expansa* Steud. ex Lechler; *Poa androgyna* Hack.; *Poa dumetorum* Hack.; *Poa dumetorum* var. *dumetorum*; *Poa dumetorum* var. *unduavensis* Hack.; *Poa pardoana* Pilg.; *Poa piifontii* J. Fernandez Casas, J. Molero & A. Susanna; *Poa pufontii* Fern. Casas, Molero & Susanna; *Poa unduavensis* Hack.)

Ecuador, Bolivia, Peru. Perennial, erect, bunchgrass, coarse, tufted, robust stems with dark nodes, spreading foliage, leaf blades flat linear scabrous acute, rhizomatous, green to purplish inflorescence on slender reflexed pedicels, loose panicle oblong to ovate with scabrous branches, spikelets clustered oblong to elliptic, glumes unequal lanceolate acute or acuminate, lower glume 1-nerved, upper glume 3-nerved, lower lemma lanceolate 5-nerved acute more or less pubescent to pilose, awns lacking, in small clumps, open tufts, found in rocky places, between rocks, puna, in rock slides, grassland, dense forest, mountain, alpine, moist areas, among shrubs, see *Berberides Americae Australis* 56. 1857 and *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 37: 506. 1906, *Repertorium Specierum Novarum Regni Vegetabilis* 6: 158. 1908, *Repertorium Specierum Novarum Regni Vegetabilis* 11: 26-27. 1912, *Fontqueria* 21: 17. 1988, *Willdenowia* 27: 237. 1997.

in Peru: sunsa, sunsa-sunsa

P. hothamensis Vickery (*Poa hothamensis* var. *parviflora* N.G. Walsh) (from Mt Hotham region, Victorian Alps)

Australia, Victoria. Perennial, erect, tufted, often rhizomatous or stoloniferous, leaves mostly basal, auricles absent, ligule membranous, sheath purplish and slightly compressed, leaves usually stiff, culms slightly flattened, green and purple panicle contracted or open, spikelets often purplish, upper glume slightly longer, web present or absent, anthers yellow or purple, ovary glabrous, suitable for rehabilitation and revegetation of alpine and subalpine areas, growing in acidic soils, granite, montane dry woodland, open habitats, see *Contributions from the New South Wales National Herbarium* 4: 191. 1970, *Muelleria* 7(4): 451. 1992.

in English: ledge grass

P. hothamensis Vickery var. *hothamensis*

Australia, Victoria. Perennial, tussock grass, rhizomatous with rhizomes elongate and oblique, leaf sheaths puberulous, anthers yellow, in rocky sites, in grassland and woodland.

P. hothamensis Vickery var. *parviflora* N.G. Walsh

Australia, Victoria. Perennial, stoloniferous with aerial stolons, sheaths glabrous or scabrous, ligule membranous and thin, velvety leaves, grows in moist forests, open forests, rare grass in Croajingolong National Park, see in *Muelleria* 7(4): 451, 454. 1992.

in English: soft ledge grass

P. howellii Vasey & Scribner (*Poa bolanderi* subsp. *howellii* (Vasey & Scribn.) Keck; *Poa bolanderi* subsp. *howellii* D.D. Keck; *Poa bolanderi* var. *howellii* (Vasey & Scribn.) M.E. Jones; *Poa howellii* var. *microsperma* Vasey) (after the American self-taught botanist Thomas Jefferson Howell, 1842-1912, in 1850 came west on the Oregon Trail, explorer, botanical collector for Dr. Asa Gray, expeditions to the Siskiyou Mountains and northern California, author of *A Catalogue of the Known Plants (Phaenogamia and Pteridophyta of Oregon, Washington, and Idaho)* 1887 and *Flora of Northwest America* 1903. P. imperialis Bor

Eastern Nepal. Perennial, stoloniferous, smooth, leaf blades linear-acuminate, ligule oblong, panicle with spreading branches, spikelets oblong, palea keeled, on rocky places, riverbanks, see *Kew Bulletin* 12(3): 414. 1958.

P. incrassata Petrie (*Poa exigua* Hook.f., nom. illeg., non *Poa exigua* Dumort.; *Poa kirkii* var. *incrassata* (Petrie) Zotov)

Antipodes Islands. Perennial rare species, tufted, small, low, glaucous, subantarctic, alpine and subalpine, leaf blades persistent usually folded, leaf sheath shining and membranous, ligule entire, inflorescence paniculate compact spike-like or racemose with stiff short branches, glumes subequal glabrous, lemma ovate strongly folded to hooded, palea keels scabrid, damp soil, see *Observations sur les Graminées de la Flore Belgique* 113. 1824, *Handbook of the New Zealand Flora* 338. 1864, *Indigenous Grasses of New Zealand* t. 51B. 1880 and *Transactions and Proceedings of the New Zealand Institute* 34: 394. 1902, *T.R.S.N.Z.* 73: 236. 1943.

P. induta Vickery (Latin *induo, ui, utum, ere* “to put on an article of dress or ornament,” *indutus* “apparel”)

Victoria, New South Wales. Perennial, erect and unbranched, loosely or densely caespitose, grayish green, leaves mostly basal, auricles absent, sheath densely hairy and compressed, ligule membranous to papery or chartaceous, leaves densely hairy and lax, green and purple panicle narrow and 1-sided, chasmogamous spikelets, glumes acute and purplish, web present, anthers yellow, ovary glabrous, fruit compressed and grooved, attractive, shade species, found in well-drained acidic soils, under eucalypt forest, in montane eucalypt woodland, similar to *Poa petrophila* Vickery, see *Contributions from the New South Wales National Herbarium* 4: 236, 238. 1970.

P. infirma Kunth (*Catabrosa thomsonii* Hook.f.; *Colpodium thomsonii* (Hook.f.) Hack.; *Eragrostis infirma* (Kunth) Steud.; *Megastachya infirma* (Kunth) Roem. & Schult.; *Ochlopoa infirma* (Kunth) H. Scholz; *Poa annua* L.; *Poa annua* f. *annua*; *Poa annua* subsp. *exilis* (Tommasini) Murb.; *Poa annua* subsp. *exilis* (Tomm. ex Freyn) Asch. & Graebn.; *Poa annua* var. *exilis* Tomm. ex Freyn; *Poa annua* var. *tommasinii* Asch. & Graebn.; *Poa exilis* (Tomm. ex Freyn) Murb.; *Poa exilis* Murb. ex Asch. & Graebn.; *Poa remotiflora* Murb., nom. illeg., non *Poa remotiflora* Rupr.)

Probable origin Europe. Annual, small, very short-lived, erect or ascending, spreading or prostrate, somewhat yellowish, caespitose, loosely tufted, branched or unbranched, leaves mostly basal, leaf blades persistent flat or folded, auricles absent, sheaths keeled and flattened, ligule membranous and truncate, leaves glabrous with hooded tip, a

green lax open panicle ovate or lanceolate with branches always erect, lower panicle branches erect to spreading after anthesis, 2-6 florets, spikelets distant and sessile, persistent glumes subequal to unequal, lower glume ovate 1-nerved, upper glume elliptic or oblong 1- to 3-nerved, silky lemma oblong to elliptic 5-nerved, palea keels ciliate, anthers yellow, ovary glabrous, weed species, very variable in forms, scarce species, in disturbed places, confused with *Poa annua* L. and *Poa trivialis* L., found along roadsides, stony places, wastelands, see *Species Plantarum* 1: 67-68. 1753, *Genera Plantarum* 23. 1776, *Essai d'une Nouvelle Agrostographie* 74, 97, 167. 1812, *Nova Genera et Species Plantarum* 1: 158. 1815 [1816], *Systema Vegetabilium, editio decima sexta* 2: 585. 1817, *Fundamenta Agrostographiae* 119, t. 7. 1820, *Nomenclator Botanicus. in English: weak bluegrass, early meadow-grass, early winter grass

P. interior Rydb. (*Paneion interius* (Rydb.) Lunell; *Poa coloradensis* Vasey ex Pammel; *Poa nemoralis* subsp. *interior* (Rydb.) W.A. Weber; *Poa nemoralis* var. *interior* (Rydb.) Butters & Abbe; *Poa subtrivialis* Rydb.)

North America, U.S. Perennial, caespitose, inflorescence ascending, growing in dense clumps, open areas, along roadsides, open rocky slopes, along rivers, flowing waters, in coniferous forest along stream, see *Species Plantarum* 1: 69-70. 1753, *Bulletin, Division of Agrostology United States Department of Agriculture* 9: 41. 1897 and *Bulletin of the Torrey Botanical Club* 32(11): 604-605. 1905, *Bulletin of the Torrey Botanical Club* 36: 536. 1909, *American Midland Naturalist* 4: 222. 1915, *Rhodora* 49: 6. 1947, *Phytologia* 51(6): 375. 1982.

in English: inland bluegrass

P. intrusa Edgar

New Zealand. Perennial, montane and subalpine, loosely tufted, tussock, erect, leaf blades persistent subcoriaceous flat or folded, leaf sheath glabrous keeled submembranous, ligule ciliate, panicle branches slender and spreading, glumes equal to subequal, lemma scabrid, callus glabrous, grassland, open forest, see *New Zealand Journal of Botany* 24(3): 463-465, f. 5. 1986.

P. iridifolia Hauman (*Poa lanigera* Nees var. *tandilensis* Hack.) (Argentina, Prov. Buenos Aires, Tandil)

South America, Argentina, Uruguay. Perennial, robust, clumped, green, leaves erect and glabrous, sheaths keeled and flattened, panicles ovoid and erect to pendent, spikelets oblong to oblong-lanceolate, lemmas keeled and lanceolate to oblong, rare species, useful for erosion control, see *Flora Brasiliensis seu Enumeratio Plantarum* 2: 491. 1829 and *Anales del Museo Nacional de Buenos Aires* 21: 152. 1911, *Anales Museo Nacional de Historia Natural de Buenos Aires* 29: 407, t. 1. 1917.

P. jugicola D.I. Morris

Tasmania. Perennial, caespitose, densely or loosely tufted, usually erect, rhizomatous with spreading rhizomes, stoloniferous with short ascending stolons, leaves mostly basal, auricles absent, sheaths keeled, ligule obtuse or truncate, a green panicle loosely contracted, chasmogamous spikelets, subtending foliar structure present or absent, web present, yellow anthers, ovary glabrous, mesophytic, subalpine, see in *Muelleria* 7(2): 167-169. 1990.

P. kanaii Rajbh.

Central Nepal. Perennial, erect, loosely tufted, smooth, short creeping rhizomes, leaf blades with scabrous margins, panicle ovate or oblong, 2-3 flowers, in alpine regions, see *Acta Phytotaxonomica et Geobotanica* 39(1-3): 58. 1988.

P. keckii Soreng (named for the American botanist David Daniels Keck, 1903-1995, experimental taxonomist, from 1950 to 1959 at the New York Botanical Garden, his writings include "Taxonomic notes on the California flora." *Aliso* 4: 101-114. 1958, "A revision of the genus *Orthocarpus*." *Proc. Calif. Acad. Sci.*, ser. 4, 16(17): 517-571. 1927, "Studies upon the taxonomy of the Madinae." *Madroño*. 3: 4-18. 1935, "The silverswords of Hawaii." *Carnegie Inst. Wash. News Serv. Bull.* 4: 75-78. 1936 and "The Hawaiian silverswords: systematics, affinities, and phytogeographic problems of the genus *Argyroxiphium*." *Occas. Pap. Bernice P. Bishop Mus.* 11(19): 1-38. 1936. South Australia, New South Wales, Victoria, Tasmania, Queensland. Perennial, green to grayish or gray-green, slender, coarse, robust, densely tufted, forming large tussocks, rarely rhizomatous, bright blue or bluish foliage, leaves mostly basal, bulk of dead dry leaves at base, auricles absent, sheath pale green or rarely purplish, ligule truncate and papery, rough to scabrous leaves flat or channeled, plume-like heads of flowers on long stems, purple or greenish panicle narrow and pyramidal, spikelets strongly compressed, vestigial foliar structure subtending the inflorescence absent, chasmogamous spikelets, lemmas hairy, web densely copious, anthers yellow, ovary glabrous, pasture, cultivated, very variable ornamental grass, graceful

appearance, drought-resistant, fast-growing and salt-tolerant, bird-attracting, specimen plant, widespread in grasslands, grassy woodlands and sclerophyll forests, common in wet places, alluvial and moist soils, prefers ample water, acidic soils, woodland of eucalyptus, confused with *Poa poiiformis* (Labill.) Druce, similar to *Stipa trichotoma* Nees (or *Nassella trichotoma* (Nees) Hack. ex Arechav.), see *Systema Vegetabilium, editio decima sexta* 1: 330. 1824, *Fl. Bras. Enum. Pl.* 2(1): 375. 1829, *Synopsis Plantarum Glumacearum* 1: 262. 1854, *Flora Australiensis: A Description...* 7: 651. 1878, *Anales Mus. Nac. (Oslo)* 30: 10-15. 1999.

in English: marsh bluegrass, bog bluegrass

P. leptocoma Trin. subsp. *leptocoma*

North America, California. Perennial, subalpine forest, moist conditions, occurs in wetlands, sometimes found in nonwetlands, see *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques, Physiques et Naturelles* 1(4): 374, 376. 1830.

in English: bog bluegrass

P. lettermanii Vasey (*Atropis lettermanii* (Vasey) Beal; *Poa brandegei* Scribn. ex Beal, also spelled *brandegi*; *Poa montevansii* Kelso; *Puccinellia lettermanii* (Vasey) Ponert) (named for George Washington Letterman, 1841 (or 1840)-1913, teacher in the public schools, botanical collector, explorer and traveler, in 1885 at Fossil Butte area, see Joseph Ewan, *Rocky Mountain Naturalists*. 249-250. The University of Denver Press 1950)

North America, California, Colorado, Mount Evans. Perennial, mountains, alpine, see *Flora italiana, ossia descrizione delle piante* ... 1: 366. 1848, *Contributions from the United States National Herbarium* 1(8): 273. 1893, *Grasses of North America for Farmers and Students* 2: 544, 579. 1896 and *Flora URSS* 2: 470. 1934, *Biological Leaflet [Washington]* 29: 2. 1945, *Feddes Repertorium* 84(9-10): 740. 1974, *Taxon* 37: 397-398. 1988.

in English: Letterman's bluegrass

P. ligularis Nees ex Steud. (*Poa denudata* var. *minor* Ball; *Poa ligularis* var. *ligularis*)

Southern America, Argentina. Caespitose, useful for erosion control, clump-forming, see *Synopsis Plantarum Glumacearum* 1: 257, 259. 1854, *Journal of the Linnean Society, Botany* 21: 238. 1884 and *Reports of the Princeton University Expeditions to Patagonia, 1896-1899, Volume viii, 1 [2]*, *Botany* 8(1,5,1): 226. 1904, *Hickenia* 2(58): 275, f. 1 (g-j). 1998.

P. ligulata Boiss. (*Poa concinna* var. *membranacea* Boiss.; *Poa membranacea* (Boiss.) C. Vicioso)

Europe, Spain, Morocco. See *Prodromus Florae Novae Hollandiae* 180. 1810, *Elenchus Plantarum Novarum* 89. 1838, *Voyage botanique dans le midi de l'Espagne* 2: 659. 1844 and *Anales del Jardín Botánico de Madrid* 2: 192. 1942.

P. lilloi Hack.

Argentina. Caespitose, riverbanks, along streams, see *Anales del Museo Nacional de Buenos Aires* 21: 153. 1911.

P. limosa Scribn. & T.A. Williams (*Poa fibrata* Swallen; *Poa scabrella* (Thurb.) Benth. ex Vasey; *Poa* x *fibrata* Swallen (pro sp.); *Poa* x *limosa* Scribn. & Williams pro sp.) [*Poa pratensis* L. x *Poa secunda* Presl, or *Poa pratensis* x *Poa secunda* subsp. *juncifolia*, or *Poa secunda* x *Poa pratensis*]

North America. Found in dry subsaline flats, see *Geological Survey of California, Botany* 2: 310-311. 1880, *The Grasses of the United States* 42. 1883, *Circular, Division of Agrostology, United States Department of Agriculture* 9: 5. 1899 and *Journal of the Washington Academy of Sciences* 30(5): 210. 1940, *Phytologia* 71: 403. 1991.

P. lindsayi Hook.f. (for the Scottish physician William Lauder Lindsay, 1829-1880, M.D., Edinburgh 1852, lichenologist, 1854-1879 Perth, F.L.S. 1858, visited New Zealand 1861-1862, botanical collector in Iceland and New Zealand, wrote "On the Toot plant and poison of New Zealand." [*Brit. & For. Med.-Chir. Rev.* 1865, 153, and 1868, 465. London], *Contribution to New Zealand Botany*. London: William & Norgate, 1868, "The Lichen flora of Greenland." *Trans. Bot. Soc. Edinburgh* 10: 32-65. 1869, *The Flora of Iceland*. Edinburgh New Philosophical Journal, New Series, July 1861. See J.H. Barnhart, *Biographical notes upon botanists*. 2: 387. 1965; T.W. Bossert, compil., *Biographical dictionary of botanists represented in the Hunt Institute portrait collection*. 239. Boston, Mass. 1972; S. Lenley et al., *Catalog of the manuscript and archival collections and index to the correspondence of John Torrey*. Library of the New York Botanical Garden. 463. 1973; Thomas Frederick Cheeseman, *Manual of the New Zealand Flora*. xxvii. Wellington 1906; I.C. Hedge and J.M. Lamond, *Index of Collectors in the Edinburgh Herbarium*. 103. Edinburgh 1970; M.E. Mitchell, *Bibl. Irish Lichenol.* 11: 13. 1979; G. Murray, *History of the collections contained in the Natural History Departments of the British Museum*. 1: 163. London 1904; Ray Desmond, *Dictionary of British & Irish Botanists and Horticulturists*. 430. London 1994)

New Zealand. Perennial, alpine, tiny, small, delicate, very slender, tufted, blue-gray to bluish, leaf blades persistent, thin and rough sheaths, ragged truncate ligule, leaves rough usually folded, slender flower stalk purplish, open flower head, glumes subequal, lemma silky hairy, awn absent, palea keels ciliate, slopes, riverbeds, ridges, hillsides, dry stony areas, see *Handbook of the New Zealand Flora* 340. 1864 and *New Zealand J. Bot.* 24: 474. 1986.

in English: Lindsay's poa

P. lipskyi Roshev. (*Poa bedeliensis* Litv.; *Poa contracta* Ovcz. & Czukav., nom. illeg., non *Poa contracta* Retz.; *Poa dispansa* Ovcz.; *Poa kungeica* Golosk.; *Poa ovczinnikovii* Ikonn.; *Poa pseudodissecta* Ovcz.; *Poa taldyksuensis* Roshev.)

Asia, China, Mongolia. Growing in sandy loam soil, hillsides, mountains, see *Izv. Bot. Sada Akad. Nauk SSSR* 30: 303, 778. 1931 [1932], *Flora URSS* 2: 415, 755. 1934, *Novosti Sist. Vyss. Rast.* 11: 26, 40. 1974, *Zlaki SSSR* 451. 1976, *Novosti Sist. Vyss. Rast.* 15: 221. 1979.

P. litorosa Cheeseman (*Festuca scoparia* Hook.f.)

Australia, New Zealand. Tussock, wiry, erect, stiff, growing in large tufts, rhizomatous with slender rhizomes, leaf

blades persistent and inrolled, leaf sheath coriaceous, ligule a ciliate rim, panicle contracted with short and erect branches, glumes unequal, lemma obtuse, palea keels ciliate, coastal, found in rocky places, tussock grassland, peat, near the sea, see *Révision des Graminées* 2: 535, t. 182. 1829 [1832], *Flora Antarctica* 1: 98-99. 1844 [1845] and *Manual of the New Zealand Flora* 902, 1155-1156. 1906.

P. longifolia Trin. (*Eragrostis longifolia* Hochst. ex Steud.; *Poa controversa* Bal., nom. illeg., non *Poa controversa* Steud.; *Poa longifolia* Hochst. ex A. Rich., nom. illeg., non *Poa longifolia* Trin.; *Poa longifolia* subsp. *meyeri* (Trin. ex Roshev.) Tzvelev; *Poa longiligula* Scribn. & T.A. Williams; *Poa meyeri* Trin. ex Roshev.; *Poa paryadrica* Boiss.)

Asia, Iran, Russia. Useful for erosion control, growing in wet spots, slopes, hillsides, open meadow, heavy clay, open habitats, see *Genera Plantarum* 23. 1776, *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques, Physiques et Naturelles. Seconde Partie: Sciences Naturelles* 4,2(1): 61. 1836, *Tentamen Florae Abyssinicae ...* 2: 425. 1850, *Synopsis Plantarum Glumacearum* 1: 260. 1854, Petr Aleksandrovich Tchihichatscheff [Pierre Alexandrowitsch de Tchihatcheff] (1812-1890), *Asie Mineure*, description physique, statistique et archéologique de cette contrée. Troisième partie: *Botanique*. Paris, Gide 1860, *Bulletin de la Société Botanique de France* 21: 16. 1874, *Circular, Division of Agrostology, United States Department of Agriculture* 9: 3. 1899 and *Flora URSS* 2: 383, 753. 1934, *Novosti Sist. Vyss. Rast.* 11: 28-29. 1974, *Zlaki SSSR* 463. 1976.

P. longifolia Trin. subsp. ***fageturnum*** (P.A. Smirn.) Tzvelev (*Poa fageturnum* P.A. Smirn.)

Europe, Russia. See *Bulletin de la Société Impériale des Naturalistes de Moscou* 58: 4, 57. 1953, *Novosti Sist. Vyss. Rast.* 11: 28-29. 1974.

P. longifolia Trin. var. ***planifolia*** Sommier & Levier
Russia.

P. lowanensis N.G. Walsh

Australia, Victoria. Perennial, shortly rhizomatous or caespitose, leaves mostly basal, leaves nonauriculate, leaf sheaths usually not keeled, ligule truncate, leaves stiff, more or less contracted panicle green to purple, chasmogamous spikelets, copious web, lemma hairy, broad and thin margin of the lemma, palea keeled, anthers yellow or purple, ovary glabrous, rare species, growing in siliceous sands, mallee vegetation on inland sand-dunes, in mallee scrub, mallee heaths, arid tussock grasslands, see *Muelleria* 7(3): 381. 1991.

P. macrantha Vasey (*Melica macrantha* (Vasey) Beal; *Poa douglasii* Nees subsp. *macrantha* (Vasey) Keck; *Poa douglasii* var. *macrantha* (Vasey) Boivin)

North America, California. Perennial, on sandy shores, riverbanks, see *Species Plantarum* 1: 66-67. 1753, *Annals of Natural History* 1: 284. 1838, *Bulletin of the Torrey Botanical Club* 15: 11. 1888, *Bulletin of the Torrey Botanical Club* 17(6): 153. 1890 and *Leaflets of Western Botany* 10(7): 118. 1964, *Le Naturaliste Canadien* 94(4): 527. 1967, *Contr. U.S. Natl. Herb.* 48: 547. 2003.

in English: large-flowered sand-dune bluegrass, seashore bluegrass

P. macrocalyx Trautv. & C.A. Meyer (*Poa hispidula* Vasey; *Poa hispidula* f. *vivipara* (Hultén) Boivin; *Poa hispidula* var. *aleutica* Hultén; *Poa hispidula* var. *vivipara* Hultén; *Poa ketoiensis* Tatew. & Ohwi; *Poa macrocalyx* subsp. *tatewakiana* (Ohwi) Vorosch.; *Poa macrocalyx* var. *chishimana* Ohwi; *Poa macrocalyx* var. *fallax* (Hack.) (Moscow & Leningrad)* 75: 1783-1786. 1990, *Phytologia* 71(5): 395. 1991.

in Japan: murasakisomosomo

P. malacantha Komarov var. *shinanoana* (Ohwi) Ohwi (*Poa shinanoana* Ohwi)

Asia, Japan. See *Acta Phytotaxonomica et Geobotanica* 2: 31. 1933, *Flora of Japan* (edition 2) 1439. 1965, *Grasses of Japan and its Neighboring Regions* 524. 1987.

P. maniototo Petrie (Maniototo Plain, Otago)

New Zealand. Perennial, alpine, tufted, compact, very small to tiny, bluish to green, slender flowering culms, sheaths shiny whitish and persistent, small ligule fringed with hairs, leaves curled and stiff, inflorescence a spike-like panicle, compact flower head, bluish spikelets, glumes equal to subequal, awns absent, palea pubescent, useful for erosion control, on rocky stony areas, semiarid dwarf grasslands, short tussock grassland, see *Transactions and Proceedings of the New Zealand Institute* 22: 443. 1890 and *New Zealand J. Bot.* 24: 446. 1986.

in English: desert poa

P. mannii Munro ex Hillebr. (*Poa mannii* Munro) (for the German-born American botanist Horace Mann, Jr., 1844-1868, assistant to Asa Gray, plant collector in Pacific, Hawaii, with William T. Brigham, 1841-1926, author of *Catalogue of the Phænogamous Plants of the United States*, east of the Mississippi, and of the vascular cryptogamous plants of North America, north of Mexico. Edition 2, rev. and cor. Cambridge, Mass., published by B.P. Mann [1872], "Notes on *Alsinidendron*, *Platydesma*, and *Brighamia*, new genera of Hawaiian plants; with an analysis of the Hawaiian flora." *Mem. Boston Soc. Nat. Hist.* 1: 529-541. 1869, "Enumeration of Hawaiian Plants." Cambridge [Mass.], *Proc. Am. Acad. Arts.* 7: 143-235. 1867, "Revision of the genus *Schiedea*, and of the Hawaiian Rutaceae." *Proc. Boston Soc. Nat. Hist.* 10: 309-319. 1866, "Statistics and geographical range of Hawaiian (Sandwich Islands) plants." *J. Bot.* 7: 171-183. 1869; he was the son of the American politician Horace Mann (1796-1859). See V. McCaughey, *Haw. For. Agr.* 16: 27, 53. 1919; Roger G. Rose, *A Museum to Instruct and Delight: William T. Brigham and the Founding of Bernice Pauahi Bishop Museum*. Bishop Mus. Press. Honolulu 1980; J.H. Barnhart, *Biographical notes upon botanists*. 2: 443. Boston 1965; T.W. Bossert, *Biographical dictionary of botanists represented in the Hunt Institute portrait collection*. 252. 1972; S. P. molinerii Balbis subsp. *glacialis* Beldie

Romania. Rare grass.

P. mollis Vickery

Tasmania. Perennial, caespitose, erect, leaves mostly basal, auricles absent, purple leaf sheaths terete, ligule chartaceous and truncate, softly hairy leaves, a loosely contracted panicle gray green and purple, chasmogamous spikelets, usually glabrous lemma internerves, web absent, anthers yellow, ovary glabrous, dry sites on cliffs and hills, mesophytic, very similar and very close to *Poa morrisii* Vickery, see *Contributions from the New South Wales National Herbarium* 4: 241. 1970.

P. morrisii Vick. (after the Australian botanist Patrick Francis Morris, 1896-1974, plant collector, author of “Ecology of Marysville and Lake Mountain.” *Vict. Nat.* 46: 34-42. 1929, “A New combination of *Helichrysum*.” *Victoria Nat.* 61: 147-148. 1944, “Grasses of the Melbourne district.” *Vict. Nat.* 43: 253-259. 1927, “Confused taxonomy in the *Ozothamnus* section of *Helichrysum*, and its rectification.” *Victoria Nat.* 59: 84-88. 1942. See J.H. Barnhart, *Biographical notes upon botanists*. 2: 516. 1965; R. Zander, F. Encke, G. Buchheim and S. Seybold, *Handwörterbuch der Pflanzennamen*. 14. Aufl. Stuttgart 1993; James Wales Claredon Audas (1872-1959), “Alien plants recorded as naturalised in Victoria.” *Vict. Nat., Melb.* 49, 1932; James Wales

Claredon Audas, *Supplement to Professor Ewart's "Weeds, poison plants and naturalized aliens of Victoria."* / by J.W. Audas and P.F. Morris; with a foreword by W. Laidlaw. Melbourne: Melbourne University Press 1925; Victoria. Dept. of Agriculture, *The Weeds, Poison Plants, and Naturalized Aliens of Victoria*. By Alfred James Ewart [1872-1937] ... Assisted by James Richard Tovey [1873-1922] ... Also a supplement by J.W. Audas and P.F. Morris. Melbourne, Kemp, 1909)

South Australia, Victoria. Perennial, velvety, tufted, rarely rhizomatous, leaves mostly basal, auricles absent, ligule truncate and hairy, grayish green to blue-green leaves softly hairy and pointed, densely hairy sheaths compressed and keeled, green or purplish panicles pyramidal and erect, chasmogamous spikelets, glumes short and hairy, glume keel often scabrous to the base, cilia on the lemma margins, web scanty or obsolete, palea keeled, anthers yellow, ovary glabrous, acidic and moist soils, mesophytic, often confused with *Poa rodwayi* Vickery and *Poa crassicaudex* Vickery, see *Contributions from the New South Wales National Herbarium* 4: 239. 1970.

P. mucuchachensis Luces

Venezuela, Páramo de Mucuchíes, Mérida. Rhizomatous, see *Boletín de la Sociedad Venezolana de Ciencias Naturales* 15(80): 3-4, f. 1. 1953, Zoraida Luces de Febres (b. 1922), *Las Gramíneas del Distrito Federal*. Caracas 1963 [also published in *Academia de Ciencias Fisicas, Matematicas y Naturales, Caracas, Boletín*, no. 63].

P. muhavurensis C.E. Hubb.

Uganda. Perennial, densely tufted, stiffly erect, basal tuft of short leaves, leaf blades linear, panicle branches stiffly spreading, clustered spikelets 2- to 4-flowered, florets imbricate elliptic, glumes lanceolate subacute, lemmas ovate glabrous subacute, stony places, mountains, see *Bulletin du Jardin Botanique de l'État* 25: 244. 1955, *Flora of Ethiopia* 7: 22. 1995.

P. mulalensis Kunth

Ecuador, Mulalo (or Mulaló), Cotopaxi. See *Nova Genera et Species Plantarum* 1: 162-163. 1815 [1816].

P. mulleri Swallen (for the American ecologist and botanist Cornelius Herman Mueller, later (after 1937) Muller, 1909-1997, botanical collector in Mexico and U.S., specialist on *Quercus*, author of "The Oaks of Texas." *Contr. Tex. Res. Found.* 1: 21-323. 1951, "The Central American species of *Quercus*." Washington, D.C.: U.S. Govt. Print. Off., 1942. (United States. Dept. of Agriculture. Miscellaneous publication no. 477). See J.H. Barnhart, *Biographical notes upon botanists*. 2: 527. 1965; Rogers McVaugh, "Botanical exploration in Nueva Galicia from 1790 to the present time." *Contr. Univ. Mich. Herb.* 9(3): 205-357. 1972; Ida Kaplan Langman, *A Selected Guide to the Literature on the Flowering Plants of Mexico*. 1964; *J. Arnold Arbor.* 24: 94. 1943; Irving William Knobloch, compiled by, "A preliminary

verified list of plant collectors in Mexico." *Phytologia Memoirs*. VI. Plainfield, N.J. 1983)

Mexico. See *Journal of the Washington Academy of Sciences* 30(5): 211. 1940.

P. mustangensis Rajbh.

Central Nepal. Perennial, scabrid, leaf sheaths glabrous, ligule ovate, panicle linear with ascending branches, spikelets 2- to 4-flowered, glumes ovate and scabrid, lower lemmas ovate, see *Acta Phytotaxonomica et Geobotanica* 39(1-3): 61. 1988.

P. myriantha Hack.

Argentina, Bolivia. Perennial, solitary, slender, lax, leaf sheaths scabrous, leaf blades linear lax glabrous acute, lax panicle oblong, spikelets ovate-oblong 3- to 7-flowered, glumes subequal ovate acuminate glabrous, lower glume 1-nerved, upper glume 3-nerved, lemma ovate 3-nerved acute, palea keels scabrous, see *Anales del Museo Nacional de Buenos Aires* 13(6): 517. 1906.

P. napensis Beetle

North America, U.S., California, Napa. Perennial and extremely rare, endangered species, occurs in wetlands and meadows, in alkaline soil, moist areas, springs, see *Leaflets of Western Botany* 4(12): 289. 1946, *Systematic Botany* 16(3): 507-528. 1991.

in English: Napa bluegrass

P. nascopieana Polunin (named for the Hudson Bay Company ship *Nascopie*)

Canada, Franklin, Baffin Island. Endangered species, found in damp soil, tundra, see Nicholas Vladimir Polunin (1909-1997), *Botany of the Canadian Eastern Arctic ...* Ottawa 1940 [Canada. National Museum, Ottawa. Bulletin no. 92, 97, 104; Biological series no. 24, 26, 32].

P. nemoralis L. (*Agrostis alba* (L.) Lunell; *Agrostis alba* L.; *Agrostis alba* f. *alba*; *Agrostis alba* var. *alba*; *Agrostis stolonifera* f. *alba* (L.) Schur; *Agrostis stolonifera* var. *alba* (L.) Lilj.; *Agrostis stolonifera* var. *alba* (L.) Kuntze, nom. illeg., non *Agrostis stolonifera* var. *alba* (L.) Lilj.; *Agrostis vulgaris* var. *alba* (L.) Gatt.; *Decandolia alba* (L.) Bastard; *Festuca capitata* Balb.; *Panicum nemorale* (L.) Fisch. ex Komarov; *Poa lapponica* Prokudin; *Poa nemoralis* Torr., nom. illeg., non *Poa nemoralis* L.; *Poa nemoralis* L. subsp. *balbisii* (Balb.) Hack.; *Poa nemoralis* subsp. *hypanica* (Prokudin) Tzvelev; *Poa nemoralis* L. subsp. *nemoralis*; *Poa pratensis* var. *fagetorum* Rech.f. & Scheff.; *Vilfa alba* (L.) P. Beauv.) (the specific name from the Latin *nemorosus*, *a, um* (*nemus, moris* "a tree, wood, grove") "woody, wooded, inhabiting woods, growing in groves")

Europe, Algeria, Morocco, Asia. Perennial bunchgrass, herbaceous, densely to loosely tufted, sometimes rhizomatous,

fine stems erect to spreading, culms rounded in section, no auricles, leaf blades persistent, very short blunt ligule, leaf sheath membranous, narrow acute leaves, panicle lax and open, erect to drooping flower head, narrow panicles ovoid to cylindrical, spikelets laterally flattened and lanceolate to ovate, glumes persistent and subequal or equal, lower glumes 3-veined or ribbed, lemmas narrow-oblong and keeled, web present or absent, palea keels scabrid, ornamental grass naturalized elsewhere in temperate regions, turf, lawns and playing fields, pasture and hay, common in well-drained mountain meadows, in moist forests, in moist regions at higher elevations, along roadsides, dry woods and edges, deep clay loam, gravelly brown loamy soils, meadows, on stream banks, see Johannes Scheuchzer (1684-1738), *Agrostographia sive graminum, juncorum, cyperorum, cyperoidum, iisque affinium historia...* Tiguri [Zürich] 1719, *Species Plantarum* 1: 61-63, 67, 69-70. 1753, *Familles des Plantes* 2: 495. 1763, *Flora Danica* 6(17): 3, t. 964. 1790, Samuel Liljebblad (1761-1815), *Utkast til en Svensk Flora, Andra Uplagan* 37. 1798, *Flora Britannica* 106. 1800, *Alpina* 3: 27, 36. 1808, *Essai sur la Flore du Département de Maine et Loire* 29. 1809, *Agrostologia Helvetica, definitionem ...* 1: 184. 1811, *Essai d'une Nouvelle Agrostographie* 16,146, 181. 1812, *Systema Vegetabilium* 2: 545. 1817, *A Flora of the Northern and Middle Sections of the United States* 1: 111. 1823, *Flora Suecica* 1: 59. 1824, *Systema Vegetabilium, editio decima sexta* 4: Cur. Eyerdam)

Asia temperate and tropical, Europe, Northern America. Perennial, herbaceous, yellow-green or purple, erect, caespitose, clumped or densely bunched, flimsy-to-robust stems, purplish lower stems usually curved and decumbent at the base, stems rooting at the nodes like stolons, auricles absent, sheaths glabrous and overlapping, ligules rounded and lacerate or entire, leaf blades flaccid and scabrid, open-branched flower head, very loose panicles ovoid to oblong, glumes subequal and narrow, lemmas narrow-oblong and strongly keeled, web present or absent, pasture species, cultivated fodder naturalized elsewhere in temperate regions, forage, useful for erosion control and revegetation, occurs in wetlands, marshes, in meadow habitats, lowland meadows and wet meadows, mountain meadows, moist conditions, shores and thickets, moist woods, in moist forests and forest openings, wet soils, alluvial soils, wet floodplains, sandy gravelly soils, gravelly soil with coarse

fragments, hillsides, swamps, shores, sloughs, stream banks, ditches, loamy soil, boggy ground, see *Systema Naturae, Editio Decima* 2: 874. 1759, *Beiträge zur Naturkunde* 6: 83. 1791, *Exercitia Phytologica* 2: 531. Lugduni Gallorum 1792, *Flora Boreali-Americana* 1: 68. 1803, *Icones et Descriptiones Graminum Austriacorum* 3: 10, t. 15. 1805, *Flora Germanica* 1: 299. 1806, *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg, Sixième Série. Bolivia, Peru. Perennial, tufted, erect or ascending, leaf sheaths papery, leaf blades linear acute, dense panicle elliptic to oblong, spikelets elliptic 2-flowered, glumes ovate acute membranous, lower glume 1-nerved, upper glume 3-nerved, lower lemma ovate 5-nerved acute glabrous, moist puna, see *Essai d'une Nouvelle Agrostographie* 97. 1812 and *Notizblatt des Botanischen Gartens und Museums zu Berlin-Dahlem* 11(108): 779. 1933, *Journal of the*

Washington Academy of Sciences 24(11): 481. 1934, *Kurtziana* 28(1): 122. 2000.

P. petrophila Vickery (Greek *petros* “rock” and *philos* “lover, loving,” referring to the rocky habitats)

New South Wales, Kosciuszko region, Victoria. Perennial, densely caespitose, tussock grass, velvety, leaves mostly basal, auricles absent, leaf sheaths compressed and purple at base, ligule truncate and papery, stiff leaves, a panicle purplish and contracted, chasmogamous spikelets, lemmas hairy to scabrous, yellow anthers, ovary glabrous, fruit compressed and grooved, web more or less absent, growing in shallow soils amongst rocks, on shallow stony soils, in open habitats and eucalyptus woodland, similar to *Poa induta* Vickery, see *Contributions from the New South Wales National Herbarium* 4: 238. 1970.

P. petrosa Swallen (*Poa pauciflora* Roem. & Schult.)

Venezuela. Rhizomatous, leaves flat and short, small cobweb, inflorescence purplish to greenish, on dry slopes, see *Essai d'une Nouvelle Agrostographie* 43. 1812, *Plantarum minus cognitarum pugillus primus [-secundus] / auctore Curtio Sprengel, Halae 1813-1815, Prodromus Systematis Naturalis Regni Vegetabilis* 1: 162. 1815 [1816], *Systema Vegetabilium* 2: 549. 1817, *Geological Survey of California, Botany* 2: 310. 1880, *The Grasses of the United States* 42. 1883, *Biologia Centrali-Americana; ... Botany ...* 3: 580. 1885, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 25: 715. 1898 and *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 37: 379. 1906, *Contributions from the United States National Herbarium* 29: 255. 1948, Volkmar Vareschi (1906-1991), *Flora de Los Páramos de Venezuela*. Universidad de Los Andes. Mérida - Venezuela 1970, *Fieldiana, Botany* 38(2): 10, f. 4. 1976, Karl Weidmann, *Páramos venezolanos*. Caracas 1991, *Willdenowia* 27: 237. 1997.

P. phillipsiana Vickery

Australia, New South Wales, Victoria. Perennial tussock grass, densely caespitose, leaves mostly basal, auricles absent, ligule firm and truncate, sheath purplish and keeled, bluish leaves with rough surface, green and purple panicle loosely spreading, spikelets terminal, chasmogamous spikelets, glumes acute, lemmas hairy and narrowly oblong to narrowly ovate, web scanty, palea pubescent, anthers yellow or purple, ovary glabrous, fruit compressed, dry sites in alpine and subalpine regions, granitic soils, in open habitats, often confused with *Poa fawcettiae* Vickery, very similar to *Poa sieberiana* Spreng. var. *sieberiana*, see *Contributions from the New South Wales National Herbarium* 4: 238. 1970.

in English: bluegrass

P. pilcomayensis Hack. (*Poa pilcomayensis* var. *pilcomayensis*) (Paraguay, Gran Choco, Pilcomayo River)

Uruguay, Argentina, Paraguay. Perennial, straight inflorescence, growing in colonies, useful for erosion control, see *Repertorium Specierum Novarum Regni Vegetabilis* 6(21-26): 346. 1909, *Anales del Museo Nacional de Buenos Aires* 21: 157. 1911, *Kurtziana* 28(1): 124. 2000.

P. piperi A.S. Hitchc. (*Poa rhizomata* Hitchc.) (for the American (born in Victoria, British Columbia, Canada) botanist Charles Vancouver Piper, 1867-1926, agronomist, studied at the University of Washington, 1890 founded the Herbarium at State College (Pullman, Washington), 1893-1903 professor of botany at the State College, 1903-1926 Director of the office of forage crops for US Department of Agriculture, his writings include “North American species of Festuca.” *Contr. U.S. Nat. Herb.* 10: 1-48. 1906, *The Flora of the Palouse Region*. Pullman, Washington 1901, “*Andropogon halepensis* and *Andropogon sorghum*.” *Proc. Biol. Soc. Wash.* 28: 25-44. 1915, *Forage Plants and Their Culture*. New York, The Macmillan Company 1917 and *Flora of the State of Washington*. Washington 1906. See *Flora of the Northwest Coast*, including the area west of the summit of the Cascade Mountains, from the forty-ninth parallel south to the Calapooia Mountains on the south border of Lane County, Oregon. By Charles V. Piper ... and R. Kent Beattie ... Lancaster, Pa., Press of the New era printing company 1915; J.H. Barnhart, *Biographical notes upon botanists*. 3: 88. 1965; J. Ewan, editor, *A Short History of Botany in the United States*. 11. 1969; T.W. Bossert, *Biographical dictionary of botanists represented in the Hunt Institute portrait collection*. 311. 1972; S. P. plicata Hack. (*Poa glomerifera* Hack.)

Argentina. Stony places, see *Österreichische Botanische Zeitschrift* 52(10): 378. 1902, *Anales del Museo Nacional de Buenos Aires* 21: 151. 1911.

P. poecila Phil. (*Aira spiciformis* Steud.; *Koeleria sterilis* Steud.; *Poa poecilantha* Rupr.; *Poa rigidifolia* Steud.; *Poa rigidifolia* var. *rigidifolia*; *Poa spiciformis* (Steud.) Hauman & Parodi) (from the Greek *poikilos* “spotted, many-colored, mottled”)

Chile, Argentina. See *Beiträge zur Pflanzenkunde des Russischen Reiches* 2: 63, t. 5. 1845, *Synopsis Plantarum Glumacearum* 1: 260, 293, 424. 1854, *Anales de la Universidad de Chile* 43(46): 573. 1872 [1873] and *Physis. Revista de la Sociedad Argentina de Ciencias Naturales* 9: 344. 1929.

P. poiformis (Labill.) Druce (*Arundo poiformis* Labill., but also spelled *poaeformis*; *Poa australis* sensu J.M. Black, partly, non R. Br.; *Poa australis* R. Br.; *Poa australis* R. Br. var. *billardieri* Hook.f.; *Poa australis* var. *billardieri* (Labill.) Hook.f.; *Poa caespitosa* var. *australis* Benth.; *Poa caespitosa* var. *laevis* (R. Br.) Benth.; *Poa caespitosa* var. *plebeia* (R. Br.) Benth.; *Poa laevis* R. Br.; *Poa plebeia* R. Br.; *Poa urvillei* Steud.)

South Australia, New South Wales, Victoria, Western Australia, Tasmania. Perennial, erect, branched or unbranched, pungent-pointed, tufted densely, rarely rhizomatous or stoloniferous, leaves mostly basal, auricles absent, sheath smooth and keeled, ligule truncate and papery, green to bluish green leaves strongly convolute and rigid, pale greenish to straw colored narrow and contracted panicles, chasmogamous spikelets, glumes more or less equal, lemma acute to obtuse, web long and copious, palea scabrous, anthers yellow or purple, ovary glabrous, fruit compressed and grooved, useful for soil erosion control, a coastal species, mesophytic, maritime-arenicolous, cliff tops and coastal sand dunes, on ocean foreshores and estuaries, in open habitats, acidic or alkaline soils, confused with *Poa billardieri* Steudel, allied to *Poa halmaturina* J. Black, see *Species Plantarum* 1: 81. 1753, *Novae Hollandiae Plantarum Specimen* 1: 27. 1804, *Prodromus Florae Novae Hollandiae* 179. 1810, *Synopsis Plantarum Glumacearum*

1: 262. 1854, *Flora Tasmaniae* 2: 125. 1858 and *Report. Botanical Exchange Club. London*. 1916: 640. 1917, *Contr. New South Wales Natl. Herb.* 4(2): 208. 1970, *Muelleria* 7(2): 169. 1990.

in English: blue tussock grass, tussock grass, coast tussock grass

P. poiformis (Labill.) Druce var. ***poiformis***

Australia. Perennial, unbranched, large tussocks forming, found in slightly saline alluvial flats.

P. poiformis (Labill.) Druce var. ***ramifer*** D.I. Morris

Western Australia, Tasmania, Victoria, Bass Strait Islands, New South Wales. Perennial, rhizomatous or stoloniferous roots, culms branched, leaves fine and glaucous, purplish sheaths, on sand dunes, see *Muelleria* 7(2): 169-170, f. 16. 1989 [1990].

P. porphyroclados Nees (*Poa caespitosa* var. *serpentum* (Nees) Benth.; *Poa maxwellii* Benth.; *Poa serpentum* Nees; *Poa sieberiana* var. *spithamea* Nees)

Western Australia, Serpentine River. Perennial, caespitose, leaves mostly basal, auricles absent, basal leaf sheaths not keeled, ligule truncate and papery, leaves grooved, chasmogamous spikelets, an open panicle green and purple, web present or absent, palea membranous, yellow anthers, ovary glabrous, found in open habitats, mesophytic, see *Florulae Insularum Australium Prodromus* 89. 1786, *Commentationes Societatis Regiae Scientiarum Göttingensis* 9: 22. 1787, *Encyclopédie Méthodique, Botanique* 5: 73. 1804, *Mantissa Prima Florae Halensis* 33. 1807, *Systema Vegetabilium, editio decima sexta* 4; *Curae Posteriores* 35. 1827, *Plantae Preissianae* 2: 105-106. 1846, *Flora Australiensis: A Description ...* 7: 652-653. 1878, *Anales Museo Nacional de Historia Natural de Buenos Aires* 5: 91. 1896.

P. porsildii Gjaerevoll (for the Danish botanist Alf Erling Porsild, 1901-1977, botanical collector in Canada and Greenland, author of *The Alpine Flora of the East Slope of the Mackenzie Mountains, Northwest Territories*. Ottawa 1945, *Vascular Plants Collected on Kiska and Great Sitkin Islands in the Aleutians* by Lt. H.R. McCarthy and Cpl. N. Kellas Aughust, September, and October, 1943. (Baron George von Maydell, 1859 collector in Russia)

Europe, Asia temperate and tropical, large climate range. Perennial, very variable, loosely or densely tufted, erect, ascending or geniculate, sod-forming, low-growing, herbaceous, smooth, leaves mostly basal, rhizomatous with slender creeping rhizomes, auricles vestigial or absent, ligule always very short, leaf sheaths smooth and compressed, basal leaf sheaths papery, ligule membranous obtuse to truncate, glabrous or slightly hairy leaf blades linear or narrow-linear, numerous erect flowering stems, panicles ovate to pyramidal with scabrous branches, ovate to oblong spikelets 2- to 5-flowered and somewhat compressed, hermaphrodite florets homogamous, glumes narrowly ovate unequal acuminate, lower glume 1-nerved, upper glume 3-nerved, lower lemma oblong, lemmas hairy on the keel and marginal nerves, web long and copious, palea with scabrous and wingless keels, anthers yellow or purple, ovary glabrous, fruit compressed, weed species widespread in temperate regions, soil improver, the pollen of this species may cause hay fever, cultivated fodder grass and widely naturalized, pasture species, highly palatable and nutritious when young and green, lawns and playing fields, golf courses,

useful for erosion control, can survive on rather poor soils, ornamental, turf, very resistant to cold and heat, more or less resistant to drought, more or less intolerant of drought, common in rich soils, open areas, open woods, open forests, dry woods, along rivers and streams, along roadsides, waste ground, in cool and moist districts, seepage areas, pastures, in prairies and fields, uncut lawns, in disturbed and well-watered sites, damp meadows, mountain meadows, lawn grass on damp limy soils, on well-drained loams or clay loams rich in humus, in wetlands or nonwetlands, along roadsides, in riparian environments, riparian woodlands, mountain grasslands, mountain brushlands, see *Species Plantarum* 1: 67-68. 1753, *Florulae Insularum Australium Prodromus* 8. 1786, *Beiträge zur Naturkunde* 6: 83. 1791, *Exercitia Phytologica* 2: 530. 1792, *Agrostologia Helvetica, definitionem ...* 1: 214. 1811, *Catalogus Plantarum Americae Septentrionalis* 11. 1813, *Flora Americae Septentrionalis; or, ...* 1: 79. 1814, *A Sketch of the Botany of South-Carolina and Georgia* 1: 160. 1816, *Systema Vegetabilium* 2: 540. 1817, *Handbok i Skandinaviens Flora* edition 1 448. 1820, *Flora Boreali-Americana* 2: 246. 1840, *Summa Vegetabilium Scandinaviae* 76. 1846, *Flora Novae-Zelandiae* 306. 1853, *Diagnoses plantarum orientalium novarum, ser. 2, (fasc. 13):* 57. 1853 [or 1854?], *Synopsis Plantarum Glumacearum* 1: 252, 426. 1854, *Öfversigt af Förhandlingar: Kongl. Europe. See *Species Plantarum* 1: 67. 1753, *Flora Austriaca* 1: 146. 1827, *Agrostographia Germanica* 35, pl. 81, f. 1623. 1834, *Diagnoses plantarum orientalium novarum, ser. 2, 4*: 135. 1859 and *Mitteilungen aus dem Botanischen Laboratorium der Technischen Hochschule in Wien* 9: 132. 1910, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 107: 203-228. 1985, *Fl. Reipub. Pop. Sinic.* 9(2): 164. 2003.

P. pumilio Hochst.

Ethiopia. Perennial, small, cushion-forming, panicle much branched, glumes broadly obtuse, subacute lemmas smooth glabrous, rocky mountains, see *Flora* 38: 321. 1855 and *Flora of Ethiopia* 7: 22-23. 1995.

P. pungionifolia Speg. (*Poa acutissima* Pilg.)

Argentina. See *Anales Museo Nacional de Historia Natural de Buenos Aires* 7: 199. 1902, *Repertorium Specierum Novarum Regni Vegetabilis* 12: 306. 1913.

P. pusilla Berggr. (*Poa anceps* var. *debilis* Kirk ex Buchanan; *Poa anceps* var. *debilis* Buchanan, nom. illeg., non *Poa anceps* var. *debilis* Kirk ex Buchanan; *Poa anceps* var. *gracilis* Cheeseman; *Poa anceps* var. *minima* Buchanan; *Poa pusilla* var. *seticulmis* (Petrie) Cockayne; *Poa seticulmis* Petrie)

New Zealand. Perennial, subalpine, slender to very slender, tufted, open, erect or drooping above, delicate, rhizomatous with slender and long-creeping rhizome, ligule ciliate and truncate, leaf blades persistent and folded or inrolled, narrow and flaccid leaves, panicle branches spreading, glumes subequal, lemma obtuse, palea keels shortly ciliate, on sandy dry areas, damp sand flats, stony places, tussock grassland, sand dunes, see *Florulae Insularum Australium Prodrumus* 8. 1786, *Indigenous Grasses of New Zealand*, t. 46E-F. 1880 and *Transactions and Proceedings of the New Zealand Institute* 34: 391. 1902, *Manual of the New Zealand Flora* 904. 1906, *Dept. Lands Rep. Dune Areas New Zealand* 34. 1911, *New Zealand J. Bot.* 24: 453. 1986.

P. pygmaea Buchanan (*Poa buchananii* Zotov)

New Zealand. Perennial, alpine to subalpine, forming cushions, small, low, dwarf, culms branched to much-branched, prostrate branches rooting, leaf blades persistent, leaf sheath membranous and glabrous, ligule entire, leaves stiff and inrolled, flowering culms filiform, panicle compact, glumes equal, lemma ovate obtuse, palea keels ciliate, see *Enumeratio Plantarum Omnium Hucusque Cognitarum* 1: 340. 1833, *Indigenous Grasses of New Zealand*, t. 50A. 1880 and *Transactions and Proceedings of the Royal Society of New Zealand* 73: 236. 1943.

P. queenslandica C.E. Hubb.

New South Wales, Queensland. Perennial, tall, loosely tufted, contracted rootstock, erect or geniculate ascending stems, often branched, vestigial auricles present, ligule truncate and lacerate, flat leaves linear and softly pointed, sheaths striate and glabrous, green to purple panicles loose with spreading branches, spikelets green, subtending foliar structure absent, glumes more or less equal, lemma hairy, web absent, palea 2-keeled with keels wingless, anthers yellow, ovary glabrous, shade species, tussocky grass, mesophytic, growing in temperate rainforests, in rainforest openings, along rainforest tracks and roads, margins of rainforests, in red loam, see *Bulletin of Miscellaneous Information Kew* 1934: 449. 1934.

in English: Queensland poa

P. radula Franchet & Savatier (*Poa ibukiana* Koidz.; *Poa ketoiensis* Tatew. & Ohwi)

Asia, Japan. See *Enumeratio Plantarum in Japonia Sponte Crescentium* ... 2: 174, 602. 1879 and *Botanical Magazine*

37: 53-53. 1923, *Acta Phytotaxonomica et Geobotanica* 4: 61. 1935, *Bot. Zhurn. (Moscow & Leningrad)* 75: 1783-1786. 1990.

in Japan: ibukisomosomo

P. ragonesei Nicora

Argentina. See *Hickenia* 2(33): 145, f. 2. 1995.

P. ramosissima Hook.f.

New Zealand. Perennial, coastal, soft, much-branched, slender, trailing, prostrate and erect, stoloniferous, leafy, leaf blades persistent, leaf sheath glabrous, ligule lacerate to deeply lacerate, flat leaves scabrid to scabrous, gynomonocious flowers, panicle compact, spikelets scabrid, lower flowers bisexual, upper flowers female, glumes subequal, lemma elliptic, tiny palea, on cliffs and rocks, near the sea, see *Flora Antarctica* 1: 101. 1844 [1845] and *New Zealand Journal of Botany* 24: 425-503. 1986.

P. reflexa Vasey & Scribner (*Poa acuminata* Scribn. ex Beal; *Poa leptocoma* var. *reflexa* (Vasey & Scribn.) M.E. Jones; *Poa leptocoma* var. *reflexa* (Vasey & Scribn. ex Vasey) M.E. Jones; *Poa pudica* Rydb.; *Poa reflexa* Vasey & Scribner ex Vasey; *Poa reflexa* Elliott ex Scribn. & Merr., nom. illeg., non *Poa reflexa* Vasey & Scribn.)

North America, U.S., Colorado. Alpine and subalpine, found in wet meadows, bogs, in shade, see *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques, Physiques et Naturelles* 1(4): 374. 1830, *A Descriptive Catalogue of the Grasses of the United States* 83. 1885, *Contributions from the United States National Herbarium* 1(8): 276. 1893, *Grasses of North America for Farmers and Students* 2: 538. 1896 and *Bulletin, Division of Agrostology United States Department of Agriculture* 27: 5. 1900, *Bulletin of the Torrey Botanical Club* 32(11): 603-604. 1905, *Contributions to Western Botany* 14: 15. 1912, *Contr. U.S. Natl. Herb.* 48: 507. 2003.

in English: nodding bluegrass

P. rehmannii (Asch. & Graebn.) Woloszczak (*Poa nemoralis* L. subsp. *rehmannii* Asch. & Graebn.) (after the Austrian-Polish plant collector and botanist Dr. Anton(i) Rehmann (Rehman), 1840-1917, geographer, traveler, plant collector in South Africa (1875-1877 and 1879-1880) and Southern Russia (1868), with Eustach Woloszczak (1835-1918). See J.H. Barnhart, *Biographical notes upon botanists*. 3: 139. 1965; Stafleu and Cowan, *Taxonomic literature*. 4: 655-656. 1983; G. Murray, *History of the collections contained in the Natural History Departments of the British Museum*. 1: 176. 1904; T.W. Bossert, *Biographical dictionary of botanists represented in the Hunt Institute portrait collection*. 328. 1972; H.N. Clokie, *Account of the Herbaria of the Department of Botany in the University of Oxford*. 230. 1964; Mary Gunn and Leslie E. Codd, *Botanical Exploration of Southern Africa*. 292-294. 1981)

Romania, Russia, Eurasia. Rare species, see *Synopsis der mitteleuropäischen Flora* 2: 412. 1900, *Flora Polonica Exs.* 10-11: no. 1020. 1904.

Local name: firuta

P. reitzii Swallen

Brazil. See *Sellowia* 7: 9-10. 1956.

P. remota Forselles (*Glyceria remota* (Forselles) Fr.; *Hydro-poa remota* (Fr.) Dumort.; *Panicularia remota* (Forselles) Kuntze; *Poa chaixii* var. *remota* (Forselles) K. Japan, Yatsugatake, Shinano. Rare grass, see *Botanical Magazine* 43: 540. 1929, *Acta Phytotaxonomica et Geobotanica* 2: 31. 1933, *Flora of Japan* 120. 1953, *New Alpine Flora of Japan* 2: 358. 1983.

P. sallacustris N.G. Walsh

Australia, Victoria. Perennial, erect or ascending, rhizomatous, auricles absent, leaf sheaths keeled and compressed, ligule hairy, leaves folded, a green panicle open and erect, chasmogamous spikelets, web present, lodicules elliptic, anthers yellow, ovary glabrous, fruit compressed, vulnerable species, halophytic, on the margins of salt lakes, in open habitats, closely related to *Poa fordeana* F. Muell., see *Muelleria* 7(3): 379. 1991.

P. saltuensis Fernald & Wiegand (*Poa debilis* Thuill.; *Poa debilis* Torr., nom. illeg., non *Poa debilis* Thuill.; *Poa debilis* var. *acutiflora* Vasey ex Macoun; *Poa languida* A.S. Hitchc.; *Poa saltuensis* var. *microlepis* Fern. & Wieg.; *Poa saltuensis* var. *saltuensis*)

North America, Canada. Perennial, herbaceous, growing in dry woods, thickets, rocky riverbanks, woods, wooded and alluvial banks, along riverbanks, wet clearings, see *Flore des Environs de Paris* éd. 2 43. 1799, *Fl. New York* 2: 459. 1843, *Catalogue of Canadian Plants* 2(4): 225. 1888 and *Rhodora* 20(235): 122-126. 1918, *Proceedings of the Biological Society of Washington* 41: 158-159. 1928, *Le Naturaliste Canadien* 94(4): 527. 1967.

in English: old-pasture bluegrass, oldpasture bluegrass

P. sandvicensis (Reichardt) A.S. Hitchc. (*Festuca sandvicensis* Reichardt; *Poa longeradiata* Hillebr.)

U.S., Hawaii. Perennial, endangered species, see *Species Plantarum* 1: 73. 1753, *Sitzungsberichte der kaiserlichen Akademie der Wissenschaften. Wien. Mathematisch-naturwissenschaftlichen Classe*. 76(1): 726. 1878, *Flora of the Hawaiian Islands* 526. 1888 and *Memoirs of the Bernice Pauahi Bishop Museum*... 8(3): 121. 1922, *Bishop Mus. Occas. Pap.* 60: 56. 1999.

in English: Hawaiian bluegrass, Hawaiian blue grass, Hawaii bluegrass

P. saxicola R. Br. (*Poa saxicola* var. *saxicola*)

Victoria, Tasmania, New South Wales, Mt. Kosciuszko region. Perennial, green, glabrous, stiffly erect, culms compressed, densely caespitose, rarely with rhizomatous roots, internodes compressed, leaves mostly basal, auricles absent, upper sheaths green and striate, ligule membranous to papery and truncate, leaves slightly rough and blunt-tipped, green and purple panicles arching and few-branched, vestigial foliar structure subtending the inflorescence present or absent, glumes more or less equal, lemma acute or obtuse, web absent, anthers yellow or purple, ovary

glabrous, fruit compressed and grooved, rarely cultivated, growing in rocky grassland and shrubland, eucalypt woodlands, in subalpine meadows, acidic and moist soils, herb fields, see *Prodromus Florae Novae Hollandiae* 1: 180. 1810, *London Journal of Botany* 2: 418. 1843.

in English: rock poa

Hall, *Botanists of the Eucalypts*. Melbourne 1978 and Supplement 1980)

Australia, Victoria, Tasmania, New South Wales, Queensland. Perennial, stiff, mainly erect, tufted, green to grayish

green, small, wiry, dead dry leaves at the base, leaf blades persistent, ligule truncate ciliate, sheaths coriaceous, leaves rough and curled to inrolled, inflorescence compact to lax, panicles pyramidal with spreading branches, spikelets green or purplish, glumes more or less equal to unequal, lemma pubescent, palea keels ciliate, extremely variable species, freely to moderately well-drained soils, grassland, rocky slopes, margin of swamps, lowland to montane, see *Systema Vegetabilium, editio decima sexta* 4; *Curae Posteriores* 35. 1827, *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques, Physiques et Naturelles* 1(4): 388. 1830, *Flora Tasmaniae* 2: 125. 1858, *Flora Australiensis: A Description ...* 7: 653. 1878 and *Contributions from the New South Wales National Herbarium* 4: 145-243. 1970, *New Zealand Journal of Botany* 24: 425-503. 1986.

in English: tussock grass, snow grass, rough poa tussock

P. sieberiana Spreng. var. *cyanophylla* Vickery

New South Wales. Perennial, ascending, stoloniferous or caespitose, dense tussock, shortly stoloniferous root system, leaves mostly basal, auricles absent, leaf sheaths keeled, fine and filiform to very narrow bluish leaves, green and purple panicle erect and open, chasmogamous spikelets, lemma membranous, web absent, anthers yellow or purple, ovary glabrous, fruit compressed and grooved, attractive grass, cultivated, eucalypt woodland, alpine grasslands, dry slopes, sclerophyll forest, see *Contributions from the New South Wales National Herbarium* 4: 227. 1970.

P. sieberiana Spreng. var. *hirtella* Vickery (*Poa crassicaudex* Vickery)

New South Wales. Perennial, caespitose, weak, shortly rhizomatous, internodes slightly swollen or not swollen, leaves mostly basal, auricles absent, leaf sheaths compressed, ligule truncate, hairy and narrow leaves, chasmogamous spikelets, green and purple panicle erect and open, web present, anthers yellow, ovary glabrous, fruit compressed, in open habitats, in moist situations, mesophytic, close to *Poa crassicaudex* Vickery, see *Contributions from the New South Wales National Herbarium* 4: 228. 1970.

P. sieberiana Spreng. var. *sieberiana*

Tasmania, New South Wales, Victoria, Queensland. Perennial, densely caespitose, forming small tussocks, basal culm internodes not swollen, leaves mostly basal and green, auricles absent, leaf sheaths compressed and keeled, ligule truncate, erect panicle green and purple, anther yellow or purple, ovary glabrous, margin of swamps, woodland, granite.

in English: fine-leafed tussock grass, snow grass

P. sierrae J.T. Howell

North America, California. Perennial, vulnerable species, in shady places, along roadsides and trails, see *Wasmann Journal of Biology* 37(1-2): 18-19. San Francisco 1979 [1980].

in English: Sierran bluegrass

P. simensis Hochst. ex A. Rich. (*Poa psilophylla* Hochst.)

Yemen, Ethiopia. Perennial, slender, densely tufted, wiry, basal leaf sheaths fibrous when old, long ligule, flexuous leaf blades narrowly linear to filiform, open panicle flexuous with loosely ascending branches, spikelets ovate 3-flowered, florets loosely imbricate, glumes acute to acuminate, pubescent lemmas membranous sharply acute, forest shade, upland forest, montane grassland, very similar to *Poa pratensis* L., see *Tentamen Florae Abyssinicae* ... 2: 422. 1850 and *Flora* 38: 322. 1955.

P. sinaica Steud. (*Poa bulbosa* L.; *Poa bulbosa* subsp. *sinaica* (Steud.) Tzvelev; *Poa reuteriana* Boiss. & Buhse) (after the Swiss botanist George François Reuter, 1805-1872, botanical collector; see J.H. Barnhart, *Biographical notes upon botanists*. 3: 147. 1965)

Asia, Iran, Israel, Turkey, Syria. Useful for erosion control, along roadsides, road embankments, see *Fl. Cyprus* 2: 1742, *Species Plantarum* 1: 67, 70. 1753, *Descriptio Graminum in Gallia et Germania* 189. 1802, *Enumeratio Plantarum Horti Botanici Berolinensis*, ... 103. 1809, *Icones florae germanicae et helveticae* 11: 34. 1834, *Synopsis Plantarum Glumacearum* 1: 256. 1854, *Mémoires de la Société Impériale des Naturalistes de Moscou* 12: 227. 1860, *Enumeratio Plantarum Transsilvaniae* 773. 1866, *Bulletin de la Société Botanique de France* 21: 17. 1874, *Compendio della Flora Italiana* 785. 1884, *The Flora of British India* 7: 338. 1896 and *Mémoires de l'Institut Égyptien* 4: 310. 1901, *American Midland Naturalist* 4: 222. 1915, *Bulletin of Miscellaneous Information Kew* 7(1940): 283. 1940, *Journal of the Bombay Natural History Society* 51(1): 53-103. 1952, *Publications from the Cairo University Herbarium* 5: 51. 1972 [1974], *Novosti Sist. Argentina. See *Physis. Revista de la Sociedad Argentina de Ciencias Naturales* 9: 344. 1929.

P. spicigera Tovar (*Poa staffordiae* Tovar) (named for Dora B. Stafford, 1930-1939 botanical collector in Peru, in 1937 in San Antonio de Esquilache, near Puno)

Peru, Bolivia. Perennial, tufted, glaucous, erect, acute and apiculate leaf blades flat or folded, oblong panicle exerted, spikelets elliptic 2-flowered glabrous, glumes unequal ovate acute, lower glume 1-nerved, upper glume 3-nerved, lower lemma 5-nerved acute, moist places, bogs, wet puna, see *Memorias del Museo de Historia Natural "Javier Prado"*

15: 20, t. 4A. 1965, *Revista de Ciencias (San Marcos)* 73(1): 105. 1981.

P. stebbinsi Soreng

North America, California. Perennial, alpine and subalpine, in rocky soils under dry conditions, usually in nonwetlands, sometimes found on wetlands, related species *Poa hansenii* Scribn., see *Bulletin, Division of Agrostology United States Department of Agriculture* 11: 53, t. 9. 1898 and *Systematic Botany* 16(3): 513. 1991.

in English: Stebbin's bluegrass

P. stenantha Trin. (*Poa chorizantha* E. Desv.; *Poa englishii* H. St. John & Hardin; *Poa flavicans* Griseb.; *Poa macroclada* Rydb.; *Poa trivialis* L.) (for Carl Schurz English)

North America, Alaska. Perennial, tufted, smooth sheaths, ligules sharply pointed and with rough hairs, auricles absent, basal leaves, open flower head spreading or drooping, three-nerved glumes unequal in length, strongly keeled lemmas with long hairs at the base, cobwebby callus below the base of the lemma absent, grows in wet meadows and forest openings in the montane to subalpine zones, see *Species Plantarum* 1: 67. 1753, *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques, Physiques et Naturelles* 1(4): 374, 376. 1830, *Flora Rossica* 4(13): 373. 1852, *Flora Chilena* 6: 407. 1854, *Contributions from the United States National Herbarium* 1(8): 276. 1893, *Bulletin de l'Herbier Boissier* 7(9): 708. 1899 and *Bulletin of the Torrey Botanical Club* 32(11): 604. 1905, *Mazama* 11: 64. 1929, *Acta Universitatis Lundensis* n. ser. 38: 220. 1942, *Le Naturaliste Canadien* 94: 636. 1967, *Brittonia* 23(3): 293-324. 1971, *Fragmenta Floristica et Geobotanica* 23: 317-325. 1977, *Phytologia* 43(1): 106. 1979, *Flora of Turkey and the East Aegean Islands* 9: 470-486. 1985, *New Zealand Journal of Botany* 24: 425-503. 1986, *Bot. P. subfastigiata Trin. (*Arctopoa subfastigiata* (Trin.) Prob.; *Glyceria subfastigiata* (Trin.) Griseb.)

Asia, Mongolia. Alpine, along rivers and stream banks, brown fine sandy soils, marshy grounds, marshes, see *Prodromus Florae Novae Hollandiae* 179. 1810, *Flora Altaica* 1: 96-97. 1829, C.F. von Ledebour (1785-1851), *Flora Rossica sive enumeratio plantarum in totius imperii Rossici*

provinciis Europaeis, Asiaticis et Americanis hucusque observatarum. 4(13): 392. Stuttgartiae, E. Schweizerbart, 1842-1853 and *Novosti Sist. Vyss. Rast.* 11: 49, 52. 1974, *Bot. Zhurn. SSSR* 69(12): 1699-1700. 1984.

P. sublanata Reverd.

Russia. See *Arkticheskaia Flora SSSR* 1: 135. 1964, *Zlakii SSSR* 458. 1976, *Turczaninowia* 1(4): 11. 1998.

P. sublimis Edgar

New Zealand. Perennial, subalpine to alpine, low, dwarf, small, smooth, tufted, forming small cushions, leaf blades persistent, leaf sheath glabrous, ligule entire, stiff leaves folded, inflorescence paniculate with slender spreading branches, glumes subequal, lemma ovate obtuse, tiny anthers, found along streams, mountains, rocky places and among rocks, riverbanks, see *New Zealand Journal of Botany* 24(3): 465, f. 6. 1986.

P. subspicata (J. Presl) Kunth (*Brizopyrum subspicatum* J. Presl; *Poa jelskii* Hack.; *Poa pubiflora* Benth.) (for Constantin von Jelski, zoologist, 1860-1879 botanical collector in French Guiana, Guyana and Peru, see Ignaz (Ignacy) von Szyszylowicz (1857-1910), "Diagnoses plantarum novarum a cl. d. Cl. Jelski in Peruvia lectarum. Pars Ima." *Diss. Acad. Crac.* xxix, Cracoviæ 1894)

South America. See *Reliquiae Haenkeanae* 1(4-5): 281. 1830, *Enumeratio Plantarum Omnium Hucusque Cognitarum* 1: 326. 1833, *Plantas Hartwegianas imprimis Mexicanas* 261. 1846 and *Österreichische Botanische Zeitschrift* 52(11): 454. 1902.

P. subvestita (Hack.) Edgar (*Poa novae-zelandiae* var. *subvestita* Hack.)

New Zealand. Perennial, dioecious, stout, robust, tufted, smooth, montane to alpine, leaf blades persistent, leaf sheath membranous and ribbed, ligule entire and pointed, stiff and erect flat leaves, loose and drooping inflorescence with short branches, glumes subequal, lemma usually obtuse, palea keels ciliate, in rocky places, cliffs, near the sea, on limestone, see *Transactions and Proceedings of the New Zealand Institute* 35: 381-382. 1903, *New Zealand Journal of Botany* 24(3): 435-436. 1986.

P. sudicola Edgar

New Zealand. Perennial, rare, subalpine, dioecious, slender, tufted, very long rhizomatous, leaf blade inrolled and persistent, leaf sheath keeled smooth and membranous, ligule entire, narrow leaves, panicle branches slender, glumes subequal and glabrous, lemma acute and glabrous, palea keels ciliate, slopes, see *New Zealand Journal of Botany* 24(3): 437-439, f. 1. 1986.

P. suksdorfii (Beal) Vasey ex Piper (*Atropis suksdorfii* Beal; *Poa pringlei* Scribn.; *Poa suksdorfii* Vasey ex Beal) (after the American (b. Holstein, Germany) botanist Wilhelm Nikolaus Suksdorf, 1850-1932; see J.H. Barnhart, *Biographical notes upon botanists.* 3: 346. Boston 1965)

North America. Mountain, gravelly areas, see *Flora italiana, ossia descrizione delle piante ...* 1: 366. 1848, *Bulletin of the Torrey Botanical Club* 10(1): 31. 1883, *Grasses of North America for Farmers and Students* 2: 574, 578. 1896 and *Contributions from the United States National Herbarium* 11: 135. 1906, *Flora URSS* 2: 470. 1934, *Feddes Repertorium* 84(9-10): 740. 1974, *Syst. Bot.* 16: 516. 1991.

in English: Western bluegrass

P. superata Hack.

Argentina. Rhizomatous, along roadsides, see *Anales del Museo Nacional de Buenos Aires* 21: 159. 1911.

P. supina Schrad. (*Poa annua* L. prol. *supina* (Schrad.) Asch. & Graebn.; *Poa annua* subsp. *supina* (Schrad.) Link; *Poa annua* subsp. *supina* (Schrad.) Husn.; *Poa annua* subsp. *varia* (Gaudin) Gaudin; *Poa annua* var. *supina* (Gaudin) Spenn.; *Poa annua* var. *supina* (Schrad.) Link, nom. illeg., non *Poa annua* var. *supina* (Gaudin) Spenn.; *Poa bifida* Fröhner; *Poa exigua* Foucaud & E. Mandon ex Husn., nom. illeg., non *Poa exigua* Dumort.; *Poa foucaudii* Hack.; *Poa supina* f. *exigua* Gamisans; *Poa supina* subsp. *foucaudii* (Hack.) Asia, China, Mongolia, Siberia, Russia, Europe. Perennial, alpine, creeping, stout, somewhat caespitose, low-growing, weed, aggressive, ornamental, useful for erosion control, found in pastures and damp places, meadows, slopes, alpine swales, see *Species Plantarum* 1: 68. 1753, *Tableau Encyclopédique et Méthodique ... Botanique* 1(1): 182. 1791, *Catalogus Plantarum in Helvetia* 38. 1800, *Flora Germanica* 1: 289. 1806, *Agrostologia Helvetica, definitionem ...* 2: 189. 1811, *Observations sur les Graminées de la Flore Belgique* 113. 1824, *Flora Friburgensis* 1: 127. 1825, *Hortus Regius Botanicus Berolinensis* 181. 1827, *Flora Helvetica* 1: 243. 1828, *Enumeratio Plantarum Transsilvaniae* 778. 1866, *Graminées. Descriptions ... France, Belgique, Isles Britanniques, Suisse* 51. 1898 and *Synopsis der mitteleuropäischen Flora* 2: 389. 1900, *Annuaire du Conservatoire et Jardin Botaniques de Genève* 9: 112. 1905, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 88: 436-437. 1968, *Acta Botanica Academiae Scientiarum Hungaricae* 17(1-2): 118. 1971[1972], *Candollea* 29(1): 48. 1974, *Botaniska Notiser* 128(4): 498. 1975[1976], *Denkschriften der Schweizerischen* 100: 1-130. 1987, *Journal of Cytology and Genetics* 23: 38-52. 1988, *Opera Botanica* 137: 1-42. 1999.

in English: supina bluegrass

P. sylvestris Gray (*Poa macroclada* Rydb.; *Poa paludigena* Fernald & Wiegand; *Poa sylvestris* var. *palustris* Dudley)

North America. Perennial, herbaceous, caespitose, slightly reddish, found in rich woods, bogs, forest, open oak woods, mowed areas, open disturbed soils, meadows, alluvial gravel, marshes, moist slopes, sandy alluvium, alluvial

woods along streams, see *A Manual of the Botany of the Northern United States* 596. 1848, *Cornell University Science Bulletin* 2: 128. 1886 and *Rhodora* 20(235): 126-127. 1918, *Manual of the Grasses of the United States (edition 2, revised by A. Chase)* 1951.

in English: woodland bluegrass, sylvan spear grass

P. tacanae Swallen

Guatemala, Volcan Tacaná. Woods, slopes, see *Contributions from the United States National Herbarium* 29(9): 399. 1950.

P. talamancae Pohl

Costa Rica. Rare species, alpine, páramos, open areas, see *Fieldiana, Botany* 38(2): 8, f. 3. 1976.

P. tatarica Fischer ex Griseb. (*Eragrostis collina* Trin.; *Eragrostis tatarica* (Fischer ex Griseb.) Henrard, nom. illeg., non *Eragrostis tatarica* (Fischer ex Griseb.) Nevski; *Eragrostis tatarica* (Fischer ex Griseb.) Nevski; *Poa collina* (Trin.) K. Koch, nom. illeg., non *Poa collina* Host; *Poa tatarica* Fischer)

Europe. See *Genera Plantarum* 23. 1776, *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg, Sixième Série. Sciences Mathématiques, Physiques et Naturelles* 1(4): 413. 1830, *Linnaea* 21(4): 405. 1848 and *Blumea* 3(3): 425. 1940.

P. tenera F. Muell. ex Hook.f. (*Poa caespitosa* var. *tenera* (F. Muell. ex Hook.f.) Benth.; *Poa effusa* (Nees) Steud., nom. illeg. non Kit.; *Poa humifusa* J.M. Black; *Poa saxicola* var. *effusa* Nees)

South Australia, Victoria, Tasmania, New South Wales. Perennial, branched above, delicate, flaccid and soft, bright green and rarely purplish, weak and slender, climbing habit, aerial or trailing stolons, sometimes forming tussocks, internodes compressed, auricles absent, compressed sheaths pale green to red to purplish, ligule glabrous, soft leaves flat and linear, green panicles with filiform branches, spikelets compressed and delicate, lemmas minutely pubescent, glumes more or less equal, web obsolete, anthers yellow, ovary glabrous, shade species, moist shaded soils, moisture-retentive acidic soils, shady and moist areas well drained, see *Florulae Insularum Australium Prodrumus* 89. 1786, *Encyclopédie Méthodique, Botanique* 5: 73. 1804, *Mantissa Prima Florae Halensis* 33. 1807, *Prodrumus Florae Novae Hollandiae* 1: 180. 1810, Josef August Schultes (1773-1831), *Österreichs Flora*, edition 2. 1: 227. Wien 1814, *London Journal of Botany* 2: 418. 1843, *Synopsis Plantarum Glumacearum* 1: 262. 1854, *Flora Tasmaniae* 2: 124, t. 164. 1858, *Flora Australiensis: A Description ...* 7: 653. 1878, *Anales Museo Nacional de Historia Natural de Buenos Aires* 5: 91. 1896 and *Flora South Australia (edition 2)* 123. 1943.

in English: slender tussock grass, soft tussock grass

P. tenerrima Scribner (*Poa gracillima* Vasey)

California. Perennial, foothill woodland, damp soil, see *Contributions from the United States National Herbarium* 1(8): 272. 1893, *Circular, Division of Agrostology, United States Department of Agriculture* 9: 4-5. 1899 and *American Journal of Botany* 74: 1431-1437. 1987.

in English: delicate bluegrass

P. tennantiana Petrie (*Poa foliosa* var. *tennantiana* (Petrie) Cheeseman)

New Zealand. Perennial, rare, robust, coastal, stout, tufted, strongly rhizomatous, old leaf sheaths fibrous, leaf blades persistent, pubescent leaf sheath membranous and striate, ligule entire and pointed, stiff leaves flat, much-branched inflorescence, glumes subequal acute, lemma pubescent, palea keels scabrid, open forest, forest margins, clearings, see *Handbook of the New Zealand Flora* 338. 1864, *The Subantarctic Islands of New Zealand* 2: 476. 1909, *Man. N.Z. Fl.* 188. 1925, *New Zealand J. Bot.* 24: 188, 434. 1986, *New Zealand J. Bot.* 27: 531-563. 1989.

P. tibetica Munro ex Stapf (*Arctopoa tibetica* (Munro ex Stapf) Probst.; *Poa ciliatiflora* Roshev.; *Poa fedtschenkoi* Roshev.; *Poa pricei* N.D. Simpson, sometimes *pricei*; *Poa pseudotibetica* Noltie; *Poa tianschanica* (Regel) Hack. ex O. Fedtsch.; *Poa tibetica* Munro; *Poa tibetica* var. *aristulata* Stapf)

Asia, China, Tibet. Wet meadows, plains, mountains, swamps, see J.F. Duthie (1845-1922), *List of North-West Indian Plants* 1885, *The Flora of British India* 7: 339. 1896 and *Fl. Pamir* p. 209. 1903, *Trudy Imp. Saint Pétersbourg. Bot. Sada* 21: 441. 1903, *Journal of the Linnean Society, Botany* 41: 452, pl. 23, f. 4-12. 1913, *Izv. Bot. Sada Akad. Eurasia. Perennial with a short lifetime, herbaceous, open, fine-stemmed, robust to weak, dark green, purple-topped, loosely tufted, sod-forming, erect or geniculate, prostrate growth habit, decumbent at the base and rooting at the lower nodes, stoloniferous with creeping slender and leafy stolons, culm nodes constricted, auricles vestigial or absent, reddish sheath compressed and keeled, prominent pointed ligule thinly to firmly membranous, drooping flat leaf blades persistent, leaves pale green to yellowish green with 2 visible veins on each side of the central nerve, open and very lax pyramid-shaped flower head, green to purple panicle erect or nodding, glumes unequal acute to acuminate, lemmas glabrous, web often copious, palea acute with scabrid keels, anthers yellow or purplish, ovary glabrous, fruit compressed and keeled, very variable species naturalized elsewhere in temperate regions, rare in South Africa, fodder, forage, pasture grass, ornamental and cultivated, lawns and playing fields, golf courses, putting greens and fairways, drought-sensitive, turf grass on wet soils, not adapted on dry sites, noxious weed of lawns and pastures, limited use in lawn mixtures for shady areas, common in sandy meadows, along roadsides, in cool and moist environment, moist

disturbed woods, grassland, wet meadows, boggy soil, wet sites, damp shaded areas, wasteland, shallow water around springs or along spring-fed streams, springheads, in waterlogged lawn, glades, brook sides, swamps and alluvial woods, lowland to montane, see *Species Plantarum* 1: 67. 1753, *Descriptio uberior Graminum* 1: 139. 1817, *Fundamenta Agrostographiae* 139. 1820, *Synopsis Plantarum Glumacearum* 1: 259. 1854, *Diagnoses plantarum orientalium novarum*, ser. 2, (fasc. 13): 57. 1853 [1854?], *Linnaea* 30(2): 205. 1859, *Bulletin de la Société Botanique de France* 21: 16. 1874, *Flora Orientalis* 5: 604. 1884, *Anales de la Universidad Central del Ecuador* 3(25): 482. 1889, *Verhandlungen der kaiserlich-königlichen zoologisch-botanischen Gesellschaft in Wien* 1890: 127. 1890, *Anales de la Universidad de Chile* 94: 164. 1896, *Grasses of North America for Farmers and Students* 2: 532. 1896 and *Synopsis der mitteleuropäischen Flora* 2(1): 426. 1900, *Plantae Europaeae* I: 87. 1900, *Österreichische Botanische Zeitschrift* 52(10): 379. 1902, *Österreichische Botanische Zeitschrift* 53(5): 199. 1903, *Repertorium Specierum Novarum Regni Vegetabilis* 12: 308. 1905, *Oefversigt af Förhandlingar, Finska Vetenskaps-Societeten* 48(13): 9. North America, U.S. Perennial, on sandy plain, red sand, see *Contributions from the United States National Herbarium* 1(8): 271. 1893, *Circular, Division of Agrostology, United States Department of Agriculture* 10: 3. 1899 and *Bulletin of the Torrey Botanical Club* 32(11): 606. 1905, *Wyoming Agric. Exp. Sta. Bull.* 418: 22. 1964.

Poagris Raf. = *Poa* L.

Greek *poa* "grass, pasture grass" and *agrius* "wild," Latin *agrius* "wild," for *Poa* L.

Pooideae, Poodae, Poeae, or Pooideae, Poeae, Poinae, see *Species Plantarum* 1: 67-68. 1753, *Encyclopédie Méthodique, Botanique* 2: 462. 1788, Constantine Samuel Rafinesque (1783-1840), *Flora Telluriana*. 1: 18. 1836 [1837] and *Bulletin of the British Museum (Natural History)*, *Botany* 8: 395-396. 1981, *Contributions from the United States National Herbarium* 48: 505-581. 2003.

Poagrostis Stapf = *Colpodium* Trin., *Pentameris* P. Beauv., *Pentaschistis* (Nees) Spach

The genera *Poa* L. and *Agrostis* L.

About one or two species, South Africa. Arundinoideae, Arundineae, or Danthonieae, annual, rarely perennial, loosely tufted, herbaceous, short, branched, sometimes rhizomatous, ligule fringed, plants bisexual, delicate inflorescence, an open contracted panicle with capillary branches, spikelets 1-flowered, two glumes more or less equal 1- to 3-nerved membranous, lemma membranous 7-nerved hairy, palea present, two lodicules, three stamens, ovary glabrous, two stigmas, slopes, damp places, mountains, usually in *Pentaschistis* (Nees) Spach, type *Poagrostis pusilla* (Nees) Stapf, see *Species Plantarum* 1: 63, 79. 1753, *Species Plantarum* 2: 1045, 1047. 1753, *Flore Française. Troisième Édition* 3: 32. 1805, *Prodromus Florae Novae Hollandiae* 185. 1810, *Essai d'une Nouvelle Agrostographie* 72, 92, 146, t. 18, f. 8. 1812, *Fundamenta Agrostographiae* 119, t. 7. 1820, *Histoire naturelle des Végétaux* 13: 164. Paris 1841, C.G.D. Nees von Esenbeck (1776-1858), *Flora Africae Australioris Illustrationes Monographicae ... I. Gramineae. Glogaviae* 1841, *Genera Plantarum* 3(2): 1158, 1163. 1883 and *Flora Capensis* 7: 760-761. 1900, *J. Bot.* 60: 138. 1922, H.P. Linder and R.P. Ellis, "A revision of *Pentaschistis* (Arundinoideae: Poaceae)." *Contributions from the Bolus Herbarium* 12: 1-124. 1990, Wageningen

Agricultural University Papers 92-1(2): 1-557. 1992, H. Du Plessis and J.J. Spies, "Chromosome numbers in the genus *Pentaschistis* (Poaceae, Danthonieae)." *Taxon* 41: 709-720. 1992, M. Lazarides, "The genus *Eriachne* (Eriachneae, Poaceae)." *Australian Systematic Botany* 8(3): 355-452. 1995, K.C. Klopper, J.J. Spies & B. Visser, "Cytogenetic studies in the genus *Pentaschistis* (Poaceae: Arundoideae)." *Bothalia* 28(2): 231-238. 1998.

Species

P. pusilla (Nees) Stapf (*Colpodium pusillum* Nees; *Pentaschistis pusilla* (Nees) H.P. Linder)

South Africa. Leaf blades not pungent, lemma finely pubescent and denticulate, see *Florae Africae Australioris Illustrationes Monographicae* 149. 1841 and *Flora Capensis* 7: 760-761. 1900, *Contributions from the Bolus Herbarium* 12: 89. 1990.

Poarion Rchb. = *Aegialina* Schult. & Schult.f., *Aegialitis* Trin., *Aegialitis* R. Br. (Plumbaginaceae), *Rostraria* Trin.

From the Greek *poa* "grass, pasture grass," the diminutive *poarion*.

Pooideae, Poeae, Aveninae, see *Syn. Pl.* 1: 97. 1805, *Prodromus Florae Novae Hollandiae* 426. 1810, *Fundamenta Agrostographiae* 127, 149, t. 9, 13. 1820, *Mantissa* 2: 13, 222. 1824, *Conspectus Regni Vegetabilis* 51. 1828, *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Pobeguinea (Stapf) Jacques-Félix = *Anadelphia* Hack., *Pobeguinea* Jacques-Félix

After the French botanist Charles Henri Oliver Pobéguin, 1856-1951, colonial administrator in French Africa, plant collector in West Africa (French Guinea and Ivory Coast), author of *Essai sur la flore de la Guinée française* produits forestiers, agricoles et industriels. Paris 1906 and *Les plantes médicinales de la Guinée*. Paris 1912; see Auguste Jean Baptiste Chevalier (1873-1956), *Flore vivante de l'Afrique Occidentale Française*. 1938; J.H. Barnhart, *Biographical notes upon botanists*. 3: 93. 1965; E.M. Tucker, *Catalogue of the library of the Arnold Arboretum of Harvard University*. 1917-1933; F.N. Hepper and Fiona Neate, *Plant Collectors in West Africa*. 65. 1971.

About 4 species, tropical West Africa. Panicoideae, Andropogonodae, Andropogoneae, Andropogoninae, *Andropogon* sect. *Pobeguinea* Stapf, perennial or annual, caespitose,

herbaceous, branched or unbranched, auricles present or absent, ligule an unfringed membrane, plants bisexual, inflorescence paniculate open or contracted, male and female fertile spikelets in the same inflorescence, 2 glumes more or less equal, palea absent, 2 small free lodicules, stamens 3, ovary glabrous, 2 stigmas, savannah, rainforest, open habitats, sometimes or often included in *Anadelphia* Hack., see *Species Plantarum* 2: 1045. 1753, *Essai d'une Nouvelle Agrostographie* 132-133, 160. 1812, *Flora Brasiliensis seu Enumeratio Plantarum* 364. 1829, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 6: 240-241. 1885, *Die Natürlichen Pflanzenfamilien* 2(2): 27. 1887, *Journal of Botany, British and Foreign* 31: 357. 1893 and *Journal de Botanique (Morot)* 19: 100. 1905, *Flora of Tropical Africa* 9: 398-400. 1919, *Revue internationale de botanique appliquée et d'agriculture tropicale* 14: 199. 1934, *Revue internationale de botanique appliquée et d'agriculture tropicale* 30: 172-174. 1950, *Kew Bulletin* 20: 281. 1966.

Species

P. arrecta (Stapf) Jacq.-Fél. (*Anadelphia arrecta* (Stapf) Stapf; *Andropogon arrectus* Stapf; *Andropogon glaucopurpureus* Stapf; *Hypogynium arrectum* (Stapf) Roberty)

Africa, Gabon. Herbaceous, savannah, see *Journal de Botanique (Morot)* 19: 101. 1905, *Flora of Tropical Africa* 9: 396. 1919, *Revue internationale de botanique appliquée et d'agriculture tropicale* 30: 173. 1950, *Boissiera*. 9: 182. 1960.

P. gabonensis Koechlin

Africa. See *Bulletin de la Société Botanique de France* 108: 243. 1961.

P. hamata (Stapf) Jacq.-Fél. (*Anadelphia hamata* Stapf; *Hypogynium hamatum* (Stapf) Roberty)

Tropical Africa. See *Flora of Tropical Africa* 9: 395. 1919, *Revue internationale de botanique appliquée et d'agriculture tropicale* 30: 174. 1950, *Boissiera*. 9: 183. 1960.

P. trichaeta (Reznik) Jacq.-Fél. (*Hypogynium trichaetum* (Reznik) Roberty; *Monium trichaetum* Reznik)

Africa, Guinea. See *Flora of Tropical Africa* 9: 399. 1919, *Bulletin du Muséum d'Histoire Naturelle*, série 2, 4: 1046. 1932, *Revue internationale de botanique appliquée et d'agriculture tropicale* 30: 174. 1950, *Boissiera*. 9: 183. 1960.

Podagrostis (Griseb.) Scribner & Merr. = *Agrostis* L.

From the Greek *pous*, *podos* "a foot" plus *agrostis*, *agrostidos* "grass, weed, couch grass."

Pooideae, Poeae, Agrostidinae, or Pooideae, Aveneae, *Agrostis* sect. *Podagrostis* Griseb., type *Podagrostis aequi-*

valvis (Trin.) Scribn. & Merr., very often or usually in *Agrostis* L., see *Species Plantarum* 1: 61-63, 70. 1753, *Essai d'une Nouvelle Agrostographie* 43. 1812, *Flora Rossica* 4(13): 436. 1852 and *Contributions from the United States National Herbarium* 13(3): 58. 1910, *Fl. Botanical Club 36: 531. 1909, *Flora of the Aleutian Islands* 75. 1937.

in English: Thurber bent grass, Thurber redtop

Podinapus Dulac

Orth. var. of *Podionapus* Dulac.

See *Species Plantarum* 1: 63-65. 1753, *Essai d'une Nouvelle Agrostographie* 91, 149, 160. 1812, *Flore du Département des Hautes-Pyrénées* 82-83. 1867.

Podionapus Dulac = *Deschampsia* P. Beauv.

Pooideae, Poeae, Airinae, see *Species Plantarum* 1: 63-65. 1753, *Essai d'une Nouvelle Agrostographie* 91, 149, 160. 1812, *Flore du Département des Hautes-Pyrénées* 82-83. 1867 and *Contributions from the United States National Herbarium* 48: 245-256, 581. 2003.

Podophorus Philippi

From the Greek *pous*, *podos* "a foot" and *phoros* "bearing, carrying."

One species, Chile, Juan Fernández Island. Pooideae, Stipeae, Duthieinae, or Pooideae, Poodae, Poeae, annual or perennial, herbaceous, auricles absent, ligule an unfringed membrane, plants bisexual, inflorescence paniculate, spikelets 1-flowered, 2 glumes herbaceous and acute, lower glume 3-nerved, upper glume 5-nerved, lemma with a flexuous terminal awn, palea 2-nerved 2-keeled, 2 free membranous lodicules, 2 stamens, ovary hairy, 2 stigmas, possibly related to *Megalachne* Steud., type *Podophorus bromoides* Phil., see *Botanische Zeitung. Berlin* 14(37): 648. 1856, *Anales de la Universidad de Chile* 13: 169. 1856 and *Boletín de la Sociedad de Biología de Concepción* 48: 165-172. 1974, *Taxon* 29: 645-666. 1980, *Brittonia* 54: 159. 2002, *Contributions from the United States National Herbarium* 48: 581. 2003.

Species

P. bromoides Phil.

Juan Fernández Island. Glumes and lemma 5-nerved.

Podopogon Raf. = *Piptochaetium* J. Presl

Greek *pous*, *podos* "a foot" and *pogon* "beard."

Pooideae, Stipeae, Stipinae, type *Stipa avenacea* L., see *Species Plantarum* 1: 78-79. 1753, *Fundamenta Agrostographiae* 109. 1820, C.S. Rafinesque, *Neogenyton*, or Indication of Sixty-Six New Genera of Plants of North America. 4. 1825, *Reliquiae Haenkeanae* 1: 222, t. 37, f.

2. 1830, *Species Graminum Stipaceorum* 22. 1842, *Synopsis Plantarum Glumacearum* 1: 118. 1854, *Index Kewensis* 2: 580. 1894 and *Revista del Museo de La Plata (Nueva Serie)*, *Sección Botánica* 6: 232, 234. 1944, E.D. Merrill, *Index rafinesquianus*. 76. 1949, *Taxon* 32: 649. 1983, *Arnaldoa* 1(1): 11-34. 1991, *Annals of the Missouri Botanical Garden* 89(3): 305-336. 2002, *Contributions from the United States National Herbarium* 48: 495-504, 581. 2003.

Podosaemum Kunth = *Muhlenbergia* Schreb.

Orth. var. of *Podosemum* Desv.

Chloridoideae, Cynodonteae, Muhlenbergiinae, see *Genera Plantarum* 44. 1789, *Systema Naturae ... editio decima tertia, aucta, reformata* 2: 171. 1791, *Essai d'une Nouvelle Agrostographie* 29, 176, 179, t. 8, f. 2, 3. 1812, *Mémoires du Muséum d'Histoire Naturelle* 2: 72. 1815 and *Contributions from the United States National Herbarium* 41: 143-173, 188-190. 2001, *Contributions from the United States National Herbarium* 48: 581-582. 2003.

Podosemum Desv. = *Muhlenbergia* Schreb., *Podosaemum* Kunth

Probably from the Greek *pous*, *podos* "a foot" and Latin *semen* "seed."

Chloridoideae, Cynodonteae, Muhlenbergiinae, type *Podosemum capillare* (Lam.) Desv. (*Muhlenbergia capillaris* (Lam.) Trin.), see *Genera Plantarum* 44. 1789, *Tableau Encyclopédique et Méthodique ... Botanique* 1: 158. 1791, *Systema Naturae ... editio decima tertia, aucta, reformata* 2: 171. 1791, *Nouveau Bulletin des Sciences, publié par la Société Philomatique de Paris* 2: 188. 1810, *Essai d'une Nouvelle Agrostographie* 29, 176, 179, t. 8, f. 2, 3. 1812, *De Graminibus unifloris et sesquifloris* 191-192, 296, t. 5, f. 15. Petropoli 1824 and *Die natürlichen Pflanzenfamilien, Zweite Auflage* 14d: 71. 1956, *Contributions from the United States National Herbarium* 34(4): 111. 1967, *Sida* 13(3): 303-314. 1989, *Contributions from the United States National Herbarium* 41: 143-173, 188-190. 2001, *Contributions from the United States National Herbarium* 48: 581-582. 2003.

Poecilostachys Hackel = *Chloachne* Stapf

From the Greek *poikilos* "spotted" and *stachys* "spike."

About 20 species, tropical Africa, Madagascar. Panicoideae, Panicoideae, Paniceae, perennial, decumbent, branched, tufted, herbaceous, rambling, scrambling, running, trailing, rhizomatous, leaf blades linear to lanceolate, auricles absent, plants bisexual, inflorescence of several lax racemes

unilateral bearing paired spikelets, spikelets laterally compressed, two glumes unequal or subequal, lower glume awned or acute to mucronate, upper glume acute to mucronate, upper lemma strongly flattened with margins flat or inrolled, palea present, 2 joined lodicules, 3 stamens, ovary glabrous, 2 stigmas, evergreen forest, in dense shade or partial shade, broad-leaved forest, forest floor, understory, near streams, type *Poecilostachys hildebrandtii* Hack., see *Sitzungsberichte der kaiserlichen Akademie der Wissenschaften. Wien. Mathematisch-naturwissenschaftlichen Classe. Abteilung I* 89: 131. 1884, *Journal of the Linnean Society, Botany* 21: 317-353, 407-455. 1884-1885 and *Journal of the Linnean Society, Botany* 40: 231. 1911, *Mémoires de l'Institut Scientifique de Madagascar, Série B, Biologie Végétale* 6: 1-272. 1955.

Species

P. alleizettei A. Camus (for the French botanist Aymar Charles d'Alleizette, 1884-1967, botanical collector in Algeria, France, Madagascar, Martinique, New Caledonia, Vietnam and Seychelles, author of "Compte rendu de l'excursion de la Société botanique de France au Col de Glaize, le 21 juillet 1927." *Bull. P. viguieri A. Camus

Madagascar. Lower glume acute to mucronate, forest, see *Bulletin de la Société Botanique de France* 75: 36. 1950.

Pogochloa S. Moore = *Gouinia* E. Fourn.,
Gouinia E. Fourn. ex Benth. & Hook.f.

From the Greek *pogon* “beard” and *chloe*, *chloa* “grass.”

Chloridoideae, Cynodonteae, Gouiniinae, type *Pogochloa brasiliensis* S. Moore, see *Genera Plantarum* 3: 1178. 1883, *Mexicanas Plantas* 2: 103. 1886, *Transactions of the Linnean Society of London, Botany* 4(3): 509, t. 37, f. 9-23. 1895 and *American Journal of Botany* 22: 32, 36. 1935, *Contributions from the United States National Herbarium* 41: 122-123, 190. 2001.

Pogonachne Bor

From the Greek *pogon* “beard” and *achne* “chaff, glume.”

One species, India. Panicoideae, Andropogonodae, Andropogoneae, Andropogoninae, annual, herbaceous, stilt-rooted, ligule an unfringed membrane, inflorescence paniculate and spatheate, single racemes, plants bisexual, sessile spikelet vestigial or suppressed, shorter spikelets sterile, pedicelled spikelet fertile strongly laterally compressed, small scales between internode and pedicel, two glumes subequal, lower glume coriaceous entire, upper glume awnless 5-nerved, awn arising from bidentate tip of lemma, palea present, 2 free and fleshy lodicules, 3 stamens, ovary glabrous, two stigmas, type *Pogonachne racemosa* Bor, see *Kew Bulletin* 4: 176. 1949.

Species

P. racemosa Bor

India. Raceme fragile, sessile spikelet male or barren, spikelet awned, upper glume hair-tufted.

Pogonarthria Stapf

From the Greek *pogon* “beard” and *arthron* “a joint,” possibly referring to the rachilla joints, hairy.

About 4 species, tropical Africa, southern Africa. Chloridoideae, Eragrostideae, Eleusininae, or Chloridoideae, Eragrostideae, Eragrostidinae, annual or perennial, unarmed, caespitose, herbaceous, branched or unbranched, tough, auricles absent, short ligule fringed or a line of hairs, leaf blades not pungent, plants bisexual, inflorescences racemose and sickle-shaped, short stiff slender racemes deciduous, crowded spikelets biseriate and several-flowered, 2

unequal glumes acute to acuminate 1-nerved, membranous lemmas divergent keeled acuminate to shortly awned, palea notched, 2 lodicules free and fleshy, 3 stamens, ovary glabrous, 2 stigmas, some species probably toxic, open habitats, in shallow or poor sandy soils or in disturbed places, savannah grasslands, undisturbed grassland, between *Eragrostis* and *Harpachne*, type *Pogonarthria falcata* (Hack.) Rendle, see *Flora Capensis* 7: 316. 1898, *Catalogue of the African Plants Collected by Dr. F. Welwitsch in 1853-61* 2(1): 232. 1899 and *Annuario del Reale Istituto Botanico di Roma* 8(3): 362. 1908, *Vierteljahrsschrift der Naturforschenden Gesellschaft in Zürich* 57: 532. 1912, *Bulletin of Miscellaneous Information Kew* 1932: 325. 1932, *Senckenbergiana Biologica* 47(4): 303-307. 1966, *Journal of Biogeography* 27(6): 1385-1401. Wilson, “Fire effects on mycorrhizal symbiosis and root system architecture in southern African savannah grasses.” *African Journal of Ecology* vol. 42(4): 328-337. Dec 2004, Qing Liu, Nan-Xian Zhao, Gang Hao, Xiao-Ying Hu and Yun-Xiao Liu, “Caryopsis morphology of the Chloridoideae (Gramineae) and its systematic implications.” *Botanical Journal of the Linnean Society* 148(1): 57-72. May 2005.

Species

P. fleckii (Hack.) Hack. (*Diplachne fleckii* Hack.; *Pogonarthria tuberculata* Pilg.) (the species was named after Dr. E. Fleck, geologist and plant collector in South-West Africa, see Mary Gunn and Leslie E. Codd, *Botanical Exploration of Southern Africa*. 155. 1981)

Zimbabwe, Namibia. Annual, erect or geniculate, tufted to densely tufted, weak, rigid, hairy, leaf blade expanded or folded, ligule a fringe of short hairs, leaf sheaths rounded, leaves linear, inflorescence a compound raceme, spike-like racemes arranged singly or whorled, spikelets attached to one side of the secondary axis, pioneer grass, low forage value, growing on sandy soils, well-drained sites, open habitats, open bush, veld, disturbed areas, see *Essai d'une Nouvelle Agrostographie* 80. 1812, *Bulletin de l'Herbier Boissier* 4(App. 3): 25. 1896 and *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 43(1): 92. 1909, *Vierteljahrsschrift der Naturforschenden Gesellschaft in Zürich* 57: 532. 1912.

in southern Africa: eenjarige denneboomgras, haariges tanengras

P. leiarthra Hack.

South Africa, Namibia. Annual, rare, tufted to loosely tufted, glabrous, found in sandy soils, red sand, see *Vierteljahrsschrift der Naturforschenden Gesellschaft in Zürich* 57: 531. 1912.

P. refracta Launert

Tropical Africa, Zambia. See *Senckenbergiana Biologica* 47(4): 304, f. 1-11. 1966.

P. squarrosa (Licht. ex Roem. & Schult.) Pilg. (*Eragrostis marlothii* Hack.; *Leptochloa falcata* Hack. ex Schinz; *Lep- tochloa falcata* Hack.; *Panicum natalense* Hochst.; *Poa squarrosa* Licht. ex Roem. & Schult.; *Poa squarrosa* Roem. & Schult.; *Pogonarthria falcata* (Hack. ex Schinz) Rendle; *Pogonarthria falcata* (Hack.) Rendle; *Pogonarthria hackelii* Chiov.; *Pogonarthria orthoclada* Peter; *Pogonarthria squarrosa* (Roem. & Schult.) Pilg.)

Tropical Africa, eastern and southern Africa. Perennial, very variable, tufted to densely tufted, erect, unbranched, clumped, stiff, sometimes shortly rhizomatous, shallow-rooted, leaf blade usually rolled and pointed, leaf sheath glabrous and more or less keeled to rounded, ligule a ring of short white hairs, inflorescence linear-oblong to pyramidal, sickle-shaped racemes ascending or spreading, spikelets 4- to 10-flowered, racemes grouped simply or arranged spirally, glumes lanceolate, lemmas 3-nerved sharply acuminate, pioneer grass, weed species hard and unpalatable, very low grazing value, possibly a source of vegetable salt, usually in disturbed areas, open waste places, grassland, sandy soil, uncultivated lands, poor soils, along roadsides, woodland and open woodland, old lands, see *Species Plantarum* 1: 55, 67. 1753, *Genera Plantarum* 23. 1776, *Essai d'une Nouvelle Agrostographie* 71. 1812, *Systema Vegetabilium* 2: 553. 1817, *Flora* 29: 113. 1846, *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 11: 404. 1889, *Bulletin de l'Herbier Boissier* 3(8): 386. 1895, *Flora Capensis* 7: 316. 1898, *Catalogue of the African Plants Collected by Dr. F. Welwitsch in 1853-61* 2(1): 232. 1899 and *Notizblatt des Botanischen Gartens und Museums zu Berlin-Dahlem* 5: 149. 1910, *Annali di Botanica* 10(3): 413. 1912, *Repertorium Specierum Novarum Regni Vegetabilis, Beihefte* 40(1. Anhang): 79. 1930, *Cytologia* 19: 97-103. 1954, *Bothalia* 17: 135-136. 1987.

in English: cross grass, herringbone grass, sickle grass

in Angola: kaxixi

in Nigeria: lammu lammugel, lammulammugel

in southern Africa: pluimsekkelgras, sekelgras, meerjarige denneboomgras, ausdauerndes tannengras; lefieloane (Sotho); lefheto (Tswana)

Pogonatherum P. Beauv. = *Homoplitis* Trin., *Pogonopsis* Presl

From the Greek *pogon* "a beard" and *ather* "awn," referring to the glumes, to the appearance of the inflorescences.

Some 3 species, tropical Asia, India. Panicoideae, Andropogonodae, Andropogoneae, Andropogoninae, or Panicoideae, Andropogoneae, Saccharinae, perennial, trailing, densely tufted and branched, slender, delicate, caespitose, decumbent, sometimes woody, culm internodes solid,

auricles absent, leaf blades linear, ligule a fringed membrane, leaves narrow and flat, plants bisexual, inflorescence axillary with spikelets laterally compressed, sessile and pedicellate spikelets of the same sex, pairs of sessile and pedicellate spikelets, sessile spikelets with 1-2 florets, the lower floret male and the upper bisexual or perfect, callus obtuse with an involucreal beard, two glumes subequal, lower glume convex on back and not keeled, upper glume awned 1-nerved, upper lemma bifid with a long slender awn, pedicellate spikelet with 1 floret usually female, palea nerveless, lodicules absent, stamens 1-2, ovary glabrous, 2 stigmas, found in damp rocky places, cliffs, stream beds, steep banks, shady places, mountains, resembling to *Lophopogon*, type *Pogonatherum saccharoideum* P. Beauv. (nom. illeg. superfl. for *Saccharum paniceum* Lam.), see Ambroise Marie François Joseph Palisot de Beauvois (1752-1820), *Essai d'une nouvelle Agrostographie*. 56, 176, pl. 11, f. 7. Paris (Dec.) 1812, *Fundamenta Agrostographiae* 166. 1820, *Reliquiae Haenkeanae* 1(4-5): 333, t. 46. 1830, *Synopsis Plantarum Glumacearum* 1: 379. 1854 and *J. Arnold Arbor.* 31: 130-132. 1950, *Reinwardtia* 2: 333-334. 1953, *Boissiera*. 382. 1960, *Grasses of Burma ...* 200, 202. 1960, *Contributions from the United States National Herbarium* 46: 252, 540-541. 2003, *Diversity & Distributions* 9(1): 73-87. Species

P. crinitum (Thunb.) Kunth (*Andropogon crinitum* Thunb.; *Andropogon crinitus* Thunb.; *Andropogon monandrus* Roxb.; *Andropogon peduncularis* Kunth; *Cinna filiformis* Llanos, nom. illeg., non *Cinna filiformis* Link; *Homoplitis crinita* (Thunb.) Trin.; *Ischaemum crinitum* (Thunb.) Trin.; *Panicum polystachyum* Burm. ex Kunth, nom. illeg., non *Panicum polystachion* L.; *Pogonatherum refractum* Nees; *Pogonatherum saccharoideum* var. *crinitum* (Thunb.) F.N. Williams; *Pogonatherum saccharoideum* var. *monandrum* (Roxb.) Hack.; *Pogonatherum crinitum* (Thunb.) Steud.; *Pogonopsis tenera* J. Presl; *Pollinia monandra* Spreng.)

Asia, Japan, Afghanistan to India. Perennial, slender, tufted, wiry, weak, trailing, reddish brown, leaf sheath loose and smooth, leaf blade lanceolate, slender spike-like raceme, paired spikelets on a flattened axis, sessile spikelet usually 1-flowered, lower floret empty or reduced to a lemma, upper floret with 1-2 stamens, glumes hyaline, lemmas hairy, long awns, palea 2-toothed, ornamental, a paste of the ashes of the whole plant applied for skin diseases, grows in wet places, lowlands and lower elevations, slopes, along roadsides and streams, on banks, often in sandy places, see *Species Plantarum* 1: 5, 55. 1753, *Species Plantarum* 2: 1045, 1049. 1753, *Flora Japonica, ...* 40, t. 7. 1784, *Systema Vegetabilium. P. paniceum (Lam.) Hackel (*Perotis polystachya* Willd.; *Pogonatherum polystachyum* (Willd.) Roem. & Schult.; *Pogonatherum saccharoideum* P. Beauv.; *Pogonatherum saccharoideum* var. *genuinum* Hack.; *Pollinia polystachya* (Willd.) Spreng.; *Saccharum paniceum* Lam.)

East Africa. Perennial, ornamental, wiry, tufted, stiff, erect, reddish, leaves acuminate and hispid, sessile spikelet usually 2-flowered, lower floret staminate, upper floret with 2 stamens, wet places and riversides, see *Species Plantarum* 1: 54. 1753, *Encyclopédie Méthodique, Botanique* 1: 595, 40, f. 1. 1783, *Hortus Kewensis* 1: 85. 1789, *Species Plantarum. Editio quarta* 1: 324. 1797, *Essai d'une Nouvelle Agrostographie* 56: 176, pl. 11, f. 7. 1812, *Systema Vegetabilium* 2: 497. 1817, *Genera Plantarum* 3(2): 1127. 1883, *Monographiae Phanerogamarum* 6: 193. 1889 and *Allgemeine Botanische Zeitschrift für Systematik, Floristik, Pflanzengeographie* 12: 178. 1906.

P. rufobarbatum Griffith (*Pogonatherum majus* Griseb.)

India. Tough, robust, solid, nodes glabrous, see *Notulae ad Plantas Asiaticas* 3: 81. 1851, August Heinrich Rudolph Grisebach, *Die geographische Verbreitung der Pflanzen Westindiens* Göttingen 1865.

Pogoneura Napper

From the Greek *pogon* “beard” and *neuron* “nerve.”

One species, East Africa. Chloridoideae, Eragrostideae, annual, herbaceous, unbranched, unarmed, glandular, ligule a ring of hairs, plants bisexual, inflorescence of slender racemes, spikelets solitary 2- to 3-flowered, 2 glumes unequal or subequal, lateral nerves of lemma ciliate or villous, palea with hairy crested keels, lodicules tiny or absent, 3 stamens, ovary glabrous, 2 stigmas, savannah,

possibly related to *Trichoneura*, type *Pogoneura biflora* Napper, see *Kirkia* 3: 112. 1963.

Species

P. biflora Napper

Tanzania. Glumes enfolding florets, upper glumes 1-nerved, lemmas rounded bidentate shortly awned, on clay soils.

Pogonochloa C.E. Hubb.

Greek *pogon* “beard” and *chloe, chloa* “grass.”

One species, Zambia, Zimbabwe, southern tropical Africa. Chloridoideae, Cynodonteae, perennial, tufted, herbaceous, unbranched, solid, unarmed, auricles absent, ligule a fringed membrane, leaf blades linear, plants bisexual, inflorescence spicate and contracted, racemes very short and crowded into a spiciform head, spikelets laterally compressed 2- to 3-flowered, second floret male or sterile, third floret reduced to an awn, 2 glumes subequal keeled membranous shortly awned, spikelets solitary, lemma membranous with a long flexuous awn, palea present, 2 free and fleshy lodicules, 3 stamens, ovary glabrous, 2 stigmas, possibly related to *Schoenefeldia*, type *Pogonochloa greenwayi* C.E. Hubb., see *Hooker's Icones Plantarum* 35: t. 3421. 1940.

Species

P. greenwayi C.E. Hubb.

Zimbabwe. Glumes enclosing florets.

Pogononeura Napper

From the Greek *pogon* “beard” and *neuron* “nerve.”

One species, East Africa. Chloridoideae, annual, herbaceous, unbranched, unarmed, glandular, ligule a ring of hairs, plants bisexual, inflorescence spicate, slender racemes, spikelets solitary, 2 glumes unequal or subequal, palea present with hairy keels, lodicules tiny or absent, 3 stamens, ovary glabrous, 2 stigmas, see *Kirkia* 3: 112. 1963.

Species

P. biflora Napper

Tanzania.

Pogonopsis Presl = Pogonatherum P. Beauv.

Greek *pogon* “beard” and *opsis* “resembling.”

Panicoideae, Andropogoneae, Saccharinae, type *Pogonopsis tenera* J. Presl, see *Essai d'une nouvelle Agrostographie*. 56, 176, pl. 11, f. 7. Paris (Dec.) 1812, *Fundamenta Agrostographiae* 166. 1820, *Reliquiae Haenkeanae* 1(4-5): 333, t. 46. 1830, *Synopsis Plantarum Glumacearum* 1: 379. 1854

and *J. Arnold Arbor.* 31: 130-132. 1950, *Reinwardtia* 2: 333-334. 1953, *Boissiera. Mémoires du Conservatoire de Botanique et de l'Institut de Botanique Systématique de l'Université de Genève* 382. 1960, *Grasses of Burma ...* 200, 202. 1960, *Contributions from the United States National Herbarium* 46: 540-541. 2003.

Pohlidium Davidse, Soderstrom & Ellis

Dedicated to the American botanist Richard Walter Pohl, 1916-1993, agrostologist, botanical collector in Colombia, Costa Rica, Honduras, U.S. (Texas and Iowa), author of "The genera of native bamboos of Costa Rica." *Rev. Biol. Trop.* 24(2): 243-249. 1976, "The Grasses of Iowa." *Iowa St. J. Sci.* 40: 341-566. 1966. See *Brittonia* 30: 160, 308. 1978; Gerrit Davidse, "Chromosome numbers of tropical American grasses (Gramineae): 5." *Ann. Missouri Bot. Gard.* 65: 637-649. 1978; Emmet J. Judziewicz, *Grasses of La Selva, Costa Rica: Poaceae (Gramineae) of Estación Biológica La Selva* (Organization of Tropical Studies), Puerto Viejo de Sarapiquí, Prov. Heredia, Costa Rica / Emmet J. Judziewicz and Richard W. Pohl. Madison, Wis.: University of Wisconsin 1984; *Phytologia* 60: 370. 1986; *Taxon* 43: 138. 1994; Lynn G. Clark, *Agnes Chase's First Book of Grasses: The Structure of Grasses Explained for Beginners* / Lynn G. Clark and Richard W. Pohl. 4th edition. Washington: Smithsonian Institution 1996; Jacob Peter Anderson (1874-1953), *Flora of Alaska and Adjacent Parts of Canada; an Illustrated Descriptive Text of All Vascular Plants Known to Occur within the Region Covered*. Integrated and indexed at the Anderson Herbarium by Richard W. Pohl. Ames, Iowa State University Press 1959.

One species, Panama, the Caribbean. Centothecoideae, Centothecae, or Panicoideae, Centothecae, or Bambusoideae, Oryzodae, Centothecae, perennial, tufted, herbaceous, branched, auricles present, ligule present or absent, leaf blades ovate pseudopetiolate, flowering culms leafy, plants monoecious, inflorescence paniculate and open with male spikelets on the periphery, spikelets unisexual, female spikelet 1-flowered and without glumes, male spikelets glumed or not, male florets 2-3-flowered and 2-3-staminate, palea present, 2 fleshy lodicules, no stamens, ovary glabrous, 2 stigmas, shade, rocky places, type *Pohlidium petiolatum* Davidse, Soderstr. & R.P. Ellis, see *Systematic Botany* 11(1): 131, f. 1-14. 1986, *Flora Mesoamericana* 6: 250. 1994, *Contributions from the United States National Herbarium* 46: 541. 2003.

Species

P. petiolatum Davidse, Soderstr. & R.P. Ellis

Panama.

Poidium Nees = *Briza* L., *Lombardochloa* Roseng. & B.R. Arrill., *Microbriza* Parodi ex Nicora & Rúgolo, *Monostemon* Henrard, *Poa* L.

Referring to the genus *Poa* L.

About 2-10 species, South America. Pooideae, Poeae, Brizinae, or Pooideae, Poodae, Poeae, perennial, herbaceous, unbranched, tufted, auricles absent, old sheaths fibrous, ligule an unfringed membrane, plants bisexual, open inflorescence paniculate, spikelets pedicellate, cleistogamous or chasmogamous, two glumes subequal, lower glume 1- to 3-nerved, upper glume 3-nerved, lemmas lanceolate or linear, palea 2-nerved 2-keeled, 2 free and membranous lodicules, 1 stamen, ovary glabrous, 2 stigmas, marsh, sometimes referred to *Poa*, type *Poidium brasiliense* Nees ex Steud., see *Species Plantarum* 1: 67-68, 70. 1753, *An Introduction to the Natural System of Botany* 450. 1836, *Synopsis Plantarum Glumacearum* 1: 288. 1854 and *Arkiv för Botanik utgivet av K. Polevansia de Winter

After the Welsh (b. near Cardiff, Wales) botanist Iltyd (Iltyd) Buller Pole-Evans, 1879-1968 (d. Umtali, Rhodesia), mycologist, plant collector, traveler, 1907 Fellow of the Linnean Society, 1918-1939 Director Botanical Survey South Africa, 1921-1939 founder and editor of *Bothalia* (A record of contributions from the National Herbarium, Union of South Africa, Pretoria), editor of volumes 1-19 of *The Flowering Plants of South Africa* (A magazine containing hand-colored figures with descriptions of the flowering plants indigenous to South Africa, London, Johannesburg, and Cape Town. Superseded by *Flowering Plants of Africa*, Pretoria and Ashford), his writings include "A vegetation map of South Africa." *Mem. Bot. Surv. S. Afr.* 15. Pretoria 1936, "The Vegetation of South Africa." In: *South Africa and science*, edited by H.J. Crocker and J. MacCrae, pp. 192-214. 1929, "Gouwziecte" veld: its vegetation and flora. *Rep. Dir. Vet. Educ. Res.* 9-10: 109-119. 1923 and "A reconnaissance trip through the eastern portion of the Bechuanaland Protectorate, April 1931." *Mem. Bot. Surv. S. Afr.* 21: 5-73. 1948. See Mary Gunn and Leslie E. Codd, *Botanical Exploration of Southern Africa*. 283-285. 1981; T.W. Bossert, *Biographical dictionary of botanists represented in the Hunt Institute portrait collection*. 314. 1972; A. White and B.L. Sloane, *The Stapelieae*. Pasadena 1937; Gordon Douglas Rowley, *A History of Succulent Plants*. 1997; Ray Desmond, *Dictionary of British & Irish Botanists and Horticulturists*. 557. 1994; I.C. Hedge and J.M. Lamond, *Index of Collectors in the Edinburgh Herbarium*. Edinburgh 1970; Gilbert Westacott Reynolds (1895-1967), *The Aloes of South Africa*. Balkema, Rotterdam 1982.

One species, South Africa, Eastern Cape. Chloridoideae, Cynodonteae, Chloridinae, perennial, herbaceous, unbranched, unarmed, rooting at the nodes, rhizomatous, stoloniferous, decumbent, mat-forming, leaves mostly basal, auricles absent, ligule a fringed membrane, leaf blades linear-lanceolate, plants bisexual, inflorescence spicate with spikelets solitary, spikelets with female-fertile florets only, one floret bisexual, 2 glumes unequal, lemmas shortly mucronate, palea present, 2 free and fleshy lodicules,

stamens 3, ovary glabrous, 2 plumose stigmas, open areas, mountain grassland, rocky or stony places, closely related to *Willkommia* Hackel, type *Polevansia rigida* De Winter, see *Bothalia* 9: 130-131. 1966.

Species

P. rigida De Winter

South Africa, Lesotho. Perennial, leaf sheaths overlapping, leaf blades linear, inflorescence rigid, spike-like racemes, glumes persistent, callus of floret short and obtuse, lemma coriaceous, found often near water.

Pollinia Sprengel = *Chrysopogon* Trin.

After the Italian botanist Ciro Pollini, 1782-1833, physician; see Mariella Azzarello Di Misa, a cura di, *Il Fondo Antico della Biblioteca dell'Orto Botanico di Palermo*. 218. Regione Siciliana, Palermo 1988.

Panicoideae, Andropogoneae, Sorghinae, type *Chrysopogon gryllus* (L.) Trin., see *Species Plantarum* 2: 1045. 1753, *Plantarum Minus Cognitarum Pugillus* 2: 10. 1815, *Fundamenta Agrostographiae* 188. 1820, *Die Natürlichen Pflanzenfamilien* 2(2): 28. 1887 and *Austrobaileya* 5(3): 503-533. 1999, *Contributions from the United States National Herbarium* 46: 159-161, 541. 2003.

Pollinia Trinius = *Microstegium* Nees

For the Italian botanist Ciro (Cyrus, Siro) Pollini, 1782-1833, physician, lichenologist, bryologist, among his publications are *Sulle alghe viventi nelle terme Euganee*. Milano 1817, *Flora veronensis*. Veronae 1822-1824, *Elementi di botanica*. Verona 1810-1811, *Discorso storico sulla Botanica recitato ... 6 Aprile 1811*. Verona 1812, *Catechismo agrario, coronato dell'Accademia d'Agricoltura ... di Verona*. Verona 1807, *Sinonimia botanica moderna, ossia elenco dei diversi nomi attribuiti dagli autori moderni alle piante*. Milano 1805 and *Catalogo delle piante dell'orto botanico veronese per l'anno 1814*. Verona 1814. See G. Moretti, *Intorno alla Flora veronensis*. Milano 1822; J.H. Barnhart, *Biographical notes upon botanists*. 3: 96. 1965; T.W. Bossert, *Biographical dictionary of botanists represented in the Hunt Institute portrait collection*. 314. 1972; E.M. Tucker, *Catalogue of the library of the Arnold Arboretum of Harvard University*. 1917-1933; Mariella Azzarello Di Misa, a cura di, *Il Fondo Antico della Biblioteca dell'Orto Botanico di Palermo*. 218. Regione Siciliana, Palermo 1988.

Panicoideae, Andropogoneae, Saccharinae, see *Révision des Graminées* 1: 160. 1829, *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques, Physiques et Naturelles. Seconde Partie: Sciences Naturelles* 2(4): 304. 1832, *A Natural*

System of Botany Edition 2. 447. 1836, *Proceedings of the Linnean Society of London* 1: 92. 1841, *Genera Plantarum* 3(2): 1127. 1883, *Monographiae Phanerogamarum* 6: 152. 1889 and *Contributions from the United States National Herbarium* 46: 292, 541-542. 2003.

Pollinidium Stapf ex Haines = *Eulaliopsis*
Honda, *Pollinidium* Haines

Resembling *Pollinia*.

Panicoideae, Andropogonodae, Andropogoneae, Andropogoninae, type *Pollinidium angustifolium* (Trin.) Haines, see *Observationes Botanicae* 5: 21. 1789, *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques, Physiques et Naturelles* 2(4): 300. 1832, *Hooker's Icon. Pl.* 18: pl. 1773. 1888 and *Botanical Magazine* 37: 124. 1923, *The Botany of Bihar and Orissa* 5: 1020. 1924, *Botanical Magazine* 38: 56. 1924, *Bulletin of Miscellaneous Information Kew* 1932(2): 72. 1932, *Hooker's Icon. Pl.* 33(3): t. 3262, p. 6. 1935.

Polliniopsis Hayata = *Microstegium* Nees

Resembling *Pollinia*.

One species, Taiwan. Panicoideae, Andropogonodae, Andropogoneae, Andropogoninae, annual or perennial, variable, rare, herbaceous, creeping or rambling, tufted or sprawling, decumbent, more or less branched and rooting from lower nodes, internodes solid, leaf blades narrowly elliptic or lanceolate, ligule short, plants bisexual, inflorescence terminal, digitate or solitary racemes bearing pairs of pedicellate spikelets, 2 glumes more or less equal to subequal, lower glume concave, upper glume awned, lemmas bidentate linear, palea present or absent, 2 lodicules free and fleshy, stamens 3 or rarely 2, ovary glabrous, 2 stigmas, invasive weed species, shady places, type *Polliniopsis somai* Hayata, see *Essai d'une Nouvelle Agrostographie* 56, 176, pl. 11, f. 7. 1812, *Plantarum Minus Cognitarum Pugillus* 2: 10. 1815, *Fundamenta Agrostographiae* 188. 1820, *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques, Physiques et Naturelles. Seconde Partie: Sciences Naturelles* 2(4): 304. 1832, *A Natural System of Botany* edition 2, 447. 1836, *Nomenclator Botanicus. Editio secunda* 1: 556. 1840, *Proceedings of the Linnean Society of London* 1: 92. 1841, *Flora* 29: 117. 1846, *Synopsis Plantarum Glumacearum* 1: 357, 396. 1854, *Die Natürlichen Pflanzenfamilien* 2(2): 24. 1887, *Hooker's Icones Plantarum* 25: t. 2466. 1896, *The Flora of British India* 7: 163-164. 1896 and *Icones plantarum formosanarum nec non et contributiones ad floram formosanam*. 7: 74-75, f. 43. 1918, *Annales de la Société Linnéenne de Lyon, sér. 2* 68: 201. 1922 [1921], *Bulletin of*

Miscellaneous Information Kew 1927: 79. 1927, *Sinensia* 3(3): 91-92. 1932, *The Families of Flowering Plants. II. Monocotyledons* 2: 227, f. 40. 1934, *Blumea* 3(3): 453. 1940, *Botanical Magazine* (Tokyo) 56(691): 16. 1942, *The Grasses of Burma* 2, 62. 1945, *Kew Bulletin* 7(2): 209-223. 1952, *Bulletin du Jardin Botanique de l'État* 25: 240. 1955, *Novosti Sist. Vyss. Rast.* 1966: 15. 1966, *Kew Bulletin* 35(4): 816. 1981, *Journal of the Bombay Natural History Society* 79(3): 652. 1983, A.K. Goel and B.P. Uniyal, "On the occurrence of a few grasses in Pakistan and Nepal (*Ischaemum impressum*, *Ischnochloa falconeri*, *Microstegium vimineum*, *Puccinellia tenuiflora*)." *Journal of Economic and Taxonomic Botany* 4(3): 43. 1983, *Contributions from the United States National Herbarium* 46: 292. 2003.

Species

P. somai Hayata (*Microstegium japonicum* subsp. *somae* (Hayata) T. Koyama; *Microstegium somai* (Hayata) Ohwi; *Polliniopsis somai* Hayata)

Asia. Creeping, rambling, paired racemes with tough rachis, lemmas awned, palea absent, see *Icones plantarum formosanarum nec non et contributiones ad floram formosanam*. 7: 76-77, f. 45. 1918, *Botanical Magazine* 43: 394. 1929, *Acta Phytotaxonomica et Geobotanica* 11(3): 155. 1942, *Grasses of Japan and its Neighboring Regions* 516. 1987.

Polyantherix Nees = *Elymus* L., *Sitanion* Raf.

From the Greek *polys* "many" and *antherix*, *antherikos* "beard of an ear of corn, the ear itself."

Pooideae, Triticeae, Hordeinae, type *Polyantherix hystrix* (Nutt.) Nees, see *Species Plantarum* 1: 83. 1753, *The Genera of North American Plants* 1: 86. 1818, *Journal de Physique, de Chimie, d'Histoire Naturelle et des Arts* 89: 103. 1819, *Annals of Natural History* 1: 284. 1838, *Bulletin, Division of Agrostology United States Department of Agriculture* 18: 10. 1899 and *Canad. J. Bot.* 42: 554. 1964, *Taxon* 41: 562-563. 1992, *Taxon* 44: 611-612. 1995, *Contributions from the United States National Herbarium* 48: 279-307, 583, 612-614. 2003.

Polyanthus C.H. Hu & Y.C. Hu =
Arundinaria Michx., *Polyanthus* C.H. Hu,
Polyanthus Y.C. Hu

From the Greek *polys* "many" and *anthos* "flower."

A monotypic genus. Bamboo, sometimes referred to *Arundinaria chinensis*, type *Polyanthus longispiculatus* (B.M. Yang) C.H. Hu ex Y.X. Hu, see *Flora Boreali-Americana* 1: 73-74. 1803 and *Oesterr. Bot. Z.* 53: 516. 1903, *Lingnan*.

Univ. Sci. Bull. No. 9: 64, 1940, *Acta Phytotax. Sin.* 18: 31. 1980, *J. Bamboo Res.* (1): 24, pl. 3. 1982, *Fl. Guizhouensis* 5: 320. 1988, *Journal of Bamboo Research* 10(3): 28-30. 1991, *J. Bamboo Res.* 13(1): 13. 1994.

Species

P. longispiculatus (B.M. Yang) C.H. Hu ex Y.X. Hu (*Arundinaria maculata* (McClure) C.D. Chu & C.S. Chao ex K.M. Lan; *Pleioblastus longispiculatus* B.M. Yang; *Pleioblastus maculatus* (McClure) C.D. Chu & C.S. Chao; *Pleioblastus oleosus* T.H. Wen; *Polyanthus longispiculatus* (B.M. Yang) C.H. Hu; *Sinobambusa maculata* McClure)

China, Hunan. See *Nat. Sci. J. Hunan Normal Univ.* 9(3): 4, f. 2. 1986 [also *J. Hunan Normal Univ., Nat. Sci. Ed.*], *J. Bamb. Res.* 10(3): 28-29. 1991.

Polyneura Peter = *Panicum* L.

Greek *polys* “many” and *neuron* “nerve,” ancient Greek *polyneuron* or *arnoglosson* for a species of *Plantago*, Latin *polyneuron* for a plant, a species of *Plantago*, great plantain.

Panicoideae, Paniceae, Paspalinae, or Panicoideae, Panicodae, Paniceae, Panicinae, type *Polyneura squarrosa* Peter, see *Species Plantarum* 1: 55, 58. 1753, *A Sketch of the Botany of South-Carolina and Georgia* 1(2): 117. 1816, *Bulletin Botanique [Genève]* 1: 220. 1830, *Flora Rossica* 4(14): 469. 1853 and *Flora of the Southeastern United States ...* 104, 1327. 1903, *Contr. U.S. Natl. Herb.* 15: 13-15. 1910, *North American Flora* 3(2): 200, 210. 1915, *Notizblatt des Botanischen Gartens und Museums zu Berlin-Dahlem* 11(104): 242. 1931, *Die Natürlichen Pflanzenfamilien* edition 2 14e: 20. 1940, *Kew Bulletin* 34(3): 559. 1979 [1980], *Taxon* 33: 126-134. 1984, *Flora Mesoamericana* 6: 302-318. 1994, *Blumea* 41: 181-216, 416. 1996, *Taxon* 45: 319-320. 1996, *Taxon* 47: 869. 1998, *Taxon* 48: 376. 1999, *Contributions from the United States National Herbarium* 46: 306-441, 537. 2003.

Polyodon Kunth = *Bouteloua* Lag.

From the Greek *polys* “many” and *odous, odontos* “a tooth.”

Chloridoideae, Cynodonteae, Boutelouinae, type *Polyodon distichum* Kunth, see *Varietades de Ciencias, Literatura y Artes* 2(4, 21): 134, 141. 1805, *Species Plantarum. Editio quarta* 4(2): 937. 1805 [1806], *Nova Genera et Species Plantarum* 1: 174, 175, t. 55. 1815 [1816], *Systema Vegetabilium, editio decima sexta* 1: 294. 1825, *Nom. Gen. Pl.* 38. 1841, *Journal of the Linnean Society, Botany* 19: 105. 1881, *Gen. Pl.* 3(2): 1169. 1883 and *Brittonia* 23(3): 293-324. 1971, *Taxon* 33: 126-134. 1984, *Contributions from the United States National Herbarium* 41: 20-33, 190. 2001.

x Polypogonagrostis (Ascherson et Graebner) Maire & Weiler

Agropogon, Agrostis x Polypogon.

See *Flore de l'Afrique du Nord* : 2: 151. 1953, *Genera Graminum* 375. 1986.

Polypogon Desf. = *Chaetotropis* Kunth, *Nowodworskyia* Presl, *Raspailia* Presl, *Santia* Savi

From the Greek *polys* “many” and *pogon* “a beard,” much-bearded, the panicles are hairy, bristly, setaceous, whiskery; see René Louiche Desfontaines, *Flora atlantica*, sive Historia plantarum, quae in Atlante, agro Tunetano et Algeriensi crescunt. 1: 66. Paris (Apr.) 1798.

About 10-18 species, tropical and warm temperate areas, tropical mountains. Pooideae, Poodae, Aveneae, or Pooideae, Poeae, Agrostidinae, annual or perennial, herbaceous, slender, hollow, stoloniferous or caespitose, loosely tufted or solitary, upright or ascending, stems often decumbent, auricles absent, leaf sheath margins free, ligule an unfringed membrane, flat leaves linear to linear-lanceolate scabrous or setaceous, plants bisexual, silky and bristly inflorescence, panicle contracted to spike-like with deciduous spikelets, spikelets with female-fertile florets only, spikelets 1-flowered and short stipitate, papery to leathery narrow glumes awned and 1-nerved, awns of the glumes several times longer than the body, lemma membranous 5-nerved, awn straight to bent or absent, palea 2-nerved, 2 glabrous lodicules toothed or untoothed, stamens one to three, anthers pale yellow to tan, ovary glabrous, stigmas white, grain golden-brown, weed species of open habitats, pampas, salt marshes and damp pasture, moist soils along streams, shores, around springs, in meadows and in ditches, grasslands, wet sand or mud of stream banks, ornamental, closely related to and hybridization with *Agrostis* L., type *Polypogon monspeliensis* (L.) Desf., see *Flora Atlantica* 1: 66-67. 1798 [1800], *Memoria di Matematica e di Fisica della Società Italiana di Scienze Residente in Modena, Parte contenente le Memorie di Fisica* 8: 479. 1799, *Révision des Graminées* 1: 72. 1829, *Reliquiae Haenkeanae* 1(4-5): 238-239, 351, t. 40, 80. 1830, *Syn. Mitteleur. Fl.* 2(1): 160, 163. 1899 and *Symbolae Botanicae Upsaliensis* 17(1): 1-112. 1960 [Studies in *Agrostis* and related genera.], *Flora Mesoamericana* 6: 241-242. 1994, *Hickenia* 2(44): 209-214. 1997, *Hickenia* 2(57): 267-272. 1998, *Restoration Ecology* 6(1): 83-93. in English: bent grass, water bent grass, water bent, beardless rabbit's-foot grass, green bentgrass

in Mexico: cola de ardilla, cola de zorrillo, pasto

in Arabic: deil el-far, naaejm

Polypogonagrostis (Ascherson & Graebner) Maire & Weiler

See *Flore de l'Afrique du Nord* : 2: 151. 1953, *Genera Graminum* 375. 1986, *Contributions from the United States National Herbarium* 48: 588. 2003.

Polyraphis (Trin.) Lindl. = Pappophorum Schreb.

From the Greek *polys* "many, much" and *raphis* "a needle."

Chloridoideae, Pappophoreae, or Chloridoideae, Cynodonteae, *Pappophorum* sect. *Polyraphis* Trin., see *Genera Plantarum* 2: 787. 1791, *Symbolae Botanicae, ...* 3: 10, t. 51. 1794, *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg. Sixième Série. Sciences Mathématiques,*

Physiques et Naturelles 1(1): 91. 1830, *The Vegetable Kingdom* 115. 1847 and *Contributions from the United States National Herbarium* 41: 178-181, 191. 2001.

Polyschistis Presl = *Bouteloua* Lag.,
Pentarrhaphis Kunth

Greek *polys* “many, much” and *schistos* “cut, divided.”

Chloridoideae, Cynodonteae, Boutelouinae, type *Polyschistis paupercula* J. Presl, see *Varietades de Ciencias, Literatura y Artes* 2(4, 21): 134, 141. 1805, *Nova Genera et Species Plantarum* 1: 177-178, t. 60. 1815 [1816], *Gen. Sp. Nov.* 5. 1816, *Reliquiae Haenkeanae* 1(4-5): 294, t. 41, f. 12. 1830, *Bulletin of the Torrey Botanical Club* 17: 233. 1890 and *Aliso* 18(1): 64. 1999, *Contributions from the United States National Herbarium* 41: 20-33, 181, 191. 2001.

Polytoca R. Br. = *Cyathorhachis* Steud.,
Cyathorhachis Nees ex Steud.

Greek *polys* “many” and *tokos* ‘a birth,’ *polytokia* “fecundity,” referring to the numerous offspring.

About 2-6 species, Indomalayan region, Southeast Asia, India. Panicoideae, Andropogonodae, Maydeae, or Chionachninae, perennial or annual, robust, caespitose, stout, branched, culm internodes solid or sometimes compressed, glabrous or softly bearded nodes, auricles present or absent, ligule an unfringed membrane, plants monoecious, male and female spikelets on the same inflorescence and usually the male above, all the fertile spikelets unisexual, inflorescences lateral and terminal, spike-like racemes and panicles, sessile and pedicellate spikelets pairs, spikelets unisexual, female sessile spikelet with 2 florets, female pedicellate spikelet sterile, male sessile spikelet with 2 florets, glumes 2 more or less equal, lower glume of female spikelet obtuse or emarginate, upper glume many-nerved, palea 2-nerved, lodicules absent, no stamens, ovary glabrous, 2 stigmas red, good fodder species, cattle fodder, forest margins, type *Polytoca bracteata* R. Br., see John Joseph Bennett (1801-1876) and Robert Brown, *Plantae Javanicae rariorum*. 15, 18, 20, f. 5. London (July) 1838, *Synopsis Plantarum Glumacearum* 1: 403. 1854 [1855] and *Blumea* 47(3): 545-580. 2002 [Revision of Chionachninae (Gramineae: Andropogoneae)].

Species

P. digitata (L.f.) Druce (*Apluda digitata* L.f.; *Coix heteroclita* Roxb.; *Polytoca bracteata* R. Br.; *Polytoca digitata* (L.f.) Henrard, nom. illeg., non *Polytoca digitata* (L.f.) Druce; *Polytoca heteroclita* (Roxb.) Koord.)

Asia, Thailand. Tufted, hispid, lower glume of sessile male spikelet chartaceous, male pedicellate spikelet like female, see *Species Plantarum* 2: 972. 1753, *Supplementum Plantarum* 434. 1782, *Flora Indica; or, Descriptions of Indian Plants* 3: 572. 1832, *Plantae Javanicae Rariores* 20, f. 5. 1838 and S.H. Koorders (1863-1919), *Exkursionsflora von Java ...* 4 vols. 1: 99. Jena 1911-1937, *Report. Botanical Exchange Club. London.* 4: 641. 1917, *Mededeelingen van's Rijks-Herbarium* 67: 10. 1931.

in Thailand: khaao phot phee, khao phot phi

P. macrophylla Benth. (*Chionachne macrophylla* (Benth.) Clayton)

Malesia. Cattle fodder, see *Plantae Javanicae Rariores* 15, 18. 1838, *Journal of the Linnean Society, Botany* 19: 52. 1881 and *Kew Bulletin* 35(4): 814. 1981, *Blumea* 47(3): 563. 2002.

P. wallichiana (Nees ex Steud.) Bentham (*Cyathorhachis wallichiana* Nees ex Steud.; *Polytoca wallichiana* (Nees) Steud.) (named for the Danish (b. Copenhagen) physician Nathaniel Wallich (originally Nathan Wulff or Wolff), 1786-1854 (d. London), botanist and botanical collector (India, Malaya, Cape, Nepal), pupil of Vahl at Copenhagen, in 1807 went out to India as surgeon, 1809 with William Roxburgh (1751-1815) at Calcutta, 1813 with the Hon. East India Company, 1815-1846 Superintendent of the Calcutta Botanic Garden (like his predecessor W. Roxburgh), 1818 Fellow of the Linnean Society, 1820-1822 plant collector in Nepal, 1829 Fellow of the Royal Society, 1833 visited Assam, correspondent of the naturalist and plant collector John Reeves (1774-1856), among his most valuable writings are *Tentamen Florae Nepalensis*. Calcutta and Serampore 1824-1826, *Descriptions of Some Rare Indian Plants*. [Asiatic Researches 1820] 1820 and *Plantae Asiaticae rariorum*. London [1829-] 1830-1832, father of George Charles Wallich (b. Calcutta 1815-d. Marylebone, London 1899); see J.H. Barnhart, *Biographical notes upon botanists*. 3: 454. 1965; I.H. Vegter, *Index Herbariorum*. Part II (7), *Collectors T-Z*. Regnum Vegetabile vol. 117. 1988; R. Zander, F. Encke, G. Buchheim and S. Seybold, *Handwörterbuch der Pflanzennamen*. 14. Burma. Slender, lower glume of sessile male spikelet herbaceous and unwinged, lower glume awned, see *Synopsis Plantarum Glumacearum* 1: 403. 1854, *Journal of the Linnean Society, Botany* 19: 52. 1881 and *Meded. Rijks-Herb.* 67: 9. 1931.

Polytrias Hackel = Aethonopogon Kuntze

Greek *polys* "many" and *treis, tria* "three," referring to the spikelets, in group of three; see H.G.A. Engler & K.A.E. Prantl (1849-1893), *Die Natürlichen Pflanzenfamilien*. 2(2): 24. (July) 1887.

One species, Indonesia, Java. Panicoideae, Andropogonodae, Andropogoneae, Andropogoninae, or Panicoideae, Andropogoneae, Saccharinae, perennial, herbaceous, creeping, erect, stoloniferous, leaves mainly basal, auricles absent, ligule a short fringed membrane, plants bisexual, inflorescence terminal, a single raceme bearing the spikelets in triplets, 2 spikelets sessile and one pedicelled at each node of the raceme, the shorter spikelets bisexual, 2 glumes more or less equal, lower glume cartilaginous 2-keeled, upper glume truncate, upper lemma 2-dentate awned, palea 2-nerved, lodicules absent, 3 stamens, ovary glabrous, 2 stigmas, mat-forming, lawn grass, open humid habitats, along roadsides, lawns, wasteland, playing fields, closely related to *Eulalia*, type *Polytrias praemorsa* (Nees ex Steud.) Hack., see *Révision des Graminées* 1: 160. 1829, *Die Natürlichen Pflanzenfamilien*. 2(2): 24. 1887, *Monographiae Phanerogamarum* 6: 189, t. 1, f. 13. 1889, *Revisio Generum Plantarum* 2: 788. 1891 and *Bulletin of the Tokyo Science Museum* 18: 2. 1947, *Flora Mesoamericana* 6: 380. 1994, *Contributions from the United States National Herbarium* 46: 14, 542. 2003.

Species

P. indica (Houtt.) Veldk. (*Andropogon amaurus* Büse; *Andropogon diversiflorus* Steud.; *Andropogon firmandus* Steud.; *Eulalia amauro* (Büse) Ohwi; *Eulalia praemorsa* (Nees) Stapf ex Ridl.; *Eulalia praemorsa* (Nees ex Steud.) Stapf ex Ridl.; *Ischaemum indicum* (Houtt.) Merr.; *Phleum indicum* Houtt.; *Pogonatherum amauro* (Büse) Roberty; *Pollinia diversiflora* (Steud.) Nash; *Pollinia praemorsa* Nees; *Pollinia praemorsa* Nees ex Steud.; *Polytrias amauro* (Büse) O. Kuntze; *Polytrias amauro* subvar. *pallida* Kuntze; *Polytrias diversiflora* (Steud.) Nash; *Polytrias praemorsa* (Nees) Hack.; *Polytrias racemosa* (Nees) Hack.)

Pantropical, Southeast Asia. Perennial, erect and prostrate, caespitose, branched, mat-forming, leaf sheath tightly wrapped around the stem, leaf blade often purple, ligule a fringed membrane, brown simple spike-like raceme, spikelets in group of three, one spikelet stalked and the other 2 sessile, lower glume ovate and very hairy, upper glume boat-shaped, lemma hyaline and keeled, long twisted awn, palea hyaline, fodder for cattle, low nutritional value, used as a lawn grass, see *Species Plantarum* 1: 59. 1753, *Species Plantarum* 2: 1049. 1753, *Natuurlijke Historie* 13: 198, t. 90, f. 2. 1782, *Observationes Botanicae* 6: 36. 1791, *Essai d'une Nouvelle Agrostographie* 56, 176, pl. 11, f. 7. 1812, *Révision des Graminées* 1: 160. 1829, *Hooker's Journal of Botany and Kew Garden Miscellany* 2: 98. 1850, *Synopsis Plantarum Glumacearum* 1: 370, 373, 409. 1854 [1855], *Plantae Junghuhnianae* 3: 360. 1854, *Flora Hongkongensis* 426. 1861, *Genera Plantarum* 3(2): 1127. 1883, *Monographiae Phanerogamarum* 6: 189, t. 1, f. 13. 1889, *Revisio Generum Plantarum* 2: 788-789. 1891 and *Torreyia* 5: 110. 1905, *Journal of the Federated Malay States Museums* 10: 251. 1922, *Journal of the Arnold Arboretum* 19(4): 320. 1938, *Bulletin of the Tokyo Science Museum* 18: 2. 1947, *Grasses of Ceylon* 168. 1956, *Grasses of Burma, Ceylon, India and Pakistan (excluding Bambuseae)* 180. 1960, *Boissiera*. 9: 393. 1960, *Micronesica* 18(2): 45-102. 1982, *Acta Botanica Yunnanica* 5(4): 345-346. 1983, *Blumea* 36(1): 180-181. 1991.

in English: Java grass

in Thailand: yaa nuan chan, ya nuan chan

Pommereulla L.f. = Melanocenchris Nees

One species, India, eastern Asia, Sri Lanka. Chloridoideae, perennial, stout, erect, tough, leaves mostly basal, leaf sheaths closely imbricate, leaf blades strap-like, ligule ciliate, stoloniferous, erect flowering culms, plants bisexual, inflorescence a single raceme, uppermost leaf sheath partially enclosing spikes, spikelets turbinate sessile with 1-2 empty lemmas and 2-3 fertile florets, two glumes membranous, upper glume 3-nerved, lemmas coriaceous 7- to 9-nerved 4-lobed, sterile florets reduced to lemmas, palea

membranous and acuminate, 2 free lodicules, 3 stamens, ovary glabrous, 2 stigmas, open areas, lowlands, coastal, arid and dry regions, related to *Astrebula* and *Lintonia*, type *Pommereulla cornucopiae* L.f., see *Nova Graminum Genera* 31. 1780 [21 Dec 1779], *Der Gesellschaft naturforschender Freunde zu Berlin, neue Schriften* 4: 218. 1803, *Novae Plantarum Species* 33. 1821, *Proceedings of the Linnean Society of London* 1: 94, 95. 1841, *Nomenclator Botanicus. Editio secunda* 2: 379. 1841, *Illustrationes Plantarum Orientalium* 4: 38, pl. 326. 1850-1853, *Revisio Generum Plantarum* 1(2): 780. 1891, *The Flora of British India* 7: 283, 300. 1896 and *Handb. Fl. Ceylon* 5: 284, 286. 1900, *Flora of the Presidency of Madras* 10: 1831. 1934, *Kew Bulletin* 1935: 148. 1935, *Grasses of Ceylon* 87, 92. 1956, *Ceylon J. Sci., Biol. Sci.* 2(2): 123. 1959, *Grasses of Burma ...* 473, 620, f. 74. 1960, Qing Liu, Nan-Xian Zhao, Gang Hao, Xiao-Ying Hu and Yun-Xiao Liu, "Caryopsis morphology of the Chloridoideae (Gramineae) and its systematic implications." *Botanical Journal of the Linnean Society* 148(1): 57-72. May 2005.

Species

P. cornucopiae L.f.

Southern India, Sri Lanka. Perennial, stout, herbaceous, leaf blades linear, spikes partially hidden by upper leaf sheath, spikelets solitary, glumes glabrous, sterile lemmas 4-lobed, palea present, lodicules glabrous, costal, sand flats.

Ponceletia Thouars = *Ponceletia* R. Br. (Epacridaceae), *Psammophila* Schult., *Spartina* Schreb.

After Abbé Poncelet or Père Polycarpe or Polycarpe Poncelet, born in Verdun, author of *Histoire naturelle du Froment*. Paris 1779, *La Nature dans la Formation du Tonnerre*. Paris 1766, *Chimie du Goût et de l'Odorat*. Paris 1755 and *Nouvelle Chymie du goût et de l'odorat*. 1800.

Chloridoideae, Cynodonteae, or Chloridoideae, Zoysieae, Sporobolinae, type *Ponceletia arundinacea* Thouars, see *Genera Plantarum* 43. 1789, *Catalecta Botanica* 3: 10. 1806, *Esquisse de la Flore de l'Isle de Tristan d'Acugna* 36. 1808, *Prodromus Florae Novae Hollandiae* 554. 1810, *Transactions of the Linnean Society of London* 12: 504. 1819, *Systema Vegetabilium* 1 Mant. 1: 69, 231. 1822 and *Iowa State College Journal of Science* 30(4): 471-574. 1956, *Journal of the Linnean Society, Botany* 60: 381-405. 1968, *Contributions from the United States National Herbarium* 41: 191, 195-200. 2001.

Poranthera Raf. = *Poranthera* Rudge (Euphorbiaceae), *Sorghastrum* Nash

Greek *poros* "opening, pore" and *anthera* "anther."

Panicoideae, Andropogonodae, Andropogoneae, Andropogoninae, or Panicoideae, Andropogoneae, Sorghinae, see *Methodus Plantas Horti Botanici ...* 207. 1794, *Transactions of the Linnean Society of London* 10: 302. 1811, *A Sketch of the Botany of South-Carolina and Georgia* 1: 144. 1816, C.S. Rafinesque, *Seringe Bull. Bot.* 1: 221. 1830, *Index Kewensis* 2: 606. 1894 and *Manual of the Flora of the Northern States and Canada* 71. 1901, *Flora of Tropical Africa* 9: 111. 1917, E.D. Merrill, *Index rafinesquianus*. 76. 1949, *University of California Publications in Botany* 23(6): 324. 1950, *Contributions from the United States National Herbarium* 46: 542, 594-598. 2003.

Porroteranthe Steud. = *Glyceria* R. Br.

Greek *porro, proso* "forwards, onwards, further in," Latin *porrum* and *porrus* "leek," *anthos* flower.

Pooideae, Meliceae, type *Porroteranthe drummondii* Steud., see *Familles des Plantes* 2: 226. 1763, Noel [Natalis] Joseph de Necker (1730-1793), *Elementa botanica genera genuina*, species naturales omnium vegetabilium detectorum ..., secundum systema omologium seu naturale... 2: 55. Neowedae ad Rhenum [Neuwied] 1790, *Prodromus Florae Novae Hollandiae* 179, 532. 1810, *Nomenclator Botanicus. Editio secunda* 2: 356. 1841, *Synopsis Plantarum Glumacearum* 1: 287. 1854 and *Kew Bulletin* 1934: 450. 1934, *Contributions from the United States National Herbarium* 48: 371-379, 589. 2003.

Porteresia Tateoka = *Indoryza* Henry & Roy, *Sclerophyllum* Gaudin, *Sclerophyllum* Griff.

For the French botanist Roland Portères, 1906-1974, agronomist, ethnobotanist, traveler, plant collector in Senegal, Guinea, Mali, Ivory Coast, West Cameroon, author of "Eleusine caracana Gaertner, céréale des humanités pauvres des pays tropicaux." *Bulletin de l'Institut Français d'Afrique noire*. tom. 13: 1-78. 1951, "Les céréales ... du genre *Digitaria* en Afrique et en Europe." *Journ. Agric. Trop. Bot. Appl.* ii. Paris 1955, "La Physionomie de la végétation pastorale." *Mem. Soc. Broteriana* 13: 105-106. 1958 and *Observations sur les possibilités de culture du soja en Guinée forestière*. Nogent-sur-Marne 1946. See Gilbert Bouriquet et al., "Le vanillier et la vanille." *Encycl. Biol.* vol. 46. [Taxonomy by Roland Portères] Paris 1954; René Letouzey, "Les botanistes au Cameroun." in *Flore du Cameroun*. 7: 1-110. Paris 1968; F.N. Hepper and Fiona Neate, *Plant Collectors in West Africa*. 66. Utrecht 1971; Auguste Jean Baptiste Chevalier, *Flore vivante de l'Afrique Occidentale Française*. 1: xxvii-xxx. Paris 1938; Cours de [sic] ethno-botanique et ethno-zoologie (1969-1970). vol. 1, *Ethno-botanique générale* / Roland Portères. Paris:

Institut d'Ethnologie; Muséum National d'Histoire Naturelle [1970?].

One species, Asia, India, Myanmar. Bambusoideae, Oryzodae, Oryzeae, perennial, herbaceous, more or less aquatic, leaves linear, leaf blades tough with tuberculate-prickly margins, plants bisexual, inflorescence paniculate, spikelets bisexual and pedicellate, glumes absent or present, fertile lemma coriaceous and strongly keeled, palea present, 2 membranous lodicules, usually 6 stamens, ovary glabrous, 2 stigmas, found in swampy areas, tidal swamps, possibly adapted to the salinity in the soils, closely related to *Oryza* L., see *Species Plantarum* 1: 333. 1753, *Flora Helvetica* 5: 47. 1829, *Notulae ad Plantas Asiaticas* 3: 8. Calcutta 1851 and *American Journal of Botany* 51: 539-543. 1964, *Bulletin of the National Science Museum* 8: 406. Tokyo 1965, *Bulletin of the Botanical Survey of India* 8: 42-44. 1966, *Bulletin of the Botanical Survey of India* 10: 274. 1969, *Bulletin of the Torrey Botanical Club* 101: 244. 1974, *Genera Graminum* 71. 1986, D.A. Vaughan, "The genus *Oryza* L.: current status of taxonomy." International Rice Research Institute, Manila, Philippines 1989, Francis R. Horne and Ari Kahn, "Water loss and viability in *Zizania* (Poaceae) seeds during short-term desiccation." *Am. J. Bot.* 87: 1707-1711. 2000, Song Ge, Ang Li, Bao-Rong Lu, Shou-Zhou Zhang and De-Yuan Hong, "A phylogeny of the rice tribe Oryzeae (Poaceae) based on *matK* sequence data." *American Journal of Botany* 89: 1967-1972. 2002.

Species

P. coarctata (Roxb.) Tateoka (*Indoryza coarctata* (Roxb.) A.N. Henry & B. Roy; *Oryza coarctata* Roxb.; *Sclerophyllum coarctatum* (Roxb.) Griff.)

India. Grain said to be edible, see *Flora Indica*; or, *Descriptions of Indian Plants* 2: 206. 1832, *Notulae ad Plantas Asiaticas* 3: 8. 1851 and *Bulletin of the Botanical Survey of India* 10: 274. 1969, R.J. Probert and P.L. Longley, "Recalcitrant seed storage physiology in three aquatic grasses (*Zizania palustris*, *Spartina anglica* and *Porteresia coarctata*)." *Annals of Botany* 63: 53-63. 1989.

Potamochloa Griff. = Hygroryza Nees

Greek *potamos* and *chloe*, *chloa* "grass."

Bambusoideae, Oryzodae, Oryzeae, type *Potamochloa retzii* Griff. (nom. illeg. superfl. for *Pharus aristatus* Retz.), see *Species Plantarum* 1: 333. 1753, *Observationes Botanicae* 5: 23. 1789, *Edinburgh New Philosophical Journal* 15: 380. 1833, *Journal of the Asiatic Society of Bengal* 5: 571, t. 24. 1836, *Synopsis Plantarum Glumacearum* 1: 4. 1855 [1853] and *Cytologia* 56: 95-102. 1991, *Am. J. Bot.* 89: 1967-1972. 2002.

Potamophila R. Br. = Maltebrunia Kunth, Potamophila Schrank (Phytolaccaceae)

From the Greek *potamos* "a river" and *philein* "to love," *philos* "lover, loving," alluding to the habitats of the species.

One species, Australia, New South Wales. Bambusoideae, Oryzodae, Oryzeae, perennial, aquatic, erect, tall, rhizomatous, tufted, leafy, auricles present or absent, ligule an unfringed membrane, linear leaf blades not petiolate, inflorescence of mixed unisexual and bisexual spikelets, lax panicles, 3 florets, the uppermost floret well developed and fertile, the lower 2 florets reduced to very small scale-like lemmas, glumes present to absent, sterile lemmas ovate membranous nerveless, fertile lemma awnless, palea and lodicules present, 6 stamens, ovary glabrous, 2 stigmas plumose, fruit more or less compressed, propagated using divisions and seed, a wild relative of domestic rice, the closest relative of *Potamophila* R. Br. is *Chikusichloa* Koidzumi which is endemic in Asia, along streams and rivers, gravel banks, type *Potamophila parviflora* R. Br., see *Species Plantarum* 1: 333. 1753, R. Brown, *Prodromus florum Novae Hollandiae et Insulae van-Diemen* 211. London (Mar.) 1810, *Plantae rariorum horti academici monacensis* 2: t. 63. 1819 [1821], *Révision des Graminées* 1: 183, t. 3. 1830, *Florae Africae Australioris Illustrationes Monographicae* 194. 1841, *Journal of the Linnean Society, Botany* 19: 55. 1881, *Genera Plantarum* 3: 1116. 1883 and *Notizblatt des Botanischen Gartens und Museums zu Berlin-Dahlem* 11: 652. 1932, Bernard De Winter (b. 1924), "A morphological, anatomical and cytological study of *Potamophila prehensilis* (Nees) Benth." *Bothalia* 6. 1951, *Bulletin de la Société Botanique de France* 108: 243. 1961, *Flore du Gabon* 5: 243. 1962, *Hooker's Icones Plantarum* 36: 3, t. 3595. 1962, H. Duistermaat, "A revision of *Oryza* (Gramineae) in Malesia and Australia." *Blumea* 32: 157. 1987, Song Ge, Ang Li, Bao-Rong Lu, Shou-Zhou Zhang and De-Yuan Hong, "A phylogeny of the rice tribe Oryzeae (Poaceae) based on *matK* sequence data." *American Journal of Botany* 89: 1967-1972. 2002.

Species

P. parviflora R. Br. (*Oryza parviflora* (R. Br.) Baill.; *Potamophila parviflora* Schrank, Phytolaccaceae, nom. illeg., non *Potamophila parviflora* R. Br.)

Australia. Perennial, aquatic, riparian, tall, tufted, reedlike, rhizomatous, ligule membranous, 3 florets, the lower 2 florets reduced and sterile, the upper floret bisexual, lemma membranous, palea nerved and membranous, useful for water erosion control, grows along streams and streamlets, wetter areas, see *Prodromus Florae Novae Hollandiae* 211. 1810, *Bulletin Mensuel de la Société Linnéenne de Paris* 2: 1063. 1892, M. Abedinia, R.J. Henry et al., "Distribution and phylogeny of *Potamophila parviflora* R. Br. a wild

relative of rice from eastern Australia." *Genetic Resources and Crop Evolution* 45(5): 399-406. 1998.

in English: watergrass, Australian wild rice

Preissia Opiz = *Avena* L.

For the German botanist Balthazar Preiss (Preis), 1765-1850, physician, author of *Rhizographie*. Prag 1823; see J.H. Barnhart, *Biographical notes upon botanists*. 3: 107. 1965; R. Zander, F. Encke, G. Buchheim and S. Seybold, *Handwörterbuch der Pflanzennamen*. 14. Aufl. 765. 1993.

Pooideae, Poeae, Aveninae, see *Species Plantarum* 1: 79-80. 1753 and *Taxon* 40: 132. 1991, *Contributions from the United States National Herbarium* 48: 126-138, 589. 2003.

Pringleochloa Scribner = *Atheropogon* Muhl. ex Willd., *Bouteloua* Lag.

After the American botanist Cyrus Guernsey Pringle, 1838-1911, Quaker, plant collector, Pacific States and Mexico, Baja California, wrote *The Record of a Quaker Conscience. C. Pringle's Diary*. New York 1918. See J.H. Barnhart, *Biographical notes upon botanists*. 3: 111. 1965; T.W. Bosser, compil., *Biographical dictionary of botanists represented in the Hunt Institute portrait collection*. 318. 1972; Ethelyn Maria Tucker, *Catalogue of the library of the Arnold Arboretum of Harvard University*. Cambridge, Mass. 1917-1933; W. Brockway, "An eminent Botanist, Mr. C.G. Pringle, etc." [Mexico, 1895] *The Two Republics* 5 Nov., 1895; Friedrich Wilhelm Klatt (1825-1897), "Berichtungen zu einigen von C.G. Pringle in Mexiko gesammelten Compositen." *Arbeit. Bot. Mus. Hamb.* [Hamburg, 1893]; Ezra Brainerd (1844-1924), "Cyrus Guernsey Pringle." *Rhodora* 13: 225-232. 1911; Irving William Knobloch, compil., "A preliminary verified list of plant collectors in Mexico." *Phytologia Memoirs*. VI. 1983; Helen Burns Davis, *Life and Work of Cyrus Guernsey Pringle*. Burlington, Vt. 1936; S. Lenley et al., *Catalog of the manuscript and archival collections and index to the correspondence of John Torrey*. Library of the New York Botanical Garden. 335-336. 1973; Ira L. Wiggins, *Flora of Baja California*. 42. Stanford, California 1980; Ida Kaplan Langman, *A Selected Guide to the Literature on the Flowering Plants of Mexico*. 596. University of Pennsylvania Press, Philadelphia 1964; Gordon Douglas Rowley, *A History of Succulent Plants*. California 1997; I.C. Hedge and J.M. Lamond, *Index of Collectors in the Edinburgh Herbarium*. Edinburgh 1970; John H. Thomas, "Botanical explorations in Washington, Oregon, California and adjacent regions." *Huntia* v. 3, no. 1, p. 18. 1979.

One species, Mexico, the Caribbean. Chloridoideae, Cynodonteae, Boutelouinae, perennial, herbaceous,

unbranched, unarmed, stoloniferous, ligule fringed, monoecious or dioecious, plants monoecious with staminate spikelets and pistillate spikelets, inflorescence spicate with 3-5 spikelets in each glomerule, two glumes subequal, palea present, 2 free and fleshy lodicules, stamens absent, 3 staminodes, ovary glabrous, 2 stigmas, open areas, plains, dry habitats, type *Pringleochloa stolonifera* (E. Fourn.) Scribn., see *Varietades de Ciencias, Literatura y Artes* 2(4, 21): 134, 141. 1805, *Species Plantarum. Editio quarta* 4(2): 937. 1805 [1806], *Reliquiae Haenkeanae* 1(4-5): 293, t. 41, f. 1-11. 1830, *A Manual of the Botany of the Northern United States. Second Edition* 553. 1856, *Genera Plantarum* 3(2): 1168-1169. 1883, *Botanical Gazette* 21: 137-138. 1896, *Circular, Division of Agrostology, United States Department of Agriculture* 15: 7. 1899 and *Contributions from the United States National Herbarium* 41: 17-18, 20-33, 191. 2001.

Species

P. stolonifera (E. Fourn.) Scribn. (*Atheropogon stolonifera* E. Fourn.; *Bouteloua reederorum* Columbus; *Bouteloua stolonifera* Scribn.)

Mexico. Perennial, leaves mostly basal, auricles absent, awns of rudiment ciliate, fodder, see *Mexicanas Plantas* 2: 140. 1886, *Proceedings of the Academy of Natural Sciences of Philadelphia* 43(2): 302. 1891, *Botanical Gazette* 21: 138. 1896 and J. Rzedowski, *Vegetación de Mexico*. Editorial Limusa. Mexico, D.F., Mexico 1978, *Genera Graminum* 249. 1986, *Aliso* 18(1): 63. 1999.

in Mexico: zacate

Prionachne Nees ex Lindl. = *Prionachne* Nees, *Prionanthium* Desv.

Greek *prion* "a saw" and *achne* "chaff, glume."

Arundinoideae, Danthonieae, see *An Introduction to the Natural System of Botany* 447. 1836.

Prionanthium Desv. = *Chondrolaena* Nees, *Prionachne* Nees ex Lindl.

From the Greek *prion* "a saw" and *anthos* "flower," lemma keels serrated.

About 3 species, South Africa. Arundinoideae, Danthonieae, annual, slender, tufted, herbaceous, unarmed, glandular, more or less branched, flowering culms leafless, auricles absent, ligule a fringed membrane, leaf blades tapering, plants bisexual, inflorescence a single spike or a single raceme, 2-flowered, spikelets paired or solitary, spikelets with female-fertile florets only or with incomplete florets, 2 subequal glumes 5- to 8-nerved and strongly keeled, lemmas 3-nerved acute, palea present, 2 minute

lodicules, 3 stamens, ovary glabrous, 2 stigmas plumose, common in seasonally wet places, damp, along roadsides, open habitats, related to *Tribolium*, see *Mémoires de la Société d'Agriculture, Sciences et Arts d'Angers* 1: 168-169, t. 7, f. 3. 1831, *An Introduction to the Natural System of Botany* 447. 1836, *Florae Africae Australioris Illustrationes Monographicae* 1: 133. 1841 and G. Davidse, "A revision of the genus *Prionanthium* (Poaceae: Arundineae)." *Bothalia* 18: 143-153. 1988, *South African Journal of Botany* 60: 285-292. 1994.

Species

P. dentatum (L.f.) Henrard (*Phalaris dentata* L.f.; *Phalaris dentata* Thunb.; *Prionanthium rigidum* Desv.)

South Africa. Annual, rare, tufted, panicle spike-like, spikelets compressed, glumes glandular 3- to 4-nerved, lemmas pubescent, palea pubescent, along roadsides, see *Species Plantarum* 1: 54. 1753, *Supplementum Plantarum* 106. 1781 [1782] and *Blumea* 4(3): 530. 1941, *South African Journal of Botany* 60: 285-292. 1994.

P. ecklonii (Nees) Stapf (*Prionachne ecklonii* Nees)

South Africa. Annual, rare, tufted, panicle spike-like, spikelets paired, glumes glandular, lemmas glabrous, paleas glabrous, along roadsides, in grazed veld, see *An Introduction to the Natural System of Botany* 447. 1836, *Flora Capensis* 7: 456-457. 1899.

P. pholiuroides Stapf (*Prionachne pholiuroides* (Stapf) Phillips)

South Africa. Annual, rare, tufted, spikelets solitary, glumes usually glandular, lemmas glabrous, paleas glabrous, common in seasonally wet places, shallow soil, moist depressions, open habitats, limestone, sandy soil, see *Flora Capensis* 7: 456. 1899 and *South African Grasses* (S. Afr. Agric. Serv.) 6: t. 63. 1931.

Prospophys Dulac = *Nardurus* (Bluff, Nees & Schauer) Rchb., *Vulpia* Gmelin

Greek *prospophys* "growing to, ongrowth, growth of new wood."

Pooideae, Poaceae, Loliinae, type *Prospophys tenella* (Reichb. ex Godron) Dulac, see *Species Plantarum* 1: 73. 1753, *Flora Badensis Alsatica* 1: 8. 1805, *Observations sur les Graminées de la Flore Belgique* 99, 100. 1824, *Genera Plantarum* 101. 1836, *Flore de Département des Hautes-Pyrénées* 67. 1867, *Die Natürlichen Pflanzenfamilien* 2(2): 75. 1887 and *Nordic Journal of Botany* 1(1): 24. 1981, *Contributions from the United States National Herbarium* 48: 454, 589, 690-694. 2003.

Prosphytochloa Schweick. = *Potamophila* R. Br.

Greek *prospophys* "growing to, growth of new wood" and *chloe, chloa* "grass," indicating the nature of the plant.

One species, South Africa, Transvaal. Bambusoideae, Oryzodae, Oryzeae, perennial, herbaceous, branched, unarmed, erect, scandent, climbing, leafy, long-rhizomatous, horizontal rhizomes, cataphylls, leaf blades not petiolate, leaf tips filiform and clinging, auricles absent, ligule an unfringed membrane, plants bisexual, inflorescence an open panicle, 3 florets, spikelets solitary and pedicelled, lower 2 florets sterile, uppermost floret bisexual, glumes reduced or absent, lemmas acuminate and awnless, palea present, 2 free and membranous lodicules, 6 stamens, ovary glabrous, 2 plumose stigmas white, shade species, in moist forests, shady forest, sometimes referred to *Potamophila* R. Br., type *Prosphytochloa prehensilis* (Nees) Schweick., see *Der Züchter. Zeitschrift für theoretische und angewandte Genetik* 31(4): 193-195. Berlin 1961, H. Duistermaat, "A revision of *Oryza* (Gramineae) in Malesia and Australia." *Blumea* 32: 157-157. 1987, Song Ge, Ang Li, Bao-Rong Lu, Shou-Zhou Zhang and De-Yuan Hong, "A phylogeny of the rice tribe Oryzeae (Poaceae) based on *matK* sequence data." *American Journal of Botany* 89: 1967-1972. 2002.

Species

P. prehensilis (Nees) Schweick. (*Maltebrunia prehensilis* Nees; *Oryza prehensilis* (Nees) Steud.; *Potamophila prehensilis* (Nees) Benth.)

South Africa. Perennial, tall, loosely paniculate, minute cuplike glumes, subulate sterile lemmas, see *Species Plantarum* 1: 333. 1753, *Prodromus Florae Novae Hollandiae* 211. 1810, *Révision des Graminées* 1: 6. 1829, *Florae Africae Australioris Illustrationes Monographicae* 1: 194. 1841, *Synopsis Plantarum Glumacearum* 1: 3. 1855 [1853], *Genera Plantarum* 3: 1116. 1883 and *Der Züchter. Zeitschrift für theoretische und angewandte Genetik* 31(4): 194-195. 1961, *Annals of the Missouri Botanical Garden* 75: 866-873. 1988.

Psamma P. Beauv. = *Ammophila* Host

Greek *psammos* "sand," referring to the habitat.

Pooideae, Poaceae, Agrostidinae, see *Species Plantarum* 1: 82. 1753, *Familles des Plantes* 2: 31, 530. 1763, *Icones et Descriptiones Graminum Austriacorum* 4: 24, t. 41. 1809, A. Palisot de Beauvois, *Essai d'une nouvelle Agrostographie*. 143-144, 176, t. 6, f. 1. Paris (Dec.) 1812, *Systema Vegetabilium* 2: 845. 1817, *A Manual of the Botany of the Northern United States* 583. 1848, Paul Mabille (1835-1923), *Recherches sur les plantes de la Corse*. 1: 33. Paris 1867-1869 and *Feddes Repertorium* 52: 269. 1943,

Contributions from the United States National Herbarium 48: 107, 589. 2003.

Psammagrostis C.A. Gardner & C.E. Hubb.

Greek *psammos* “sand” and *agrostis*, *agrostidos* “grass, weed, couch grass.” One species, Australia. Chloridoideae, Eragrostideae, annual, erect, herbaceous, branched, geniculate, decumbent, ascending, auricles absent, leaf sheaths inflated, ligule a fringe of hairs, leaves linear-lanceolate, plants bisexual, inflorescence axillary subtended by a spatheole, reduced raceme bearing 1-3 spikelets, spikelets clustered, two glumes more or less unequal, upper glume 3-nerved, lower glume nerveless or 1-nerved, lemmas keeled coriaceous glabrous obtuse mucronate, palea 2-keeled, 2 free and fleshy lodicules, 3 stamens, ovary glabrous, open areas, sandy places, slopes, hills, similar to *Eragrostis* and *Thaumastochloa*, type *Psammagrostis wiseana* C.A. Gardner & C.E. Hubb., see *Familles des Plantes* 2: 31, 530. 1763, *Icones et Descriptiones Graminum Austriacorum* 4: 24, t. 41. 1809, A. Palisot de Beauvois, *Essai d'une nouvelle Agrostographie*. 143, 176. Paris (Dec.) 1812, *A Manual of the Botany of the Northern United States* 583. 1848 and Charles Austin Gardner (1896-1970) and Charles Edward Hubbard (1900-1980), *Hooker's Icones Plantarum*. Ser. 5. (Sep.) 1938 [or *Hooker's Icones Plantarum* 34: t. 3361. 1938].

Species

P. wiseana C.A. Gardner & C.E. Hubb. (for the Hon. Frank Joseph Scott Wise, 1897-1986, Australian Labor Party, a farmer, 1936 Minister for Agriculture and the North-West, Minister for Lands and Agriculture 1939-1945, 1945-1947 premier of Western Australia, 1951-1956 Administrator for the Northern Territory, he played a prominent part in the development of plantations on the Gascoyne River and also in the introduction of buffel grass into pastoral areas in Western Australia)

Australia. Ephemeral, raceme subtended by a spatheole, spikelets borne in leaf sheaths axils, glumes not awned, palea coriaceous.

Psammochloa A. Hitchc.

From the Greek *psammos* “sand” and *chloe*, *chloa* “grass.”

One species, Mongolia. Stipoideae, Stipeae, perennial, robust, herbaceous, long rhizomes, stoloniferous, auricles absent, nodes hidden by leaf sheaths, ligule membranous and unfringed, plants bisexual, open inflorescence paniculate, spikelets pedicellate, two glumes subequal, lemma villos and awnless, unkeeled palea 5- to 7-nerved and acute, 3 lodicules free and membranous, 3 stamens, ovary glabrous, 2 stigmas, open areas, mobile sand dunes, fixed

dunes, related to *Stipa*, similar to *Ammophila*, type *Psammochloa mongolica* Hitchc., see *Species Graminum* 3: t. 352. 1836 and *Fl. Aziatsk. Ross.* 2(12): 173. 1916, *Journal of the Washington Academy of Sciences*. 17: 140. 1927, *Kew Bulletin* 6: 186-192. 1951, Wang K.Q., S. Ge and M. Dong, “Allozyme variance and clonal diversity in the rhizomatous grass *Psammochloa villosa* (Gramineae).” *Acta Botanica Sinica* 41: 537-540 (in Chinese). 1999, Li A. & S. Ge, “Genetic variation and clonal diversity of *Psammochloa villosa* (Poaceae) detected by ISSR markers.” *Annals of Botany* 87: 585-590. 2001, Andrea R. Pluess and Jürg Stöcklin, “Population genetic diversity of the clonal plant *Geum reptans* (Rosaceae) in the Swiss Alps.” *Am. J. Bot.* 91: 2013-2021. 2004.

Species

P. mongolica Hitchc. (*Arundo villosa* Trin.; *Psammochloa villosa* (Trin.) Bor; *Timouria mongolica* (Hitchc.) Roshev.)

Mongolia, Gobi Desert. Rhizomatous, sand-binder, robust, see *Journal of the Washington Academy of Sciences* 17: 140. 1927, *Journal of the Washington Academy of Sciences* 18: 502. 1928, Feihai Yu, Ming Dong and Bertil Krüsi, “Clonal integration helps *Psammochloa villosa* survive sand burial in an inland dune.” *New Phytologist* 162(3): 697-704. June 2004.

Psammophila Schult. = *Ponceletia* Thouars, *Ponceletia* R. Br. (Epacridaceae), *Psammophila* Fourr. (Caryophyllaceae), *Psammophiliella* Ikonn., *Spartina* Schreb.

Greek *psammos* “sand” and *philos* “lover, loving.”

Chloridoideae, Cynodonteae, or Chloridoideae, Zoysieae, Sporobolinae, type *Psammophila arundinacea* (Thouars) Schult. (*Ponceletia arundinacea* Thouars), see *Genera Plantarum* 43. 1789, *Catalecta Botanica* 3: 10. 1806, *Esquisse de la Flore de l'Isle de Tristan d'Acugna* 36. 1808, *Prodromus Florae Novae Hollandiae* 554. 1810, *Transactions of the Linnean Society of London* 12: 504. 1819, *Systema Vegetabilium* 1 Mant. 1: 69, 231. 1822 and *Iowa State College Journal of Science* 30(4): 471-574. 1956, *Journal of the Linnean Society, Botany* 60: 381-405. 1968, *Contributions from the United States National Herbarium* 41: 191, 195-200. 2001.

Psammopyrum Á. Löve = *Thinopyrum* Á. Löve

Greek *psammos* “sand” and *pyros* “grain, wheat.”

Pooideae, Triticeae, Hordeinae, type *Psammopyrum pungens* (Pers.) Á. Löve, see *Syn. Pl.* 1: 109. 1805, *Linnaea* 17: 395. 1843, *Flore de France* 3: 607. 1855 and *Ann. Sci.*

Nat. Bot., sér. 10, 14: 234. 1932, *Botanical Journal of the Linnean Society* 76(4): 380. 1978, *Taxon* 29(2-3): 351. 1980, *Veröffentlichungen des Geobotanischen Institutes Rübel in Zürich* 87: 50. 1986, *Contributions from the United States National Herbarium* 48: 589, 653-654. 2003.

Psathyrostachys Nevski = *Psathyrostachys* (Boiss.) Nevski

From the Greek *psathyros* “fragile, friable” and *stachys* “a spike,” rachis fragile readily disarticulating between the spikelets.

About 7-8 species, European Russia, Volga, Asia, south Europe. Pooideae, Triticeae, Hordeinae, or Pooideae, Triticoideae, Triticeae, perennial, densely or loosely tufted, herbaceous, unbranched, hollow, shortly rhizomatous, with underground stolons, creeping, auricles present or absent, ligule an unfringed membrane, plants bisexual, inflorescence spicate, spikes linear, spikelets 1-2-flowered all sessile and similar in groups of 2 or 3 in regular longitudinal rows, lowermost floret fertile, 2 subequal glumes awnlike entire, lemmas lanceolate 5-7-veined awned to acuminate, palea 2-keeled, 2 free and membranous lodicules, 3 stamens, ovary hairy, 2 stigmas, good fodder plants, open areas, slopes, steppe, desert and semidesert, stony places, similar to *Sitanion*, closely related to *Leymus* and *Hordeum*, hybrids with *Leymus*, type *Psathyrostachys lanuginosa* (Trin.) Nevski, see *Species Plantarum* 1: 83. 1753 and *Trudy Tiflisskogo Botanicheskogo Sada* 6(1): 97. 1902, *Acta Inst. Bot. Acad. Sci. URSS, Ser. 1, Fasc. 1*: 22, 27. 1933, *Flora URSS* 2: 712, 714-715, pl. 50, f. 5. 1934, *Claves Generum et Specierum Graminearum Primarum Sinicarum Appendice Nomenclatione Systematica* 192. 1957, *Flora Illustralis Plantarum Primarum Sinicarum: Gramineae* 437. 1959, *Feddes Repertorium* 83: 507. 1973, *Bot. Zhurn. SSSR* 69(4): 511-517. 1984, *Flora Sibiriae* 2: 53. 1990, *Nordic Journal of Botany* 9(5): 449-460. 1990, C. Baden, “A taxonomic revision of *Psathyrostachys* (Poaceae).” *Nordic Journal of Botany* 11(1): 3-26. 1991, *Plant Systematics and Evolution* 189: 217-231. 1994 [Relationships between species of *Leymus*, *Psathyrostachys* and *Hordeum* (Poaceae, Triticeae) inferred from Southern hybridization of genomic and cloned DNA probes.], M. Ørgaard, and J.S. Heslop-Harrison, “Investigations of genome relationships between *Leymus*, *Psathyrostachys* and *Hordeum* inferred by genomic DNA:DNA *in situ* hybridization. *Annals of Botany* 73: 195-203. 1994, Seberg, O., G. Petersen and C. Baden, “The phylogeny of *Psathyrostachys* Nevski (Triticeae, Poaceae)—are we able to see the wood for the trees?” In R. R.-C. Wang et al. [eds.], *Proceedings of the 2nd International Triticeae Symposium*, 247-253. Utah State University Press, Logan, Utah, U.S. 1994, *Acta Agrestia Sin.* 8(3): 193-197. 2000, Kesara Anamthawat-Jónsson and Sigríður K. Bödvarsdóttir, “Genomic and genetic relationships

among species of *Leymus* (Poaceae: Triticeae) inferred from 18S-26S ribosomal genes.” *Am. J. Bot.* 88: 553-559. 2001, *Contributions from the United States National Herbarium* 48: 589. 2003, Zeng-Yu Wang, Yaxin Ge, Megann Scott and German Spangenberg, “Viability and longevity of pollen from transgenic and nontransgenic tall fescue (*Festuca arundinacea*) (Poaceae) plants.” *Am. J. Bot.* 91: 523-530. 2004, *Am. J. Bot.* 91: 1709-1725. 2004.

Species

P. caduca (Boiss.) Melderis (*Elymus caducus* Boiss.; *Hordeum caducum* Munro ex Aitch.)

Europe, Asia, Afghanistan. See *Journal of the Linnean Society, Botany* 18: 110. 1880, *Flora Orientalis* 5: 691. 1884 and *Biologiske Skrifter* 14(4): 93. 1965.

P. fragilis (Boiss.) Nevski (*Elymus fragilis* (Boiss.) Griseb.; *Elymus fragilis* Boiss.; *Hordeum fragile* Boiss.; *Psathyrostachys scabriphylla* Ponert)

Russia. See *Diagnoses plantarum orientaliarum novarum, ser. 1*, 7: 128. 1846, *Flora Rossica* 4(13): 330. 1852 and *Flora URSS* 2: 716. 1934, *Novosti Sist. Vyssh. Rast.* 9: 58. 1972, *Feddes Repertorium* 83: 507. 1973, *Euphytica* 33: 363-367. 1984, *Canadian Journal of Genetics and Cytology* 26: 430-435. 1984, *Nordic Journal of Botany* 9: 449-460. 1990, *Nordic Journal of Botany* 11(1): 10. 1991, *Acta Botanica Boreali-Occidentalia Sinica* 13(6): 92-97. 1993, *Plant Systematics and Evolution* 191: 183-198. 1994, *Annals of Botany* 73: 195-203. 1994, *Pakistan Journal of Botany* 26: 353-366. 1994, Linde-Laursen, I. and C. Baden, “Comparison of the Giemsa C-banded karyotypes of the three subspecies of *Psathyrostachys fragilis*, subsp. *villosus* (2x), *secaliformis* (2x, 4x) and *fragilis* (2x) (Poaceae), with notes on chromosome pairing.” *Plant Systematics and Evolution* 191: 183-198. 1994.

P. fragilis (Boiss.) Nevski subsp. ***fragilis***

Russia.

P. fragilis (Boiss.) Nevski subsp. ***secaliformis*** Tzvelev (*Elymus secaliformis* Trin. ex Steud.)

Russia. See *Nomenclator Botanicus. Editio secunda* 1: 551. 1841 and *Novosti Sist. Vyssh. Rast.* 9: 58. 1972.

P. fragilis (Boiss.) Nevski subsp. ***villosus*** Baden

Russia. See *Nordic Journal of Botany* 11(1): 10. 1991.

P. huashanica Keng ex P.C. Kuo (*Psathyrostachys huashanica* Keng)

China. Rhizomatous, loosely tufted, glabrous, leaf sheaths glabrous, ligules ciliate, leaf blades usually flat, greenish inflorescence, spikelets 2-3 at each node, 1-3 florets, rachis densely pubescent with hirsute margin, glumes scabrous, lemmas glabrous to sparsely scabrous, palea ciliolate along keels, on stony slopes, rocky places, see *Flora Illustralis Plantarum Primarum Sinicarum: Gramineae* 437. 1959, *Flora Tsinlingensis* 1(1): 440. 1976, *Plant Systematics and*

Evolution 151: 203-213. 1986, *International Organization of Plant Biosystematists Newsletter* 13: 20-21. 1989, *Nordic Journal of Botany* 9: 11-14, 449-460. 1989-1990, *Acta Botanica Yunnanica* 12: 57-66. 1990, *Genome* 33: 563-570. 1990, *Acta Genetica Sinica* 18(6): 513-519. 1991, *Acta Phytotaxonomica Sinica* 31: 393-398. 1993 [A study on hybrids between *Psathyrostachys huachanica* and two species of *Roegneria*.], *Acta Botanica Boreali-Occidentalia Sinica* 13(6): 92-97. 1993, *Annals of Botany* 73: 471-479. 1994, *Pakistan Journal of Botany* 26: 353-366. 1994, *Plant Systematics and Evolution* 194: 83-91. 1995, *Plant Systematics and Evolution* 197: 225-231. 1995, *Plant Systematics and Evolution* 202: 265-269. 1996, *Acta Genetica Sinica* 23(6): 447-452. 1996, *Journal of Nanjing Agricultural University* 21(1): 10-13. 1998.

P. hyalantha (Rupr.) Tzvelev (*Elymus hyalanthus* Rupr.; *Psathyrostachys juncea* (Fischer) Nevski; *Psathyrostachys juncea* subsp. *hyalantha* (Rupr.) Tzvelev)

Russia. See *Mémoires de la Société Impériale des Naturalistes de Moscou* 1: 25, t. 4. 1811, *Mémoires de l'Académie Impériale des Sciences de Saint Pétersbourg (Sér. 7)* 14(4): 36. 1869 and *Flora URSS* 2: 714, pl. 50, f. 6a-e. 1934, *Novosti Sist. Vyss. Rast.* 9: 58. 1972, *Nordic J. Bot.* 11(1): 21. 1991, *Novon* 7(3): 229. 1997.

P. juncea (Fischer) Nevski (*Elymus albertii* Regel; *Elymus altaicus* A. in English: Russian wild rye

P. juncea (Fischer) Nevski var. ***hyalantha*** (Ruprecht) S.L. Chen

Central Asia, Russia. Culms densely hairy below spike, anthers purple, mountain, slopes, grassland, on steppes.

P. juncea (Fischer) Nevski var. ***juncea***

Central Asia, Russia. Culms below spike smooth and glabrous or scabrous, anthers yellow.

P. kronenburgii (Hack.) Nevski (*Elymus kronenburgii* (Hack.) Nikif.; *Hordeum kronenburgii* Hack.)

Russia. Usually densely tufted, glabrous, leaf sheaths fibrous, spikes greenish, rachis pubescent, spikelet narrowly ovate usually 3 at each node, 1-2 florets, glumes pilose, lemma pilose 5-veined tapering into a short awn, palea 2-keels ciliate, anthers violet, riverbanks, mountain slopes, grassy areas, see *Species Plantarum* 1: 84. 1753 and *Allgemeine Botanische Zeitschrift für Systematik, Floristik, Pflanzengeographie* 11: 133. 1905, *Flora URSS* 2: 713. 1934, *Acta Botanica Yunnanica* 12: 57-66. 1990, *Acta Botanica Boreali-Occidentalia Sinica* 13(6): 92-97. 1993.

P. lanuginosa (Trin.) Nevski (*Elymus lanuginosus* Trin.; *Hordeum lanuginosum* (Trin.) Schenck)

Russia. Densely tufted, glabrous, leaf sheaths glabrous, leaf blades flat to subinvolute, spike ovate villous, rachis brittle, spikelets usually 2-3 per node, 1-2 florets, glumes densely hirsute, lemma densely villous, palea densely ciliate along 2-keels, see *Flora Altaica* 1: 121. 1829 and *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 40(1): 109. 1907, *Flora URSS* 2: 714, pl. 50, f. 5. 1934, *Acta Botanica Yunnanica* 12: 57-66. 1990, *Acta Botanica Boreali-Occidentalia Sinica* 13(6): 92-97. 1993, Linde-Laursen, I., and C. Baden, "Giemsa C-banded karyotypes of two cytotypes (2x, 4x) of *Psathyrostachys lanuginosa* (Poaceae; Triticeae)." *Hereditas* 120: 113-120. 1994, *Pakistan Journal of Botany* 26: 353-366. 1994.

P. rupestris (Alexeenko) Nevski (*Hordeum rupestre* Alexeenko; *Hordeum rupestre* var. *intermedium* Alex.; *Psathyrostachys rupestris* var. *intermedia* (Alex.) Tzvelev) Russia. See *Flora URSS* 2: 715. 1934, *Zlaki SSSR* 191. 1976, *Grasses of the Soviet Union* 276. 1983, *Bot. Zhurn. (Moscow & Leningrad)* 76: 1174-1178. 1991.

P. rupestris (Alexeenko) Nevski subsp. *daghestanica* Russia.

P. rupestris (Alexeenko) Nevski subsp. *rupestris* Russia.

P. stoloniformis

China. Loosely tufted, rhizomatous, glabrous, leaf blades involute at margin scabrous on both surfaces, spike oblong, rachis with hirsute margin, spikelets narrowly elliptic usually 3 at each node, 1-2 florets, glumes scabrous and pilose, lemmas usually sparsely pilose, palea bifid, see *Nordic Journal of Botany* 9(5): 449-460. 1990, *Genome* 35: 676-680. 1992, *Guihaia* 13: 146-148. 1993, *Annals of Botany* 73: 195-203, 471-479. 1994, *Plant Systematics and Evolution* 189: 217-231. 1994.

Pseudanthistiria (Hackel) Hook.f.

From the Greek *pseudes* "false, untrue" plus the genus *Anthistiria* L.f.

About 4 species, India, Sri Lanka to Thailand. Panicoideae, Andropogonodae, Andropogoneae, Andropogoninae, *Andropogon* sect. *Pseudanthistiria* Hack., annual or perennial, herbaceous, slender, erect, trailing, ascending, prostrate, wiry, rooting at the nodes, ligule a very short unfringed membrane, leaf blades linear to lanceolate, leaves glabrous or pilose, plants bisexual, inflorescence a leafy false panicle, 2-10 bunches of solitary racemes enclosed by a sheathing spatheole, spikelets sessile and pedicellate, longer spikelets male and awnless, sessile spikelet dorsally compressed and 2-flowered, upper floret perfect, lower floret reduced to a short lemma, two glumes subequal, lower glume not grooved, upper glume awnless, lower lemma absent, upper lemma with glabrous awn, palea tiny or

absent, two free and fleshy lodicules, ovary glabrous, two stigmas, open areas, disturbed places, hills, related to *Mono-cymbium*, type *Pseudanthistiria heteroclita* (Roxb.) Hook.f., see *Nova Graminum Genera* 35. 1779, *Flora Brasiliensis seu Enumeratio Plantarum* 364. 1829, Rudolf Friedrich Hohenacker (1798-1874), *Anzeigen getrocknete Pflanzen aus Klein-Asien, Sibirien und Ost-Indien ...* Fr. Metz, Pl. Indiae orientalis prov. Canara. in: *Flora*, Jena, 30, p. 622. 1847, *Monographiae Phanerogamarum* 6: 400. 1889, *The Flora of British India* 7: 219-220. 1897 [1896] and *Journal of the Bombay Natural History Society* 73(1): 192. 1976.

Species

P. burmanica Hook.f. (*Andropogon monomerus* Hochst.) India. See *Species Plantarum* 2: 1045. 1753, *The Flora of British India* 7: 220. 1897 [1896].

P. emeiica S.L. Chen & T.D. Zhuang

China. See *Bulletin of Botanical Research* 8(3): 45, f. 2. 1988.

P. heteroclita (Roxb.) Hook.f. (*Andropogon heteroclitus* (Roxb.) Nees; *Anthistiria heteroclita* Roxb.; *Hypogynium heteroclitum* (Roxb.) Roberty)

Hong Kong. Used for thatching, see *Flora Indica; or Descriptions ...* 1: 253. 1820, *Florae Africae Australioris Illustrationes Monographicae* 115. 1841, *The Flora of British India* 7: 219. 1897 [1896] and *Boissiera*. 9: 190. 1960, *Taxon* 34: 159-164. 1985.

in India: jhinkuphul ghas

P. umbellata (Hack.) Hook.f. (*Andropogon umbellatus* Hack.)

India and Sri Lanka. Annual, leaf blades linear to lanceolate, false panicle, pedicelled spikelet staminate or barren, awn geniculate, see *Enum. Pl. Zeyl.* 366. 1864, *Monographiae Phanerogamarum* 6: 401. 1889 and *Handb. Fl. Ceylon* 5: 247. 1900, *Grasses of Ceylon* 188. 1956, *Grasses of Burma ...* 204. 1960.

Pseudarrhenatherum Rouy =

Arrhenatherum P. Beauv., *Thorea* Rouy, *Thorea* J. Briquet (Apiaceae, alt. Umbelliferae)

From the Greek *pseudes* "false" and the genus *Arrhenatherum* P. Beauv.

About 2 species, Europe. Pooideae, Poodae, Aveneae, or Aveninae, perennial, tufted, herbaceous, unbranched, auricles absent, ligule a ciliate to fringed membrane, plants bisexual, inflorescence paniculate, spikelets pedicellate, 2 glumes unequal to very unequal, palea present, 2 free membranous lodicules, 3 stamens, ovary hairy, 2 stigmas, open areas, dry places, grasslands, sometimes referred to *Arrhenatherum*, see *Species Plantarum* 1: 79, 264. 1753, *Essai*

d'une Nouvelle Agrostographie 55, 152, 153. 1812, *Mantissa* Addit. I. ad Mant. Cl. III: 526 [326]. 1827, *An Introduction to the Natural System of Botany* 21. July 1836, *Voyage botanique dans le midi de l'Espagne* 2: 657. 1844, Ludwig Georg Karl Pfeiffer (1805-1877), *Nomenclator botanicus*. Nominum ad finem anni 1858 publici juris factorum, classes, ordines, tribus, familias, divisiones, genera, subgenera vel sectiones designantium enumeratio alphabetica. Adjectis auctoribus, temporibus, locis systematicis, apud varios, notis literariis atque etymologicis et synonymis. Conscriptus Ludovicus Pfeiffer. Cassellis, sumptibus T. Fisherii, [1871-] 1873-1874 and *Archives des Sciences Physiques et Naturelles* sér. 4. 13: 614. 1902, *Verhandlungen der Gesellschaft Deutscher Naturforscher und Ärzte* 85(2): 671. 1914, *Bulletin de la Société Botanique de France* 68: 401. 1921, *Contributions from the United States National Herbarium* 48: 119-121. 2003.

Species

P. longifolium (Thore) Rouy (*Arrhenatherum longifolium* (Thore) Dulac; *Arrhenatherum thorei* (Duby) Des Moul.; *Avena longifolia* Thore; *Avenastrum longifolium* (Thore) Samp.; *Thorea longifolia* (Thore) Rouy; *Thoreochloa longifolia* (Thore) Holub)

Europe. See Jean Thore, *Promenade sur les côtes du golfe de Gascogne*, etc. 92. Bordeaux 1810, *Flore de Département des Hautes-Pyrénées* 78. 1867 and *Bulletin de la Société Botanique de France* 68: 401-402. 1921, *Boletim da Sociedade Broteriana*, ser. 2 7: 119. 1931, *Acta Universitatis Carolinae: Biologica* 1962: 154. 1962.

P. setifolia (Brot.) Smythies (*Avena setifolia* Brot.; *Helictotrichon setifolium* (Brot.) J.M. Couderc & Guédès)

Europe. See *Flora Lusitanica* 108. 1804 and *Taxon* 25(1): 188. 1976, *Englera* 3(3): 645. 1986.

Pseudechinolaena Stapf = *Loxostachys* Peter, *Perulifera* A. Camus

Greek *pseudes* "false" and the genus *Echinolaena* Desv.

About 1-6 species, Madagascar and the pantropics. Panicoidae, Panicoideae, Paniceae, Panicinae, or Panicoideae, Paniceae, Setariinae, perennial or annual, herbaceous, creeping, slender, trailing, mat-forming, culms leafy and branched above, decumbent at the base and rooting at the nodes, internodes solid, auricles absent, ligule a fringed or ciliate membrane, leaf blades lanceolate to acuminate and flat, plants bisexual, inflorescence a lax slender raceme sparsely flowered, spikelets paired or solitary, very often 1 spikelet of the pair very reduced, 2 florets, lower floret sterile or male, upper floret perfect, 2 glumes subequal, lower glume smooth acute to awned, upper glume gibbous and hooked after fertilization, lemmas lanceolate, lower lemma papery or coriaceous with membranous margins,

upper lemma cartilaginous or coriaceous, lower palea keels rounded, 2 free and fleshy lodicules, 3 stamens, ovary glabrous, 2 plumose stigmas, damp places, in forest shade, under tree shade, ground cover, related to *Oplismenus* and *Poecilostachys*, type *Pseudechinolaena polystachya* (Kunth) Stapf, see *Species Plantarum* 1: 55. 1753, *Encyclopédie Méthodique, Botanique* 6: 50. 1804, *Essai d'une Nouvelle Agrostographie* 53. 1812, *Journal de Botanique, Appliquée à l'Agriculture, à la Pharmacie, à la Médecine et aux Arts* 1: 75. 1813, *Agrostografia Brasiliensis* 41. 1823, *De Graminibus Paniceis* 138. 1826, *The Flora of British India* 7: 28, 58. 1897 [1896] and *Anales del Museo Nacional de Buenos Aires* 11: 74. 1904, *Flora of Tropical Africa* 9: 494-495. 1919, *Bulletin de la Société Botanique de France* 74: 889. 1928, *Repertorium Specierum Novarum Regni Vegetabilis, Beihefte* 40(1): 203, Anh. 55. 1930, *Boletín técnico. Ministerio de Agricultura y Cria.* 41. 1937, Guillermo Herter (1884-1958), *Fl. Illustr. Urug.* 1: 127. [Report. Nov. Spec. Regn. Veg. 118, 1939] Montevideo 1939-1957, *Revista Sudamericana de Botánica* 7(6-8): 196. 1943, *Revista Sudamericana de Botánica* 9: 118. 1953, *Adansonia* 15(1): 132. 1975, *Iselya* 1: 115-139. 1979 [Botanical Journal of the X Club. in Sierra Leone: nane, nani

P. tenuis Bosser

Madagascar. See *Adansonia* 15(1): 128. 1975.

Pseudobambusa Nguyen

From the Greek *pseudes* "false" and *Bambusa*.

A monotypic genus, Myanmar, India, Vietnam. Bambuseae, Bambusinae, type *Pseudobambusa schizostachyoides*

(Kurz) T.Q. Nguyen, see *Genera Plantarum* 1: 236. 1789, *Neue Entdeckungen im ganzen Umfang der Pflanzenkunde* 2: 43. 1820 [1821], *Flora Brasiliensis seu Enumeratio Plantarum* 2: 535. 1829, *Transactions of the Linnean Society of London* 26(1): 138. 1868, *Forest Flora of British Burma* 2: 565. 1877, *Annals of the royal botanic garden. Calcutta*. 7: 48. 1896 and *Bulletin of the Botanical Survey of India* 22(1-4): 176. 1980 [1982], *Bot. Zhurn. (Moscow & Leningrad)* 76(7): 992. 1991, *Bamboos of the World* 310. 1999.

Species

P. kurzii (Munro) Ohrnb. (*Bambusa kurzii* (Munro) N.P. Balakr.; *Melocanna kurzii* Munro; *Schizostachyum kurzii* (Munro) R.B. Majumdar)

India, Vietnam. See *Transactions of the Linnean Society of London* 26(1): 134. 1868 and *Bulletin of the Botanical Survey of India* 22(1-4): 176. 1980, *Fl. Ind. Enumerat.-Monocot.* 281. 1989.

in Vietnam: nua, neua

Pseudobrachiaria Launert = Brachiaria (Trin.) Griseb., Urochloa P. Beauv.

From the Greek *pseudes* "false" and *Brachiaria* (Trin.) Griseb.

Panicoideae, Paniceae, Melinidinae, type *Pseudobrachiaria deflexa* (Schumach.) Launert, see *Species Plantarum* 1: 55. 1753, *Essai d'une Nouvelle Agrostographie* 52, 53, t. 11, f. 1. 1812, *De Graminibus Paniceis* 51, 125, 266. 1826, *Beskrivelse af Guineiske planter* 63-64. 1827, *Kongel. Danske Vidensk. Selsk. Naturvidensk. Math. Afh.* 3: 83-84. 1828, *Flora Rossica* 4(14): 469. 1853, *Synopsis Plantarum Glumacearum* 1: 37. 1855 [1853] and *Bulletin of Miscellaneous Information Kew* 1923(9): 315. 1923, *Bulletin du Jardin Botanique de l'État* 9(3): 181. 1932, *Flora of West Tropical Africa* 2: 563, in clav., 564. 1936, *Mitteilungen der Botanischen Staatssammlung München* 8: 158. 1970, *Canad. J. Bot.* 65: 2297-2309. 1987, *Annals of the Missouri Botanical Garden* 75: 866-873. 1988, *Bulletin du Muséum National d'Histoire Naturelle, séries 4, Section B, Adansonia. Botanique Phytochimie* 11(4): 443. 1989 [1990], *Annals of the Missouri Botanical Garden* 81(4): 775-783. 1994, *Contributions from the United States National Herbarium* 46: 141-143, 629-634. 2003.

Pseudobromus K. Schumann = Festuca L.

From the Greek *pseudes* "false" plus *Bromus* L.

About 3 species, Madagascar, tropical Africa, South Africa. Pooideae, Poodae, Poeae, or Pooideae, Poeae, Loliinae, perennial, herbaceous, unbranched, tufted, auricles present, leaf blades linear to linear-lanceolate, ligule an unfriended

membrane, plants bisexual, open inflorescence paniculate, spikelets pedicellate, 2 glumes unequal, palea present, 2 free and membranous lodicules, 3 stamens, ovary hairy, 2 white stigmas, damp places, in forest shade, under tree shade, ground cover, sometimes referred to *Festuca*, type *Pseudobromus silvaticus* K. Schum., see *Species Plantarum* 1: 73-74. 1753, *Essai d'une Nouvelle Agrostographie* 39, 155. 1812, *Die Pflanzenwelt Ost-Afrikas* C: 108. 1895, *Bulletin de l'Herbier Boissier* 3(8): 382. 1895 and *Flora Capensis* 7: 763-764. 1900, *Notulae Systematicae. Herbarium de Paris* 12: 149-150. 1946, *Bulletin de la Société Botanique de France* 102: 120. 1955, *Watsonia* 16: 300. 1987, *Contributions from the United States National Herbarium* 46: 312-368. 2003.

Species

P. brassii C.E. Hubb.

Africa. See *Kew Bulletin* 1949: 341. 1949.

P. engleri (Pilg.) Clayton (*Festuca engleri* Pilg.)

Africa. See *Botanische Jahrbücher für Systematik, Pflanzengeschichte und Pflanzengeographie* 40: 85. 1907, *Kew Bulletin* 23: 293. 1969.

P. silvaticus K. Schum. (also spelled *sylvaticus*) (*Brachelytrum silvaticum* (K. Schum.) Hack.; *Festuca africana* (Hack.) Clayton)

Africa, Tanzania. See *Die Pflanzenwelt Ost-Afrikas* C: 108. 1895, *Die Natürlichen Pflanzenfamilien* 2(2): Nacht. 42. 1897 and *Kew Bulletin* 40(4): 727-728. 1985.

Pseudochaetochloa A. Hitchc.

From the Greek *pseudes* and the genus *Chaetochloa* Scribn., *chaite* "bristle, long hair" and *chloe*, *chloa* "grass."

One species, Western Australia. Panicoideae, Panicoideae, Paniceae, subtribe Cenchrinae, perennial, tufted, herbaceous, branched, auricles absent, ligule fringed, plants dioecious, inflorescence paniculate subspiciform, deciduous branchlets spreading, 2-5 spikelets with bristles, 2 male florets per spikelet, hermaphrodite florets wanting, two glumes unequal, upper lemma membranous, open areas, stony places, slopes, sometimes referred to *Pennisetum*, type *Pseudochaetochloa australiensis* Hitchc., see Albert Spear Hitchcock (1865-1935), in *Journal of the Washington Academy of Sciences*. 14(21): 492. 1924.

Species

P. australiensis Hitchc.

Australia. Inflorescence a contracted spike-like panicle not spatheate, bristles or scales subtending the spikelets and deciduous with them, glumes membranous, see *Journal of the Washington Academy of Sciences* 14(21): 492. 1924.

Pseudocoix A. Camus = *Hickelia* A. Camus

Greek *pseudes* "false" plus *Coix* L.

One species, Madagascar and Tanzania. Bambusoideae, Bambusoideae, Bambuseae, Bambusinae, perennial, shrubby, erect, branched, leaning on trees, woody, scrambler, scandent, fragile, leafy, rhizomes pachymorph, leaf blades linear, plants bisexual, inflorescence compound, spikelets subtended by a bract, spikelets 1-flowered, glumes 2-3 membranous and 1-2 indurated, lemma smooth, palea not convolute, lodicules present, 6 stamens, ovary hairy, 3 stigmas, forest, sometimes referred to *Hickelia*, see *Reliquiae Haenkeanae* 1: 256. 1830 and *Comptes Rendus Hebdomadaires des Séances de l'Académie des Sciences* 179: 478-480. 1924, *Bulletin de la Société Botanique de France* 71: 903-906. 1925, *Archives du Muséum d'Histoire Naturelle*, sér. 6, 12: 603. Paris 1935, *Kew Bulletin* 49(3): 429-443. 1994.

Species

P. perrieri A. Camus (*Hickelia perrieri* (Camus) S. Dransf.)

Madagascar. See *Kew Bulletin* 49(3): 441. 1994.

Pseudodanthonia Bor & C.E. Hubb. = *Sinochasea* Keng

Greek *pseudes* "false" and *Danthonia* DC., after the French botanist D. (Étienne) Danthoine, fl. 1788, agrostologist.

About 1-2 species, Asia, Himalaya. Pooideae, Poodae, Aveneae, or Arundinoideae, Danthonieae, perennial, tufted, herbaceous, usually unbranched, auricles absent, ligule an unfringed membrane, plants bisexual, inflorescence racemose or paniculate, spikelets pedicellate, 2 glumes subequal 5- to 9-nerved, lemmas coriaceous hairy bifid, palea present, 2 free and fleshy lodicules, 3 stamens, ovary hairy, 3 plumose sessile stigmas, mountains, slopes, open areas, type *Pseudodanthonia himalaica* (Hook.f.) Bor & C.E. Hubb., see *Flore Française. Troisième Édition* 3: 32. 1805 and *Kew Bulletin* 12: 425. 1958, *Journal of the Washington Academy of Sciences* 48(4): 115-117, f. 1. 1958.

Species

P. himalaica (Hook.f.) Bor & C.E. Hubb. (*Danthonia himalaica* Hook.f.)

India. See *The Flora of British India* 7: 281. 1897 [1896] and *Kew Bulletin* 12: 427. 1958.

P. trigyna (Keng) Clayton (*Sinochasea trigyna* Keng)

India, China. Spikelet 1-flowered, see *Journal of the Washington Academy of Sciences* 48(4): 115-117, f. 1. 1958, *Kew Bulletin* 40(4): 729. 1985.

Pseudodichanthium Bor

Presumably related to *Dichanthium*.

One species, India. Panicoideae, Andropogonodae, Andropogoneae, Andropogoninae, annual, slender, straggling, more or less aromatic, auricles absent, leaf blades linear, ligule membranous, plants bisexual, inflorescence racemose, single racemes with imbricate spikelets, spikelets sessile and pedicellate, 2 glumes unequal, lower glume convex cartilaginous broadly winged, upper lemma entire awned, palea absent, 3 stamens, ovary glabrous, 2 stigmas, light shade, forest, type *Pseudodichanthium serrafalcoides* (Cooke & Stapf) Bor, see *Species Plantarum* 2: 1045. 1753, *Annalen der Botanik. ed. Usteri* 18: 11. 1796 and *Indian Forester* 66: 271. 1940, *Grasses of Burma ...* 204. 1960, *Journal of the Bombay Natural History Society* 84(2): 388. 1987[1988].

Species
